## Preface

Food resources concern everybody. They have concerned me in a particular way for the last 18 years while I have been compiling the Oxford Companion to Food, a million-word work which seeks to describe all foodstuffs, of more than purely local use, in the world.

Looking back over this protracted effort from the vantage point of 1998, now that the book has been delivered and is due for publication just before the end of the present millennium, I can mentally divide up the 18 years in various ways: slow start/final sprint; bouts of travel/stay-at-home periods; able to accommodate my reference material in one room/two rooms/three rooms / and, recently, not even in five rooms; working solo/with a collaborator; and so on. In this range of divisions, one of the most significant would be that between the pre-Cornucopia years and those which came after my acquisition of the book.

Of all the 4,500 books with which I have worked, there are just 21 which sit in a special little bookcase beside the computer, ready to be consulted at any moment. Of the 21, none has been consulted more often (thousands of times, not just hundreds) or to better effect than Cornucopia. For anyone who is writing seriously about food, whether by country, region, continent or globally, it falls fair and square into the 'must have' category.

After all, plant foods are fundamentally what keep the population of the world going. And the need for knowledge about them and for the ability to identify them, whether at the level of genus, species or cultivar, has been increasing exponentially. Food producers, wholesalers and retailers, restaurateurs, food writers of every kind and domestic cooks--all benefit from knowing more about what is available, what is threatened by extinction, what may usefully be rescued from oblivion, and so forth. The terrain charted by Stephen Facciola, already immense when he was composing the first edition of his magnum opus, has been growing more extensive with every passing year, as progress is made in the complex art of taxonomy, in the development of new cultivars and hybrids, and in the appearance of new suppliers and new sources of information.

So the appearance of Cornucopia II, with its wealth of new features and its more user-friendly design, must be a cause for not merely satisfaction and ripples of applause but for standing ovations and prolonged cheers!

The cheers, of course, will come from a wide range of people, not just those directly concerned with producing, marketing, preparing, cooking or writing about food. Who shall count the beneficiaries, actual and potential?

The late Dr. Robert Bond of San Diego was a good friend, who is greatly missed by all who knew him and who profited from his extensive knowledge of herbs, in both their botanical and culinary aspects. It was he who first told me about Cornucopia and he who, with the generosity of spirit which animated both him and his wife Suzanne, had a copy sent to me. I remember that when it arrived I read with awe the long list, in the Introduction, of categories of readers for whose benefit it had been compiled. It would be no exaggeration to say that this is a reference tool for all who are concerned with the future of the human race and of our planet. I shall not cease to marvel at the fact that this book is, essentially, the product of one person.

‘And still they gazed and still the wonder grew  
That one small head could carry all he knew.’

Oliver Goldsmith was writing in a completely different context (one might almost say 'another world') when he penned these lines; and no doubt it is a computer, rather than Stephen's brain, which can actually accommodate and instantly recall all the knowledge in this book. But that in no way diminishes the feat, or the relevance of Goldsmith's couplet. As I see it, the computer serves as an extension of the human brain, not a replacement. It is like an extra drive, of almost infinite capacity yet capable of nothing unless controlled by a person—in this instance a person with a prodigious gift for organization and an inspiring degree of diligence and enthusiasm. Let the new version of his work be acclaimed as the uniquely rich resource and dazzling achievement which it is.

Alan Davidson  
Chelsea, London  
September 1998

### Preface to the first edition

In your hands is one of the most remarkable efforts to come out of the struggle to preserve the genetic diversity of our planet. It is not a dry policy statement preaching of far-away places and unlikely schemes, nor is it an impenetrable tract full of untraceable Latin names and fascinating but useless details. Rather Steve Facciola has put together an easy-to-understand, easy-to-use compendium of the diversity of food plants available today to consumer, gardener, and scientist. It includes thousands of cultivars of hundreds of crop species, as well as many mushrooms and microorganisms. It can serve as both a reference for information on plants, and a guide to actually finding, growing, and using them. As far as I know, it is unique.

No one can say exactly how many plant species there are, but scientists seem to constantly raise their estimates. Yet of the several hundred thousand that are known, at least 20,000 have usefully edible parts, such as seeds, tubers, fruits or leaves. Although humans have tasted them all at one time or another, only three or four thousand have ever been used on a regular basis.

Over tens of thousands of years, these few plants have been mankind's bulwark against starvation. Moreover, during the past 5,000 years or so certain specimens of certain species have been slowly molded to fit human requirements...they have become "domesticated". During the last two centuries, a burst of breeding and crop development has yielded thousands of selected cultivars, collectively suited to meet almost any climate, soil type, or disease or pest threat. This seemingly vast cornucopia of food resources represents one of the best of all human efforts, and is our greatest treasure—more valuable than all the industrial development that has grown in parallel with it.

Indeed, the contribution crop-developers have made to history is seldom if ever mentioned in history books, and yet their effects have been more profound (and much more beneficial in most cases) than all the politics and politicians that now fill the pages of those books. It has recently been pointed out, for example, that development of the potato in Europe probably made possible the Industrial Revolution because it provided the Europeans with food security for the first time, and that in turn allowed millions to leave the land to work in the factories.

Nonetheless, with all mankind's efforts to develop crops, the selection of target species has been very narrow. Fewer than 150 species have been brought into what most people would consider substantial "agriculture". And far fewer than that have been raised to a point where they approach their potential. Most of the world's food is being produced from a mere twenty or so, grossly overworked, species. Indeed, the preponderance of human food comes from only four: wheat, rice, corn, and potatoes. It is a dangerously small larder for feeding a whole planet.

Thus, although our modern food supply is one of the most remarkable of human achievements and new technologies promise even greater harvests in the future, there exist thousands of wondrous resources of which we have taken little advantage. Yet ironically, just as we realize the importance of this underexploited heritage, it is being threatened. In the last twenty years, for example, hundreds of varieties of plants have been lost—not only from the rainforests but also from our gardens.

All this is why Steve Facciola's effort is so important. It is a guide not only to your grandparents' favorite garden veggies, but to exotic delights now scarcely known even to botanists. In total, his book records the more than 3,000 species available in the U.S. and abroad. For over a hundred crops, detailed varietal descriptions of culture and taste are given. The sources listed are not only for seeds, but also for different types of nursery stock, for specialty produce and food products and for unusual items such as mushroom spawn and starter cultures.

This book should appeal to anyone interested in our plant heritage, in what to grow next summer, or in what to do with that strange fruit in the market. For everyone from browser to botanist, the utility of this effort is obvious.

October, 1990

## Introduction

There are approximately fifteen thousand species of plants recorded in the literature as having been used as food by man. One hundred fifty or more of these have been cultivated on a commercial scale and innumerable cultivars of the more important crops have been developed. Yet today, most of the world is fed by approximately twenty crops including wheat, rice, maize, millet, sorghum, potato, sweet potato, cassava, peas, beans, peanuts, coconuts and bananas. And of the estimated eight thousand cultivars of apples that have been described, only a handful are available in supermarkets.

Our knowledge of the remaining edible plants represents thousands of years of trial and error by our ancestors and should be more greatly utilized. Many of these plants have desirable traits or properties that have not been exploited and may have some yet to be discovered. In addition, only a small percentage of cultivars is being grown commercially compared to a generation or two ago. While some newer cultivars provide valuable traits such as resistance to pests and diseases, many older traditional cultivars also have great merit and should be preserved and made more available. Breeding is overly focused on developing strains of industry standards, such as Red Delicious apples, rather than creating truly unique cultivars like Butterblossom squash or Saturn peach.

In recent years, however, an increased awareness has created expanded markets for new and unusual foods, heirloom cultivars, and foods grown without the use of chemical fertilizers and toxic pesticides and herbicides. More of these are becoming available all the time. The purpose of this book is to provide a guide to those having the most current interest and potential future value. As much diversity as possible is included without being redundant. Species were selected to provide a broad range of the more than sixty different usage categories including edible fruits, seeds, leaves, roots, stems, flavorings, flowers, oils, beverages, tea and coffee substitutes and sugars and sugar substitutes. Cultivar selection has focused on traditional and well-adapted favorites, family heirlooms, gourmet and specialty market items, and the most promising of the newest releases. Sources for both seeds and nursery stock are provided as well as specialty produce and specialty food products.

Approximately three thousand species have been selected including the higher plants in addition to organisms once classified as plants but now treated in separate kingdoms. These include algae, fungi and bacteria.

Over one hundred and ten major crops have been chosen for detailed cultivar listings representing the most popular fruits, vegetables, nuts, herbs, grains and mushrooms. Also included are fruit and nut tree rootstocks, salad mixes, sprouting seeds and starter cultures.

Taxonomic nomenclature of families, genera and species follows that of Tanaka and Kunkel, the most recent works on edible plants of the world, as much as possible. Some older names that are used in the trade are retained. Others that have been maintained in the trade for an unreasonable time are rejected. Classification of cultivars is modified after Lewis and Hortus Third.

Cornucopia is intended to be an authoritative reference book as well as a useful tool. It has been written for gardeners, small-scale and alternative farmers, researchers dealing with new food crops, cooks, economic botanists, genetic preservations, natural foods enthusiasts, nutritionists, those in the specialty and gourmet foods business, and colleges and universities. References have been selected to provide a balance between technical and popular works.

## How to use this book

*CORNUCOPIA II* is divided into three primary chapters—Part I: Botanical Listings, Part II: Major Crops and Part III: Suppliers.

Included in Part I are listings of approximately 3,000 species of plants, fungi, algae and bacteria. The listings are presented alphabetically by their botanical or Latin names (sometimes referred to as scientific names), first by family, then genus, and finally by species. Family names always end with the suffix “ACEAE”. Botanical synonyms, represented by the symbol - are placed alphabetically within each family. A listing in Part I can have up to seven different sections which are described below:

1. - Genus and species.
2. - The most widely used vernacular name or names, presented in italicized text.
3. - A default code enclosed within braces {} that indicates the type of plant material or product offered by the suppliers. For example, an {S} code would indicate that seeds are being offered. For a complete list of codes and what they represent see Appendix D. Three different codes are used to indicate that fresh produce or a food product is being sold: {PR}, {PD}, and {DF}. A {PR} code is used for fresh produce such as fresh fruits or vegetables. A {PD} code indicates a food product, for example a canned or bottled product, and {DF} is used for dried foods such as seeds and nuts and also for botanicals (dried herbs and spices). An underlined {PR}, {PD}, or {DF} code is used when a plant has more than one usage and an explanation is needed. In these instances see the explanation given after *Sells the following products*: in the supplier’s listing. For example, when you see the listing J73{PD} look up J73 in the Suppliers chapter and then see the explanation after *Sells the following products*:
4. - A description of how the plant is used, the parts of the plant that are consumed, and the food products that are made from the plant.
5. - The geographical distribution of the plant and whether the plant is cultivated.
6. - Bibliographical citations annotated with codes enclosed in brackets []. The codes refer to categories of additional information that can be found in the references cited. For example, an [Re] following a citation indicates that the reference contains recipes for the plant. For a complete list of codes and what they represent see Appendix D.
7. - The suppliers’ codes. A code enclosed in braces {} may be attached to a supplier’s code. In these instances the attached code overrides the default code. For example, in the sample listing below, K67{PL} signifies that the supplier K67 is selling plants not seeds as indicated by the default code {S}. Keep in mind that when a {PL} code overrides a {GR} code it indicates that seedlings and not the generally more desirable grafted trees are being offered.

A sample listing from Part I follows with arrows pointing to each of the seven sections described above:

**1. Genus, Species**   **2. Vernacular name**   **3. Default Code**   **4. Usage**

Prunus spinosa - *Sloe, Blackthorn* {S}. Ripe fruits are sometimes eaten raw, especially after having been mellowed by frost. They are also made into jellies, syrup, conserves, and *kissel* or used as a flavoring for *sloe gin* and other liqueurs. In France, the unripe fruit is pickled like olives. Leaves are used as an adulterant of tea. The flowers are edible and are sometimes candied. Eurasia. MABEY [Re], MICHAEL [Re]; K67{PL}, L2, M35M{PL}

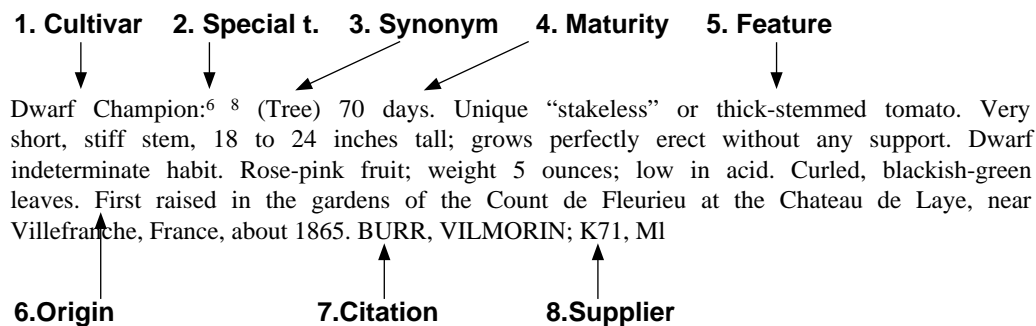

**5. Distribution**   **6. Citation, Annotation**   **7. Supplier, Attached Code**

Over 110 crops have been selected for Part II representing the most important and popular fruits, vegetables, nuts, herbs, grains and mushrooms. Within each crop’s listing are the most interesting and useful cultivars (cultivated varieties), listed alphabetically under various subheadings. The subheadings are used to group the cultivars into horticultural classes. For example, apples are grouped under cider apples, cooking apples, crab apples and dessert apples, then by whether they are harvested in spring, summer or fall. Cultivars of less important crops

are listed directly under their botanical listings in Part I. A listing in Part II can have up to eight different sections which are described below:

1. - Cultivar name.
2. - Special types. These are additional categories that do not merit major subheadings. For example, pink-fleshed apples or apples high in Vitamin C. Superscripted numbers (<sup>1,2</sup>) are used for special types. To find out what each superscripted number refers to see CODES FOR SPECIAL TYPES at the end of each crop's listings.
3. - Synonyms, if any, for the cultivar name.
4. - Days to maturity. Mostly used for vegetable crops to indicate the time from planting of seeds to harvest.
5. - A description of the cultivar's most important features.
6. - The origin of the cultivar.
7. - Bibliographical citations annotated with codes enclosed in brackets [], as used in Part I.
8. - The suppliers' codes, as used in Part I.

A sample listing from Part II follows with arrows pointing to each of the eight sections described above:

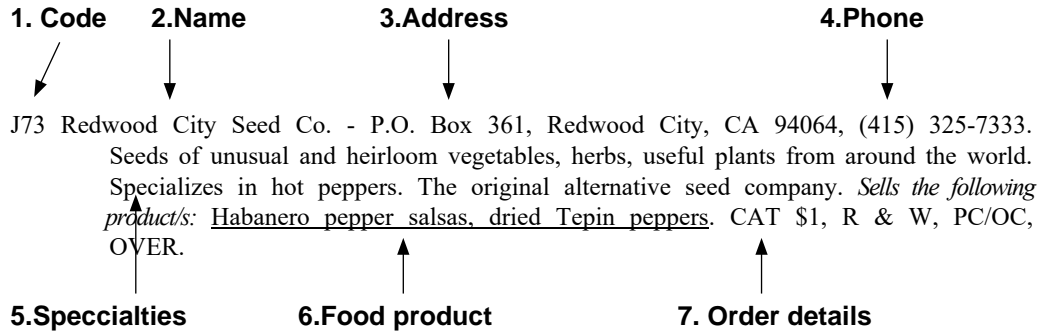

Included in Part III are listings for more than 1370 firms and institutions whose catalogs have been surveyed, including approximately 1175 from the United States and Canada, 100 from overseas, and 100 non-commercial sources (botanical gardens, arboreta, research stations, etc.). Each company has a unique code that is used to indicate what products they list. In the listings for Parts I & II retail company codes are presented in normal text, wholesale companies in italics, and non-commercial sources in bolded text. A listing in Part III can have up to seven different sections which are described below:

1. - Unique code used for each company or institution.
2. - Name of the company or institution.
3. - Address of the company or institution.
4. - Phone number of the company or institution.
5. - A description of the most important specialties offered by the company or institution.
6. - Food products offered by the company, presented in underlined text after the phrase *Sells the following product/s:* For more details see above.
7. - Order details such as catalog price, retail or wholesale status, currencies accepted, overseas shipments, minimum order, and whether a company produces an English language catalog. For a complete list of abbreviations used in this section and what they represent see Appendix D.

A sample listing from Part III follows with arrows pointing to each of the seven sections described above:

To order an item look up a company's listing in the suppliers' chapter using the unique codes. Every effort has been made to find commercial suppliers. Only when none could be found were sources such as botanical gardens and research stations used. Many rare and valuable species are apparently only available from such sources. It should be noted however that many of these institutions have limited facilities or budgets and cannot respond to the general public. Primarily material is exchanged with other institutions on a reciprocal basis. Private individuals who have a sufficiently large collection may also make arrangements for trade.

Many of the best cultivars are similarly unavailable through the trade. Organizations such as the California Rare Fruit Growers, North American Fruit Explorers, Rare Fruit Council International, and Seed Savers Exchange are invaluable sources of such material and welcome new members. They do not sell seeds or plants however. It is best to write them and ask for a membership application and then follow their normal procedures of exchange.

### Author's notes

Several new usage categories have been added to this edition of *Cornucopia* including food wrappers, honey plants, smoke flavorings, popping seeds, wood flavorings, bitters, food tonics, fat replacers, and milk substitutes. See Appendix A for further details. The coconut-oil scents category has been dropped because it was determined that the coconut oil in question was used for rubbing on the body not for edible purposes. The hypertrophies category has been combined with the galls.

While tonics are generally thought of as medicinal, many are used in such a way that they should be considered food. Good examples are the various Chinese tonics eaten regularly in soups and rice porridge or with meat. Other Chinese tonics are consumed frequently in the form of teas and tonic wines. Ayurvedic tonic herbs of India are also often combined with other foods such as boiled warm milk, ghee, oil, raw sugar and honey. Bitter tonics are most often used in the West, generally as digestive aids but sometimes also as flavoring. The overriding consideration is that the tonics are not taken merely to cure or allay illness but for their nourishing properties which promote general well-being, rejuvenate the body, strengthen the immune system and prevent illness.

Honey plants were omitted from the first edition but after further consideration have been included in *Cornucopia II*. Although honey is produced by bees, a small amount of nectar or honeydew finds its way into the honey and actually contributes to its flavor. Each honey will have a different flavor, depending on the blossoms that the bees were visiting. There are tens of thousands of these plants that are visited by honey bees but not all are desirable for commercial honey production. Those that are not may be called bee plants and are not included here. Those that produce the most desirable and best tasting honey and are sought as bee forage are true honey plants and the ones that have been chosen for listing.

Originally, *Cornucopia* was intended as a reference and source book for gardeners, farmers, botanists and others working with plants. However, during the compilation of the first edition a decision was made to include sources of food products since these products were included in the descriptions of how the plants were used. The response from chefs, food writers and others in the culinary world has been very favorable, therefore for this edition many additional suppliers of produce and food products have been listed.

During the compilation of *Cornucopia II* it has been noted that many more cultivars developed for home gardeners are now available through seed and nursery catalogs. Vegetables and fruits that have been selected for outstanding flavor, unique color, shape or fragrance, special culinary qualities, or superior nutritional content are more numerous than in past years. Others may have thin skins and tender flesh, the ability to ripen over an extended period, are easy to harvest, or can be grown by those with limited space, all traits that are favored by the backyard gardener and market farmer. This is a trend that should be encouraged. Look for these special types throughout *Cornucopia*, especially in the Major Crops section. The codes used for the special types are now listed at the end of each crop's listings. See *How to use this book* for more details.

The author welcomes any comments, suggestions, corrections or additions from readers, especially in regard to new suppliers or previously unknown usage.

Steve Facciola  
Vista, California

## BOTANICAL LISTINGS

### ALPHABETICAL LISTING OF PLANT FAMILIES

#### ACANTHACEAE

*Beloperone californica* - *Chuparosa*, *Pisily* {PL}. The red flowers, which resemble cucumber in flavor, may be eaten raw or cooked. Diegueno Indians are known to have sucked the flower for its nectar, as desert hikers do today. Southwestern North America, Mexico. BEAN, L., CLARKE, KIRK; G60, 198M

*Peristrophe speciosa* - *Purple rice plant*, *Shrimp plant*, *La cam*, *La gum* {PL}. In Thailand and Vietnam, the leaves are employed as a colorant for festive rice dishes. They are first boiled in water to yield a purple liquid in which the rice is cooked. The liquid is also used to color cooked eggs, cookies, and a glutinous rice and coconut milk dessert which is served with a fried peanut, sugar and salt mixture. Southeast Asia. TUCKER 1995; M82, R77

*Rungia klossii* - *Moku*, *Tani*, *Kenkaba*, *Aimbe* {S}. Leaves and stems are eaten raw in salads, cooked as a potherb, or used as a flavoring. They contain iron, vitamin C, and Beta-carotene. The biennial herb is harvested three to four months after planting and continues bearing for up to two years. Papua New Guinea. HACKETT [Cu], MAY, R.; X14

#### ACERACEAE

*Acer circinatum* - *Vine maple* {PL}. The sap is made into sugar and maple syrup. Pacific Coast of North America. GIBBONS 1979; A2{S}, D95, E15{S}, E87, 147{S}, J26, K38{S}, K63G{S}, M51M, NO

*Acer ginnala* - *Amur maple* {PL}. Young leaves are used as a tea substitute. Japan, China. TANAKA; A80M, C9M{S}, C33, E7M{S}, E87, G16, G66, H49, 128, K38{S}, K63G{S}

*Acer grandidentatum* - *Big-tooth maple* {PL}. The sap is boiled down to produce maple syrup. Western North America. KIRK; B94{S}, D95, E67T, G66, G89M, K37M, K63G{S}, L55J{S}

*Acer macrophyllum* - *Oregon maple*, *Big-leaved maple* {S}. The sweet sap can be used for maple syrup and sugar manufacture. Yellow flower-clusters are sweet with nectar and may be eaten right from the tree. Produces a rare, exotic honey with a very aromatic aroma and flavor. Pacific Coast of North America. DOMICO, GIBBONS 1979, PELLETT; B92{PL}, B94, C60D{PD}» D96, E15, G59M, G60{PL}, G66, H47{PD}, K38, K63G, N0{PL}, 093

*Acer negundo* - *Negundo aceroides*

*Acer nigrum* - *Black maple*, *Black sugar-maple* {S}. The sap is used for maple sugar and maple syrup. Closely related to *A. saccharum* and one of the principal producers of commercial maple syrup. Eastern North America. LAWRENCE, MEDSGER; D95{PL}, E7M, G21M{PL}, G66, K37M{PL}, K63G, K89, K89{PL}

*Acer pensylvanicum* - *Striped maple*, *Moosewood* {S}. Although a small tree it is an abundant producer of very sweet sap which yields more sugar per gallon than larger maples. It is said to have a better flavor than other maples. Eastern North America. GIBBONS

1966a; D95{PL}, G66, H8{PL}, K38, K63G, K89{PL}, M7M{PL}, N7T{PL}, N71M, N84, P49

*Acer pseudoplatanus* - *Sycamore maple*, *Plane-tree maple* {S}. In Europe a wine is made from the sap which also yields maple syrup. The leaves are used as a wrapping for *Cab rales*, a blue-veined cheese of Spain. Children in England suck the wings of the growing keys to obtain the sweet exudation that accumulates on them. Eurasia. HEDRICK 1919, ROBINSON, R. 1995; B9M{PL}, F85J{PD}, G47J{PD}, G66, K38, K63G, L13P{PD}, N71M, 093, P5, P49, R78

*Acer rubrum* - *Red maple*, *Swamp maple* {PL}. The French Canadians make sugar from the sap which is called *plaine*. Good, dark maple syrup is also produced from this tree although the yield is comparatively small. The wood is a source of cooking planks which impart a distinctive, pleasant, woody flavor to foods cooked on them. Before cooking on the planks, they are oiled, charred or moistened with water, each of these methods creating a different flavor. Eastern North America. FERNALD, HEDRICK 1919, LAWRENCE; A80M, C9M{S}, D45, D95, E33M, G21M, H49, 14, J16, K38{S}, K63G{S}, L15G{PD}, N7T

*Acer saccharinum* - *Silver maple*, *River maple*, *White maple* {PL}. The sap is considered by some to be sweeter and whiter than that of the sugar maple. It is boiled down to make sugar and syrup. Has less than half the sugar density of sugar maple, so considerably more boiling is required. Eastern North America. FERNALD, LAWRENCE, MEDSGER; A82, C9M{S}, C33, D45, F51, G66{S}, H49, 14, 19M, K38{S}, K63G{S}, L27M

*Acer saccharophorum* - \**Acer saccharum*

*Acer saccharum* - *Sugar maple* {PL}. Leading producer of maple syrup and sugar. Maple butter or honey and maple cream are different forms of maple sugar. The Indians cooked the dewinged seeds in butter and milk. The sap can be used in place of water to brew herbal teas made from sassafras and spicebush. It is also made into vinegar. Maple wax or *sugar-on-snow* is a delicious, chewy product made by boiling the sap beyond the syrup point until it reaches the consistency of molasses, then pouring it on fresh snow. Sugar maple wood is preferred over that of other species of maple for smoking meat and other foods. It adds a sweet, smoky flavor somewhat reminiscent of maple syrup, and also darkens the meat. Eastern North America. BJORKMAN, FERNALD, GIBBONS 1962 [He], LAWRENCE, MESSINA, NEARING [Cu, Re], ROOT 1980a, THOMPSON, B. [Cu, Re]; A82, B74, C9M{S}, C21M{PD}, C37M{PD}, D45, D95, E63K{PD}, G66{S}, G73{PD}, 14, I42G{PD}, J3{PD}, J21H{PD}, K38{S}, K63G{S}, L15G{PD}, L27M, M85{PD}, N7T, etc.

#### CULTIVARS

Ohio Supersweet: The sugar content of sugar-maple sap usually varies between 2 and 3 %. The supersweet strains produce sap with double the sugar content or around 4.2%. As a result, only half the fuel is needed in the syrup manufacturing process. The original trees were collected in the 1950's by Howard Kriebel for the Wooster

Agricultural Experiment Station. LAWRENCE, LOGSDON 1981; I59J

*Acer saccharum* ssp. *nigrum* -\**Acer nigrum*

Negundo aceroides - *Bcx-elder*, *Ash-leaved maple* {S}. Highly valued as a producer of maple syrup and sugar. Groves have been planted in Illinois and other areas. The sugar from the sap of this tree is said to be whiter than that produced by other maples, but notably thin. North America. FERNALD, HEDRICK 1919, LAWRENCE; G60{PL}, G66{PL}, K38, K63G, M69M{PL}, N71M, 053M, 093, P5, R78

ACTINIDIACEAE

*Actinidia arguta* - *Hardy kiwi*, *Tara vine*, *Bower berry* {S}. The small, emerald green fruits are eaten out of hand, dried, or made into jam, jellies and wine. They are considered to be sweeter than the common kiwi fruit. The vine is rich in sap, which is drinkable. Young leafy shoots are eaten. Dried leaves are sold in Korean markets for use in seasoned vegetable dishes. Eastern Asia, cultivated. PEMBERTON, TANAKA, THOMSON 1988 [Cu]; B32{PL}, E13G{PR}, H4{PL}, H53M{SC}, K38, K63G, P38, R78, R47. (for cultivars see Kiwi, page 402)

*Actinidia arguta* var. *cordifolia* - *Hardy kiwi* {PL}. The smooth green fruits are the size of a grape, have very sweet flesh, and are eaten out of hand. Considered one of the best tasting of the hardy kiwis. A variety that is adapted to growing in low chill areas. China. KUNKEL, THOMSON 1988; F16, H53M{S}, H53M{SC}, I49M, J51P{SC}. (see also Kiwi, page 402)

CULTIVARS {GR}

Mevers: Round-shouldered, green fruit; non-bitter skin; very sweet flesh, about 28% brix, excellent flavor; ripens very early, late August or early September in southern California. Highly productive. Relatively low chilling requirement. D37, E13G{PR}, H53M, I66T

*Actinidia callosa* - *Mei-soh-khan* {PL}. The ripe fruits are somewhat acid in flavor and may be eaten raw, or dried for use in pastries. China, Japan. KUNKEL, TANAKA; H53M{SC}, M16

*Actinidia chinensis* - *Chinese softhair kiwi* {SC}. The fruits are eaten raw or cooked. They often have distinctive colored flesh such as yellow, orange or red. Eastern Asia, cultivated. J51P. (for culti vars see Kiwi, page 402)

*Actinidia cordifolia* -> *Actinidia arguta* var. *cordifolia*

*Actinidia coriacea* - *Chinese egg-gooseberry* {PL}. The small, egg-shaped fruits are eaten. They have brownish skin with white dots and are very juicy. China. SIMMONS 1972; H4

CULTIVARS {GR}

Katie: Choice, female selection that bears numerous 3/4 inch, ovoid, brown fruits of top quality. Attractive, ornamental red flowers and handsome foliage. H4

*Actinidia deliciosa* - *Kiwi fruit*, *Chinese gooseberry*, *Yang-Cao* {S}. Fuzzy, subacid fruits are rich in vitamin C and may be eaten raw or cooked. When firm-ripe they are tart-sweet and used in salad dressings or other dishes where tartness is desired. When soft-ripe they are sweeter and are eaten out of hand, or used in fruit salads, ice cream, pies, cakes and other desserts. *Pavlova* cake, consisting of kiwis, meringue and whipped cream, is the national dessert of New Zealand. China, cultivated. BEUTEL [Re], MORTON 1987a, SALE [Cu], SCHNEIDER 1986 [Cu], THOMSON 1988 [Cu, Pro]; A79M, B32{PL}, C9M, D3M{DF}, E13G{PR}, F97M{DF}, G92{DF}, H4, N40{DF}, N40{PD}, N84, 053M, P38, R47. (for culti vars see Kiwi, page 402)

*Actinidia eriantha* - *Velvet vine* {S}. The fruits are eaten fresh or dried. They are completely covered with a long, white fuzz which gives them a very distinct appearance. Also very high in vitamin C, up to one per cent or more. Considered by some Chinese to have the

best flavor of all *Actinidia* fruits. China. H53M, H53M{SC}, J51P{SC}, P38

*Actinidia kolomikta* - *Hardy kiwi*, *Arctic beauty kiwi*, *Kishmish*, *Manchurian gooseberry* {PL}. The fruit is eaten fresh, dried, or preserved in salt. Young leaves are parboiled and eaten in soups, cooked and seasoned and used as a potherb, or preserved in salt. China, Japan, cultivated. TANAKA, THOMSON 1988 [Cu]; C9, C34, E63, E87, G73{S}, H4, H53M{SC}, H65, I83M, J61M, K63G{S}, M75, M77, N84{S}. (for cultivars see Kiwi, page 402)

*Actinidia melanandra* - *Red kiwi* {S}. The fruit is one inch long, egg-shaped, reddish in color, and can be eaten out of hand. A good pollinator for *A. arguta* var. *cordifolia*. Eastern Asia. THOMSON 1988; A79M, G73, H4{PL}, H53M{SC}, N84, P38. (see also Kiwi, page 402)

CULTIVARS

1064-79: Fruit ovoid, glabrous, smooth; about 1 inch long and 1 inch across; brown with a white patina. Self-fertile. Lance shaped leaves with a white underside. J51P{SC}

*Actinidia polygama* - *Silver vine*, *Matatabi* {S}. Young leaves are eaten raw with vinegared miso, or roasted and mixed with tea. Ripe fruits are smooth-skinned, bright orange in color, and are eaten raw, made into a liqueur, or dried for later use. Unripe fruits are pickled in salt. Eastern Asia. TANAKA, THOMSON 1988; A26, D95{PL}, F73D{PL}, G66, H4{PL}, H53M{SC}, J51P{SC}, K63G, N84, 053M

CULTIVARS {GR}

418-77B: Self-fertile clone with small, yellow fruit. Highly decorative vine with shiyy, ovate leaves, some colored white on the upper surface. A very vigorous grower. Hardy into Zone 4 and parts of Zone 3. H4

*Actinidia purpurea* - *Purple Chinese gooseberry* {PL}. Ripe fruits are smooth-skinned, sweet, purple inside and out, and are eaten out of hand. They are said to have a cherry-like flavor. China. TANAKA; A79M{S}, B74, D56M{S}, G66{S}, G73{S}, H4, H53M{SC}, I49P, J51P{SC}, K63G, M16, N40M, N84{S}. (for cultivars see Kiwi, page 402)

*Saurauia nepaulensis* - *Gogina* {S}. The yellowish fruits, the size of a cherry, are consumed with sugar by the natives of Kampuchea and Vietnam. Also used to adulterate honey. Himalayan region, Southeast Asia. UPHOF, WATT; Z25M

ADIANTACEAE

*Adiantum capillus-veneris* - *Maidenhair fern* {PL}. In the Arran Islands the fronds are dried and used as a tea substitute. The flavoring *capillaire* was once popular in England. The fern was simmered in water for several hours, and the liquid was then made into a thick syrup with sugar and orange water. *Capillaire* was then mixed with fruit juice and water to form soft drinks. Northern temperate region. HEDRICK 1919, MABEY; D61, D95, G0{DF}, H4, I98M, M42, M77M, M98, N7D{DF}, N37M, N84{S}

AGAVACEAE

*Agave americana* - *Century plant*, *Maguey* {S}. *Agamiel*, the sap from the flowering stem is sweet and can be drunk. It is also fermented into a whitish, viscous, slightly acidic alcoholic beverage called *pulque*. Kickapoo Indians bake the tender, asparagus-like flower stalks on hot stones. The resulting product is called *quite*. The bulbous leaf base is sweet and is eaten after roasting. Central America. HEDRICK 1919, LATORRE 1977b, STEINKRAUS; A69, H4{PL}, H52{PL}, I28{PL}, I57{PL}, K47M, P5, P17M, Q41, Q46, R88

*Agave angustifolia* - *Mescal agave* {PL}. The principal species of agave used in the manufacture of *mescal*, a tan-colored, sour alcoholic beverage produced by distilling the liquid that forms when the cooked and mashed stem bases of the plant, called *cabezas*, are allowed to ferment. Before distillation the *cabezas* are roasted over hot coals in underground pits covered with maguey leaves, which

contribute a smoky flavor to the mescal. Mescal of lower quality is commonly sweetened and flavored with tropical fruits, citrus, herbs or almonds. Flavored mezcals are known as *cremas de mescal*. Tropical America, cultivated. HUTSON 1995, NOBEL, STEINKRAUS; F80, H4, N84{S}, P5

*Agave atrovirens* - *Maguey manso* {PL}. *Pulque* and *mescal* are produced from the sap and the crushed stem bases, respectively. *Pulque* can be used in making bread or distilled into a brandy-like beverage called *aca pulque*. The cuticle or *corteza* is peeled from young leaves of the central spike and used as a translucent wrapping for the Mexican dish called *mixiote*, which is prepared for Christmas and Easter and other festive occasions. The flower stalk is roasted and eaten. Southwestern North America to Mexico. NOBEL, QUINTANA 1994 [Re], TANAKA; AOM

*Agave bovicornuta* - *Cow horn agave* {PL}. The young flowers, harvested from side branches of tall inflorescences, are cooked lightly then dipped in egg batter and fried. Mexico. NOBEL; AOM, G91M, H52, N84

*Agave deserti* - *Desert agave* {PL}. Flowers and flower buds are eaten. Young flower stalks are baked in earth ovens until they form a sweet, starchy cake called *mescal* said to taste like bananas and pineapple. The leaf bases are similarly prepared. *Pulque* is made from the sap. Nectar from the flowers was consumed directly by the Indians. Southwestern North America. CLARKE [Re], TANAKA, TATE; AOM, A61, A61{S}, A69{S}, C98M, F85{S}, G91M, I98M, I98M{S}, L13{S}, N51, Q41{S}, R88{S}

*Agave parryi* - *Parry's century plant* {S}. Young flower stalks are roasted and eaten. The bases of the stems, called *mescal heads* or *cabezas*, are baked in pits to produce a sweet vegetable that is eaten in the manner of an artichoke heart. Roasted leaves are eaten like artichoke bracts—the edible part being scraped off with the teeth, leaving the fibrous part behind. Nectar from the flowering stalk can be made into a sweet syrup. Southwestern North America. MC-GREGOR, MEDSGER, NOBEL; A69, F44M{PL}, F80, F85, H52{PL}, I28{PL}, I33, J25M, J25M{PL}, L13, N84, Q41, R88, T25M

#### *Agave quotifera* - *Agave salmiana*

*Agave salmiana* - *Maguey ceniso* {PL}. One of the principal species used for manufacturing *pulque*, which is produced from *aguamiel*, a sweet liquid that accumulates in hollowed-out stems of mature plants. *Aguamiel* can also be fermented into vinegar. The cuticle of the young, inner leaves is used as a wrapping for the Mexican delicacy *mixiote*, which is eaten on festive occasions, especially Christmas and Easter. The cuticle wrapping adds a subtle flavor to the dish which is steam-cooked and consists of chicken or other meats, chopped cactus stems (*nopalitos*), other vegetables and spices. Flower stalks are cut for *quiote*, which is sold in the streets and is chewed by the natives like sugar cane. Southwestern North America. NOBEL, QUINTANA 1986 [Re], UPHOF; B86

*Agave shawii* - *Shaw's agave* {PL}. The sweet nectar from the base of the flowers can be used directly. An endangered species. California. CLARKE, TANAKA; AOM, F85{S}, I98M, N51

*Agave sisalana* - *Sisal hemp* {S}. The heart of the new shoots is eaten in Java. An alcoholic beverage can be distilled from the sap of the flower stalk. In Venezuela, the roots are used in the production of *Cocuy*, a liqueur. Mexico, cultivated elsewhere. CAMPBELL-PLATT, TANAKA; I33, N84, P38, Q41

*Agave stricta* - *Hedgehog agave* {S}. In parts of Mexico the young flowers are removed from the side branches of tall inflorescences and are often lightly cooked and then dipped into an egg batter for frying. Mexico. NOBEL; AOM{PL}, A69, G94{PL}, H4{PL}, K47M, N84, Q41, R88, T25M

*Agave tequilana* - *Tequila agave*, *Chino azul* {PL}. Cultivated in Tequila, Jalisco for the production of the alcoholic beverages *mescal* and *tequila*, which are distilled from the roasted bases of the plants,

called *cabezas* or *pims*. The cultivar 'Azul' or *blue agave* is preferred for tequila manufacture which has four principal styles—*tequila añejo* (aged), *tequila blanco* (white, silver), *tequila abocado* (gold), and *tequila reposado* (reposed). Tequila is the principal ingredient, along with the orange liqueur *Cointreau*, of the classic cocktail known as *margarita*. In contemporary cuisine tequila is added to salsas, marinades, soups, pestos, tortas, frijoles, meat and fish dishes, cakes, pies, and custards. *Agave nectar*, a concentrated syrup made from the sap, is becoming popular with home brewers as an adjunct, especially for tequila-flavored meads. Mexico, cultivated. HUTSON 1995 [Cul, Re], NOBEL, UPHOF; A79M, F65{PD}, F73D{S}, G94

*Agave utahensis* - *Utah aloe* {PL}. The centers of the plants consisting of the buds, short stalks, and leaf bases are placed in stone lined pits and baked until they form a sweet cake. They can be dried for future use or soaked in water to produce a flavorful beverage. Roots and flower stalks are also edible. Western North America. GIBBONS 1973, HARRINGTON, H.; B84, F89M, G18, H52, H52{S}, I33{S}, I47M, I98M, N51, N84{S}, Q41{S}, R88{S}

*Dasyliion texanum* - *Texas sotol* {PL}. Central part of the bud containing a sugary pulp, was roasted in mescal pits and used as food by the Indians. It was also made into a beverage, *sotol*. Texas. UPHOF; A19, A69{S}, H4, N51, Q41{S}, R88{S}

*Dasyliion wheeleri* - *Wheeler sotol* {S}. Central bud was roasted in mescal pits and consumed by the Indians. *Sotol* was also made from this plant. Southwestern North America. UPHOF; AOM {PL}, A69, C98M{PL}, F63M, H4{PL}, I28{PL}, I33, I47, L13, N51{PL}, 093, Q41, R88

*Hesperoyucca whipplei* - *Chaparral yucca* {S}. Stalks are eaten raw or roasted in a pit. Flowers are boiled and eaten. Seeds are ground into flour. Southwestern North America. TANAKA; AOM{PL}, C9M, D56M, G60{PL}, H71, I98M, I98M{PL}, N84, 053M, P5, P17M, Q41

*Polianthes tuberosa* - *Tuberosa* {PL}. In Java the flowers are eaten by the Chinese in vegetable soup. They are added to the substrate in the manufacture of *kecap*, an Indonesian soy sauce. Also the source of *tuberosa*-flower water. Cultivated. MACNICOL [Re], STEINKRAUS, TANAKA; A79M, D24, E33, H4, H37M, I91, J27, M37M, M77, N84

*Samuela carnerosana* - *Palma barreta* {S}. The young flower clusters are eaten boiled or roasted. Mexico. TATE, UPHOF; A69, F85, H4{PL}, N51{PL}, R88

*Yucca aloifolia* - *Spanish bayonet*, *Spanish dagger* {S}. Crisp flower petals are eaten raw in salads. Flowers are dipped in egg batter and fried. After peeling, the flower stalk is boiled and eaten. Florida, Caribbean. MORTON 1977; C9M, F85, H4{PL}, H71, I33, K38, 053M, 093, P5, Q15G, Q32, R88

#### *Yucca arborescens* - \* *Yucca brevifolia*

*Yucca baccata* - *Banana yucca*, *Datil* {S}. Fleshy fruits are sweet and can be used in pies. The pulp is scraped out and dried for later use or boiled down to a paste, molded into cakes and then dried. They are later eaten as sweetmeats. Flowers and tender flower stalks are also eaten. Southwestern North America. CLARKE, GIBBONS 1966a, HARRINGTON, H., TATE; A69, C9M, D92M, E61{PL}, G66, I33, I47, J25M, J25M{PL}, K38, K63G, L13, P5, P17M, R88, etc.

*Yucca brevifolia* - *Joshua tree* {S}. The flower clusters, before the buds open, can be parboiled in salt water to remove the bitterness, drained, and cooked again and served like cauliflower. Opened buds, which are rich in sugar, are roasted and eaten as candy. Roots are eaten raw, boiled, or roasted. Seeds are also edible. Southwestern North America. TANAKA, TATE; A69, C9M, C98, F80, G60{PL}, G66, I33, I98M, I98M{PL}, K63G, L13, 053M, P17M, R88

#### *Yucca carnerosana* - *Samuela carnerosana*

*Yucca elata* - *Soap-tree yucca* {S}. The flowers are eaten raw or in preserves. Fruits are edible raw or cooked. An extract of the roots is used to produce foam in beverages. Southwestern North America. KUNKEL, MACNICOL, UPHOF; A69, C9M, C98, C98M, F63M, 133, J25M, J25M{PL}, K63G, 053M, Q41, R88

*Yucca elephantipes* - *Spanish dagger, Izote* {S}. After removing the bitter anthers and ovaries, the flowers are dipped in egg batter and fried. Rich in vitamin C and niacin, they are also added to salads, soups, and stews. The tender stem tips stripped of their leaves, called *cogollo de izote*, are eaten in El Salvador. Central America. UPHOF, WILLIAMS, L.; C9M, H4{PL}, I57{PL}, N84, P17M, Q32, Q41

*Yucca filamentosa* - *Adam's needle, Eve's thread* {PL}. Large, fleshy fruits are eaten. Flowers make a tasty and attractive addition to salads. Southwestern North America. GIBBONS 1979, HEDRICK 1919; A79M{S}, B32, C9M{S}, E33M, F80{S}, F89, G66{S}, H4, H49, 133{S}, 053M{S}

*Yucca glauca* - *Soapweed yucca* {PL}. Immature fruits are peeled, boiled, and served with butter and seasonings. The young flower stalk is cooked and the whitish inner portion eaten. Flowers and flower buds are eaten raw in salads or cooked as a potherb. North America. GIBBONS 1966a, HARRINGTON, H., KINDSCHER; C9, C9M{S}, D92M{S}, F51, F80{S}, H4, H49, 133{S}, I47{S}, J25M, L13{S}, M35M, 053M{S}

*Yucca mohavensis* - *Yucca schidigera*

*Yucca schidigera* - *Spanish dagger, Wild date* {S}. Young stems are chopped and cooked or baked like a sweet potato. Fruits and flowers are eaten raw or in jellies. Southwestern North America. TANAKA; C9M, F85, 133, 198M, I98M{PL}, N51{PL}, N84, R88

*Yucca whipplei* - *Hesperoyucca whipplei*

#### AIZOACEAE

*Glottiphyllum linguiforme* - {S}. Roots are used in the Transvaal for making a *kaffir beer*, the fermenting action being due to the presence of a yeast and two molds. South Africa. FOX, F.; H52{PL}, Q41, R88, T25M

*Khadia acutipetala* - {S}. The roots are used by the natives of Transvaal for the preparation of *khadi*, a fermented liquor. South Africa. FOX, E, TATE; N84, S28M

*Sesuvium portulacastrum* - *Sea purslane, Gelang pasir* {PL}. Seacoast plant with succulent, salty leaves that are eaten raw or cooked. They are also pickled like samphire. The leaves should be well rinsed in water to remove some of the salty taste. Good source of vitamin C. Pantropic, Southern United States. FERNALD, GIBBONS 1979, HEDRICK 1919, OCHSE, WATT; F73

*Trianthema portulacastrum* - *Ulisman, Toston* {S}. Succulent, fleshy leaves are eaten. The have a delightfully salty flavor, and are delicious in a salad dressed with apple cider vinegar. Tropical seacoasts. GIBBONS 1973, NIETHAMMER, WATT; F85

#### ALISMATACEAE

*AUisma plantago* - *Alisma plantago-aquatica*

*Alisma plantago-aquatica* - *Water plantain, Mad-dog weed* {S}. The bulb-like bases are eaten after being dried to rid them of their acrid properties. Northern temperate region. FERNALD, GIBBONS 1979; H30{PL}, I90M{PL}, J41M, K34, M15{PL}, M73{PL}, N3M{PL}, N11{PL}, N71M, N84, 053M, Q24

*Sagittaria latifolia* - *Arrowhead, Duck potato, Wapatoo* {PL}. Tubers are eaten boiled, creamed, fried and roasted, having a flavor similar to potatoes. It is best to peel the tubers after cooking them. The Indians sliced the boiled tubers and strung them on strings (like dried apples) to dry for winter use. North America. ANGIER [Re], CLARKE [Re], FERNALD, GIBBONS 1962 [Re]; A54, F73, G26,

G47M, G85, 174, J7M, J41M, K85M, M34M, M72, M73M, N3M, Nil, R49, etc.

*Sagittaria rigida* - *Sessile-fruited arrowhead* {PL}. The tubers are eaten, tasting like potatoes. Eastern North America. CROWHURST 1972 [Re], PETERSON, L.; G47M{S}, M34M, Nil, N84

*Sagittaria sagittifolia* - *Arrowhead, Water archer* {PL}. The tuber is eaten, wasted or boiled, and then seasoned. Young leaves and petioles are also edible. Eurasia. TANAKA; H4, K34, M73, N84{S}, 053M{S}, Q24{S}, R49

*Sagittaria sinensis* - *Chinese arrowhead, Chee koo, Kuwai* {PL}. Starchy tubers are chopped and cooked with pork or sliced and fried like potato chips. The protein content of 4 to 1% is high for a root crop. Young shoots are also eaten. Commonly found in Chinatown markets and used in Chinese and Japanese cuisines. China, Japan. COST 1988, DAHLEN [Pre, Cul], HARRINGTON, G. [Cu, Cul], HERKLOTS [Cu], ROSS [Re]; C74, 174, 190M, K34, M39

#### ALLIACEAE

*Allium akaka* - *Valik, Wolcg* {PL}. Young plants are considered a delicacy and are sold in the bazaars of Teheran. They are used as an addition to rice in pilafs. In Turkey, they are added to *herbal cheese* or dried and stored for winter use, in place of *A. cepa*. Iran, Temperate Asia. HEDRICK 1919, OZTURK; L92

*Allium ampeloprasum* - *Levant garlic, Perennial sweet leek, Yorktown onion* {PL}. Cultivated for its very large bulbs that are eaten raw or used as a condiment. The leafy tops of some strains are used as a vegetable or flavoring. Mediterranean region, Asia Minor, cultivated. FERNALD, KUNKEL, VILMORIN, ZEVEN; B61M, B61M{S}, L92, M77M, N84

#### CULTIVARS

**Elephant:** (Elephant Garlic) Very large bulbs can weigh over a pound. Preferred by some to regular garlic because of its milder flavor and ease of peeling. Mild enough to be eaten raw in salads. Also excellent baked, broiled, steamed, or boiled and served as a side dish. CUSUMANO [Cul, Rs], HALPIN [Cu], HAWKES [Cul]; B73M, C16, C16{PR}, C82, E3, FII, F66T{PR}, G16, H33M, 139, J99G, J99G{PD}, K22, K85, L7M, M46, etc.

**Gandana:** The green leafy tops are a common ingredient in Afghan cuisine. They are eaten with spinach and rice, or used as a filling in many famous dishes such as *ashak* (pasta) and *boulanee* (pastry). Mild, leek-like flavor. Grown as a perennial, cut-and-come-again crop. Occasionally available in Middle Eastern stores. SABERI [Re]; U63

**Perlzwiebel:** (Multipier Leek, Argentine Garlic) Multiplying cultivar that produces a cluster of solid (not layered) spherical white bulbs or rounds, much used for pickles in Holland and Germany. Bulbs range in size from 1/4 to 2 1/2 inches in diameter. If left in the ground after dieback, they will resprout in late winter or spring. Does not produce cloves or viable seed. WOOEWARD [Re]; U63

**Tarreh Irani:** (Three Irani, Persian Chives) Larger and flatter than common chives, but more delicate in both flavor and texture. Sweet, leek-like flavor. Widely used in Persian cuisine, especially for *kuku* (omelettes) and stews such as *khoresht-e ghormeh sabzi*. Occasionally available at Persian markets in the United States. Cultivated near Tehran. Similar if not identical to Gandana. SHAIDA [Re], ZEVEN; U63

*Allium ampeloprasum* var. *babingtonii* - *British leek, Welsh leek* {PL}. Bulbs are gathered and eaten in Western Ireland and Southwest England. The young leaves and bulbils are also eaten, having a mild, leek-like flavor. Thought to be a relic of former cultivation by monks. A very showy perennial with round, deep-purple flower heads. Grows to a height of 3 feet. British Isles. PHILLIPS, WOODWARD, ZEVEN; M82, N84, R49

*Allium ampeloprasum* Kurrat Group - *Kurrat-nabati, Salad leek* {S}. This is believed to be the leek of ancient Egypt, the leaves

having been found in Egyptian tombs. It is still cultivated there today, and in Arabia and the Middle East. Closely related to the common leek, but the young leaves are the part usually eaten. They can be added to salads, cooked as a side dish, or combined with other foods. Southwest Asia. DARBY, GESSERT, WOODWARD, ZEVEN; U63

*Allium ampeloprasum* Porrum Group - *Leek* {DF}. Leaves and long white stalks are eaten steamed, boiled, or braised much like asparagus. The stalk can be sliced thinly and added to salads. Also used to give a mild onion flavor to other foods. Widely used in gourmet French cuisine, especially *vichyssoise*. *Glamorgan sausages*, popular in Wales, are meatless sausages made from leeks, cheese and breadcrumbs. Sprouted seeds are eaten like those of onion or garlic. DWIES [Re], HALPIN, HEDRICK 1919, MORTON 1976; C16{S}, E14T, E97{S}, F37T, G73, L17, M82. (for cultivars see Leek, page 406, see also Sprouting Seeds, page 524)

*Allium angulosum* - *Mouse garlic* {PL}. In Siberia the bulbs are eaten fresh, and are dried or salted for winter use. Eastern Asia. HEDRICK 1919, TANAKA, WOODWARD; C11J, L92{PL}, N84

*Allium bakeri* - *Allium chinense*

*Allium canadense* - *Canada onion*, *Wild garlic*, *Meadow leek* {S}. The whole plant is gathered before the flowers appear and used like *scallions*. Top-setting bulbils make a fine onion-flavored pickle. The bulb is pure white, crisp, mild and of pleasant flavor. Forms a cluster of large bulbs under cultivation. North America. DORE, FERNALD, GIBBONS 1962 [Re], HEDRICK 1919, KINDSCHER; A61, A61{PL}, J39M, J39M{PL}, J42, J42{PL}, J43, M34M, N84, 053M, R49

*Allium cepa* - *Onion* {PD}. Bulbs are eaten raw, cooked, dried, pickled, roasted and served with salt and olive oil, or are used for flavoring other foods. The leaves of some cultivars are widely used as *scallions*. Sprouted seeds are eaten in salads and sandwiches. Dehydrated onions are a principal ingredient of herbal salt substitutes such as *Spike*, *Mrs. Dash* and *Vegit*. In Catalonia, large, leek-like *onion shoots* called *calgots* or *sprunzale* are produced from sprouting bulbs planted in trenches and blanched in the manner of celery, cardoons and finocchio. They are eaten raw with bread, grilled, or as flavoring for sauces and beans, both the white and green parts being used. The famous French dish *pissaladiere*, sometimes called *Provengalpizza*, calls for a thick covering of cooked onions, preferably sweet white onions with a high water content. *Sofregit* and *sambaina* are Catalan sauces made from onions. In Tunisia, a fermented onion paste called *hrous* flavor soups, stews and couscous. The outer scales or peels, called *shuski* in Slavic Macedonia, produce a dye widely used for coloring Easter eggs. In Egypt, they color and flavor *hamine* eggs. Shallots produce a particularly dark, rich-hued dye. Onion peels are used as a smoke flavoring by some gourmet chefs. Cultivated. ANDREWS, C. 1988 [Re], ANONYMOUS 1995, GRAY, P. [Cul, Re], HEDRICK 1919, KHALIL [Re], NEWALL, OLNEY [Re], TANAKA, UPHOF, WOLFERT 1994b [Re]; A52M. (for cultivars see Onion, page 438, see also Sprouting Seeds, page 524)

*Allium cepa* Aggregatum Group - *Potato onion*, *Multiplier onion*, *Shallot*. Unlike other onions these divide underground to form a cluster of bulbs. Some of the best gourmet onions are in this group. In Thailand, red shallots are fermented into *hom-dong* while in Indonesia their leaves and young flower stalks are used in soups and stews. OCHSE, STEINKRAUS, VILMORIN [Cu]; (for cultivars see Onion, page 438)

*Allium cepa* Aggregatum Group 'Perutile' - *Ever-ready onion*, *Everlasting onion* {PL}. Hardy perennial onion forming very dense clumps of leaves about a foot high. The leaves are finer in texture and milder than those of the Welsh onion, but are grown and used in the same manner. Each bulb planted in spring will produce 10 to 15 bulbs by autumn. HERKLOTS, LARKCOM 1984, WOODWARD [Cu]; N84, P92, R49, R53M

*Allium cernuum* - *Nodding onion*, *Lady's leek* {PL}. The strong-flavored bulbs are eaten raw, boiled, and pickled. Also used to flavor other foods. The flowers can be used like those of chives. North America. BARASH [Re], GESSERT, GIBBONS 1962 [Re], HARRINGTON, H.; C11J{S}, E15{S}, E61, G47M{S}, H37M, I47{S}, J39M, J40, J40{S}, J42, J42{S}, J43{S}, L13{S}

*Allium chinense* - *Rakkyo* {PL}. The bulbs, which have an excellent crisp texture and a strong onion-like but distinctive odor, are eaten raw or cooked. In China and Japan, they are often pickled in vinegar with either sugar, honey or soy sauce added. They can also be preserved in salt, sake lees or sweet sake. Sold in the United States in bottles or cans as *pickled scallions* or *rakkyo-zuke*. The finest rakkyo, known as *hana-rakkyo*, can take up to four years to produce. In Thailand, the roots are pickled with ground chili or used to make a kind of noodle dish called *khao soi*. China, cultivated. HERKLOTS, JACQUAT, MANN [Cu, Pro], TANAKA, TSUJI, UPHOF, WOODWARD [Cu, Be], YAMAGUCHI [Re], YASHIRODA; E56{PD}, G20M{ED}, H37M, N49M{PD}, S70

*Allium drummondii* - *Cebolla del monte*, *Wild onion* {PL}. The mineral-rich greens as used as a condiment by the Kickapoo Indians. Bulbs are eaten as a vegetable. North America, Mexico. KAVASCH [Re], KINDSCHER, LATORRE 1977b; N84

*Allium fistulosum* - *Welsh onion*, *Ciboule*, *Japanese bunching onion*, *Negi*, *Chang fa* {S}. The leaves are a principal source of *scallions*. Mostly used as a condiment for other foods or for tying foods before serving. Widely used in Chinese, Korean and Japanese cuisines, especially in scallion pancakes, called *chung yo bing* in China and *pajon* in Korea. Flowers are excellent for use in salads, soups and sauces. Cultivated. CHANG, W. [Re], HALPIN, HARRINGTON, G., HERKLOTS, LARKCOM 1984, NOH [Cul, Re]; C11J, C82, C85M, E14T{DF}, G68, 191, L16{DF}, M82{PL}, N7G, 053M, S55. (for cultivars see Onion, page 438)

*Allium geyeri* - *Geyer onion* {PL}. The bulbs were eaten by the Navajo, Apache and Nez Perce Indians, usually after drying and then steaming in pits. Western North America. HARRINGTON, H., TANAKA, WOODWARD; A61, D95, L13{S}, N84{S}

*Allium grayi* - *Nobiru*, *Tallae* {PL}. The whole, young plants are eaten raw, seasoned with miso or put into miso soup, used in stir-fry dishes, made into *kimchi*, or prepared with soy sauce and sesame oil. The bulbs can be eaten in salads or pickled like those of *A. chinense*. Occasionally available fresh in Korean markets. Eastern Asia. LEE, F. 1988 [Re], NOH, PEMBERTON, TANAKA; M77M

*Allium kurrat* -+ *Allium ampeloprasum*

*Allium ledebourianum* - *Asatsuki*, *Siu yuk* {S}. The leaves are eaten raw, in soups, sauteed, or used as a garnish for chilled tofu. Bulbs are pickled in brine, vinegar, or syrup. The flavor resembles wild onion and chives, with a hint of garlic. China, Japan. HERKLOTS, SHURTLEFF 1975, TANAKA, TSUJI; U63, V29M, V73M, V85M, W5, X54, Y29

*Allium longicuspis* - *Top-setting wild garlic* {PL}. Bulbs are eaten, resembling rocambole. They have a good garlic flavor. Perennial plant is believed to be the wild parent of garlic. Central Asia. ZEVEN; U63

*Allium nipponicum* - *Allium grayi*

*Allium obliquum* - *Twistedleaf garlic* {S}. Cultivated since ancient times in Siberia for the bulbs which are used as a substitute for garlic. Eurasia. HEDRICK 1919; A61, A61{PL}, E48{PL}, L92{PL}, N84, 053M

*Allium odoratum* - *Allium tuberosum*

*Allium odorum* - *Allium ramosum*

*Allium paniculatum* - *Sirno* {S}. Above ground parts of the plants, collected before they flower, are added to *herbal cheese*, a specialty of the East Anatolian provinces of Turkey. The herb

flavors the cheese, and also makes it somewhat softer. OZÆELIK, OZTURK; C11J, M77M{PL}, N84, R52, R83{PL}

*Allium x proliferum* (A. cepa x A. fistulosum) - *Egyptian onion*, *Topset onion*, *Tree onion*, *Walking onion* {PL}. Strong flavored bulbils are used as a flavoring or are added to cucumber pickles. The green leaf tips are used like chives; white lower stalks are chopped raw into salads; young thinned stalks are used as *scallions*, and the fat, hollow leaves can be slit and stuffed with cottage cheese. Cultivated. HALPIN [Cu], LARKCOM 1984, VILMORIN [Cu]; C67M, E61, F67, G68, 139, K22, K85, L7M, M53. (for cultivars see Onion, page 438)

*Allium ramosum* - *Chinese leek*, *Fragrant-flowered garlic*, *Fragrant Chinese chives* {S}. Leaves are eaten raw or used to flavor other foods. Suitable for edible landscaping, having white flowers with a red stripe down the center of each petal. Often confused with A. tuberosum. Central Asia. COST 1988, GESSERT, KUNKEL, WOODWARD; A61, D92M, E7M, F67{PL}, L59{PL}, N84, Q24, Q34, R49{PL}

*Allium rubellum* - *Himalayan onion* {S}. In India, the hill people eat the bulbs raw or cooked. The leaves are dried and preserved as a condiment. Eurasia. HEDRICK 1919, WATT; V73M

*Allium sativum* - *Garlic* {PL}. Bulbs are roasted, baked, boiled, sauteed, broiled or used as a flavoring for other foods. *Allioli*, *aioli*, *tarator*, *bagna cauda* and *skordalia* are garlic sauces widely used in Mediterranean and Middle Eastern cuisines, and *fleurs d'ail* is a sauce made from the flowers. The mild-flavored young leaves are considered a delicacy in the Orient, and are used in salads, soups, egg-dishes, etc. Flowering stalks, sometimes called *garlic chives*, are also used for flavoring and are occasionally sold in bunches in oriental stores. Dehydrated garlic is a common ingredient of herbal salt substitutes like *Vegit*, *Spike* and *Mrs. Dash*. Garlic oil is occasionally used in cooking. The seeds and sprouted seeds are also eaten. A nutritional supplement known as *garlic balls* contains odorless garlic mixed with ginseng and honey. Can be grown in indoor windowsill gardens. Cultivated. COST 1988, ENGELAND, GRAY, P. [Cu], [Re], HARRIS [Re], MORTON 1976, SALLOUM [Re], TANAKA; A52M{PD}, C85M, C94M{PD}, D65, D78{DF}, D82, D97{PD}, E60P{PD}, G47J{PD}, G68, G71, H25M{PD}, H33M, H41{ED}, H42, H54, J20, M82, N54{PD}, etc. (for cultivars see Garlic, page 370, see also Sprouting Seeds, page 524)

*Allium sativum* Ophioscorodon Group - *Top-setting garlic*, *Rocamboles*, *Spanish garlic*, *Serpent garlic*, *Ophio garlic*, *Hardneck garlic* {PL}. Both the bulbs and bulbils are used to flavor food, providing a mild garlic flavor. The flower stalk coils then straightens, later producing a cluster of pea-sized bulbils at the top of the stalk. Young chive-like leaves are preferred by some for their delicate flavor. The young flower shoots, called *garlic spears*, are a delicacy much appreciated in the Orient. Fresh cut spears are also a source of garlic oil. ENGELANDt HAWKES, KRAFT, LARKCOM 1984 [Cu], MORTON 1976, VILMORIN [Cu]; C43M, C43M{S}, D78{DF}, E7M, G68, K22, K85, M82, R47. (for cultivars see Garlic, page 370)

*Allium schoenoprasum* - *Chives*, *Ciboulette* {PL}. The mildly pungent leaves are used for flavoring soups, sauces, eggs, butter, cream cheese, etc. In England, chopped onions and chives are often used for flavoring *Cotswold*, a local *Gloucester* cheese. Flowers are eaten in egg, cheese and fish dishes, or used as a garnish. Cultivated. CAMPBELL-PLATT, LATHEOP, LEGGATT [Re], MORTON 1976, TANAKA; A97, C3{S}, C82, C82{S}, E14T{DF}, F80{S}, F85J{PD}, G84{DF}, H46{DF}, K22, K66{S}, K85, M53, N19M, R47, etc.

#### CULTIVARS

**Black Isle Blush:** A light mauve flowered cultivar that "blushes" with a deep pink flower center. Same usage as common chives. Royal Horticultural Society Award of Garden Merit winner in 1995. Developed by Poyntzfield Herb Nursery. R53M

**Dwarf:** Compact, low growing form of chives that only reaches a height of 3 to 6 inches. Attractive, pink blossoms. Excellent for a border edging. C9, K22, M82

**Extra Fine Leaved:** A special strain with a very fine leaf that is much in demand by growers for bunching. Grows about 12 inches tall. S55{S}

**Forescate:** Good flavor for culinary use. Choice edible flowers. Vigorous plant, 18 to 24 inches tall. The clumps of attractive foliage and clear, bright rose-red flower heads also make it an outstanding ornamental. A61{S}, B92, C9, C36, 139, J37M, M82

**Grolau:** (Windowsill Chives) Bred in Switzerland for greenhouse forcing. Can be grown on a windowsill, and because of its thick, dark green foliage will not yellow or become leggy. Produces best when kept continuously cut. Good strong flavor. I39{S}, J82, L94M{S}, M82, S55

**Pink Perfection:** A good culinary type with attractive pink blossoms. Royal Horticultural Society Award of Garden Merit winner in 1995. Developed by Poyntzfield Herb Nursery. R53M

**Profusion:** (Sterile) Prolific producer of flowers and tender leaves. Flowers remain edible much longer than other types because they do not develop seeds. Ideal for commercial edible flower producers and the gourmet trade. Also good for potted plant and indoor growing. Introduced by Richters. J82

**Purly:** Medium-heavy leaf. Good for both fresh market and processing. More upright plant habit than Staro, with a slightly straighter leaf. G6{S}

**Staro:** Heavy-leaf type. Developed for fresh market uses which demand a thicker leaf for freezing, drying, or immediate consumption. G6{S}

**Triumph:** Selected strain. Highly recommended for specialty market growers. Upright, fine-leaved plant; resistant to tip burn. Preferred by commercial growers over standard varieties. I77{S}

#### *Allium schoenoprasum* var. *foliosum* - \**Allium ledebourianum*

*Allium schoenoprasum* var. *sibiricum* - *Siberian chives*, *Giant chives* {PL}. The leaves and bulbs are pickled, used as a condiment or eaten in dumplings. Has a stronger garlic flavor than common chives. Temperate Asia, North America. TANAKA; C1 1J{S}, P92, R53M

*Allium scorodoprasum* - *Sand leek*, *Giant garlic* {S}. Bulbs are used for flavoring. It is still cultivated in some parts of the former Soviet Union. Eurasia. KUNKEL, ZEVEN; U63, V73M, V85M, V87, W88M, X54

*Allium senescens* - *Broadleaf chives*, *Sekka-yama-negi* {PL}. Bulbs, leaves, and young shoots are used as food. Eurasia. TANAKA; C9, E30, E61, F35M, J37M, L22, M77M, N84{S}

#### CULTIVARS

**Glaucum:** (Silver Corkscrew Chives) Very decorative, twisted, silver-grey foliage which never needs trimming. Mild, chive-like flavor, highly appreciated by some. Grows 6 to 8 inches tall, with contrasting 9 inch high flower stalks and lavender ball-shaped flowers. Excellent used as an edging in border plantings. Attractive as well as functional. B77, C9, C43M, E30, G96, H29M, H51M, J24, J37M, K22, K79, L22, M65M, M77M, M82, M92, etc.

#### *Allium sibiricum* - \**Allium schoenoprasum* var. *sibiricum*

*Allium sphaerocephalum* - *Round-headed garlic*, *Ballhead onion* {PL}. Bulbs are eaten by the people near Lake Baikal, Siberia. Dried leaves are used as food in India. Eurasia. HEDRICK 1919, TANAKA, WATT; A61{S}, E11, E33, F67, H63, I99M, K33M, L92, M82, N71M{S}, N84{S}, O53M{S}, Q24{S}

*Allium splendens* - *Chishima-rakkyo* {PL}. Small bulbs are eaten boiled or pickled in a mixture of sake, vinegar, and scy. Japan. UPHOF; A61{S}, C9, C1 I J{S}, M77M

*Allium stellatum* - *Prairie onion* {S}. The bulbs are eaten. North America. PETERSON, L., TANAKA; A61, B29, C13T{PL}, E48{PL}, G47M, H70M, H70M{PL}, J39M, J39M{PL}, J41M{PL}, J42, J42{PL}, M82{PL}, Q24

*Allium thunbergii* - *Yama-rakkyo* {PL}. Young plants and leaves are eaten raw, in soups, as a potherb, oil-roasted or preserved in salt. Bulbs are pickled in brine, vinegar, and syrup. Eastern Asia. TANAKA; M77M, N84

*Allium tricoccum* - *Ramps*, *Wild leek* {S}. Unfolding leaves and bulbs have a mild, sweet flavor and resemble leeks. They can be chopped fine and added to salads, fried, boiled and served with cream sauce, used in leek soups or canned for winter use. North America. ANGIER [Re], DOUTT, FERNALD, GIBBONS 1962 [Re], MEDSGER, SCHNEIDER 1986 [Cui, Re]; B51, G5{PR}, H25M{PR}, H61M, H73{PR}, I44{PL}, J6, J26M, J63T, J63T{PL}, J63T{DF}, J63T{PD}, J82, N9M, N9M{PL}, etc.

*Allium triquetrum* - *Three-cornered leek*, *Onion weed* {PL}. The flat leaves have a milder and more delicate flavor than the onion. They are eaten in Algeria. The flowers can be added to salads. Attractive for edible landscaping, but can be invasive. Mediterranean region, naturalized in North America. FAIRCHILD 1930, ROOS-COLLINS, WOODWARD [Cu, Re]; A61{S}, H37M, J99G, K33M, L59P, L92, N84{S}, R49, R83

*Allium tuberosum* - *Garlic chives*, *Chinese chives*, *Chinese leek*, *Nira*, *Gow choy* {PL}. The mild, garlic-flavored leaves are used in cooking, especially miso soup. Oil from the seeds is used as food. The blanched leaves, called *gau wong*, *chive shoots* or *yellow chives*, are a delicacy eaten with pork or poultry or stirred into noodle dishes at the last minute. Flowers, flower stems, and seedheads are all edible. Unripe seeds are used in Pennsylvania Dutch cooking. Sprouted seeds can be used like those of onion and garlic. Cultivated. ALTSCHUL, COST 1988 [Cul], DAHLEN [Pre, Cul], GESSERT, HERKLOTS, LARKCOM 1984 [Cu], ROUTHIER 1989 [Cul, Rs], WEAVER 1993 [Re]; A97, C3{S}, C82, C82{S}, K22, K22{S}, K66{S}, K85, L59{S}, M53, N7G{S}, N19M, R47{S}. (see also Sprouting Seeds, page 524)

#### CULTIVARS {S}

**Broad Leaved:** Long, thick white stems with large, broad dark-green leaves of excellent flavor. Used in Chinese cooking and stir-frying with eggs and meat. Very vigorous plant; height 13 to 15 inches; can be cut several times. Good for blanching culture. C20M, K73, L59, L79G, Q39, S63M

**Flowering:** (Chinese Leek Flower, Gow Choy Fah, Tenderpole) A cultivar selected for the edible flower buds and long, flower stalks. Unusual leek-like flavor, stronger than Chinese chive leaves. Excellent fried, pickled, and in soups. Widely grown in south China and Southeast Asia. COST 1988 [Cul], DAHLEN [Pre, Cul], ROSS [Re], ROUTHIER 1989 [Cul, Re]; B1M, C20M, D55, 177, L59, L79G, N84, S70

**Green Belt:** Specially selected for its dark green color, large and broad leaves, and disease resistance. Vigorous plant produces numerous tillers in a short period and is tolerant of winter temperature and summer heat. Ideal for year-round growing. Soft, pleasant flavored leaves; excellent for seasoning and kimchee making. C20M, F85, L79G, Q3

**Mauve:** (Curly) Has the same excellent garlic flavor as regular garlic chives, but features attractive mauve-colored edible flowers. Twisted, flat leaves. F35M, J82, K57{PL}, L94M, M82

**New Belt:** Thick, green leaves, 10 millimeters in width. Slightly more vigorous than the standard cultivar. Prolific and resistant to disease. Both stalks and buds are eaten. May be harvested at any stage for use raw in salads. Very important vegetable for Chinese dishes. S70

**Pink:** Similar to regular garlic chives in habit and flavor, but features attractive pink-colored edible flowers. E61

**Vietnamese:** Giant garlic chives from Metnam. Young flower stalks are stir-fried, steamed, or boiled. C82, C82{PL}

*Allium unifolium* - *One-leaf onion* {PL}. Bulbs and young shoots are fried and eaten. Western North America. TANAKA; D24, E63M, I98M, J99G, K33M, L92, N84{S}, R83

*Allium ursinum* - *Ramsons*, *Bear's garlic* {S}. Finely chopped leaves and bulbs are added to salads, omelettes, casseroles and sauces. They have an overpowering garlic odor that dissipates on cooking. The small green bulbils are used as a caper substitute. Eurasia. LAUNERT, MABEY, MICHAEL [Re], WOODWARD [Cu, Re]; A61, N71M, N84, O53M, Q24, R47, R49{PL}, R53M, R53M{PL}, S55

*Allium validum* - *Swamp onion* {PL}. Although the bulbs are somewhat fibrous they are very acceptable as a flavoring ingredient for soups and stews. Western North America. CLARKE, MEDSGER; D95, N84{S}

*Allium vineale* - *Crow garlic*, *Field garlic* {S}. Tender young tops can be chopped finely and used in salads. Bulbs are sometimes used but they have a very strong flavor and odor. Eurasia, naturalized in North America. ANGIER, FERNALD, GIBBONS 1962, MEDSGER; N84, 048

*Allium wallichii* - *Jimbu*, *Dzimbu* {S}. The aromatic leaves are cut, crushed and dried and used as a condiment for soups, dais, cooked vegetables and meat dishes. Has a strong, distinctive flavor, a small amount being enough to flavor a dish. An important article of trade in parts of Nepal. Himalayan region. ALTSCHUL, ASSOCIATION [Re], MAJUPURIA [Re], MANANDHAR, POHLE; N84, Q40{PL}

*Brodiaea douglasii* - {S}. Corms are edible raw, but are at their best when roasted slowly in hot ashes for up to an hour, after which they become rather sweet. The young seedpods may be used as a potherb. Western North America. KIRK; 147, O53M

*Brodiaea pulchella* - *Blue dicks* {S}. The corms are eaten raw, fried, boiled and roasted. Flowers are eaten in salads. Western North America. CLARKE; F80, G60{PL}, H61M, I98M{PL}, J25M, K15, L13, N7M, N84

#### *Dichelostemma pulchella* - *Brodiaea pulchella*

*Tulbaghia alliacea* - *Wild garlic*, *Isikhwa* {S}. Leaves and stems are cooked and eaten like spinach or are chopped fine, seasoned with salt and used as a relish. Young leaves are added to soups, stews, omelettes, pickles, etc. The flowers are regarded as a delicacy by Zulu women. Bulbs are cooked with meat or roasted and eaten. Southern Africa. FOX, R, TREGOLD; N84

*Tulbaghia violacea* - *Society garlic* {PL}. Flat leaves have a mild, garlic flavor and are used as a flavoring in soups, butters, spreads and salads. The attractive pink flowers are produced year round in warm climates, and can be used as a garnish, eaten in salads, or used to flavor other foods. South Africa. FOX, F., LATHBOP, MORSE [Re]; A97, E61, F35M, F53M, F93G, H4, H94M, J27, K22, L56, M53, N84{S}

#### CULTIVARS

**John Rider:** {S} Attractive border plant, growing 18 to 24 inches tall when in flower; rich violet flower umbels on strong stems. Will flower the first season if started early. Produces flowers year round in warm climates. Both flowers and foliage are edible, having a strong garlic-like flavor. D92M, N84, O53M

**Silver lace:** (Variegated, Tricolor) Dwarf, clumping plant with attractive grass-like leaves of deep green, margined with pink and white. Makes a fine container plant. More ornamental than the common type. The flowers are also somewhat milder in flavor. C9, E48, E61, F35M, F53M, G20, H4, H94M, I99P, K22, M82, N37M, R77

## ALTINGIACEAE

*Liquidamber orientalis* - {S}. Source of a gummy resin, called *Asian styrax*, used to flavor tobacco, chewing gum, baked goods, and candy. Asia Minor. MORTON 1976, TANAKA; Z25M

*Liquidamber styraciflua* - *Sweet gum* {S}. Produces a gummy resin that is chewed to sweeten the breath and clean the teeth, and also to flavor tobacco. It is called *storax*, or *American styrax*. Does not produce much resin in the Northern states. Eastern North America to Central America. MORTON 1976; A82{PL}, C9M, E47, E47{PL}, F80, H4{PL}, H7I, I28{PL}, K38, K63G, Q32

## AMARANTHACEAE

*Achyranthes aspera* - *Prickly chaff flower*, *Apamarga*, *Latjira* {S}. Young leaves and the leafy tops of the stems are eaten as *lalab* (side-dish) and as *bayam* or *bayem* (spinach) in *sayor* (soup). Used as a salt substitute in Chad. The seeds boiled in milk, *chach*, or whey are regarded as a good tonic in India. Old World Tropics. BHANDARI, CRIBB, DALZIEL, OCHSE, TREDGOLD, UPHOF; F68T, F85, N84

*Alternanthera amoena* - *Alternanthera ficoidea*

*Alternanthera ficoidea* - *Bayam merah*, *Bayam bang* {PL}. The young leaves are eaten raw with rice, boiled as a potherb, or eaten with *sambal*, a hot-pepper mixture. Southeast Asia. OCHSE; G96, N84

*Alternanthera sessilis* - *Bayam kremah*, *Chuk-tsit-tsoi* {PL}. The leaves and tender tops of the plants are eaten in salads, soups, curries, with fish or rice, and steamed as a potherb. Resembles spinach in appearance and flavor. Flowers are eaten in China. Tropics. ALTSCHUL, TANAKA, UPHOF; F85{S}, H29, I90M, N3M, N84{S}

*Alternanthera versicolor* - *Pink cress* {PL}. Pink-red serrated leaves make an attractive addition to salads. They are mild flavored and can be boiled and used as a potherb, mixed with stronger flavored greens. Southern Asia. KUNKEL; I90M

*Amaranthus caudatus* - *Inca wheat*, *Kiwicha*, *Pendant amaranth* {S}. Mild flavored greens are boiled and used as a potherb, or cooked in soups and stews. They can be harvested as thinnings from amaranth grain fields. Seeds are popped, ground into flour for baking, cooked into a porridge, or mixed with crude sugar to make a confection called *boroco*. Cultivated. COLE, J. [Re], KAUFFMAN [Cu], NATIONAL RESEARCH COUNCIL 1984, SAUER, WILLIAMS, L.; F80, F85, J25M, N84, O53M, PIG

*Amaranthus cruentus* - *Mexican grain amaranth* {PD}. Leaves are steamed and used as a spinach substitute. Sprouted seeds are eaten in salads and natural-foods cuisine. In Guatemala, the seeds are used for *torillas* or parched and popped, then made into a confection called *niguas*. A relatively new product, *pre-gel amaranth powder*, can be used as a replacement for corn starch in instant puddings, gravies and sauces. Flowers are used to color ceremonial maize bread. Cultivated. COLE, J. [Re], KAUFFMAN [Cu], NATIONAL RESEARCH COUNCIL 1984, SAUER; C25M, E56{DF}, 116, 116, I51M{DF}, I51M, L14G{DF}, L14G, O53M{S}. (for cultivars see Amaranth, page 265)

*Amaranthus dubius* - *Khada sag*, *Bayam bhaji* {S}. The leaves of this species are considered very palatable. They are eaten as a potherb in India, West Africa, the Caribbean, and Indonesia. One of the best cultivars is *Claroen*, particularly popular in Benin and Suriname. Seeds are also eaten. Tropics. CHAUHAN, D., NATIONAL RESEARCH COUNCIL 1984; N84, S55

*Amaranthus edulis* - *Amaranthus mantegazzianus*

*Amaranthus gangeticus* - *Amaranthus tricolor*

*Amaranthus gracilis* -> *Amaranthus viridis*

*Amaranthus graecizans* - *Prostrate amaranth* {S}. Young, tender leaves and stems have a bland, mild flavor. They are steamed and used as a potherb with purslane, mustard, and other greens with a more pronounced flavor. Seeds are eaten raw, parched, or ground into flour or meal. North America. HARRINGTON, H., KINDSCHER, KIRK; N84

*Amaranthus hybridus* - *Rough pigweed*, *Spleen amaranth* {S}. Leaves and young seedlings are eaten in salads\* soups, and stews. Seeds are eaten or ground into flour. Has the potential, through crossbreeding, of imparting early maturity to the white-seeded grain amaranths. North America, widespread. MORTON 1977, NATIONAL RESEARCH COUNCIL 1984; M34M, N84, R47. (for cultivars see Amaranth, page 265)

*Amaranthus hypochondriacus* - *Mercado grain amaranth*, *Guegui*, *Bledo*, *Ramdana*, *Rajgira* {S}. The seeds are eaten toasted, made into *torillas* and *chapaties*, rolled into balls, or powdered and drunk as *atole*. Popped grain is soaked in milk and sugar, or mixed with honey to form cakes called *laddoos* in India and *alegrías* in Mexico. Young leaves are used like spinach. Sprouted seeds are used in salads. Cultivated. COLE, J. [Re], HALPIN [Cu], JONES, M. [Re], KAUFFMAN [Cu], NATIONAL RESEARCH COUNCIL 1984, NIETHAMMER [Re], SAUER; A25G{EQ}, B31{DF}, C43M, J73, J82, PIG, RO. (for cultivars see Amaranth, page 265, see also Sprouting Seeds, page 524)

*Amaranthus lividus* - *Purple amaranth*, *Vleeta*, *Horsetooth amaranth* {S}. Cultivated in the gardens of the ancient Greeks and Romans for die purple-red leaves, eaten as a potherb. Ground seeds are made into cakes and porridge. Eurasia. KUNKEL, NATIONAL RESEARCH COUNCIL 1984, WATT; L77D, N84

*Amaranthus mangostanus* - *Amaranthus tricolor*

*Amaranthus mantegazzianus* - *Quinoa de Castilla* {S}. Seeds are used as a grain crop. Cultivated in Argentina but becoming rare. Andean South America. COLE, J., COONS, TANAKA, ZEVEN.

## CULTIVARS

**Bolivia 153:** Purple to black-seeded cultivar suitable for milling into flour. Mostly uniform red plants, 2 to 4 feet tall, characterized by one very thick floral spike. Medium to long season. A2, K49M

*Amaranthus oleraceus* - *Amaranthus lividus*

*Amaranthus paniculatus* - *Reuzen amaranth*, *Marsa* {S}. Leaves are a good substitute for spinach. Starchy seeds are ground into flour and used in baking. Cultivated. TANAKA, K53, RO

## CULTIVARS

**Oeschberg:** Very productive plant; height 3 feet; produces up to one half pound of nutritious seed on a square yard. Dark, ornamental foliage. Striking, rich bright blood-red spikes. Developed by the famous Oeschberg Horticultural College in Switzerland. D92M, N81, N84, Q34

*Amaranthus patulus* - *Amaranthus retroflexus*

*Amaranthus quitensis* - *Sangorache*, *Ataco* {S}. Occasionally cultivated for its stout, intensely red inflorescences which are a source of dye used for coloring *chicha* and ceremonial maize dishes. The leaves are eaten as a potherb. Seeds are ground into flour. Andean South America. KUNKEL, SAUER, ZEVEN; X54

*Amaranthus retroflexus* - *Redroot amaranth*, *Wild beet*, *Pigweed* {S}. Leaves and stems, while still young and tender, are eaten alone as a potherb or mixed with stronger flavored greens such as cress, dandelion and chicory. Amaranth meal is greatly improved by roasting the seeds before grinding. It is then mixed with cornmeal and used as *pinole* to make bread, cakes, and gruel. Seeds are occasionally sprouted and eaten. North America. ANGIER [Re], CLARKE [Re], GIBBONS 1962 [Re], HARRINGTON, H.; C82, L3J, M34M, N71M, N84, P38

*Amaranthus spinosus* - *Prickly amaranth*, *Spiny callaloo*, *Careless weed*, *Taduliya* {S}. The young leaves and tender stems, before

the spines form, are used as a spinach. Older ones are highly esteemed after the spines have been removed. In Uganda, the plant is used in the preparation of a local salt known as *abalong*, which imparts a sourish flavor to foods. The Maori make a type of wine from it. Pantropical. BURKILL, CAMPBELL-PLATT, GOODE, OCHSE, WATT, WILLIAMS, L.; F73D, F85, G73, N84, RO, R50

*Amaranthus tricolor* - *Chinese spinach*, *Hinn choy*, *Bayam*, *Callaloo*, *Sag* {S}. Leaves are eaten raw, boiled, steamed, stir-fried, or used in soups, stews, curries, frittatas, omelettes, pastas, sauces, etc. Types with very large leaves can be used for wrapping like grape leaves. The crisp interior of large stems makes a tasty cooked vegetable. An excellent hot weather substitute for spinach. Cultivated. BURKILL, COLE, J. [Re], HALPIN [Cul, Nu], HARRINGTON, G. [Cu], HERKLOTS, NIETHAMMER [Re], OCHSE, ORTIZ 1973 [Re], VILMORIN [Cu]; F85, G73, H49, I39, J82, N84, PIG, S55. (for cultivars see *Amaranth*, page 265)

*Amaranthus viridis* - *Green amaranth*, *Green callaloo*, *Bayam hedjo* {S}. The leaves are cooked and used as a spinach substitute. Leafy stems and flower clusters are also used as vegetables. One of the principal ingredients, along with *Xanthosoma* spp., of the Jamaican *peppercup* soup. Tropics. BENGHIAT [Cul, Re], BURKILL, CRIBB, OCHSE, TANAKA; F85, S55

*Amaranthus* x sp. (*A. cruentus* x *A. powellii*) - *Hopi red-dye amaranth*, *Komo* {S}. A form selected for its bright red pigmentation. A water extract of the flower clusters is used to color the pink maize wafer bread (*piki*) used in Hopi ceremonial dances. Seeds are also edible. Cultivated. SAUER; A2, C43M, C95, D68, D92M, E61, F35M{PL}, F37T{PL}, 116, J76, J76{PL}, K49M, L94M, O53M

*Celosia argentea* - *Quailgrass*, *Sokoyokoto* {S}. Leaves, tender stems, and young inflorescences are steamed and eaten as a potherb, or finely cut and used in soups. In Africa there are both green and red types. An edible oil is extracted from the seeds. The protein extracted from the leaves, known as *sokotein*, is used as a food supplement. Tropics, cultivated. DALZIEL, MARTIN 1975, OCHSE, OOMEN PIRIE, VAN EPHENHUSEN [Cu]; D33, D92M, F85, N84

*Celosia argentea* f. *cristata* - *Cockscomb* {S}. The young leafy shoots are boiled or steamed and used as a potherb. In Japan, they are added to miso soup. The classic Moghul and Kashmiri dish *rogan josh*, sometimes called *red lamb stew*, is often colored with a reddish liquid made by soaking partially dried cockscomb flowers in water. *Rista*, *Dani*, and *vari masala* (spice cake) are other Kashmiri foods using cockscomb flower water. Cultivated. ACHAYA, ALTSCHUL, MATTOO [Re], TANAKA; B6, D40G, D56M, D68, E7M, E81M, G0{DF}, G71, G82, 116, I63Z, 191, J82, K17J{PD}, K49M, K49T, K71, L3J, M29, N7D{DF}, etc.

#### CULTIVARS

**Mano de Obispo:** (Bishop's Hand) Ornamental cockscomb used in Mexico for decorating graves on The Day of the Dead (El Dia de los Muertos). Flowers are mostly a vivid magenta color, occasionally golden. The black seed is edible. 116, N84

*Celosia cristata* - \**Celosia argentea* f. *cristata*

*Celosia trigyna* - *Silver spinach*, *Ajefowo* {S}. Young and tender leafy shoots are finely cut up and used in soups and sauces. Tropical Africa. DALZIEL, FOX, R, VAN EPHENHUSEN [Cu]; U14

*Iresine herbstii* - *Blood leaf*, *Beefsteak* {PL}. Leaves are squeezed in water to obtain a red dye used for coloring agar-agar jellies. New Guinea, cultivated. BURKILL, TANAKA; E48, G73, G96, N84, P38, R77

*Pfaffia paniculata* - *Suma*, *Brazilian ginseng* {DF}. The roots have reportedly been used as a ginseng-like tonic by the Xingu tribe of Matto Grosso, Brazil for at least three hundred years. Also becoming popular with natural foods enthusiasts. Amazonian region. TIERRA, TYLER, VAN STRATEN; B21P, E14T, F37T, F73D, F86G, GO, K18M, L34, M15M, N7D

## AMARYLLIDACEAE

*Narcissus jonquilla* - *Jonquil* {PL}. The flowers are eaten in salads, candied, or made into desserts. Cultivated. CROWHURST 1973 [Re], MACNICOL; A61, E11, F40M, H37M, K33M, N84{S}, R52, R83

*Pancreatum maritimum* - *Sea daffodil* {S}. The bulbs are edible. They were exhibited with other foods at the International Exhibition of 1862. The seeds were apparently eaten in Ancient Greece. Southern Europe. HEDRICK 1919, LANZA 1996, NIEBUHR; H37M{PL}, L91M, M77{PL}, N84, Q24

## AMBROSIACEAE

*Ambrosia artemisiifolia* - *Ragweed* {S}. Achenes contain 19% oil, having slightly better drying properties than soybean oil. They have been suggested for edible purposes, as the oil is relatively free from linolenic acid. Sometimes called *oil of ragweed*. North America. UPHOF; M34M, N84

## ANACARDIACEAE

*Anacardium giganteum* - *Caju do matto* {S}. Fleshy receptacles are eaten green, cooked and roasted, or made into alcoholic beverages. They have a very pleasant subacid flavor reminiscent of strawberries. The cashew-like nuts are roasted and eaten. Northern South America. TANAKA, WILLAN; X88M

*Anacardium occidentale* - *Cashew* {S}. Kidney-shaped kernels are the cashew nuts of commerce. After preparation, they are eaten raw, roasted or made into cashew butter, nut milks, and *seed yogurt*. They also give flavor to *Madeira* wine. The fleshy receptacle, the *cashew apple*, is eaten fresh, stewed, candied, dried or made into chutney, vinegar, pickles, a carbonated beverage *cashola*, a brandy *fenni*, and a gin-like liquor *koniagi*. Cultivated. BENGHIAT [Cul, Re], CARIAS [Re], COLE, C. 1990 [Re], GARNER [Pro], JOHNS [Cul], MEYEROWITZ 1994b [Re], MORTON 1987a, POPENOE, W. 1920 [Cu], ROSENGARTEN, UPHOF; A79M, E29{PL}, F85, F97MJED), G92{PD}, H80M{ED}, I12{PL}, I66M{EQ}, J22{PL}, J51M{DF}, M63M{ED}, N84, 093, P5, Q12, Q18, Q93{PL}, etc.

*Bouea gandaria* - *Bouea macrophylla*

*Bouea macrophylla* - *Maprang*, *Gandaria*, *Kundang* {S}. The young, grayish-violet leaves are often eaten raw with *sambal ontjom*. Fruits with a sweetish sour flavor are peeled and eaten raw. Others have an acid flavor and are used as a substitute for sour lime and tamarind. Unripe fruits are used in making *rujak*, *asinan*, and *sambal gandaria*. Malaysia. BURKILL, MORTON 1987a, OCHSE, RIFAI. A45{PD}, N84

#### CULTIVARS {SC}

**Wan:** (Sweet) Small, plum-sized, orange fruit. Much sought after because of its fine flavor. When fully ripe, the entire fruit including the skin but not the seeds is eaten. Originated near Bangkok, Thailand. Introduced into Florida in 1967, by William F. Whitman. MORTON 1987a, WHITMAN; T73M

*Buchanania lanzan* - *Almondette tree*, *Chironji*, *Charoli* {S}. The seeds, which have an excellent flavor somewhat reminiscent of almonds or pistachio nuts, are eaten raw and roasted, or used in the preparation of sweetmeats and desserts such as *shrikhand*, *laddu* and *burfi*. The fruit has a pleasant, sweetish, subacid flavor. Also the source of a light yellow, wholesome oil that has a pleasant aroma and may be used as a substitute for almond or olive oil. Commonly found at Indian stores in North America. Also popular in England, where the seeds are known as *almondettes*. Tropical Asia. DEVI, JAFFREY [Re], MACNICOL [Re], MENNINGER, PARMAR, P. [Re], ROSENGARTEN, UPHOF; F74{DF}, Q46

*Choerospondias axillaris* - *Spondios axillariss*

*Dracontomelon dao* - *Yun meen*, *Jen-mien-tzu* {S}. The small, sourish-sweet fruits are cooked with soy sauce and eaten with rice, or used for flavoring curries. In Canton, they are commonly served

with minced pork. Leaves are also edible. Philippines. BURKILL, DAHLEN [Re], MARTIN 1975, PONGPANGAN, TANAKA; N84

*Harphephyllum caffrum* - *Kaffir plum* {S}. The tart, juicy, red fruits are sometimes eaten raw, but are more often made into a delicious jelly or a good rose wine. South Africa, cultivated. KUNKEL, TANAKA, TREDGOLD; A79M, C9M, N84, 053M, P5, P38, Q32, R33M, R60

*Lannea coromandelica* -> *Lannea grandis*

*Lannea grandis* - *Wodier wood*, *Kayoo djaran* {S}. Trunk is the source of a gum, *jingan gum*, much used in confectionery. Young leaves and shoots are eaten uncooked, steamed as *lalab* (spinach) with rice, and mixed in *sayor* (soup). Powdered bark is used as a flavoring for roast fowl. Southeast Asia. BURKILL, OCHSE, UPHOF; F85, Q46

*Mangifera caesia* - *Hndjai* {S}. Young fruits are sliced and eaten raw with ketjap or sambal. In Sumatra, the pulp is salted and preserved in bottles stoppered with ashes, then used as an admixture to small fishes wrapped in leaves. The leaves are eaten raw or used as a condiment. Fresh or dried seeds are grated, mixed with spices and dried fish, and eaten as a side-dish with rice. Malaya. MORTON 1987a, OCHSE, TANAKA, TANKARD, TINGGAL; N84

*Mangifera foetida* - *Horse mango* {S}. Before being eaten, the peeled young fruits—which have a strong turpentine-like flavor—are pickled, preserved in syrup, or used for chutneys and curries. They are sometimes consumed with a sambal sauce. Ripe fruits of sweet types are eaten fresh. Southern Asia, cultivated. BURKILL, JACQUAT, MORTON 1987a, OCHSE, RIFAI, TANAKA, TINGGAL, WATT; N84

*Mangifera indica* - *Mango* {S}. The juicy, aromatic fruit is eaten fresh, in curries, made into chutney, jams, pickles, pies, sauces, wine, vinegar, etc. The grated unripe flesh is used as a meat tenderizer. Dried unripe fruits, *amchoor*, are ground into a powder and used as a sour flavoring in Indian cuisine, and are also an ingredient of *chat masala*, a spice mixture. Seeds are used in the preparation of *dodol* or pudding; a starch and an edible fat are also extracted from them. Flowers and young leaves are also edible. In Jamaica, mango wood is reportedly used as a smoke flavoring for sausages. Cultivated. BENGHIAT, DEVI, GARNER [Pro], JAFFREY [Cul], KUNKEL, MORTON 1987a [Cu], NORMAN, OCHSE, ORTIZ 1973 [Re], PASSMORE, POPENOE, W. 1920 [Cu], SCHNEIDER 1986 [Cul, Re], TANAKA; A7{DF}, B23P{PR}, B60M{PR}, C9M, E29{PL}, F74{DF}, G0{PD}, G92{DF}, G99M{PR}, G99M{PD}, L54{PR}, L54{DF}, L54{PD}, N84, Q12, Q46, etc. (for cultivars see Mango, page 420)

*Mangifera odorata* - *Kuveni mango*, *Kuini* {S}. The ripe fruits are sour-sweet, with a strong turpentine-like aroma, and are eaten fresh or prepared as syrup, jam and sweets. Unripe fruits are pickled, used in curries, or eaten with vinegar. Malaysia, Indonesia. BROWN, BURKILL, MORTON 1987a, RIFAI, TANAKA; 019

*Pleiogynium cerasiferum* -> *Pleiogynium solandri*

*Pleiogynium solandri* - *Burdekin plum* {S}. The large, ribbed seeds have a pleasant flavor and are eaten. Fruits are used in jams and jellies. They develop their best flavor when allowed to soften and ripen for several days after they are harvested. Australia. CRIBB, MOWRY [Pro], ROBINS, UPHOF; E29{PL}, I83M{PL}, N84, 094, P5, P17M, P38, R15M, R33M

*Pleiogynium timorense* -> *Pleiogynium solandri*

*Rhus aromatica* - *Fragrant sumac* {PL}. The acid red fruits are made into *Indian lemonade*. Kiowa Indians ate the berries mixed with com meal, beaten with sugar or boiled into a tea. North America to Mexico. KINDSCHER, MEDSGER; B9M, C9M{S}, C47, D92M{S}, D95, F51, G89, H90, J39M, K38{S}, K63G{S}, M69M, M92, 093{S}

*Rhus chinensis* - *Sumac*, *Tibri* {S}. The fruit is eaten. Also used as a salt substitute and a vegetable rennet in the preparation of curds. China, Himalayan region. TANAKA; D95{PL}, F85, G66, N84

*Rhus copallina* - *Shining sumac*, *Winged sumac* {PL}. Fruits are used to make *Indian lemonade*. North America. ANGIER, FERNALD, HEDRICK 1919, MEDSGER, UPHOF; A80M, B9M, B32, E87, F51, G66{S}, H49,111M, I11M{S}, K38{S}, K63G{S}, K89, M69M, 053M{S}, 093{S}, etc.

*Rhus coriaria* - *Sicilian sumac*, *Elm-leaved sumac*, *Tartak* {DF}. Crushed fruits, along with *Origanum syriacum*, are the principal ingredients of *za'tar*, a popular spice mixture used in Middle Eastern cuisine. In Syria a valued drink is prepared by soaking the berries in milk. Immature fruits are used as a caper substitute. Middle East, Mediterranean region. HEDRICK 1919, MORTON 1976, NIEBUHR; A7, A7M{PD}, A52M, D95{PL}, E69, G66{S}, J66M, L16, L16{PD}, L50M{PD}, ei5G{S}

*Rhus glabra* - *Smooth sumac*, *Scarlet sumac* {PL}. A refreshing pink lemonade-like beverage is prepared by bruising the fruit in water, thus freeing the malic acid, straining the resulting liquid through cloth, and then adding sugar. The peeled young shoots and the peeled roots can be eaten raw. North America. FERNALD, GIBBONS 1962 [Re], KINDSCHER, MEDSGER, TURNER 1979 [Re]; A49D{DF}, C9M{S}, D95, F51, G0{DF}, H4, 14, I11M, I11M{S}, I47{S}, J26, M35M, 053M{S}

*Rhus integrifolia* - *Lemonade berry* {S}. Fruits are crushed in water to make a cooling beverage. Boiling should be avoided as this releases tannic acids. The Indians dried the berries for winter use when they made a kind of hot pink lemonade. Southwestern North America. CLARKE, HEDRICK 1919, MEDSGER; B94, C9M, D92M, D95{PL}, F85, G60{PL}, H71, 147, I98M, I98M{PL}, K15, N84, 053M

*Rhus javanica* - *Nurude*, *Mu-yen* {PL}. A salt derived from the fruit is used to flavor foods and to coagulate *tofu*. Indonesia. TANAKA; N37M

*Rhus ovata* - *Sugar bush* {S}. The pulp of the fruit is sucked for the pleasingly tart juice that forms on its surface. A sweetish white sap exudes from the fruit and is used as an acid flavoring or a sugar substitute. Leaves are boiled to make tea. Southwestern North America. CLARKE, MEDSGER, UPHOF; B94, C9M, D95{PL}, F63M, G59M, G60{PL}, H71, I98M, I98M{PL}, J25M, K15, N84

*Rhus trilobata* - *Lemonade sumac*, *Squaw berry* {PL}. Fruits are eaten fresh, dried, mixed with corn meal, or made into jam, lemon pie, or sumac ade. Southwestern North America. CLARKE [Re], KIRK, UPHOF; C43V{S}, D95, E61, E67T, F53M, F63M{S}, G60, G66{S}, H4, I47{S}, J25M, J25M{S}, J26, K38{S}, M35M, etc.

*Rhus typhina* - *Staghorn sumac*, *Vinegar tree* {PL}. Very sour fruits are used in pies and soaked in water to make *Indian lemonade*. Eastern North America. FERNALD, KUNKEL, MEDSGER; B9M, B32, C9M{S}, D45, D95, E33M, F51, F80{S}, H4, I11M, K38{S}, M35M, M69M, 053M{S}

*Schinus molle* - *Californiapfeppertree* {S}. Dried, roasted berries are used as a pepper substitute. Oil distilled from the fruit is used as a spice in baked goods and candy. The fruits are brewed into wine. They are also pulverized and used in cooling drinks called *horchatas* or *atoles* in Central America. The Incas of Peru made *chicha* and vinegar from them. South America, cultivated. COE, MORTON 1976, TANAKA, WILLIAMS, L.; A79M, C9M, G66, I28{PL}, I68{?L}, J86{PL}, K38, 053M, 093, P5, P17M, Q15G, Q32, S92

*Schinus terebinthifolius* - *Brazilian pepper*, *Pink peppercorns*, *Red peppercorns* {S}. The peppery seeds, imported from Reunion, are sold in expensive specialty markets and are used as a spice in Cajun and Nouvelle cuisines. However, they are known to cause rashes, vomiting, and diarrhea in some sensitive individuals. South America, cultivated. VONWELANETZ; A7{DF}, A79M, C9M,

C43M{PL}, C94M{DF}, F85, G66, K17J{DF}, K18M{DF}, L16{DF}, L17{DF}, L34{DF}, 053M, 093, P5, P17M, Q15G, Q32, etc.

*Sclerocarya birrea* - *Dineygama* {S}. Sugary fruits, the size of a plum, have a pleasant acid flavor and are eaten fresh or made into an alcoholic cider. Milky kernels are eaten like peanuts. Tropical Africa. HEDRICK 1919, TANAKA, UPHOF, VON MAYDELL; N84

*Sclerocarya birrea* ssp. *caffra* - *Sclerocarya caffra*

*Sclerocarya caffra* - *Marula* {S}. The tart, juicy fruit is eaten or made into jelly and a liqueur known as *Amarula*. An alcoholic cider is brewed from its juice, which is also boiled down to a thick black syrup used by the natives to sweeten their Guinea-corn gruel. Seed kernels, tasting like walnuts or peanuts, are eaten with *mealie meal*, or ground into flour. They contain 4 times the vitamin C of oranges. *Sakoa oil*, extracted from the kernel, contains 28% protein and is used in cooking. Southern Africa. CAMPBELL-PLATT, FCK, F., MENNINGER, TANAKA, TREGOLD, VAN WYK; M17{PL}, N84, 053M, R47, S28M

*Spondias axillaris* - *Lapsi*, *Hsuan-tso* {S}. The sour green fruits are used as a tamarind-like flavoring. In Nepal, they are commonly made into achar, candies, soups and sauces, or served as an accompaniment to various foods. *Titori* is a kind of bon-bon made from lapsi, salt, chili and asafoetida. Young leaves are eaten raw with chili sauce. The bark is chewed like betel nut. China. JACQUAT, MAJUPURIA [Re], TANAKA, VON REIS; P38

*Spondias cytherea* - \**Spondias dulcis*

*Spondias dulcis* - *Ambarella*, *Vi apple*, *Otaheite apple*, *June plum*, *Golden apple* {PL}. The ripe fruits are eaten fresh, dried, cooked in coconut milk, curried, put in syrup with agar-agar, or made into jams, drinks, wine, and marmalade. Unripe fruits are made into jelly, pickles, *rujak*, and relishes or used as a sour flavoring for sauces, soups and stews. Young leaves are pleasantly acid and are consumed raw, steamed with salted fish and rice, or used as a seasoning. Cultivated. EISEMAN, KENNARD [Pro], MORTON 1987a, POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], STURROCK, TANAKA, WALSH; A7{PD}, E8M, E29, F85{S}, 777, M17, N84{S}, R78M{S}

*Spondias lutea* - *Spondias mombin*

*Spondias mangifera* - *Malayan mombin*, *Amra*, *Buah amara*, *Klonjing* {S}. Young leaves and fruits are used in Indonesian cuisine to add a sour, lemony flavor to curry and other dishes. Fruits are also pickled in oil, salt and chilis or preserved in sugar. In Thailand, they are added to papaya salad or *plaa kung*, fresh shrimp in lemon juice. Panicles are eaten raw or cooked as a vegetable. Tropical Asia. BURKILL, JACQUAT, MORTON 1987a, OCHSE, TANAKA, WATT; N84, P38, P38{SC}, Q46

*Spondias mombin* - *Yellow mombin*, *Hog plum*, *Ciruella tronadora* {S}. The fleshy fruits are pleasantly acid and are eaten fresh or stewed with sugar, and are also made into cider-like drinks, ice cream, jams and jellies. Huastec Indians use them to flavor *aguardiente*. In Amazonas, they are used to produce a wine sold as *vinho de taperiba*. Unripe fruits are pickled and eaten like olives. Young leaves are cooked as greens. The bark is added to sugarcane juice when making *pulque*. Tropical America. ALCORN, JOHNS [Cu], KENNARD, MORION 1987a, POPENOE, W. 1920 [Cu, Pro], STURROCK; F85, M17{PL}

*Spondias pinnata* - *Spondias mangifera*

*Spondias purpurea* - *Red mombin*, *Purple mombin*, *Spanish plum*, *Ciruella* {S}. Spicy, subacid fruits are consumed fresh, stewed with raw sugar, or are boiled and dried for future use. Also made into jams, jellies and beverages. Unripe fruits are pickled in vinegar or made into a tart, green sauce. The sour leaves and shoots, containing 5.5% protein, are eaten raw or cooked. Tropical America. DUKE, KENNARD, MORION 1987a, POPENOE, W. 1920 [Cu, Pro],

STURROCK, WILLIAMS, L.; E29{PL}, F85, M17{PL}, N84, P38{SC}

*Spondias tuberosa* - *Imbu* {PL}. The greenish yellow, thick-skinned fruit has soft, melting, almost liquid flesh with a pleasant, subacid flavor suggestive of a sweet orange. It is eaten fresh or made into ice cream, jams, jellies and drinks. In northern Brazil, a famous custard-like dessert called *imbuzada* is prepared by adding the juice of the fruit to boiled sweet milk. Brazil. HEDRICK 1919, KENNARD, MORTON 1987a, POPENOE, W. 1920, UPHOF; E29, N84{S}

## ANNONACEAE

*Annona x atemoya* (*A. cherimola* x *A. squamosa*) - *Atemoya* {S}. A garden hybrid of the cherimoya and the sugar apple grown in the tropics for its sweetish fruit, which is usually eaten chilled. Has some of the qualities of the cherimoya, but is mostly grown in warmer climates where the cherimoya does not succeed. GARNER, MORTON 1987a [Cu], MOWRY, SCHNEIDER 1986 [Nu, Re], STURROCK; A41G{PL}, B60M{PR}, I77G{PL}, J29M, N84, P5, P38

### CULTIVARS {GR}

48-26: Libby cherimoya x Red Sugar sugar apple. Grey-pink fruit with short, bumpy protuberances; inside surface of skin pink-red; white flesh with a pink core, melting, very juicy; mild, sweet, refreshing flavor. Hyper-productive tree, should be thinned for good fruit size. Originated in Boynton Beach, Florida by Har Mahdeem. N53M

**African Pride**: (Kaller) Large fruit, up to 20 ounces; skin dull green, smooth to medium rough; flesh rubbery in texture, free of discoloration and bitterness next to the skin, flavor good; seeds few. Tree dwarfish, comes into production early; a biannual bearer in Florida, the first crop in September and October, the second in March and April. Originated in Israel; introduced into Australia from South Africa. BROOKS 1972, MORTON 1987a; J22, Q93

**Bradley**: Small to medium-sized fruit, symmetrical round in shape, of excellent flavor. Tree a heavy producer. Good for back yard growers. Originated in Florida. E29, 183M, N53M

Elly: Local Hawaiian selection with sweet fruits of good flavor and few seeds. Bears good crops of fruit. E8M

**Geffner**: Medium-sized fruit with firm, rubbery flesh and fair to good flavor; seedier than African Pride. Tree a heavy producer. Grown commercially on Kauai and in Florida. Selected in Israel. E8M, E29, G2M, J22, M17, N53M, Q93, S97M

**Hillar White**: Improved strain of Pink's Mammoth. Large fruit of good quality. Smaller and seedier than Pink's Mammoth, but more productive. Has fewer seeds than African Pride. Grows to a large tree. Does not produce good crops as early as African Pride, but will produce commercial crops for a longer period. Q93

**Page**: Medium-size fruit, tends to split on the tree. Sets good crops without hand pollination. Originated on the property of Morrison Page in the Redlands, Florida. One of the first named selections of *atemoya*. MORTON 1987a; Q93

**Pink's Mammoth**: (Mammoth, Pink's Prolific) Very large, irregularly-shaped fruit, up to 5 pounds; remarkably few seeds; flavor excellent; quality good though the flesh immediately below the rind is usually brownish and bitter. Large open tree, takes several years to come into production. Originated in Queensland, Australia. MORTON 1987a; E8M, J22

**Priestly**: Medium-sized fruit with few seeds and an excellent flavor; susceptible to splitting if left on the tree too long. Somewhat knobby and unattractive. Also not very productive. N53M

*Annona cherimola* - *Cherimoya* {PR}. The delicious fruits, tasting like a cross between a pineapple and a banana, are best eaten out of hand. Or they can be used in ice cream, custards, cakes, pies, sherbets and other desserts or turned into soft drinks and alcoholic

beverages. Andean South America, cultivated. GARNER [Pro], JOHNS [Cu], MORION 1987a [Cu], POPENOE, W. 1920 [Cu], SCHNEIDER 1986 [Nu, Re], SIMMONS 1972; C89, D3M, D57{PL}, E13G, E29{PL}, F15, N40, 093{S}, P38{S}, Q41{S}, Q49M{PL}. (for cultivars see Cherimoya, page 326)

*Annona cinerea* - *Anon morado*, *Rihon* {S}. The violet-tinted fruits, resembling a large sugar apple, have an unusually sweet flavor. Sold in the markets of Colombia. Southern Caribbean region. HEDRICK 1919, PEREZ-ARBELAEZ, UPHOF; Y2

*Annona diversifolia* - *llama* {PL}. The sweet fruits are eaten fresh, being one of the best for the tropical lowlands. Pale-green fruited types have very sweet white flesh. Pink-fruited kinds have a rose-pink tinged flesh that is more acidic like that of the cherimoya. Central America. KENNARD, MORTON 1987a, MOWRY, POPENOE, W. 1920 [Cu], SIMMONS 1972; A41G, D57, E29, F85{S}, M17{GR}, N84{S}, S97M

CULTIVARS {SC}

**Genova Red:** Large, smooth, pinkish-green fruit with deeply cracked skin; reddish pulp with a very pleasant, subacid flavor. Originated in Genova, Guatemala. Introduced into Florida in 1988. MAHDEEM; N53M

**Guillermo:** Large fruit with whitish-green skin and large rounded bumps, deeply cracked. Dark pink flesh of very good flavor. Originated in El Xab, Guatemala. Introduced into Florida in 1985. MAHDEEM; N53M

**Paiaoitá:** Medium-sized fruit; smooth, pinkish, lightly cracked skin, has a tendency to turn brown when ripe. Dark pink to light reddish pulp of very good flavor. Originated in Pajapita, Guatemala. Introduced into Florida in 1985. MAHDEEM; N53M

*Annona glabra* - *Pond apple*, *Alligator apple* {S}. The fruit is eaten raw, though not of good quality. Some types have fair flavor that can be improved by boiling. Also made into jelly and wine. Valued as a rootstock for other *Annona* species in wet soils. Florida, Tropical America. MORTON 1977, MORTON 1987a, POPENOE, W. 1920; A79M, E29{PL}, F85, M17{PL}, N84, P38

*Annona mannii* - *Anonidium mannii*

*Annona montana* - *Mountain soursop*, *Guandbana cimarrona*, *Araticu grande* {S}. Fruits are juicy, refreshingly subacid, peculiarly aromatic and of a fair flavor similar to the soursop. Can be grown at slightly higher elevations, with cooler temperatures, than the soursop. West Indies. KENNARD, MORTON 1987a, POPENOE, W. 1920; E29{PL}, F85, M17{PL}, N84, P38

*Annona muricata* - *Soursop*, *Guandbana* {PL}. Ripe fruits are juicy, refreshingly acid and are eaten raw. Also used in ice cream, sherbets, custards, and mixed with wine or brandy. A popular Cuban beverage *champola de guandbana* is made from the strained pulp and milk. In the Philippines, the juice is fermented into *nata de guayabana*. Young leafy, shoots are steamed and eaten. Unripe fruits are roasted, fried or boiled or used in soups. Leaves are brewed into *corosol tea*. Cultivated. CAMPBELL-PLATT, GARNER [Pro], HEDRICK 1919, MORTON 1987a [Cu], OCHSE, ORTIZ 1973 [Re], POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], STURROCK; A41G, A52M{PD}, A79M{S}, C4M{PD}, D57, E29, F85{S}, G5M{DF}, I77G, I83M, /77, N84{S}, P38{S}, Q93, R78M{S}, etc.

CULTIVARS {GR}

**Cuban Fiberless:** Medium to large, oblong fruit, 8 to 15 inches long; thin yellow-green skin, covered with short spines which become shorter and separate as the fruit ripens; juicy, white flesh with a subacid to sweet flavor, fiberless; numerous dark brown seeds. Tree small, upright, vigorous. Q93

**Dulce:** A sweet type having a very low acid content. Suitable for eating raw or using for drinks. E8M

**Miles 28:** A large-fruited strain, with fruits reaching the size of a watermelon. Originally from Costa Rica. E8M

**Whitman Fiberless:** Large fruit with delicious, melting pulp, completely fiberless. Can be eaten with a spoon like ice cream, spitting out the small seeds. Tree bears regularly. Second generation seedling selection of Cuban Fiberless, which seldom fruits in Florida. WHITMAN; E8M

*Annona purpurea* - *Soncoya* {S}. The fruit is round, brownish-gray in color, with soft bright-orange flesh of a pleasant aromatic flavor suggesting that of the northern pawpaw (*Asimina triloba*). It is usually eaten fresh or strained for juice and drunk as a beverage. Central America, cultivated. MORTON 1987a, POPENOE, W. 1920, STURROCK, UPHOF, WILLIAMS, L.; A79M, M17{PL}

*Annona reticulata* - *Bullock's heart*, *Custard apple* {S}. The sweetish fruits vary considerably in quality. Some are eaten fresh, but most often they are used in preserves, drinks, ice cream, custards, ices, milk shakes, and other desserts. Cultivated. GARNER [Pro], MORTON 1987a [Cu], POPENOE, W. 1920 [Cu], STURROCK; A79M, E29{PL}, F85, G73, G73{PL}, I77G{PL}, /77{PL}, K8, N84, 093, Q46

CULTIVARS {GR}

**Canul:** Medium-sized fruit; waxy, glossy, night-red skin; attractive purple flesh, very aromatic, deliciously sweet; free of grittiness but often lumpy near the seeds. Grows well on *A. glabra* rootstock. Introduced into Florida by L.H. Zill. MAHDEEM; M17, N53M

**San Pablo:** Large, elongated fruit with red skin and dark pink flesh. Good flavor and texture. Selected for creamy texture, attractive color, and rich flavor. Introduced into Florida by L.H. Zill. MAHDEEM; E29, M17, N53M

**Sartenava:** Red-skinned fruit with dark pink pulp, not as attractive as Canul or Tikal. Exceptional texture and flavor. Tree more vigorous than Canul or Tikal. Introduced into Florida by L.H. Zill. MAHDEEM; N53M

**Tikal:** Brilliant red pulp throughout except for some white around the seeds and core. Eating quality excellent. Apparently grows well on *A. glabra* rootstock. Originated in El Remate, Guatemala, near Lake Peten Itza. Introduced into Florida by L.H. Zill. MAHDEEM; E29, N53M

*Annona scleroderma* - *Posh-te* {PL}. The delicious, aromatic fruit is eaten out of hand. It is much richer than the soursop, with a suggestion of the flavor of the white sapote (*Casimiroa edulis*). Central America. POPENOE, W. 1920; M17

*Annona senegalensis* - *Wild custard apple*, *Abo*, *Amamense* {S}. The round, deep orange fruit has a pineapple-like aroma and the flavor of apricots. It is considered one of the best fruits of Tropical Africa. Unopened flower buds are eaten in soup and are also used to flavor other foods. Leaves are edible, containing 8.2% protein when dried. West Tropical Africa. DALZIEL, FOX, F., KUNKEL, MORTON 1987a, TREGOLD; F85, M17{PL}, N84

*Annona squamosa* - *Sugar apple*, *Sweetsop*, *Custard apple*, *Fruita de Conde* {S}. Sweet, creamy fruits are highly regarded as a dessert fruit in the Tropics. Mostly eaten fresh, but sometimes made into sherbets, ice cream, jellies, preserves, or a fermented cider. Cultivated. GARNER [Pro], IDONE, MORTON 1987a [Cu], POPENOE, W. 1920, TANAKA; A79M, B60M{PR}, D57{PL}, E8M{PL}, E29{PL}, F85, I12{PL}, I77G{PL}, I83M, N84, P5, P17M, Q12, Q18, Q46, etc.

CULTIVARS {PL}

**Kampona Mauve:** Medium-sized, very attractive fruit; skin segments mauve or reddish-purple, bright red or pink along the edges; inside of peel also reddish; creamy-white flesh, translucent when ripe, sweet and juicy; excellent flavor and texture. Highly productive, self-fertile tree. Seedling that originated at The Kampong, David Fairchild's former residence in Coconut Grove, Florida. VANAKEN; E29, M17, N53M

**Red:** Roundish fruit, 2 to 3 inches in diameter; skin pale green blushed with pink, small protuberances evenly distributed; soft, light pink flesh with a sweet melting flavor, numerous brown seeds

scattered throughout; ripens in early spring. Small tree with long, pointed, pale green leaves. Brought into Hawaii from Queensland, Australia. E29, M17

**Seedless:** Completely seedless fruit, slightly malformed; less appealing in flavor than seeded types. Splits badly during hot, humid summer weather; resists splitting in the cooler, drier winter months. MORTON 1987a, WHITMAN; E8M, E29, M17, N53M

*Anonidium mannii* - *Junglesop* {S}. The very large elongated fruits, weighing between ten and fifteen pounds, are eaten out of hand. The soft, yellow flesh varies from sweet and delicious to somewhat sour, depending on the genotype and the maturity of the fruit when picked. Tropical Africa. DANFORTH, UPHOF; Y40

*Artabotrys uncinatus* - *Climbing ylang ylang* {S}. Flowers are used to scent tea. Southeast Asia. TANAKA; A79M, D56M, F85, G73, K8, N40M, Q46

*Asimina grandiflora* - \**Asimina obovata*

*Asimina obovata* - *Florida pawpaw* {PL}. Fruits are said to be eaten. Can be hybridized with *A. triloba*. Southeastern North America. DARROW, TANAKA; H4, H14M, M17, N37M

*Asimina parviflora* - *Dwarf pawpaw* {PL}. The fruits are edible but not pleasant. Hybridizes with *A. triloba*. Southeastern North America. DARROW; D95, H4, H14M

*Asimina triloba* - *Pawpaw*; *Michigan banana*, *False banana* {PL}. Soft, creamy fruits have the flavor of banana custard and are delicious eaten out of hand. They can also be used for making preserves, pies, ice cream, cookies, cakes, and other sweet desserts. North America. ANGIER [Re], DARROW, FERNALD, GIBBONS 1962 [Re], LOGSDON 1981, SIMMONS 1972, THOMSON 1974 [Cu, Pro]; A80M, A82, B73M, D37, F16, H4, I11M, I49M, 160, 174, I83M, K38{S}, K63G{S}, L99G, L99G{S}, N37M, N84{S}, etc.

#### CULTIVARS {GR}

**Davis:** Small to medium, kidney-shaped fruit, up to 4 3/4 inches long; weight 4 ounces or more; skin green when ripe; flesh yellow, sweet, flavor good, seeds large; ripens the first week of October in Michigan. Keeps well in cold storage. Originated in Bellevue, Michigan by Corwin Davis. Introduced in 1961. BROOKS 1972; B74, B99, D37, 140, 149M, I49P, I60{PL}, I66T, 174, K67, L99G

**Estil:** Improved clone selected by Nettie Estil of Frankfurt, Kentucky. Large, high quality fruits averaging about 8 1/2 ounces each. Yellow flesh with a smooth texture and superior flavor. H4

**IXL:** Overleese x Davis. Large fruits weighing about 12 ounces each; tasty, yellow flesh. Ripens the second week of October in Michigan. Developed by Corwin Davis. 140, L99G

**LA Native:** (Louisiana Native) Small to medium-sized fruit with yellow flesh and good flavor. Blooms late in Tennessee. Somewhat resistant to frost. Originated in Louisiana. F43M

**Mango:** Medium to large fruit, may reach 12 to 14 ounces; yellow skin and flesh; quality very good to excellent. Ripens in late August and early September. Selected from the wild in Tifton, Georgia by Major C. Collins, in 1970. BROOKS 1997; D37, F43M, K67

**Marv Foos Johnson:** Good sized fruit with smooth, flavorful yellow flesh and relatively few seeds. Heavy producer. Similar if not identical to Sunflower. Selected from the wild in Kansas by Milo Gibson, possibly in the 1960's. Original seedling donated to North Willamette Experiment Station by Mary Foos Johnson. F43M, 174, K67

**Mitchell:** Medium to large, oval to round fruit; slightly yellow skin; golden-colored flesh with excellent flavor; few seeds. Hand-some tree with large leaves. Originated in Jefferson County, Illinois as a wild clone. Introduced by Joseph Hickman, prior to 1979. F43M, H4, K67

**NQ--1.1** Davis x Overleese. Large fruits with thin skin and few seeds; weight about 12 ounces; yellow skin and flesh. Ripens early, about September 15 in Ontario. Originated in Ontario, Canada by R.D. Campbell. Introduced in 1976. BROOKS 1997; B99

**Overleese:** Medium to large, oval to round fruits, weight 12 ounces or more; flesh firm, flavor very good to excellent; few seeds. Ripens the first week in October in Michigan. Tree very vigorous; productive, bears fruit in clusters of 3 to 5. Selected from the wild in Rushville, Indiana by W.R. Ward, in 1950. B74, B99, E62, E62{SC}, F43M, H4, 149M, I49P, 174, K67, L99G

**Pennsylvania Golden:** Yellow skin and golden flesh. Ripens in mid-September in New York. Seedling selection made by John Gordon of Amherst, New York. Original seed obtained from the George Slate collection. BROOKS 1997; E62, E62{S}, E62{SC}

**Prolific:** Medium to large fruit, weight 7 to 8 ounces; yellow flesh of excellent flavor; quality high. Ripens the first week of October in Michigan. Very precocious and reliable; an excellent cropper. Originated in Bellevue, Michigan in the mid-1980's. Selected by Corwin Davis. BROOKS 1997; B74, C34, 140, 149M, I49P, J61M, K67, L99G

**Rebecca's Gold:** Blunt, kidney-shaped fruit, weight 3 1/2 to 6 ounces; skin smooth and somewhat tender, green with slight bloom, turns yellowish when ripe; flesh chrome-yellow, melting, sweet and aromatic; seed unusually large, mostly 8 per fruit. Tree vigorous, upright, free of suckering; self-fruitful, bears 4 to 5 fruit per stem. Selected by John M. Riley in 1974. B74, F43M, H4, 149M, I49P, I66T, 174, J61M, K67

**Sue:** Discovered in southern Indiana by Don Munich. Selected for its excellent flavor and productiveness. Small fruits, about 4 inches in diameter and weighing 4 to 6 ounces; skin yellow when ripe; very tasty, yellow flesh. 140

**Sunflower:** Fruit large, about 8 to 12 ounces, borne in clusters of up to 5; skin has a yellowish cast when ripe; flesh butter-colored, flavor good; seeds few, often only 6 to 8; ripens the first week in October in Michigan. Tree wide rather than pyramidal; blooms and ripens its fruit slightly later than most cultivars; self-fertile; hardy in southern Michigan. Originated near Chanute, Kansas. B74, B99, C34, D37, E62{SC}, E87, F43M, H4, I49M, I49P, I66T, 174, J61M, K67, L99G

**Sunalo:** Large fruit, up to 12 ounces; yellow skin and yellow flesh; very good flavor. Ripens the first week of October in Michigan. L99G

**Sweet Alice:** Medium to large fruit with orange-yellow flesh. Excellent flavor with no aftertaste, not overly sweet. Bears in large clusters without hand-pollination. Introduced by Homer L. Jacobs of the Holden Arboretum, Mentor, Ohio. Selected from the wild in West Virginia. F43M, H4, 174, K67

**Taylor:** (Taylor #1) Small to medium-sized fruit; skin green when ripe; flesh yellow, sweet, flavor slightly better than Davis; ripens the first week in October. Tree fairly productive, bears fruit in clusters of up to 7. Selected from the wild in Eaton Rapids, Michigan by Corwin Davis, in 1968. B74, 149M, I49P, I66T, K67, L99G

**Taytwo:** (Taylor #2) (Taytoo) Large fruit, weighing up to 10 ounces; skin light green in color when ripe; flesh yellow, of excellent flavor; ripens from the 10th of October onward in southern Michigan. Tree a rather shy bearer. Selected from the wild in Eaton Rapids, Michigan by Corwin Davis, in 1968. 174, K67, L99G

**Wells:** Large to very large fruit; weight 10 to 14 ounces; green skin; very tasty, orange flesh; high flesh-to-seed ratio. Ripens in mid-season. Winner of a contest for the largest fruit. Selected by Brett Callaway and David K. Wells from a chance seedling found in Salem, Indiana. Introduced in 1990. B74, D37, E87, 149M, I49P, I66T, 174, J61M

**Wilson:** Attractive, medium-sized fruit; lemon-yellow skin; golden flesh with a very good flavor; quality high. Very prolific tree. Originated in the wild on Black Mountain, Harlan Co., Kentucky. Discovered by John V. Creech in 1985. BROOKS 1997; H4

**Zimmerman:** (SAA Zimmerman) One of the superior selections collected by the late George A. Zimmerman of Picketown, Pennsylvania during the first half of the 20th century. Yellow skin and flesh; few seeds; weight 6 to 8 ounces. E62, E62{PL}, E62{SC}

*Cananga odorata* - *Ylang-ylang* {PL}. The essential oil distilled from the flowers is used as a flavoring in candies, icings, baked goods, soft drinks, and chewing gum. Southeast Asia. MORTON 1976; A79M{S}, E29, F85{S}, G73, G73{S}, 112, M17, N84{S}

*Friesodielsia obovata* - *Monkey fingers* {S}. The scarlet fruits have a sweetly acid and mildly peppery flavor when eaten raw. They can be cooked as a rich red acid jelly, stewed, or fermented into a pleasant wine. Southern Africa. FOX, E, TREGOLD; F85

*Hexalobus crispiflorus* - *Bonde kpilima* {S}. The banana-shaped fruits are eaten fresh. Near the skin the flesh is firm and tart, while the jelly-like part surrounding the seeds is very sweet. When eaten together, the flavor is said to be reminiscent of ambarella, *Spondias dulcis*. West Tropical Africa. DANFORTH; Y40

*Monodora myristica* - *Calabash nutmeg*, *Jamaica nutmeg* {S}. Spicy seeds, resembling true nutmeg in flavor, are commonly sold in African markets. They are used to flavor soups and other foods. Tropical Africa. BURKILL, DALZIEL, MORTON 1976, UPHOF; F85

*Rollinia deliciosa* - *Biriba*, *Countess\*fruit*, *Amazon custard-apple* {PL}. The yellow fruits have a juicy, melting flesh of a very pleasing flavor, reminiscent of lemon meringue pie. Mostly eaten fresh, but can be used for pies, ice cream and cakes or made into wine. One of the most promising fruits of the expanding rare fruit market in Australia. Brazil, cultivated. MORION 1987a, POPENOE, W. 1920, UPHOF; E8M, J22, M17, N84{S}, 019{S}, P38{S}, Q93, R78M{S}

*Rollinia mucosa* - *Wild cachiman*, *Wild sweetsop* {S}. The yellow fruits have a white, mucilaginous, sweet pulp. They are eaten fresh or in desserts. Tropical America. KENNARD, MARTIN 1987, UPHOF, WILLAN; A41G{PL}, N84, P38

*Stelechocarpus burakol* - *Keppel apple* {S}. Round fruits, born on the trunks of the tree, are juicy, sweet, and fragrant. It is claimed that after eating these fragrant fruits, one's whole body is permeated with the smell of roses. Malaria. FAIRCHILD 1930, RIFAI; T73M

*Uvaria microcarpa* - *Kai kung shue* {S}. The yellowish-red to black fruits are eaten. Leaves are used for making *tsau peng*—*yczst* cakes employed in the manufacture of wine. China. ALTSCHUL, VON REIS; P5

*Xylopia aethiopica* - *Ethiopian pepper*, *Spice tree* {S}. Seeds and fruits are the source of an aromatic peppery spice once commonly exported to Europe. Now used locally to flavor coffee, palm wine and various dishes. Sold in markets of Senegal and other parts of Africa. Tropical Africa, cultivated. HEDRICK 1919, MORTON 1976, UPHOF; F85

*Xylopia frutescens* - *Malagueto chico* {S}. The fruits have an acrid, aromatic taste and are used as a substitute for pepper. It is said that the flesh of wild pigeons feeding on them permanently takes on their flavor. Brazil, Guiana. HEDRICK 1919, LOVELOCK, TANAKA; F85

#### APIACEAE (UMBELLIFERAE)

*Aegopodium podagraria* - *Gout weed*, *Ashweed*, *Ground elder*, *Herb Gerard* {S}. Young leaves and stems, having an unusual tangy flavor, are eaten raw in salads, cooked as greens, or made into fritters. Consumed by the country people of Northwest Germany

during spring, in *grüne suppe* (green soup). Eurasia, naturalized in North America. HEDRICK 1919, LARKCOM 1984, LAUNERT, MABEY, MICHAEL [Re], UPHOF; B9M, B47, K2, N84{S}, 048{S}

*Ammi majus* - *Bishop's weed*, *Queen Anne's lace* {S}. The seeds are used as a condiment. Eurasia. KUNKEL; C43M, D92M, E7M, F44, F80, H80, J82, J88, K66, 053M, Q34

*Ammi visnaga* - *Toothpick*, *Bishop weed* {S}. Seeds are one of the spices added to *mish*, a soft, pickled, ripened cheese with a yellowish-brown color and a sharp, salty flavor known to the ancient Egyptians and still popular in many parts of Egypt today. Leaves are chewed for their pleasant aromatic flavor. Eurasia. DAGHER, ROBINSON, R. 1991, TANAKA; A2, C43M, C43M{PL}, C95, D92M, F37T{PL}, F68T, F86G, 191, J82, Q34

*Anethum graveolens* - *Dill* {PL}. The young leaves, known as *dill weed* or *baby dill*, are used as a seasoning for salads, soups, eggs, vegetables, sour cream, cream cheese, *gravlax*, vinegars, sauces, etc. Seeds and flowers add flavor to pickles, gravies, stews, mustards and breads. In Poland, the roots, stems, leaves and seeds are added to pickles. Dill oil is used by the food industry in pickles, condiments, meat products, chewing gum, and candy. Sprouted seeds are eaten in breads, soups, and salad dressings. Both leaves and seeds can be brewed into tea, that made from the latter having a milder flavor. Eurasia, cultivated. BARASH [Re], GESSERT, GRIEVE, HEDRICK 1919, KNAB, LATHROP [Cu], LEGGATT, MARCIN, MORSE [Re], MORTON 1976, ROOT 1980b; A97, B75{S}, D92M{S}, F80{S}, H46{DF}, I91{S}, J66, J76, J76{S}, K22{S}, M35, N19M. (see also Sprouting Seeds, page 524)

#### CULTIVARS {S}

**Ambrozia:** Extremely fragrant cultivar that contains high levels of ethereal oil. Produces large quantities of foliage over an extended harvest period. Disease resistant. Originally from Poland, where it is well known and highly valued. K47

**Aroma:** Dark-green, leafy plants produce much more green matter before forming seed. Has a particularly fine fragrance and flavor. Excellent for *dill weed*, used either fresh or dried. Vigorous, bushy plants are heavy yielding and late blooming. Tetraploid. K22

**Bouquet:** 65 days. Leaves deep blue-green; stems slender; large, fairly compact head. Plant is relatively bushy, 30 to 40 inches, slightly earlier than Mammoth. Once the leaves turn yellow, they remain yellow for a long time before turning brown. The best cultivar to grow for the production of seeds. GESSERT; A75, B75M, C44, D82, D92M, F82, G68, H61, K73, M49

**Dukat:** Leaves blue-green; flavor very good, mellow and sweetly aromatic, never bitter or overly pungent. Plant vigorous; an abundant producer of leaves; holds longer at the leaf stage than other dills. Excellent either fresh or dried. *Al<sub>9</sub>* C53, D11M, D92M, E81M, F70, I39, J82, K50, K66, K73, L89, R53M, S55

**Fernleaf:** Unique dwarf dill, only grows 18 to 20 inches tall, branches from the base. Ideal for growing in pots, borders, or where space is limited. Dark bluish-green, finely cut foliage, excellent for *dill weed*. Very slow to bolt. Distinct and ornamental, but also retains the flavor of larger types. All America Selections winner for 1992. A97{PL}, B75{PL}, C92, D74B, E63D, G6, G71, I39, I91, I99P{PL}, J82, J97M, K50, K71, L89, L94M, M29, M82{PL}, R53M, etc.

**Hercules:** Heavy yielding tetraploid strain. Very flavorful. Slow to flower so foliage stays green and succulent longer. One of the best cultivars for the fresh leaf market. Large plant, 3 to 4 feet tall. G6, J82, K57, N84, 053M

**LQn<sup>^</sup> I<sup>^</sup>land.Mgmmph;** (Mammoth) 70 days. Leaves greenish, comparatively few in number. Plant 24 to 36 inches tall, vigorous, runs to seed very readily. Produces large productive heads which make unusual decoration. Grown primarily for the seeds. A2, A75, B78, C44, C92, E24, G16, G71, H61, K57, L7M, L89, S55

**Super Dukat:** Improved Dukat type with a higher essential oil content. Straighter and cleaner plant for easier harvesting. Flower heads are more uniform in height. Developed by Svalof of Sweden. G6, N84, S61M

**Tetra:** High quality tetraploid dill developed especially for its lush green foliage. Grows bushier and more vigorously than standard dill. Slow to bolt. Excellent for *dill weed*. Has double the normal number of chromosomes resulting in greater vigor and increased yields of foliage and seed. D92M, E81M, J82, N81, N84

**Vierlina:** A German cultivar specially selected to produce extra large flat-topped clusters of tiny yellow, green and white flowers for cutting, either fresh or dried. The fragrant, very fine feathery leaves are an attractive bluish-green. Very productive plant; height 2 1/2 feet. D92M, J82, K53, N81, N84, O1, 053M, S55

*Anethum graveolens* 'Sowa' - *Indian dill*, *Satapashpi* {S}. The fresh leaves are eaten with steamed rice or used for flavoring soups. Although pungent and bitter, the seeds are more popular than common dill and are an essential ingredient in curry powder. In Indonesia, they are used in pastries and drinks. Plants are taller than common dill, attaining a height of 2 to 4 feet. GESSERT, MORTON 1976, TANAKA; D92M, F85, J73, J82, N84, 048, S55

*Anethum sowa* - *Anethum graveolens*

*Angelica archangelica* - *Angelica* {PL}. The leafstalks are blanched and eaten like celery or combined with rhubarb in pies, sauces, and jams. Aromatic, licorice-flavored leaves are eaten in salads or cooked with fish or poultry. Candied flower stems and leafstalks are used in pastries, cakes, and confectionery. Young flower-heads, enclosed in their sheaths are eaten in salads, omelettes, or grilled and served with oil and vinegar. The seeds and roots are the source of an essential oil that flavors ice cream, candy, baked goods, puddings, cordials, *Benedictine*, *Chartreuse*, *vermouth*, *Angelique*, *Tatra* vodka, gins, etc. Dried leaves are used in the preparation of hop bitters. Leaves, seeds, and roots are brewed into tea. Eurasia, cultivated. BROWN, G, GRAY, P. [Cu], GRIEVE [Pie, Re], LATHROP, MARCIN, MORTON 1976, RAY, C, TANAKA, UPHOF, VILMORIN [Cu]; A97, C67M, C81M, D92M{S}, E61, F35M, H15T{PD}, J66M{PD}, K22, K54{ED}, K85, R47{S}

*Angelica atropurpurea* - *Purple angelica*, *Masterwort* {S}. Tender new stems and leafstalks are peeled and eaten in salads or blanched and used like asparagus. When boiled in two waters, they form a vegetable that strongly resembles stewed celery. The young leaves can be added to fish dishes, soups and stews. Roots, leafstalks and stems are candied. North America. CROWHURST 1972 [Re], FERNALD, MORTON 1976; C95, E7M, E61{PL}, F85, G47M, 131, J26M, J39M, J39M{PL}, J40, J42, L91M, N84, Q24

*Angelica gigas* - *Oni-no-dake*, *Korean angelica* {PL}. The young leaves are pickled, boiled or fried and eaten. Eastern Asia. TANAKA; A61, B28, C43M, D92M{S}, E33, E7M{S}, 191, I91{S}, K22, K63G{S}, L22, Mil, M82, M98, 053M{S}, etc.

*Angelica sinensis* - *Dong quai* {DF}. The roots are used in Chinese tonic soups, wines and rice porridges (congee). They have a strong distinctive flavor that combines well with hearty meats like mutton, but are also excellent with chicken or duck and vegetables such as winter melon. The main ingredient of a very famous commercial tonic known as *Shou Wu Chih*. Also an ingredient of *Four Things Soup*. Eastern Asia. FLAWS 1995, LEE, G, PASSMORE, TAN [Re], TEEGUARDEN, TIERRA; A49D, B21P, E2M, E14T, E13G{PR}, F68T{S}, F86G, G19P, G73, J82{S}, K18M, L17, E2M, L34, N29{ED}, etc.

*Angelica sylvestris* - *Woodland angelica*, *Wild angelica*, *Ground ash* {S}. Young stems and leaves are boiled and eaten as a vegetable. The chopped leaves are a good addition to stewed fruits, especially rhubarb. Stems and leafstalks are used in candies and sweetmeats. Eurasia. MABEY [Pre, Re], TANAKA; N71M, N84, 048, 053M, Q34

*Anthriscus cerefolium* - *Chervil*, *French parsley*, *Cerfeuil* {PL}. The leaves, when young, impart a warm, aromatic flavor to soups, stews, stuffings, egg dishes, potato salads, sauces, dressings, and tossed salads. They constitute the basis of the herbal mixture known by the French name of *finer herbes*. As a garnish they are added to meats and fish. The flowers are also used as a seasoning. Roots are consumed. Eurasia, cultivated. DE SOUNIN [Cu], HEDRICK 1919, KRAFT, LATHROP [Cu], LEGGATT [Re], MORTON 1976, VILMORIN; C3{S}, C94M{DF}, C94M{PD}, E7M{S}, F35M, F80{S}, H46{DF}, J11M{ED}, K66{S}, L16{DF}, L17{DF}, M53, N40{PR}, R47

CULTIVARS {S}

**Brussels Winter:** An improved European selection. Leaves are dark green, lacy, with a pleasant anise flavor. Plant is vigorous, slow to bolt, becomes much larger, and is more resistant to both heat and cold than older types. C53, DIT, D68, E28M, E63D, G6,177, K49M, K57{PL}, L7M, L77D, N84, Q34

**Curled:** (Curly, Cerfeuil Frise) The leaves are crisped or curled, very ornamental, and are better for garnishing; the aroma and flavor are the same as common chervil. It is more easily cultivated, earlier, of more vigorous growth, less hairy, and more productive. BURR [Cu], VILMORIN; D92M, E5T, G93M, 177,191, J82, K2, K22, K71, L94M, M46

**Long Standing:** Similar in habit and usage to common chervil, but has the tendency to bolt less quickly. Grows to about 2 feet tall. L94M

**Vertissimo:** Hardy type with dark green leaves. Very slow in running to seed. Grows back quickly after having been cut. Sown in the summer for a winter harvest. P59M

*Anthriscus nemorosa* - *Mendi*, *Mendo* {S}. The whole above ground plant is gathered before flowering and eaten as a vegetable or added to *herbal cheese* for flavoring. Mediterranean region. OZ-CELIK, OZTURK; W59M

*Anthriscus sylvestris* - *Woodland chervil*, *Beaked parsley*, *Cow parsley* {S}. Young leaves are sometimes eaten as a potherb or dried and stored for future use. Small quantities can be used for seasoning soups, salads, omelettes, casseroles, baked potatoes, and bean dishes. The roots are edible and are recommended for improvement by selection and breeding. Eurasia. MABEY, VILMORIN; F80, N71M, N84

*Apium australe* - \**Apium prostratum*

*Apium graveolens* - *Celery* {DF}. Leafstalks are blanched and eaten raw in salads, fried, braised, steamed, stuffed with cream cheese, or added to soups, stews, stuffings, and casseroles. Leaves can be chopped and added to tossed green salads. Celery juice is often blended with carrot, parsley and spinach juices. Celery seed, seed extract, and oil are used for flavoring sauces, soups, omelettes, beverages, pickles, celery salt, bakery products, etc. The dried leaves, sometimes marketed as celery flakes, have a stronger flavor than the seeds and can be added to salads and sandwiches. Eurasia, cultivated. CARCIONE [Re], FELL 1982b, GURSCHE [Nu], LARKCOM1984, MORTON 1976, ROOT 1980b [Cu], SKELLY, UPHOF, VILMORIN [Cu]; A49D, L17. (see also Celery, page 325)

CULTIVARS {S}

**Soice Celery 60000:** Developed in Israel for its aromatic seeds which are used as a spice. Has a high percentage of essential oils. A non-shattering type with very high yield potential. T27M

*Apium graveolens* Rapaceum Group - *Celeriac*, *Celery root*, *Turnip-rooted celery*, *Knob celery* {S}. Roots are sliced or grated and eaten raw in salads, braised, pureed, marinated, baked, mashed, cooked as a vegetable, or used in soups, stews, fritters, and stuffings. A popular way of preparing celeriac in France is to shred the roots into julienne strips, and then serve them with a *remoulade* sauce. Celery root powder gives a sweet, celery-like flavor to sauces, soups and dressings. Fermented celeriac root juice, sold

under the brand names *Biotta* and *Eden*, is popular with those following a natural foods diet. Leaves can be used for flavoring soups and stews. Often succeeds in areas not suited for celery culture. CUSUMANO [Cul, Re], DE SOUNIN [Cul], HALPIN [Cu], HAWKES [Re], HEDRICK 1919, HUNTER 1973a, KRAFT, ORGAN, SCHNEIDER 1986 [Pre, Re], UPHOF, VILMORIN [Cu]; E13G{PR}, J66M{PD}, L55J, N40{PR}, R47. (for cultivars see *Celeriac*, page 324)

*Apium graveolens* Secalinum Group - *Leaf celery*, *Soup celery*, *Cutting celery*, *Celeri a couper*, *Sedano da taglio* {S}. A group of cultivars that have been little improved by cultivation, and closely resemble the wild celery. Generally, they produce an abundance of erect-growing leaves. The stalks are hollow, rather thin, tender, and brittle. They send up great numbers of suckers, and are grown for their strongly aromatic leaves, which are cut like parsley and used for flavoring soups, stews, and the Italian herb mixture *soffritto*. After being cut they produce new leaves GRAY, P. [Cul, Re], LARKCOM 1984, VILMORIN, ZEVEN; C67M{PL}, C85M, E33, G6, J82, K49M, Q11M, R32, R47, R53M, S55

#### CULTIVARS

**Afina:** 60 days. Large, clumping, upright plant that produces numerous shoots; leafstalks hollow and tender. Very aromatic, dark-green foliage, excellent for flavoring soups. Regrows quickly after having been cut. Originally from The Netherlands. D68, P59M

**Amsterdam Fine:** Attractive 12 to 18 inch plant with crisp, dark green, somewhat serrated foliage that looks like a very shiny, flat-leaved parsley. Fresh or dried, they add a rich, mellow flavor to foods. Very easy to dry and does not lose its flavor in storage. Ready for picking when stalk celery is high in price. J97M, K66

**E-Z Leaf:** 75 days. Easily grown crops of leaves that can be used to add the flavor of celery to soups and stews. Can also be added to salads or used as a garnish. Grows to 12 inches in height. 191, K71, M53{PL}

**French Dinant:** Sends out a multitude of narrow thin stalks. Has a much fuller flavor than common stalk celery and is excellent for seasoning soups, stews, salads, and dressings. Resistant to light frosts. Can be dried and stored for winter use. A2, 139, N24M

**Golden Medium Early:** (Chinese Golden Medium Early, Golden Leaved) Yellowish-green leaves with long, crisp hollow stalks. Smaller and more delicate than Western cultivars. Has a very pleasant aroma, and a more subtle combination of flavors than Western types. D55, F73D, L59, L79G, N84

**Heung Kunn:** (Chinese Celery, Kintsai) The plant has a branching rather than a bunching habit, which makes it easier to harvest individual leafstalks as needed. These are thin, hollow, have a strong flavor, and should be picked when young as older ones lose their crisp tenderness. Both the leaves and stalks are used in stir-fried dishes, or used as a garnish in bowls of soup. COST 1988 [Cul], DAHLEN [Pre, Cul], KRAFT [Cu, Cul], ROSS [Re]; A2, F44, K73, M46, N84, Q34, R32, S55, S63M, S70

**Par-Cel:** Attractive plant with tender, dark-green leaves that resemble parsley; height approximately 18 inches. Rich, warm aromatic flavor. European heritage cultivar from the seed bank at Gatersleben, Germany. Traditionally boiled, eaten raw, or used specifically for soup flavoring. C53, D68, L91M, Q34

**Smallaae:** 90 days. Plants are tall, to 2 feet, with slender, yellowish green stalks and leaves. The leaves are smaller and more flavor-filled than those of regular celery, and are used for seasoning soups and stews. Both the leaves and stalks are blanched for use by planting densely. K2

**White Queen:** (F.) Distinctive, Chinese white-stalked type. Dark-green leaves and very long, thin, pure white leafstalks. Excellent for salads and cooking. Can be harvested 60 to 65 days after sowing. Potential specialty market item and salad mixture ingredient. PHILLIPS; 177, S63M

**Zwolsche Krul:** An old Dutch heritage cultivar with extra dark green leaves and a height of 2 1/2 to 3 feet. Bred for the production of leaves not leafstalks. Quite handy, hardier than common stalk celery. Excellent in soups and stews, and for drying. G16, J20, 053M

*Apium prostratum* - *Australian celery*, *Sea parsley* {PL}. The leaves have a parsley-like flavor and may be used as a garnish, cooked as a potherb, or added to salads, seafoods, soups and stews, and casseroles. Considered to have good potential for the bushfoods industry. Apparently not an Aboriginal food. Australasia. CHERI-KOFF, CRIBB, HEDRICK 1919, NATUSCH.

#### CULTIVARS

**Southern Ocean:** Vigorous, low-growing, perennial herb; spreading 3 to 3 1/2 feet wide. Selected for its unusual, broad-leaf form and intense parsley and celery-like flavor. Glossy-green leaves, similar in shape to common parsley. Produces better quality leaves and stems if given partial shade in summer. Adapted to coastal exposures and alkaline soils. N79, N79{PR}

*Arracacia xanthorhiza* - *Peruvian carrot*, *Apio*, *Arracacha* {PL}. The starchy tubers are eaten boiled, steamed, fried, added to soups and stews, or made into fritters and *chicha*. In flavor, they are faintly reminiscent of parsnips or celery with a hint of sweetness, and the texture is like that of potato or cassava. Also the source of a starch used in foods. Blanched young shoots can be eaten in salads or cooked as a vegetable. Andean South America, cultivated. DUKE, FRIED, HERKLOTS, HODGE 1954 [Cu, Pro], NATIONAL RESEARCH COUNCIL 1975a, NATIONAL RESEARCH COUNCIL 1989, ORTIZ 1979; 174, L55J, N84

*Athamanta cretensis* - *Candy carrot* {S}. Seeds are used for flavoring liqueurs. Mediterranean region. HEDRICK 1919; N84, Q24

*Bunium bulbocastanum* - *Earth chestnut*, *Tuberous-rooted caraway* {S}. Starchy tubers are eaten raw in salads or boiled and served as a vegetable. Leaves are used like parsley. The flowers and seeds are employed as condiments. Eurasia. KUNKEL, LOVELOCK, TANAKA, UPHOF; A2, C95, F73D, 139, 174{PL}, L3J, N84, 053M, R47

*Bunium persicum* - *Royal cumin*, *Shahi jeera*, *Siyah jeera*, *Black cumin* {DF}. An expensive spice occasionally sold in Indian stores. The seeds are darker, finer, and more complex in flavor than ordinary cumin. In Pakistan, Kashmir, Punjab and Uttar Pradesh the seeds are preferred to regular cumin for flavoring curries because of their strong flavor. Sometimes confused with *Nigella sativa*. South-west Asia. DEVI [Re], IAFFREY, KARIM, NORMAN; A7, C34G, E14T, F74, K17J

*Bupleurum rotundifolium* - *Thorowax* {S}. Leaves are eaten in salads or cooked as a potherb. Also said to be used as a spice. Eurasia. HEDRICK 1919, TANAKA; D92M, F35M{PL}, F68T, F86G, N84, 048, 053M

#### *Carum bulbocastanum* - *Bunium bulbocastanum*

*Carum carvi* - *Caraway* {PL}. Seeds are widely used for flavoring breads, sauerkraut, sausages, *Kiimmel* and other cheeses, cookies, cakes, brandy *schnapps*, and liqueurs such as *Kiimmel* and *Danziger Goldwasser*. They are often sugar-coated (*sugar plums*) and taken as a breath freshener and digestive aid after spicy meals. The young leaves form a good salad while older ones may be boiled and served like spinach or added to soups and stews. Roots are boiled and eaten or chopped and used in soups. Seeds are crushed and brewed into a tea. The seed oil is used commercially in ice cream, candy, pickles, soft drinks, etc. Eurasia, cultivated. BOWN, BREMNESS, CAMPBELL-PLATT, GRIEVE, HEDRICK 1919, KRAFT, MARCIN, MORTON 1976, RAY, C., ROOT 1980b [Cul], UNDSSET, UPHOF, VILMORIN [Cu]; A97, C3{S}, C43M, D92M{S}, F35M, F80{S}, G40{PD}, G84{DF}, H46{DF}, H94M, K22{S}, K54{PD}, N19M

## CULTIVARS {S}

**Annual:** Superior strain developed for commercial production. High-yielding plant, yields twice the crop of the standard biennial type. Also does not shatter when mature making for easier harvesting. Sown in March and April for harvesting in August and September of the same year. D92M, J82, N84, T27M

**Arterner:** High-yielding European cultivar with large, smooth seeds for cooking. Can be planted from early to late summer to yield fresh seed the second year. Essential oil content averages 4%. G6

*Carum copticum* - \**Trachyspermum ammi*

*Carum kelloggii* - \**Perideridia kelloggii*

*Carum roxburghianum* - *Ajmod, Randhuni, Wild celery* {S}. Widely cultivated in India for its seeds which are used in curries. In parts of Bengal they are occasionally added to the spice mixture known as *panch phoran*. The leaves are occasionally used as a substitute for parsley. One of the spices used in the manufacture of *kecap*, and Indonesian soy sauce. Southern Asia. KIRCHNER [Re], STEINKRAUS, WATT; D92M, J82, N84

*Carum segetum* - \**Ridolfia segetum*

*Chaerophyllum bulbosum* - *Turnip-rooted chervil, Tuberous chervil, Cerfeuil tubereux* {S}. The roots are eaten boiled, steamed, pureed, or used as a garnish for game. Their flesh is aromatic, floury, and sweet, with a peculiar aromatic flavor. The flavor is excellent and unlike that of any other vegetable. Do not peel the roots or the flavor will be ruined. For a change, the cooked roots can be sliced and fried in butter and served garnished with parsley. Eurasia. BROUK, ORGAN [Pre], ROHDE, VILMORIN [Cu]; C95, N71M, N84, R47

*Chaerophyllum bulbosum* ssp. *prescottii* - *Siberian chervil-turnip, Prescott chervil* {S}. The roots are cooked and eaten. They are longer and larger than the common tuberous-rooted chervil, but their flavor is coarser and more like that of the parsnip. Siberia. VILMORIN; W5, X33, X34, Z88

*Chaerophyllum prescottii* - *Chaerophyllum bulbosum* ssp. *prescottii*

*Conopodium denudatum* - *Conopodium majus*

*Conopodium majus* - *Pig nut* {S}. The small, tuberous roots are peeled and eaten raw in salads, boiled, roasted, or used in broths and soups. They are said to taste like a cross between raw chestnuts and fresh hazelnuts, with a hot after-taste of radish. Northern Europe. HEDRICK 1919, MABEY, MICHAEL [Re]; N84, 048, R49{PL}

*Coriandrum sativum* - *Coriander, Cilantro, Chinese parsley, Yuensai, Dhania* {S}. Young, aromatic leaves are pickled, stir-fried, used as a garnish, or eaten in soups, fish dishes, guacamole, and salads. Seeds are widely used to season curries, breads, puddings, sausages, pickles, cakes, liqueurs, gin essences, and spicy sauces. Confectioners form little pink and white comfits from them. They are often dry roasted to bring out their full flavor and aroma. In Southeast Asia, they are chewed with betel nut. Unripe seeds, having a distinctive flavor, are used by the Pennsylvania Dutch in pickles. The roots are used extensively in Thai cooking. Flowers are eaten in salads. Leafstalks are added to beans and soups for flavoring. Dried stems are popular for smoking foods, providing a very intense flavor. Mediterranean region, cultivated. BARASH, BREMNESS, CRAWFORD [Pre, Re], GRIEVE, HALPIN, HARRINGTON, G. [Cu, Cul], HERKLOTS, KENNEDY, D. [Cul], KRAFT [Re], ROUTHIER 1989 [Cul, Re], SHURTLEFF 1979, TANAKA, UPHOF, WEAVER 1993 [Re]; A49D{DF}, A97IPL, F71M, F80, G84IDF, H46{DF}, J3{PD}, K22, L90G{£D}, M53{PL}, N19M{PL}, N40{DF}

## CULTIVARS

**Caribe:** Long standing or slow bolting type used for the production of green leaves (cilantro). Adapted to Northeast growing conditions. K50

**Festival:** 50 days. Ultra early producer of leaves for culinary use. Produces a harvestable crop at least 2 weeks earlier than other types. Strong vigorous plants. Recommended for planting with Santo for continuous, season-long harvests. A87M, 191

**Indian:** 40 days. Annual type with oblong-shaped seeds. Seeds are sweeter and have a fuller flavor; used in curries or eaten like candy when sugar coated. Crushed leaves are more aromatic and superior in flavor to commercial coriander. Most highly esteemed cultivar in India. J73

**Jantar:** Slow-bolting type. Greater leaf production and at least 1 week slower to bolt than Santo. Plant with Santo and extend the harvest season for leaves. G6

**Large Leaved:** 35 days. A relatively slow flowering type which produces large quantities of young leaves for vegetable use. Resistant to bolting. Yields up to three times as much foliage as other types. D55, J20

**Leisure:** 47 days. Extra long standing or bolt resistant strain similar to Santo. Lush, finely-cut, deep green leaves. Grows about 2 feet tall. Has performed extremely well in trials across the nation. Recommended especially for hot weather plantings in southern or northeastern areas. AI, A87M, D12, E24, F63, H21, K10, L11, L42, N16, N84, R53M, S55

**Moroccan:** One of the best cultivars for the production of seeds. Quick to bolt and with minimal leaf production. C20M, D12, N84, S55

**Santo:** 60 days. Select strain that is fast growing yet remarkably slow bolting. Broad, celery-like, bright green leaves. Upright growth habit; grows about 15 inches tall. Recommended for spring and summer plantings where bolt tolerance is most important. A87M, C28, C44, D11M, F70, G6, G16, I64, 191, K50, L89, M35{PL}, N24M

**Slow Bolt:** (Long Standing) Bolt resistant strain similar to Santo. Produces lush vegetative growth through several cuttings and is relatively long standing. Although it is slow to bolt to seed, it is best to make succession plantings every few weeks to ensure a continuous harvest. Height 18 inches. Recommended for fall and winter plantings. C44, C53, E28M, 139, K50, J73, K17M, K57{PL}, K66, K71, L59, M46, N52, N84

**Tian China:** Very fine-leaved type originally from Eastern Asia. Said to be sweeter than most other commercially available strains. Also germinates very quickly, only 6 to 8 days at 60° F. J73

**Yen Sai:** Reportedly the sweetest of all cilantros. Also has thicker leaves than most other types, and keeps producing for a somewhat longer time. Slower to germinate than some, 17 days at 60° F. J73

*Crithmum maritimum* - *Samphire, Rock samphire, Sea fennel, Cristemarine* {PL}. The salty, slightly spicy leaves are pickled in vinegar, added to salads, or used like capers for flavoring other foods. The flowers are also eaten in salads. In Italy and Greece, the leaves are washed, cut into small pieces, and mixed with olive oil and lemon juice to prepare an agreeable salad dressing. Mediterranean region. BIANCHINI, FRANKE [Nu], GRAY, P. [Cu], GRIEVE, HAWKES, MATIGNON [Re], MICHAEL [Pre, Re], UPHOF, VILMORIN [Cu]; E61, F37T, H25M{£D}, H49, 139, J82, K22, L56, L90J, M82, 053M{S}, Q24{S}, R53M

*Cryptotaenia canadensis* - *Honewort, Wild chenil* {S}. Young leaves, stems, and flowers are boiled and eaten as a potherb, chopped and added to salads, or used in green soups. The roots can be scrubbed and boiled in salted water for 20 minutes and served with butter and a sprinkling of parsley, or with a cream sauce. The seeds can be used as a flavoring for cookies, cakes, and breads. Stems are candied in sugar. North America. CROWHURST 1972, FERNALD, GIBBONS 1979; N84

*Cryptotaenia japonica* - *Mitsuba, Japanese parsley, Japanese honewort, Trefoil* {S}. The leaves and blanched leafstalks are eaten

raw in salads and sandwiches, boiled, fried, added to soups, or used in egg dishes, tempura, and as a garnish. Often dressed with ground sesame seeds or soy sauce. Young seedlings or sprouts are eaten, having a pleasant angelica-like flavor. Roots can be blanched for five minutes, then sauteed in sesame oil, or they can be boiled together with diced parsnips. Seeds are utilized as a seasoning. Japan, cultivated. COST 1988 [Cu], HARRINGTON, G. [Cu, Cu], LARKCOM 1984, LARKCOM 1991, MORTON 1976, SHURTLEFF 1975, TANAKA, YASHIRODA; D55, D92M, E61{PL}, G20M{PR}, G33, G68, J76{PL}, K22{PL}, K85{PL}, L59, O53M, R32, S63M

#### CULTIVARS

**Kansai:** Vigorous, upright, rapid growing plant. Small leaves with long, uniform leaflets and good coloration. Suitable for growing in both water or open fields, but particularly adapted to water culture. Popular with market growers in Japan. Q88

**Purple:** (*Atropurpurea*) An attractive, unique, dark purple form from Japan that could be a useful specialty market item. N84

*Cuminum cyminum* - *Cumin, Jeera, Safed jeera* {S}. Aromatic seeds are widely used for flavoring soups, pickles, breads, cakes, cookies, *Leyden* and *Kumino* cheeses, curry powders, *falafel*, chutneys, chili sauce, cordials, etc. Occasionally they are candied and taken as a digestive aid. The ground spice is a standard ingredient of commercial curry powder. Cumin seed oil is used in condiments, sausages, meat sauces, etc. Especially popular in Spanish, Mexican, and Indian cuisines. In Vietnam, the stems are used as a condiment. Eurasia, cultivated. BREMNESS, DE SOUNIN, LATHROP [Cu], MORTON 1976, PAINTER [Cu, Re], ROOT 1980b[Cul], WALTER; A2, D92M, E91G, F80, F85J{PD}, 139, 191, J76{PL}, K22, M46, M82, S55

*Daucus carota* - *Wild carrot, Queen Anne's lace* {S}. Roots are sometimes cooked and eaten as a vegetable or added to soups and stews. The aromatic seeds are used for flavoring stews, soups, fish chowders, and savory sauces. Dried and roasted roots are ground and utilized as a substitute for coffee. Flower clusters can be French-fried into a carrot-flavored gourmet treat. Northern temperate region. CROWHURST 1972, FERNALD, GIBBONS 1979, HARRINGTON, H.; B39M, C43M, C82, D11T{PL}, D92M, F80, I11M, I37M{PL}, J76, J76{PL}, N9M, N9M{PL}, N23

*Daucus carota* Sativus Group - *Carrot* {DF}. The sweet roots are widely used raw in salads, boiled, steamed, fried, pickled, made into jam and wine, or used in soups, stews, casseroles, etc. Pigment from the juice of the orange-red cultivars is sometimes used for coloring butter. In Egypt, sliced red carrots are added to pickles to provide a pink or red color. An alcoholic tincture of the seeds is used in French liqueurs. Carrot seed oil is used for flavoring and as a yellow food colorant. Carrot root juice, both raw and fermented, is a very popular beverage with natural foods enthusiasts. It is sometimes made into a syrup used for sweetening. The leaves are eaten in soups and stews, couscous dishes, etc. Flour, made from dried roots, may be used to flavor and thicken soups, dips, sauces, breads, pancakes, muffins, puddings, and custards. Pectic acid can be extracted from the root and solidified into a wholesome, appetizing jelly. FELL 1982b, GRIEVE [Cu, Re], KHALIL [Re], LARKCOM 1984, LEUNG, MARTIN 1975, MILIUS [Re], TANAKA, UPHOF, VILMORIN [Cu], WOLFERT 1994b [Re]; G17M, L17. (for cultivars see Carrot, page 319)

*Daucus pusillus* - *American carrot, Rattlesnake weed* {S}. Roots were consumed by the Navajo and Nez Perce Indians. The Navajo of northern Arizona are reported to still use the plant, eating the roots raw or cooked. Western North America. KIRK, YANOVSKY; 198M

*Eryngium campestre* - *Snakeoot* {S}. Young shoots are used as a substitute for asparagus. Candied roots are occasionally eaten in France and England. They are also cooked and used as a vegetable. Europe. TANAKA, UPHOF; A61, A61{PL}, G80{PL}, J82, M82{PL}, N71M, N84, O53M, Q24, S55

*Eryngium foetidum* - *Culantro, Recao de monte, False coriander, Saw leaf herb, Shadow bennie* {PL}. Young leaves are sometimes eaten raw or steamed and served with rice. They have a strong coriander-like aroma, and are more commonly used as a garnish for fish and for flavoring soups, sauces and curries. Roots are used as a condiment in soups and meat dishes to which they impart a very agreeable flavor. The seeds are also said to be used. In West Indian markets of New York and other large cities, a seasoning mixture called *sofrito* is widely sold. Its three main ingredients are culantro, cilantro and *ajicitos*—small chilis, usually mild bonnet peppers (*Capsicum chinense*). Tropical America, cultivated. ALTSCHEUL, CHANTILES [Re], DEWITT 1993 [Re], DUKE, MORTON 1976, OCHSE, ROUTHIER 1989, UPHOF, WILLIAMS, L.; C43M, C43M{S}, C95{S}, D92M{S}, F80{S}, H94M, 112, J82, J82{S}, L94M{S}, M82, N84

*Eryngium maritimum* - *Sea holly, Sea eryngo* {S}. The young, tender, flowering shoots, when blanched, may be boiled and eaten like asparagus. When boiled or roasted, the roots are said to resemble chestnuts or parsnips in taste. The candied roots were known as *eringoes*, to which Shakespeare refers in *The Merry Wives of Windsor*. They were a vital ingredient of the Elizabethan dish, *marrow-bone pie*, European coasts, Asia Minor. GENDERS 1977, GRIEVE, HEDRICK 1919, LEYEL 1987a, MABEY; A61, A61{PL}, B61M, N84, O53M, Q24, R53M{PL}

*Falcaria vulgaris* - *Longleaf, Kazayagi* {S}. In Azerbaijan, the herb is mixed with malva, chickweed and other wild greens and put into *kutabs*—flatbread wrapped around various stuffings. Also used as a vegetable in Turk<sup>^</sup>. Euiasia. AKHMEDOV [Re], OZTURK; N71M

*Ferula assa-foetida* - *Asafoetida, Food-of-the-gods* {S}. The roots are the source of a gum resin used as a flavoring in lentil soup, curried fish, vegetarian dishes, sauces, drinks, pickles, cakes, etc. It is a standard ingredient of *Worcestershire sauce* and is widely employed in spice blends and condiments. Also popular in natural foods cuisine as a substitute for garlic. Young shoots are consumed as a cooked green vegetable. The cabbage-like folded heads are eaten raw as a delicacy. Roots are roasted and eaten. Southwest Asia, cultivated. GRIEVE, HEDRICK 1919, JAFFREY, MORTON 1976, UPHOF, VON WELANETZ; A2, A7{DF}, A49D{DF}, C43M, C43M{PL}, C95, E7M, F74{DF}, J76{PL}, K17J{DF}, K18M{DF}, L17{DF}, L94M, N84, R47

*Ferula communis* - *Giant anise fennel* {S}. Leaves are edible. North Africa. MARTIN 1975; C43M, C43M{PL}, F32D{PL}, J75{PL}, J76, J76{PL}, N84, O53M, Q24

*Foeniculum vulgare* - *Fennel, Wild fennel, Bitter fennel, Sweet fennel, Green anise* {PL}. The anise-flavored leaves are used as a garnish or as a seasoning for soups, salads, sauces, fish, olives, snails, *Champsac mustard*, etc. They are an essential ingredient of the classic Sicilian dish *pasta con le sarde*. Aromatic seeds, whole or ground, are used in stuffings, *finocchiona* sausage, breads, cookies, cakes, cheese, *taralli* biscuits, confectionery, etc. Cracked fennel seed is preferred for flavoring Italian sausages. Unripe seeds flavor *Kutztown Jar-Jar*, a relish. Fennel oil is widely employed for flavoring liqueurs such as *Sambuca*. The stems and flower heads are used as vegetables. Young flower heads are also steeped in vinegar and eaten in salads or used to flavor capers. In Tuscany, the pollen is added to soups and stews. Dried stalks are used as a smoke flavoring in the famous Provençal red mullet dish, *rouget flambe au fenouil*. Sprouted seeds are added to salads. In India, roasted or candy-coated seeds are chewed as an after-dinner breath freshener. In France, rabbits fed on fennel are said to develop a delicious flavor. A tea can be made by steeping the seeds or leaves in hot water. Roots are edible. Southern Europe, cultivated. BAILEY, C., BISSELL, BROWN, G., CLARKE [He], DEVI [Cu], GRAY, P. [Cu], GRIEVE, LANZA 1993 [He], MABEY, MARCIN, MICHAEL [Re], MORTON 1976, NORMAN, ROOT 1980b [Cu], VILMORIN [Cu], WEAVER 1993 [Re]; A97, B61M{S}, D92M{S}, E14T{PD}, F35M, G40{PD}, G68{S}, G87M{PD},

191 {S}, K27T{PD}, L99{PD}, M35, M53, N19M. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Berfena:** Consistent producer with a taller and sturdier growth habit than the standard type. Also has a stronger flavor. Used for both fresh leaf and seed production. J82, N84{S}

**Bronze:** (Red, Copper, Rubrum) The foliage, especially the new growth, is an attractive brownish-purple in color. Clusters of flat-topped ocher flowers. It is a vigorous grower, and can be used very effectively in a border. Good for culinary use. A97, C43M, C43M{S}, C67M, D92M{S}, J76, J82, K22, K85, M35, N7G{S}, N19M

**Smokey:** {S} 60 days. Attractive, lacey, smokey bronze foliage. Grows 5 or 6 feet tall. Strong, sweet licorice-like taste. Excellent for flavoring salads, fish and egg dishes. Also very good as a component of mesclun. The seeds may be harvested in the fall and used throughout the year. C53, E9JG, 191, K71, L89, L91M, M46

*Foeniculum vulgare* Azoricum Group - *Florence fennel*, *Finocchio* {S}. The blanched leafstalks are eaten raw in salads, steamed, sauteed, braised, pureed, fried, baked, or used in antipasto, soups, chowders, and pasta dishes. Fresh leaves can be used in salads or to give a slight anise flavor to foods. Dried or fresh, they are used in salad dressings. The seeds, which appear in the second year, may be used for flavoring cookies and candies. CUSUMANO [Cul, Re], GRIEVE, HALPIN [Cu, Cul], KRAFT [Re], LARK-COM 1984, SCHNEIDER 1986 [Pre, Re], VILMORIN; A76{PD}, C43M{PL}, D92M, F44, G68, G93M, J66{PL}, J76, J76{PL}, L7M, L89, M46, M53, M82{PL}, R47, etc.

#### CULTIVARS

**Albaro:** Newer cultivar with whiter bulbs. Also more rounded like Italian cultivars. Very resistant to bolting. Suitable for both spring and autumn sowing. Considered to be an important improvement over the standard cultivars Zefa Fino and Zefa Tardo. Q34

**Cantino:** A very reliable cultivar for spring sowing. Very resistant to bolting and produces fine quality bulbs. Grows all year and can be grown on open ground. B49, C95, N84, R32, S55

**Colossale d'Inaeanoli:** Very large, rounded, pure-white bulbs; very broad stalks with a good, firm texture. Ripens later than Romanesco. Very poor resistance to bolting. Sown from August onwards for harvesting in the fall and winter. N84, Q11M

**Cristal:** A selected strain recommended for areas with a short spring and hot summers. Plant in June and July for a fall harvest. Produces a medium-sized, roundish, brilliant pure-white bulb with full, crisp stalks. N84, Q11M

**Goal:** Compact plant, shorter in height than Zefa Fino, about 10 inches tall. Produces one of the largest, roundest bulbs available. Uniform bulbs. Very resistant to bolting. DI 1M, F70

**Mammoth:** Slow bolting, forms a large, thick bulb before running to seed. Best sown as a fall crop. Pleasant anise-like flavor, delicious cooked or eaten raw in salads. K49M, S17, S95M

**Perfection:** Developed in Europe for cool, northern climates. Matures quickly, is easier to grow, and is fairly resistant to bolting. Produces a round, medium sized bulb that is fleshy, tender, and crisp. Delicate aniseed flavor. S55

**Romanesco:** Very large, round, compact, pure white bulbs; tender, very sweet and quite aromatic; matures early. Moderately resistant to bolting. One of the most attractive cultivars. Sown from July onwards for harvesting in the fall. B8, N84, Q11M, S17

**Romy:** Large, globular bulbs, the shape preferred by Italian fennel aficionados; crisp delicate flesh with a refined sweet flavor. Produces more usable flesh because it lacks the tough, fibrous wrapper leaves that the more long-standing cultivars may develop. An extremely early maturing Italian heirloom. Suitable for an early spring or fall harvested crop. K66

Rudyi(F<sub>1</sub>) 80-90 days. More uniform, rounder, higher yielding version of Zefa Fino. Large, white bulbs; very thick and heavy; good tolerance to bolting. For spring and summer production. G6, K50, N81, N84

**Sicilian:** (Carosella) The plant is used while in the state of running to bloom; the stems, fresh and tender, are broken and served raw, still enclosed in the expanded leaf-stalks. The flavor is quite similar to finocchio, recalling tarragon or chervil. Bulbs can be used in place of finocchio. HALPIN, KRAFT [Re], VILMORIN; S17

**Zefa Fino:** (Fino) Slow bolting, can be sown in late spring or early summer with success, whereas other cultivars go to seed before forming a bulb. Vigorous plant, 12 to 18 inches tall; forms a large, tender, very sweet bulb. Recently introduced, and one of Europe's top varieties, bred at the Swiss Federal Research Station. LARK-COM 1984; C53, C95, D68, E24, E63D, G6,139,177, J20, K49T, K50, K66, M35{PL}, N7G, N81, RUM, S75M, etc.

**Zefa Tardo:** (Wadenswil) Produces thicker bulbs than Zefa Fino with heavy sheaths. Tall foliage. Recommended sowing is late spring to early summer, although late summer to early autumn plantings can be made in mild winter climates. S75M

*Glehnia littoralis* - *Corkwing*, *Hama-bdfu* {S}. The young leaves and leafstalks are used for their agreeable flavor and fragrance. They are pickled and are often served with sliced raw fish and vinegared dishes. One of the seven herbs that flavor *tozo*, sweet Japanese sake. Said to taste like a cross between angelica and tarragon. Grows in strong sun on coastal sand dunes. Eastern Asia. COOK, LOVE-LOCK, UPHOF, YASHIRODA; F88M

*Heracleum lanatum* - *Cow parsnip* {S}. The young leafstalks are eaten raw or cooked as greens. Chopped leaves may be added to salads. Peeled stalks can be eaten raw, but are best when cooked. Dried base of the plant and ashes from the burned leaves are used as a substitute for salt. The cooked root is said to have the flavor of rutabaga. Dried seeds are used as a seasoning for soups, stews, and potato salad. Northeast Asia, North America. CROWHURST 1972, FERNALD, GIBBONS 1979, HALL [Pre, Re], HARRINGTON, H., KIRK, UPHOF; F68T, F80, F85, G59M, H61M, 131, 160{PL}, I98M, J39M, J42, L3J, L55J

#### *Heracleum maximum* - *Heracleum lanatum*

*Heracleum persicum* - *Golpar*, *Sov* {DF}. Petioles and fleshy shoots are boiled and eaten as a breakfast food in parts of Turkey. They are also used there as an aromatic condiment in *herbal cheese*. In Iran, the seeds are ground into a powder and sprinkled over potatoes, cooked fava beans, and roasted watermelon seeds, or added to the spice mixture known as *advieh*. Whole seeds are added to soups, stews and some types of pickles. Southwest Asia, cultivated. BATMANGLU [Re], OZQELIK, OZTURK, SHAIDA [Re], UPHOF; K60D, K60D{PD}

*Heracleum pubescens* - *Downy cow-parsnip* {S}. The young shoots are filled with a sweet, aromatic juice and are eaten raw by the natives of the Caucasus. Southern Europe, Asia Minor. HEDRICK 1919; Y89M

*Heracleum sphondylium* - *European cow-parsnip*, *Hogweed* {S}. The young shoots and leaves may be boiled and eaten as a green vegetable, and when just sprouting from the ground resemble asparagus in flavor. From the boiled leaves and fruits an alcoholic beverage, called *bartsch*, is prepared. Employed in France to flavor liqueurs. A sweet substance resembling sugar is said to form upon the dried leafstalks, which is eaten as a great delicacy. The peduncles before flowering can be eaten as a vegetable or added to soups. Eurasia. CAMPBELL-PLATT, FERNALD, HEDRICK 1919, LAUNERT, UPHOF; C95, D35G, F80, F85, K63G, N71M, N84, O53M

*Laserpitium latifolium* - *Laserwort*, *White gentian* {S}. The Romans used the root with cumin in seasoning preserved artichokes.

A decoction of the seeds is used in beer. Eurasia. HEDRICK 1919, UPHOF; N84, Q24

*Laserpitium siler* - {S}. Roots and seeds are used by mountain people as a condiment. Seeds are used in Austria for the preparation of a liqueur. Europe. UPHOF; A61, A61{PL}, N84, 053M, Q24

*Ledebouriella divaricata* - *Bofu, Fang feng* {S}. Young leaves and shoots are eaten raw, boiled, stir-fried, preserved or added to soups. In Japan, the wine-red stems are commonly used as a garnish for seafood and kombu dishes such as "White Hsh and Tororo Kombu" and "Sea Bream and Sea Urchin". Eastern Asia. ARASAKI [Re], PASSMORE, TANAKA, TSUJI; J82, N84

*Ledebouriella seseloides* - *Ledebouriella divaricata*

*Leptotaenia dissecta* - *Lomatium dissectum*

*Levisticum officinale* - *Lovage* {PL}. The leafstalks and stem bases are blanched and eaten like celery or candied. Young leaves can be chopped and added to salads, soups, omelettes, stews, and seafood dishes. Seeds, either whole or ground, are used for flavoring soups, breads, cookies, confectionery, and French liqueurs. They are sometimes pickled like capers. The flowers are eaten. Roots are the source of *oil of lovage*, used for flavoring. An aromatic tea is made from the dried leaves or grated roots. Roots may be chopped and preserved in honey. Eurasia, cultivated. GRIEVE, HEDRICK 1919, LATHROP, LEGGATT [Re], MORTON 1976, UPHOF, VILMORIN [Cu]; A7{DF}, A97, C3{S}, D92M{S}, F80{S}, H46{DF}, I77M, J66, J76, K22, K85, N19M, R47{S}

CULTIVARS {S}

**Maanus:** An improved strain with more uniform growth. J82, N84

*Ligusticum hultenii* - *Sea lovage, Wild celery* {S}. Young leaves can be used as a substitute for celery. The leaves and stalks are cooked as a vegetable. In Alaska, they are eaten raw with seal oil, or stored in seal oil for winter use. The roots are reportedly eaten. Alaska, Eastern Asia. HELLER, TANANA, UPHOF; C95

*Ligusticum monnieri* - *Gieng sang, Xa-sang* {S}. Occasionally cultivated in northern Vietnam where the herb is used as a condiment. Temperate Asia. UPHOF; F85

*Ligusticum scoticum* - *Scotch lovage* {S}. The young shoots and leafstalks are blanched and used as a celery substitute in tossed green salads or as a flavoring for soups and stews. In the Hebrides, it is eaten raw in a salad known as *shunis*. Young shoots and roots are occasionally candied like angelica. The green stem is peeled and eaten. Roots are chewed. Northern temperate region. ANGIER [Re], FERNALD, GIBBONS 1964 [Re], GRIEVE, HEDRICK 1919, LEYEL 1987b, UPHOF; K49Q, N84, R53M, R53M{PL}

*Lomatium californicum* - *Wild celery-parsley* {S}. Both the large, aromatic roots and flavorful tops were eaten by the Indians. An endangered species. Western North America. C95, N84

*Lomatium dissectum* - *Fern-leaved biscuit-root* {S}. Roots are dried and then cooked. Nez Pierce Indians baked the roots in a pit for up to two days, in the manner of cooking camass. Western North America. HART, YANOVSKY; A2, B21P{DF}, C95, E14T{DF}, F86G, I39, F68T, I23G{PR}, I23G{DF}, I47, I81T{DF}, J82{DF}, N84

*Lomatium macrocarpum* - *Large-fruited biscuit-root* {S}. The roots are eaten raw, or dried and ground into flour and made into cakes. Tea may be prepared from the leaves, stems and flowers. The tiny seeds are nutritious raw or roasted, and can be dried and ground into flour. North America. HART, KIRK, YANOVSKY; C95, I47, N84

*Lomatium nudicaule* - *Cow parsley, Smyrniium* {S}. The leaves and stems are eaten as a vegetable or used like celery in soups. An infusion of the leaves, stems, and flowers is utilized as a beverage. Roots are sometimes cooked and eaten. In the young plant the vitamin C is remarkably high, one cup providing more than the adult

Recommended Dietary Allowance Western North America. HEDRICK 1919, HILTY [Nu, Pre], YANOVSKY; A2, C95, E15, F68T, F88M, N7G, N84, R47

*Lomatium triternatum* - *Lewis\* biscuit-root* {S}. The roots are eaten raw, roasted, baked or ground into flour and made into cakes. They have a sweet mild flavor, especially after having been dried. Western North America. HART, HEDRICK 1919, YANOVSKY; C95, E15, I47, N7G, N84

*Lomatium utriculatum* - *Desert gold, Porno celery* {S}. Young leaves and shoots are eaten as greens or in salads. North America. YANOVSKY; E15, F88M, N7G, N84

*Meum athamanticum* - *Spignel, Meu, Baldmoney* {S}. The crushed fresh herb can be rubbed on to pork or lamb before cooking. As a condiment it adds a subtle, sweetish-aromatic flavor to soups, stews, and vegetable dishes. The roots are collected and consumed as a parsnip-like vegetable by the Highlanders of Scotland. Europe. GRIEVE, LAUNERT, MABEY, UPHOF; N71M, N84, 048, Q24, R53M, R53M{PL}

*Myrrhis odorata* - *Sweet cicely* {PL}. The sweet, anise-like leaves can be eaten raw in salads, added to soups and stews, used as a garnish for fish dishes, or brewed into tea. Because of its sweet flavor, it is cooked with fruits such as plums and rhubarb to reduce the amount of sugar needed. Roots are bailed and served with oil and vinegar or candied. The fresh seeds are chewed or chopped and mixed with salads to give them an aromatic flavor. Seeds are used for flavoring brandy and *Charreuse*. Alpine Europe, cultivated. FELL 1982b, GRIEVE, HEDRICK 1919, LAUNERT, MARCIN, MORTON 1976, PAINTER [Cu, Re], UPHOF, VILMORIN [Cu]; C9, C67M, D92M{S}, E7M{S}, F80{S}, G96, J76, K22, K54{PD}, K85, 053M{S}, R47{S}

*Oenanthe javanica* - *Water dropwort, Seri, Minari, Korean watercress, Metnamese celery* {PL}. Young leaves and stems are eaten raw, steamed, with soy sauce and sesame oil, boiled with fish and meat, or chopped fine and used as a seasoning in soups, suki-yaki, and chicken dishes. In Korea, the stems are used for tying squid in bundles before serving. The slender white roots grow about one foot long in the water, and the prettiest of these are highly esteemed for cooking. In Japan, seri and six other herbs are customarily boiled in rice gruel (<*okayu*) on January 7th or 15th. Seeds are said to be edible. Usually available in Oriental markets. Southeast Asia. ALTSCHUL, HAWKES [Cu], HERKLOTS, HOMMA, LARKCOM 1991 [Cu], LEE, F. 1988, MILLON [Re], NOH [Cu, Re], OCHSE, TANAKA, YASHIRODA; H30, I90M, J7M, M82

CULTIVARS

**Flamingo:** Variegated form with pink, green and white foliage, the pink being outstanding in the cooler weather of spring and fall. Not as vigorous as the common form. Grows to 6 inches in height. B9M, B77, C74, D95, G96, H30, I90M, M82, M92, N84

**Su Zhou:** Medium early cultivar with few fibers and excellent taste. 054{S}

*Oenanthe pimpinelloides* - *Meadow parsley* {S}. The roots have been esteemed as food in certain areas. They are said to be starchy, with a flavor somewhat like a filbert. Europe. GRIEVE, HEDRICK 1919; F85

*Oenanthe sarmentosa* - *Pacific water dropwort, Water parsley* {S}. The black tubers have sweet, snow-white, farinaceous flesh that was esteemed by the Indians. Has a cream-like taste when boiled, with a slight parsley flavor. Western North America. HEDRICK 1919, MEDSGER, YANOVSKY; C74{PL}, F85, F88M

*Oenanthe stolonifera* - *Oenanthe javanica*

*Osmorhiza aristata* - *Ibu-ninjin* {S}. Young leafstalks are eaten boiled and seasoned, put into soups, or cooked with soy sauce. Roots are eaten raw. The young plant is also cooked and eaten. Southern Asia, Eastern Asia. TANAKA; X33

*Osmorhiza claytonii* - *Anise sweet-cicely* {S}. The roots and stems are sometimes eaten as vegetables. Aromatic roots and unripe seeds are used as anise-like flavorings. North America. PETERSON, L., YANOVSKY; B61M, H61M, J39M, J39M{PL}, N84

*Osmorhiza longistylis* - *Anise-root, Smooth sweet-cicely, Sweet myrrh* {S}. Roots have the spicy taste of anise and are chewed, made into a tea, or used as a flavoring. Anise-flavored leaves and green seeds may be added to salads. Dry seeds are used in cakes, candies and liqueurs. North America. MEDSGER, PETERSON, L., TANAKA; N84

*Osmorhiza occidentalis* - *Western sweet-cicely* {S}. The roots have a sweet licorice or anise flavor and may be dried, ground into a powder and used as a flavoring for cookies and other foods. Dried seeds are used as a seasoning, fl or nibbled raw when they are still fleshy. Western North America. HARRINGTON, H., KIRK; E66M, J82, N84

*Pastinaca sativa* - *Parsnip, Wild parsnip* {S}. Roots are eaten raw, boiled, steamed, sauteed, mashed, pureed, baked, or used in soups, stews, sauces, cakes, pies, and puddings. They are also made into marmalade, syrup, beer, and wine. Young leaves and shoots are added to soups or mixed with other greens and eaten as a cooked vegetable. In Belarus, they are occasionally added to pickled apples. The seeds make a fine condiment, being similar in taste to dill. *Parma* and *San Daniele* hams are said to derive their flavor from the parsnips which are used as feed. Eurasia, cultivated. BISSELL, BOLOTNIKOVA, CARCIONE, FELL 1982b, GRIEVE [Re], HAWKES [Re], LAUNERT, MABEY, TANAKA, VILMORIN [Cu]; M34M, N71M, N84, 048, 053M. (for cultivars see Parsnip, page 449)

*Perideridia gaindneri* - *Yampa, Squawroot, Ipo, False caraway* {S}. The fleshy roots have a pleasant, sweet, nutty flavor and are eaten raw, boiled, baked or preserved for winter use. Occasionally they are dried, ground into flour, and baked in cakes. The seeds are used as a caraway-like seasoning, or parched and eaten in porridge. Western North America. HALL [Re], HARRINGTON, H. [Re], HEDRICK 1919, KIRK, MEDSGER, YANOVSKY; F85

*Perideridia kelloggii* - *Cascade caraway, Kellogg's yampa* {S}. Roots are eaten raw or cooked having a sweet, pleasant, nutty flavor. The aromatic seeds have a fine, distinctive flavor and can be used like caraway. California. YANOVSKY; C95, L77D

*Petroselinum crispum* - *Wild parsley, Sheep's parsley* {S}. Leaves are used as a garnish or added to soups. The herb can be fried in hot butter and served as a vegetable with fish. Eurasia. LAUNERT, MABEY; L91M, N71M, 048

*Petroselinum crispum Hortense Group* - *Parsley* {PD} Leaves are widely used as a garnish or for seasoning soups, stews, salads, *salsa verde*, dressings, omelettes, *tabouli*, *falafel*, stuffings, etc. Also the main ingredient of *Chimichurri*, a green salsa-like sauce from Argentina that is widely used on barbecued meats. Parsley juice is often mixed with carrot, celery and spinach juices. Parsley oil, derived from the leaves and seeds, is used by the food industry in sauces, pickles, meats, bakery products, and soups. The stems are dried and powdered and used as a food coloring. Fresh or dried leaves can be brewed into a pleasant tasting tea. GRAY, P. [Cu, Re], GRIEVE, GURSCHE [Nu], MARCIN, MORTON 1976, ROOT 1980b [Cu], UPHOF, VILMORIN [Cu]; A7, N54. (for cultivars see Parsley, page 448)

*Petroselinum crispum Radicosum Group* - *Hamburg parsley, Turnip-rooted parsley, Parsnip-rooted parsley, German parsley* {S}. The thick, fleshy, parsnip-like roots are thinly sliced or grated, and eaten raw in salads. They are also a popular ingredient in soups and stews or can be roasted, mashed, and fried, or made into chips the way potatoes are. The flavor is delicious and somewhat reminiscent of a combination of celery and parsley, but with a nuttier flavor. Young leaves are such a popular soup and stew ingredient, they are known as *soup greens*. HALPIN [Cu, Cul], KRAFT [Re], ORGAN [Pre, Re], RODALE [Cu], SCHNEIDER 1986 [Cul, Re],

VILMORIN; A16, C85M, D11M, D92M, E13G{PR}, F70, F80, G16, G73{DF}, G80{PL}, G71, H61, H73{PR}, K73, L79, N40{PR}, etc. (for cultivars see Parsley, page 448)

*Petroselinum sativum* -> *Petroselinum crispum*

*Peucedanum nudicaule* -> *Lomatium nudicaule*

*Peucedanum ostruthium* - *Masterwort, Hog-fennel* {S}. The leaves are boiled and eaten as a potherb. Aromatic roots are used in the preparation of gin, Swiss cheese, and certain herb-cheeses. One of the ingredients of *Ramazotti*, an Italian bitter. Europe. BROWN, G., HEDRICK 1919, LOVELOCK, TANAKA, UPHOF; F37T{PL}, F80, J82, N84, Q24, R53M{PL}

*Peucedanum palustre* - *Marsh hog's-fennel* {S}. In some Slavic countries, the roots are used as a substitute for ginger. Europe. GRIEVE, HEDRICK 1919, LOVELOCK, UPHOF; V73M, V84T, V85, V85M

*PheUopteris UttoraUs* -> *Glehnia littoralis*

*Pimpinella anisum* - *Anise* {S}. Aromatic seeds are used as a seasoning in cakes, cookies, breads, cheese, *anise milk*, confectionery, beverages, wine, icings, etc. One of the most popular flavorings for aperitifs and liqueurs, such as *Anisette*, *Ouzp*, *Pastis* and *Raki*. The fresh leaves can be chopped and used in salads, soups, stews, vegetable dishes, and sauces. Source of a distilled oil that flavors licorice candy, chewing gum, ice cream, and pickles. Both leaves and seeds are brewed into a sweet, licorice-like tea. Cultivated. DOMINE, GRIEVE, LATHROP [Cu, Cul], MARCIN, MORTON 1976, RAY, C., ROOT 1980b [Cu], UPHOF, VILMORIN; A97{PL}, C3, C43M, D92M, F80, G84{DF}, H46{DF}, K2{ffi}, K22, N19M{PL}, R47

*Pimpinella brachycarpa* - *CKam-namul* {S}. Young leaves are eaten fresh, boiled, or seasoned with sesame oil and soy sauce. Very common in the markets of Korea where it has recently been brought into cultivation. Eastern Asia. PEMBERTON, TANAKA; W22

*Pimpinella major* - *Greater burnet-saxifrage, White saxifrage* {S}. Roots are the source of an essential oil used to flavor candy and liqueurs. Eurasia. MORTON 1976; N71M, N84, 048

*Pimpinella saxifraga* - *Burnet saxifrage* {S}. Young leaves and shoots have the flavor of cucumber and can be eaten in salads or used in cooling drinks. They have been tied in bundles and hung in casks of beer, ale, and wine to improve the flavor. The flower heads were formerly made into wine. Seeds are coated with sugar and eaten as a confection. An essential oil from the root is used for flavoring candy and liqueurs. Eurasia. GRIEVE, MORTON 1976, ROOT 1980b [Cu, Cul]; C43M, C43M{PL}, C95, F35M{PL}, F86G, J82, L66{PL}, N71M, N84

*Porphyroscias decursiva* - \**Angelica decursiva*

*Ridolfia segetum* - *False caraway* {S}. An aromatic herb that can be used as a condiment. Mediterranean region. HEDRICK 1919; C95, N84

*Saposhnikovia divaricata* - \**Ledebouriella divaricata*

*Scandix pecten-veneris* - *Venus' comb, Shepherd's needle, Kafkalithra* {S}. Young leaves and stem tops are eaten raw in salads or cooked as a potherb. In Greece they are a popular ingredient of *hortopita*, a classic vegetable pie made with a mixture of seven different wild greens including sweet, sour, bitter and aromatic types chosen to complement each other. Eurasia, naturalized in North America. HEDRICK 1919, KREMEZI 1993 [Re], UPHOF; N84, 053M

*Setinum monnieri* - *Ligusticum monnieri*

*Silaum silaus* - *Pepper saxifrage, Meadow saxifrage* {S}. Sometimes cooked as an acid potherb. Europe. HEDRICK 1919; N71M, N84, 048

*Silaus flavescens* - *Silaum silaus*

*Siler divaricatum* - *Ledebouria divaricata*

*Sison amomum* - *Bastard stone-parsley* {S}. The aromatic leaves and seeds can be used as a condiment. Roots are edible, and are said to have the taste of celery. Eurasia. HEDRICK 1919, UPHOF; N84, 048

*Sium cicutaefolium* - *Water parsnip* {S}. Roots have an agreeable nutty flavor and are consumed as food by some Indian tribes in the United States and Canada. The aromatic leaves were eaten by the Klamath Indians as a relish. Eastern North America. FERNALD, UPHOF; C74{PL}, G47M

*Sium sisarum* - *Skirret* {S}. The sweet, floury white roots are eaten raw in salads, boiled, stewed, braised, baked, batter-fried, creamed, or used in soups, stews, pies, and curries. They are delicious when mashed with potatoes, served with a cheese sauce, or dressed in a vinegar marinade and served alone as a salad. Sometimes used as a substitute for coffee. Eurasia, cultivated. HALPIN [Cu, Cul], ORGAN, UPHOF, VILMORIN [Cu]; C95, E7M, E61{PL}, 139, J26M, K2, K85{PL}, L56{PL}, M82{PL}, 053M, R53M{PL}, S55

*Sium suave* - *Sium cicutaefolium*

*Smyrniolum olusatrum* - *Alexanders, Black lovag?* {S}. Young shoots and leafstalks are blanched and eaten like celery in salads, soups, sauces, and stews. The thicker stems may be used as a cooked vegetable, and the flowerbuds as a salad. Leafy seedlings can be used as a parsley substitute. The roots are boiled and served with oil and vinegar or used in soups. They are said to be more tender if kept all winter in a cool place. Spicy seeds are used as a pepper substitute. Was cultivated for several centuries, until recent times when it was gradually replaced by celery. Eurasia. HEDRICK 1919, LARKCOM 1984, LOVELOCK, MABEY, MACNICOL [Re], MICHAEL [Pre, Re], PAINTER [Cul, Re], UPHOF, VILMORIN [Cu]; A2, C95, E61{PL}, F37T{PL}, 139, L77D, L90J{PL}, N19M{PL}, N61, N84, 053M, R47, S55

*Smyrniolum perfoliatum* - *Perfoliate alexanders* {S}. The blanched leafstalks are eaten raw in salads or used as a potherb. It is considered superior to *S. olusatrum*, as it not only blanches better, but is more crisp and tender, and not so harsh flavored. Southern Europe. BURR, HEDRICK 1919; L91M, 053M

*Tordylium apulum* - *Roman pimpinell, Small hartwort* {S}. The aromatic young plants are eaten as a vegetable in some parts of Greece, often combined with other sweet greens in pies and stews. In Italy, they are used as a condiment. Eurasia. LOVELOCK, UPHOF, WOLFERT 1998; V84, W59M, X47

*Trachymene glaucifolia* - *Native carrot* {S}. The root is reported to be edible, either raw or cooked. Australia. CRIBB; N84, R15M

*Trachyspermum ammi* - *Ajowan, Ajwain, Bishop's weed, Ammi, Nech azmid* {S}. The aromatic, pungent seeds are widely used for seasoning curries, *chat masala*, vegetable dishes, fritters, stews, cookies, and breads. Their flavor is said to be a combination of anise and oregano with a hint of black pepper. They are also considered a good preservative for canned foods. In Ethiopia, they are used in *niter kibbeh*, a spiced butter, *shiro* (spiced, powdered peas), and the red pepper pastes *berbere* and *awaze*. Ajowan oil, sweeter than oil of thyme, is extracted from both the plant and seeds and used for flavoring. Southern Asia, cultivated. JAFFREY [Re], MACMILLAN, MESFIN [Re], MORTON 1976, NORMAN, UPHOF; A7{DF}, D92M, F74{DF}, F80, H51{DF}, H51{ED}, J73, J82, K17J{DF}, L16{DF}, L94M, N84, 053M, S55

#### CULTIVARS

**Bengal Bold:** Improved leafy type from India. Has thicker leaves than Bengal Thin, and they are also sweeter. Can be steamed like spinach or chopped and added fresh to salads and sandwiches. J73, N84

**Bengal Thin:** Improved fine-leaved type from India. Not as sweet as Bengal Bold. Leaves have a mild flavor reminiscent of carrot and caraway. They are often added to sandwiches and soups. J73, N84

*Zizia aurea* - *Golden alexanders* {S}. The golden flower clusters, with the main stem removed, are a welcome addition to a tossed green salad. They also make a delicious cooked vegetable, somewhat in the manner of broccoli. Eastern North America. CROWHURST 1973 [Re]; B29, B29, B51, E7M, F80, G47M, G89{PL}, H61M, J39M, J39M{PL}, J41M, J41M{PL}, J42, J42{PL}, J43, etc.

#### APOCYNACEAE

*Carissa arduina* - \* *Carissa bispinosa*

*Carissa bispinosa* - *Amatungula, Num-num* {S}. The small red fruits, the size of a cherry, have few seeds and are eaten fresh. Southern Africa. FOX, F., MOWRY, POPENOE, W. 1920; N84

*Carissa carandas* - *Karonda, Christ Is thorn* {S}. Fruits are eaten raw or cooked. When ripe they are eaten fresh as a dessert, or made into wine, drinks, syrups, preserves, chutneys, tarts, and an acid jelly used with meat and fish. Unripe fruits are pickled. Tropical Asia, cultivated. KENNARD, MORTON 1987a, SINGH, S., STURROCK [Pc], WATT; F74{ED}, F85, N84, P5, Q12, Q46, R50{PL}, S97M{PL}

*Carissa edulis* - *Arabian num-num* {S}. The milky red pulp of the fruit is sweet and pleasant and is eaten fresh or made into jelly, jam, preserves and vinegar. Pieces of the root are used as a condiment to disguise fish odor or as bitters macerated in rum or gin. In Kenya, they are added to tonic soups. Tropical Africa. DALZIEL, FOX, F., GACHATHI, TREGOLD; N84

*Carissa grandiflora* - *Carissa macrocarpa*

*Carissa macrocarpa* - *Natal plum, Amatungula* {S}. The ripe, bright red fruits are eaten out of hand, made into jellies, syrups, pickles, tarts and pies, or stewed into a sauce that very much resembles cranberry sauce. South Africa, cultivated. CREASY 1982 [Re], MORTON 1987a, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Pre, Re], THOMSON 1976; A79M, C9M, F85, G96{PL}, H49{PL}, 7£{PL} I57{PL}, K38, N84, P5, P38, S28M  
CULTIVARS {GR}

**Fancy:** Large, nearly round fruit with a pointed end; skin dark red; flesh whitish, flavor very good, seeds few. Bush ornamental, grows 6 feet tall; self-fertile, bears fruit all year along the California coast; flowers fragrant. Makes a uniform hedge. H78, I8, 183M

**Yautepec:** An improved type selected at Vive» Yautepec in Cuernavaca, Moreles, Mexico. S97M

*Fernaldia pandurata* - *Loroco* {S}. The flowers and buds are cooked as greens, folded into egg batter, or added to a kind of stuffed tortilla called *pupusa* which is very popular in El Salvador. In Guatemala, they are an essential ingredient of *polio en crema*, a rare and celebrated delicacy. Available canned or frozen at Latin American markets. Central America. MARKS [Re], TANAKA, WILLIAMS, L.; YOM

*Hancornia speciosa* - *Mangabeira, Mangaba* {S}. The pleasant, subacid fruits, yellow streaked with red, are eaten fresh or made into juice, preserves, sherbet, pudding and wine. Much esteemed as a marmalade in some parts of Brazil. South America. CARDENAS, HEDRICK 1919, MARTIN 1987, TANAKA, UPHOF, WILLAN; T73M

*Plumeria acutifolia* - *Plumeria rubra acutifolia*

*Plumeria rubra* - *Frangipani* {S}. Flowers are eaten in sweetmeats. Tropical America, cultivated. BURKILL, KUNKEL; A79M, A79M{PL}, F85, I57{PL}, I83M{PL}, J27, J27{PL}, N84, 053M, Q46

*Plumeria rubra* f. *acutifolia* - *Pagoda tree*, *Chi-tan-hua* {S}. Dried flowers are used as a substitute for tea. Tropical America, cultivated. BURKILL, TANAKA; 053M, Q46

*Tabernaemontana elegans* - *Lowveld toad tree* {S}. The juicy, orange-colored pulp of the fruit is eaten fresh, having somewhat the flavor of Citrus fruits. It is considered a delicacy in some parts of Africa. Also used by the Zulus for curdling milk. Southern Africa. FOX, F, TREGOLD.; N84, S28M

*Willughbeia angustifolia* - *Kubal madu*, *Surapit* {S}. The round, bright orange fruit is eaten. Its flesh, which surrounds the large flat seeds, is soft and juicy and has a sweet, tangy flavor reminiscent of orange sherbet. Borneo. TANKARD, TINGGAL; F85

#### APONOGETONACEAE

*Aponogeton distachyus* - *Cape asparagus*, *Water onion*, *Water Hawthorne* {PL}. Flowering spikes are eaten pickled, or as a substitute for asparagus and spinach. The starchy roasted roots are also eaten. Southern Africa. FOX, E, HEDRICK 1919; C74, H30, 174, 190M, J7M, M15, M39, N3M, N84, P59M

#### AQUIFOLIACEAE

*Ilex aquifolium* - *Holly* {S}. The leaves have been used as a tea substitute in the Black Forest of Germai. A rare Alsatian brandy, made from the red berries, is known as *eau de vie de baie de houx*. Eurasia. CAMPBELL-PLATT, GIBBONS 1979, GRIEVE, RAY, C; C9M, C60D{PD}, D95{PL}, G23{PL}, G66, H8{PL}, K38, K63G, N84, 053M, 093, P5

*Ilex cassine* - *Cassine* {PL}. Dried, roasted leaves are used as a tea substitute. Should be used in moderation. Can cause dizziness and have a laxative effect. North America. FERNALD, HEDRICK 1919, MEDSGER, MORTON 1977; F73, F85{S}, H4, H14M, N37M

*Ilex glabra* - *Inkberry*, *Gallberry*, *Appalachian tea* {PL}. Dried leaves, after roasting, make a good substitute for yaupon tea. Contains caffeine. The flowers yield a very light-colored, heavy-bodied honey with a particularly mild flavor that is in great demand in parts of the South. Eastern North America. CRANE 1984, FERNALD, GIBBONS 1979; B9M, B70{PD}, D95, H4, H8, K38{S}, K63G{S}, L56M{PD}, M75, N37M, N84{S}, R78{S}

*Ilex latifolia* - *Tara-yo*, *Holly tea* {PL}. The leaves are used as a tea substitute, and the seeds as a substitute for coffee. Japan, China. KUNKEL, TANAKA; B96, D95, H4, H8, N37M

*Ilex opaca* - *American holly* {S}. Roasted leaves were the most popular tea substitute during the Civil War. Being free of caffeine, they lack the stimulating properties of mate and yaupon. North America. FERNALD, GIBBONS 1966b; D95{PL}, H4{PL}, H49{PL}, 147, K38, K63G, M92{PL}, N84, 053M

*Ilex paiaguariensis* - *Yerba mate*, *Paraguay tea*, *Jesuit tea* {PL}. Dried, crushed leaves are used as a stimulating beverage, containing about 1 % caffeine. It has a light green color, a pleasant aroma and a slightly bitter flavor. The most popular beverage in South America, preferred over coffee and tea. Usually graded into Mate grosso, Mate fino, and Mate entrefino. Andean South America, cultivated. BROUK, SCHERY, UMANA-MURRAY [Re], UPHOF; A26, A26{S}, C43M, F37T, F73D, F73D{DF}, G47J{DF}, G96, H4, I39{DF}, J76, J82{S}, L90J, N84{S}, P38{S}, etc.

*Ilex verticillata* - *Winterberry*, *Black alder* {PL}. Leaves are dried slowly in a warm attic, crumbled, and then used as a substitute for Oriental tea. Does not contain caffeine. Eastern North America. FERNALD, GIBBONS 1979; B9M, B32, C47, D95, G66{S}, H4, H14M, I47{S}, K38{S}, K63G{S}, K89, L12, M69M, N84{S}, 093{S}, etc.

*Ilex vomitoria* - *Yaupon*, *Cassena*, *Dahoon*, *Carolina tea* {PL}. A mildly stimulating beverage, containing caffeine, is prepared from the leaves. They are roasted slowly in an oven, powdered, and

steeped in first cold then boiling water. Also used to flavor ice cream and soft drinks. Southeastern North America. FERNALD, GIBBONS 1979, SCHERY; A19, B32, D95, F73, G66{S}, H4, H14M, K38{S}, K63G{S}, N37M, N84{S}

#### ARACEAE

*Acorus calamus* - *Calamus*, *Sweet flag*, *Myrtle sedge* {PL}. Rootstocks are candied, chewed, used as a ginger substitute, and to sweeten the breath. Calamus oil is used to flavor liqueurs, cordials, bitters, ice cream, soft drinks, and vinegar. Inner portion of young shoots makes a very palatable salad. Temperate Asia, cultivated. FERNALD, GIBBONS 1962 [Re], MORTON 1976, TOOMRE [Re], UPHOF; C43M, D75M, E33M, G47M{S}, G85, H4, I81M{DF}, J73, K18M{DF}, K22, L56, M15, M15T{DF}, M73, N3M, Nil, etc.

*Acorus gramineus* - *Grass-leaved sweet flag*, *Sekisho* {PL}. Rhizomes are peeled, finely chopped, steeped in several waters, and then eaten fried or oil-roasted. They are said to have a stronger and more pleasing taste than sweet flag, and can be used as a flavoring. Japan. HEDRICK 1919, TANAKA; B28, G73, H4, 128, I81M, K79, K85M, M15, N3M

#### CULTIVARS

Licorice: (Licorice Sweet Flag) Shiyy, strap-like leaves. Entire plant has a strong licorice scent and flavor. Used in Thai cuisine for flavoring rice dishes. Hardy plant, grows 8 to 12 inches tall. A good choice for a water garden. 139, J82, M7M

*Amorphophallus campanulatus* - *Whitespot giant arum*, *Telinga potato*, *Indo-konnyaku*, *Suran* {S}. Corms, leaves, and petioles can be eaten after proper preparation. The corms are then boiled with tamarind leaves, fried, curried, added to stews, pickled, or cooked in syrup. Available fresh or canned at Indian markets. Tropical Asia. BURKILL, HERKLOTS, MEHTA [Re], OCHSE, REEJH-SINGHANI1975 [Re], TANAKA; F74{PQ}, F85, N84, P38{PL}

*Amorphophallus paeoniifolius* - *Amorphophallus campanulatus*

*Amorphophallus rivieri* - *Devil's tongue* {PL}. The large brown tubers are peeled, cooked, and pounded to extract their starch, which is solidified with dissolved limestone into an edible gel called *konnyaku* or *yam cake*. Used in Japanese cuisine, and valued for its ability to cleanse the digestive tract without being a laxative. Konnyaku noodles, known as *shirataki*, are widely used in sukiyaki. In Korea, konnyaku is valued as a chewy addition to dishes like *yachae chongol*, a one-pot, sukiyaki-like dish served over a burner at the table. Southeast Asia, cultivated. HOMMA [Re], MILLON [Re], NOH [Re], SHURTLEFF 1975 [Re], SHURTLEFF 1976 [Re], TANAKA, TSUJI [Re]; A79M, G20M{EQ}, G73, 112, N49M{PD}, N84

*Amorphophallus variabilis* - *Kembang bangke* {S}. After proper preparation, tubers and young shoots may be eaten. From the tubers, an edible gel (*konnyaku*) is manufactured. Southeast Asia. BURKILL, OCHSE, TANAKA; F85, N84

*Arisaema triphyllum* - *Jack-in-the-pulpit*, *Indian turnip* {PL}. Fleshy roots are cut into very thin slices and allowed to dry for several months, after which they can be eaten like potato chips, crumbled to make a cereal, or ground into cocoa-flavored flour for baking cakes, cookies, rolls, muffins, and pancakes. Eastern North America. ANGIER, FERNALD [Pre], GIBBONS 1966b [Pre, Re]; B96, C43M, D75M, E33M, F80{S}, HIM, 144, J71, L88M, M77M, N9M, N9M{S}

*Calla palustris* - *Wild calla*, *Water arum*, *Water dragons* {PL}. In Scandinavia the roots are dried, macerated, boiled, and made into a kind of bread, *missen bread*. Northern temperate region. FERNALD [Pre]; C74, D75M, H30, M15, N84{S}, Q24{S}

*Colocasia esculenta* - *Taro*, *Coco-yam* {PL}. Corms are eaten boiled, fried, baked, steamed, in soups, stews, puddings, pounded into dumplings, or employed as a starch. In Hawaii, they are sliced

and fried into taro chips and fermented into a pasty mass called *poi*. Two types of corms are often marketed—the large main corm and the smaller side corms or cormels, called *malanga coco* and *eddoe*, respectively. Young leaves and leaf stalks are eaten as vegetables, called *luau* and *aihaha*, respectively, in Hawaii. In the Caribbean, they are added to *callaloo*. The leaves can also be stuffed like cabbage leaves. In India, they are stuffed with besan flour and spices in a dish called *patra*. Leaf stalks are also used for thickening soups or are boiled, cut into sections and served with a soy sauce dressing. The forced white sprouts, having somewhat the taste of mushrooms, called *woo-sun* in China and *imonome* in Japan, are harvested when young, cut into sections and cooked with roast pork or chicken, baked fish, or in anchovy sauce. Both the leaf stalks and runners, called *zūiki* in Japan, are partly cooked and dried and hung in strands for decoration at the Zūiki harvest festival of Kyoto. Spadices were baked with fish or pork, as a delicacy. Leaves, leaf stalks, and flower stalks were all added to *lulau*, a Hawaiian pork dish baked in an underground oven. The ancient Hawaiians fed taro to dogs raised for meat, called *poi dogs*, to make the meat more delicately flavored. Cultivated. BOND, DEGENER, DEWITT 1993 [Re], GREENWELL, GRIGSON, J. 1986 [Re], HAWKES [Re], HERK-LOES [Cu, Pre], MAY, R. [Nu, Re], SCHNEIDER 1986 [Cul, Re], TANAKA; A25G{PD}, B60M{PR}, D43G{PD}, E13G{PR}, G20M{PR}, G85, H4, 128, I90M, K34, K85M, M73M, N3M, N40{PR}, N84{S}, etc.

#### CULTIVARS

**Akado:** Corm purple; flesh white with yellowish fibers. Leaf stalks greenish-bronze, shading into dark reddish-purple at base and apex. Medium-tall, stiffly erect, stocky plant; grown primarily under upland culture; produces more than 20 cormels. Matures within 10 months. Cormels are good baked or steamed. The vivid leaf stalks, and sprouts from small cormels grown in darkness make excellent greens. Probably a native of Japan. WHITNEY; T54

**Aouwai:** Corm cream-colored; flesh white with indistinct, yellowish fibers. Short, moderately spreading, very stocky plant; essentially a wetland taro. Matures within 6 to 9 months. Leaves are highly prized for *luau*; corms are very good baked or steamed. Also makes good *poi* of a very light, silver color, soft in consistency, and easy to pound and prepare. Native Hawaiian cultivar. WHITNEY; T54

**Bun-Lona:** (Chinese) Corm cream-colored; flesh white with conspicuous purple fibers. Has a crispy texture when baked or boiled. Used commercially for taro chips. Tall, well spreading, stocky plant; grown under both wetland and dryland culture. Matures within 9 to 12 months. Young leaves are desirable for *luau* because of their large size, tenderness and comparative non-acridity. Introduced into Hawaii from China. WHITNEY; T54

**Eleele Naioea:** Corm dark reddish-purple; flesh lilac-purple with conspicuous darker purple fibers. Medium-tall, well spreading plant; petioles blackish; grown under upland culture. Matures within 8 to 12 months. Produces red *poi* that is highly prized. Native Hawaiian cultivar. One of the so-called *royal black taros* of the early Hawaiians. WHITNEY; T54

**Kal Kea:** Corm light pink; flesh white, tinged with pink, especially at the apex. Medium-tall, well spreading plant; primarily grown under wetland culture. Matures within 8 to 12 months. Makes a translucent amber *poi* of excellent quality that was highly esteemed by the Hawaiian chiefs. Native Hawaiian cultivar. WHITNEY; T54

**Kakakura-Ula:** Corm cream-colored to white; flesh white with yellowish fibers. Good baked or steamed. Medium-tall to tall, moderately spreading plant; grown under upland culture; reproduces by rhizomes. Leaf stalk striped light and dark green, overlaid with brilliant reddish-purple, white at base. Matures within 9 to 12 months. One of the most beautiful of all taros. Introduced into Hawaii from the South Seas. WHITNEY; T54

**Lehua Maoli:** Corm dark pinkish-lilac; flesh light purplish-lilac with darker purple fibers. Medium-tall, well spreading, slender

plant; grown under both wetland and upland culture. Matures within 8 to 12 months. The primary cultivar used for *Lehua red poi*, which often commands a premium in price. A favorite native Hawaiian cultivar. WHITNEY; T54

**Lehua Palaii:** Corm light pink; flesh lilac-purple with darker purple fibers. Short to medium-tall, stiffly erect, slender plant; grown principally under upland culture; quite hardy and a good yielder. Matures within 12 to 18 months. Makes red *poi* of excellent quality. Native Hawaiian cultivar. One of the royal taros, formerly grown for and eaten only by the chiefs. WHITNEY; T54

**Mana Eleele:** Corm dark purple; flesh white tinged with lilac near the apex, with yellowish fibers. Medium-tall, erect plant; grown almost exclusively under upland culture. Matures within 9 to 12 months. Mainly used as a table taro, either baked or steamed. Said to be the most drought-resistant of the Hawaiian taros. WHITNEY; T54

**Mana Keokeo:** Corms large; skin white, light lilac-pink to purple at the leaf scars; flesh chalky white with yellowish fibers. Excellent baked or steamed. Also a favorite for *kulolo*, a Hawaiian pudding prepared from grated raw taro and coconut milk, steamed underground. Medium-tall, erect plant; grown almost exclusively under upland culture; yields well even under adverse conditions. Matures within 7 to 12 months. WHITNEY; T54

**Mana Uliuli:** Corm cream-colored, dark purple along leaf-scar rings; flesh yellow with light yellow fibers; tough and rubbery when cooked. Makes good *poi* of distinctly yellow color. Medium-tall, erect, moderately stocky plant; grown primarily under upland culture; branches prolifically. Matures within 9 to 12 months. Introduced into Hawaii from the South Seas. WHITNEY; T54

**Mana Ulu:** Corm yellow; flesh yellow with light yellow fibers. Excellent cooked, having a somewhat dry, mealy, flaky texture and an orange-yellow color that is much more attractive than that of most other cultivars. Medium-tall, slender, erect plant; does well under both upland and wetland culture. Matures within 7 to 12 months. Native Hawaiian cultivar. WHITNEY; T54

**Ohe:** Corm light pink; flesh white with a light pinkish tinge, especially near the apex, and yellowish fibers. Medium-tall, well spreading, stocky plant; grown primarily under upland culture; especially well adapted to elevations above 1,500 feet. Matures within 12 to 16 months. Makes gray *poi* of excellent quality. Native Hawaiian cultivar. WHITNEY; T54

**Piialii:** Corm brilliant reddish-purple; flesh lilac-purple with darker purple fibers. Short, erect, stocky plant; grown primarily under wetland conditions. Matures within 8 to 12 months. Makes a red *poi* that is highly prized for flavor and quality. One of the oldest cultivars grown in Hawaii, known in the early days as one of the royal taros. WHITNEY; T54

**Piko Kea:** Corm pale pink; flesh white with pinkish apex and yellowish fibers; fairly firm in texture, will absorb more water in the preparation of *poi* than most cultivars. Makes light bluish-gray *poi* of very good quality. Medium-tall, erect, moderately stocky plant; grown almost exclusively in wetland patches; widely adapted. Matures within 15 to 18 months. Native Hawaiian cultivar. WHITNEY; T54

**Tsurunoko:** (Araimo) Corm white; flesh white with yellowish fibers. Short, spreading, moderately spreading plant; grown almost exclusively under upland culture; produces as many as 40 cormels. Often matures within 6 months. Cormels are eaten baked or steamed. Sprouts from cormels grown in darkness are also eaten. Most important Japanese cultivar in Hawaii. Valued primarily for its excellent keeping qualities. WHITNEY; T54

*Cyrtosperma chamissonis* - *Te babai*, *Giant swamp taro* {PL}. The large tubers are boiled and eaten. They are also mashed into a dough, which is kneaded and then left to ferment before being

recooked in an earth oven. Pacific Islands. MASSAL, TANAKA; T67M, Z5

*Monstera deliciosa* - *Ceriman* {S}. Juicy, subacid fruits have an excellent aroma and taste, combining the flavors of banana and pineapple. They are eaten out of hand or used in ices, sherbets, and soft drinks. Even ripening of the fruit may be encouraged by wrapping the whole in paper, placing it in a refrigerator for 24 hours, and then leaving it at room temperature until soft. Central America, cultivated. JOHNS, KENNARD, RICHARDSON, M. [Re], SCHNEIDER 1986, STURROCK; B60M{?R}, C9M, D57{PL}, E29{PL}, E53M, 053M, 093, P5, P17M, Q32

*Peltandra virginica* - *Arrow arum*, *Tuckahoe* {PL}. Seeds are slightly sweetish, suggesting in taste parched Indian com. A bread can be made from them, tasting like corncake with a strong flavor of cocoa. Eastern North America. FERNALD; A54, B32, C74, F73, H4, H30, H61M{S}, J7M, K85M, M15, M72, M73, N3M, N11{S}

*Philodendron bipinnatifidum* - *Banana de Macaco* {S}. The red fruits are edible and much esteemed in some parts of southern Brazil. Pulp is used for making a jelly. Brazil. UPHOF; A41M, C9M, D56M, E53M, F85, H4{PL}, 053M, 093, P5, P17M, Q32

*Philodendron selloum* - *Arborescent philodendron* {S}. Fruits are used in compotes. Brazil, cultivated. UPHOF; B41{PL}, C9M, D26G, D56M, E53M, F85, H71, 157{PL}, N40M, 093, P5, P17M

*Xanthosoma atrovirens* - *Yautia amarilla*, *Tannia* {PL}. Young leaves, rich in protein and minerals, are cooked and eaten. The corms form one of the staple starchy foods of Dominica. Tropical America. HERKLOTS, TANAKA; A41G, J37M, M73M

*Xanthosoma brasiliense* - *Tahitian taro*, *Tanier spinach*, *Belembe* {PL}. Leaves, stems, and tender upper portion of the petioles are used as potherbs. They can contain few oxalate crystals and are preferred over other species of *Xanthosoma* and *Colocasia* in the popular West Indian stew called *callaloo*. Tropical America, cultivated. MARTIN 1975, MASSAL, OMAWALE, OOMEN [Re], ORTIZ 1973 [Re]; H29, L55J, N84

*Xanthosoma maffafa* - *Maffafa* {PL}. Corms are pounded and made into *fufu*, a starchy food. Northern South America. DALZIEL; H4

#### *Xanthosoma nigrum* - *Xanthosoma violaceum*

*Xanthosoma sagittifolium* - *Yautia*, *Malanga blanca*, *Indian kale* {PL}. Corms are peeled and then eaten boiled, baked, pureed, in soups and stews, made into chips, pancakes, fritters, *fufu*, etc. Young leaves and petioles are cooked and eaten like spinach. In Jamaica, they are an ingredient of *pepperpot* and other soups. Tropical America, cultivated. BENGHIAT [Cul, Be], HAWKES [Re], ORTIZ 1973 [Re], SCHNEIDER 1986 [Pre, Re], TANAKA, WILSON, E.G.; B60M{PR}, E13G{PR}, H4, L14G{ED}, N37M, N40{PR}, N84

*Xanthosoma violaceum* - *Violet-stemmed taro*, *Primrose malanga*, *Woo chai* {PL}. Young leaves and petioles are chopped and eaten as a spinach. Cormels are peeled and used in stews, custards, and pancakes. In Tonga, the leaves are used like taro for wrapping meat in a dish known as *lu*. Tropical America. BURKILL, HARRINGTON, G. [Cu, Cul], OCHSE, WHISTLER, W.; A41G, H4

#### ARALIACEAE

*Acanthopanax divaricatus* - *6-ukogi* {S}. Leaves are parboiled and dried for use as a winter vegetable. Also used for seasoning sake wine. Dried leaves are a tea substitute. China, Japan. TANAKA; T41M

#### *Acanthopanax senticosus* - \**Eleutherococcus senticosus*

*Acanthopanax sessiliflorum* - *Manshu-ukugi* {S}. Young leaves are boiled as a vegetable, older ones are used as a tea substitute. The

bark makes wine much fancied by the Chinese. China. TANAKA; C95, G66, M35M{PL}, N84

*Acanthopanax sieboldianum* - *Ukogi*, *WU-chia* {PL}. Young leaves are boiled and eaten, having a delicious, somewhat fragrant flavor. Also used as a tea substitute. A liquor is brewed from the plant. China, Japan. TANAKA; B9M, D95, E87, N84, R78{S}

*Aralia cordata* - *Udo*, *Japanese asparagus*, *Tu-huo* {PL}. Blanched shoots are crisp and tender with a unique lemon-like flavor. When used in salads, they are peeled, cut into shavings, and soaked in ice water for an hour before serving with French dressing. To prepare as asparagus or for soup, boil in several changes of water first. A favorite of David Fairchild, the famous plant explorer. Japan. FAIRCHILD 1938, FERNALD, HAWKES [Cul], LARKCOM 1991, SHURTLEFF 1975, TSUJI [Re], UPHOF; A61, A61{S}, B28, N84, Q24{S}

*Aralia elata* - *Japanese angelica tree*, *Turup* {S}. The young, tender leafy shoots are considered a great delicacy in Korea where they are parboiled and used like asparagus or fried in batter. In northern Japan, they are boiled with the leaves of *Zanthoxylum piperitum* and eaten as a tasty salad. Sometimes available in Korean markets. Eastern Asia, cultivated. MILLON, NOH, PEMBERTON, YASHIRODA; D95{PL}, E7M, G66, H4{PL}, H29M{PL}, K63G, N71M, N84, P49, R78

*Aralia nudicaulis* - *Wild sarsaparilla* {PL}. The rootstock is often used as an ingredient in *root beer*. Also used as a refreshing herbal tea. North America. FERNALD, MARGIN; B21P{DF}, F68T, J82{DF}, M16

*Aralia racemosa* - *American spikenard*, *Life-of-man*, *Pettymorrel* {S}. The roots are pleasantly aromatic and are one of the popular ingredients of *root beer*, imparting a licorice flavor. Menomoni Indians prepared a dish of the roots mixed with wild onion, wild gooseberry, and sugar. Berries are made into jelly. North America. FERNALD; A61, A61{PL}, B28{PL}, E14T{DF}, E33M{PL}, GO{DF}, 131, J39M, J39M{PL}, J82, K18M{DF}, M82M{DF}, N84, 053M, Q24, R53M{PL}, etc.

*Aralia spinosa* - *Hercules' club*, *Devil's walking stick*, *Angelica tree* {S}. Young unfolding leaves, before the prickles form, are gathered and used as a potherb. They are chopped finely, flavored with vinegar, and served with rice. North America. FERNALD, GIBBONS 1979; B51, B68{PL}, E48{PL}, D47M, F85, H4{PL}, K38, K63G, M92{PL}, N37M{PL}, N84, P5, P38

*Eleutherococcus senticosus* - *Siberian ginseng* {S}. Young leafy shoots are eaten as a potherb, often mixed with boiled rice. Dried leaves are used as a substitute for tea. Becoming popular as a ginseng-like food tonic, with various parts of the plant available as extracts, tinctures, capsules, tablets, teas, etc. Eastern Asia. FLAWS 1994, FRAWLEY, LEUNG, TANAKA; E14T{DF}, F37T{DF}, F68T, F78{PD}, G66, G73{DF}, J82, J82{DF}, K18M{DF}, K63G, ZJ4{DF}, 053M, P5, R53M, R53M{PL}, etc.

#### *Nothopanax fruticosum* - *Polyscias fruticosa*

#### *Panax fruticosum* - *Polyscias fruticosa*

*Panax ginseng* - *Asiatic ginseng*, *Renshen*, *Insam* {S}. The sliced young roots are eaten raw like carrot sticks, candied, fried, dipped in honey as a snack, in tossed or spicy salads, made into *kimchi*, or added to other dishes like *sangxae tang*—chicken stuffed with glutinous rice, jujubes, chestnuts, and ginseng. Whole roots are often aged in bottles of liqueur. Pieces of dried root can be chewed like candy or brewed into an excellent tea, called *insam cha* in Korea. One of the principal food tonics of Asia, available as numerous supplemental products such as powders, extracts, chewing gum, etc. *Ginseng-Up* is a carbonated beverage made from ginseng. Fresh roots are occasionally available in Korean markets. Eastern Asia, cultivated. FLAWS 1995, LEE, F. 1988 [Be], LEE, F. 1992 [Nu, Re], LEUNG, MILLON [Cul, Re], NOH [Be], TAN [Re], TANAKA; B21P{DF}, C27G{PD}, E14T{DF}, F68T, F85, G19P{DF},

*G66*, 191 {PL}, J82, K18M{DF}, K63G, L34{DF}, N7D{PD}, N40{PR}, N84, R53M{PL}, R47, etc.

*Panax japonica* - *Japanese ginseng* \ *Bamboo ginseng* {ED}. The dried, aromatic roots are used in tonic teas and liqueurs. One of the ingredients of *Mu #16* tea, a blend of sixteen mountain-grown herbs formulated by George Ohsawa, the founder of macrobiotics. Eastern Asia. LEE, F. 1992, TANAKA, YASHIROEA; E60P, E66T, G47B, M15M, N84{S}, R53M{S}, R53M{PL}

*Panax notoginseng* - *Tienchi ginseng*, *Sanchi ginseng*, *Thin chat* {DF}. The tuberous, fleshy roots are dried and eaten in Chinese tonic soups, especially with chicken. They impart a distinctive, bittersweet flavor that is much appreciated by some. China, cultivated. HSU, LEE, F. 1992, LEUNG, TAN [Re], TEEGUARDEN; E2M, G19P, H36, L34

#### *Panax pseudoginseng* - *Panax ginseng*

*Panax quinquefolius* - *American ginseng* {PL}. Aromatic roots are candied and used as a masticatory. Leaves and roots are brewed into a pleasant tea. Also considered a food tonic similar to Asiatic ginseng, but somewhat more bitter, and milder in its effects. Available in supplemental powders, extracts, tinctures, candies, tonic drinks, etc. North America, cultivated. FERNALD, GIBBONS 1966b, HEDRICK 1919, LEE, F. 1992, LEUNG, MARCIN, TIERRA; A36, A36{S}, A83M, A83M{S}, C43M, E33M, F37T, F78, F78{S}, F78{PR}, F78{PD}, G68{S}, K18M{DF}, K22, M82M{DF}, N7T, R47, etc.

#### *Panax schinseng* *Panax ginseng*

*Panax trifolius* - *Dwarf ginseng* {PL}. Bulb-like roots when boiled in salted water, become very palatable, either as a hot vegetable or eaten cold like salted nuts. North America. FERNALD; A51M

*Polyscias fruticosa* - *Ming aralia* {PL}. The young leaves and tops are steamed and eaten as greens, cooked with fish and meat, or added to soups as a seasoning. They have an aromatic flavor reminiscent of parsley. Southeast Asia. HEDRICK 1919, OCHSE, OOMEN, UPHOF; G96,157, N84, 093{S}

*TYevesia palmata* - *Bhotala*, *Snowflake bush* {S}. Flower buds are eaten cooked. Himalayan region. TANAKA; A79M, C9M, F85, G20{PL}, G96{PL}, N84, 093, Q32

#### ARAUCARIACEAE

*Araucaria angustifolia* - *Parana pine*, *Brazilian pine* {S}. The nutritious seeds are eaten. Flavor of the kernel is mealy and somewhat sweet, resembling the taste of sweet potatoes. Also yields a gum which is consumed. Brazil, Argentina. KUNKEL, MENNINGER; E29{PL}, F85, G66,183M{PL}, K38, K63G, N84, 093

*Araucaria araucana* - *Monkey puzzle*, *Chile pine* {PL}. Starchy seeds, called *pi hones*, are eaten fresh, boiled, roasted, or made into an alcoholic beverage. Chile, Argentina. HEDRICK 1919, UPHOF; B74, B94{S}, D95, E87, H4, 174, I83M, J61M, M7M, NO, N84{S}, 053M{S}, 093{S}, P49{S}, R78{S}, etc.

*Araucaria bidwillii* - *Bunya bunya* {S}. The kernel of the seed is starchy and delicious, having the texture of a waxy boiled potato, with a flavor of chestnuts and pine nuts. It is eaten raw, boiled, roasted, in sauces or soups, deep-fried like a small potato, glazed, used as stuffing, or ground into flour. The wood and the shell of the nut are used for smoking meats and fish, imparting a delicious flavor. Germinated seeds produce an underground *earth nut*, which has a crisp texture and a coconut-like flavor. Australia. CRIBB, MENNINGER, NOEL, ROBINS [Cui, Re]; A79M, C9M, H4{PL}, I83M{PL}, K63G, M7M{PL}, N79{DF}, 032M{DF}, 094, P5, P38, Q32, Q46, R33M

#### ARECACEAE (PALMAE)

*Acanthorrhiza aculeata* - \* *Cryosophila nana*

*Acrocomia aculeata* - *Gru gru palm*, *Macauca* {S}. The sweet pulpy portion of the fruit is eaten. Also made into palm wine and a sago-like starch. An important source of kernel oil in parts of Brazil. Often found in drier regions, where conventional oilseed palms do not thrive. Tropical America. MENNINGER, PESCE, WILLAN; C9M, K47G, N84

*Acrocomia mexicana* - *Falmito de coyol* {S}. The tender leaf base is eaten raw, boiled, roasted, or pickled. Fruits are eaten or made into an oil similar to coconut oil, called *oil of coyol*. Sweet sap from the trunk is fermented into a palm wine, *vino de coyol*. Seed kernels are edible. Central America. MENNINGER, TANAKA, UPHOF, WILLIAMS, L.; K47G

*Acrocomia sclerocarpa* - *Gru gru nut*, *Palmeira mucaja* {S}. Young leaves are eaten as a vegetable. The sweet kernel is eaten or manufactured into a cooking oil. Pulp of the fruit is edible, having the flavor of apricot. Tropical America. HEDRICK 1919, PESCE, TANAKA; K47G

*Acrocomia totai* - *Total*, *Mboocayapalm* {S}. The seed kernel oil, when refined, is suitable for edible purposes. An important source of cooking oil in Bolivia and Paragu<sup>^</sup>. South America. MENNINGER, UPHOF; E29{PL}, K47G, N84

*Aiphanes caryotifolia* - *Chascara*, *Mararay* {PL}. Oily seeds are eaten or used in jams and confiture. Colombia to Brazil. DUKE, KUNKEL; A41G, A79M{S}, D87E, E29, I84M, K47G{S}, N84{S}, Q12, R33M{S}, R78M{S}

#### *Allagoptera arenaria* - \* *Diplothemium maritimum*

*Areca catechu* - *Betel nut*, *Pan* {S}. Thin slices of the seed kernel are made into a quid, smeared with slaked lime, wrapped in a fresh leaf of *Piper betle*, and chewed as a stimulating masticatory. It causes the lips, tongue, and teeth to become red, and if used frequently, black. Young leaves, inflorescences, and the sweet inner part of the shoots are eaten as vegetables. Skin of the fruit is edible. Southeast Asia, cultivated. ALTSCHUL, JACQUAT, MENNINGER, ROSENGARTEN; D87E{PL}, F85, I12{PD}, I12{PL}, I81M{DF}, I81M{PL}, K47G, N84, Q12, Q46, R33M

#### *Areca sapida* *Rhopalostylis sapida*

*Arenga ambong* - *Ambung* {S}. The heart of the stem produces a *sago* starch. Buds are edible. Philippines. BROWN, W., TANAKA; D87E{PL}, I84M{PL}, K47G, N84, Q12, R33M

*Arenga engleri* - *Formosan sugir palm* {S}. Young leaves and buds are eaten. Pith of stems yields a starch. Sap from the inflorescence is made into sugar. Taiwan. TANAKA, WESTER; A41G{PL}, C9M, D87E{PL}, D43{PL}, F85, I28{PL}, I84M{PL}, K47G, N84, P5, Q12, R33M

*Arenga pinnata* - *Sugar palm*, *Gomuti palm* {S}. Pith of stems furnishes a starch used in pastries or *tjendol*, a kind of syrup. Sap from the inflorescence is sweet and can be drunk fresh, boiled down to a sugar called *gula*, fermented into *tuwak*, distilled into *arrak*, or made into vinegar. Buds are cooked as a vegetable or pickled. The white, immature seeds are made into preserves (*kolang kaleng*), and *es campur*, a refreshing dessert of mixed fruit served with sweet syrup and ice. Malaysia. EISEMAN, HESSELTINE, MACMILLAN, OCHSE, UPHOF; A41G{PL}, F85,184M{PL}, K47G, N84, 093, Q12, R33M

#### *Arenga tremula* - *Arenga ambong*

*Astrocaryum murumuru* - *Palmeira murumuru* {S}. The juicy, fleshing covering of the fruit is eaten. It is said to have a pleasant aromatic flavor reminiscent of melon. Seed kernels are the source of an oil, called *murumuru oil* or *murumuru fat*, which is considered equal to that of the Babassu palm. It is used in the production of margarine and may serve as a substitute for cocoa butter. The seeds are exported to Europe and other areas. Brazil. HEDRICK 1919, PESCE, UPHOF; K47G

*Astrocaryum tucuma* - *Palmeira tucuma*, *Tucum* {S}. Both fruits and kernels are the source of an oil, *tucuma oil*, similar to coconut oil. The yellow fruit pulp has a flavor similar to apricot and is fermented into *tucuma wine*. South America. BROUK, CAVALCANTE, TANAKA, UPHOF; K47G

*Attalea cohune* - *Orbignyia cohune*

*Bactris gasipaes* - *Guilielma gasipaes*

*Bactris maraja* - *Marajah palm* {S}. The pulp of the fruit has a pleasant, acid flavor and is eaten fresh or brewed into a wine. Brazil. HEDRICK 1919, TANAKA, WILLAN; K47G

*Beccariophoenix madagascariensis* - *Monarana* {PL}. The Betsimisaraka people of Madagascar apparently prepare a sweet drink from the sap of the trunk. Madagascar. UPHOF; A41G, D87E, I83M, I84M, K47G{S}, N84{S}

*Borassus aethiopicum* - *Black rhum palm* {S}. The terminal bud or *palm-cabbage* is eaten raw in salads, or cooked as a vegetable. The fresh sap is a refreshing drink and yields one of the best palm wines and a sugar. Immature seeds contain a sweet juice consumed like coconut water, and after solidifying is like tender coconut meat. The thick, fleshy growth of the first underground leaf, called *mouroutehi* is a highly esteemed vegetable of the Hausas. The starchy, tuberous portions of germinated seeds are used as a tasty vegetable. They are produced in home gardens in Gambia by burying the seeds. The oily fruits are also eaten. Eastern Africa. FOX, E, TANAKA, VON MAYDELL; F85, I84M{PL}, K47G, N84

*Borassus flabellifer* - *Palmyra palm*, *Kaong*, *Taal* {S}. Sweet sap from the inflorescence is drunk as a beverage. It also produces palm wine, a sugar called *gur Jaggery* or *namtaan*, molasses, candy, and vinegar. Young fruits are pickled. Pulp of mature fruits is eaten or made into *punatoo*. Immature jelly-like seeds are eaten, added to *halo-halo*, or canned for export. Inflorescences are added to soups and curries. Sprouted seedlings are peeled and eaten raw, sun-dried or cooked. They also yield a starch made into gruel with rice, herbs, chilis, and fish. In Guatemala, the leaves are used for wrapping tamales, steamed fish, farmer's cheese, etc. The terminal bud is eaten. Salt is prepared from the leaves. Tropical Asia. BANERJI [Cu], GELLE [Re], JACQUAT, MARKS [Re], MENNINGER, MORTON 1988, PASSMORE [Re], UPHOF; C34G{PD}, D87E{PL}, E29{PL}, I8M{PD}, K47G, N84, 093, Q46

*Brahea armata* - \**Erythea armata*

*Brahea dulcis* - *Palma dulce* {PL}. The fruits, called *michire* or *miche*, are sweet and edible. Mexico. UPHOF; A41G, 128, 174, K47G{S}, N51, N84

*Brahea edulis* - *Erythea edulis*

*Butia capitata* - *Jelly palm*, *Pindo palm* {S}. Orange fruits are sweet, aromatic, with somewhat the flavor of apricots. They can be eaten fresh or made into jellies, jams, cakes, pies, etc. Sometimes found in specialty markets. Brazil, cultivated. RICHARDSON, M. [Re], TANAKA; A41G{PL}, A79M, C9M, D43{PL}, D57{PL}, E29{PL}, H4{PL}, I83M{PL}, 053M, P5, R33M

*Butia yatay* - {S}. Terminal buds are eaten as a vegetable. Fruits are used for making brandy. Kernels are also edible. Argentina to Paraguay. TANAKA, UPHOF; D43{PL}, K47G, N84, 053M, 093, P5, P17M, Q32

*Calyptronoma dulcis* - {S}. Flowers are used for making candy. Cuba. KUNKEL; F85, D87E{PL}, K47G

*Caryota cumingii* - *Fish-tail palm* {S}. Pith of stems are a source of *sago* starch. Buds are also edible. Philippines. BROWN, W., TANAKA; D87E{PL}, F85, I84M{PL}, K47G, Q12, R33M

*Caryota mitis* - *Smaller fish-tail palm* {S}. Slightly bitter buds are cooked and eaten with rice. Stems are a source of starch. Seeds are edible after removing the poisonous fruit wall. Southern Asia,

cultivated. BURKILL, MENNINGER, TANAKA; A41M, A79M, C9M, D43{PL}, E53M, K47G, N84, 093, P5, Q32, R33M

*Caryota rumphiana* - *Suwamkung* {S}. Terminal bud or *palm-cabbage* is eaten as a steamed vegetable with rice, in soups, or fried with coconut milk and spices. The stems are a source of *sago* starch. Indonesia. OCHSE, TANAKA; A41G{PL}, D87E{PL}, F85, I84M{PL}, K47G, Q12, R33M

*Caryota urens* - *Toddy palm*, *Fish-nil palm* {S}. Very young unfolding leaves are used as a vegetable. Juice of the trunk is made into sugar and an alcoholic beverage. Stems are a source of a starch. Southern Asia, cultivated. BURKILL, UPHOF; C9M, D43{PL}, I28{PL}, I84M{PL}, K47G, N84, 093, P5, Q12, Q18, Q32, Q46, R33M

*Chamaedorea costaricana* - *Pacaya* {S}. Young inflorescences are eaten raw in salads, dipped in egg batter and fried, boiled, or used in soups. Costa Rica. WILLIAMS, L.; A41G{PL}, C9M, F85, I84M{PL}, K47G, N84, 093, P17M, Q12, Q41, R33M

*Chamaedorea elegans* - *Collinia elegans*

*Chamaedorea graminifolia* - *Pacaya* {S}. Unopened flower clusters are eaten in salads, folded into egg batter and fried, or used as a boiled vegetable. Central America. TANAKA, UPHOF, WILLIAMS, L.; F85, K47G

*Chamaedorea pacaya* - *Pacaya*, *Boda* {S}. The immature male inflorescences are eaten raw in salads, boiled and served with salt and butter, added to soups, or dipped in egg batter and fried. Sold in local markets. Central America. FAIRCHILD 1947, WILLIAMS, L.; K47G, 093

*Chamaedorea tepejilote* - *Pacaya* {S}. The young inflorescences are taken from the spadices and eaten raw in salads, boiled, or fried in egg batter to form a fritter called *recado de pacaya*. Probably the best of the *Chamaedorea*s for this purpose. Usually cooked in several changes of water first to remove bitterness. Often used as a garnish for *fiambre*, a Guatemalan cold salad traditionally served on All Saints' D<sup>^</sup>. Occasionally available in bottles at Latin American markets. Mexico. HEDRICK 1919, MARKS [Re], WILLIAMS, L.; A41G{PL}, C9M, D43{PL}, D87E{PL}, F80, F85, I28{PL}, I84M{PL}, K47G, N84, P5, Q12, Q41, R33M

*Chamaerops excelsa* - *Trachycarpus fortunei*

*Chamaerops humilis* - *Palmetto*, *Dwarf fan-palm* {S}. The young shoots or suckers from the bottom of the plant, called *cafaglioni*, are eaten in Italy. Very young leaf buds are eaten as a vegetable. Dried fruits are also edible. Mediterranean region, cultivated. HEDRICK 1919, UPHOF; A41M, A79M, C9M, D43{PL}, D87E{PL}, H4{PL}, K38, K47G, 053M, P5, Q12, R33M

*Coccothrinax dulcis* - *Calyptronoma dulcis*

*Cocos coronata* - *Syagrus coronata*

*Cocos nucifera* - *Coco-palm*, *Coconut* {S}. Inflorescences are eaten as a vegetable; also the source of sugar, vinegar, and palm wine. Pulp of seeds is eaten raw, shredded, in desserts, or made into coconut oil, coconut milk (*santan*), coconut butter (*santan kanil*), *macaroons*, *ghee*, etc. Very young fruits are cooked in curries. The young mature-sized fruit or *water coconut* has jelly-like pulp that is considered a delicacy. Mature fruits yield *coconut water*, used as a refreshing beverage or as a tenderizing agent in stews and fondues. Terminal buds are eaten raw. The Nawasi cultivar has an edible husk. Coconut sport or *makapuno* is a delicacy that comes from a strain in which the coconut water is replaced with a thick curd. Another delicacy is the *coconut apple*, a spongy mass that forms inside a germinating seed at the expense of the water and albumen. The leaves are used to wrap foods before cooking. Scorched roots are a coffee substitute. Sprouted seeds are eaten like celery. Pith of stems is made into bread, added to soups, fried or pickled. *Onjom*, *tempeh bongrek*, *nata de coco* and *dageh kelapa* are fermented products made from coconut. *Nata de coco*, or *coconut gel*, is a

common ingredient of *halo-halo*—a bottled dessert that also contains aduki beans and sugar syrup. Cultivated. DUKE, FAIRCHILD 1930, GELLE [Re], JACQUAT, MACMILLAN, OCHSE, PASSMORE, ROSENGARTEN, ROUTHIER 1989 [Cul, Re], SHURTLEFF 1979, STEINKRAUS, TANAKA, UPHOF; A41G{PL}, A45{PD}, B60M{PR}, B60M{PR}, E21D{PL}, F85, I76T{PD}, N84, P17M, Q46

CULTIVARS {PL}

**Golden Malayan Dwarf:** (Golden Coconut) Small, attractive, golden-yellow nut. Dwarf, heavy yielding tree, much shorter than the typical coconut. Has a life expectancy half to one third that of common tall forms. Over 90% resistant to lethal yellowing disease. Introduced into Florida from the Malay Archipelago by an expedition sponsored by W.J. Matheson. I77G

**Green Malayan Dwarf:** Small, solid green nut. Dwarf, heavy yielding tree, half to one third the size of common tall forms; bears when about 4 or 5 years old with only 2 or 3 feet of bare trunk exposed. Full production of about 100 nuts per tree is reached in the ninth or tenth year. Tolerant to lethal yellowing disease. I77G, I84M

**King:** Distinct cultivar, said to have originated in Sri Lanka. Bears a yellow, ovoid fruit, called *tambili* in the immature stage when it is distinguished by its clear, sweet juice which furnishes a pleasant refreshing drink. Also esteemed for culinary purposes and *arrack*. Susceptible to lethal yellowing disease. BALASURIYA, MACMILLAN; T72M{S}

**Laccadive Dwarf:** Starts bearing after 2 1/2 to 3 years. Yields 250 nuts annually when mature. Color green and yellow. Excellent for tender, sweet coconut water. R0

**Makapuno:** Very distinct and desirable type whose interior is filled with soft, sweet, jelly-like flesh that can be eaten with a spoon. Originated in the Philippines where it is popular for making a delicious, delicate ice cream. There, Makapuno fruits sell locally for four times the amount of ordinary coconuts. T72M{S}

**Mavpan:** Large green nut, sometimes variegated with brownish or yellowish tints depending on the seed parents. Tree intermediate in size between the two parents; bears approximately 100 nuts beginning about the 5th year. Highly resistant to lethal yellowing disease. Malayan Dwarf x Panama Tall. Developed in Jamaica. I84M

**Panama Tall:** (San Bias) Notable for its unusually high yield of coconut milk. Tall tree, about 50% resistant to lethal yellowing disease. Widely grown in Jamaica. Originated on the Pacific coast of Panama; presumably introduced there from the Philippines. T72M{S}

**Red Malayan Dwarf:** Small, attractive, solid red nuts; tend to remain on the tree and not fall to the ground when ripe as the nuts produced by tall cultivars do. Dwarf, heavy yielding tree; comes into bearing much sooner than other types, when only 2 or 3 feet high. Tolerant to lethal yellowing disease. T72M{S}

**West Coast Tall:** Medium-sized nuts, somewhat variable in shape and color. Begins to bear 5 to 7 years after planting. Grows well in all soil types and is tolerant of soil moisture stress. Yields 60 to 80 nuts per year, 100 or more under irrigated conditions. Common tall cultivar grown extensively on the west coast of India. THAMPAN; R50

*Collinia elegans* - *Neanthe bella palm*, *Parlour palm* {S}. The young, unexpanded flower spikes are eaten like asparagus. Fruits are used as food by the Chinantecs, Zapotecs, and other Indian tribes. Central America, cultivated. HEDRICK 1919, UPHOF; A41M, A79M, C9M, D43{PL}, D87E{PL}, E53M, F85, I28{PL}, I57{PL}, K47G, 093, P5, Q32, R33M

*Copernicia cerifera* - *Copernicia prunifera*

*Copernicia prunifera* - *Carnauba* {S}. The trunk is the source of a *sago* starch and an edible gum. Roots are used as a substitute for

*sarsaparilla*. The young inflorescences are consumed. Seeds are used as a coffee substitute. Tropical South America. GENDERS 1977, KUNKEL, TANAKA; A41G{PL}, A79M, C9M, E8M{PL}, F85, I84M{PL}, K47G, R33M

*Corozo oleifera* - *American oil palm*, *Noli palm*, *Dende do para* {S}. Pulp of the fruit yields a reddish oil, similar to red palm oil, called *oil of corozo*, used for culinary purposes. The kernels contain a white oil that, when refined, is utilized for making margarine. Can be crossed with *Elaeis guineensis*, producing hybrids of low or medium stature. South America, cultivated. CAVALCANTE, DUKE, PESCE, TANAKA, UPHOF, ZEVEN; F85, K47G, N84

*Corypha elata* - *Buri palm*, *Gabang* {S}. Terminal buds are eaten raw, cooked with rice or made into pickles. Pith of stems is a source of *sago*. The sap yields a fermented drink (*tuba*), palm sugar, and vinegar. Kernels of young seeds are eaten or made into a sweetmeat. Southern Asia. BURKILL, MACMILLAN, OCHSE, TANAKA; F85, Q12, R33M

*Cryosophila nana* - {S}. Pulp of the fruit is eaten. It has abundant juice of a penetrating, sweet flavor that is well suited for making palm wine. Mexico. HEDRICK 1919; K47G

*Daemonorops draco* - *Dragon's blood palm* {DF}. The fruits exude a resin used commercially as a flavoring and colorant for non-alcoholic beverages. Malaysia. BURDOCK; GO, H36, K2, K18M, K47G{S}, L21T, M15M, N7D

*Diplothemium maritimum* - *Coast palm*, *Coco da praia* {S}. The fruit is eaten, being an ovate or obovate drupe with greenish-yellow, fibrous, acid-sweet flesh. Reportedly superior to the fruits of *Butia* if eaten at the dead ripe stage. Brazil. HEDRICK 1919; I84M{PL}, K47G

*Elaeis guineensis* - *African oil palm* {S}. The fleshy pulp of the fruit produces *red palm oil*, used in West African cuisine, especially red palm oil stew. Boiled and pounded nuts yield *palm nut butter* or *palm nut cream*, a thick red liquid popular in Ghana and Liberia for making palm butter soup and other traditional dishes. Seed kernels are the source of *palm kernel oil*, used as an industrial oil in the manufacture of margarine, shortenings, etc. In India and Malaysia it is made into *vanaspati*, a vegetable *ghee*. The kernels are also eaten raw, roasted, or cooked with cinnamon and sugar. A palm wine called *nsafUJuo* is made from the sap. Cultivated. CAMPBELL-PLATT, HEDRICK 1919, MENNINGER, TANAKA, UPHOF, WILSON, E.G. [Re]; A7{PD}, A41G{PL}, A79M, C9M, E29{PL}, F85, I84M{PL}, K47G, N84, 093, R33M

*Elaeis melanococca* - *Corozo oleifera*

*Erythea armata* - *Mexican blue palm* {S}. The fruit is edible. Mexico. TANAKA; A41M, A79M, C9M, D43{PL}, H4{PL}, H71, I28{PL}, I83M{PL}, I98M, I98M{PL}, J86{PL}, N84, 053M, R33M

*Erythea edulis* - *Guadalupe fan palm* {S}. Sweet pulp of the fruit is eaten. Young leaf-buds from the heart of the tree are used as a vegetable. Caribbean region. UPHOF; A41M, C9M, D43{PL}, H71, I28{PL}, I83M{PL}, I98M, I98M{PL}, K46{PL}, K47G, N84, 093

*Eugeissona utilis* - *Stilt-root palm* {S}. The stem yields an excellent starch, said to be superior to that of *Metroxylon rumphii*. The violet pollen grains are consumed with rice or sago as a dessert. Indonesia. UPHOF; K47G

*Euterpe edulis* - *Assaipalm*, *Para palm* {S}. The long, terminal bud is one of the sources of *hearts of palm*. A tropical delicacy, they are eaten raw in salads, sauteed in butter, or pickled like artichoke hearts. Fruits are used to make a beverage. Tropical South America. HEDRICK 1919, NATIONAL RESEARCH COUNCIL 1975a, TANAKA; A41G{PL}, K47G, N84, 093, P5, P17M, P38, Q12, R33M

*Euterpe oleracea* - *Cabbage palm*, /4<sup>^</sup> {S}. The pulp of the fruit is added to water to make a violet-colored beverage or juice. It is then consumed with tapioca and sugar, cassava meal and grilled fish or dried shrimp, as a porridge cooked with cassava meal, or as an ice cream or popsicle flavoring. Also the source of an edible oil. The terminal leaf-bud is eaten as *hearts of palm*, said to resemble artichoke. Tropical America, cultivated. CAVALCANTE, HEDRICK 1919, IDONE, PESCE, TANAKA; A41M, C9M, D87E{PL}, F85, K47G, N84

*Euterpe precatoria* - *Agai* {S}. The oily, grayish mesocarp is used in the preparation of a popular beverage similar to one made from the *Bacaba branca palm*, *Oenocarpus distichus*. It also yields a dark green oil with an agreeable flavor and aroma. The terminal buds are cut for hearts of palm. Similar to *E. oleracea*, but does not grow in clumps. Brazil. PESCE, TANAKA; I84M{PL}, K47G, N84

*Geonoma binervia* - *Pacuca* {S}. The young, tender inflorescences are cooked and eaten. Once common in the markets of Costa Rica. Central America. ALTSCHUL, UPHOF, WILLIAMS, L.; K47G

*Guilielma gasipaes* - *Pejibaye*, *Peach palm*, *Pupunha* {S}. The fruits, high in protein, are eaten roasted, boiled with salt and mixed with mayonnaise, or made into bread, cookies, and sweet *chichas*. The original inhabitants of Costa Rica slowly smoked the fruit to keep it fresh better and improve the flavor. Pejibaye soup is an exotic delicacy of Costa Rican nouvelle cuisine. Dried fruits are ground to a flour that is mixed with eggs and vegetables to make *torillas*. Seeds are the source of an edible oil, called *oil ofnmacanilla*. Kernels are eaten or made into a meal used to flavor milk drinks. A salt substitute is obtained by cooking the spadix. The young flowers may be chopped and added to omelettes. *Coquillo* is a palm wine prepared from the sap. A valuable source of *hearts of palm* because it produces multiple shoots. Tropical America, cultivated. ALMEYDA 1980 [Cu, Pro], DE CERDAS [Re], DUKE, IDONE, MENNINGER, MORTON 1987a [Cu], NATIONAL RESEARCH COUNCIL 1975a, SMITH, N., UPHOF; A41G{PL}, A79M, C9M, D87E{PL}, E21D{PL}, F85, H25M{PD}, I84M{PL}, K47G, L55J, N84, 019, R33M

#### CULTIVARS {S}

**Spineless:** Produces yellow or red-skinned fruits that are identical to those of other peach palms. However, the tree and leaves are entirely spineless. Ordinary strains are well-armed with rings of two inch long, needle-like spines which can make harvesting the fruits and hearts of palm very unpleasant. 019

*Heterospatha elata* - *Sagisi* {S}. Terminal buds are used as a vegetable. The seeds are chewed with betel nuts. Philippines. BROWN, W., BURKILL, UPHOF; F85, I84M{PL}, K47G, N84, Q12, R33M

#### *Hyphaene argun* - *Medemia argun*

*Hyphaene coriacea* - *Gingerbread palm* {S}. The pulp of the fruit is eaten. Also the source of a palm wine. Eastern Africa. FOX, F., UPHOF; A41G{PL}, C9M, D87E{PL}, K47G, Q12, N84, R33M

*Hyphaene natalensis* - *South African doum palm*, *Lala palm* {S}. The sap furnishes a palm wine that is said to taste like ginger beer when ripe. Bushmen relish the milk from the seed which has the flavor and color of coconut milk. The shoots of the germinated seeds are eaten as a vegetable. Southern Africa. FOX, F.; A41M, D87E{PL}, K47G, N84

*Hyphaene thebaica* - *Egyptian doum palm*, *Gingerbread palm* {S}. Terminal buds are used as a tasty cabbage. The thick, dark pulp of the fruit, having the scent of ginger bread, is made into molasses, cakes, drinks and sweetmeats. Unripe kernels, when properly prepared, are edible. The germinated seedlings just below the ground are used as a vegetable. Northern Africa. DAGHER, MENNINGER, UPHOF, VON MAYDELL; E29{PL}, F85, K47G

*Iriarteia ventricosa* - *Palmeira paxiuba barriguda* {S}. Heart of the shoots is eaten as *palm-cabbage*. The flowers yield an ash used as

a substitute for common salt. Guiana-Brazil. KUNKEL, TANAKA; K47G

*Jessenia bataua* - *Pataua palm*, *Seje* {S}. The fruits yield an excellent light greenish-yellow oil which is almost identical with olive oil. It is used in cooking or as a coloring for chocolates. A nutritious milk-like beverage is made by mixing the juice of the pulp with manioc meal. Northern South America. BALICK [Nu], CAVALCANTE, KUNKEL, PESCE, UPHOF; A41G{PL}, A41M, A79M, I84M{PL}, K47G, N84

*Jessenia polycarpa* - *Seje*, *Ibe* {S}. The violet-colored fruit, about the size of a pigeon's egg, has a thin, oily flesh that is sweet and edible. Its pulp yields a yellow oil, called *mantecca negra*, that closely resembles olive oil and is sold in markets of Colombia. The milky residue forms a nutritious beverage known as *vicutta*. Northern South America. DUKE, HEDRICK 1919, NATIONAL RESEARCH COUNCIL 1975a, PEREZ-ARBELAEZ, UPHOF; K47G

*Jubaea chilensis* - *Chilean wine palm*, *Coco de Chile*, *Honey palm* {S}. The sap from the trunk is fermented into palm wine, or boiled down to a syrup called *miel de palma* or *palm honey*. Fruits are candied. Edible kernels are called *cokernuts*, *pygmy coconuts*, or *coquitos* and have been introduced into the specialty foods market. They have a nutty taste raw and are also used in sweetmeats. Chile, cultivated. HEDRICK 1919, MENNINGER, UMANA-MURRAY, UPHOF; A41G{PL}, A79M, C9M, D43{PL}, D57{PL}, E13G{PD}, G5M{PD}, I28{PL}, I83M{PL}, N40{H2}, N84, P5, P38

#### *Jubaea spectabilis* - *Jubaea chilensis*

*Licuala spinosa* - *Ki pho* {PL}. Young leaves are used as a wrapping for glutinous rice desserts. The young shoots, either raw or cooked, are eaten with the Thai shrimp paste and chili sauce known as *nam phrik kapi*. Southeast Asia. JACQUAT; A41G, D87E, I84M, K47G{S}, N84{S}

*Livistona saribus* - *Tro* {PL}. Fruits are eaten after maceration in vinegar or a salt solution. Terminal buds are used as cabbage. Tropical Asia. BURKILL, UPHOF; C9M{S}, D43, D87E, I84M, K47G{S}, N84{S}, Q12{S}

#### *Lodoicea callipyge* - *Lodoicea maldivica*

*Lodoicea maldivica* - *Coco-de-mer*, *Double coconut* {S}. The immature seed contains a delicately-textured, translucent, jelly-like substance that is sweet and melting and much appreciated as a dessert delicacy, often served with a dressing of liqueur. Terminal shoots are eaten and are often preserved in vinegar. Seychelles. HEDRICK 1919, LIONNET, MENNINGER; N84

*Mauritia flexuosa* - *Buriti palm*, *Wine palm*, *Miriti* {S}. A juice prepared from the fruit pulp is consumed with sugar and cassava meal, or made into a sweet *doce de buriti*. The pulp also yields an edible oil. An edible starch is derived from the pith of the trunk. Potable sap from the inflorescence is drunk or made into palm wine or sugar. Tropical South America. CAVALCANTE, HEDRICK 1919, IDONE; K47G

*Mauritia martiana* - *Carana* {S}. A juice is prepared from the pulp of the fruit which has, to some people, a better flavor than that of miriti. It is consumed with cassava meal and sugar. Brazil. CAVALCANTE; K47G

#### *Mauritia vinifera* - *Mauritia flexuosa*

*Medemia argun* - *Argun palm* {S}. The fruits are consumed by the tribal peoples of North Africa. In Nubia they are buried for some time, after which they acquire a sweetish flavor somewhat reminiscent of coconut. North Africa. DARBY, UPHOF; A41G{PL}, A41M, K47G, N84

*Metroxylon rumphii* - *Spiny sago palm* {S}. The trunk yields *sago*, an important starch used in porridge, cakes, puddings, soups,

bread and pastries. Much is exported from Malaysia and Indonesia. In the Kai and Tanimbar Islands, the pith is roasted and eaten. Malaysia, Pacific Islands, cultivated. BURKILL, MASSAL, MAY, R. [Re], UPHOF; K47G, N84, 093

Metroxylon sagu - *Sago palm* {S}. The heart of the trunk is steamed, roasted, added to stews, or preserved. Also the source of a sago starch resembling tapioca, and used in much the same way. In India, sago starch is made into *papadams* and *idlis*. Ripe fruits, though astringent, are eaten as a delicacy by the native people. Terminal buds are steamed and eaten as a side-dish with rice, added to stews, or pickled. Southern Asia, cultivated. CAMPBELL-PLATT, MACMILLAN, OCHSE, REEJHSINGHANI 1973 [Re], TANAKA; K47G

Nannorrhops ritchieana - *Mazini palm* {PL}. Young leaves, inflorescences, and fruits are eaten. Arabia to India. TANAKA, WATT; A41G, 128, 184M, K47G{S}

Oenocarpus bacaba - *Bacaba vermelha, Red bacaba* {PL}. The fruit yields a colorless, sweet oil used to adulterate olive oil. Fruits are also used to prepare a cocoa-like drink. Guiana, Brazil. ALTSCHUL, HEDRICK 1919; D87E, K47G{S}

Oenocarpus distichus - *Bacaba branca, White bacaba* {PL}. The pulp of the fruit contains 25 % of a clear, yellow oil that can substitute perfectly for olive oil. *Bacaba branca*, a milky drink, and *bacaba vermelha*, a yellow-red beverage used pure or with sugar and cassava meal, are both produced from the fruit. These beverages are sometimes fermented into vinegar. Guiana, Brazil. CAVALCANTE, IDONE, PESCE, TANAKA, UPHOF; D87E, K47G{S}

Oenocarpus multicaulis - *Palmeira bacaba-y, Becabinha* {S}. Juice made from the fruit pulp is used as an oily beverage. The seeds are edible. Terminal buds are used as cabbage. Also the source of an edible oil. Peru, Brazil. CAVALCANTE, KUNKEL, TANAKA; D87E{PL}, K47G

Oncosperma filamentosum - *Anibong, Nibong, Gendiwung* {S}. The heart, or cabbage, is delicately white with a very sweet, nutty flavor. It can be used raw in salads, and when boiled it resembles asparagus or kale. Flowers are used to flavor rice. Malaysia. BURKILL, HEDRICK 1919, TANAKA; F85, K47G

Orbignya cohune - *Cohune palm* {S}. Seed kernels are the source of an oil used in cooking or the manufacture of margarine. Fruits are made into sweetmeats. Sap is used for winemaking. Central America. DUKE, MENNINGER, UPHOF; A41G{PL}, A79M, F85, K47G

Orbignya martiana - *Babassu* {S}. A cooking oil is extracted from the kernels. They are also eaten as a snack or made into a nut milk. The watery endosperm, *agua de coco*, is consumed as a beverage. Sap from the stem produces a palm wine. The palm heart or *palmito* is used as food. Ashes from burned stems are used as a salt substitute. Babassu flour is mixed with milk and sugar to produce a chocolate-like drink. Brazil. IDONE, MAY, P., PESCE, NATIONAL RESEARCH COUNCIL 1975a; K47G

Parajubaea cocoides - *Quito palm, Mountain coconut* {PL}. The sweet, fleshy kernels, about the size of a macadamia nut, are eaten raw as a delicious snack. They also yield an edible oil. Very popular locally. Ecuador, Columbia. NATIONAL RESEARCH COUNCIL 1989; A41G, A41M{S}, D87E, K47G{S}, N84, Q49M

Parajubaea torallyi - *Janchicoco* {PL}. The sweet, fleshy nuts are eaten or pressed for their edible oil. Also a source of hearts of palm. An endangered species. Bolivia. NATIONAL RESEARCH COUNCIL 1989; I84M, N84{S}

Phoenix canariensis - *Canary Islands date palm* {S}. Source of a sap used like *palm honey*, or syrup. The fruit is also edible. Canary Islands, cultivated. KUNKEL, TANAKA; C9M, D43{PL}, F80, F85, H4{PL}, K38, N84, 053M, P5, P5{PL}, Q32, R33M

Phoenix dactylifera - *Date palm* {S}. The ripe fruits are eaten out of hand, in breads, cakes, pastry, confectionery, *asseeda, Branston pickles*, etc. Traditionally they are stuffed with butter or nuts, baked, boiled with onions in milk, fried with eggs, made into date syrup, or used as a coffee substitute. The fruits develop and ripen in four stages: *kimri, khalal, rutab* and *tanr*. The male inflorescence is eaten as a delicacy. Unripe fruits are pickled. The seeds are occasionally eaten or pressed for their oil. Spathes are chewed, soaked in drinking water to improve its flavor, or distilled into a liquid that flavors hot or cold drinks. The pollen is eaten. Also the source of *hearts of palm, toddy, arrak*, and an edible manna. Cultivated. BARREVELD, DONKIN, NIXON [Cu], POPENOE, P., POPENOE, W. 1920; A79M, C9M, C34M{PD}, C81{PD}, D57{PL}, G3Z{PD}, H15T{PD}, I28{PL}, J82, K38, L50M{PD}, 053M, P17M, Q12, Q32, Q46, R33M, etc. (for cultivars see Date, page 358)

Phoenix paludosa - *Bengal date palm* {S}. Fruits are eaten in curries. The pith is edible. Southern Asia. BURKILL, TANAKA; F85, K47G, 093, Q12, R33M

Phoenix pusilla - *Inchu* {S}. The edible fruit is sweet and mealy, tasting like chestnuts. Also used to make palm sugar and an alcoholic beverage. Southern Asia. BURKILL, TANAKA, WATT; K47G, Q12, R33M

Phoenix reclinata - *Senegal date* {S}. The sap is fermented into a palm wine. Seeds are used as a coffee substitute. The terminal bud is used as a vegetable. Ripe fruits are sweet and tasty and are eaten raw. Tropical Africa, cultivated. FOX, F., HEDRICK 1919, TANAKA; C9M, D43{PL}, I28{PL}, K47G, N84, 053M, 093, P5, P17M, Q32, Q41, R33M

Phoenix sylvestris - *Wild date palm* {S}. Sap from the stem can be drunk as a beverage. It is also boiled down to a palm sugar, *jaggery*, or fermented into palm wine and distilled into *arrak*. The fruit is sometimes eaten. Southern Asia. MACMILLAN, PARMAR, C., TANAKA, UPHOF; C9M, D43, D87E{PL}, F85, I28{PL}, I84M{PL}, K47G, N84, 093, P5, Q41, R88

Pseudophoenix vinifera - {PL}. The saccharine juice obtained from the stem is fermented into a drink. West Indies. TANAKA; A41G, D87E, F85{S}, I84M, K47G{S}

Ptychosperma elegans - *Cabbage palm* {S}. Unexpanded leaves are eaten as a vegetable. Australia. TANAKA; A41G{PL}, F85, I84M{PL}, K47G, N84, 093, P5, Q12, Q32, R33M

Raphia farinifera - *Madagascar raffia palm* {PL}. The stem is the source of a sweet beverage, *harafa*. Also the source of a starch. Fruits and seed kernels are eaten. Boiled fruit pulp yields a yellow fat, *Raphia butter*, of good taste when fresh. Africa, Madagascar. HEDRICK 1919, MENNINGER, UPHOF; A41G, D87E, I84M, K47G{S}

Raphia hookeri - *Ivory Coast raffia palm, Giant raffia palm* {S}. The abundant sap of the young inflorescence yields an excellent palm wine, known as *mimbo* or *doka*. Stems are the source of a starch. Central buds are eaten as *palm-cabbage*. Tropical Africa, cultivated. CAMPBELL-PLATT, HEDRICK 1919, KUNKEL, STEINKRAUS, UPHOF; F85, K47G

#### *Raphia ruffia - Raphia farinifera*

Raphia vinifera - *Wine raffia palm, Bamboo palm* {S}. Sap from the flower stalks is brewed into a palm wine. It is also boiled down into a palm sugar. Fruit is edible, but somewhat bitter. Tropics. TANAKA; K47G

Rhopalostylis sapida - *Nika palm, Nikau palm* {S}. Young inflorescences are eaten. The terminal bud, or blanched heart is juicy and succulent, with an agreeably nutty flavor even when raw. New Zealand. COLENSO, HEDRICK 1919; C9M, D43{PL}, I28{PL}, I83M{PL}, N84, 093, P5, Q12, Q49M, R33M

*Roystonea elata* - *Florida royal palm* {S}. The edible fruits fall to the ground when ripe. Terminal bud is used for cabbage. Southeastern North America. MORTON 1977; /77{PL}, K47G, N84, Q12, R33M

*Roystonea oleracea* - *Cabbage palm* {S}. The terminal bud, of a white color and delicate flavor, is boiled as a vegetable or made into pickles. Pith of the stem yields a starch. West Indies. HEDRICK 1919; A41G{PL}, C9M, F85, K47G, N84, 093, P5, Q12, R33M

*Roystonea regia* - *Cuban royal palm* {S}. The terminal bud, or cabbage, is consumed as a vegetable in some parts of the West Indies. Fruits are also edible. In the Dominican Republic, a very popular candy known as *Raspadura* is wrapped with the bark of the crownshaft sheath, locally called *yagua*. *Raspadura de leche* is made with milk and *Raspadura de melao* with *melao syrup*, a molasses-like product. Caribbean region. MORTON 1977, RAMIREZ DE CARIAS [Re], UPHOF; I84M{PL}, K47G, 093, P5, P17M, Q12, Q18, Q32, Q41, etc.

*Sabal etonia* - *Scrub palmetto*, *Scrub cabbage* {PL}. Terminal bud, or cabbage, is used as a vegetable. The fruits are also eaten. Southeastern North America. MORTON 1977; A41M{S}, B32, D43, H4, H14M, K47G{S}, N37M, N84{S}, Q12{S}

*Sabal minor* - *Dwarf palmetto* {S}. The pith of the stem is edible. Southern North America. HEDRICK 1919; D43{PL}, F85, H4{PL}, I28{PL}, N37M{PL}, 053M, 093, P5, Q32, R33M

*Sabal palmetto* - *Cabbage palmetto*, *Swamp cabbage* {S}. The pulp of the fruit is very sweet and prune-like in flavor. It is eaten raw, made into syrup, or dried and made into bread. Terminal bud is a delicacy raw or cooked. The pith of the upper trunk is chewed for the sweetish juice, made into a pumpkin-like pie, or boiled with raisins and syrup as a pudding. Ashes serve as a salt substitute. Southeastern North America. HAWKES [Re], MORTON 1977, POLVAY [Pre, Be], QUINTANA 1994 [Re]; A79M, C9M, D43{PL}, F80, H4{PL}, I28{PL}, N37M{PL}, N84, P5, Q32, R33M

*Sabal texana* - *Texas palmetto*, *Palma huichira* {S}. The fruit is eaten. Formerly, the heart was dried and pounded into a meal. Southwestern North America. LATORRE 1977b; A80M{PL}, F85, N37M{PL}, 093, Q12, Q32, R33M

*Salacca conferta* - *Salak hutan*, *Asampayo* {S}. The intensely acid pulp of the fruit is used to season curries, or it is boiled and made into a sweetmeat. Malaysia. BURKILL, HEDRICK 1919, TANAKA; K47G, N84

*Salacca edulis* - *Salak* {S}. Considered one of the finest palm fruits for eating out of hand. The tear-drop shaped fruit has distinctive brownish scales and yellow-white pulp that is slightly crisp with a delicious blend of acids and sugars. Also eaten cooked with spices, pickled, or preserved in salt water and sugar. Seeds are edible. Indonesia, cultivated. EISEMAN, HEDRICK 1919, MENNINGER, UPHOF; E8M{PL}, E29{PL}, K47G, N84, 019, R78M

#### CULTIVARS

**Gondak:** On the island of Bali, where the best salak grow, this is one of the two leading cultivars. Self-pollinating, can produce fruit on single trees, without the aid of a pollinator. WHITMAN; U27T

**Nanaka:** One of the two best cultivars grown in Bali. Bears fruit without the aid of pollen from another tree, whereas salak originating outside of Bali produce both male and female trees. WHITMAN; U27T

*Salacca wallichiana* - *Kumbur* {PL}. The seeds are used as an acid flavoring in curries. Malaysia. BURKILL; D87E, K47G{S}

*Salacca zalacca* - *Salacca edulis*

*Scheelea butyracea* - *Wine palm*, *Palma real* {S}. The terminal buds are cooked and eaten as a vegetable. Sap from the trunk yields a good palm wine or *toddy*. Seeds are eaten and are also the source of an edible oil. In Panama, they are mashed and mixed with roasted

green plantain, forming a dish called *sango*. Tropical South America. DUKE, PEREZ-ARBELAEZ, TANAKA; K47G

*Scheelea macrocarpa* - *Coroba* {S}. Seeds are edible, though the kernels are extremely hard. Also the source of an edible oil. South America. MENNINGER, UPHOF; K47G

*Scheelea preussii* - *Corozo* {S}. The terminal bud is eaten, either raw or cooked. Oil from the seed is said to be edible. Central America. UPHOF, WILLIAMS, L.; K47G

*Serenoa repens* - *Saw palmetto* {PL}. Fruits are edible. Florida pioneers once made a carbonated soft drink from the juice of the berries and called it *Metto*. Produces several delicious palm hearts the size of a walnut. All but one can be harvested without killing the tree. Seeds are edible. Southeastern North America. GIBBONS 1979, MORTON 1977, UPHOF; A41G, A41M{S}, D87E, F85{S}, H14M, I28, I83M, I84M, K47G{S}, N37M, N84{S}, R33M{S}

*Syagrus coronata* - *Licuri palm*, *Nicuri*, *Ouricuru palm* {PL}. Pulp of the fruit is consumed by the natives. Kernels are the source of an oil used in the manufacture of margarine. The pith of the stem is used to make bread. Brazil. HEDRICK 1919, UPHOF; A41G, D87E, F85{S}, I84M, K47G{S}

*Trachycarpus fortunei* - *Chinese windmill palm* {S}. The young inflorescence is eaten in much the same way as bamboo sprouts. Fresh flowers and the terminal bud are also apparently consumed. China, cultivated. ESSIG, HEDRICK 1919, TANAKA; A79M, C9M, D43{PL}, H4{PL}, H71, K38, L91M, NO{PL}, N37M{PL}, 053M, P5, R33M

*Washingtonia filifera* - *California fanpalm* {S}. The berry-like, black fruits have a thin, sweet pulp that tastes somewhat like dates or butterscotch. They are eaten fresh, dried, or made into jellies and drinks. Seeds are ground into meal for making bread or porridge. Terminal bud is eaten roasted. Southwestern North America. CLARKE, KIRK, MEDSGER, UPHOF; A41M, C9M, D43{PL}, D87E{PL}, F80, I33, K38, 053M, Q12, R33M

*Zalacca conferta* - *Salacca conferta*

#### ARISTOLOCHIACEAE

*Aristolochia serpentaria* - *Virginia snakeroot* {PL}. The aromatic, dried roots yield an essential oil reminiscent of valerian and ginger that is used as a flavoring for alcoholic beverages. Eastern North America. BURDOCK; G73{DF}, N84

*Asarum canadense* - *American wild ginger* {PL}. Flowers and rootstocks have a fragrance and taste suggestive of ginger and can be used as a flavoring. Candied wild ginger is prepared by boiling in sugar water until a syrup forms. The roots are then rolled in granulated sugar, while the syrup can be used on ice cream and other desserts, or mixed with water to form a beverage that is a digestive aid. Eastern North America. ANGIER, FERNALD, GIBBONS 1962, HALL [Pre, Re]; BO, C9, C43M, D75M, E33M, F51, G89, K18M{DF}, K85, M77M, N7T, N9M, N9M{S}

*Asarum caudatum* - *Long-tailed wild ginger* {PL}. Rootstocks can be used as a ginger substitute. Leaves are brewed into a tea. Western North America. KIRK, UPHOF; A51M, B92, D95, E63M, E87, G60, I39, I98M, J26, K79, L59P

#### ASCLEPIADACEAE

*Asclepias incarnata* - *Swamp milkweed* {PL}. Unopened flower buds were made into soup with deer broth, added to cornmeal mush, and dried and stored for winter use, by the Menominee Indians. Young fruits are boiled and eaten. North America. YANOVSKY; B51{S}, E7M{S}, F20M, F80{S}, G47M{S}, G89, H61M{S}, H63, I11M, J40, J40{S}, J42, J42{S}, J43{S}, K53{S}, N9M, N9M{S}, etc.

*Asclepias speciosa* - *Showy milkweed* {S}. Young shoots are boiled and eaten like asparagus. Tender tops of older plants are

steamed as a potherb. The gum was used for chewing. Flower buds young fruits, roots, and raw flowers are also used. North America. CLARKE, FERNALD, HARRINGTON, H.; D95{PL}, E61{PL}, J25M, J39M, L55J, N84

*Asclepias syriaca* - *Common milkweed* {S}. In the spring the new shoots, while still young and tender, are cooked and eaten like asparagus. The leaves before they become tough are steamed like spinach. Unopened flower clusters are a broccoli substitute. If picked at the proper moment the young pods resemble okra when cooked. Sprouted seeds are eaten. North America. FERNALD, GIBBONS 1962 [Pre, Re], HARRINGTON, H., KINDSCHER; C43M, E7M, F80, H61M, J40, J42, M34M, N9M, N9M{PL}, N84, 053M

*Asclepias tuberosa* - *Butterfly-weed, Pleurisy root* {S}. Tender shoots can be eaten cooked like asparagus. The Sioux Indians prepared a crude sugar from the flowers, but this technology seems to have been lost. Some authors report that the tubers are edible, others say they are poisonous. Leaves and inflorescences are also eaten. North America. FERNALD, HARRINGTON, H., HEDRICK 1919, MEDSGER, UPHOF, YANOVSKY; B51, C9{PL}, C9M, E7M, E33M{PL}, F80, G47M, G89, I77M{PL}, J40, J40{PL}, K53, N9M, N9M{PL}, 053M, etc.

*Ceropegia bulbosa* - *Khapparkadu* {PL}. Succulent leaves and stems are acidic and are eaten stewed in curries. Tuberous roots are eaten after the bitterness is removed by boiling. India. TANAKA, TATE, WATT; L26

*Fockea angustifolia* - *Water root, Khoa, Kghoa* {PL}. The swollen rootstocks have whitish, watery flesh with a nutty flavor and are eaten raw when young or used for making jam and preserves. Southern Africa. FOX, E, TATE; N84

*Fockea edulis* - *Kambro* {PL}. The large tubers have been used to make a *konfyt*, as an alternative to watermelon. Southern Africa. FOX, F.; E48, G18, G94, H52, I47M, N84{S}, 053M{S}, Q41{S}, R88{S}, S28M{S}

*Gymnema sylvestre* - *Australian cow-plant* {DF}. The leaves are occasionally eaten. They have the unusual ability to temporarily cause the taste buds to suppress all sensitivity to sweet substances. Tropics. INGLET, LOVELOCK, MARTIN 1975, UPHOF; K18M

*Pergularia daemia* - *Leshwe* {S}. The leaves, stalks and flowers are cooked and eaten as potherbs. India. FOX, F., TANAKA; N84, S28M

*Telosma cordata* - *Yeh-lai-hsiang, Bunga siam* {PL}. In Thailand, both the flowers and leaves are eaten. The fleshy roots are made into a sweetmeat by the Chinese in Java. Tropical Asia. BURKILL, TANAKA, UPHOF; E78M, F85{S}

#### ASPARAGACEAE

*Asparagus acutifolius* - *Wild asparagus, Triguero* {S}. The young, tender shoot tips have a uniquely bitter, aromatic flavor. They are excellent in omelets, grilled, or seasoned with oil and lemon juice. Preferred over regular asparagus by some gourmets because of its stronger flavor. Mediterranean region. BIANCHINI, DOMINGO, GRAY, P. [Cul], HEXAMER, KREMEZI 1993 [Re]; F85

*Asparagus aphyllus* - *Prickly asparagus, Sporangia* {S}. In Greece, the slightly bitter young shoots are gathered from the wild and eaten raw or cooked. Mediterranean region. HEDRICK 1919, NIEBUHR; Z25M

*Asparagus cochinchinensis* - *Tenmondd* {S}. Tuberous roots are eaten after preserving in sugar. Fruits also said to be edible. South-east Asia. ALTSCHUL, TANAKA; F85, N84

*Asparagus officinalis* - *Asparagus* {S}. Young shoot tips are eaten boiled, steamed, sauteed, stir-fried, pickled, etc. Lower part of shoot

can be used in soups. Blanched or white asparagus is preferred by some for its more delicate flavor. Pencil-thin shoots, known as *sprue*, are used frequently in Italy, often with the addition of grated Parmesan cheese. Seeds are used as a coffee substitute. Cultivated. HEDRICK 1919, SPENCER, UPHOF; B63M{P£}, H25M{PR}, H73{PR}, L55J, N7G, N84, R47. (for cultivars see *Asparagus*, page 291)

#### ASPLENIACEAE

*Asplenium bulbiferum* - *Pikopiko* {PL}. Roots and young uncurled shoots are used as food. New Zealand. KUNKEL, NATUSCH; 128, M42, N84{S}

*Asplenium nidus* - *O-tani-watari* {S}. Leaves are parboiled and eaten. Ash from burned leaves is used as a substitute for salt. Tropics. CROFT, KUNKEL, TANAKA; I28{PL}, K47M, N84, 033, P17M

#### ASTERACEAE {COMPOSITAE}

*Achillea atrata* - *Achillea noire* {S}. Used in the same way as musk yarrow in the preparation of *iva liqueurs*. Europe. UPHOF; N84

*Achillea decolorans* - *Garden mace* {PL}. The aromatic leaves are used as a substitute for tea. Also used as a flavoring for soups and stews, potato salad, etc. Europe. C43M, E61, F35M, F37T, H51M, J82, L90J, M82, P92, R49, R53M

*Achillea erba-rotta* ssp. *moschata* - *Musk yarrow* {S}. Source of a liqueur, called *esprit d'iva, iva liqueur*, or *iva wine*, produced in Italy. In Switzerland, *iva bitter* is produced. Europe. TANAKA, UPHOF; N84, 053M, Q24, R49{PL}

*Achillea ligustica* - *Milfoil* {S}. In England, the herb forms one of the main ingredients of an old-fashioned cordial, called *lovage*—along with the garden lovage (*Levisticum officinale*), and tansy (*Tanacetum vulgare*). Europe. GRIEVE; F85

*Achillea millefolium* - *Yarrow, White yarrow* {S}. Young leaves are occasionally eaten in salads, cooked as a vegetable, or added to soups and sauces. In Germany, they add a characteristic flavor to *grundonnerstag suppe*. The leaves and flowers are brewed into an aromatic tea. In parts of Sweden, the herb is employed as a substitute for hops in the preparation of beer. Yarrow is said to make an excellent *kombucha* drink when combined with elderflower, raspberry leaves, dandelion and stinging nettle. An essential oil, derived from the flowering tops, is used commercially for flavoring soft drinks and alcoholic beverages. Northern temperate region, cultivated. FRANK, GRIEVE, HEDRICK 1919, LOVELOCK, MARCIN, MICHAEL [Re], MORTON 1976, PAINTER [Cul, Re], TIETZE, UPHOF; A97{PL}, C67M{PL}, F80, G59M, G68, G84{DF}, H46{DF}, H80, 111M{PL}, K22{PL}, N11M, R47

#### CULTIVARS {PL}

**Pink:** (Rosea) Very aromatic foliage. Brilliant clusters of deep-pink flowers. Also good in dried arrangements, although the flowers lose their shape. C67M, D11T, F32D, G68{S}, 139, J76, K22, K85, N19M, N84{S}

*Achillea moschata* *Achillea erba-rotta* ssp. *moschata*

*Achillea nana* - *Glacier chamomile* {S}. Used in the preparation of *iva liqueurs*. Europe. UPHOF; N84, 053M

*Anacyclus pyrethrum* - *Pellitory of Spain* {S}. Source of an essential oil used in liqueurs. Roots are sometimes used for chewing. Mediterranean region. UPHOF, ZEVEN; N84, 046, R53M, R53M{PL}

*Anthemis cotula* - *May-weed, Dog femel, Mansanilla* {S}. An aromatic herb used for flavoring in Peru. Also used for making an herbal tea similar to chamomile, the dried leaves and flowers being employed. Northern temperate region. ALTSCHUL, ROOS-COLLINS; M34M, N84

*Anthemis nobilis* - \**Chamaemelum nobile*

*Anthemis tinctoria* - *Golden Marguerite, Yellow chamomile* {S}. The golden flowers are occasionally dried and used for making tea. Eurasia. REILLY; A2, C43M, C43M{PL}, E7{PL}, E61{PL}, E81M, F37T{PL}, G68, J5M{PL}, L56{PL}, L94M, M82{PL}, N23, R32, R53M, R53M{PL}, etc.

*Arctium lappa* - *Great burdock, Wild gobd* {S}. Roots are sliced, boiled, and eaten as a vegetable. The peeled leaf-stalks and tender, young leaves are boiled and served like spinach or asparagus. Leaf-stalks are also parboiled and used as a substitute for cardoon. The pith of the flower-stalk can be eaten raw in tossed salads, boiled as a potherb, or made into a confection. Seeds can be sprouted and eaten like bean sprouts. Eurasia, naturalized in North America. ANGIER, FERNALD, GIBBONS 1962 [Re], GRIEVE, LARKCOM 1984, MACNICOL; A2, D40G, D92M, Mi5M{DF}, N71M, 048, 053M, S55

*Arctium lappa* 'Esculenta' - *Gobd, Japanese burdock* {S}. Very young roots can be peeled and used in salads like radishes. Older roots are stir-fried, sauteed, roasted, added to soups and stews, or cooked with tofu, yuba, etc. One of the ingredients of *tekka*, a miso-based condiment. In Japan, both the stems and roots are pickled. Before use, the roots are shredded or cut into thin strips, and soaked in water to remove any strong flavors. Dried roots are a popular ingredient of *namul*, the seasoned vegetable dishes of Korean cuisine. BELLEME 1993, HALPIN [Cu, Cul], HARRINGTON, G. [Cul], HERKLOTS, NOH [Pre, Re], SCHNEIDER 1986 [Cul, Re], SHURTLEFF 1975 [Pre, Re]; A2, B49, C43M{PL}, C82, D3M{PR}, E56{PD}, E60P{PD}, E66T{DF}, F80, F88{DF}, F88{PD}, G33, G44M{PR}, G47B{DF}, G47B{PD}, I9M{PD}, I81T{PR}, K49M, N84, etc.

CULTIVARS

**Mitova Shirohada:** Thick, smooth, uniform roots, up to 3 feet in length. White, tender, and with good flavor. Matures relatively early. Can be sown in either the spring or fall. C20M, 053M

**Nonava:** Long, brownish roots; about 3/4 inch in diameter when grown under ideal conditions; relatively soft with slow fiber development; good flavor. Q3

**Sakiaake:** 120 days. Rapid-growing, solid roots are flavorful, smooth, and white in color. Matures earlier than other cultivars and becomes 2 feet long or more and 3/4 to 1 inch in diameter without becoming pithy. A leading cultivar in Japanese markets. L77D

**Takinogawa Long:** 150 days. Long, smooth, slender root; 30 to 36 inches in length, about 1 inch in diameter; flesh is light-yellow, with very little fiber. Largest diameter is attained when grown in deep soils. Petioles are reddish colored. Mild, bittersweet flavor. The most popular cultivar grown in Japan. C95, D55, E59Z, G6, 139, 199M, J73, J82, J82{PL}, K49T, K73, L3J, N84, S63M

**Watanabe Early:** 120 days. A very rapid grower, producing long, slender roots about 30 inches long and 1 to 1/12 inches in diameter, with tender, fine-textured flesh of good flavor. Very popular in Japan. C20M, K73, L3J, M46, S63M

*Arctium minus* - *Burdock, Beggar's buttons* {S}. The young leaves and leaf-stalks are eaten as potherbs. Young flower stalk is peeled and eaten raw, used as a salad, or cooked as asparagus. Peeled and sliced roots can be eaten with sesame seeds and soy sauce. Roasted and ground roots are used as a coffee substitute. Eurasia, naturalized in North America. HARRINGTON, H., MABEY, MEDSGER, MICHAEL [Pre, Re]; A2, F85, H94M{PL}, L55J, L94M, M34M, N84, 048

*Arctotheca calendulaceum* - {S}. Said to be used in cooking. The pollen is much appreciated. Southern Africa. KUNKEL; F85, N84, S28M

*Artemisia abrotanum* - *Old man, Southernwood* {PL}. The young, bitter shoots and leaves are sometimes employed as an ingredient of beer. In Italy, they are used to flavor cakes and confec-

tions. Also brewed into a tea. Eurasia. HEDRICK 1919, MICHAEL [Pre, Re], MORTON 1976, PAINTER, UPHOF; C9, C43M, C67M, C81M, E14T{DF}, E61, F32D, G73{DF}, 139, J66, J76, K85, M82, N7D{DF}, N19M, etc.

*Artemisia absinthium* - *Wormwood* {PL}. The herb has been used in the preparation of a liqueur, *absinthe*, now banned in many countries. Also employed for flavoring other alcoholic beverages including dry *vermouth* and *muse verte*, as well as bitters. At one time it was a common substitute for hops in beermaking. The flowering tops are used in continental Europe to counteract the greasiness of goose and duck dishes. Eurasia, cultivated. CAMPBELL-PLATT, CORNELL, GIBBONS 1962, GRIEVE, LEUNG, MABEY, MORTON 1976, UPHOF; A49D{DF}, A97, C3{S}, C67M, D92M{S}, E14T{DF}, F80{S}, K18M{DF}, K22, K85, L36M{DF}, N19M, N42, R47{S}

*Artemisia afra* - *African wormwood* {PL}. The herb is used in some parts of Africa in the same way that *A. absinthium* is used. Southern Africa. UPHOF; C43M, D92M{S}, E61, H94M, J76, J82{S}, K22, K85, L90J, N42, N84{S}, S28M{S}

*Artemisia annua* - *Sweet wormwood, Sweet Annie* {PL}. In China, the plant is used as a medium for growing *Aspergillus* employed in brewing wine. Eurasia, cultivated. TANAKA; C43M, C43M{S}, C67M, D40G{S}, D92M{S}, E7M{S}, F35M, F80{S}, K22, K85, L7M{S}, M35, N19M, N42, R47{S}, etc.

*Artemisia asiatica* - *Nishi-yomogi* {PL}. In Japan, the leaves are pounded with steamed glutinous-rice to give it flavor and color. The resulting cake or dumpling is known as *yomogi-mochi*. The young leaves are eaten with barley. Eastern Asia. ALTSCHUL, TANAKA; C43M, F32D, G80, L90J

*Artemisia dracunculus* - *Russian tarragon, Wild tarragon* {S}. The oily seeds were eaten by the Indians of Utah and Nevada. Leaves were baked between hot stones and consumed with salt water. The leaves are also eaten in salads or used as an inferior substitute for French tarragon. North America. LARKCOM 1984, LATHROP, MASEFIELD, YANOVSKY; B1M, C43M{PL}, C82{PL}, C85M, E91G, 191, J20, L90J, N84, S55

*Artemisia dracunculus* 'Sativa' - *French tarragon* {PL}. The young, licorice-flavored tips and leaves are added to salads, vinegar, pickles, sauces, *Dauphin* cheese, etc. Fresh or dried leaves are essential ingredients of *bearnaise*, *tartare*, and *bechamel* sauces. Tarragon mustard is one of the most popular mustards in France. The young shoots are cooked and eaten as a potherb. In the Near East, cooked or raw, they are served as an appetizer. In Belarus, they are preserved by dry salting. Eurasia, cultivated. CAMPBELL-PLATT, BOLOTNIKOVA, DE SOUNIN, GRIEVE, HEDRICK 1919, MASUI, ROOT 1980a, ROOT 1980b [Cul], VILMORIN; A7{DF}, A49D{DF}, C9, C43M, C67M, C82, C94M{DF}, H90G{ED}, 139, J82, K22, K85, L17{DF}, L90J, M35, M82, N19M, etc.

*Artemisia frigida* - *Fringed wormwood* {PL}. Leaves are used by the Hopi Indians for flavoring sweet-corn. North America, Northern Asia. KIRK, LATHROP, UPHOF; C43M, E66M{S}, G66, G89M, H94M, I47{S}, J25M, J25M{S}, L90J, N19M, N84{S}

*Artemisia genipi* - *Spiked wormwood* {S}. The herb is used in the preparation of *eau d'absinthe*. Europe. HEDRICK 1919; A61, A61{PL}, K22{PL}, M82{PL}, N84, Q24

*Artemisia glacialis* - *Genepi des glaciers* {S}. The herb is used for flavoring *vermouth* and liqueurs. Europe. UPHOF; H98{PL}, N84, 053M

*Artemisia indica* - *Artemisia asiatica*

*Artemisia japonica* - *Otoko-yomogi* {S}. Young plants are boiled, fried or stir-fried and used as a potherb or added to soups. Also used like *A. princeps* for coloring and flavoring *mochi*. Eastern Asia. TANAKA, YASHIRODA; 199M, K49T

*Artemisia judaica* - *Semen contra*, *Graines a vers* {S}. Used as a condiment and for flavoring liqueurs. Mediterranean region, Southwest Asia. TANAKA, UPHOF; F85

*Artemisia lactiflora* - \**Artemisia vulgaris*

*Artemisia laxa* - \**Artemisia umbelliforme*

*Artemisia ludoviciana* - *Louisiana wormwood*, *White prairie-sage*, *Cudweed*, *Estafiate* {PL}. Leaves and flower-heads are used as a seasoning, or made into tea. Leaves are also used as a garnish for wild game and pork dishes. Chopped leaves can be added to sauces and gravies. Seeds are also eaten. North America. CROWHURST 1973, HUTSON 1987 [Cul], YANOVSKY; C43M, C67M, E66M, F93G, G89M, H70M, I47{S}, J25M, J25M{S}, J39M, J39M{S}, J41M, J43{S}, M82, N19M, etc.

*Artemisia maritima* - *Sea wormwood*, *Levant wormseed*, *Santonica* {S}. The herb is used for flavoring. Eurasia. UPHOF; J82, R53M{PL}

*Artemisia mutellina* - \**Artemisia umbelliforme*

*Artemisia pallens* - *Davana* {PD}. The flowers yield an essential oil employed as a flavoring in commercial candy, chewing gum, beverages, baked goods, puddings, and frozen dairy products. Asia. BURDOCK; GO, N84

*Artemisia pontica* - *Roman wormwood*, *Petite absinthe* {PL}. Used for flavoring aperitifs and cordials, and also for the preparation of *Pontic vermouth*. Southern Europe. BROUK, GRIEVE, MORTON 1976; C67M, F32D, H94M, J82, K22, K85, L90J, M35, M82, N19M, N84, R53M

*Artemisia princeps* - *Japanese mugwort*, *Yomogi*, *Ssuk* {PD}. The leaves and young seedlings are eaten in salads and soups, after the bitterness has been removed. After being boiled briefly, the leaves are pounded into glutinous-rice dumplings (*mochi*). They impart a delightful color, aroma, and flavor. Mugwort *mochi* is widely available at natural foods stores in North America. Mugwort soba is also popular in natural food and macrobiotic cuisines. Also widely used in Korean sweets such as the festive *half-moon rice cakes*. Eastern Asia. HOMMA, MILLON, NOH [Cul, Re], PEMBERTON, TANAKA, YASHIRODA; E56{DF}, E56, G47B, I19M

*Artemisia spicata* - \**Artemisia genipi*

*Artemisia stelleriana* - *Beach wormwood*, *Old woman*, *Shiroyomogi* {PL}. Leaves are used for flavoring rice dumplings. Northern temperate region. TANAKA; B9M, B28, C9, E30, J24, J37M, J82, K22, K85, L22, L56, M82, N19M, N84{S}

*Artemisia umbelliforme* - *Alpine wormwood* {S}. The herb is used for the preparation of a tea and liqueur, often with the addition of absinthe. Southern Europe. UPHOF; A61, A61{PL}, N84, 053M, Q24

*Artemisia vulgaris* - *Mugwort* {PL}. Young shoots and leaves are an indispensable condiment for fatty poultry such as geese and ducks, as well as fat pork, mutton, and eel. In Japan, they are boiled and eaten as a potherb, or used to give flavor and color to festival rice-cakes, *mochi* and *dango*. Dried leaves and flowering tops are added to country beer, or steeped into tea. At one time in China the leaves were used for wrapping glutinous rice dumplings eaten during the Dragon Boat Festival, called *mugwort perfumed dumplings*. Northern temperate region. COTTERELL, FERNALD, GRIEVE, LAUNERT, MARCIN, MORTON 1976, ROOT 1980b [Cul], UPHOF; A97, B55M{DF}, C43M, C67M, D40G{S}, D92M{S}, E61, F80{S}, K85, L36M{DF}, N84{S}

#### CULTIVARS

**White:** (Yomogi-Na, Junn Jiu Choi, White Wormwood, Ghostplant) Tall, showy plant with pale-green, trifoliate leaves and distinctive 8 to 10 inch long, reddish-purple leaf stalks. Height 3 to 5 feet. Produces spikes of creamy flowers in late summer. Has a strong, rather resinous or "floral" taste similar to chrysanthemum leaves. Used in soups or fried as a side dish. DAHLEN [Cul, Re];

C9, C43M, C81M, D69, E61, F32D, H51M, H63, H94M, J5M, J76, K22, M82, L66, L90J, N84{S}, etc.

*Aster scaber* - *Shirayama-giku*, *Cham-chui* {S}. The young plants are parboiled or steamed and used like spinach or watercress, especially in Korean cuisine. When dried, they are reconstituted then seasoned with soy sauce and sesame oil. Dried leaves are widely available in Korean stores, while fresh plants are occasionally seen. Eastern Asia, cultivated. MILLON, PEMBERTON; V29M

*Asteropterus gnaphalodes* - *Geelblommetjeste* {S}. In the Cedarburg area of South Africa, the leaves are used for making an aromatic pleasant-flavored tea. Southern Africa. FOX, E, UPHOF; N84, S28M

*Atractylodes macrocephala* - *Bai zhu* {DF}. The rhizomes are eaten in numerous Chinese tonic foods including soups, cakes, and specialty rices or *peng*. Also made into a porridge called *congee* or *jook*, often with pork tripe, sesame oil and soy sauce. One of the ingredients of *Mu #16* tea, and *Dragon Herbal*. Eastern Asia. FLAWS 1995, LEUNG, TEEGUARDEN; E2M, E14T, E60P{PD}, E66T{PD}, F37T, G19P, G47B{PD}, G73, H36, L21T, L34, M15M{m}, N7D, N84{PL}

*Balsamita major* - *Costmary*, *Bible-leaf*, *Alecost* {PL}. Young, tender leaves are chopped and used sparingly in salads. They are also used as a seasoning for ale and beer, sauces, stuffings, soups, poultry, and stews. Whole leaves can be laid in cake pans to flavor cakes while baking. Rower petals are used for conserves. The dried leaves are often brewed into tea. Southwest Asia, cultivated. GRIEVE, LARKCOM 1984, LATHROP, MACNICOL, MORTON 1976; C9, C43M, C67M, E61, F35M, J66, J76, J82, K22, K85, L90J, M53, N19M, N84

*Balsamorhiza deltoidea* - *Puget balsam-root* {S}. Young, tender, aromatic roots may be eaten like carrots, or they can be candied like elecampane. Boiled young leaves make a good potherb. The flower-stalks are cooked and eaten as a vegetable. The rich, oily seeds are eaten like sunflower seeds. Western North America. GIBBONS 1979, YANOVSKY; E15, N84

*Balsamorhiza hookeri* - *Hooker's balsam-root* {S}. The roots are eaten raw or cooked. Seeds are also consumed. Western North America. HEDRICK 1919, MEDSGER, YANOVSKY; E67T{PL}, 147, P10

*Balsamorhiza sagittata* - *Arrowleaf balsam-root*, *Oregon sunflower* {S}. Young shoots and leaves are eaten raw in salads or boiled as a potherb. The seeds are roasted and ground into flour for breadmaking. Roots are eaten raw, cooked, or roasted and used as a coffee substitute. Rathead Indians baked them in a fire pit, like camass, for at least three days. The young, immature flower-stalk can be peeled, and the tender inner portion eaten raw, like celery. Western North America. HART, HEDRICK 1919, KIRK, KUNKEL, YANOVSKY; A12M, A61, C43V, C95, E15, E66M, E67T{PL}, F44, F85,147, J26{PL}, K62, L3J, N84, 053M, Q24, etc.

*Bellis perennis* - *English daisy* {S}. Flower petals of the cultivated forms, and the whole flowers of the wild plant are eaten in salads. Flower buds can be eaten in sandwiches, soups, and salads. Preserved in vinegar, they serve as a substitute for capers. The leaves are occasionally used as a potherb. Eurasia, cultivated. HEDRICK 1919, LARKCOM 1984, LAUNERT, LEGGATT [Re], MACNICOL [Re]; A16, B30{PL}, E9IG, F80, 191, J82, L91M, K85{PL}, M82{PL}, N7IM

*Berlandiera lyrata* - *Chocolate flower* {S}. Flowers are used for seasoning foods. Western North America. YANOVSKY; D92M, E61{PL}, F44M{PL}, H94M{PL}, 147, J25M, J25M{PL}, L13, L55J, L91M, N7M, N84, Q24

*Bidens pilosa* - *Spanish needles*, *Beggar's ticks* {S}. The young shoots and leaves are eaten raw or steamed, added to soups and stews, or dried and stored for future use. Also used as a substitute

for tea. In the Philippines, the plant is used in the preparation of a rice wine, called *tafei* or *sinitsit*. Cosmopolitan. CRIBB, FCK, F., MARTIN 1975, UPHOF, VAN EPENHUSEN; F37T{PL}, G73, J82{PL}, L77D, N84, P38

*Blumea balsamifera* - *Ngai camphor* {S}. The camphor-scented leaves are occasionally eaten with various foods as an aromatic condiment. Sold in local bazaars. Southeast Asia. UPHOF; N84

*Borrichia frutescens* - *Jamaican samphire* {PL}. The leaves are apparently eaten in salads or as a potherb. Tropical America. LOVELOCK; B61M{S}, D87G, H4, N84{S}

*Cacalia atriplicifolia* - *Pale Indian-plantain* {S}. Young leaves are eaten as a potherb. North America. KUNKEL; B29, G47M, J39M, J39M{PL}, J40, J43, N84

*Cacalia hastata* var. *orientalis* - *Yobusuma-so* {S}. Young plants and tops are parboiled and eaten in soups, fired, used as a potherb, or stir-fried. Eastern Asia. TANAKA; V29M

*Calendula anensis* - *Kinsen-ka, Souci des Champs* {S}. Young shoots and leaves are boiled and eaten. The flower-heads are pickled. In the Sinai and Negev desert areas, the Bedouins use the leaves as a condiment for clarified butter (*samin*). Mediterranean region, Southwest Asia. BAILEY, C., KUNKEL, TANAKA; JV77M, N84, 053M

*Calendula officinalis* - *Pot marigold* {S}. Fresh flower petals are chopped and sprinkled on tossed salads. When dried, they have a more concentrated flavor, and are used for seasoning soups, puddings, cakes and cookies, and for coloring butter and cheese. Both flowers and petals can be used for tea, the flower-petal tea being less bitter. Pot marigold is sometimes employed as an adulterant of saffron. Southern Europe, cultivated. BRYAN [Cu, Cul], GRIEVE, HEDRICK 1919, LARKCOM 1984, LEGGATT [Re], MACNICOL [Re], MORTON 1976; A97{PL}, C9M, C67M{PL}, D92M, E14T{DF}, E63D, I81T{PR}, K22, K53, M53{PL}, M82{PL}, N19M{DF}, N71M, R47

CULTIVARS

**Hen and Chickens:** An unusual form in which the normal orange double flower is surrounded by smaller secondary flowers arranged in sun and planet form, having stalks emerging from just beneath the petals of the central parent bloom. Suitable for culinary use. N84, 053M, Q34

**Kablouna Gold:** (Kablouna Yellow) A very distinct and unique form of calendula, especially recommended for culinary use. Plants are 18 to 20 inches tall; free flowering. Blooms are about 2 inches across. Flowers form a crested center, reminiscent of a miniature honeycomb, concealing the eye. In some the center extends 2/3 of the way to the tips of the single petals. C95, K66, N84, Q34

**Kablouna Mix:** Mixture of gold, orange, and lemon poly-petaled flowers some with radiant dark centers. Easy to grow. Can be cut from early summer to frost. Does well in cool summer areas. A2, C53, C92, D68, E81M, K49T

*Carduus eriophorus* - \**Cirsium eriophorum*

*Carduus nutans* - *Musk thistle* {S}. The pith of the flowering stem is said to be delicious when boiled for a brief time in salted water and dressed. The dried flowers are used in some countries as a rennet to curdle milk. Eurasia. FERNALD; M34M, N71M, N84, 048, 053M

*Carlina acanthifolia* - *Acanthus-leaved thistle* {S}. The receptacle of the flowers may be used like that of an artichoke. Mediterranean region. HEDRICK 1919; D92M, L91M, N84, 053M, Q24

*Carlina acaulis* - *Dwarf car line-thistle, Silver thistle* {S}. Flower receptacles are boiled and eaten like artichokes in some mountainous regions of Europe. In the Alps they are known as *chardousse*, in the Cevennes as *cardavelle*, and to the Germans they are *wild artichokes*. The leaves can be used to curdle milk. Europe. BREMNESS, LOVELOCK, TANAKA; D92M, E61{PL}\E87{PL},

E91G, F35M{PL}, F80, J82, K63G, L91M, N71M, N84, 053M

*Carlina vulgaris* - *Carlina thistle* {S}. The receptacle of the flowers can be eaten in the same manner as an artichoke. Eurasia. HEDRICK 1919; D92M, E61{PL}, N71M, N84, 048, 053M, Q24

*Carthamus tinctorius* - *Safflower, Mexican saffron* {S}. Dried flowers are the source of a red and a yellow dye used for coloring butter, liqueurs, and confectionery. In the food industry it serves as an adulterant of saffron. The slightly bitter petals can be cooked with rice. Seeds are fried and eaten in chutney, or used as a substitute for rennet in coagulating milk. Also the source of an edible oil widely utilized in salads, cooking, margarine, etc. Leaves can be eaten as a potherb or seasoned with soy sauce. Eurasia, cultivated. BARASH [Re], GRIEVE, ROOT 1980b [Cul], TANAKA, UPHOF; A7{DF}, C43M, D92M, E7M, E14T{DF}, E61, F37T{PL}, F80, G68, J66M{DF}, J73, K22, M46, N84

CULTIVARS

**Penvigei:** 95-100 days. Improved oilseed type from Hungary. Flowers may also be used as a substitute for saffron. Grows to 4 feet tall. Golden ochre flowers. L3J

*Centaurea cyanus* - *Cornflower, Bachelor's button* {S}. The flowers are eaten as a vegetable, used as a garnish, made into jelly, or added to beer. They also yield a blue dye used for coloring sugar and gelatine. Mediterranean region. LEGGATT, MACNICOL, TOOMRE [Re]; A2, C9M, Fil, F44, F59, H80, I15M, J88, M47M, N11M, N23, N71M, 053M, R47

*Centaurea nigra* - *Lesser knapweed, Hardhead* {S}. Flower petals have been used in salads. Europe, naturalized in North America. MABEY; A61, A61{PL}, D92M, F80, N71M, N84, 053M, Q24, R32

*Centaurea solstitialis* - *Yellow star thistle* {PD}. Source of a heavy-bodied, very sweet honey with an excellent almond candy-like flavor and a whitish color tinged with greenish-yellow, similar to olive oil. At one time a very common honey in California, but becoming rarer. Europe, naturalized in North America. CLEMSON, PELLETT; B54M, D7, G58, H80M, I43T, J70D

*Chamaemelum nobile* - *Roman chamomile, English chamomile* {PL}. Fresh or dried flowers are made into a pleasant-tasting tea. In Spain, they flavor *manzanilla sherry*. The whole herb is used in making herb beers. The small sprigs, gathered at the proper time, can be used to lend a subtle flavor to cream sauces, butter, honey, and sour cream. Eurasia, cultivated. BRYAN [Cul, Re], GRIEVE [Cu], MACNICOL, MARCIN, MORTON 1976, PAINTER, UPHOF; C67M, C82, D92M{S}, E61, J66, J73{S}, J76, J82, K85, M35, M53, N19M

CULTIVARS

**Flore Pleno:** Double flowered form of common Roman chamomile with pure white, pom-pom like flowers produced all summer. It is said that this cultivar is much less bitter than others, and thus makes a tastier herbal tea. Grows to about 12 inches in height. E61, G96, H29M, 757, J82, K22, L94M, M82, N84, R49

**Lawn:** Low growing, dense mat with strong, sweet odor; 2 inches high. Produces many flowers, which can be used for tea. This is the English lawn chamomile so long used for benches and flagstone filler. The flowers must be removed to make a successful lawn. K22, K85, R32{S}, S55{S}

**Treneaue:** More compact and tight growing than Lawn chamomile; 1 to 2 inches high. Very sweet, apple-scented foliage. Does not produce flowers, so requires no cutting for a successful lawn. Withstands quite acid soil. Probably originated as a sport from the Buckingham Palace lawns in 1932. C9, C43M, E61, F35M, J82, K85, L56, N84, R32, R49, R53M, S55

*Chamomilla aurea* - *German chamomile, Hungarian chamomile* {PL}. The dried flower-heads are brewed into an excellent, aromatic tea. Also used for flavoring fine liqueurs of the French type, such as *Benedictine* and *D.O.M.*. Source of an essential oil utilized by the food industry for enhancing fruit flavors in ice cream, candy,

baked goods, and chewing gum. Mediterranean region. MORTON 1976, UPHOF; A97, C3{S}, C67M, D92M{S}, G0{DF}, I81T{PR}, J20{S}, J66, J76, J82{S}, K22, K22{S}, K54{PD}, K85, M82, N19M, R47{S}, etc.

#### CULTIVARS {S}

**Bodegold:** Erect, sturdy, uniform plants with larger flowers than common types. Higher than normal essential oil content, up to 0.7%. Blooms 2 weeks earlier than other selections. Yields 700 pounds of flowers per acre. Improved strain from Germany, developed for commercial production. Also popular with home gardeners. E81M, J82, K66, M82{PL}, N84

**Bona:** Small, very sweet blossoms, easy to harvest. Essential oil content very high, 0.9 to 1%. Earliest to flower, a week earlier to full flower than Bodegold. Height 14 to 18 inches. G6

#### *Chrysanthemum halsamita* - *Balsamita major*

*Chrysanthemum coronarium* - *Garland chrysanthemum*, *Shun-giku*, *Chop suey greens*, *Ssukka* {S}. The aromatic leaves and tender stems are parboiled and seasoned with soy sauce, miso, or ground sesame seeds. They are also eaten raw in salads, stir-fried, made into fritters, or used as a seasoning for soups and *sukiyaki*. Koreans use them as a wrapping for *pulgogi*, rice, and *kochujang*. In Japan, a fragrant pickle, *kikumi*, is made with fresh chrysanthemum petals. The flowers can also be blanched briefly and added to salads, or prepared as tempura. Sprouted seeds are eaten as a winter snack. Eurasia, cultivated. BREMNESS, COST 1988 [Cul, Re], HALPIN, HARRINGTON, G. [Cu, Cul], HERKLOTS, KRAFT [Re], LARKCOM 1980, MACNICOL [Re], MILLON [Re], PAINTER [Re], TANAKA; A79M, B49, C9M, C43M{PL}, C53, C82, C95, D92M, E63D, F44, G6, G33, J76, J76{PL}, O53M, R47, etc.

#### CULTIVARS

**Bicolor:** Fine-leaf form with attractive, dissected leaves. Very aromatic. Bicolored petals of sunflower yellow and creamy yellow make a striking edible garnish for salads and soups. Can be planted spring through fall. N7G

**Flavon:** Medium-sized, attractive green leaves with a pleasant flavor. Excellent in salads or cooled with fish. Very easy to grow; can be grown year round; slightly spreading growth habit. Q3

**Flore Pleno:** Double flowered form with pom-pom like flowers in various shades. Predominantly yellow, with a few white and bi-colored petals. Grows about 3 feet tall. Excellent in salads and soups. Also suitable for wreath making. C95, N84

**Large Leaved:** 35 days. Large, oblong leaves, moderately lobed; dark-green in color; thick, tender, very smooth. Traditionally used for stir-frying or for adding to soups; rich aromatic flavor. Plant in early spring or fall. Very popular in southern China and Taiwan. C20M, D55, H49, K49M, L59, L79G, Q39, Q34, S70

**Maiko:** Dark-green, aromatic leaves. Used for *ohi-tashi* and *yosenabe*, and as a potherb to be boiled with meat. Can be harvested 50 days after sowing, or when about 8 inches tall in temperate areas. Very vigorous grower; prolific producer of lateral shoots; prefers cool weather conditions. Best sown between summer and early fall. C20M, S63M, TIM

**Round Leaved:** Large, broad, dark green leaves; only slightly lobed; broad, flat leafstalks. Good aroma. Very popular in Japan for soup and other dishes. Usually grown in summer and fall. C20M, D55, N84, S63M, TIM

**Small Leaved:** (Serrate Leaved) 35 days. Similar to Large Leaved, but the leaves are smaller and deeply serrated, and the flavor is slightly milder. Spreading, branching plant gives high yields. Grows well in cool, humid climates. This type is very popular in Japan for use in *sukiyaki* and *yosenabe*. C20M, D55, G13M, H49, K10, K49M, K73, L59, L79G, N84, S63M, S70

*Chrysanthemum indicum* - *Mother chrysanthemum* {PL}. Flower-heads are pickled in vinegar. Also used as a tea or for perfuming tea. Young leaves are eaten fried or boiled. The seeds are

edible. Eastern Asia. ALTSCHUL, TAN\KA, VAN DUONG; C9, K22, N81{S}, N84{S}

#### *Chrysanthemum leucanthemum* - \**Leucanthemum vulgare*

*Chrysanthemum* x *morifolium* - *Ryori-giku*, *Edible chrysanthemum*, *Ju hua* {PL}. The flower-heads are boiled and served as a salad with fish or tofu, and seasoned with vinegar or soy sauce. They are also prepared as tempura, pickled, dried, or added to soups. The aromatic leaves are used in fritters or made into a tea. Flowers or flower petals can also be brewed into a tangy, aromatic tea. For a sweeter tea, the petals only are used. Also used for perfuming China tea. Eastern Asia, cultivated. CLARKE [Re], GESSERT, LEGGATT [Re], MARCIN, TAN\KA, VAN DUONG, YASHIRODA [Pre, Re]; A7{DF}, B30, B73M, C9, E14T{DF}, E97, F53M, G16, G19P{DF}, G73{DF}, H44M{P}3, I91{S}, K22, L34{DF}, L88D{PD}, N7D{DF}, etc.

#### *Chrysanthemum parthenium* - \**Tanacetum parthenium*

*Chrysanthemum segetum* - *Corn marigold*, *Tung-hao* {S}. Young shoots are consumed as a vegetable in some parts of Asia, especially in China. Eurasia. UPHOF; N71M, N81, N84, O48, O53M, R32, S55

*Chrysanthemum* x *superhum* - *Shasta daisy* {S}. Leaves are sometimes used as a cool season salad green. Cultivated. A25, A53M, B28{PL}, C43V, C69, C97, D11T{PL}, G89M{PL}, K63G, L22{PL}, L41, L42, M47M, M82{PL}, N7G, N23, R47, etc.

*Chrysothamnus nauseosus* var. *graveolens* - *Chamisa blanco* {PL}. The flowers can be brewed into a delicious, aromatic, golden-colored tea. Often sold in herb shops, along with other herbal teas selected for their flavor. Western North America. G89M

*Cicerbita alpina* - *Mountain sow-thistle* {S}. The bitter stem is peeled and eaten raw by the Laplanders. Europe. HEDRICK 1919; N84, O53M, Q24

*Cichorium endivia* - *Endive*, *Escarole*. Leaves are eaten raw in salads, boiled, steamed, sauteed, braised, or cooked in soups and stews. Broad-leaved types make an excellent wrapping for other foods. The mature plants are sometimes blanched before harvesting to reduce the bitter flavor. In Java, they are pickled in brine. Eurasia, cultivated. CARCIONE [Re], CUSUMANO [Cul, Re], LARKCOM 1984, VILMORIN [Cu]; (for cultivars see *Endive*, page 362)

*Cichorium intybus* - *Chicory* {S}. The somewhat bitter leaves are eaten raw in salads, boiled, steamed, braised, or used in soups and stews. Some types are grown for their blanched shoots, others for their roots, which are eaten as a vegetable or used as a substitute for coffee. Wide-leaved forms can be used as wrapping. The attractive blue flowers can be used in salads, fresh or pickled. In Turkey, a chewing gum called *dagsakizi* is prepared from the sap. Eurasia, cultivated. FERNALD, GIBBONS 1962 [Re], HALPIN [Cu, Cul], HARRINGTON, H., LARKCOM 1984, MACNICOL [Re], OZTURK, UPHOF, VILMORIN [Cu]; C9M, D92M, E7M, F59, G47M, H61M, H80,115M, J76{PL}, M47M, N7G, N11M, N23, Q24. (for cultivars see *Chicory*, page 334)

*Cirsium arvense* - *Canada thistle* {S}. The young shoots and flower stalks are boiled and eaten as a vegetable. Roots can be eaten raw or cooked. The herb has been used to coagulate milk. Northern temperate region. LAUNERT, UPHOF; M34M, N71M, N84

*Cirsium eriophorum* - *Woolly-headed thistle* {S}. Young leaves and shoots are eaten as a salad. The young stalks, peeled and soaked in water to remove the bitterness, are said to be excellent, either boiled or baked in pies in the same manner as rhubarb. The pulpy receptacles are eaten like those of the artichoke. Eurasia. GRIEVE, HEDRICK 1919; F85, N84, O48

#### *Cirsium lanceolatum* - \**Cirsium vulgare*

*Cirsium oleraceum* - *Meadow cabbage, Cabbage thistle* {S}. Very young succulent parts of the plant are cooked and used as a vegetable in some regions of Russia and Siberia. The swollen rootstock, gathered before the plant flowered, was formerly used as a table vegetable. Eurasia. HEDRICK 1919, UPHOF, VILMORIN; *N71M*, N84, 053M

*Cirsium palustre* - *Marsh thistle* {S}. The young shoots and peeled flower-stalks are eaten raw in salads, or boiled and served as a vegetable. Eurasia. FERNALD, GRIEVE, HEDRICK 1919, LARKCOM 1984; *N71M*, N84, 048

*Cirsium vulgare* - *Common thistle, Bull thistle, Bur thistle* {S}. Young flower-stalks and roots are boiled and eaten as a vegetable. The young leaves can be soaked overnight in salted water and then cooked and eaten. Receptacles are cooked and served like artichokes. The dried flowers are used as a substitute for rennet in curdling milk for cheesemaking. Roasted seeds are occasionally eaten. Eurasia, naturalized in North America. CLARKE [Re], FERNALD, HARRINGTON, H.; M34M, *N71M*, N84

*Cnicus benedictus* - *Blessed thistle* {S}. The herb is used for flavoring. In Germany, it forms an ingredient of *kolner klosterpillen*. An extract of the plant is added to bitters and *Benedictine*. Mediterranean region. LEUNG, TANAKA, UPHOF; A2, C43M, C43M{PL}, D92M, F24D, G80{PL}, J82, M82{PL}, N84, S55

*Cnicus eriophorus* - *Cirsium eriophorum*

*Cnicus oleraceus* - *Cirsium oleraceum*

*Cnicus palustris* -> *Cirsium palustre*

*Conyza canadensis* - *Canada fleabane, Horseweed, Hime-mukashi-yomogi* {S}. In Japan, the young leaves and seedlings are eaten boiled, cooked with rice, or dried for future use. Source of an essential oil used commercially for flavoring candy, condiments, and soft drinks. North America. ALTSCHUL, FOX, F., MORTON 1976, TANAKA; F68T, F85, J43, M34M, N84, 048

*Coreopsis cardaminifolia* - *Cress-leaved tickseed* {S}. A decoction of the herb was used as a beverage by the Zuni Indians. North America. UPHOF, YANOVSKY; V85M

*Cosmos caudatus* - *Margarita, Kenikir* {S}. In Indonesia, the young leaves and tops are eaten raw, cooked, added to stews, or mixed with grated coconut and oriental radish. The leaves are also mixed with rice to prepare yeast. Tropical America. BURKILL, JACQUAT, OCHSE; F85, J82

*Crassocephalum crepidioides* - *Ebobo, Okinawan spinach* {S}. Young leaves and shoots are used as a potherb, fried, or mixed in *khao yam*. The leaves are fleshy, tinged with purple and have a somewhat mucilaginous quality and nutty flavor. Has become quite popular on the island of Okinawa and in Hawaii. In Thailand, the roots are eaten with chili sauce or cooked in fish curry. Tropical Africa, cultivated. DALZIEL, JACQUAT, JOSSELIN [Re], TANAKA, VAN EPENHUSEN; F85, H29{PL}

*Crepis capillaris* - *Smooth hawkbeard* {S}. The leaves are eaten; either raw or cooked. In Friuli, Italy they are gathered in the spring and mixed with more than fifty other wild greens in a traditional dish known as *pistic*. Europe, naturalized in North America. PAOLETTI; N84

*Crepis setosa* - *Rough hawkbeard* {S}. Young leaves are collected in the spring and used like those of *C. capillaris* in the Friulian ritualistic dish known as *pistic*. Europe, naturalized in North America. PAOLETTI; V84T, V87

*Cynara cardunculus* - *Cardoon* {S}. The blanched leaf-stalks are eaten boiled, batter-fried, braised, sauteed, pickled, or used in soups and stews. In Italy, raw strips are dipped into olive oil or *bagna cauda*, a hot anchovy and garlic dip. The root is thick, fleshy, tender, and of an agreeable flavor. It can be cooked like carrots or parsnips. The young leaves and stalks were eaten as a salad in

ancient Rome. Flower receptacles can be eaten like artichokes. Dried flowers are used as a substitute for rennet in making *Serra de la Estrela, Serena, Caciotta*, and *Torta del Casar* cheeses. Cultivated. BIANCHINI, CUSUMANO [Cul, Re], HALPIN [Cu, Cul], HEDRICK 1919, KOSIKOWSKI, KRAFT [Re], MACNICOL [Re], ROBINSON, R. 1995, SCHNEIDER 1986 [Pre, Re], VILMORIN [Cu]; B71G{PD}, C43M, C43M{PL}, C82, E13G{PR}, E61, E61{PL}, F35M{PL}, G68, J73, L13P{PD}, L99{ED}, N40{PR}, N54{PD}

#### CULTIVARS

**Gigante d'Inaeanolì:** Very uniform Italian cultivar. Large, fleshy, very tender white stalks, completely free of spines; gray-green leaves. Somewhat resistant to dry growing conditions. Planted in April and May for harvesting in the fall. Q11M

**Gigante di Romagna:** Very large, tender stalks, completely free of spines. Long toothed, silver-grey leaves. Often reaches 4 to 5 feet tall. Harvested in December. Decorative as well as useful. B49, C53, G53M, R32, S17, S55

**Ivorv Coast:** Ornamental as well as useful. Leaf stalks are harvested in late fall or winter for use as a cooked vegetable. Also makes striking dried flowers if harvested in midbloom. N7G

**Large Smooth:** Select strain, much improved over the old artichoke-leaved type. Smooth, thick, heavy stalks. Almost twice as heavy as older forms. Grows to 6 feet tall. Requires rich soil. C92, DIT, G57M, G71, J82, N52

**Plein Blanc Inerme:** 100 days. Large, smooth, fleshy solid white stalks. Completely free of spines. Grows 3 to 5 feet high with an equal diameter. Blanches readily. An excellent home garden type from France. E63D, N84, P59M

**Tenderheart:** 120-150 days. Plants grow 3 to 4 feet tall with deeply cut leaves, multiple side-branches, and a heavy flower-head with purple bristles. Blanched stalks of the inner leaves are tender and are used as a winter vegetable. 90 days from transplants. C69, G93M, I18M

**White Ivorv:** Very large, broad, slightly indented, ivory white leafstalks; self-blanching; spineless. Long, broad cut edges similar to artichoke leaves. Harvested from May to December, after the stalks have self blanched. Popular European cultivar. Q34

**White Thornless:** 180 days. Large, broad, ivory white stalks; smooth and thick; completely spineless. Tall, vigorous plant. D74B, N84

*Cynara humilis* - *Wild artichoke, Coque* {S}. In Morocco, the dried flowers are employed as a rennet in coagulating *raipe*, a type of sweetened junket or yogurt. The flower receptacles are used in the preparation of a popular *tagine* (stew). Mediterranean region. WOLFERT 1973 [Pre, Re]; Z19

*Cynara scolymus* - *Artichoke* {S}. The fleshy receptacles (sometimes called crowns), and the floral bracts are eaten raw, boiled, steamed, baked, fried, stuffed, marinated, etc. Small, or *baby artichokes*, that form on the lateral shoots are pickled, preserved in oil, or used in soups, stews, and omelettes. When marinated, they are sold as *artichoke hearts*. In Italy, the dried receptacles are utilized in soups. The tender, inner portion of the flower stalk has a sweet, nutty flavor and is eaten raw or cooked. Flowers are used as a substitute for rennet. The young leaf-stalks, which were once known as *artichoke chard*, are blanched and eaten like cardoon. For their renowned dish *Carciofi alla Giudia*, the ancient Roman Jews devised an ingenious technique for cleaning artichokes so that all inedible parts were removed. The Italian edible snail called *municedda* is said to develop a delicate flavor after feeding on young artichoke leaves. Also used in the preparation of a liqueur called *cyna*. Cultivated. BIANCHINI, BRYAN [Cul, Re], BURR, CARCIONE, GRAY, P. [Pre, Re], GRIEVE [Re], HACKETT, MACHLIN [Pre, Re], VILMORIN [Cu]; A76{P£}, C95, D76, D76{PL}, E42M{PD}, E42M{PR}, R47

## CULTIVARS

**Cal Green Globe:** Improved Green Globe type. Deep green, globe-shaped heads, lacking in purple tinge. Nearly free of sharp spines. Vigorous and prolific, often producing heads the first year from seed. B49

**Emerald:** Direct seeded type adapted to a wide range of growing conditions. Uniform, attractive, glossy green heads; ovoidal in shape; thornless; large, deep heart; thick, most flesh with a nutty flavor. Produces buds on long stems for easy harvest. Can be grown as an annual or perennial. Developed by D. Palmer Seed Co. I85

**Green Globe:** Large heads, nearly round, and with a dusky, purplish tint; thick, highly flavored scales. Receptacles are very fleshy, more so than in most cultivars. Plants grow 4 to 6 feet high, 6 to 8 feet wide. Mature plants may yield 12 to 20 buds each. The standard cultivar, valued for its ability to produce uniform plants from seed. C44, C92, E38, E42M{PL}, E42M{PD}, E42M{PR}, E97, F15{PR}, G68, G71, L89

**Green Globe Improved:** 180 days. Much improved strain. Large, globe-shaped heads; deep-green throughout, no purple tint; 2 to 4 inches in diameter. Consistently heavy-bearing plants, 4 1/2 to 5 feet tall; the number of sharp spines greatly reduced making it easy to harvest. Like Green Globe, produces heads the first year from seed. A88M{PL}, B49, C20M, C54, DIT, F82, I67M, J20, K71, L91M, Q34

**Gros Vert de Laon:** Large, broad, thick, fleshy receptacles; pale green, slightly tinged with violet at the base; spineless. Silvery-gray leaves with reddish ribs, especially at the base. Vigorous plant of medium height, reliably productive. Reproduces fairly well from seed. An old French heirloom, at one time widely grown around Paris. VILMORIN; N84, P59M

**Imperial Star:** 150 days. Large, uniform, glossy medium-green heads; thornless bracts, slow to spread open at maturity. Excellent flavor and tenderness. Compact plants. Widely adapted but commonly used as a very fast maturing, direct-seeded annual crop for the coasts, inland valleys and even desert areas of the West. Developed by the University of California. B75, DIT, D11M, DIIMPL, D12, D68, E63D, F70, F70{PL}, G6, G93M, I91, J9M, K23{PL}, K66, etc.

**Northern Star:** The first Green Globe type artichoke bred for overwintering and a spring harvest. Good uniformity, better than most Green Globe strains. Has survived sub-zero temperatures without protection. Grown as a biennial, the seed being sown in spring and early summer for harvesting the following spring. Developed by Tim Peters. J9M

**Purple de Jesi:** Produces the small artichokes the French and Italians eat raw or "cru" when the heads are very young and tender. Also good steamed. Medium-large, spineless green heads, markedly tinged with reddish-purple. Q34

**Purple Sicilian:** Produces the small, deep purple artichokes the French and Italians eat "cru" or raw, when very young and tender. Also good steamed. Heat tolerant, but not cold resistant; mulch if temperatures drop below freezing, or over-winter in large tubs. K49M

**Violetto di Chioaia:** (Violetto) Produces a flavorful and attractive purple head, decorative enough for the flower border. More elongated than the Green Globe type. Some heads will be green from this seed, so select the best before planting out. These selected plants can then be propagated by division. C53, B75, I18M, J20, K23{PL}, L89, N84, Q11M, Si 7, S55

**Violetto di Romaana:** (Purple Romanesco) Produces large, globe-shaped, greenish violet heads that are spineless. B8, Q11M

*Dahlia pinnata* - *Garden dahlia* {S}. The tubers are eaten as a vegetable in some parts of Mexico. Flower petals can be eaten in salads. A sweet extract of the tuber, marketed as *Dacopa*, is used as

a beverage or flavoring. It is mixed with hot or cold water or milk, or sprinkled on ice cream. Its naturally sweet, mellow taste is said to combine the characteristic flavors of coffee, tea, and chocolate. Central America, cultivated. HEDRICK 1919, UPHOF; A25G{PD}, C95, L34{PD}, L69{PL}, N84, P38, R47

*Elephantopus mollis* - *Elephantopus scaber*

*Elephantopus scaber* - *Mao-ti-tan-t's'ao*, *Elephant's foot* {S}. The young leaves are eaten like spinach. In Nepal, powder made from the plant is added to *marcha*, a fermentation cake used in the preparation of local beers and alcoholic drinks. Tropics. MANANDHAR, TANAKA; N84

*Emilia sonchifolia* - *Floras paint brush*, *Yieh-hsia-hung* {S}. The young, not yet flowering plant is eaten in salads, soups, or steamed and consumed as a side dish with rice. Frequently sold in the native markets of Java. Tropics, weedy. CRIBB, JACQUAT, OCHSE, TANAKA; N84

*Erechtites valerianifolia* - *Brazilian fireweed* {S}. In Indonesia, the flowering tops are eaten raw, or steamed and served with rice. Tropical America. BURKILL, CRIBB, OCHSE; N84

*Erigeron canadensis* - \* *Conyza canadensis**Farfugium japonicum* - \* *Agularia kaempferi*

*Galinsoga parviflora* - *Quickweed*, *Gallant soldier*, *Guascas* {S}. The leaves, stems, and flowering shoots are cooked and eaten as a potherb, or added to soups and stews. In Colombia, the herb is sold in jars, dried and ground into a green powder. It is used there to flavor soups and stews, especially those made with chicken. The fresh juice can be drunk mixed with tomato or other vegetable juices. South America, naturalized in North America. CRIBB, FERNALD, GIBBONS 1979, HARRINGTON, H., LAUNERT, ORTIZ 1979; F85, M34M

*Grindelia squarrosa* - *Resinweed*, *Gum plant* {S}. The fresh or dried leaves are used to make an aromatic, slightly bitter but pleasing tea. A sticky, resinous sap that covers the leaves can be used as a chewing gum substitute. Western North America. KINDSCHER, KIRK; F80, H61M, N84

*Guizotia abyssinica* - *Niger seed*, *Ramtil* {S}. The seeds are eaten fried, used as a condiment, or mixed with honey and flour and made into sweet cakes. Also the source of an edible oil used in cooking, as a substitute for *ghee*, or an adulterant of sesame oil. In Ethiopian cooking, it is used in place of *niter kibbeh*, a clarified, spiced butter. Sold as *thistle seed* for feeding birds in the United States. Tropical Africa. BIANCHINI, UPHOF, VON WELANETZ, WATT; DIT, F80, F85, K27M, L3J, N84

*Gundelia tournefortii* - *Cardi*, *Accoub*, *Hacub*, *Kenger* {S}. The leaves, thick stems, undeveloped flower buds, and roots are all eaten. They are said to combine the flavors of artichoke and asparagus. Roots and stems can be peeled and eaten raw. Stems are often cooked with chick peas or wheat berries. The buds are excellent boiled and sauteed in butter, like artichoke. The roots are considered more flavorful than salsify or scorzonera. Seeds are dried, ground and used as a coffee substitute, called *kenger coffee*. Highly prized in Lebanon, Syria and other areas where it is sold in local markets. Middle East. HEDRICK 1919, KARAOGLAN [Re], LOVELOCK, OZTURK, PAILLIEUX, UPHOF; N84, Q24

*Gynura bicolor* - *Velvet plant* {PL} Young leaves and shoots are eaten as a vegetable or cooked in soups. In Japan, the succulent foliage is eaten flavored with a sauce of sake, shoyu, and vinegar. Indonesia. HEDRICK 1919, LARKCOM 1991, YASHIRODA; E48

*Gynura crepidioides* - \* *Crassocephalum crepidioides**Gynura procumbens* -+ *Gynura sarmentosa*

*Gynura sarmentosa* - *Bdu ddt, Rau hung lui, Purple passion plant* {PL}. The leaves are used as a condiment or eaten as a vegetable. Tropical Asia. BURKILL, UPHOF, VAN DUONG; E48, G96, 157

*Helianthus annuus* - *Sunflower* {PD}. The seeds are eaten raw, boiled, roasted, salted, or made into sunflower butter, nut milks, and *tempheh*. In the Ukraine, they are used for making a type of *halava*. Also the source of an edible oil used in salads, cooking, margarine, etc. Young seedlings, called *sunflower lettuce*, are popular with natural foods enthusiasts. The flower receptacles can be steamed and served like artichokes. Ground seeds are sometimes added to soups. The bittersweet flower petals can be cooked with pasta or other foods. The boiled seeds are mixed with water and honey to form the refreshing Ethiopian beverage called *suff*. Germinated seeds are blended with water and fermented into *seed yogurt* or *seed cheese*. The young petioles are eaten grilled and seasoned with oil and salt. Roasted hulls of seeds are used as a substitute for coffee. Produces a yellow honey with a rich, distinct buttery flavor that is excellent for baking. North America, cultivated. BARASH [Re], BIANCHINI, COLE, C. 1990 [Re], CRANE 1975, HEDRICK 1919, HEISER 1976, HUGHES, P. [Re], KULVINSKAS, MACNICOL [Re], MORSE [Re], ROSENGARTEN, SHUKTLEFF 1979, UPHOF, WILSON, G; C94M, G0{DF}, H80M, K37P, K54, L14G, M63M, N54. (for cultivars see Sunflower, page 548, see also Sprouting Seeds, page 524)

*Helianthus annuus* ssp. *lenticularis* - *Wild sunflower* {S}. Parched seeds are ground into meal and used in breads, cakes, and rich soups. The roasted shells, after the starch has been removed, or the roasted seeds are used in preparing a coffee-like beverage. An edible oil can be extracted from the pounded seeds. North America. ANGIER, FERNALD, GIBBONS 1962, HARRINGTON, H., KINDSCHER, MEDSGER, TURNER 1979 [Pre, Re]; A2, A12M, C6M, F44, F59, I15M, J25M, M34M, M47M, N7G, N84

*Helianthus giganteus* - *Giant sunflower* {S}. The seeds were ground into flour, mixed with corn meal and used for making bread by the Choctaw Indians. North America. UPHOF; D92M, J41M, J41M{PL}, J43, N84

*Helianthus x laetiflorus* (*H. rigidus* x *H. tuberosus*) - *Showy sunflower* {S}. Natural hybrid. The edible tubers are said to have a flavor indistinguishable from that of the Jerusalem artichoke. North America. GIBBONS 1979, MEDSGER; D92M, G47M, J39M, J39M{PL}, J40, J42, J42{PL}, J43, M77M{PL}, N84, 053M, Q24

*Helianthus maximilianii* - *Maximilian's sunflower* {S}. Tubers may be eaten raw, roasted, or boiled. North America. KIRK, YANOVSKY; B38, F80, I11, I11M{PL}, 147, J25M, J25M{PL}, J41M{PL}, K49Z, L41, L66{PL}, M25, N84, Q24

#### CULTIVARS

**Prairie Gold:** Perennial sunflower with Jerusalem artichoke-like tubers which are edible but not very productive. The Land Institute in Salina, Kansas is investigating their oil-seed potential as part of a non-tillage permaculture system. K62

*Helianthus tuberosus* - *Jerusalem artichoke, Sunchoke, Topinambour* {PL}. The inulin rich tubers are eaten raw in salads, steamed, fried, baked, pickled, pureed, or used in soups, casseroles, and pies. Commercially, they are used in the preparation of low-starch *artichoke pasta*. Jerusalem artichoke flour, high in inulin and *fructo-oligosaccharides*, can be added to baked goods, salad dressings, juices, smoothies, or sprinkled on cereal. Roasted tubers are used as a substitute for coffee. Sometimes marketed as sunchoke, although this name was originally given to the hybrid between the Jerusalem artichoke and the common sunflower, which has been investigated as a possible sugar crop. North America, cultivated. ANGIER, FERNALD, GIBBONS 1962, HALPIN [Cu, Cul], HEISER 1976, HERKLOTS, KINDSCHER, MURRAY, SCHNEIDER 1986 [Pre, Re], VILMORIN [Cu]; A25G{PD}, B31{PD}, B73M, C43M, C82, D65, D68, E13G{PR}, E31{PD}, F17{PD}, F97M{PD}, G16, G71, H15T{PD}, H42, I66{PD}, L14G{PD}, N40{PR}, etc.

#### CULTIVARS

**Brazilian:** Large, white-skinned tubers produced in abundance. Matures in mid to late September. Very tall, vigorous plants occasionally reaching 12 feet in height. J9M

**Carson:** Large, fairly uniform tubers with purplish skin. Selected for its mild, sweet, nutty flavor and crisp texture. Extremely prolific plant, about 6 feet tall. Originally from Mike Carson of Grand Forks, British Columbia. K17M

**Challenger:** The most productive cultivar among dozens tested by researchers at Agriculture Canada. Not a strong bloomer. H24

**French Mammoth White:** (White Mammoth) Large, knobby, white-skinned tuber; difficult to clean; matures late; does not store well. Tall, vigorous plant; height 8 to 10 feet; heavy yielding. Standard knobby type cultivar. K49M

**Fuseau:** 95 days. Large, tapered, sweet potato-like tubers; 4 to 5 inches long, 1 to 1 1/2 inches in diameter; skin tan-colored, very smooth and entirely free of the knobs that characterize the common types and makes cleaning difficult. Matures early, about a week later than Stampede. Height 7 to 9 feet. Tubers are very elongated even in sandy soil. An old French cultivar. A91, J99G, K20M, K49M, R32

**Golden Nugget:** Long, thin tubers; shaped somewhat like an elongated radish or carrot; 3 to 3 1/2 inches long, 1/2 to 1 inch in diameter; skin very smooth, free of knobs, dark reddish-orange in color. Excellent for pickling. Non-aggressive growth habit. Produces heavy crops of consistently small tubers. Matures within a week of Stampede. K49M

**Jack's Copperclad:** Long, plumb, knobby tubers. Attractively colored with copper and rose Very good flavor. Tall plants, about 10 feet in height. High yielding. F73D, N84

**Long Red:** Large, tapered, sweet potato-like tubers; similar to Fuseau. Glossy, red-colored skin. K20M, K49M

**Maaenta Purple:** Large, brilliantly colored tubers born in abundance. Very dark purple with dark-pink splotches. F73D, N84

**Red:** Elongated, red-skinned tubers with a sweet nutty flavor. Bushy plants that grow 4 to 8 feet tall with small, sunflower-like blossoms. Matures in midseason. Very prolific. A91, 160, J5M, M82

**Red Fuseau:** An attractive maroon-red version of Fuseau. Smooth, elongated roots that are easy to clean. Loses its color when cooked. Matures early in the season. Sweeter than Stampede. Large, vigorous plant that spreads rapidly. Red coloration is not noticeable on the above ground plant. E24, J99G, M16

**Skoroelka:** Selected strain originating in Russia. Very large, fat, knobby tubers. Attractively colored with cream and lavender. Produces good crops in a fairly concentrated set. F73D, N84

**Smooth Garnet:** (Garnet) Long, medium-sized, ruby-red tubers; smooth and free of knobs. K49M, N24M

**Stampede:** 90 days. A special high-yielding, extra-early strain. Flowers in July and matures more than a month before common cultivars. White-skinned tubers are large, often weighing over 1/2 pound each. Relatively dwarf; height about 6 feet. Winter hardy in severe cold. Developed by Indians in northern Ontario who selected plants for earliness and tuber size. E24, G6, H24, J9M, J99G, M16, N24M

#### *HeUchrysum angustifolium* -\**Helichrysum itaUcum*

*Helichrysum arenarium* - *Everlasting* {S}. The spicy, aromatic, dried yellow flowers keep their color well, and are often added to commercial herbal teas for color. Eurasia. D92M, J82, N84, 053M, Q24

*Helichrysum italicum* - *Curry plant* {PL}. The finely chopped or minced leaves may be used to flavor omelettes, scrambled eggs which are not cooked for long, or stuffed eggs. Flower-heads are used for tea. Also the source of an essential oil and extract, which are used to enhance fruit flavors in candy, ice cream, baked goods, soft drinks, and chewing gum. Southern Europe. MORTON 1976, PAINTER [Re]; A97, C9, C43M, C67M, F35M, G96, H94M, J66, J76, J82, K22, K85, M35, M53, R53M, etc.

#### CULTIVARS

**Dwarf:** (Nana) A more dense, dwarf strain of curry plant, only growing to about 11/2 feet tall. Has a fine scent, nice color and attractive, yellow-bronze flowers. Excellent in containers. C43M, E61, G96, H29M, J57, J66, K22, K57, L94M, M35, N42, N84, R53M

*Helichrysum petiolatum* - *Licorice plant, Silver licorice* {PL}. The roots have a distinct licorice-like flavor and can be used for culinary purposes. Cultivated. F15M, G96, H51M, H94M, J82, K57, M35, M82, N84{S}

*Hypochoeris radicata* - *Spotted caCs-ear* {S}. The young leaves can be eaten raw in salads, boiled and served like spinach, or briefly wilted in hot bacon grease or peanut oil. Europe. CRIBB, FOX, E, GIBBONS 1979, MABEY; N71M, N84, 053M

*Inula crithmoides* - *Golden samphire* {S}. Young leaves are occasionally eaten as a potherb. The fleshy leaves and young shoots were formerly pickled in vinegar, and added to salads as a relish. They were often used as an adulterant of true samphire, *Crithmum maritimum*. Europe. BURR [Cu], GRIEVE; V85, W59M, W88M

*Inula helenium* - *Elecampane, Horse-heal, Elf dock* {PL}. The root is made into candy, sweetmeats, and syrup. Also used for flavoring puddings, fish sauces, beer, cordials, *vermouth*, and French and Swiss *absinthe*. The young, bitter leaves were used as a potherb by the ancient Romans. Eurasia, cultivated. FERNALD, GIBBONS 1966b [Re], GRIEVE [Cu], MORTON 1976, UPHOF; C43M, C67M, D92M{S}, E61, E61{S}, F35M, F80{S}, I81T{PR}, I81T{DF}, J76, K85, N71M{S}, 053M{S}, R47{S}

*Ixeris dentata* - *Nigana, Ssumbagwi* {S}. Whole young plants are gathered and eaten raw or used as *namul*, a seasoned vegetable dish. The roots are boiled and eaten. Recently brought into cultivation in Korea. Eastern Asia. PEMBERTON, TANAKA; V29M

#### *Lactuca alpina* - *Cicerbita alpina*

*Lactuca indica* - *Indian lettuce, Indian salad* {S}. The leaves are eaten raw in salads, steamed, or added to soups. In Indonesia, they are used for wrapping and frying fish, especially eels. Asia, cultivated. HERKLOTS, OCHSE; N84

*Lactuca perennis* - *Peiennial lettuce* {S}. Young or blanched leaves are used as salads in some parts of southern Europe. They are also occasionally eaten boiled like spinach or endive. Europe. BURR, UPHOF, VILMORIN; N84

#### *Lactuca saligna* - *Lactuca indica*

*Lactuca sativa* - *Lettuce*. The leaves are widely eaten raw, especially in tossed salads and sandwiches. Also boiled as a potherb, pickled, braised, sauteed, fried, pureed, or used in soups and stews. Larger leaves can be used as natural cups for seafood or fruit salads. In the Middle East, the bulghur wheat salad *tabouli* is wrapped in lettuce leaves and eaten out of hand. Sprouted seeds can be used in salads and sandwiches. Cultivated. CARCIONE, FELL 1982b, HERKLOTS, LARKCOM 1984 [Cu], OCHSE, ROOT 1980a, ROUTHIER 1993, VILMORIN [Cu]; (for cultivars see *Lettuce*, page 409)

*Lactuca sativa* Angustana Group - *Celuce, Asparagus lettuce, Chinese lettuce* {S}. Young leaves are eaten raw in salads, cooked, preserved, or served with miso. The thick, tender stem is crisp and juicy, with a flavor variously described as being like that of lettuce, celery, artichoke, asparagus, squash, or chard. It is peeled, sliced,

and eaten raw, braised, sauteed, pickled, stir-fried or cooked in soups. DAHLEN [Pre, Cul], FELL 1982b, KRAFT [Re], HALPIN [Cu, Cul], HERKLOTS, TANAKA, VILMORIN; B49, C27G{PD}, D11M, D27, D55, F70,139, K49M, L42, L91M, M46, 053M, R47, S63M

#### CULTIVARS

**Majesty:** Long, greenish-white stem, 2 1/2 to 3 inches in diameter; crispy, light-green flesh; suitable for pickling Young leaves can be added to salads or used as a green vegetable. Vigorous, fast-growing plant, resistant to *Cercospora* leaf spot. Q39

**Narrow Leaf:** Very long, narrow leaves; 2 inches wide, 12 inches or more long. The pointed leaves have a very decorative, drooping habit. Originated in southern China. E83T, PIG

**Red:** (Cracoviensis) 45-50 days. A form of asparagus lettuce with reddish stems and bronzy leaves. When young, forms a rosette with heavy reddish-purple accenting. Bolts rapidly but retains a buttery flavor. Grown and used in the same way as the common form. VILMORIN; D68, F73D, N7G

**Round-Leaved:** Slightly crumpled leaves, more or less the shape of Romaine lettuce leaves; somewhat darker green than Narrow Leaf. Similar growth habit. Originated in Taiwan. E83T

#### *Lactuca scariola* - *Lactuca serriola*

*Lactuca serriola* - *Prickly lettuce, Wild lettuce, Compass plant* {S}. The young, tender leaves make a very good salad, cut in pieces with a little chopped onion and served with French dressing. As a potherb, it needs very little cooking and is excellent when served with a hot dressing of melted butter and vinegar. Seeds are the source of Egyptian *lettuce seed oil*, a semi-drying, pleasant-flavored oil used in foods. Eurasia, naturalized in North America. GIBBONS 1966b, MEDSGER, UPHOF; N71M, N84, 048

*Lapsana communis* - *Nippelwort* {S}. The young leaves are eaten raw in salads and sandwiches, cooked like spinach, or added to omelettes, soups, and casseroles. They are said to have a bitter, or radish-like taste. Eurasia. HEDRICK 1919, LAUNERT [Re]; N71M, N84, 048

*Leontodon autumnalis* - *Fall dandelion* {S}. The leaves are added to salads or cooked in a variety of ways like spinach. A traditional favorite in Italy, especially for salads. When used as a cooked vegetable, the first cooking water is usually discarded. Eurasia. CRET; N71M, NU, Q24

*Leontodon hispidus* - *Rough hawkbit* {S}. Young leaves are eaten in salads. Roasted roots have been recommended as a substitute for coffee. Eurasia. MABEY, UPHOF; N71M, N84, 048, 053M

*Leucanthemum vulgare* - *Oxe-eye daisy* {S}. The young leaves are finely chopped and eaten in salads, sandwiches, omelettes, or added to soups. Pungent in flavor, they should be used sparingly or mixed with other salad plants. The flower-heads can be used in the same way as dandelion for home winemaking. Eurasia, naturalized in North America. FERNALD, GIBBONS 1979, LAUNERT; B39M, B39M{PL}, D11T{PL}, F44, F80, G0{DF}, G47M, H61M, J82, M47M, N7D{DF}, N9M, N9M{PL}, N11M, N23, etc.

#### *Leyssera gnaphaloides* - *Asteropterus gnaphaloides*

*Ligularia kaempferi* - *Silveredge, Tsuwabuki, Japanese silver leaf Wild butterbur* {S}. Petioles are boiled in water to remove the harsh flavor, skinned of their outer bark, and used for adding flavor to salads and other dishes, or otherwise served like those of *Petasites japonicus*. Japan. SHURTLEFF 1975, TANAKA, YASHIRODA; F85, H4{PL}, N84

#### *Ligularia tussilaginea* - *Ligularia kaempferi*

*Madia sativa* - *Chile tarweed* {S}. Seeds are eaten raw, roasted, dried, or used for *pinole*. The crushed seeds are a good addition to soups. Also the source of a sweet, edible oil, called *madia oil*, used as a substitute for olive oil. Western North America, South Amer-

ica, cultivated. GIBBONS 1979, HEDRICK 1919, KIRK, MEDS-GER, TANAKA; F80, N7G, N84

*Matricaria chamomilla* - *Chamomilla aurea*

*Matricaria matricarioides* - *Pineapple-weed* {S}. The fresh or dried leaves and flowers make a pale golden, pineapple-scented tea when steeped in hot water. The pineapple flavor is enhanced if the flowers are left in the tea when drinking. Western North America. GIBBONS 1979, NORTON, PETERSON, L., ROOS-COLLINS; E7M, N84, 048

*Matricaria recutica* •\* *Chamomilla aurea*

*Onopordum acanthium* - *Scotch thistle*, *Cotton thistle* {S}. The fairly large flower receptacles can be cooked and eaten like those of the artichoke. Tender young shoots are peeled, boiled, and served like cardoon or burdock. An oil expressed from the seeds has been used for culinary purposes. Floral parts are used as an adulterant of saffron. Mediterranean region. FERNALD, GRIEVE, HEDRICK 1919, LAUNERT, UPHOF; C43M, C43M{PL}, D92M, H21, L56{PL}, L91M, M82{PL}, N71M, N84, 053M, Q24, S55

*Pectis angustifolia* - *Chinchweed* {DF}. The leaves and young shoots are eaten raw, cooked or after having been dried. Also used as a seasoning for other foods, having a strong lemon-like aroma. Western North America. ALISCHUL, KIRK, YANOVSKY; N29

*Petasites frigidus* - *Sweet coltsfoot* {S}. The young leaves are mixed with other greens and used as a potherb by the Eskimos in Alaska. Young stalks and flower heads are cooked and eaten. Roots are roasted and eaten. Western North America. HELLER, KUNKEL, UPHOF; C95, E15, F88M, N84

*Petasites frigidus van palmatus* - *Petasites palmatus*

*Petasites japonicus* - *Fuki*, *Sweet coltsfoot*, *Butterbur* {PL}. The leafstalks are boiled and seasoned with salt or soy sauce, pickled and used in winter soups, or preserved in miso and sake lees. The flowerbuds have a slightly bitter yet agreeable flavor and are prized as a vegetable and condiment in Japan. They are eaten while still green with miso or boiled down in soy sauce. The leaves are used for wrapping tofu and glutinous yam in the Japanese dish known as *naruto-dofu*. Eastern Asia, cultivated. HOMMA, LARKCOM 1991, SHURTLEFF 1975, SHURTLEFF 1976 [Re], TANAKA, TSUJI [Pie], UPHOF, YASHIRODA [Cu, Cui]; B28, F35M, 174, J37M, M16, N37M

*Petasites japonicus* 'Giganteus' - *Akita-buki*, *Giant sweet coltsfoot* {PL}. Leafstalks are parboiled and seasoned with soy sauce or candied. They are occasionally canned. The flower buds are eaten as a vegetable or used as a condiment. Similar to *P. japonicus*, but with much larger leafstalks. Eastern Asia, cultivated. HOMMA, LARKCOM 1991 [Cu], TANAKA; A61, B77, C74, D95, E61, 174, K22, K85, M77, M87, M92

CULTIVARS

Varieaatus: Similar to the above, but the leaves are variegated with patches of creamy yellow. Requires some shade. Hardy in Zone 5. D95, E61

*Petasites palmatus* - *Palmate butterbur*, *Sweet coltsfoot* {S}. The young flower-stalks, before the flowerbuds appear, can be boiled until tender and seasoned with salt and butter. The flowerbuds are also cooked and eaten. Leafstalks are peeled and eaten raw. Ash of the plants is used as a substitute for salt. North America. FERNALD, GIBBONS 1979, TANAKA, YANOVSKY; A2, D95{PL}

*Picridium vulgare* - *Reichardia picroides*

*Picris echioides* - *Common ox-tongue* {S}. The very young leaves are tender and slightly sweet and can be mixed with other greens or cooked alone. In France and Italy, they are often an ingredient of vegetable soups. Europe. CRETTE, WOLFERT 1998; N84

*Pluchea indica* - *Indian sage*, *Lontis* {S}. Young leaves, shoots and inflorescences are eaten raw in tossed green salads, steamed and

served as a side-dish with rice, added to soups, or mixed with hot pepper sauce. Also used as a condiment. Tropical Asia, Australia. MARTIN 1975, OCHSE; F85, N84

*Polymnia sonchifolia* - *Yacon*, *Llacon*, *Strawberry jicama*, *Bolivian sunroot* {PL}. The sweet, juicy tubers, when properly grown, can be eaten out of hand like a fruit. Otherwise they can be sliced and added to tossed salads, or shredded and mixed with other sweet roots such as carrots and sweet potatoes in cold salads. The tubers are sweeter after they have been cured in the sun, although some of their crisp texture may be lost. In the Andes, the grated pulp is squeezed through a cloth to yield a sweet, refreshing drink. The juice is also concentrated to form dark-brown blocks of sugar called *chancaca*. Leaves are said to be edible. Andean South America, cultivated. HERKLOTS, KUNKEL, NATIONAL RESEARCH COUNCIL 1989, UPHOF; D57, E13G{PR}, 174, K67, L55J, N84, Q49M, R49

*Porophyllum ruderales* - *Papalo quelite*, *Quillquiha* {S}. The leaves are eaten raw in salads, added to guacamole, or with tacos. They have a very distinctive, pungent aroma and flavor which some have compared to cilantro. In Bolivia they are chopped finely and added to local stews and a delicious salsa made with tomatoes, onions and locoto chile. The Mexican name is derived from *Papalotl*, Nahuatl for "butterfly". Central America. CARDENAS, QUINTANA 1994 [Re], VON REIS; A2, C95, D92M, E81M, F68T, F73D, F80, F86G, I74{PL}, J82, K49T, L77D, L94M, N84

*Ratibida columnaris* -> *Ratibida columnifera*

*Ratibida columnifera* - *Coneflower*, *Mexican hat* {S}. The leaves and flower-heads may be brewed into a pleasant tea. Western North America. KIRK, YANOVSKY; A53M, C43V, D47M, F59, G47M, H80, 111, J25M, J41M{PL}, J88, K62, L41, N11M

*Reichardia picroides* - *French scorzonera* {PL}. The leaves have a very mild, slightly sweet, agreeable flavor, and while young and tender, are mixed in salads. One of the ingredients of *gerbi* and *preboggion*. Gerbi is a mixture of greens and herbs gathered from the wild in the Cinque Terre region of the Italian Riviera, and then eaten with beans and potatoes and a dressing of olive oil and lemon juice. Preboggion, from the Genoa province, is a mixture of wild greens which serve as filling for a ravioli-like dumpling known as *pansotti*. Roots are also eaten. Macaronesia, Mediterranean region. ANDREWS, C. 1996 [Re], BURR [Cu], HEDRICK 1919, VILMORIN; R49

*Salmea* sp. - *Palito de Chile* {S}. Young leaves are cooked and eaten with beans. Tender tips of the stems can be eaten raw. Shrub to 3 feet tall with white flowers. Oaxaca, Mexico. THEODOR-OPOULOS; F80

*Santolina chamaecyparissus* - *Lavender cotton*, *Grey santolina* {PL}. The aromatic leaves can be used for flavoring broths, sauces, meats, fish, grain dishes, etc. Southern Europe, cultivated. BRYAN [Cu, Re]; A97, B28, C43M, C67M, D92M{S}, J76, J82{S}, K22, K85, M35, M82, N19M, 053M{S}

*Saussurea lappa* - *Costus*, *Kuth*, *Mu Xiang* {DF}. Aromatic roots are occasionally used as a spice. They have a characteristic penetrating odor reminiscent of violet, orris and vetiver. Also the source of an essential oil used in the food industry for flavoring baked goods, gelatins and puddings, beverages, candy and confectioner's frosting. Himalayan region. ATAL, KUNKEL, LEUNG; E14T, F37T, G19P, G73, N7D

*Scolymus hispanicus* - *Spanish salsify*, *Cardillo*, *Golden thistle* {S}. The fleshy roots are eaten boiled, mashed, baked, or used as a substitute for coffee. Young, tender leaves and blanched leaf-stalks are consumed in salads. They are much appreciated in Madrid where they are prepared as a cooked vegetable dressed with olive oil, salt and vinegar. Flowers are used to adulterate saffron. Mediterranean region. BURR, HAWKES, HEDRICK 1919, KUNKEL, ORGAN [Cu, Cu], SEVILLA 1997b, TANAKA, VILMORIN; W88M, X54, Y89M

*Scolymus maculatus* - *Spotted golden thistle*, *Tagarnina* {S}. Young leaves are eaten in salads, cooked as a potherb, or added to casseroles and omelettes. The roots are boiled and eaten. Mediterranean region. HEDRICK 1919, KUNKEL, SEVILLA 1997b; V84T, W88M

*Scorzonera deliciosa* - *Scorzonera undulata ssp. deliciosa*

*Scorzonera hispanica* - *Black salsify*, *Mock oyster*, *Coconut root* {S}. The long, blackish roots are eaten boiled, steamed, baked, batter-fried, or cooked in soups and stews. Young, tender shoots, known as *chords*, can be added to tossed salads. The flower buds, whether raw or cooked and cooled, can be eaten as a salad. The yellow flower petals have their own distinct flavor and may be sprinkled on a salad. Also used in the French dish *omelette aux fleurs de salsifis*. Roasted roots are used as a coffee substitute. Mediterranean region. FELL 1982b, HALPIN [Cu, Cul], KRAFT [Re], MACNICOL [Re], SCHNEIDER 1986 [Pre, Re], UPHOF, VILMORIN; B49, D11M, F70, 139, J82, K49M, N40{PR}, 053M, Q34, R47, S55

#### CULTIVARS

**Duplex:** Very long, cylindrical roots, 8 to 10 inches in length; blunt ended; deep black skin; creamy white flesh with a delicious flavor; quality excellent. High yielding. Should be planted early in rich, deeply worked soil. C85M

**Flandria:** 80 days. A new cultivar introduced by a distinguished European breeder. Very uniform, cylindrical roots, about 12 inches long; tapered to a point; smooth, dark black skin; tender white flesh. The flavor is nut-like, mild, and somewhat reminiscent of coconut. Very productive. Somewhat susceptible to bolting. P59M

**Giant Black Russian:** (Geante Noire de Russie) Very long, thin, coreless, smooth black roots with large shoulders characterize this European market growers selection. Reaches 15 inches or more in length. Smooth, firm texture; rich flavor. Deep, loose soil is required for best production. E63D, G68, L3J, N84, Q11M

**Giaantia:** 120 days. A select European strain. Roots are long and cylindrical and relatively stout. The flavor is rich, and the texture smooth and firm. Delicious raw. G6

**Lanae Jan:** (Long John) 115 days Very uniform, smooth, thick, heavy-yielding roots. Long and cylindrical, with black skin and white flesh. Bolt resistant. Selected strain from Europe. G6, K50, N81, P59M, S61M

**Maxima:** Roots are 11 to 13 inches long, cylindrical with a blunt end. Production capacity is very good. Has performed very well in Dutch Official Cultivar Testing. N84, R32

**Omeaa:** An improved type with very long, slender, black roots and a short top. More productive and of better quality than standard sorts. Despite the great length of the root, it is easy to dig up. *RIIM*

*Scorzonera undulata ssp. deliciosa* - *Delicious scorzonera* {S}. The sweet, delicious roots are widely used in Sicily for making various confections. They are candied in sugar or made into syrups, jams, sorbets, ice creams, refreshing orchata-like beverages, tea, juleps and jasmine-perfumed ices. Mediterranean region. HEDRICK 1919, PAILLIEUX; W59M

*Silphium laciniatum* - *Rosinweed*, *Compass plant* {S}. The resinous exudation that forms on the upper parts of the flower-stalk has been used as a chewing gum. North America. FERNALD, MEDSGER; G47M, G89, H63{PL}, H70M, H70M{PL}, J39M, J39M{PL}, J40, J40{PL}, J41M{PL}, J42, J42{PL}, J43, N37M{PL}

*Silybum marianum* - *Milk thistle* {S}. Young leaves are trimmed of prickles and eaten raw or boiled. The stems can be peeled, chopped, and used in salads, or soaked in water to remove the bitterness and then stewed like rhubarb. Young flower receptacles are boiled and served like those of artichoke. Seeds are roasted and used as a coffee substitute. The roots are also edible, either raw or cooked.

Mediterranean region. CLARKE, GRIEVE, LARKCOM 1984, MABEY, UPHOF; A26, A97{PL}, C43M, C43M{PL}, C95, D92M, F24D, F80, K2, K22{PL}, M15T{PL}, M82{PL}, 053M,

*Solidago canadensis* - *Canada goldenrod* {S}. Seeds were eaten by Indians of several tribes. The leaves can be used for tea. North America. MARCIN, UPHOF; A2, D11T{PL}, D47M, E15, F68T, F85, F86G{DF}, F88M, 147, J25M, J42, L94M, N71M, N84

*Solidago graminifolia* - *Fragrant goldenrod* (S). Fresh or dried leaves are used as a substitute for tea. The flowers yield a thick, heavy-bodied, deep golden yellow honey with a strong aroma and a more pronounced flavor than clover honey. North America. CRANE 1975, PELLETT; B29, B51, D17{ED}, J39M, J39M{PL}, J42, J42{PL}, N84

*Solidago missouriensis* - *Missouri goldemod* {S}. Young leaves are eaten in salads or cooked as a potherb. The dried leaves and the dried, fully expanded flowers make good tea. North America. KIRK, YANOVSKY; B29, B29{PL}, J43, N84

*Solidago odora* - *Sweet goldenrod* {PL}. The dried leaves and dried, billy expanded flowers are used for brewing an aromatic anise-flavored tea, known as *Blue Mountain Tea*. North America. FERNALD, GIBBONS 1962, MARCIN MEDSGER, WEAVER 1993 [Re]; B61M{S}, C43M, D92M{S}, E61, G0{DF}, H61M{S}, I11M, K22, K85, M77M, N84{S}

*Solidago suaveolens* - *Solidago odora*

*Sonchus arvensis* - *Field sow-thistle* {S}. The young shoots and leaves are eaten in salads, added to curries, or cooked like spinach and served with rice. Roots are used as a substitute for coffee. In Indonesia, an improved type is grown for its leaves. Eurasia. CROWHURST 1972, HARRINGTON, H., LAUNERT, OCHSE, TANAKA; N84

*Sonchus asper* - *Prickly sow-thistle*, *Puha tiotio* {S}. The tender leaves and flowering tops may be used raw in salads or cooked and served like spinach. The stems should be bruised and the bitter, milky juice washed out before eating or cooking. Eurasia. CRIBB, KIRK, OCHSE, PAINTER [Pre, Cul]; N84, 048

*Sonchus oleraceus* - *Common sow-thistle* {S}. Young leaves are employed as an ingredient of salads, boiled like spinach, or cooked in soups, souffles, frittatas, and porridges. The young stalks are peeled of their outer skin and boiled and served like asparagus. The roots are also used as food. New Zealand Maoris chewed the milky sap as gum. Eurasia. CLARKE [Re], COLENSO, CRIBB, FOX, E, FULLER [Re], GRIEVE, MEDSGER, MICHAEL [Re]; N84

*Spilanthes acmella* - *Toothache plant*, *Alphabet plant*, *Australian cress* {S}. The young leaves and shoot tips, either raw or steamed, are eaten as a side-dish with rice. Tropics. OCHSE, TANAKA; A2, A26, C43M{PL}, C95, F37T{PL}, F68T, F80, F85, F86G, H94M{PL}, I81T{PR}, I81T{DF}, J82, K49T, L55J, L77D, M82{PL}, etc.

*Spilanthes acmella* 'Oleracea' - *Para cress*, *Brazil cress*, *Jambu*, *Brede mafane* {S}. The leaves, when mixed with salads, impart to them a pungent flavor, and have the effect of stimulating the action of the salivary glands and numbing the lips and tongue. Very popular in Brazil where it is essential, along with manioc juice or *ucupi*, to Amazonian soup dishes such as *pato no ucupi* and *taacca*. Has become the favorite vegetable of the Europeans of Antananarivo, Madagascar, and is a main ingredient of *roumazave*, the Malagasy national dish. Also cooked in coconut milk curry. Milder in flavor and with larger purple leaves than toothache plant. IDONE [Re], JACQUAT, OCHSE, TANAKA, VIARD, VILMORIN; C81M, C95, D68, F24D, G6, I81T{PR}, I81T{DF}, 199M, K49T, K57{PL}, L3J, L77D, N42{PL}

*Spilanthes oleracea* - *Spilanthes acmella*

*Stevia rebaudiana* - *Sweet-herb of Paraguay, Sugar leaf* {PL}. Leaves contain stevioside, a substance three hundred times sweeter than sucrose. In South America, the dried leaves are ground for use as a sweetener or soaked in water and the liquid employed in making preserves. *Stevia* tea bags are used for brewing tea, or they can be added to other beverages such as lemonade and fruit drinks. The leaves are sometimes chewed by those wishing to reduce their intake of sugar. Herbal tea manufacturers utilize the powdered herb as a sugar substitute. Paraguay, Brazil. INGLETT, KIRKLAND [Re], MORTON 1976; A25G{DF}, C43M, E56{DF}, F16, F85{S}, G96,139,166{DF}, 174, J61M, J82, M32G{EC}, M82, R53M

*Stevia serrata* - *Sweet leaf, Roninowa* {PL}. In Mexico, the leaves are used as a catalyst in the fermentation of *tesguino*, a slurry-like alcoholic beverage made from germinated corn or corn stalk juice. Also apparently suitable for use as a sugar substitute. Southwestern North America to Central America. STEINKRAUS; I37M, I83M

*Tagetes anisatum* - *Anise marigold* {S}. The herb can be used as a tarragon-like seasoning, being very similar in flavor and aroma to *T. lucida*. Dried flowering tops make a pleasant anise-flavored tea. Tropical America. D92M

*Tagetes erecta* - *Aztec marigold* {S}. The dried flowers are the source of a yellow dye occasionally used for coloring butter and cheese. Also used as an adulterant of saffron. The flowers of some cultivars can be eaten. In Thailand, the strongly aromatic leaves and the flower buds are eaten raw with *lon too jieow*—z coconut milk and fermented soybean sauce. Central America. JACQUAT, MORTON 1976, TANAKA; A26, C95, F86G, I99M, K49T, L89, N84, 053M

CULTIVARS

**Yellow Climax:** The petals of the mild-flavored flowers can be used as colorful garnishes. B75

*Tagetes filifolia* - *Irish lace marigold, Hierba anis* {S}. The plant has the scent of anise and is used for flavoring or for making a very pleasant tea. Cultivated. KUNKEL, THEODOROPOULOS; D92M, F80, J82{PL}, N84

*Tagetes lemmonii* - *Copper Canyon daisy* {PL}. The foliage is occasionally used as a flavoring, having a very strong, distinctive flavor somewhat reminiscent of lemon and mint. Also brewed into a pleasant, aromatic tea. Southwestern North America. BUCHANAN; B92, C98M, C98M{S}, E61, F93G, H94M, J66, L13{S}, L55J{S}, N37M, N51, N84{S}, Q34

*Tagetes lucida* - *Mexican tarragon, Sweet marigold, Sweet mace, Pericon* {PL}. The leaves and flowers are used as a substitute for tarragon in seasoning soups, sauces, vinegars, dressings, salads, herbal butters, etc. Dried leaves and flowering tops are brewed into a pleasant anise-flavored tea. Mexico. HEDRICK 1919, HUTSON 1987 [Re], MORSE, MORTON 1976, VILMORIN; A26{S}, C43M, C67M, D92M{S}, E61, F35M, F73D{DF}, F80{S}, F93G, G96,116{DF}, I81M{DF}, J73{S}, J82{S}, K22, N51, etc.

CULTIVARS

**Sweetie:** Has a more pronounced tarragon-like flavor than the standard seed grown types. Bright golden flowers. Compact, bushy growth habit. Sensitive to frost. Introduced by Nichols Garden Nursery. 139

*Tagetes minuta* - *Muster John-Henry, Mexican marigold* {S}. The dried leaves are used as an aromatic seasoning for soups, broths, meats, and vegetables. Source of an essential oil used commercially in ice cream, candy, baked goods, gelatin desserts, and soft drinks. South America. FERNALD, MORTON 1976; A26, C43M{PL}, C95, D92M, E81M, I99M, J82, K22, K49T, L94M, N84, 053M, PIG, R47, S55, etc.

*Tagetes patula* - *French marigold, Imeretian saffron* {S}. Leaves are used as a condiment in Africa. The dried flowers serve as an adulterant of saffron or as coloring for butter and cheese. In Georgia, they are an important ingredient of *khmeli-suneli*, a famous spice mixture which flavors *kharcho*, a popular beef soup. Often added to

Georgian sauces containing walnuts and vinegar, to prevent the vinegar from turning the walnuts an unsightly purplish-black. Flowers are said to be used in refreshing drinks. Central America. GOLDSTEIN [Re], KUNKEL, MARGVELASHVILI, MORTON 1976, WOLFERT 1994a [Cui, Re]; A7{DF}, I99M, J82, K22, K49T, L7M, N84, 053M, R47, S55

*Tagetes tenuifolia* - *Lemon marigold, Signet marigold* {S}. The flowers of some cultivars have a pleasant citrus-like flavor and can be used sparingly as a garnish, in salads and sandwiches, or added to desserts and wines. Central America. K22, 053M

CULTIVARS

**Golden Gem:** Sister strain of Lemon Gem, but with butter yellow flowers. Similar compact, mounded habit and intriguing lemon-like aroma and flavor. Lacy foliage. Suitable for bedding, window boxes and hanging baskets. Excellent for borders. C53, D92M, E24, H33M, K49Z, N84, 053M

**Lemon Gem:** Floriferous, single, forget-me-not type flowers with a bright lemon-yellow color. Both leaves and flowers have a lemon-like aroma and flavor. Excellent in hot pudding sauces Very early, compact, ball-shaped plant with fine, lacy foliage. B75, C53, D11M, D68, E7M, E63D, E81M, E91G, F70, H33M, 139, 177, J82, K49M, K66, L79, L91M, etc.

**Lulu:** Compact, mound-shaped plants; 8 inches tall; covered with small, lemon-yellow single blooms that are very good in salads; fern-like foliage. Excellent for rockeries. H42, 177, K49M, L42, N81

**Ornament:** A prolific flowering cultivar with very attractive maroon flowers. Excellent citrus-like aroma and flavor. Well suited for use in salads or as a garnish. Has also been used in potpourris. Small, lacy plant, blooms over a very long period; small, single flowers. 177, N81

**Paprika:** Attractive, intense reddish-orange to maroon flowers, sometimes edged with gold. Refreshing citrus-like flavor and aroma. Excellent in salads and as a garnish. Small, lacy plant; thin, slender foliage; small, single flowers. D92M, 177, M82{PL}, N84

**Tangerine Gem:** Dime size, golden orange single flowers make unique cut flowers for small arrangements. Both the petals and leaves have a tangerine-like fragrance and flavor. Compact, dome-shaped plants have lacy, fern-like foliage. Excellent for borders. C53, D11M, D68, D92M, E81M, E91G, F70, G6, G16, H33M, H49,177, K49M, L42, L89, L94M, M82{PL}, Q34, S55, etc.

*Tanacetum parthenium* - *Feverfew* {PL}. Dried flowers are used as tea, or in wine and certain pastries. One of over thirty different herbs and spices included in *Norfolk Punch*, a non-alcoholic herbal beverage formulated by Monks of Norfolk, England. Eurasia, cultivated. UPHOF; A97, C43M, C67M, D92M{S}, F80{S}, J76, J76{S}, J82, K2{PD}, K22, K85, M82, N19M, N84{S}, 053M{S}, R47{S}, etc.

CULTIVARS

**Golden:** (Yellow) Very similar to the species, but with a yellow tint to the leaves, and a more compact growth habit. C43M, D92M{S}, E81M{S}, F35M, H51M, H94M, J66, J76, J76{S}, J82, L22, L56, M82, R53M, R53M{S}, etc.

*Tanacetum vulgare* - *Tansy, Bitter buttons* {PL}. The young, aromatic leaves are finely chopped and used in salads, puddings, cakes, fritters, fish-dishes, etc. Tansy-cheese is made by steeping the herb and pouring the extract into the milk before the curds are made. The juice extracted from the leaves was used to flavor omelettes known as *tansies*, traditionally eaten on Easter as a remembrance of the bitter herbs eaten at Passover seders. Flowers have a unique flavor and are eaten or used for garnishing. The leaves and flowering tops are brewed into a bitter, somewhat lemon-flavored tea. Eurasia, cultivated. FERNALD, GRIEVE, LEGGATT [Re], MABEY, MACNICOL [Re], MARCIN, MICHAEL [Re], ROOT 1980b; A97, C3{S}, C43M, C67M, D92M{S}, F80{S}, J76, J76{S}, K22, K85, M53, N19M, R47{S}

## CULTIVARS

**Fernleaf:** (Curled, Crispum) More decorative than the common form with deeper green, more delicate foliage and larger orange-yellow flowers. Compact, lacy, fern-like leaves. Good as an ornamental garnish. Lower growing, height 2 to 2 1/2 feet. Will spread slowly to fill any allotted space. Doesn't flower as frequently. B28, C9, C43M, E61, F24D, F32D, F35M, J76, J82, K22, K85, M82, N19M

*Taraxacum officinale* - *Dandelion*, *Pissenlit*, *Radicchiello* {S}. Young leaves are eaten in salads, boiled, steamed, sauteed, fried, braised, etc. The roots are eaten raw, or cooked and served like salsify. The blanched leaf-stalks, or crown, can be eaten raw or as a cooked vegetable. Dandelion wine is made from the flowers. One of over thirty different herbs and spices included in *Norfolk Punch*, a non-alcoholic herbal beverage formulated by Monks of Norfolk, England. The unopened flower-buds, while still inside the crown, are eaten in pancakes, omelettes, and fritters. Roasted roots are ground and used as a substitute for coffee. The flowers are used as an ingredient in the Arabic cake called *yublo*. Both the leaves and roots are brewed into tea. The open blossoms are steeped like tea and the resulting liquid is boiled with sugar to make dandelion jelly. Sprouted seeds can be eaten. Northern temperate region, cultivated. The pollen can be used a food coloring. CUSUMANO [Cu, Re], GIBBONS 1962, HALPIN [Cu, Cul], HARRINGTON, H., LEGGATT [Re], LINSKENS, MACNICOL [Re], MARCIN, MICHAEL [Re], UPHOF, VILMORIN [Cu]; A2, C25PIDF), C56G{PD}, C82, C82{PL}, D3M{PR}, E13G{PR}, F86G{PD}, G73{PD}, I81T{PR}, K2{PD}, K18M{PD}, K22, N40{PR}, N71M, N84, etc.

## CULTIVARS

**Ameliore a Coeur Plein:** A very distinct cultivar, surpassing the wild plant not so much in the size as in the very great number of the leaves, which form a regular tuft or clump, instead of a plain rosette. It yields a very abundant crop without taking up much ground, and blanches very easily and, indeed, almost naturally. VILMORIN; C53, E63D, N84, P59M, S55, S95M

**Broad Leaved:** (Thick-Leaved, Cabbage-Leaved) 95 days. Large, broad, dark-green leaves; more deeply lobed along the axis of the leaf than those of the wild dandelion; thick and tender. Easily blanched plants are semi-erect, forming a rosette of leaves. In rich soil, each plant spreads 18 to 24 inches across. Doesn't go to seed as quickly as the French types. E38, G57M, G71,139, J82, L42, N84, O53M, R47

**Fullheart Improved:** 48 days. Improved French strain, much larger than the Italian types. Large, savoyed leaves, some up to a foot long. Can be harvested throughout the year with succession planting. J20, S95M

**Vert de Montmaanv:** (Vert de Montmagny Ameliore) 92 days. Large, long, dark green leaves; well lobed and denticulated; large, well-filled hearts; may be blanched or not. Smaller, compact plants; vigorous and productive. Best sown in early spring or fall. C95, G68,177, K73, L42, N84, S95M

*Taraxacum camphoratus* - *Camphor bush*, *Hottentot tobacco* {S}. The camphor-flavored leaves are chewed. Also a substitute for tea. In Kenya, the roots are eaten in tonic soups. South Africa. GACHATHI, KUNKEL, UPHOF; F85, N84, S28M

*Thelesperma ambiguus* - *Thelesperma filifotta*

*Thelesperma filifolia* - *Showy Navajo tea* {S}. Leaves and flowers are used as a substitute for tea. Western North America. G89M{PL}, 111, J25M, M25, M82{PL}, N84

*Thelesperma gracile* - *Navajo tea*, *Cota*, *Greenthread* {S}. The leaves and dried flowers are used as a substitute for tea. The color of the tea is greenish-yellow to dark yellow-red, and when properly made it is delicious with just a hint of mint in its aftertaste. Flower buds can also be eaten. Western North America. GIBBONS 1979,

HARRINGTON, H., HUGHES, P., KIRK; C98M, C98M{PL}, J25M, L3J, L55J, R47

*Thelesperma longipes* - *Navajo tea*, *Cota* {DF}. Dried leaves and flower heads can be brewed into an excellent, flavorful tea. Western North America. HARRINGTON, H.; 116

*Thelesperma megapotamicum* - *Thelesperma gracile*

*Tragopogon dubius* - *Goat's beard* {S}. The young stems, when a few inches high, and the bases of the lower leaves are used as potherbs. Young roots are eaten raw or cooked. Northern temperate region. FERNALD, HARRINGTON, H., KIRK; E5T, L55J, M34M, N84

*Tragopogon majus* - *Tragopogon dubius*

*Tragopogon porrifolius* - *Salsify*, *Oyster plant*, *Vegetable oyster* {S}. Roots are eaten raw in salads, boiled, baked, sauteed in butter, added to soups, or grated and made into cakes. The young shoots (<chords), flower buds, and flowers may be eaten in salads, either raw or cooked and cooled. Flowers are also pickled. Young flower-stalks are cooked and dressed like asparagus. Sprouted seeds can be used in salads and sandwiches. The milky latex from the roots was used as chewing gum by British Columbia Indians. Mediterranean region, cultivated. CUSUMANO [Cu, Re], GRIEVE [Re], HALPIN [Cu, Cul], HAWKES [Re], HEDRICK 1919, LARKCOM 1984, UPHOF, VILMORIN [Cu]; B49, C95, E13G{PR}, E38, K49M, L55J, N40{PR}, N84, R47

## CULTIVARS

**Improved Mammoth Sandwich Island:** 120 days. Smooth roots with sweet, tender, snow-white flesh. Has a mild, pleasing flavor said to resemble that of oysters. Stores well. E97

**Mammoth Sandwich Island:** 120 days. Long white roots grow 8 inches long or more, measure 1 to 1 1/2 inches across at the shoulder, slightly tapering and uniform; creamy white flesh. May be left in the ground over winter for early spring use. Requires a long season but is easy to grow. Introduced before 1894. A2, A16, A25, B75M, C85M, D11M, F70, G71,184, L3J, M46, O53M

*Tragopogon pratensis* - *Goat's beard* {S}. The flowering stems, including the buds, are cooked and served like asparagus. Young leaves, shoots, and diced roots can be used in salads. The fully developed taproot is blanched, peeled, and cooked and eaten like salsify. The whole herb may be cooked in soups and stews. Eurasia, naturalized in North America. FERNALD, LAUNERT [Re]; C95, F68T, H61M, N71M, N84, O48

*Tussilago farfara* - *Coltsfoot* {PL}. The young leaves, flower buds, and young flowers can be eaten in salads, soups, or as a potherb. Fresh or dried leaves and flowers are used for preparing an aromatic tea. The slender rootstock is candied in sugar syrup. A delicious country wine is made from the flowers. Ash from the leaves is used as a salt substitute. Northern temperate region. CROWHURST 1972 [Re], FERNALD, GIBBONS 1966b, GRIEVE, HALL [Pre, Re], LAUNERT [Re], MACNICOL [Re], MARCIN, MICHAEL [Pre, Re]; C43M, C67M, E61, F35M, G96, J5M, J82, L90J, L94M, M16, M82, N9M, N9M{S}, R53M

*Urospermum picroides* - *Sow thistle*, *Zochos* {S}. The leaves are eaten in some parts of the Mediterranean and Middle East, especially in soups and stews. In Greece, they are considered very good for making *hortopita*, a popular vegetable pie consisting of seven different wild greens including sweet, sour, bitter and aromatic types chosen to complement one another. Mediterranean region. CRET, KREMEZI 1993 [Re], MARTIN 1975; V84, V84T, V85M, W59M, Y18

*Vernonia amygdalina* - *Bitterleaf* *Ewuro* {S}. The young, leafy shoots are eaten as a potherb or used in soups. They are occasionally squeezed before use to reduce the intense bitterness. Finely cut and dried leaves are sold in local markets. Young twigs are chewed as a stomachic tonic and appetite stimulant. Very popular in parts of Africa. Some cultivated forms are nearly free of bitterness. Tropical

Africa. MARTIN 1975, OOMEN, UPHOF, VAN EPENHUSEN [Cu]; N84, S28M

*Vernonia cinerea* - *Ash-colored fleabane* {S}. The slightly bitter leaves are eaten as a potherb or added to soups. A powder made from the plant is added to millet or rice flour in the preparation of *marcha* or *mana*, a fermentation cake used in the Himalayas for brewing local beers and other alcoholic beverages, Old World Tropics. CRIBB, FCK, R, MANANDHAR, OCHSE; F68T, N84

*Wedelia biflora* - {S}. The leaves are stuffed with grated coconut, rolled, and then either steamed or boiled. In the New Hebrides, the leaves are used for wrapping fish, to which they impart flavor. A tea is made from the leaves and roots. Polynesia. ALTSCHUL, BROWN, W., MASSAL; N84

#### ATHEROSPERMATACEAE

*Atherosperma moschatum* - *Tasmanian sassafras* {S}. The bark, either fresh or dried, is made into a pleasant tasting tea. Australia, Tasmania. CRIBB; N84

#### *Laurelia aromatica* - *Lauretia serrata*

*Laurelia serrata* - *Peruvian nutmeg* {S}. Fruits and leaves are used as a spice in some parts of Peru. Chile, Argentina. HEDRICK 1919, KUNKEL, UPHOF; Z25M

#### ATHYRIACEAE

*Diplazium esculentum* - *Kuware-shida*, *Pako* {PL}. Very young leaves are eaten raw in salads, steamed and eaten with rice, or used as an attractive garnish. They are often an ingredient of *gado gado*. In Thailand, they are blanched and eaten with *nam phrik* or fried. Tropical Asia. BROWN, W., BURKILL, JACQUAT, OCHSE, PASSMORE; E48, M42

#### AVERRHOACEAE

*Averrhoa bilimbi* - *Bilimbi*, *Kamia*, *Cucumber tree* {S}. Very acid fruits are pickled like cucumbers, candied, preserved in syrup, eaten as a relish with meat or fish, or used in curries, marmalade, chutneys, jams, jellies, and lemonade-like drinks. Flowers are made into conserves. Southeast Asia, cultivated. GARNER [Pro], GELLE [Re], HEDRICK 1919, MORTON 1987a, OWEN [Re], POPENOE, W. 1920, STURROCK, UPHOF; A79M, F85, G73, N84, S97M{PL}

*Averrhoa carambola* - *Carambola*, *Starfruit* {S}. Juicy fruits of the sweet type can be eaten out of hand, dried, sliced into fruit and vegetable salads, or used in ices, sherbets, drinks, Bavarian creams, mousses and other desserts. Sour types or slightly underripe fruits are pickled, cooked with fish and poultry or made into relish, *rujak*, and jelly. The acid flowers are eaten in salads or made into conserves. Leaves have been eaten as a substitute for sorrel. In Bali, they are eaten with coconut milk sauce. Cultivated. CUSUMANO [Cul, Re], EISEMAN, GARNER [Pro], HEDRICK 1919, HUTTON [Re], MORTON 1987a, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], SCHNEIDER 1986 [Re]; A7{DF}, A79M, B60M{PR}, D3M{DF}, E13G{PR}, E29{PL}, F85, G5M{PD}, H55{PD}, I12{PL}, L14G{PD}, L54{PD}, L97G{DF}, N40{PR}, N40{DF}, N84, 093, P38, Q32, Q46, S97M{PR}, etc.

#### CULTIVARS {GR}

**Arkin:** Uniform fruit, 4 to 5 inches long, with small wings; bright yellow to yellow-orange skin and flesh; very sweet, juicy, firm flesh with few seeds; keeps and ships very well. Tree partially self-fruitful; bears heavily from October to December in Hawaii, earlier in Florida, from December to March in California. The leading commercial cultivar. D57, 112, 177G, N53M, Q93

**Fwana Tung:** Fruit 5 to 8 inches long, with long wings; pale yellow skin and flesh; very sweet and juicy, firm flesh with few seeds; ripe when wing edges are still green. Beautiful starry shape when cut in slices. Bears heavily from October to January in Hawaii. Originated in Florida as a seedling of a Thai variety. D57, E8M, G2M, 177G, N53M, Q93, S97M

**Honey:** (B-17) A superior new selection from Malaysia with honey sweet fruit. However, the tree requires cross pollination to set good crops. E8M

**Kajana:** Fruit 4 to 5 inches long; bright yellow skin and flesh; sweet, juicy, firm flesh with few seeds. Beautiful star shape when cut in slices. Bears heavily from October to December in Hawaii. J22

**Kari:** Sweet, juicy, pleasantly-flavored fruits, an attractive orange-yellow when ripe; excellent, crisp texture. Selected seedling of Sri Kembangan. Slightly less elongated and pointed, with less green-edged wings. Developed at the University of Hawaii Poamoho Experiment Station, Oahu. E8M, G2M, 112, 177G, J22, N53M

**Maha:** Roundish fruit with light yellowish-white skin; white flesh; low acid content; sweet and crunchy. Originated in Hawaii. Q93, S97M

**Sri Kembangan:** (Kembangan) Elongated pointed fruit, 5 to 6 inches in length; bright yellow-orange skin and flesh; juicy, sweet, firm flesh with few seeds, flavor rich and sweet; dessert quality excellent. Bears heavily from September to January in Hawaii. Originated in Thailand. D57, E29, J22, N53M, Q93

**Wheeler:** Medium to large, elongated fruit; orange skin and flesh; mildly sweet flavor. Tree a very heavy bearer. Q93

#### AVICENNIACEAE

*Avicennia germinans* - *Black mangrove*, *Honey mangrove* {PL}. A salt is collected from the leaves and roots that is said to be better than that from other mangroves. The flowers are the principal source of mangrove honey. Tropical seacoasts. DUKE, MORTON 1977; A79M{S}, D87G, F73, N84

#### BALANITACEAE

*Balanites aegyptiaca* - *Desert date*, *Egyptian myrobalan*, *Soapberry tree* {S}. The fruits are eaten fresh, dried, or made into syrup and alcoholic beverages. Seed kernels are eaten raw or dried, added to soups, or made into a kind of bread. Also the source of an edible oil, *zachun oil*. Leaves and flowers are used as vegetables. Drier Africa to Southwest Asia. MENNINGER, UPHOF, VON MAYDELL, ZEVEN; F85, Q46

#### *Balanites maughamii* - *Balanites wilsoniana*

*Balanites wilsoniana* - *Torchwood*, *Mkonga* {S}. Fruits are sometimes eaten. Seeds are the source of a clear oil, similar to olive oil. Tropical Africa. FCK, F., MENNINGER, UPHOF; N84, S28M

#### BALSAMINACEAE

#### *Impatiens biflora* -+ *Impatiens capensis*

*Impatiens capensis* - *Jewelweed*, *Spotted touch-me-not* {S}. The succulent stems, while still young and tender, can be cut up and cooked like green beans or served with cream sauce in the manner of asparagus. North America. GIBBONS 1966b, MEDSGER; D47M{PL}, F85, J39M, N9M, N9M{PL}, N84

*Impatiens glandulifera* - *Jewelweed* {S}. Raw seeds, having the taste of nuts, are eaten or pressed for their edible oil. The leaves are used as a vegetable. India, cultivated. KUNKEL, TANAKA, WATT; F35M{PL}, F80, N84

*Impatiens pallida* - *Pale jewelweed* {S}. The crisp young shoots, after five minutes of simmering in boiling water, are excellent when added to sukiyaki, chow mein, and other Oriental dishes. When eaten as a vegetable on their own, they should be cooked in one or two changes of water and then served with butter or vinegar. North America. CROWHURST 1972, GIBBONS 1979; D47M{PL}, J39M, N9M, N9M{PL}, N84

## BAMBUSACEAE

*Arundinaria gigantea* - *Southern cane, Large cane* {PL}. Seeds are eaten as a cereal or ground into a flour. The young sprouts are used like bamboo shoots. North America. FERNALD, HEDRICK 1919, MEDSGER, PETERSON, L.; A79, G87T, H4, I29T, I45M, M16, M33M

*Bambusa arundinacea* - *Spiny bamboo, Thorny bamboo* {S}. Young sprouts are edible. They should be cooked in two changes of water to remove the bitterness. In Thailand, a fermented vegetable product, *naw-mai-dong*, is prepared from the shoots. The sugary sap is made into a popular drink. Seeds are also edible. Tropical Asia, cultivated. STEINKRAUS, TANAKA, YOUNG 1954, YOUNG 1961; M5M{PL}, Q18, Q46

*Bambusa bambos* - \* *Bambusa arundinacea*

*Bambusa beecheyana* - *Sinocalamus beecheyana*

*Bambusa multiplex* - *Leleba multiplex*

*Bambusa oldhamii* - \* *Leleba oldhamii*

*Bambusa vulgaris* - \* *Leleba vulgaris*

*Cephalostachyum pergracile* - *Wa-ciaw, Khaao loam* {PL}. The thin inside membranes of the internode stems are used as casings for a popular Thai dessert called *khaao laam*—a mixture of glutinous rice, adzuki beans, coconut milk, sugar and salt. After the internodes are grilled or baked, the membrane becomes attached to the filling and the two are eaten together, the bamboo giving a specific fragrance to the dish. The slightly bitter shoots are occasionally eaten. Tropical Asia. ALTSCHUL, ANDERSON, E.F., JACQUAT, WATT; M5M

*Dendrocalamus asper* - *Buloh betong, Delingpetung* {PL}. Very young shoots, before they emerge from the soil, are tender and sweet. They are cooked and eaten as a vegetable, pickled in vinegar, preserved in salt, or cut into strips and used as a substitute for macaroni in soups. India, cultivated. BURKILL, OCHSE, ROSS [Re]; D43, M5M

*Dendrocalamus latiflorus* - \* *Sinocalamus latiflorus*

*Dendrocalamus strictus* - *Male bamboo, Bans* {S}. The young shoots are cooked as a vegetable. Seeds are also eaten. Source of an edible manna that can be used for cooking or making sweetmeats. India, cultivated. DONKIN WATT; MIJ{PL}, M5M{PL}, N84, O53M, Q18, Q46, R88

*Gigantochloa hasskarliana* - *Awitela* {PL}. The young shoots are cooked and eaten as a side dish with rice. They are also used in the preparation of soups and stews. Highly esteemed in Indonesia for their sweet, flavorful qualities. Tropical Asia. OCHSE; M5M

*Indocalamus tessellatus* - *Large-leaved bamboo, Zong ye zhu* {PL}. Has the largest leaves of any bamboo, often measuring 24 inches in length and 4 or more inches in width. In China, they are used for wrapping pyramid-shaped glutinous rice dumplings called *zongzi*, eaten during the Dragon Boat Festival on the fifth day of the fifth lunar month. Also used for lining the bottoms of pans when cooking rice cakes, meat patties and other dishes, the cooked foods absorbing the flavors of the bamboo leaves. Dried leaves are available at Oriental markets. China. COTTERELL [Re], LEE, G. [Re]; A78, A79, B76, D43, G87T, H4, I29T, I45M, I77G, J68, MIJ, M5M, M16, M16M, N37M, etc.

*Leleba multiplex* - *Hedge bamboo, Bring tjendani, Horai-chiku* {PL}. Young shoots, though bitter, can be eaten if they are harvested before they emerge from the soil, and then parboiled in water. Tropical Asia. OCHSE, TANAKA; A78, A79, C36, D43, G87T, H4, I8, I29T, I45M, I77G

*Leleba oldhamii* - *Giant timber bamboo, Lii-chu, Ryoku-chiku* {PL}. The young sprouts can be used as *bamboo shoots*. They are of

excellent quality. China. TANAKA; A79, D43, G87T, H4, H78, I8, I28, I77G, I83M, K46, MIJ, M5M

*Leleba vulgaris* - *Common bamboo, Daisan-chiku* {PL}. Very young shoots, while still tender, are cooked and eaten with rice, added to soups, or made into pickles. Southern Asia, cultivated. BURKILL, OCHSE, TANAKA; D43, I77G, I83M

*Oxytenanthera abyssinica* - *Savannah bamboo, Woody bamboo-grass* {S}. The young shoots are sometimes consumed. In Uganda, they are boiled, steamed, smoked, dried or salted, and are also made into a vegetable salt. Grains are cooked and eaten like rice. Sap from the stems can be drunk immediately or stored and fermented into wine. The wine can be mixed with other drinks like lager beer. Cultivated in the highland areas of Tanzania. Eastern Africa. GOODE, IRVINE 1961, KUNKEL, MARTIN 1975, MGANI, VON REIS; F85

*Oxytenanthera braunii* - *Oxytenanthera abyssinica*

*Phyllostachys angusta* - *Stone bamboo, Sah chu* {PL}. The long shoot is eaten. It is said to be one of the best for quality and flavor. China. YOUNG 1954; A78, B76, D43, G87T, H4, I45M, J68, MIJ, M5M, M16

*Phyllostachys aurea* - *Golden bamboo, Fishpole bamboo, Hotei-chiku* {PL}. Fresh shoots are eaten as a vegetable. They have very little bitterness even when eaten raw. Seeds are also edible. China, cultivated. KUNKEL, YOUNG 1954, YOUNG 1961; A79, B41, B93M, D43, F53M, G87T, H4, I28, I45M, I83M, J68, M16, M5M

*Phyllostachys aureosulcata* - *Yellow-groove bamboo* {PL}. Young sprouts make good *bamboo shoots* as they are relatively free of bitterness or acidity, even when eaten raw. China. YOUNG 1954, YOUNG 1961; A79, B28, B76, D43, G87T, H4, H49, I29T, I45M, J61M, J68, M5M, M16, M33M

*Phyllostachys bambusoides* - *Ma-dake, Japanese giant timber bamboo* {PL}. The large shoots are somewhat acrid, and should be prepared for eating by boiling in a considerable amount of water or by boiling in several changes of water. China, cultivated. YOUNG 1954, YOUNG 1961; A78, A79, B93M, D43, H4, I8, I29T, I45M, I53M, I74, J61M, J68, MIJ, M5M, M16, etc.

*Phyllostachys congesta* - \* *Phyllostachys purpurata*

*Phyllostachys dulcis* - *Sweetshoot bamboo, Pah kohpoo chi* {PL}. The new shoots which emerge in early spring are free of acidity, and are excellent for eating purposes. One of the most highly esteemed bamboos in China, where it is called *vegetable bamboo*. Used in salads, soups, stews and stir-fried dishes, or it is canned, salted, and pickled. China, cultivated. HALPIN, HERKLOTS, YOUNG 1954, YOUNG 1961; A78, D43, G17, G87T, H4, I29T, I45M, I74, J68, MIJ, M5M, M16M, M33M

*Phyllostachys elegans* - *Flowered bamboo* {PL}. Highly regarded for its tasty, early spring time shoots. One of the first species of the genus to send up shoots in the spring. China. D43, G87T, H4, MIJ

*Phyllostachys flexuosa* - *Zig-zag bamboo* {PL}. Shoots are edible, appearing in midspring. They are slightly acrid in the raw state, and should be boiled first before using in salads, etc. China. UPHOF, YOUNG 1954; D43, G87T, H4, I29T, I45M, J68, MIJ, M5M, M33M

*Phyllostachys heterocycla f. pubescens* -> *Phyllostachys pubescens*

*Phyllostachys nidularia* - *Big node bamboo* {PL}. Highly prized for their shoots, not only because they are among the earliest to appear in spring, but because of their delicate food qualities. The cooked shoots have somewhat the flavor of hominy corn. China. YOUNG 1954; A79, B76, D43, G87T, H4, I29T, J68, MIJ, M5M

*Phyllostachys nigra* - *Black bamboo, Kuro-chiku* {PL}. The new shoots are somewhat acrid and can be prepared for eating by first

boiling in a change of water. The water being changed after the first eight to ten minutes. When so prepared they have a distinctive taste and aroma. China, cultivated. UPHOF, YOUNG 1954; A78, A79, D43, G87T, H4, I29T, I45M, I83M, J61M, J68, M5M, M16, M16M, M33M, N37M, etc.

*Phyllostachys nigra* f. *boryana* - *Unmon-chiku*, *Bory bamboo*, *Snake-skin bamboo* {PL}. Young sprouts are used as *bamboo shoots*. Prepared in a similar manner to *P. nigra*. Culms are attractively mottled with green and black. China, cultivated. TANAKA, YOUNG 1954, YOUNG 1961; A79, D43, G87T, H4, I29T, I45M, 174, J68, Mi/, M5M, M16M

*Phyllostachys nigra* f. *henonis* - *Henon bamboo*, *Ha-chiku* {PL}. The young shoots are eaten, having the characteristic flavor and aroma of *P. nigra*. China, cultivated. TANAKA, YOUNG 1961; A78, A79, D43, E87, G87T, H4, I29T, I45M, 174, J61M, J68, Mi/, M5M, M16M, etc.

*Phyllostachys nuda* - *Nude sheath bamboo* {PL}. Edible *bamboo shoots* are of excellent quality and only slightly acrid when eaten raw. Boiling in water for only a short time would make them suitable for salads. China. HERKLOTS, YOUNG 1954; A78, A79, B28, D37, D43, H49, I29T, I45M, I49M, I49P, J61M, J68, Mi/, M5M, M33M, etc.

*Phyllostachys pubescens* - *Moso bamboo*, *Chiang-nan-chu*, *Mao tosh* {PL}. Young sprouts are noticeably acrid raw but are fragrant when cooking. When prepared by a change of water in cooking they are extensively eaten, either cooked alone or with other foods, stir-fried, pickled, or canned and exported. Tender *winter shoots* or *dung sun*, harvested as early as December, are of excellent flavor and esteemed as a delicacy. China, cultivated. HERKLOTS, TANAKA, YOUNG 1961; A79, C27G{PD}, G87T, H4, I29T, I45M, 174, J61M, Mi/, M5M

*Phyllostachys purpurata* - *Water bamboo* {PL}. Young shoots are slightly bitter when raw and are used as a cooked vegetable after boiling in a change of water. China. YOUNG 1954; A78, A79, D43, G87T, H4, I45M, J68, Mi/

*Phyllostachys rubromarginata* - *Red-margined bamboo* {PL}. The tender, young shoots have a small degree of bitterness or acidity, and after boiling in water they are eaten in salads, stir-fried dishes, etc. China. YOUNG 1954; A78, A79, B76, C74, G87T, H4, I29T, I45M, J68, Mi/, M5M, M16, M33M

*Phyllostachys viridi-glaucens* - {PL}. Young sprouts are virtually free of acidity or bite and are eaten as a cooked vegetable, pickled, put in soups, salted, etc. China. YOUNG 1954, YOUNG 1961; A78, A79, D43, G87T, H4, I45M, J68

*Phyllostachys viridis* - *Green sulphur* {PL}. The young shoots are almost entirely free of acidity and could be sliced finely and used raw in salads. They are more commonly boiled first and then used cold in salads, stir-fried, braised, added to stews, etc. China. YOUNG 1954, YOUNG 1961; A78, D43, G87T, I45M, Mi/

#### CULTIVARS

**Robert Youna:** The culms emerge a light sulphur green, then upon exposure to the sun turn a striking yellow with an occasional green stripe. It may taste even better than the species. A79, D43, G87T, H4, I28, I29T, I45M, J68, Mi/, M5M, M16M

*Phyllostachys vivax* - *Wu bu ji zhu* {PL}. The new shoots are free of acidity or bite when raw. Species with this quality would appear to be more nutritious since less of the vitamins and minerals are dissipated in the cooking water. China. YOUNG 1954, YOUNG 1961; A79, D43, G87T, H4, I29T, I45M, I49M, I49P, I66T, 174, Mi/, M5M, M16M

*Sasa kurilensis* - *Chishima-zasa* {PL}. Sprouts are edible, either cooked, canned, or preserved. It is said that they are so popular in Japan that a license is required to collect them. Seeds are also edible. Japan, Korea. TANAKA; A79, G87T, I29T, I45M

*Sasa palmata* - *Chimaki-zasa* {PL}. The broad leaves, often 15 inches long and 3 inches wide, are used in Japan for wrapping salted fish and other condiments eaten as side dishes with rice. On May 5th, for Boy's Day, they are wrapped around the sticky rice cake known as *chimaki mochi* or *sasamaki*, then dipped in toasted soybean flour (*kinako*). The shoots are occasionally eaten. Eastern Asia. FREEMAN-MITFORD, HOMMA, SUGANO; A78, A79, B76, G87T, H4, 128, I29T, I45M, J68, Mi/, M5M, M16, M16M, M33M

*Semiarundinaria fastuosa* - *Narihira bamboo*, *Temple bamboo*, *Narihira-dake* {PL}. New shoots that appear in spring are practically free of bitterness or bite. Although small they are of good quality when cooked, and have a unique flavor. Japan. UPHOF, YOUNG 1954, YOUNG 1961; A78, A79, D43, G87T, H4, I29T, I45M, J68, M5M

*Sinocalamus beecheyanus* - *Beechy bamboo* {PL}. An important source of commercial *bamboo shoots* in southern China. The ground around the base of the clump should be mounded with soil well before the shoots appear. In this way all light that would cause the shoots to develop an intense bitterness is excluded. China, cultivated. SO [Cul], YOUNG 1954, YOUNG 1961; A79, D43, I83M

*Sinocalamus latiflorus* - *Big jute bamboo*, *Machiku*, *Ma-chu* {PL}. Widely grown in Canton for its excellent edible shoots which are robust, relatively solid, and unusually free of any unpleasant taste when raw. Shredded and dried they are used in Chinese-style snacks in Japan, China, Southern Asia. HERKLOTS, TANAKA, YOUNG 1961; M5M

#### BASELLACEAE

*Anredera cordifolia* - *Madeira vine* {PL}. The succulent, slightly mucilaginous leaves may be eaten raw in salads, used as a potherb, or prepared with sesame oil and soy sauce. Tubers are boiled and eaten like potatoes. Occasionally available in ethnic markets. Central America, South America. TANAKA, UPHOF; C43M, C95, E48, N37M, N84, R49

*Basella alba* - *Ceylon spinach*, *Malabar spinach*, *Poi sag*, *Saan choi* {S}. The succulent leaves and stem tips are an excellent hot weather substitute for spinach. They can be eaten raw in salads, boiled, steamed, stir-fried, or added to soups, stews, tofu-dishes, and curries. Flowering shoots are added to hot and sour soup. An infusion of the leaves is used as a tea. The purplish sap from the fruits is used for coloring agar-agar, pastries, and sweets. A little lemon juice added to the dye enhances the color. Tropics, cultivated. DAHLEN [Cul, Re], HALPIN [Cu, Cul], HAWKES [Re], HEDRICK 1919, HERKLOTS, JACQUAT [Cul, Re], MARTIN 1975, OCHSE, UPHOF, VILMORIN [Cu], WINTERS [Nu]; A79M, B49, D26G, J20, J73, K49M, N84, PIG, P38, Q34, R47

#### CULTIVARS

**Red:** (Red Stemmed, Rubra) Leaves, stems, and flowers are tinged with red. Ornamental in appearance, however, best used in salads as it loses much of the pigment when cooked and becomes unattractive. D33, D55, D68, E7M, F37T{PL}, F73D, F85, H49, 139, K49M, N84, N91, S70

*Basella rubra* - *Basella alba*

*Boussingaultia baseUoides* - *Anredera cordifolia*

*Ullucus tuberosus* - *Ulloco*, *Melloco* {PL}. Tubers may be boiled and served with vinegar. When boiled and fried they taste like potatoes. In the cold altiplano areas of the Andes they are frozen and then dried, the resulting product being called *chuho*, a name first used for dried potatoes but now used for any desiccated vegetable. The *chuho* prepared from these tubers is called *llingli*. Leaves are eaten in salads or as a potherb. Andean South America, cultivated. DUKE, FRIED [Re], HERKLOTS, HODGE 1951, NATIONAL RESEARCH COUNCIL 1989, VILMORIN [Cu].

## CULTIVARS

**Como Verde de Monte:** Medium to large, perfectly toned soft pastel green fruits. Smooth, round and desirable. 174

**Pica de Pulqa:** (Flea Bites) Round fruits with an outstanding flavor. Stunning bright fluorescent pink and magenta mottling on a yellow background. Popular in Peru, where "flea bites" is used as a generic term for types with pink and magenta spots. 174

**Plata de Monte:** Smooth, medium-sized, roundish tubers; glossy silver white skin, occasionally mottled with pink. A uniform commercial cultivar. 174

**Shrimp of the Earth:** Small, elongated curved tubers, somewhat reminiscent of shrimp; bright pinkish-maroon skin. A form which is much sought after in its native region and commands a high price. 174

**Yellow Jewels:** (Oid de Monte) Very high quality strain with good form, size and uniformity. Soft pastel yellow tubers. 174

## BATIDACEAE

*Batis maritima* - *American saltwort*, *Jamaica samphire* {PL}. The salty, succulent leaves are sometimes eaten in salads. They are also cooked or used for pickles. Makes a salty puree after boiling and straining to remove "strings". Roots are chewed and sucked for their sweet juice, made into a beverage, or used to sweeten coffee. American coasts. FELGER 1985, HEDRICK 1919, MORTON 1977, TANAKA; F73, F85{S}

## BEGONIACEAE

*Begonia x tuberhybrida* - *Tuberous begonia* {PL}. Artificial hybrids. The showy, waxy flowers are eaten raw in salads, with fish, in desserts, made into sauces, or used as a garnish. They have a pleasant, somewhat tart, lemon-like flavor. Different flower colors make sauces of varying colors and flavors, with red being the tastiest and yellow relatively mild. Petioles can be substituted for rhubarb in making strawberry-rhubarb pie. Relatively high in oxalic acid. Cultivated. BARASH [Re], LENZ, MORSE [Re]; D24, E33, E91G{S}, H57M{S}, G82, H61{S}, H95{S}, 191, J20, L42{S}

## BERBERIDACEAE

*Berberis aquifolium* - *Mahonia aquifolium*

*Berberis aristata* - *Indian barberry*, *Nepal barberry* {S}. Flower buds are used in sauces. Dried fruits, known as *zirshk turash*, are used as a substitute for raisins in desserts. Himalayan region. HEDRICK 1919, KUNKEL, WATT; D95{PL}, I74{PL}, N61, Q12, Q40

*Berberis asiatica* - *Himalayan barberry*, *Raisin barberry* {S}. The large, purplish fruits are dried and used like raisins in desserts. They are said to make the best *Indian raisins*. Himalayan region. HEDRICK 1919, HENDRICKSON, SIMMONS 1972; N51{PL}, N61, Q40

*Berberis buxifolia* - *Magellan barberry*, *Calafate* {S}. When ripe, the large, black, pleasantly-flavored fruits may be eaten out of hand. In England, both green and ripe fruits are used like gooseberries in making pies, tarts, and preserves. Southern Chile and Argentina. HEDRICK 1919, SIMMONS 1972, UPHOF, VALENZUELA; U45

*Berberis darwinii* - *Darwin barberry* {S}. The dark-purple fruits are eaten or made into preserves. Chile, Patagonia. HEDRICK 1919, HENDRICKSON; A61{PL}, D95{PL}, /S{PL}, L91M, N61, N84, 053M, P49, R78, R83{PL}

*Berberis haematocarpa* - *Mahonia haematocarpa*

*Berberis lycium* - *Indian barberry* {S}. Fruits are eaten raw or made into preserves. The young shoots and leaves are consumed as a vegetable. An infusion of the leaves is used as a substitute for tea. Himalayan region. HEDRICK 1919; D95 {PL}, N61, Q40

*Berberis nervosa* - *Mahonia nervosa**Berberis repens* - *Mahonia repens**Berberis trifoliolata* - \**Mahonia trifoliolata*

*Berberis vulgaris* - *European barberry* {S}. Berries are eaten raw, candied, preserved in syrup, made into jellies, sauces, pies, tarts and cakes, or pickled in vinegar and used as a substitute for capers. In some countries the juice is used like that of lemons in the preparation of cooling drinks, and for flavoring ices, sherbets, and punches. In Iran, the dried berries, called *zerezhk*, are a popular sour flavoring for polow and other rice dishes, stuffings, and *kookoo-ye sabzi* (herb omelette). *Confiture de pines vinette*, a celebrated French jam, is made from a seedless form. The leaves are eaten as an acid nibble or used to season meat. Dried young leaves and branch-tips make an excellent refreshing tea. Eurasia, cultivated. BATMANGLU [Re], FERNALD, GOLDSTEIN, GRIEVE [Re], HEDRICK 1919, JOHNS [Cu], LAUNERT, SHAIDA [Re], SIMMONS 1972 [Cu], UPHOF; A7{DF}, K60D{DF}, K63G, N61, N71M, N84, 053M, P49, R78

*Mahonia aquifolium* - *Oregon hollygrape*, *Holly barberry* {PL}. The acid fruits are used in pies, jellies, jams, beverages, and confectionery. When fermented, the juice makes a palatable and wholesome wine. The bright yellow flowers are eaten or used to make a lemonade-like drink. North America, cultivated. DOMICO, FREITUS [Re], HEDRICK 1919, MEDSGER; A2{S}, C9M{S}, D95, 198M, K38{S}, K63G{S}, M77, N84{S}, 053M{S}

*Mahonia haematocarpa* - *Red hollygrape*, *Mexican barberry*, *Algerita* {PL}. The bright blood red berries are pleasantly acid in flavor and are primarily used for making jellies. Southwestern North America. HARRINGTON, H., MEDSGER; D95, 198M, L13{S}, N84{S}

*Mahonia nervosa* - *Oregon grape* {S}. Ripe fruits are too acid to eat raw, but stewed with sugar or other fruits, or made into jams, jellies, and pies, they are very good. They can also be used to enhance the flavor of bland fruits or prepared like lemonade to make a refreshing drink. Young, tender leaves are simmered in a small amount of water and eaten as a snack. Western North America. SIMMONS 1972 [Cu], TURNER 1979 [Pre, Re]; A2, A61, D95{PL}, E15, G5M{£D}, G66, H71, 147, K38, K63G, L94M, N84

*Mahonia repens* - *Creeping barberry*, *Creeping Oregon grape* {PL}. The tart fruits are eaten raw, roasted, pickled in vinegar, or made into jellies, jams, wines, and a lemonade-like beverage. A distinctive jelly can be made by using half apple juice to half barberry juice: Western North America. HARRINGTON, H., HART, UPHOF; C9M{S}, G60, 198M, J25M, J26, K38{S}, K63G{S}, L13{S}, M35M, M51M, 053M{S}

*Mahonia swaseyi* - *Texas mahonia*, *Agrito*, *Wild currant*, *Chaparral berry* {PD}. The fruits are yellowish-orange, up to a half inch in diameter, and pleasantly acid. They can be used in concentrated juices and blends, sauces, tarts and pies, or made into wine, relish, pickles, pies, jams, jellies, candies, and "raisins". Roasted seeds are used as a substitute for coffee. Recommended for improvement by selection and breeding. Southwestern North America. DURAND 1972; D81P, G5M, H4{PL}

*Mahonia trifoliolata* - *Agrito*, *Laredo mahonia*, *Mexican barberry* {S}. The bright red fruit has a subtle, tart flavor which is quite pleasant and is eaten raw or used in jellies, preserves, sauces, drinks, cakes and tarts. Southwestern North America. HUTSON 1995 [Re], LATORRE 1977a [Re], LATORRE 1977b, UPHOF; D81P{PD}, G5M{PD}, H4{PL}, J25M

## BETULACEAE

*Alnus crispa* - *Mountain alder* {S}. The wood is a favorite of many Tanaina Indians for smoking salmon and trout because of the excellent flavor it imparts to foods. Northern temperate region. KARI, SCHOFIELD; G66, K38

*Alnus rubra* - *Red Alder* {S}. In the Pacific Northwest, the wood was traditionally preferred to that of others for smoking salmon, halibut and other fish, adding a light, delicate flavor. Also frequently used in modern restaurant grilling. Alder planks are becoming popular for baking, especially seafood. When baked on planks, the food retains more of its moisture. The wood also adds a somewhat "nutty" flavor to the food. Western North America. BEAN, A. [Re], COX [Re], DE GEUS, JAMISON, UPHOF; A2, B74{PL}, C9M, C26M{PD}, D56M, D96, E15, F88M, G60{PL}, G66, H45M{PL}, I23M{PD}, 147, J26{PL}, K38, K63G, K74J{PD}, M85{PD}, P5, etc.

*Alnus tenuifolia* - *Mountain alder* {S}. In British Columbia, the wood is commonly used for smoking fish and other meats Western North America. DEGEUS; B94, C55{PL}, D96, E67T{PL}, G66, G89M{PL}, I23M{PD}, K63G, N73{PL}, N84

*Betula alleghaniensis* - *Yellow birch* {S}. The sweet sap makes a pleasant drink or it can be boiled down to a syrup. Dried leaves are used as a substitute for tea. Twigs and leaves, having the flavor of wintergreen, can be used as condiments. North America. FERNALD, MEDSGER; D47M, D95{PL}, G66, 14{PL}, K38, K63G, N84, 053M, 093, P17M, P49, Q32, R78

*Betula lenta* - *Sweet birch, Black birch, Cherry birch* {S}. Dried leaves and the reddish bark from the larger roots are used in brewing a delightful tea. The sweet sap is drunk as a beverage, boiled down to sugar and syrup, or fermented into *birch beer*, wine and vinegar. An essential oil, distilled from the twigs and bark, is widely used as a wintergreen flavoring in soft drinks, frozen dairy desserts, baked goods, chewing gum, gelatins and puddings. The wood can be used for smoking foods such as poultry and beef, adding a sweet, woody flavor. Inner bark has been used for food. Eastern North America. ANGIER, FERNALD, GIBBONS 1962, LEUNG, LOGSDON 1981, MARGIN, MEDSGER; A20M{PD}, B68{PL}, D95{PL}, G66, 14{PL}, J3{PD}, K38{PL}, K63G, L36M{PD}, M16{PL}, N7T{PL}, N84, P49

#### *Betula lutea* - *Betula alleghaniensis*

*Betula nigra* - *Red birch, River birch* {PL}. The sap from the trunk is said to make a pleasant drink, and when boiled down, to furnish sugar. It can also be fermented into *birch beer*. North America. FERNALD, TANAKA; B52, C9M{S}, C11M, C33, D45, D95, F51, G23, H49, 14, 177M, K38{S}, K63G{S}, Q32{S}

*Betula papyrifera* - *Paper birch, Canoe birch, White birch* {PL}. Very young leaves, shoots, and catkins may be eaten in salads, or stir-fried dishes. The sap is prized as a pleasant, sweet drink, and by boiling it can be reduced to syrup, or finally, sugar. It is also sometimes used in making *birch beer* and vinegar. Birch syrup, produced commercially in Alaska, has a rich caramel-like flavor and can be used on ice cream and pancakes, in hot cocoa and coffee drinks, barbecue sauces and marinades, or added to dessert recipes. A tea is made from the young leaves. The Tanaina Indians use the wood for smoking fish. North America, cultivated. BRYAN [Cul, Re], FERNALD, KARI, LAWRENCE, MEDSGER, SCHOFIELD; A2{S}, C9M{S}, C33, D45, F88M{S}, G5M{PD}, G19{PD}, H49, 14, J16, J61M{PD}, K38{S}, K63G{S}, L91M{S}, etc.

*Betula populifolia* - *Gray birch* {S}. The sap is consumed as a sweet beverage or fermented into beer and vinegar. Inner bark, ground into flour, is used as an emergency breadstuff. Eastern North America. FERNALD, TANAKA; D95{PL}, E47{PL}, G66, H45M{PL}, K38, K63G, N84, 093, Q32

#### BIGNONIACEAE

*Catalpa ovata* - *Ki-sasage, Azusa* {S}. Flowers and young pods are eaten. China, cultivated. TANAKA; D95{PL}, E7M, H4{PL}, 160{PL}, K63G, N84, 093, P38, P49, R78

*Crescentia alata* - *Mexican calabash, Morrito* {S}. The ripe seeds, when ground, are mixed with raw rice, roasted pumpkin seeds, lemon peel, sugar, water, and ice and made into a non-alcoholic

beverage called *horchata*. They also yield a bland, relatively stable edible oil. Fruits are sometimes eaten or made into a drink. Tropical America. MENNINGER, TANAKA, WILLIAMS, L.; A79M, N84

*Crescentia cujete* - *Calabash tree, Calabazo, Jicara-nut, Mono* {S}. Young fruits are pickled like walnuts. The seeds have been much used in Curacao to make syrup or a popular confection called *carabobo*. For syrup, the seeds are pounded fine, mixed with sugar and a little water and boiled. Roasted seeds are mixed with roasted wheat to form a flavorful, aromatic coffee substitute once marketed as *café du grain*. In Africa, the leaves are cooked in soups with those of Adansonia. Tropical America. BENGHIAT [Cul, Re], DUKE, HEDRICK 1919, MENNINGER, UPHOF; A79M, D56M, F85, I12{PL}, N40M, N84

*Dolichandrone rheedii* - *Thakut* {S}. The young fruits and flowers are eaten as a vegetable by the Burmese. Burma, Andaman Islands. TANAKA; Z25M

*Kigelia africana* - *Sausage tree* {S}. In Kenya, the fruits are used in the preparation of *muratina*, *uki* and *kathroko*, sweet-sour, effervescent beverages made from sugar cane juice or honey. They are consumed as refreshing beverages in place of Western-style beers, especially at festivals and social gatherings. Roasted seeds are eaten as a famine food. Tropical Africa. CAMPBELL-PLATT, FOX, F., HEDRICK 1919, STEINKRAUSI WALKER; A79M, F85, I12{PL}, I47M{PL}, I83M{PL}, N84, 053M, 093, P5, Q12, Q18, Q46, S28M

#### *Kigelia pinnata* - *Kigelia africana*

*Oroxylum indicum* - *Sword fruit tree, Indian trumpet-flower* {S}. The young leaves and flowers are eaten uncooked as a side-dish with rice. This is usually prepared by mixing them with various spices, including chilis, fish paste, red onions, candle nut, lemon grass, and ginger. Young fruits are cut into pieces, boiled, and eaten with rice. Older fruits are grilled and added to curries. Unripe seeds are grilled and served with chili sauce. Matures seeds are used to make a refreshing Chinese drink known as *chub liang*. Also an ingredient of *Chyavanprash*, a famous Ayurvedic food tonic. Southeast Asia. JACQUAT, MENNINGER; A79M, C95, F85, 174 {PL}, N84, Q46

*Parmentiera aculeata* - *Food candle tree, Guachilote* {S}. When ripe, the yellow, banana-shaped fruits are quite sweet and may be eaten raw, cooked, roasted, or made into pickles, preserves and sweetmeats. In flavor, the raw fruit is said to resemble sugar cane. Central America. KENNARD, UPHOF, WILLIAMS, L.; F85, N84, P5

#### *Parmentiera alata* - *Crescentia alata*

*Parmentiera cerifera* - *Candle tree* {S}. Cultivated in the West Indies and other tropical regions for its edible fruits. Mexico. ZEV-EN; A79M, I12{PL}, N84, 093, P5, R78M

#### *Parmentiera edulis* - *Parmentiera aculeata*

*Spathodea campanulata* - *African tulip tree* {S}. The flower buds contain a sweet, watery liquid that is considered tonic. Winged seeds are said to be edible. Tropical Africa, cultivated. DALZIEL, DUKE, IRVINE 1961; A79M, C95, F80, F85, 183M{PL}, N84, P5, P17M, Q32, Q46, R33M, S92

*Tabebuia impetiginosa* - *Pau d'arco, Tahebo, Lapacho, Ipe roxo* {DF}. The inner bark has traditionally been brewed into a tonic tea by rainforest Indians of Brazil, Argentina and other regions of the Amazon. Also very popular with natural foods enthusiasts. Reportedly used by Ghandi and Czar Nicholas II of Russia. South America. TYLER, VAN STRATEN; A25G, A49D, B21P, E14T, F37T, F86G, G84, J82, K2, K18M, L17, L34, L94M, M15M, M32G, M87M, N84{S}, etc.

## BISCHOFIACEAE

*Bischofia javanica* - *Toog, Midi, Akaqi* {S}. Seeds and fruits are eaten. Young leaves are eaten in salads or used as a condiment. Tropical Asia. TANAKA, VAN DUONG; A79M, C9M, F85, 174, 183M{PL}, K46{PL}, N84, P5, Q18, Q32, Q45M, Q46

## BIXACEAE

*Bixa orellana* - *Anatto, Lipstick plant, Urucum* {S}. The seeds, called *achiote* or *roucou*, are briefly steeped in hot oil or lard which is then strained, cooled, and used as coloring and flavoring for meat, poultry, fish, and vegetable dishes. In Yucatan, the whole seeds are ground with various spices into a paste, giving a more pronounced flavor. In Brazil they are ground to a fine red powder which colors stews. The seed coat is the source of a yellow pigment widely used in the food industry for coloring cheese, butter, and margarine. Tropical America, cultivated. DUKE, IDONE, MENNINGER, ORTIZ 1973 [Pre, Re], ORTIZ 1979, UPHOF, WILLIAMS, L.; A7{DF}, A79M, C3M{DF}, F80, F85, H73{DF}, I30{PD}, K18M{DF}, L17{DF}, N84, 053M, P5, P17M, Q46, R33M, etc.

## BLECHNACEAE

*Stenochlaena palustris* - *Paku miding, Pakis bang* {S}. Young leaves and shoots, wine-red in color, are eaten either raw or steamed with rice and are said to resemble amaranth. A soup can also be made from them, the water of which, is likewise led. In West Sumatra, they are cooked with fish and coconut milk in a dish called *pangek*. Tropical Asia. BROWN, W., BURKILL, HUTTON [Re], JACQUAT, OCHSE, OWEN [Re], UPHOF; N84

## BOMBACACEAE

*Adansonia digitata* - *Baobab, Monkey bread, Cream of tartar tree, Ethiopian sour gourd* {S}. Acid pulp of the fruit is eaten, made into drinks, and used as a flavoring or to curdle milk. Young leaves, rich in lime and vitamins, are eaten as a potherb or made into *kuka*, a powder used to thicken soups, sauces and stews. Seeds are eaten mixed with millet meal, used as a coffee substitute, or made into *lalu*, a powder used as flavoring or a baking powder substitute. When slightly fermented, *lalu* has the flavor of almonds. *Reniala oil* or *fony oil*, derived from the seeds, is edible. The flowers are eaten raw. Tender roots are eaten. Shoots of germinating seeds are edible. Tropical Africa. DALZIEL, DUKE, FOX, F., MENNINGER, UPHOF, VON MAYDELL, VON WELANETZ, WILSON, E.G.; A7{DF}, A79M, E29{PL}, 133, 183M{PL}, L91M, M17{PL}, N84, 053M, 093, P5, P38, R88, S28M, S92, etc.

*Adansonia gregorii* - *Australian bottle tree, Cream of tartar tree* {S}. Seeds are eaten raw or roasted. Immature fruits are roasted and eaten. Pulp of the ripe fruit is somewhat acid, also eaten. Aborigines dissolved the sap in water to make a drink. Grown commercially in Spain as a source of *cream of tartar*. Australia. CHERIKOFF, KUNKEL, UPHOF; E14T{DF}, F80, I47M{PL}, K18M{DF}, L34{DF}, N79M, N84, 033, P5, P17M, P38, Q32, Q41, R15M, R33M, R88, S92, etc.

*Bombax buonopozense* - *Red-flowered silk cotton tree* {S}. The fleshy, rather mucilaginous calyces are consumed in soups or used in sauces, as a substitute for roselle (*Hibiscus sabdariffa*). The young fruits are cut, dried and then eaten in various meals. Young leaves, often dried, are eaten as a potherb. Tropical Africa. DALZIEL, UPHOF, VON MAYDELL; F85

*Bombax ceiba* - *Ceiba pentandra*

*Bombax costatum* - \**Bombax buonopozense*

*Bombax ellipticum* - *Mokok* {PL}. Seeds of the white-flowered form are eaten as a snack food. Mexico. ALCORN; A79M, E48, G91M, I47M, N84{S}, Q41{S}, R88{S}, T25M{S}

*Bombax glabra* - *Pachira aquatica*

*Bombax malabaricum* - *Salmalia malabarica*

*Ceiba aesculifolia* - *Ceibillo* {PL}. Young fruits and ripe seeds are eaten after cooking or roasting, in some parts of Yucatan. Mexico. UPHOF, WILLIAMS, L.; N84

*Ceiba pentandra* - *Kapok tree, Silk cotton tree* {S}. Tender leaves, buds, and fruits are mucilaginous and are eaten like okra. Seeds are roasted and ground, eaten in soups, used as a flavoring, or fermented into *kantong*. Presscakes from the seeds can be used for making *tempeh*. They also yield a pleasant tasting cooking oil. Flowers are blanched and eaten with chili sauce. Dried stamens are added to curries and hot and sour soup for coloring. In Indonesia, the sprouted seeds are eaten raw, cooked, added to soups, or made into *sambal goreng* (coconut-milk sauce). Wood ashes are used as a salt substitute. Tropics, cultivated. BURKILL, CAMPBELL-PLATT, DUKE, HEDRICK 1919, JACQUAT, MENNINGER, OCHSE, SHURTLEFF 1979, WATT; A79M, F85, G73, H4{PL}, L55J, N84, P5, Q12, Q18, Q41, Q46, R88

*Durio dulcis* - *Lahong, Tutong, Durian maragang* {S}. When ripe the fruit is an attractive dark purplish-red and has a bright yellow, very sweet aril with an extremely offensive odor. It is soft, creamy and caramel-like with a delicious flavor reminiscent of pineapple cream without the acidity. The sweetest and most ill-smelling of all Durio species. The seeds are eaten boiled or roasted. Borneo. SOEGENG-REKSODIHARDJO, TANKARD, TINGGAL; F85

*Durio graveolens* - *Tabelak, Durian mah* {S}. The orange-yellow fruit is very distinct from that of the common durian, and has a fleshy, dark red aril, without odor and with a very sweet flavor. It is much preferred by the natives for relish and is usually made into *sajur*, soup prepared from fresh water fish. Indonesia. ALT-SCHUL, SOEGENG-REKSODIHARDJO, TANKARD, TINGGAL; Z12

*Durio kutejensis* - *Lai, Durian pulu, Durian kulu, Nyekak* {S}. Ripe fruits are eaten fresh. They are golden yellow in color when ripe and have soft, short spines. The thick-textured, yellowish-orange flesh is drier and firmer than *Isu*. Distinctive flavor, sweetish but less sweet and less strongly flavored than durian, with a tangy aftertaste. They have only a slight aroma when fully ripe. Indonesia, cultivated. RIFAI, SOEGENG-REKSODIHARDJO, TANKARD, TINGGAL; 019

*Durio oblongus* - *Isu* {S}. The small, round durian-like fruits are eaten out of hand. They have yellowish shells when ripe, covered with long sharp, pentagonal spines. The pale yellow flesh is slightly thicker textured than durian, and somewhat dry, like peanut butter. Flavor rich, similar to durian but less sweet and with a slight tangy aftertaste. Only mildly aromatic. Borneo. TANKARD; 019

*Durio zibethinus* - *Durian* {S}. Ripe fruits have a foul odor, but a delicious flavor, much described. Usually eaten out of hand, but also made into candy, preserves, ice cream and paste. Unripe fruits are cooked with coconut milk and spices. Fermented fruits are eaten as *tempoyak*. Fresh seeds are roasted and eaten or cut in slices and fried. Dried up seeds are boiled as a delicacy. Smoke from burned fruit peels gives flavor to fish dishes. The flower petals and young leaves and shoots are also edible. Southeast Asia, cultivated. BURKILL, GARNER [Pro], MORTON 1987a [Cu], OCHSE, POPENOE, W. 1920 [Cu], STEINKRAUS WATT; A45{PD}, E8M{GR}, F85, G5M{PD}, J22{PL}, N84, 019, 093  
CULTIYARS {GR}

**Chanee:** (Gibbon) Large, elongated, golden-yellow fruit; thick, fleshy arils, sweet and creamy; excellent, mild flavor; small, abortive seeds. Lacking the typical garlic-like aroma characteristic of most unimproved forms. Named gibbon for its tendency to bear on top of slender branches. Originated in Thailand where it is in high demand. Q93

*Eriodendron aesculifolium* - *Ceiba aesculifolia*

*Matisia cordata* - *Quararibea cordata*

*Pachira aquatica* - *Malabar chestnut, Guinea chestnut, Provision tree, Saba nut* {PL}. Seeds are eaten raw, tasting like peanuts.

Roasted or fried in oil they have the flavor of chestnuts, and can be ground into a flour for bread baking. Young leaves and flowers are used as a vegetable. Brazil, Guiana, cultivated. DUKE, HEDRICK 1919, MENNINGER; A79M, E29, F85{S}, 112, I83M, M7M, 019{S}, N84{S}, 093{S}, P5{S}

*Pachira insignis* - *Mamorana grande* {S}. Kernels of the nuts are edible after being roasted. Young leaves and flowers are eaten. Tropical America. HEDRICK 1919, MENNINGER, TANAKA; C9M, F85, 112{PL}, 019, N84, P38

*Pachira macrocarpa* - \**Pachira aquatica*

*Patinoa almirajo* - *Almirajo* {S}. The fleshy aril which completely covers the seeds is edible and considered a delicacy by the natives. Cultivated by the Indians of the Choco region of Colombia. Tropical South America. DUKE, SOEGENG-REKSODIHARDJO; U27T

*Quararibea cordata* - *Chupa-chupa*, *South American sapote* {S}. The fibrous, yellow-orange pulp of the fruit is sweet and can be eaten out of hand. The flavor is reminiscent of a very sweet pumpkin, with overtones of mango and apricot. Types with very little fiber may be utilized for juice. Colombia to Peru. HACKETT, HODGE 1960, MORTON 1987a, POPEÑO, W. 1924, WILLAN; E8M{PL}, N84, 019, R78M

*Salmaalial malabarica* - *Red silk-cotton tree*, *Semal*, *Pan-ya* {S}. Flowers and flower buds are eaten as a vegetable. Fleshy calyxes of the large red flowers are used in curries. Ripe seeds are roasted and eaten, or used as a source of cooking oil in place of cotton-seed oil. Tropical Asia, cultivated. BURKILL, HAWKES, MACMILLAN, WATT, TANAKA; A79M, D56M, F80, F85, 174, N40M, N79M, 093, P17M, P38, Q12, Q18, Q32, Q46

BORAGINACEAE

*Anchusa azurea* - *Anchusa* {S}. The bright, gentian-blue flowers are an excellent addition to a tossed salad, particularly when mixed with rose petals. They are also used as an attractive garnish. In Turkey, fresh parts of the plant are eaten as a vegetable or condiment. Europe. LARKCOM 1984, LEGGATT [Re], OZTURK; A61, A61{PL}, C9{PL}, F35M{PL}, L66{PL}, M82{PL}, N23, N84, 053M, Q24 \*

*Anchusa capensis* - *Cape forget-me-not* {S}. The vivid blue flowers are prized as an addition to salads, including seafood, fruit, potato, vegetable and tossed green salads. Also used in cold drinks, pasta, puddings, custards, icings, and hot or cold soups. Leaves are also eaten. South Africa, cultivated. KUNKEL; E5T, E7M, F85, 139, I50G, N84, 093, Q34, S28M, S55

*Anchusa officinalis* - *Alkanet*, *Bigloss* {S}. Young leaves and shoots are boiled or steamed and eaten like spinach, especially in the south of France and parts of Germai. The flowers are eaten as a vegetable or used as a garnish. The roots have been used as a red food coloring. Europe. HEDRICK 1919, LAUNERT, LEGGATT [Re], WILSON, C.; A61, C43M, C43M{PL}, D56M, E61{PL}, F68T, J76, J76{PL}, J82, K22, M82{PL}, N71M, N84, S55

*Borago officinalis* - *Borage* {PL}. Fresh leaves, tasting of cucumbers, are added to salads, eaten as a potherb, or used in the preparation of cooling drinks. The blue flowers are eaten in salads, preserved, candied, made into syrup, or used as garnishes. Seeds are the source of a nutritious oil that can be used in salads, dressings or mixed into foods, but more often is taken as a food supplement. In Spain and the Balearic Islands, the succulent leafstalks are parboiled and fried in batter, and the roots are mixed with "baby" borage leaves in salads. Dried stems are used for flavoring beverages, among which *negus* and *claret cup*. Flower corollas can be used to color vinegar blue. Both leaves and flowers are brewed into tea. The flowers also yield a whitish honey with a mild, herbal flavor, much appreciated in New Zealand. Mediterranean region, cultivated. CRANE 1975, DE SOUNIN [Cu], ERASMUS [Nu], HALPIN, LAUNERT, MACNICOL [Re], MARCIN, MICHAEL [Pre, Re], MURRAY, SEVILLA 1997a, UPHOF; A97, C3{S}, C3M{PD},

C67M, D92M{S}, E14T{PD}, F80{S}, I66{PD}, J66, K22{S}, M35, M53, M84{PD}, N19M

*Cynoglossum officinale* - *Hound\*s tongue* {S}. Young leaves are used in some areas of Switzerland as a salad and vegetable. Eurasia. UPHOF; D56M, F35M{PL}, F80, J82, J99D, L3J, N40M, N71M, N84, 053M, Q24, S55

*Echium vulgare* - *Viper\*s bugloss* {S}. The blue flowers can be crystallized and added to salads. They also yield a white to light golden honey with a delicate sweet flavor. In Australia, it is popular for blending with other honeys in quality table lines. The leaves are cooked and eaten like spinach. At one time a popular cordial herb in England, being added to wine cups and cooling summer drinks. Eurasia, naturalized in North America. BREMNESS, CLEMSON, CRANE 1975, LAUNERT, LEYEL 1987b; A61, C95, C3M{ED}, F80, H15T{PD}, K17M, N71M, N84, 053M, Q24, S55

*Heliotropium curassavicum* - *Seaside heliotrope*, *Nena* {S}. Leaves are eaten in salads or boiled as a potherb. Dried leaves are brewed into a tea. Ashes of the plant are used as a substitute for salt. Tropical America. DUKE, KUNKEL, TANAKA, WILLIAMS, L.; Y29M

*Lithospermum officinale* - *Gromwell* {S}. Leaves are used as a substitute for tea, called *Bohemian tea* or *Croatian tea*. Eurasia. UPHOF; A2, E61, E61{PL}, F68T, F86G, J82, M82{PL}, N84, R53M, R53M{PL}

*Mertensia maritima* - *Sea bugloss*, *Oyster plant* {S}. The fleshy leaves, whose taste has given it the name oyster plant, are eaten both raw and cooked. They are especially good cooked with eggs. Rhizomes are consumed as food by the Eskimos of Alaska. Northern temperate region. LOVELOCK, MABEY, SCHOFIELD, UPHOF; N84, R53M, R53M{PL}

*Myosotis arvensis* - *Field forget-me-not* {S}. The leaves are gathered when young and added to *pistic-3i* mixture of up to fifty six different wild greens which are cooked together with butter, garlic and pieces of lard and eaten as an early spring ritualistic dish in parts of Friuli, Italy. Eurasia. PAOLETTI; N71M, N84, 053M, S55

*Myosotis sylvatica* - *Forget-me-not* {S}. The flowers may be added to salads as a garnish. They are also very good for candying. BREMNESS, WILLIAMS, J.; A53M, C95, D47M, E81M, FI, F32D{PL}, F80, H21, I63Z, J99D, M49, M47M, M82{PL}, O1, R47, etc.

*Pentaglottis sempervirens* - *Evergreen alkanet* {S}. The azure blue flowers can be used in salads. Europe. LARKCOM 1980; N84

*Pulmonaria officinalis* - *Lungwort*, *Jerusalem cowslip* {PL}. Young basal leaves can be used for salads, boiled as potherbs, or added to soups, stews, and vegetable dishes. An extract of the herb flavors *vermouth*. Europe. BOWN, LAUNERT, MABEY; B28, D92M{S}, F37T, K85, M82, N84{S}, 053M{S}, P92, Q24{S}, R53M

*Symphytum officinale* - *Comfrey* {PL}. Young leaves are chopped and added to salads, cooked as a potherb, or used in soups, sautes, pastas, and au gratin dishes. A Teutonic fritter called *schwarzwur* is made from leaves stuffed with cheese, dipped in egg batter, and then fried. Mature leaves were used to flavor cakes and a sauce base known as *panada*. Blanched stalks are used like asparagus. Peeled roots are cut up and used in vegetable soups. Dried leaves and roots are used for tea. The roasted roots are mixed with those of chicory and dandelion and used as a coffee substitute. One of over thirty different herbs and spices included in *Norfolk Punch*, a non-alcoholic herbal beverage formulated by Monks of Norfolk, England. Eurasia, cultivated. GRIEVE, HALPIN [Cu, Cul], HEDRICK 1919, MABEY [Re], MARCIN, MICHAEL [Pre, Re], MORTON 1976; A97, C67M, C82, D65, G96, J66, J73, K2{PD}, M53, M87M, M87M{PD}, N71M{S}, N84{S}

*Symphytum peregrinum* - *Symphytum x uplandicum*

*Symphytum tuberosum* - *Tuberous comfrey* {PL}. The roots, when roasted until brown and brittle, then ground, make a very good substitute for coffee, with a smoothness that is not even found in real coffee. Europe, naturalized in North America. GIBBONS 1979; N84, R53M

*Symphytum x uplandicum* - *Russian comfrey* {PL}. A natural hybrid. Young leaves are boiled or steamed and served like spinach, or used in soups, souffles, and au gratin dishes. Health food enthusiasts liquidize the leaves and consume them as *green drink*. Dried leaves are used for tea, the best flavor coming from those that have been dried quickly. They can also be ground to a green flour that can be used in gravies, soups, and stews. Caucasus Mountains, cultivated. HILLS, L. [Nu, Re], ZEVEN; A50, D56M{S}, F37T, H94M, 139, I91{S}, J5M, K22, K85, L90J, M35, M82, N84{S}, S55{S}

#### CULTIVARS

**Booking 4:** Leaves broad, round tipped, very large, recovering rapidly after cutting. Stems strong, solid, wings small. Flower color is Bishops Violet 34/3 when fully open. Recommended for use in liquidized *green drink*. HILLS, L.; J82

**Booking 14:** (Webster's) Leaves pointed, slightly serrated at the edges. Flower stems slender, frequent, entirely wingless. Flowers are Imperial Purple 33/3 fading to Lilac Purple 031/3. Considered too bitter for use in *green drink*. HILLS, L.; J82, R32, S55

*Trichodesma zeylanicum* - *Northern bluebell* {S}. Leaves are cooked and eaten as a side-dish with groundnuts or added to beer to ensure proper fermentation. The seeds yield an edible oil. Tropical Asia, Tropical Africa. FOX, F., MARTIN 1975, MENNINGER, QUIN; N84, 053M, R15M, S92

#### BRASSICACEAE (CRUCIFERAE)

##### *Alliaria officinalis* - *Sisymbrium officinale*

*Alliaria petiolata* - *Garlic mustard*, *Hedge garlic* {S}. The garlic-flavored leaves can be finely chopped and added to tossed salads, cooked as a potherb, or eaten with bread and butter. In England, they are mixed with mint leaves and made into a sauce to serve with salt-fish, lamb, or mutton dishes. Eurasia. GRIEVE, HEDRICK 1919, LAUNERT, MABEY, MICHAEL [Re], UPHOF; 139, L7M, N7G, N71M, N84, 053M, R32, S55

##### *Alyssum maritimum* - *Lobularia maritima*

*Arabis alpina* - *Alpine cress*, *Mountain rock-cress* {S}. The young leaves and flowers are an agreeable substitute for cress. They can be eaten raw, cooked, or mixed with other greens as a flavoring. North America. FERNALD, GIBBONS 1979; A53M, C43V, C85M, E5T, F80, N23, N84, Q24, S55

##### *Armoracia lappathifolia* -> *Armoracia rusticana*

*Armoracia rusticana* - *Horseradish* {PL}. The fresh roots are used for flavoring meats, vegetables, pickles, etc. They are also processed into sauce, powder, and vinegar. Prepared horseradish is available in white and red forms, which are preserved in vinegar and beet juice respectively. In Poland, horseradish is mixed with beets to form an ancient condiment known as *cwikla*, served at Easter with sausage and ham. Horseradish mustard is one of the most popular of all mustards. In Japan, the powdered root is used to adulterate true *wasabi* powder. Young leaves have a pleasant flavor and can be added to salads, pickles, or cooked as a potherb. Sprouted seeds are eaten in salads. Roots can be brought indoors in the winter and forced into producing white, tender, sweet leaves. In Germany, sliced roots are cooked like parsnips. Eurasia, naturalized in North America. FERNALD, GIBBONS 1966b, HALPIN [Cu, Cul], HERBST, S., KNAB, LARKCOM 1984, MABEY, SCHNEIDER 1986 [Cul, Re], TANAKA, UPHOF, VILMORIN [Cu]; A7{DF}, A94M{PD}, C43M, D65, D97{PD}, E14T{DF}, FL, G22{PD}, G71, H65, H90G{PD}, I42G{PD}, I81T{PR}, I81T{DF}, J63M, J83, J99G, K22, ZJ4{DF}, etc.

#### CULTIVARS

**Bq To d:** A newly selected strain that is vigorous, widely adapted, and resistant to foliage disease, rust and bacteria spot. Plant in the early spring in a rich soil that maintains good moisture. Plant with the slanted cut down and the flat end up. D69, F13,150

**Bohemian:** (Bohemian Giant) Hardy, easy to grow cultivar. Produces large, white roots of superior quality that make a gourmet sauce. Grate and mix with mayonnaise. Has a pleasantly pungent flavor. Plant in moist, well-drained soil and full sun. B73M, C82, D76, E97, G16

**Hybrid:** An outstanding, hybrid horseradish with superior disease resistance, smoother roots, and bigger yields. Pungent roots add flavor to meats and relishes. Dig roots during cool weather of spring and fall. D76, E97

**Maliner Kren:** Vigorous grower, producing large white roots. Earlier, larger, whiter than the standard type. True Bohemian horseradish, the standard cultivar for condiment use. Originally from Germany. B75, C85M, G57M, H54, I39, K71, M46

**New Bohemian:** (Kiester's New Bohemian) Improved Maliner Kren or Bohemian type, known for its vigorous growth and large-size roots. Makes a strong quick growth and produces a heavy crop, particularly on land which has been well prepared. The small sets or roots are planted in the spring to furnish large, straight, smooth roots for use the following season. C61, C84

**Varieata:** Attractive, variegated horseradish with long, wide leaves that emerge from the center of the plant. Dark green, splashed with white. Grows 24 inches tall and 18 inches wide. The variation is very slight the first year, but will improve with time. H63, M82, N84

##### *Barbarea praecox* - *Barbarea verna*

*Barbarea verna* - *Upland cress*, *American cress*, *Belle-Isle cress* {S}. The young leaves have a pleasant flavor similar to water-cress and are eaten in salads as a garnish or flavoring. They are also used in cress soup. In hot weather the plant runs to seed very rapidly, the flavor then becoming very hot. Seeds are used as a source of oil. Sprouted seeds can be eaten in salads. Europe, cultivated. FERNALD, HALPIN, KRAFT, LARKCOM 1984, UPHOF, VILMORIN; A2, C44, E38, F80, F82, G71, I39, K22, K49M, K71, L7M, L91M, N84

*Barbarea vulgaris* - *Winter cress*, *Yellow locket* {S}. Young leaves and shoots, while still tender, may be chopped fine and added to tossed green salads. Somewhat older leaves make a good potherb if cooked in two or more waters, the first removing some of the bitter flavor. The undeveloped flower clusters are gathered and used like broccoli. During mid-winter warm spells, the plant has the ability to grow vigorously and produce greens. Northern temperate region. ANGIER, FERNALD, GIBBONS 1962, MEDSGER; E28M, L7M, M34M, N71M, N84, 048

#### CULTIVARS

**Variegata:** A heavily variegated form with leaves in shades of green, splashed with cream or gold. Spreading plant, 9 to 12 inches tall. Makes a striking addition to a kitchen garden. Somewhat bitter, spicy flavor. L94M, N84, 053M

##### *Brassica adpressa* -+ *Hirschfeldia incana*

##### *Brassica alba* -\* *Sinapis alba*

##### *Brassica alboglabra* - *Brassica oleracea*

##### *Brassica arvensis* -\* *Sinapis arvensis*

##### *Brassica campestris* - *Brassica rapa*

*Brassica carinata* - *Ethiopian mustard*, *Abyssinian mustard*, *Senafich*, *Karate* {S}. Tender leaves and young stems, up to twelve inches high, can be eaten raw in salads. Older leaves and stems are cooked and served like collards or mustard. The inflorescence may

be used as a broccoli-like vegetable. Seeds are used for a prepared mustard popular in Ethiopia during lent and are also the source of an edible oil. East Africa, cultivated. LARKCOM 1984 [Cu], MESFIN [Re], OOMEN, ZEVEN; N84, 048

#### CULTIVARS

**TexSei:** (Tamu TexSel, Tel-Tex) The plants in the early growth stages develop a rosette of leaves from a very short stem. At full height the plants are 3 to 5 feet. The foliage is green to light glaucous, mostly glabrous. Similar in growth characteristics to mustard and collards. Immature plants are excellent as a green leafy vegetable. The flavor is somewhat milder than collards without the pungency of mustard greens. Developed at Texas A&M University. ANONYMOUS 1972; E83T, L89G, R32, S55

*Brassica fimbriata*-*Brassica napus*

*Brassica geniculata* -\**Hirschfeldia incana*

*Brassica hirta* -\**Sinapis alba*

*Brassica Japonica*-*Brassica rapa*

*Brassica juncea* - *Indian mustard*, *Gai choy*, *Mustard greens*, *Karashi-na* {S}. Leaves are eaten raw, pickled, as a potherb, stir-fried, boiled, added to soups and stews, or fermented into *gundruk*. Pickled leaves are known as *sajur asin* and *hum choy*. The seeds are very pungent and are often used whole to season meats and other foods. They yield an edible oil widely used for pickling in Bengali and Kashmiri cooking. *Mostarda di Cremona*, *Mostarda vicentina*, and *Mostarda mantovana* are Italian preserves of whole, pureed or segmented fruits in hot, mustard-oil flavored syrup. Powdered seeds are the source of *brown mustard*, a prepared mustard that is stronger than that produced from other species. In the preparation of some prepared mustards whole or cracked seeds are used. The roots of some forms are eaten. Sprouted seeds can be used in salads. Protein extracted from the leaves mixes well with banana pulp and is well adapted as a pie filling. Cultivated. CAMPBELL-PLATT, GRAY, P., HALPIN [Cu, Cu], HAWKES [Re], HERKLOTS, HESSELTINE, JAFFREY, MORTON 1976, OCHSE, PIRIE, SCHNEIDER 1986 [Cu, Re], STEINKRAUS, TANAKA; B71G{PD}, C82, E13G{PR}, F74{PD}, H15T{PD}, H90G{PD}, H99J{SP}, L24G{SP}, L59, M56M{PD}, R47. (for cultivars see Mustard, page 431, see also Sprouting Seeds, page 524)

*Brassica kaber* -> *Sinapis arvensis*

*Brassica napiformis* -\**Brassica juncea*

*Brassica napobrassica*-*Brassica napus*

*Brassica napus* - *Rape*, *Colza* {S}. The seeds are pressed for their oil which is used as a salad or cooking oil. They are also used to adulterate mustard seed. *Rapeseed oil* is widely produced in Canada, while *colza oil* is common in India and China. In Italy, it is favored over olive oil by some professional bakers of *farinata* or *socca*, a chickpea flour pancake. Leaves are eaten in salads, used as a potherb or fermented into *gundruk*. Inflorescences can be used like broccoli. Sprouted seeds are eaten in salads. Cultivated. ANDREWS, C. 1996 [Re], BIANCHINI, CAMPBELL-PLATT, SCHERY, TANAKA, UPHOF; B13, B49, E38,193M, I99M, K95M, M34M, N81, N84, S17

#### CULTIVARS

**Dwarf Essex:** (Broad Leaf Essex) Rapid growing dual-purpose crop; will thrive in almost any soil. Used extensively in some areas for early greens. Can also be used instead of *mustard and cress* as an indoor seedling crop, and as a sprouting seed. Sown outside it makes a good cut-and-come-again crop. Biennial. A15Z, D26D, D68, E38, E53, G27M, G71, H54, K71, K95M, Nil, S55

**Ranai:** Resistant to aphids and club root rot. A good oil seed and often used as a green manure. Prefers a cool growing season, moderate rainfall, and a sunny, dry harvesting period. Needs protection from strong winds to prevent seed pods shattering. J97M

**Rape Salad:** (Salad Rape) In England, when boxes of seedlings are sold as *mustard and cress* they are often neither, but are in fact Rape Salad. This is much milder than mustard or cress and is more like cabbage in taste. It is an excellent salad vegetable. Rape Salad runs to seed much more slowly than mustard or cress, hence it can be used over a longer period. LARKCOM 1984 [Cu]; B49, K2{PD}, 048, 053M, R32, S55

*Brassica napus* Napobrassica Group - *Rutabaga*, *Swede*, *Swedish turnip* {S}. The turnip-like roots are eaten boiled, steamed, baked, fried, mashed, etc. In Sweden, small rutabagas are brushed with oil and baked until tender. The lid is then cut off, a wedge of cheese inserted, the lid replaced, and the whole is served hot. Rutabagas are hardier than turnips and take from four to six weeks longer to mature. Flesh color is usually yellow and the texture is richer than a turnip. The leaves can be used as a potherb. BURR, CUSUMANO [Cu, Re], FELL 1982b, HEDRICK 1919, RODALE [Cu], VILMORIN [Cu]; 048, R47. (for cultivars see Rutabaga, page 518)

*Brassica napus* Pabularia Group - *Curled kitchen kale*, *Siberian kale* {S}. The leaves and plant tops are eaten as a vegetable. In comparison with common kale, the plant is generally taller and more spreading, with less frilled, grayish-green leaves. In the southern United States, it is planted as animal fodder as well but many prefer its flavor to other kales. Plants are extremely cold-hardy. HALPIN, TANAKA. (for cultivars see Kale, page 389)

*Brassica napus* 'Canola' - *Canola* {S}. Rapeseed is high in erucic acid and glucosinolates, which were thought to have anti-nutritional properties. In 1974, Canadian plant breeders produced a "double low" cultivar of rapeseed that was low in both erucic acid and glucosinolates, and by 1981 a second "double low" cultivar was produced from *B. rapa*. In 1979, the name Canola was adopted for all the new "double low" cultivars. Canola oil is used as a salad and cooking oil and in products such as mayonnaise, margarine, and shortening. The toasted seeds can be used like sesame, sunflower or poppy seeds—sprinkled on salads, baked potatoes or cooked grain dishes like rice, added to baked goods and salad dressings, or ground into flour and used as a coating for fish, chicken and meat before roasting or barbecuing. DE PETERS, ERASMUS; C73P{PD}, G6, G50, G68, G68{DF}, I19M{£D}, J99G, L77D, M63M{ED}, N24M. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Alto:** New and improved type developed in Canada. Matures early and germinates quickly, even in cold spring weather. Has a higher oil and protein content than other types. Also about 25% higher yielding. Sow in rows 28 inches apart, 4 pounds to the acre. Or broadcast at the rate of about 20 pounds per acre. G50

*Brassica narinosa* -\**Brassica rapa*

*Brassica nigra* - *Black mustard* {S}. The pungent seeds are used whole to season pickles, sausages, and sauerkraut. When ground, they form mustard powder or dry mustard, a common ingredient of curry powders in the Near East. Mixed with vinegar and spices they constitute the commercially prepared mustard used as a relish on frankfurters, etc. The tender leaves can be chopped finely and added to tossed green salads, or cooked as a potherb. Young flower clusters are prepared like broccoli. Preferred over other mustards for sprouting. Eurasia, naturalized in North America. GIBBONS 1962, GRIEVE [Cu], HARRINGTON, H., MABEY [Re], MEYEROWITZ 1994a, MORION 1976, UPHOF, VILMORIN; F80, G91{SP}, H99J{SP}, J73, K2, L24G{SP}, M34M. (see also Sprouting Seeds, page 524)

*Brassica nipposinica* -\**Brassica rapa*

*Brassica oleracea* - *Wild cabbage* {S}. Although slightly bitter raw, the leaves are quite acceptable to eat after being cooked in two or more changes of water. The flower buds and the green, undeveloped seed pods can be stir-fried and eaten. Atlantic coast of Europe, Mediterranean region. BREMNESS, MABEY, MICHAEL; U15

*Brassica oleracea* Acephala Group - *Kale, Collard, Flowering kale, Flowering cabbage*. The leaves are eaten boiled, steamed, sauteed, used as a garnish, or added to soups and stews. Unopened flower clusters, sometimes called *broccolini*, can be used like broccoli and have a flavor reminiscent of a cross between broccoli and asparagus. In Ireland, kale or cabbage are traditionally served in a dish called *colcannon*, which is made with potatoes, leeks, and milk or cream. Collards are popular in the southern United States and are commonly cooked with hamhocks, fatback bacon, and other types of pork. HALPIN [Cul, Re], IRWIN [Re], KRAFT [Re], SCHNEIDER 1986 [Cul, Re], VILMORIN [Cu]; (for cultivars see Kale, page 389 and Collard, page 339, see also Sprouting Seeds, page 524)

*Brassica oleracea* Alboglabra Group - *Chinese broccoli, Chinese kale, Gai-lohn, Kai-laan, Fat-shan* {S}. The leaves, flower stalks, and young inflorescences are steamed, stir-fried, cooked with oyster sauce, or used in sukiyaki. The florets can be cut from the stalk, dipped in tempura batter, and deep-fried. Stems that have been briefly cooked are marinated in a spicy dressing and served as a kind of pickle. HARRINGTON, G. [Cu, Cul], HERKLOTS [Cu], KRAFT [Re], TANAKA; A79M, C82, E13G{PR}, H49, J73, J82, K73, M46, N40{PR}, N84, R47, S63M

#### CULTIVARS

**Blue Star:** Large stems with pointed leaves, very crisp and tender. White-flowered type. One of the most popular varieties sold in Chinatown markets. D55, N84

**Green Delight:** Leaves and stems are slightly smaller and more tender than those of Blue Star. Grows very well in mild, warm climates. Young leaves and stems are very good for stir-frying. D55, N84

**Green Lance:** (F.) 45 days. Highly heat-resistant, vigorous and rapid growing with thicker stems than open pollinated types. Ready for use about 10 days earlier. After the main stem is cut, it branches freely for extended harvest. C20M, G13M, 139, K16M, K66, L91M, M29, N84, 053M, Q34, R32, S55

**White Flowered:** 60-70 days. Large, smooth, bright-green, pointed leaves; tender, crisp, fleshy stems Very hardy and will tolerate heat but bolts readily. Quick growing. Suitable for growing in spring and summer. C20M, F80, F85, G13M, G93M, L42, L59, L79G, S70

**Yellow Flowered:** 60-70 days. Leaves are light-green. Plants are dwarf with yellow flowers Very hardy and will tolerate heat, but may bolt in cold weather. L59, L79G

*Brassica oleracea* Botrytis Group - *Cauliflower, Perennial broccoli*. The immature flower heads are eaten raw in salads, boiled, steamed, braised, fried, used in soups and casseroles, prepared as tempura, etc Young leaves can be used for greens. The flower stalk and the midveins of the larger leaves make first-rate eating, though they are usually neglected, except in counties which like cauliflower soup. Sprouted seeds are eaten. CARCIONE, LARKCOM 1984, ROOT 1980a, TANAKA, VILMORIN [Cu]; (for cultivars see Cauliflower, page 322)

*Brassica oleracea* Capitata Group - *Cabbage, Savoy cabbage, Red cabbage* {DF}. The leaves are eaten raw in salads and *cole slaw*, steamed, boiled, pickled, fermented into *sauerkraut*, etc. Fermented sauerkraut juice, sold under the brand names *Biotta* and *Eden*, is popular with natural foods enthusiasts. In the former Yugoslavia, whole heads of cabbage are fermented like sauerkraut. Called *kiseo kupus*, they are used in w/na—stuffed sour cabbage rolls with smoked spareribs. In Egypt, red cabbage leaves are added to pickles to provide a purple color. The core, normally containing more than twice the Vitamin C of other parts, may be cut into strips and soured. Stems can be eaten boiled or pickled after having been peeled. The sprouted seeds are very good eating. BOLOTNIKOVA, CARCIONE, CHANTILES, HUNTER 1973a, KHALIL [Re], LARKCOM 1984, PEDERSON, STEINKRAUS, TANAKA,

VILMORIN [Cu]; A7, E47M{PD}, L17. (for cultivars see Cabbage, page 315, see also Sprouting Seeds, page 524)

*Brassica oleracea* Gemmifera Group - *Brussels sprouts* {PD}. The small, cabbage-like heads are eaten raw in salads, boiled, steamed, sauteed in butter, served with cream sauce, or used in soups. They are especially good cooked and eaten in a cold salad with chestnuts and apples. As the sprouts mature the lower leaves are removed to facilitate harvesting of the sprouts. These thick, collard-like leaves can be finely chopped, steamed, and served with butter and lemon juice. CARCIONE [Pre], RICHMOND, S. [Re], SCOTT, TANAKA, VILMORIN [Cu]; E42M. (for cultivars see Brussels Sprouts, page 313)

*Brassica oleracea* Gongyloides Group - *Kohlrabi*. The swollen, fleshy, turnip-like stem is eaten raw in salads or marinades, steamed, boiled, braised, stuffed, or served with Hollandaise or other sauces. Kohlrabi is at its best when young and tender before it becomes necessary to peel it, as much of the flavor lies just below the skin. The young leaves, especially those of the Prague cultivars, can be used as potherbs. CARCIONE, CUSUMANO [Cul, Re], HALPIN [Cul], KRAFT [Re], MATTOO [Re], ORGAN [Re], SCHNEIDER 1986 [Cul, Re], TANAKA, VILMORIN [Cu]; (for cultivars see Kohlrabi, page 406)

*Brassica oleracea* Italica Group - *Sprouting broccoli, Purple cauliflower, Cape broccoli* {DF}. The immature flower heads and tender parts of the stems are eaten raw in salads, steamed, boiled, sauteed, prepared as tempura, marinated, served au gratin or with a cream sauce, etc. In preparing broccoli for the table, it is best to quarter the stem lengthwise so it cooks more rapidly and insures that the delicate buds are not overcooked. Leaves are also eaten. The sprouted seeds are eaten. They are in great demand because of recent nutritional findings. L17. CARCIONE [Pre], VILMORIN [Cu]; (for cultivars see Broccoli, page 311, see also Sprouting Seeds, page 524)

*Brassica oleracea* Tronchuda Group - *Portuguese cabbage, Couve tronchuda, Galician cabbage, Braganza, Sea-kale cabbage* {S}. The midribs of the outer leaves are thick, white, and fleshy. When cooked, they somewhat resemble sea-kale in texture and flavor. In Portugal, the large, flat, tender leaves are shredded with a special implement and used in the preparation of the national soup *caldo verde*. The heart, or middle of the plant, is peculiarly delicate and agreeably flavored, without any of the coarseness so often found in Brassicaceous crops. It can be cut into pieces, boiled, and then braised. ANDERSON, J. [Re], BURR [Cu], ORGAN [Re], VILMORIN; C44, E83T, G68, 053M, PIG

#### CULTIVARS

**De Valhascos:** Tender and delicate. J73, N84

**Gloria de Portugal:** Large, wide leaves with very tender midribs and stem. N84

**Tronchuda Portuauesa:** Improved early-maturing type which is also known as "Cabbage of Seven Weeks" in Portugal. J73, N84

*Brassica oleracea* 'Aspabroc' - *Aspabroc, Broccolini* {S}.

Artificial hybrid. Broccoli x Chinese broccoli. Combines the best aspects of broccoli and the asparagus-like Chinese broccoli. The flowering stems may be eaten raw, steamed, boiled or stir-fried.

#### CULTIVARS

**Asoation:** Distinct, multi-branched flowering shoots; elongated, slender stems with medium-sized beaded heads; mild, sweet and tender. Darker green and more nutritious than both broccoli and Chinese broccoli. Offers a longer shelf life than broccoli. Tall, spreading plant, yields 6 to 10 stems. Developed by Sakata Seed America, Inc. K16M

*Brassica oleracea* x - *Big stem broccoli* {S}. Artificial hybrid. Broccoli x kohlrabi. Produces a swollen kohlrabi-like stem which elongates into a broccoli-like beaded head. The stem and flower head may be used like kohlrabi and broccoli, respectively.

## CULTIVARS

**Queen:** (F.) Large, thick stem, 15 to 16 inches long and 3 to 4 inches in diameter; small flower head. Vigorous and early, can be harvested 55 days after transplanting. The stem is suitable for salads, pickles or cooking. The flower head can be used like broccoli. Q39

*Brassica oleracea* 'Dalmeny' - *Dalmeny sprouts, Cabbage sprouts* {S}. Artificial hybrid. Cabbage x brussels sprouts. A new "old" vegetable, the result of a cross between the common heading cabbage and brussels sprouts. The stem is a foot or more in height, and is not only thickly set with sprouts or small cabbages, like brussels sprouts, but terminates in a cabbage of medium size. BURR, FELL 1982b.

## CULTIVARS

**Fisher's:** Golden Acre cabbage x an unspecified brussels sprouts. Most of the plants will make good solid heads like cabbage; some produce heads along the stem like brussels sprouts. Earlier than regular brussels sprouts. Developed by Fisher's Garden Store, Belgrade, Montana. D82

*Brassica parachinensis* -> *Brassica rapa*

*Brassica perviridis* - *Brassica rapa*

*Brassica rapa* - *Field mustard, Wild turnip* {S}. Leaves are eaten boiled, oil-roasted, pickled, or added to soups. The finely chopped, very young leaves can be added to a tossed green salad. Immature flower clusters are cooked and served like broccoli. The seeds can be ground into a powder and used as a seasoning. Eurasia. CROW-HURST 1972, TANAKA.

## CULTIVARS

**Tarahumara Esoinaca:** (Mequasare) Plants grow to 6 feet tall. Tender, mild flavored young leaves can be used in green salads. Also tasty fried. Cultivated by the Tarahumara Indians of Mexico. Introduced there by the Spanish. 116, N84

**Tarahumara Mostasa:** (Mocoasali) Slightly spicy leaves can be added to green salads when young or cooked as a potherb. The seeds are ground and added to *pinole*. Wild in the fields of the Tarahumara Indians. Old World introduction. 116, N84

**Variegated:** Similar to the species, except the leaves are irregularly variegated white and green. C7M

*Brassica rapa* Chinensis Group - *Bok choy, Pak-choi, Chinese white cabbage, Tsoi sum, Yow choy* {S}. The leaves, tender leaf-stalks, and in some cultivars the flowering stems, are eaten raw in salads, stir-fried, steamed, or pickled. Some cultivars also yield an edible oil. Bok choy leaves are widely used in wonton and other similar Chinese broths. In China, bok choy is sometimes dried and stored for several weeks before use. The product is called *bok choy kan*. When pickled in salt, the leaves rapidly lose fifty percent of their vitamin B but the content can be increased nearly fourfold if the leaves are pickled in a paste of salt and rice bran. Rice bran pickles are called *nuka-miso-zuke* in Japan. HALPIN [Cu, Cul], HARRINGTON, G., HERKLOTS, KRAFT [Re], LARKCOM 1984, OCHSE, SCHNEIDER 1986 [Pre, Re], SHURTLEFF 1975; A79M, C27G{DF}, C82, F82, G93M, K73, L59, R47. (for cultivars see Bok Choy, page 309)

*Brassica rapa* Japonica Group - *Potherb mustard, Japanese mustard* {S}. Leaves are used as a potherb, pickled, or added to soups. The flavor is pleasant and mild compared to mustard. HERKLOTS, TANAKA.

## CULTIVARS

**Green Spray:** (F.) Hybrid mibuna. Light green, entire, flavorful leaves. Suitable for harvesting either in the young stage or when mature. Used for boiling, pickling or *ohi-tashi*. Very vigorous, high-yielding plant with good cold tolerance; early maturing. Good for both fall and winter harvests. C20M, G6,139, N84, Q34, S55, S63M, S75M, TIM

**Kyoto:** 43 days. Vigorous growing plant produces numerous slender, white stalks. Narrow, dark-green leaves, deeply cut and

fringed at the edges; non pungent. Highly resistant to cold. Grows extensively during the winter season. J20, S70

**Mibu-Na:** Long, smooth-edged, relatively flat leaves, more rounded than Mizu-Na; 12 inches long, only 1 to 1 1/2 inches wide; narrow, greenish petioles. Excellent for pickling. Sown late summer to fall, often being overwintered for an early spring crop. Spring planted crops produce edible flower stalks. Makes a superior cut-and-come-again vegetable. D55, F73D, 177, M46, PIG, R32, R47, S63M, S70

**Mizu-Na:** (Kyo-Na, Thousand Veined Mustard) 65 days. Leaves are deeply divided into many linear or filiform thread-like lobes, giving it an attractive feathery appearance. Narrow, white petioles. While Mibu-Na is chiefly pickled, this cultivar is seldom pickled but is more often used in sukiyaki-like Japanese dishes. Also good in salads. GESSERT, HARRINGTON, G. [Cu, Cul], HERKLOTS, LARKCOM 1984, TANAKA, ZEVEN; C53, D3M{PR}, D55, E24, G6, G33, 139, 177, J73, K22, K23{PL}, K66, L59, N7G, O53M, R47, etc.

**Purple Mizu-Na:** A stable line of mild flavored mustards. Deeply divided leaves resemble Mizu-Na but with light purple stems similar to Hon Tsai Tai (Flowering Purple Pak Choy). N7G

**Sakata:** Premium quality Mizu-Na type. Slender white stalks with narrow leaves deeply cut and fringed at the edges; more pronounced ribbing and regular serration. Has a longer shelf life than many other varieties. Very easy to grow. Regrows quickly after having been cut. I18M, 177

**Tokyo Beau:** (F.) 70 days. Vigorous, uniform grower with broad shiny leaves, deep green in color. Mild, fresh, mustard-like flavor. Similar to Tokyo Belle, but grows larger, up to 4 1/2 pounds. Cold hardy and bolt resistant. Has ornamental value as an edging plant in home gardens from autumn to winter. A79M, D68, 177, K16M, L42, L89C, M46

**Tokyo Belle:** (F.) 60 days. Large, vigorous plant, much improved over open-pollinated types. The stalks are thicker, wider, and whiter; the leaves are broader, glossy dark-green with sharp cut lobes. Has a sweeter, milder flavor. Cold tolerant, can be fall planted and harvested even in snow. Also very ornamental. D68, K16M, Q34

*Brassica rapa* Pekinensis Group - *Chinese cabbage, Celery cabbage, Pe-tsai, Wong bok, Napa, Siew choy, Tientsin cabbage* {S}. Leaves are eaten raw in salads and slaws, stir-fried, steamed, marinated, braised, pickled, or added to soups. In Korea, it is fermented into a spicy, sauerkraut-like vegetable called *kimchi*. *Kimchi* is a general term, more specific names being used depending on the substrate, processing methods, seasons, and localities. *Tongbaechu-kimchi* and *bossam-kimchi* are based on Chinese cabbage. Sprouted seeds are eaten in salads and sandwiches. HALPIN, HARRINGTON, G. [Cu, Cul], HERKLOTS [Cu], JAFFREY, LARKCOM 1984, SCHNEIDER 1986 [Pre, Re], STEINKRAUS, TANAKA; C82, E13G{PD}, E38, F92, G83M, G93M, H49, L59. (for cultivars see Chinese Cabbage, page 337, see also Sprouting Seeds, page 524)

*Brassica rapa* Perviridis Group - *Mustard spinach, Komatsu-na* {S}. Leaves are eaten raw in salads, cooked as a potherb, stir-fried, pickled, or used in soups. In eastern Honshu, they are used in the preparation of a New Year's ceremonial rice-cake soup, *zoni*. Young seedlings are also used as a vegetable. The thick, tuberous root of some forms is pickled and eaten. HALPIN [Cu], HERKLOTS, LARKCOM 1984, TANAKA, UPHOF; D55, G33,139,177, J20, J73, M46, R32, S63M

## CULTIVARS

**Kuromaru:** (F.) Upright plant with oval, glossy dark-green leaves. Tight petiole resists damage during harvest. Can be harvested in about 20 days from a summer sowing, 50 days in autumn. Productive all year round. High tolerance to heat and cold, turnip mosaic virus, and black rot. Q28

**Osome:** (F.) 35 days. Recently developed hybrid with thick, dark-green, large round leaves that grow upright. Easy to grow. Very uniform, vigorous and heavy yielding. M46

**Savanna:** (F.) 30 days. Uniform, early maturing Tendergreen type. Vigorous, upright plant with large, round, thick, glossy dark-green leaves. Mild flavor. Develops fewer yellow leaves as crop matures. Faster growing and slower bolting than open pollinated types. Shows good tolerance to heat, cold and drought. Fast recovery after harvest. Introduced in 1979 by T. Sakata Co. *Al*, A27M, C28, D11M, F70, 177, 191, J82, K10, *K16M*, K73, L42, M29, M46, Q34, etc.

**Summer Fest:** (F.) 35 days. Dark green, rounded leaves; slender, fleshy, rounded green stems. Mild, tender and delicious. Recommended for use in salads and braising mixes. Upright, uniform plants, heat and disease tolerant. Specially suited for growing as a summer crop. G6,177, N84, Q34, *S63M*

**Tenderareen:** 30-50 days. Spreading; medium-green, broad, smooth, thick leaves have a very mild, bland flavor with hardly a hint of mustard-like hotness. Grows to about 18 inches tall in fertile soil and should be thinned to at least 8 inches apart. Bolts about May 1st from a February planting in western Washington. A25, C44, F82, G79, *H33M*, 139, *L10*, L59, M46, N16, R47

**Tokyo:** 30 days. Very popular Japanese cultivar of fine quality. Medium-green leaves with a mild flavor. Excellent for stir-frying. Fast growing and dependable. Grows about 18 inches tall. F73D

Brassica rapa Rapifera Group - *Turnip*, *Fodder turnip*, *Stubble turnip* {S}. The roots are eaten raw, pickled, braised, pureed, or used in soups, stews, casseroles, etc. They can be harvested when the size of a seedling radish and used in salads. Salted turnips are a common product in China. A bread is sometimes made from turnips. First they are peeled, boiled, and the juice is pressed out. When dry, wheat flour is added, the mixture is kneaded, fermented briefly, made into loaves, and then baked. The leaves are used as a potherb, and in Nepal they are fermented into *gundruk*. In northern Iraq, pickled turnip heads are used instead of yoghurt in the production of *kushuk*. In Morocco, the leaf stalks are chopped and cooked in chicken *kabra*, a type of stew that includes the aged Moroccan butter called *smen*. Sprouted seeds are eaten in salads and sandwiches. CAMPBELL-PLATT, CARCIONE, DIRAR 1993, EVELYN, VILMORIN [Cu], WOLFERT 1973 [Cui, Re]; B13, C27G{PD}, E53, 193M, M25, N81, 048. (for cultivars see Turnip, page 566, see also Sprouting Seeds, page 524)

Brassica rapa Ruvo Group - *Broccoli raab*, *Turnip broccoli*, *Rapini*, *Sparachetti*, *Cimadi rapa*, *Grelos* {S}. The flowering stems and leaves have a pleasant bitter flavor and are eaten boiled, steamed, braised, sauteed, or served with pasta, potatoes, Italian sausage, etc. A very popular vegetable with Italians, who traditionally prepare it with garlic and olive oil. Also widely eaten in Spain and Portugal. Young, tender leaves are sometimes eaten in salads. ANDERSON, J. [Re], BUGIALLI [Re], CUSUMANO [Cul, Be], GRAY, P. [Pre, Re], HALPIN [Cu, Cul], KRAFT [Re], SCHNEIDER 1986 [Pre, Re], UPHOF; A76{P£}, E13G{PR}, F80, 139, 184, K49M, N40{PR}, R47

#### CULTIVARS

**Broccoletto:** An Italian "seedling" crop. Each plant produces a single, sweet broccoli-like head. Can be broadcast or sown in rows, thinning to a minimum of 4 inches. Harvest whole plants as soon as buds show, usually when 9 to 12 inches tall. Sow in succession from early spring to fall. An ideal catch crop. DI 1M, F70, R32, S55

**Centoventina:** (120 Days, 120 Giomi) Sown in autumn for harvesting during the winter in mild climates. One of the latest of all cultivars, maturing in about 120 days. Q11M, *S17*

**Fall Raab:** (Late Rappone, Salad Rappone) 90 days. Grows 18 to 22 inches tall. Tasty strap-shaped leaves, medium to dark-green in color; long standing. Winter hardy; seeded in late fall for an early spring harvest. Greens similar to turnip tops. In mild winter areas,

produces multiple small florets when the weather turns colder. *Al*, C28, C44, *DIT*, G57M, G71,177, K50, L42

**N.C. Raab Salad:** 60 days. Fresh market and garden variety for greens. Dark green leaves; abundant side shoots. Grows to 15 inches tall. Planted in late spring and early summer. G1M

**Novantina:** 90 days. Produces numerous shoots that are eaten during the winter in the same manner as asparagus. Usually sown from July to September in Italy. Matures relatively late, in about 90 days. Good regrowth after cutting. B8, J20, Q11M, *S17*

**Quarantina:** 40 days. Produces tasteful greens during winter. Usually harvested at about 12 inches tall, before the blossoms have opened, and eaten boiled or pan-fried. Matures very early, in about 40 days. Usually sown from July to September in Italy. B8, D68, Q11M, *S17*

**Sessantina:** 60 days. Not as early as Quarantina, but more voluminous. Quality excellent. Usually sown from July to October in Italy. Rapid growing, matures in about 60 days. B8, K66, Q11M, *S17*

**Sessantina Grossa:** Improved type with thicker, tender shoots and early, large buds. Leaves and buds have a "bloom" and more of the color of regular broccoli. Suitable for fall, winter or spring crops. G6

**Sorrento:** 40 days. One of the earliest maturing cultivars, recommended for early spring planting. Delicious, dark-green florets, among the largest and most uniform in the early category; blue-green foliage. Grows upright to 30 inches tall; well branched. Excellent for home gardeners and specialty growers. L42, L89

**Soring Raab:** 60 days. Extra early fine-flavored spring raab. Plants grow quickly without developing a center head. Grows to 12 inches with numerous, tender side shoots. Seeded in early spring; harvested before weather becomes hot; bolts quickly. Can also be used for an early fall harvest. Not winter hardy. B75, C28, C92, F82, G57M, G71,167M, K50, K73, L42, M29

Brassica rapa Sarson Group - *Sarson*, *Toria* {S}. Source of *Indian colza oil*, used in pickles, preserves, curries and other culinary preparations. Also grown as a vegetable crop in the hills and plains of northwestern India, the young leaves and flowering stalks being used as greens. In some areas sarson *sag* is relished when eaten with maize *chapaties*, butter, and buttermilk. One of the vegetables used for *gundruk*, an important Nepalese food which is made by fermenting shredded and squeezed greens, then drying them. *Gundruk* is eaten with curries, dais, soups and achars. ANONYMOUS 1950, ASSOCIATION [Re], CAMPBELL-PLATT, CHAUHAN, D., MAJUPURIA [Cul], MANANDHAR, VAUGHAN, WATT, ZEVEN.

#### CULTIVARS

**Brown Sarson:** (Kali Sarson) Flower clusters, hairy leaves and seed oil are used for culinary purposes. Highly self-sterile. Resembles *Toria* more than it does Yellow Sarson. Matures slightly later than *Toria*. Has a slightly lower oil content than Yellow Sarson. Grown in the Punjab area of India. ANONYMOUS 1950, CHAUHAN, D., TANAKA, WATT; U76, Y81

**Toria:** (Indian Rape) The smooth leaves and seed oil are used for culinary purposes. Highly self-sterile Very sensitive to drought during pod formation. Sown in September and harvested in January, making it the earliest maturing Indian oleiferous brassica. An important oil-seed crop in the Punjab area of India. ANONYMOUS 1950, TANAKA, WATT; U76, Y81

**Yellow Sarson:** (Indian Colza) Source of a seed oil much used in the diet of the Hindus. The tender leaves and shoots are relished as a potherb. Self-sterile. Matures somewhat later than *Toria*. Also more drought resistant, but more susceptible to insects and diseases. An important oil-seed crop in parts of India. ANONYMOUS 1950, CHAUHAN, D., TANAKA, WATT; U76, Y81

*Brassica rapa* 'Tyfon' - *Tyfon, Holland greens* {S}. 40 days. A cross between Chinese cabbage and stubble turnip. Highly nutritious, productive, fast growing crop; can be grown in all parts of the country. Extremely winter-hardy and bolt resistant. If harvested by cutting back, several cuttings can be made at 30 to 40 day intervals. Best cut when young and tender. Mild-flavored, can be used in salads or as a cooked vegetable. A15Z, 139, J20, L89, M25, M46

*Brassica sinapistrum*-*Sinapis arvensis*

*Brassica tournefortii* - *Wild turnip-rape, Punjab rai* {S}. Leaves and young shoots are eaten. Seeds are the source of an edible oil. Eastern Mediterranean, Southwest Asia. KUNKEL, TANAKA, ZEVEN; W59M, Y81, Z7M

*Brassica* x sp. (*B. oleracea* x *B. rapa*) - {S}. Artificial hybrids. Cabbage x various forms of *B. rapa*. The leaves are eaten fresh in salads, stir-fried or pickled.

CULTIVARS

**Hakuran:** A hybrid between common cabbage and Chinese cabbage. Intermediate in shape between the two parents. The head resembles a large, loose Napa type Chinese cabbage, contains 50 to 60 leaves and weighs 2 1/4 to 4 1/2 pounds. Leaves are crisp, juicy, tasty and have less fiber. Moderate yield and disease resistance. Matures later than Chinese cabbage and has greater heat tolerance; more suited to tropical and sub-tropical areas. NISHI; Q28

**Senoosai:** (One Thousand Treasure Vegetable) 35 days. A hybrid between common cabbage and komatsu-na produced by embryo culture. Thick, green leaves; tender and soft like komatsu-na, moderately sweet like cabbage. Heat resistant; grows vigorously all year round, even in summer. Very rapid-growing. High in vitamins and minerals. Developed by Kirin Brewery Co., Ltd in cooperation with Tokita Seed Co., Ltd. LARKCOM 1991; D55, D68, 177, N84, Q34, S70

*Brassica* 'Colbaga' - *Colbaga* {S}. Very large roots, purple above ground, white below the soil; flesh white, firm like a rutabaga. Flavor unique, delicate, combines the flavors of Chinese cabbage, rutabaga and cabbage. Can be used both cooked or raw in cole slaw or other salads. Grow and store like a rutabaga. Will keep all winter. Developed by Professor E.M. Meader at the University of New Hampshire.

CULTIVARS

**Whits:** An improved cultivar developed by Fisher's Garden Store, Belgrade, Montana. Selected for its pure white flesh. D82

*Bunias erucago* - *Com rocket* {S}. The young, tender leaves are used in refreshing spring soups or as a side dish. They have a characteristic, aromatic flavor that goes well with white Spanish beans (Dutch case knife beans) in dishes such as *ris e barland* soup from Lombardy, Mediterranean region, Southwest Asia. BIANCHINI; V73M, W88M, X54, Y17M

*Bunias orientalis* - *Turkish rocket* {S}. Young leaves and shoots are eaten raw in salads or boiled as a potherb, especially in some parts of Russia and Poland. Eumsia. HEDRICK 1919, UPHOF, VILMORIN [Cu]; C95, N71M, N84, R49{PL}

*Cakile edentula* - *American sea-rocket* {S}. The succulent, young leaves, stems, and unripe capsules are eaten raw in salads, having the flavor of horseradish. Older leaves and flower buds can be combined with milder flavored greens and used as a potherb. The roots are occasionally dried, ground, mixed with flour and used for making bread. Northern temperate region. FERNALD, GIBBONS 1964, MEDSGER; F85, F88M

*Cakile maritima* - *Sea rocket* {S}. Young leaves and stems, flower buds, and unripe pods are eaten raw in salads and sandwiches, or mixed with milder greens for use as potherbs or seasonings. The roots are pounded, mixed with flour, and eaten during times of scarcity. European coasts, North Africa. BIANCHINI, CLARKE, HEDRICK 1919; N84

*Camelina sativa* - *Gold of pleasure, False flax, Siberian oil-seed, Tsitsmati* {S}. The seeds yield an oil which is used for culinary purposes. In Georgia, the peppery leaves are eaten fresh, having a flavor similar to arugula. Sold in local markets. Eurasia. GOLDSTEIN, HEDRICK 1919, VAUGHAN [Nu]; N71M, N84

*Capsella bursa-pastoris* - *Shepherd's purse, Chinese cress, Water chestnut vegetable, Nazuna* {S}. The young leaves and stems are cooked and eaten like spinach. They are said to have a cabbage-like flavor when blanched and served as a salad. At one time cultivated and brought to the markets of Philadelphia. Seedpods can be used as a peppery seasoning for soups and stews. Fresh or dried roots are used as a ginger substitute or candied in syrup. The seeds are sometimes gathered and ground into meal. In Japan, the plant was one of the essential ingredients in the ceremonial rice and barley gruel eaten on January 7th. Eurasia, cultivated. BURR [Cu], FERNALD, HARRINGTON, H., HERKLOTS, HOMMA, LARKCOM 1984, LAUNERT [Re], MEDSGER, TANAKA; A2, C82, C95, F37T{PL}, F86G, J82, M34M, N71M, N84, R47

*Cardamine amara* - *Large bitter-cress* {S}. Young leaves can be eaten alone as a salad, or used like rocket and watercress to enhance the flavor of other salads with its aromatic, piquant taste. Eurasia. BIANCHINI, HEDRICK 1919, UPHOF; W35

*Cardamine diphylla* -> *Dentaria diphylla*

*Cardamine hirsuta* - *Hairy bitter cress, Lamb's cress* {S}. The young leaves and flowers are eaten raw in salads, used as a garnish, or cooked and served like spinach. Eurasia. CRIBB, HEDRICK 1919, LARKCOM 1984; N84, O48

*Cardamine oligosperma* - *Little Western bitter cress, Spring cress* {S}. The peppery rosette leaves are delicious added to salads, or the whole plants can be harvested like mache. Western North America. C95, N7G, N84

CULTIVARS

**Karen's Giant:** Selected by Shoulder to Shoulder Farm for its exceptionally large rosettes, 3 to 5 inches in diameter. Some rosettes are flat, others are mounded like a pin cushion of small, cress-like leaves. Good eating quality until the first flowers open, when the stems become tough. N7G

*Cardamine pratensis* - *Cuckoo flower, Lady's smock* {S}. The young leaves, shoots, and flower buds have a pungent, cress-like flavor and can be added to fresh green salads, sandwich spreads, sauces, or served alone with an oil and vinegar dressing. Northern temperate region. CROWHURST 1972, LARKCOM 1984, LAUNERT [Re], MICHAEL, VILMORIN; K53, M77M{PL}, N71M, N84, 053M, Q24, R32, S55

*Cardamine rotundifolia* - *Mountain water cress* {PL}. The young and tender leaves are eaten raw in salads, having a delicious mildly pungent flavor somewhat reminiscent of water cress. Older leaves are cooked and eaten. North America. GIBBONS 1979, HEDRICK 1919, MEDSGER, PETERSON, L.; I90M

*Cardaminopsis halleri* - {S}. In parts of Friuli, in northern Italy, the leaves are added to *pistic-di* ritualistic spring dish containing up to fifty six different wild greens. Europe. PAOLETTI; V84T

*Cardaria draba* - *Hoary cress* {S}. Young leaves and shoots are eaten in salads or as a potherb. The pungent seeds are used as a seasoning. Eurasia. HEDRICK 1919, NIEBUHR, UPHOF; M34M, N84, O48

*Cochlearia anglica* - *English scurvy-grass* {S}. The young leaves and flower-heads are eaten raw in salads and sandwiches. Europe. MICHAEL [Pre, Re]; N84

*Cochlearia danica* - *Danish scurvy-gmss* {S}. Young leaves are eaten raw in tossed green salads. As a cultivated plant, it is considered superior to *C. officinalis*. Northern temperate region. LARKCOM 1980, MICHAEL; Z25M

*Cochlearia officinalis* - *Scurvy grass*, *Spoonwort* {S}. The succulent, slightly salty leaves and flower-heads are added to tossed green salads, soups, sauces, beer, or used as a filling for bread and butter sandwiches and stuffed vegetables. Juice from the leaves can be added to orange juice to make *spring juices*. Once taken on long sea voyages on account of its high vitamin C content. Circumpolar. BURR [Cu], HEDRICK 1919, LAUNERT, LEYEL 1987b, PAINTER [Re], ROOT 1980b, VILMORIN; J82, N84, 048, S55

*Conringia orientalis* - *Yabani tutun* {S}. Seeds are the source of a light-yellow oil used for cooking purposes. In Turkey, the above ground parts are used as a vegetable or condiment, condiment. Europe. OZTURK, UPHOF; M34M

*Crambe cordifolia* - *Tartar sea-kale* {PL}. Young leaves are eaten as a potherb. The root is also reported to be edible. Southwest Asia to Central Asia. HEDRICK 1919, WATT, ZEVEN; A61, A61{S}, B28, C2, C9, E7M{S}, E30, E33, L91M{S}, M37M, N84{S}, 053M{S}, Q24{S}

*Crambe maritima* - *Sea-kale* {S}. The blanched leafstalks are eaten raw in salads, boiled, baked, braised, or otherwise prepared as asparagus. When properly cooked, they retain their firmness and have a very agreeable flavor, somewhat like that of hazelnuts, with a very slight bitterness. The leaves can be boiled until soft, minced, seasoned with garlic and served as spinach. Plants can be forced indoors for winter use. Eurasia. HALPIN [Cu], HAWKES [Cu], KRAFT [Re], LARKCOM 1984, LAUNERT, MABEY, VILMORIN [Cu]; A61, A61{PL}, B77{PL}, C2{PL}, C9{PL}, D92M, D95{PL}, E30{PL}, I74{PL}, J6, L22{PL}, L91M, N84, 053M, Q24, R47, R53M{PL}, etc.

#### CULTIVARS

**Lily White:** Young leaves are totally devoid of the purple tinge that develops on those of the common type when they are exposed to the light, becoming green under similar conditions. In other respects they are identical. VILMORIN; B49, N84, 053M, R32, S55

*Crambe orientalis* - {S}. The very thick roots are used as a substitute for horse radish. Young flower-stalks can be prepared in the same manner as broccoli. Reportedly has potential for producing an edible oil. Eurasia. HEDRICK 1919, OZTURK; U71M

*Crambe tatarica* - *Tartar bread plant* {S}. Young, blanched leafstalks are eaten raw or cooked, like those of *C. maritima*. The root is thick, fleshy, and sweet and is eaten raw as a salad, as well as cooked and seasoned with oil, vinegar, and salt. Eurasia. HEDRICK 1919, TANAKA, UPHOF; A61, A61{PL}, D92M, N84, 053M, Q24

*Dentaria diphylla* - *Two-leaved toothwort*, *Pepper-root*, *Crinkleroot* {PL}. The crisp, white rootstock is a popular nibble, having the flavor of cress or horseradish. It can be added to green salads and sandwiches, eaten as a radish-like relish with salt, or grated and prepared like horseradish. Eastern North America. FERNALD, GIBBONS 1979, MEDSGER; I37M, 144, J48, L59P, N9M, N9M{S}

*Dentaria laciniata* - *Cut-leaved toothwort* {PL}. The crisp roots have a pungent, peppery taste and are chopped and added to salads, or used in the preparation of spicy relishes and sauces. They are very good eaten in sandwiches with luncheon meats, whose salt helps bring out their flavor. North America. ANGIER [Re], CROWHURST 1972, GIBBONS 1966b; 144, J39M, J48, L59P, M77M, N9M, N9M{S}

*Descurainia pinnata* - *Tansy mustard* {S}. Leaves, when boiled or roasted between hot stones, were eaten by Indians of several tribes. The seeds were mixed with cornmeal, added to soups, or boiled to a mush and consumed with salt. In Mexico, they are made into refreshing drinks with lime juice, claret and syrup. Pods make an interesting mustard-flavored nibble. North America. CLARKE, GIBBONS 1979, KIRK, MEDSGER, UPHOF; M34M, N84

*Descurainia sophia* - *Tansy mustard*, *Flixweed* {S}. The pungent seeds are sometimes made into mu staid. Young leaves are used as a

potherb. Sprouted seeds are eaten in salads and sandwiches. American Indians baked the leaves in firepits and used the ground seeds as *pinole* in breads, gruels, and soups. Eurasia, naturalized in North America. HARRINGTON H., KAVENA [Re], TANAKA, UPHOF; F85, L3J, N84

*Biptaxis erucoides* - *Wild rocket*, *Sylvetta* {S}. The spicy leaves are eaten in salads or cooked with dried beans. They are best harvested before the flowers appear. A very popular traditional vegetable in parts of Italy. Often cooked with pasta in the manner of broccoli raab. Mediterranean region. CRETTE, WOLFERT 1998; N7G, N84

*Diplotaxis muralis* - *Wall rocket*; *Wild arugula*, *Rucola selvatica*, *Sylvetta* {S}. The young leaves have a piquant flavor, somewhat resembling arugula but with a sharp aftertaste. Finely chopped, they can be used sparingly in salads or as a flavoring for cooked dishes. Flowers are also eaten or used for garnishing. The perennial plant is resistant to heat, and would make a good warm weather substitute for arugula in suitable climates. Mediterranean region. BIANCHINI, WEAVER 1993; C53, E63D, G6, G53M, 139,177, J20, K57{PL}, K66, N71M, N81, N84, Q11M, Q34, S17, S55

#### *Diplotaxis tenuifolia* - \**Diplotaxis muratis*

*Eruca sativa* - *Rocket-salad*, *Arugula*, *Roquette*, *Rucola* {S}. Young leaves have a distinct, spicy flavor and are eaten raw in salads, or sauteed with garlic and olive oil. One of the popular ingredients of *mesclun* and *misticanze*, salad mixtures of baby and bitter lettuces and mild herbs. Older leaves that have become too hot to be eaten alone can be pureed and added to soups and sauces. Arugula sauce is a traditional condiment of the Umbria region of Italy. The flowers are used as a garnish and are available at some specialty markets. Seeds are used as a substitute for mustard, and also yield an edible oil called *jamba oil*. Sprouted seeds are eaten. Eurasia, cultivated. CUSUMANO [Cu, Re], GRAY, P. [Cu, Re], HALPIN [Cu, Cu], KRAFT [Re], LARKCOM 1984, SCHNEIDER 1986 [Cu, Re], UPHOF, VILMORIN [Cu]; A16, A97{PL}, C3, C44, D3M{PR}, F15M{PL}, F80, F93G{PL}, G6, G68, G82, 191, 194{PD}, J73, J85T{PR}, K22, K66, M46, N40{PR}, R47, etc. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Astro:** Improved strap leaf strain. Medium green, slim, less deeply cut leaves; semi-open plant habit; somewhat milder, nutty flavor, stronger in high temperatures. Matures slightly earlier. Small leaf tips can be harvested and blended with other greens in *mesclun* mixes. Mature leaves and flowers add flavor to salads. C20M, K57{PL}, L42, N84

**Greek:** An improved cultivar that originated in Greece. Nutty, spicy flavor, excellent in salads. Easily and quickly grown. L88J

*Eutrema wasabi* - *Wasabi*, *Japanese horseradish* {PL}. The fleshy rhizomes are grated and prepared into an attractive fresh green paste which is the essential condiment for Japanese raw sliced fish (*sashimi*). Considered to have a distinct flavor and pungency that is superior to common horseradish. Leaves, flowers, leafstalks, and freshly sliced rhizomes are soaked in salt water and then mixed with sake lees to make a popular pickle called *wasabi-zuke*. Eastern Asia, cultivated. COST 1988 [Cu], HAWKES [Re], HODGE 1974 [Cu], SHURTLEFF 1975 [Re], TANAKA, TSUJI [Re], YASHIRODA [Cu]; A7{DF}, E66T{DF}, F88{DF}, G20M{ED}, G47B{DF}, I8M{DF}, L16{DF}, N84, R53M, S70, S70{S}

#### *Farsetia clypeata* - *Fibigia clypeata*

*Fibigia clypeata* - *Paperpumpkinseeds* {S}. The young leaves are eaten in salads like cress. Eastern Mediterranean. HEDRICK 1919; D92M, E91G, F35M{PL}, F80, L94M, N84, 01, 053M, Q24

*Hesperis matronalis* - *Dame's rocket*, *Damask*, *Scented rocket* {S}. In many countries, especially in Germany, the young leaves, before flowering, are gathered and eaten like cress in salads. Seed-pods can be added to soups and stews. The flowers are used to add a spicy flavor to salads and fruit dishes. Seeds are the source of an oil,

called *honesty oil*, *huile de Julienne*, or *rotreps oel*. The sprouted seeds can be eaten. Eurasia. GRIEVE, REILLY, UPHOF; C9M, D92M, F24D, G47M, H63{PL}, K53, N11M, N19M{PL}, 053M, R47

*Hirschfeldia incana* - *Greek mustard* {S}. Young plants are consumed with oil and lemon juice in some parts of Greece. The Cahuilla Indians of California ate them either fresh or boiled. They also collected the seeds and ground them into mush. The flowers can be added to vegetable dips. Southern Eurasia, naturalized in North America. BEAN, L., ROOS-COLLINS, UPHOF; F85

*Iberis amara* - *Rocket candytuft* {S}. Seeds are occasionally used as a source of mustard. Eurasia. UPHOF; D56M, D92M, E7M, F68T, F85, F86G, J82, N40M, N84

*Lepidium campestre* - *Bastard cress*, *Pepperwort* {S}. Finely chopped leaves and young shoots can be used to give a watercress-like taste to salads, omelettes, soups, and sauces. The pungent, unripe seedpods can be added to hot soups and stews. Northern temperate region. LAUNERT [Re], PETERSON, L.; N71M, N84

#### *Lepidium draba* *Cardaria draba*

*Lepidium fremontii* - *Desert pepper-weed*, *Mustard bite* {S}. Seeds were used by the Indians of Arizona for making bread or mush. They may be used directly as flavoring in salads, soups and stews, and they also make an excellent dressing for meat when mixed with vinegar and salt. The young shoots are good in salads. Southwestern North America. HALL, KIRK, YANOVSKY; L55J, N84

*Lepidium latifolium* - *Dittander* {S}. The peppery leaves are used in salads, sauces, and as a potherb. Seeds are used as a condiment. The hot, pungent root resembles horseradish, for which it may be used as a substitute. Was once cultivated in England and by the ancient Greeks. Northern temperate region. MABEY, UPHOF; N71M, 048, R49{PL}

*Lepidium meyenii* - *Maca* {DF}. The sweet, pleasant flavored roots resemble a small pear in both size and shape. The fresh roots are sometimes baked in underground pits. After being dried, they are cooked in water or milk to form a sweet, aromatic porridge called *mazamorra*. Maca roots are also placed in sugar cane rum (*aguardiente*), to which they impart a special aroma and flavor. Leaves are also edible. Andean South America. HERKLOTS, LEON, NATIONAL RESEARCH COUNCIL 1989; F37T, GO, K18M

#### CULTIVARS {PL}

**Hesoerada:** (Varietad) Thick, strong radish-like root SL Yellow skin, banded with purple at the waist. Pearly white flesh, somewhat marbled in appearance. 174

**Purple:** Thick, strong radish-like roots. Purplish skin. Pearly white flesh, somewhat marbled in appearance. 174

**White:** Thick, strong radish-like roots. Whitish skin. Pearly white flesh, somewhat marbled in appearance. 174

**Yellow:** Thick, strong radish-like roots, Yellowish skin. Pearly white flesh, somewhat marbled in appearance Yellow types are generally the most popular of the macas in their native region. 174

*Lepidium sativum* - *Cress*, *Garden cress* {S}. Young leaves are eaten in salads, sandwiches, soups, omelettes, with sliced hard-boiled eggs, etc. Commonly grown in combination with mustard as a cut-and-come-again seedling crop called *mustard and cress*. The fresh or dried seed pods can be used as a pungent seasoning. In Ethiopia, the seeds are grown for their edible oil, while in the United States they are utilized as a sprouting seed. Roots are occasionally used as a condiment. Cultivated. BIANCHINI, DUKE, HALPIN, LARKCOM1984, UPHOF, VILMORIN [Cu]; E7M, E33, E63D, K2{PD}. N7G, N71M, N84, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Broad Leaved:** (Mega Cress, Broad Leaved French) 10-40 days. The leaves are oval in shape, about 2 inches long, and about 1 inch broad; the blade of the leaf is entire, without any divisions, merely notched somewhat on the edges. The stalks are slender and somewhat irregular in outline. Less desirable as a salad plant but good for use in soups. BURR, VILMORIN; C53, G6, L91M{SP}, N84, P59M

**Curled:** (Peppergrass, Curly Cress, Early Curled) 10-30 days. In this cultivar the divisions of the leaves are finer and more numerous than in the common kind; they are also curled and more or less frilled on the edges like some types of parsley, which gives the foliage a very ornamental appearance. Used in salads, feta cheese sandwiches and as a garnish. BURR, VILMORIN; A16, D82, E24, FI, F70, F92, H99J{SP}, I91{SP}, K66, L24G{SP}, L89, M49, N7G

**Extra Curled:** (Triple Curled) 10-30 days. The blade of the leaf is divided into a few lobes, which are almost entire, the edges only being cut into a kind of fringe. The divisions are very fine, numerous, and curled in such a manner as to cause the plant to resemble a tuft of green moss. Leaf-stalks are comparatively short, which gives the plant a dense and compact appearance. VILMORIN; C85M, D11M, L91M, PIG

**Greek:** A fast growing salad crop that can be broadcast in succession and cut when young. A completely new addition to the mixed salad. Delicious peppery taste. Discovered in Greece. B49, N84, R32, S55

**Groka:** Large, oval, entire leaves; attain a dark-green color at an early age Very vigorous and quick growing. The strong, sturdy plant is trouble free and easy to grow. Maintains its attractive appearance well. Can be harvested 5 to 8 after sowing for a seedling crop. R11M

**Moss Curled:** 10 days. Fine cut leaves resemble parsley; dwarf and compact in growth. Tastes like water cress. Ready just 10 days from seeding; sow every 2 weeks year round. Can be grown indoors in pots to provide winter greens. G16, Q34

**Persian:** (Barbeen, Shahi) Broad-leaf type. Large, dark-green leaves, 2 to 6 inches long and 1/2 to 1 inch wide; irregularly toothed. Pungent, water-cress like flavor. In Iran, Iraq and the Gulf States of Arabia, the fresh leaves are commonly used as a garnish in salads like watercress. In Iran they are also used as a potherb. MALLOS [Re]; A2, C95, 199M, K49T, N7G

**Reform:** 50 days. A vigorous broad-leaf cultivar. Leaves are sword shaped, 3 to 5 inches long. Targy, peppery-sweet cress flavor. Will grow and thrive in ordinary garden soil. Seed can be freely broadcast in the bed or row and seedlings don't need thinning. Grows very quickly; sow every month from early spring until hot weather and again all fall. Recently introduced from Holland. K66

**Victoria:** 25 days. Broad, smooth-leaved type which is very productive and very fast growing. Excellent for adding a spicy, piquant flavor to salads. Can be planted in two week successions for continuous harvest. J20

*Lepidium virginicum* - *Wild pepper-grass*, *Virginia cress* {S}. The mustard-flavored leaves or young shoots are chopped and mixed in salads, used as a garnish, or cooked as greens. Unripe pods, pleasantly pungent in flavor, are chopped, mixed with vinegar and served as a condiment with soups and stews. North America. CROWHURST 1972, GIBBONS 1979, MEDSGER, MORTON 1976; F85, M34M

*Lobularia maritima* - *Sweet alyssum* {S}. Leaves, young stems, and flowers can be used as a flavoring herb in salads or other dishes where pungency is desired. The flowers are also good for candying. Cultivated. BOCEK, NYERGES; A53M, D92M, E7M, E59Z, E66M, FI, K15, K49M, K53, N11M, N84, 053M, R47

## CULTIVARS

**Rosie O'Dav:** Recommended for candying by candied flower expert Jill Ann Williams. Highly scented, dainty, pinkish-lilac blossoms. For use when wanting to set a "feminine" mood. Works well with gel-based candying kits. WILLIAMS, J.; D92M, N84

**Royal Carpet:** Recommended for candying by candied flower expert Jill Ann Williams. Rich, velvet, violet-purple blossoms with white eyes. Combines well with yellow and orange edible flowers. Works well with gel-based candying kits. WILLIAMS, J.; C85M, D26D, FI, F92, H21, L11, L79, N84, 053M

**Snow Crystals:** Recommended for candying by candied flower expert Jill Ann Williams. Pure white blossoms, largest of any variety. Sturdier than other types, holding up better in the candying process. Especially recommended when a lace-effect is desired. Good combined with other edible flowers and leaves, such as blue pansy and woodland violets, and made into a cluster. WILLIAMS, J.; D26D, N84

*Lunaria annua* - *Penny flower, Honesty, Money plant* {S}. The roots, when gathered before the flowers form, can be eaten raw in salads. Pungent seeds are used as a substitute for mustard. Europe. HEDRICK 1919, UPHOF; B77M, C82, C95, D92M, E7M, FI, G80{PL}, K53, L59, N42{PL}, R47

*Lunaria biennis* - *Lunaria annua*

*Matthiola incana* - *Stock* {S}. The highly fragrant flowers are eaten as a vegetable or used as a garnish, especially with sweet desserts. Pods are also edible. Mediterranean region, cultivated. LEGGATT [Re], TANAKA; C53, D68, D74B, D92M, E5T, E7M, F85, G71, G71M, G82,191, K66, L89, M29, OfR47, etc.

*Nasturtium officinale* - *Water cress* {S}. Leaves and shoots are employed as an attractive garnish, eaten in salads, or used in soups, canapes, omelettes, etc. Blended with butter it makes a tangy spread for sandwiches. Seeds are occasionally made into mustard. The seeds can also be sprouted like alfalfa or grown as a seedling crop. Eurasia, cultivated. CARCIONE, FERNALD, FOX, F., GIBBONS 1962 [Re], HALPIN [Cu, Cul], HARRINGTON, G., LARKCOM 1984, VILMORIN [Cu]; C53, C95, E38, F80, F92, G0{DF}, G6, H54,191{SP}, K66, L59, M39{PL}, N11, R47. (see also Sprouting Seeds, page 524)

## CULTIVARS

**Improved Broad-Leaved:** (Large Improved, Broad Leaf) 50 days. An improved cultivar with large, broad, oval leaves and a mildly pungent flavor. Home gardeners should have a very moist, shady spot, as it is usually grown along river banks. Harvest in cool temperatures. Perennial. D11M, FI, F70,177, K49M, L42, L89, L94M, P59M

*Orychophragmus violaceus* - *Erh-yiieh-lan* {S}. Used as a vegetable in some parts of China. China, cultivated. TANAKA; L91M

*Peltaria alliacea* - *Shieldwort, Garlic cress* {PL}. The flowers and leaves are eaten in salads, having a flavor reminiscent of garlic and mustard. They are best harvested during the cooler months, as hot weather makes them somewhat bitter. Europe. HEDRICK 1919; R49

*Radicula nasturtium-aquaticum* -> *Nasturtium officinale*

*Radicula palustris* - *Rorippa islandica*

*Raphanus caudatus* - \* *Raphanus sativus*

*Raphanus maritimus* *Raphanus raphanistrum ssp. maritimus*

*Raphanus raphanistrum* - *White charlock, Wild radish* {S}. Young leaves and shoots are minced and added to salads or cooked as a potherb. The seeds are very pungent and are said to form an excellent substitute for mustard. Sprouted seeds make a very tasty addition to a salad. Eurasia, naturalized in North America. BIANCHINI, HEDRICK 1919, LAUNERT; M34M, N71M, N84,

048

*Raphanus raphanistrum ssp. maritimus* - *Sea radish, Spanish radish, Rapestone* {S}. Leaves and roots are eaten as a potherb. The succulent roots can be used as a substitute for horseradish. Mediterranean region. HEDRICK 1919; SI7

*Raphanus sativus* - *Radish, European radish*. The hot, spicy roots are eaten raw in salads, as an appetizer, pickled, used for garnishing, etc. Leaves may be boiled as greens, fermented into *gundruk*, or used as a cress. Young flower clusters are eaten as a cooked vegetable. The tender pods of some forms are served with beer in Germany. Seeds are the source of an edible oil. The sprouted seeds are widely used in the food industry for spicy sprout mixtures. Dehydrated radish sprouts can be used as a salt substitute. Cultivated. ASSOCIATION [Re], CAMPBELL-PLATT, HEDRICK 1919, LARKCOM 1984, MEYEROWITZ 1994b [Re], TANAKA, UPHOF, VILMORIN [Cu]. (for cultivars see Radish, page 500, see also Sprouting Seeds, page 524)

*Raphanus sativus* Caudatus Group - *Rat-tail radish, Mougrî, Singri, Serpentine bean, Monkey-tail radish* {S}. The long, slender seedpods can grow to two feet or more in length, and have an attractive purple tint. In India, where they are primarily grown the pods are eaten in salads, boiled, pickled, or cooked with ghee or in curries. It is best to harvest them when still tender and free of fibers, usually at ten or twelve inches. BURKILL, TANAKA, VILMORIN [Cu], WATT; B49, C95, F73D, F80, H24, J20, J39, N24M, Q34

## CULTIVARS

**Long Purple:** An improved type from India with long purple pods. R0

**Madras:** Mild-flavored pods that remain crisp and tender for up to 2 weeks. Excellent raw or pickled. Distinctive pale pink flowers, tipped with purple. Originated in India. Introduced into the United States from England in 1859 by Isaac Buchanan. WEAVER 1997; B49, K46T

*Raphanus sativus* Longipinnatus Group - *Daikon, Lobak, Lo bok, Oriental radish* {S}. The roots are grated and eaten raw, marinated, stir-fried, used in soups, pickled, etc. Pickled roots are known as *takuan* or *gakkua-zuke*. Young leaves and flower clusters are stir-fried, boiled, added to soups, or pickled. The young seedlings may be cooked like spinach. In Korea, *chonggak-kimchi*, *yeolmu-kimchi*, and *dongchimi* are some of the forms of *kimchi* prepared with oriental radishes. The peppery seeds can be added to tossed salads or rice dishes. Both the roots and leaves are dried and stored for later use. Pods are also eaten. HALPIN, HARRINGTON, G. [Cu, Cul], HERKLOTS [Cu], HESSELTINE, KRAFT, SCHNEIDER 1986 [Cul, Re], SHURTLEFF 1975 [Re], STEIN-KRAUS, TANAKA, YAMAGUCHI; E13G{PR}, E56{DF}, E66T{PD}, F85, G20M{PD}, G47B{DF}, G47B{PD}, H91{ED}, N40{PR}. (for cultivars see Radish, page 500, see also Sprouting Seeds, page 524)

*Raphanus sativus* Oleiformis Group - *Oilseed radish, Fodder radish* {S}. A type of radish particularly adapted for the production of oil. The oil is considered superior to rapeseed oil, but is extracted with greater difficulty. Cultivated in China, Japan, India and parts of Europe. In Canada, besides being grown as a canola-like oil crop, it is often grown as a sprouting seed. BURR, ZEVEN; B13, B49, D68, G50, I93M, I99M, K95M, N81, R32. (see also Sprouting Seeds, page 524)

*Rorippa islandica* - *Yellow marsh-cress* {S}. The young leaves and stems make a good substitute for watercress. Young seedlings are also eaten. Europe, naturalized in North America. CRIBB, MEDSGER, TANAKA; N84

*Sinapis alba* - *White mustard, Yellow mustard* {S}. In England, the young seedlings are commonly grown together with those of cress for use in salads and sandwiches. They are usually harvested when two or three inches high. Milder in flavor than those of black mustard, the seeds are preferred for making lighter mustards, such as American frankfurter mustards. The leaves of mature plants can be

used as a potherb. Eurasia, cultivated. BROUK, GRIEVE, HARRINGTON, H., HERKLOTS [Cu], LARKCOM 1984, MORTON 1976, VILMORIN; B49, E14T{DF}, F15M{PL}, F91{SP}, F97MIDF}, H90G{PD}, H99J{SP}, J82{DF}, L24G{SP}, L24M{SP}, M82{PL}, 053M, Q34, S55. (see also Mustard, page 431 and Sprouting Seeds, page 524)

#### CULTIVARS

**Fine White:** (Fine White Kingston) For growing as *mustard and cress*, i.e. as a companion for plain or Moss Curled cress in containers all year round. They should be sown 3 days after cress to mature concurrently. Tops are usually cut close to the soil surface with scissors. If grown outdoors, it makes an excellent cut-and-come-again crop. N84, S55

*Sinapis arvensis* - *Charlock, Field mustard* {S}. Seeds are widely used as a condiment in Southern Russia, where they are sold in markets. In England, *Durham mustard* is occasionally derived from the seeds Young, finely chopped leaves lend a piquant flavor to salads, cottage cheese, pates, omelettes, and sandwiches. Larger leaves can be used as a potherb. The flower buds are prepared and served like broccoli. Flowers are used as a vegetable or garnish. Sprouted seeds can be used in salads and sandwiches. Eurasia, naturalized in North America. CROWHURST 1972, GRIEVE, HEDRICK 1919, LAUNERT, LEYEL 1987b, UPHOF; M34M, N71M, N84, 048

*Sisymbrium alliaria* - \**Alliaria petiolata*

*Sisymbrium altissimum* - *Tumble mustard* {S}. The leaves and shoots, when young and tender, are eaten raw in salads or cooked as a potherb. Seeds were ground into a meal and used for making gruel and flavoring soup. Northern temperate region. HARRINGTON, H.; L3J, M34M, N84

*Sisymbrium canescens* - *Descurainia pinnata*

*Sisymbrium irio* - *London rocket* {S}. Young leaves, stems, and flowers are eaten raw in salads, boiled or fried. The seeds are ground and eaten. Sprouted seeds are also edible. Mediterranean region. BAILEY, C., FARNSWORTH [Re]; F80, F85

*Sisymbrium officinale* - *Hedge mustard, Tumble-mustard* {S}. The young leaves and shoots are added to tossed salads, used in sauces, soups, and omelettes, or prepared as a potherb. The seeds can be parched and ground into a nutritious flour for making gruel or seasoning soups. Eurasia, naturalized in North America. FERNALD, HARRINGTON, H., HEDRICK 1919, KIRK, LAUNERT, NIETHAMMER [Re]; N84, 048

*Sisymbrium sophia* - \**Descurainia sophia*

*Sophia pinnata* - \**Descurainia pinnata*

*Stanleya pinnata* - \**Stanleya pinnatifida*

*Stanleya pinnatifida* - *Prince \*s plume, Indian cabbage* {S}. The tender stems and leaves have a cabbage-like taste and may be prepared in the same manner. They can be quite bitter at first, but boiling in several waters removes the astringency. Seeds are sometimes parched, ground, and made into mush. Western North America. KINDSCHER, KIRK, YANOVSKY; E67TJPL}, G89M{PL}, I98M{PL}, I98M, J25M, L13, N84

*Thlaspi arvense* - *Penny cress, Treacle mustard* {S}. Young leaves and shoots are eaten raw in salads or sandwiches, used in soups, omelettes, and sauces, or cooked as a potherb. The flavor is somewhat like mustard, with a hint of onion. The seeds are used as a mustard-like condiment. Sprouted seeds are occasionally eaten. Eurasia, naturalized in North America. FERNALD, HARRINGTON, H., LARKCOM 1984, LAUNERT; D92M, F85, M34M, N71M, N84, 048, 053M

*Wasabia japonica* - \**Eutrema wasabi*

#### BROMELIACEAE

*Aechmea magdalenae* - *Pingwing, Pita* {PL}. Acid fruits are eaten raw or cooked. They are said to be better when made into beverages. Central America, Tropical South America. DUKE, WILLIAMS, L.; P38

*Ananas comosus* - *Pineapple* {PL}. Ripe fruits are eaten raw, preserved, cooked with ham, candied, used in pies, puddings, ice cream, and sherbets, or made into jams, juice, vinegar, wine, etc. Unripe fruits are eaten raw with hot pepper sauce. Terminal buds are eaten raw, cooked as a vegetable, or put in soups. Flower-spikes are peeled, sliced, and used as a steamed vegetable or added to stews. Young shoots, called *hijos de piha*, are eaten in salads or curries. In the Philippines, the juice is fermented into a sweet, gelatinous dessert called *nata de piha*, which is often added to *halo-halo* (fruit sundaes). The rind of the fruit is made into *chicha de piha, tepache* and other beverages. Source of *bromelain*, an enzyme used commercially in meat tenderizing, modifying bread dough, chillproofing beer, clarifying fruit juices, and in manufacturing sausage casings. Tropical America, cultivated. BENGHIAT [Cu, Re], COLLINS [Cu], DUKE, GELLE [Re], JACQUAT, JOHNS [Cu], LEUNG, MORTON 1987a [Cu, Pro], OCHSE, STEINKRAUS, UPHOF, ZASLAVSKY; G92{DF}, L54{DF}, N84{S}, P38

#### CULTIVARS

**Abacaxi:** (Abbaka, Abbaco) Tall, pyramidal fruits; weight 4 to 5 pounds; very fragrant; white or very pale yellow flesh, juicy, sweet, rich and succulent; nearly coreless. One of the most delicious of all pineapples. Erect, spiny plant; disease resistant; low yielding. Too tender for commercial use. MORTON 1987a; I77G

**Hawaiian Kina:** A lush deep-green, smooth leaved cultivar grown commercially in Hawaii. Plants grow 2 to 3 feet tall at maturity and are covered with large violet blooms on dense spiked heads from January to March. Harvest season is May through September. G17

**Honey Gold:** One of the largest pineapples, often reaching 15 pounds in weight. Has a large base and a narrow crown. Flesh yellow, juicy, moderately acidic, very aromatic, rich in flavor. Plant grows 3 feet tall with a spread of 3 feet. Originated in Hawaii. D57

**Natal Queen:** Medium-sized, conical fruit, weight 1 1/2 to 2 pounds; skin deep yellow, with deep eyes; flesh juicy, crisp, aromatic, of fine, delicate flavor with a small, tender core. Dwarf, compact plant, produces numerous shoots and no slips. Sport of the old Queen cultivar originating in South Africa. COLLINS, MORTON 1987a; T73M

**Red Spanish:** Medium-sized, more or less round fruit, weight 3 to 6 pounds; skin orange-red, with deep eyes; flesh pale-yellow, fibrous, large-cored, aromatic and flavorful. Breaks off easily and cleanly at the base in harvesting; stands handling and shipping well. Highly resistant to fruit rot; subject to gummosis. The most popular cultivar in the West Indies; Venezuela and Mexico. MORTON 1987a; I77G

**Smooth Cayenne:** (Sweet Spineless) Large, cylindrical fruit; weight 4 to 10 pounds; rind orange, eyes shallow; flesh yellow, low in fiber, juicy and rich; flavor excellent, mildly acid. Highly prized for canning. Plant nearly free of spines except for the needle at the leaf tip. Selected and cultivated by the Indians of Venezuela; introduced from Cayenne, French Guyana in 1820. MORTON 1987a; E29, I77G, J81M, N84

**Sugarloaf:** (White Sugarloaf) Fruit more or less conical, sometimes round, not colorful; weight averages 1 1/2 to 3 pounds. Flesh white to yellow, very sweet, juicy. Leaves of the plants and crowns pull out easily. Too tender for shipping. Closely related to Abacaxi. MORTON 1987a; D57, I83M

**Variigated:** An attractive plant with green and yellow striped leaves. When approaching maturity it turns cherry pink at the base of all its fronds. It soon sends up short stalks topped by pale white fruit with flaming red tops. Both the skin and flesh of the ripe fruit is albino white and sweet as honey. E29, G17, H4, I77G, N84

*BromeUa karatas* -+ *Karatas plumieri*

*Bromelia pinguin* - *Pinguin, Pinuela* {S}. When ripe, the pulp of the fruit is acid but makes an excellent refreshing drink. It is also used to make vinegar. The fried inflorescence is eaten in El Salvador. Shoots at the base of the plant are eaten raw or cooked. Sold in local markets. Caribbean region. DUKE, KENNARD, UPHOF, WILLIAMS, L.; A79M, E29{PL}, I74{PL}, N84, P38

*Karatas plumieri* - *Pinuela* {S}. The fruits, raw or cooked, are used in making refreshing beverages called *atol de pinuela* or *atol de pina*. Tender, blanched leaf bases of young shoots are eaten as a cooked vegetable or used in soups, stews, and egg dishes. Young inflorescences are cooked and eaten or used with eggs. Central America. WILLIAMS, L.; N84, P38

*Tillandsia erubescens* - {PL}. The flowers are prized by American Indians for their sweetness. Southern North America. LINSKENS; N84

## BUDDLEIACEAE

*Buddleia asiatica* - *Winter lilac, Sau dau chuoat, Glentud ulangan* {PL}. The root, dried and powdered, is used in the preparation of a fermented liquor. The hill tribes of northern Thailand boil the flowers to make a yellow liquid which is poured over rice as a coloring. Tropical Asia. ALTSCHUL, ANDERSON, E.F., TANAKA; G20, G96, M82, N84{S}, 093{S}

*Buddleia officinalis* - *Butterfly bush* {PL}. Hani people living in mountainous regions of Xishuangbanna, China often collect the flowers and use them for dyeing rice. Eastern Asia. ZAIJU; R77

*Buddleia salviifolia* - *Sagewood* {S}. Fresh or dried leaves are used as a substitute for tea. Southern Africa. FOX, E; N84

## BURSERACEAE

*Boswellia carterii*-*Boswellia sacra*

*Boswellia sacra* - *Frankincense, Olibanum* {DF}. Source of an aromatic resin that is chewed or manufactured into an essential oil used commercially to flavor candy, baked goods, gelatins and puddings, ice cream and soft drinks. Eastern Africa to Southwest Asia. LEUNG, MORTON 1976; E14T, F73D, F86G, GO, H36, L21T, L34, N7D

*Boswellia serrata* - *Frankincense, Indian olibanum tree* {DF}. The flowers and seeds are eaten. Also the source of an edible gum. Southern Asia. MENNINGER, TANAKA, WATT; F37T, GO, K18M, M15M, N7D, Q46{S}

*Bursaria fagaroides* - *Linaloe* {DF}. One of the sources of linaloe wood oil, an essential oil with an agreeable, flowery, rose-like odor used commercially for flavoring baked goods, frozen dairy products, candy, pudding and beverages. Mexico. BURDOCK; A49D, E14T, F73D, N84{S}

*Bursaria simaruba* - *West Indian birch, Gumbo-limbo* {PL}. Leaves are used as a substitute for tea. West Indies. TANAKA; D87G, G73, I12, N84

*Canarium album* - *White Chinese olive, Ch 'ing-kuo* {S}. The fruits, when pickled in salt or preserved in honey, are highly esteemed as a condiment or as a side dish. Often used as a garnish for the southern Chinese dish known as *fried milk*. Also used in wines and liqueurs. Seed kernels are also eaten. Readily available in Chinatown markets. Southeast Asia, cultivated. CHANG, W., PASSMORE, PORTERFIELD, TANAKA; U7N, U71M

*Canarium commune* - *Java almond, Kenari, Galip nut* {S}. The seeds have a rich, pleasant flavor and are eaten in pastries or with rice. In Celebes, they are made into bread. An edible oil is extracted from them. Also used as a condiment. Indonesia, cultivated. HEDRICK 1919, KUNKEL, MENNINGER, OWEN [Re], TANAKA; F85, 019

*Canarium edule*-*Dacryodes edulis**Canarium indicum*-*Canarium commune*

*Canarium odontophyllum* - *Borneo olive, Dabai, Kembayau, Sibul olive* {S}. The blue-black fruits can be eaten raw or used in the same manner as olives. For fresh eating, they are prepared by soaking in hot water for ten minutes until they soften, then eaten with soy sauce or sugar with a meal or as a savory snack. The flavor is unique and the texture thick and oily, like a rich creamy avocado. The rich, nutty kernel is also edible. Produces 70% male trees from seed. Indonesia, Malaysia. ALTSCHUL, TANAKA, TANKARD, TINGGAL; 019

*Canarium ovatum* - *Pili nut* {S}. When roasted, the sweet nuts have a delicious flavor and are served like almonds, or used in confections, preserves, ice cream, and nut milks. In some areas they are used to adulterate chocolate. In the Philippines, they are cooked with sweet potatoes to make *turon*. The oil obtained from the nuts is sweet, and suitable for culinary purposes. Pulp of the fruit is boiled and eaten, pickled, or pressed for its edible oil. It has a tangy, resin-like flavor. Young shoots are eaten in salads. Philippines. CORONEL 1983, GELLE, MENNINGER, O'BOYLE [Re], ROSENGARTEN, UPHOF; A79M, F85, 019

*Canarium schweinfurthii* - *Papo canary tree, Incense tree* {S}. The greenish, oily fruits are eaten in many parts of Africa. They are best softened in warm water before eating. The seeds are occasionally eaten. Also the source of an oil which is a possible substitute for *shea butter*. In Angola the fruit is used as a condiment. Tropical Africa. DALZIEL, DANFORTH, MENNINGER; Y40

*Commiphora molmol* - *Somalian myrrh* {DF}. The bark yields a fragrant, balsam-like gum oleo-resin used by the food industry for flavoring beverages, baked goods, candy, gelatins, meat products, frozen desserts, and chewing gum. Eastern Africa. BURDOCK, LEUNG; A49D, B21P, F73D, F86G, GO, K18M, L34, N7D

*Commiphora mukul* - *Guggul* {DF}. Source of a bitter, pungent resin which is the most important gum used in Ayurvedic tonic formulas. It is often combined with *Triphala* to make *Triphala guggula*. Another well-known restorative formula is *Yogaraj guggula*. Aiaibia to Eastern India. FRAWLEY, TIERRA; F37T, GO, K18M, N7D

*Commiphora myrrha* - *Myrrh* {DF}. Source of a fragrant, pungent gum-resin used commercially to flavor soft drinks and other non-alcoholic beverages, soups, baked goods, gelatins and puddings, candy and chewing gum. Also one of the ingredients of *Swedish biters*, a famous tonic formula. Southwest Asia. KUNKEL, LEUNG, MORTON 1976, TREBEN; E14T, H36, J82

*Dacryodes edulis* - *Bush butter tree, Safii, Eben tree* {S}. The dark purple fruit is eaten raw, roasted, boiled, fried or with curries. When placed in hot water it softens and swells, and all the flesh then slides easily off the seed. It is usually salted and tastes like a warmed ripe avocado, with a slight sour flavor. Has a seven percent protein content, which is very high for a fruit. Tropical Africa. DALZIEL, DANFORTH, HEDRICK 1919, SMITH, N., UPHOF; Y40

*Dacryodes rostrata* - *Pinanasan* {S}. The oblong, smooth-skinned, black or bluish-black fruits are eaten. They have oily, yellowish-purple flesh that is sweet and creamy. In Brunei, they are preserved in salt or soy sauce and eaten as an appetizer with rice or porridge. Similar to the Borneo olive. Malaysia, Indonesia. ALTSCHUL, TINGGAL; F85

## CABOMBACEAE

*Brasenia schreberi* - *Water shield, Junsai* {PD}. Young, curled leaf tips, which are coated with a thick transparent mucilage, are eaten as a salad with vinegar, sake and soy sauce, dressed with vinegared bean cake, pickled, or added to soups as a thickener. Considered a great delicacy in Japan. Often bottled and sold in Japanese and oriental markets. The starchy, tuberous roots may be peeled, boiled and eaten, dried and stored, or ground into flour.

Widespread. FERNALD, GIBBONS 1979, HEDRICK 1919, KIRK, LARKCOM 1991, SHURTLEFF 1975, TANAKA, UPHOF, YASHIRODA [Cui]; G19M, G20M

## CACTACEAE

### *Acanthocereus pentagonus* - \**Acanthocereus tetragonus*

*Acanthocereus tetragonus* - *Barbed-wire cactus*, *Pitahaya* {PL}. The fruit is scarlet, gloss/, round or oblong, about two inches long. Flesh is juicy, red, with numerous small, black seeds. When ripe, the fruit may be eaten raw. Tender stems are cooked and eaten. Central America, Florida Keys. ALCORN, MORTON 1977; B86

*Ariocarpus fissuratus* - *Living rock* {S}. Juice of the plant is used in the preparation of *tesguino*, a slurry-like, alcoholic beverage prepared by fermentation of germinated maize or maize stalk juice. An important beverage of the Tarahumares, Huicholes, Tepehuanos, and other Indian people of Northwestern Mexico. Southwestern North America. STEINKRAUS; F73D, G18, G73, H52, H52{PL}, 133, I81M, K47M, N43M{PL}, N84, Q38, R88, T25M

*Camegiea gigantea* - *Saguaro*, *Giant cactus* {S}. The sweet fruits are eaten raw, cooked, dried, preserved, or made into jam, syrup, refreshing drinks, or a ceremonial wine called *nawait*. Also used for curdling milk. Seeds are ground into flour, used in *atole* and *pinole*, soups, sweetmeats, or made into a buttery paste used on tortillas. Also the source of an edible oil. Southwestern North America. CROSSWHITE [Pre, Re], GUNDA, KIRK, NIETHAMMER [Re], UPHOF; AOM, A69, A79M, B86{PL}, C99{PL}, F80, F89M{PL}, 133, K47M, O53M, T25M

### *Cereus dasyacanthus* - *Echinocereus dasyacanthus*

#### *Cereus engelmannii* - *Echinocereus engelmannii*

*Cereus hexagonus* - *Cierge pascal* {S}. Fruits are pale red, thick-rinded, and have white or pinkish pulp and black seeds. They may be eaten out of hand and parts of the stems can be used as a vegetable. Caribbean region. BRITTON 1937, KUNKEL, ZEVEN; F85, 133, Q41, R88

*Cereus jamacaru* - *Jamacaru* {S}. The large, bright red fruit has white, edible pulp and is usually eaten out of hand. Stems are sometimes used as a vegetable. Brazil. BRITTON 1937, CORREA; B84{PL}, B86{PL}, 133, N84, P38{PL}, Q41, R88, T25M

*Cereus pernambucensis* - *Jumbaba* {S}. Fruits are narrowly oblong, purplish red, and when mature they split on one side exposing the white, edible pulp and black seeds. Brazil to Paraguay. BRITTON 1937, TANAKA; F85, 133

*Cereus peruvianus* - *Pitahaya* {S}. The fruits are pinkish-red, with a white pulp that is juicy, sweet, somewhat aromatic, and much appreciated. David Fairchild recommended freezing thin slices of the fruit after they had been sprinkled with sugar and lime juice. The peel of the fruit can be candied. Young stems are sometimes eaten. Commonly cultivated as an ornamental in California, Florida, and Hawaii. Cultivated. KUNKEL, MORTON 1987a, TATE [Re]; A69, F53M{PL}, 133, K47M, N84, P38{PL}, Q41, T25M

### *Cereus variabilis* - *Cereus pernambucensis*

#### *Coryphantha arizonica* - *Coryphantha vivipera* var. *arizonica*

*Coryphantha vivipera* var. *arizonica* - *Sour cactus* {S}. The pleasantly sour fruits were gathered by the Navajo Indians, dried in the sun, and used like dried currants. Southwestern North America. TATE; C98M{PL}, F89M, 133, Q38, Q41, R88

*Cylindropuntia fulgida* - *Chain-fruit cholla* {PL}. Juicy fruits are eaten raw, or made into jellies or refreshing beverages. A gummy sap that exudes from the cut stems can be eaten raw, boiled, roasted, or mixed with water to form a beverage. Southwestern North America. FELGER 1985, NOBEL, TANAKA; C99, H52, N84{S}, R88{S}

*Cylindropuntia imbricata* - *Cholla*, *Walking-stick cactus* {S}. Unopened flower buds are boiled or steamed and then added to stews, tossed salads or potato salads. When dried they are less mucilaginous. The fruit is eaten raw or cooked in New Mexico and Arizona. Southwestern North America. NIETHAMMER [Pre, Re], YANOVSKY; A69, C98M, C99{PL}, F85, H52, H52{PL}, H60{PL}, 133, M16{PL}, N51{PL}, N84, Q41

*Echinocactus grandis* - *Barrel cactus* {S}. The candied pulp of the stems, called *acitron* or *cubiertos de biznaga*, is eaten as a sweet, or used to flavor meat hash or desserts. Mexico. LATORRE 1977a [Pre, Re], VON WELANETZ; H52{PL}, 133, Q38, Q41

*Echinocactus horzontbalonium* - *Manca caballo* {S}. The fruits are sliced, candied, and sold as confections. Pulp of the stems is used in making sweetmeats. Southwestern North America. TATE, UPHOF; A69, C98M{PL}, C99{PL}, H52, 133, N84, Q38, Q41, R88

*Echinocactus ingens* - *Biznaga* {S}. The pulp of the stems is used in sweetmeats. Fleshy parts are eaten in salads. Mexico. BRITTON 1937, KUNKEL; AOM{PL}, A69, B86{PL}, H52{PL}, 133, K47M, N51{PL}, Q38, Q41, R88

*Echinocactus platyacanthus* - *Barrel cactus* {S}. The stem is cut into pieces and boiled with both white and brown sugar until it crystallizes. The resultant cactus candy is eaten as is or added to pastries, cakes and sweet tamales. Mexico. NOBEL; H52{PL}, N84, Q41, R88, T25M

### *Echinocactus viridescens* - *Ferocactus viridescens*

#### *Echinocactus wislizenii* - \**Ferocactus wislizenii*

*Echinocereus conglomeratus* - *Alicoche*, *Pitahaya de Agosto* {S}. The somewhat acid fruits are eaten. Mexico. BRITTON 1937, UPHOF; A69, B84{PL}, 133, K47M, Q38, Q41

*Echinocereus dasyacanthus* - *Chihuahua* {S}. The fruit is small, greenish-purple, rich in sugar, and when fully ripe is delicious to eat, much like a gooseberry. Southwestern North America. HEDRICK 1919, YANOVSKY; A69, B84{PL}, C99{PL}, H52, H52{PL}, 133, K47M, N51{PL}, Q38, Q41, R88

*Echinocereus engelmannii* - *Indian strawberry* {PL}. Fruits are eaten fresh, served with cream and sugar, or cooked into conserves, jams, and sauces. They are said to have a delicious strawberry-like flavor. Southwestern North America. HEDRICK 1919, TANAKA, TATE; A69, B84, C98/S, C99, G94, H52, I33{S}, Q38{S}, Q41{S}, R88{S}

*Echinocereus enneacanthus* - *Strawberry cactus* {S}. Fruits are eaten fresh or preserved. The flavor of the fruit is so much like strawberries that preserves made from them cannot be distinguished from strawberry jam. Southwestern North America. BRITTON 1937, TATE; A69, B84{PL}, C98M{PL}, G91M{PL}, H52{PL}, 133, N51{PL}, Q41, R88

*Echinocereus stramineus* - *Mexican strawberry* {S}. The red fruits have a pleasant strawberry-like flavor and are usually eaten raw. Southwestern North America. YANOVSKY; A69, B84{PL}, C98M{PL}, C99{PL}, H52, H52{PL}, 133, Q38, Q41, R88

*Echinocereus triglochidiatus* - *Red hedgehog-cactus* {S}. Bright red fruits are eaten fresh or made into preserves. The fruit pulp is sliced and baked like squash, or made into a sweet pickle by baking it in sugar. Southwestern North America. UPHOF; AOM{PL}, A26, C99{PL}, F44M{PL}, F73D, G73, H52{PL}, 133, I81M, J25M, N84, Q38, Q41, R88

*Escontria chiotilla* - *Chiotilla* {S}. Purple, fleshy fruits are eaten fresh or are used in marmalade and ice cream. Sold in the market at Tehuacan under the name of *geonilla* and *tuna*. The dried fruit is said to have the flavor of gooseberries. Mexico. BRITTON 1937, NOBEL; A69, H52{PL}, N84, Q41

*Espositoa lanata* - *Cotton ball*, *Peruvian old man* {PL}. Sweet, juicy fruits are white with pinkish scales and are eaten raw. They are called *soroco* in southern Ecuador. Ecuador, Peru. BRITTON 1937; AOM, B84, B86, C99, H52, H52{S}, I33{S}, 053M{S}, Q38, Q38{S}, Q41{S}, R88{S}, T25M{S}

*Ferocactus acanthodes* - *Barrel cactus* {S}. The fruit is eaten raw, dried, or made into a syrup which is then fermented into an alcoholic beverage. A potable sap is obtained by scooping out the pulp from the stem and squeezing out the juice. Pulp of the stems is also used to make cactus candy. Seeds are ground and made into a meal-cake. Flower buds are cooked and eaten. Southwestern North America. CLARKE, KIRK, TANAKA, TATE [Re]; A69, C98, C99, F85, 133, 198M{PL}, K47M, Q41, R88, T25M

*Ferocactus hamatacanthus* - *Hamatocactus hamatacanthus*

*Ferocactus histrix* - *Mexican barrel cactus* {PL}. Fruits are eaten raw or their juice is extracted and used for making popsicles, marmalades, syrups and wine. The water-storage tissue of the plant is cut into pieces and boiled with sugar until it crystallizes. The resultant barrel cactus candy is eaten as is or used in pastries, cakes and sweet tamales. Commonly sold in markets. Mexico. NOBEL; A69{S}, B84, H52, N84{S}, Q38{S}, R88, T25M

*Ferocactus viridescens* - *Coast barrel cactus* {S}. Reddish fruits are pleasantly acid, somewhat resembling the taste of a gooseberry and are usually eaten fresh. Flower buds are eaten cooked. Southwestern North America. HEDRICK 1919, TATE; A0M{PL}, A69, B84{PL}, C99{PL}, F85, G91M{PL}, H52{PL}, 133, 198M{PL}, K47M, N84, R88, T25M

*Ferocactus wislizenii* - *Arizona barrel cactus*, *Bisnaga* {S}. The pulp of the stems is watery, slightly acid, and is used to quench the thirst. Pieces of it, soaked in syrup or sugar and dried, resemble candied citron in taste and texture. Seeds are parched, ground and used for bread and gruel. The flower buds or *cabuches* are pickled and served as an appetizer. They are occasionally available at specialty markets. The sour fruits are eaten. Southwestern North America. FELGER 1985, HEDRICK 1919, NIETHAMMER [Re], QUINTANA 1986 [Re], TATE; A69, C99{PL}, H52{PL}, 133, K47M, L55J, N84, Q41, R88, T25M

*Hamatocactus hamatacanthus* - *Turk's head*, *Lemon cactus* {S}. In some parts of Mexico, the fruits are used as a substitute for lemons in giving an acid flavor to drinks, pies, or cakes. The fruit is dried and eaten as a sweetmeat. Unopened flower buds are delicious soaked in water overnight and boiled or fried. They taste like artichokes. Southwestern North America. TATE, UPHOF; AOM {PL}, A69, B84{PL}, G91M{PL}, H52, H52{PL}, 133, K47M, Q38, Q38{PL}, Q41, R88

*Hylocereus guatemalensis* - *Guatemalan pitahaya* {PL}. The fruits are eaten. They are deep purplish red and juicy. Guatemala. UPHOF; G18

*Hylocereus ocamponis* - *Pitahaya roja* {PL}. The skin as well as the sweet pulp of the fruit are a wine-red color. Usually eaten out of hand. Also grown as an ornamental hedge plant. Central America to Colombia. MORTON 1987a, PEREZ-ARBELAEZ, ZEVEN; G18, P38

*Hylocereus polyrhizus* - *Pitahaya* {S}. Red, thick-skinned fruit has pulp that is white or sometimes pinkish, and a sweet and pleasant flavor. It is used in making *refrescos*, or eaten out of hand. Has potential for large scale commercial plantings. Panama to Colombia. NOBEL, POPENOE, W. 1924; F85

*Hylocereus triangularis* - *Selenicereus megalanthus*

*Hylocereus undatus* - *Night-blooming cereus*, *Strawberry pear*, *Pitahaya* {PL}. Sweet, juicy fruits are eaten out of hand, in cooling drinks, sherbets, preserves, etc. A syrup made of the whole fruit is used to color pastries and candy. The unopened flower buds are cooked and eaten. In Jamaica, they are called *byne spear* and in some areas are used like okra in the famous *peppercot* stew. Also grown as

an ornamental for its fragrant night-blooming flowers. Hand pollination is recommended for good fruit production. Cultivated. MORTON 1987a, POPENOE, W. 1924, TATE [Re], WALSH [Cul, Re]; AOM, F85{S}, 183M, P38, Q41{S}

*Lemaireocereus chichipe* - *Chichipe* {S}. The edible fruit is red both within and without, and is sold in the Mexican markets. Like many other Mexican cactus fruits, it has a name different from that of the plant—it is called *chichituna*. Mexico. BRITTON 1937; A69, K47M, N84, Q38, Q41, T25M

*Lemaireocereus queretaroensis* - *Pitahaya* {S}. When fully ripe the edible fruit is deep red. The flesh is dark red to purple and has a sweet delicious flavor. Cultivated in Jalisco, Michoacan, and Queretaro. Mexico. NOBEL, POPENOE, W. 1924; A69

*Lemaireocereus schottii* -> *Lophocereus schottii*

*Lemaireocereus stellatus* -\* *Stenocereus stellatus*

*Lemaireocereus thurberi* -\* *Mars hallo cereus thurberi*

*Lophocereus schottii* - *Senita* {S}. The small red fruits are eaten fresh. Southwestern North America. FELGER 1974, UPHOF; A69, A79M, B84{PL}, C98, F85, G18{PL}, 133, 181M, K47M, Q38, Q41, R88

*Machaocereus gummosus* - *Pitahaya agria*, *Creeping devil* {S}. The fruit is much relished for its sweet but tart flavor. It may be eaten fresh, dried, or made into unsweetened jams. Mexico. FELGER 1974, TATE [Re], UPHOF; N84, R88

*Mammillaria mammillaris* -+ *Mammillaria simplex*

*Mammillaria meiacantha* - *Viejito* {S}. The oblong, scarlet fruits are very good to eat. Southwestern North America. HEDRICK 1919; C98M{PL}, C99{PL}, H52, H52{PL}, 133, Q38, Q41

*Mammillaria simplex* - {S}. Fruits are edible. The plant is said to yield a milky juice that is sweet and wholesome. Northern South America. HEDRICK 1919; N84, Q38, Q41

*Marshallocereus thurberi* - *Organ-pipe cactus*, *Pitahaya dulce* {S}. The fruits are large, sweet, and delicious. They are eaten fresh skin and all, dried, or made into wines and syrups. They are sometimes combined with prickly pears to make a candy called *dulce pitahaya*, or made into a jam that is served as a topping for the Mexican custard *flan*. Seeds are dried and powdered into meal. The petals are also eaten. Southwestern North America. FELGER 1974, TATE, YANOVSKY; A0M{PL}, A69, A79M, B84{PL}, 133, 181M, N84, Q38, Q41, R88, T25M

*Melocactus communis* - *Melon cactus* {S}. The small fruits are eaten. The juice of the plant is used to quench thirst. Central America, Caribbean region. BRITTON 1937, HEDRICK 1919, TANAKA; F85, Q41

*Myrtillocactus geometrizans* - *Garambullo*, *Blueberry cactus* {S}. Small, bluish-purple fruits are eaten fresh as a dessert, resembling blueberries in flavor. The dried fruits are similar to raisins in appearance and are used in much the same way. The flowers are often eaten raw in salads or cooked with eggs. Cultivated in central Mexico for its fruit. Central America. BRITTON 1937, HEGYI, NOBEL; A0M{PL}, A69, F85, G18{PL}, H52{PL}, 133, 174{PL}, K47M, N84, Q38, Q41, R88, T25M

*Neocardenasia herzogiana* - *Kalapari*, *Carapari* {S}. The fruits are eaten. They have smooth, pinkish pulp with a delicious flavor reminiscent of pineapple and strawberry. Said to be the finest tasting cactus fruit. Andean region. CARDENAS, WINTER; A0M{PL}, A69, 133, N84, Q38, Q38{PL}, Q41, R88, T25M

*Nopalea cochenillifera* - *Nopal* {PL}. The fruits are eaten or made into candy. Young joints are pickled. One of the host plants for the insect that produces *cochineal*, a reddish dye used as a colorant for meat products, soft drinks, Easter eggs, baked goods, shrimp, *Snapple*, and liqueurs such as *Campari* and *Al Kermes*. Mexico.

BURDOCK, HANNEMAH NEWALL, NOBEL, TANAKA, TOOMRE [Re], WILSON, C.; H52

*Opuntia basilaris* - *Beavertail cactus* {PL}. Unripe fruits are boiled or baked to the consistency of applesauce. Ripe fruits are eaten raw, dried, or made into syrup or jam. The syrup can be used to flavor candy, sauces, ice cream, and other dishes calling for fruit. Young pads are sliced and substituted for green beans in stews and other dishes. Flowers and flower buds are cooked and eaten. Southwestern North America. CLARKE [Re], YANOVSKY; AOM, C98, C99, F89M, G18, H52, H60, I98M, I98M{S}, N84{S}, R88{S}

*Opuntia compressa* - *Opuntia vulgaris*

*Opuntia dillenii* - *Dillen prickly-pear* {S}. Fruits are insipid but very juicy, and are eaten raw or made into syrup, jam or jelly. Young joints are cut into pieces and boiled, or dried in the sun for future use. Florida, Caribbean region. MORTON 1977, PARMAR, C; F85, Q41, Q46

*Opuntia ficus-indica* - *Prickly pear, Indian fig, Tuna* {PL}. Sweet, juicy fruits are very refreshing, the best ones being much like watermelons. They are very good chilled and eaten out of hand, the seeds simply swallowed. Also used in ices, jams, tarts, cakes, drinks, *Sabra* liqueur, etc. The fermented pulp is mixed with flour and nuts to form the festive Italian biscuit *mostaccioli di fichi d'India*. Young pads, called *nopalitos*, are boiled and used like snap beans in salads, soups, omelettes, or pickles. In Japan they are made into *narazyke*, *saboran*, and *saboten glace*. Part of the traditional diet of the Majorcan black pig, the prickly pears adding a distinctive flavor to the famous sausages made from this breed. A host plant of the *cochineal* insect. Cultivated. BROWN, G., CARTER, GRAY, P. [Cul], HALPIN [Cul], NOBEL, POPENOE, W. 1920, RAY, C, SCHNEIDER 1986 [Cul, Re], SIMMONS 1972 [Cu], TATE [Re]; B86, C89{PR}, F43M, H52{S}, K47M{S}, L15M{ED}, M16, N40{PD}, N84{S}, 053M{S}, Q41

#### CULTIVARS

**Burbank's Spineless:** (Spineless, Thornless) Some have sweet fruit, others can be used for their pads which do not require despinning. Many cultivars of spineless, or nearly spineless cactus were developed by Luther Burbank. Unfortunately, most of those named and released have been lost and the generic name Burbank's Spineless has become widely used. D33, G17,174

**Honeydew:** Pale lime-green fruits, about 3 to 4 inches long; kiwi-green inside and out; has a hint of a honeydew-like flavor. Fruits hang on the plant for a couple of months after ripening, when they develop a rosy-pink blush. Vigorous, large spineless pads. 174

**Papava:** Large, oval fruits, about 3 to 4 inches long resemble a papaya in color and taste. Fruits turn from pink to deep sherbet-orange when ripe, inside and out. Vigorous, tall growing plant, to 8 feet; large edible pads. Rose-like flowers. 174

*Opuntia fulgida* - \**Cylindropuntia fulgida*

*Opuntia humifusa* - *Devil's tongue, Western prickly-pear* {PL}. The fruit has purplish pulp that is somewhat acid or sweetish. It is eaten raw, roasted, stewed, or dried for later use. Young joints are roasted and eaten. North America. HEDRICK 1919, MEDSGER; C99, E30, E61, F43M, F89M, G91M, H61M{S}, I33{S}, L22, M16, N9M, N9M{S}, N84{S}, Q41{S}

*Opuntia imbricata* - *Cylindropuntia imbricata*

*Opuntia leucotricha* - *Duraznillo* {S}. Aromatic, white or red fruits are eaten raw or made into a fermented beverage, *colonche*. The custom of making this beverage is said to be more than two thousand years old. Mexico. STEINKRAUS, UPHOF; N84, Q41

*Opuntia lindheimeri* van *linguiformis* - *Opuntia linguiformis*

*Opuntia linguiformis* - *Cow's tongue, Lengua de vaca* {S}. Fruits are used in making ^rup or jelly. Southwestern North America. TATE [Re]; A69, B86{PL}, 133, K47M, N84, Q41

*Opuntia megacantha* - *Mission tuna, Nopal* {S}. Widely cultivated for the fruits from which some of the best edible tunas are derived. They are eaten raw or made into various products. *Queso de tuna* is composed of the dried fruits pressed into large, thick cakes. *Miel de tuna* is the name given to a syrup prepared from the fruits, and the taffy that forms when the syrup cools. *Melcocha* is a thick paste or jelly made from the boiled juice. *Colonche* is boiled and fermented juice. *Nochote* is fermented tuna juice, *pulque*, and water. Tender, young joints are used as a vegetable. Cultivated. LATORRE 1977a, NOBEL, TATE [Re], UPHOF; F85, Q41

#### CULTIVARS {PL}

**White:** Extra-large fruits of commercial quality; whitish-green skin and light green pulp. Large pads with very small spines. Young pads can be sliced, boiled and seasoned like snap beans or okra. 174

*Opuntia phaeacantha* - *Bastard fig* {S}. Juicy fruits are eaten raw, dried, pickled, made into jelly, or baked with sugar, butter, cinnamon, and lemon juice. The seeds are dried, parched, and ground into a meal for use in gruel and cakes. Young stems are boiled or roasted and then used like green beans with scrambled eggs. North America. HARRINGTON, H., TATE [Re]; A69, C99{PL}, F80, F89M{PL}, H52{PL}, H60{PL}, 133, M16{PL}, N84, Q41, R88, T25M

*Opuntia polyacantha* - *Many-spined opuntia* {S}. Fruits are eaten raw, or dried for future use. The dried fruits can be mixed into stews or used to thicken soups. Young joints are boiled and added to salads or fried. Western North America. HART, KAVASCH [Re]; C98M{PL}, C99{PL}, F89M{PL}, H52{PL}, H60 {PL}, 133, K47M, M16{PL}, N84, Q41

*Opuntia pottsii* - *Prickly pear* {PL}. The Hopi Indians take the stems, spines and all, boil them and squeeze out the juice, and mix it with commeal used in making *torillas*. It acts as the white of an egg does in making the meal more cohesive. Southwestern North America. TATE; H52

*Opuntia rafinesquii* - *Opuntia humifusa*

*Opuntia robusta* - *Dinner plate* {S}. Fruits are eaten raw, pureed, or made into jellies, jams, pies, gelatin desserts, sherbets, syrups, or *colonche*, a fermented drink. Wine made from the fruit is later distilled into a type of biandy. One of the primary species used for *nopalitos*, young joints which are cooked with onions, peppers, cheese, eggs, and spices and used as fillings for tacos and other dishes. Marinated *nopalitos*, eaten as hors d'oeuvre, in salads or cooked with other foods, are widely available in Mexican stores. Mexico. STEINKRAUS, NOBEL, TATE [Re]; F85, G91M{PL}, L55J, N84, Q41

*Opuntia soehrensii* - *Ayrampo* {S}. The dried seeds, when placed in water, yield a brilliant clear violet dye which is used for coloring jellies, gelatine; wines and *chicha*. Available in local markets. The small fruits are occasionally eaten. South America. BRITTON 1937, KUNKEL; L3J

*Opuntia streptacantha* - *Tuna cardona* {S}. Fruits are eaten raw, used in the preparation of sweetmeats, made into *colonche*, a sweet alcoholic beverage, or distilled into a type of biandy. One of the primary species used for the production of *queso de tuna*, sweet brown brick-like cakes made by boiling down the pulp of the fruit. Whole fruits are often hung on strings to dry, after which they become coated with a sweet sticky juice. One of the primary sources of *nopalitos*, young pads which are sliced or diced and used as a vegetable. Mexico. KUNKEL, NOBEL, STEINKRAUS, TATE; F85

*Opuntia tenuispina* - *Prickly pear* {S}. The fruits are said to make the best cactus wine. The juice is allowed to stand until the wine thickens and sours to taste. It is then bottled and capped. This makes a delicious, cooling summer drink. Southwestern North America. TATE; F85

*Opuntia tomentosa* - *Tree pear* {S}. Fruits are eaten raw or made into jams and jellies that have a flavor rather like that of guava jelly.

A succulent cactus chutney is made by mixing the fruit with raisins, apples, onions, lemon peel, dates, sugar, vinegar, and spices. One of the host plants for the *cochineal* insect. Mexico, cultivated. CRIBB, NOBEL, TATE [Re]; Q41

*Opuntia tuna* - *Tuna, Nopal, Panini* {S}. The sweet, juicy fruits are delicious to eat out of hand. Also used in ices, jams, jellies, cakes, muffins, ice cream, sauces, compotes, wine, or to color beverages and confectionery. Half-ripe fruits, when dried, have the flavor of dried green apples. Tender pads are boiled and then used as a substitute for string beans in soups, stews, omelettes, fritters, souffles, casseroles, stuffings, etc. Jamaica, cultivated. GIBBONS 1967 [Re], TANAKA, TATE [Re]; F85, L55J, N84, Q41

*Opuntia vulgaris* - *Eastern prickly-pear* {PL}. Fruits are eaten raw, stewed, or dried for later use. Unripe fruits and tender, young joints can be added to soups and stews and will impart an okra-like mucilaginous quality. Cultivated, naturalized in North America. GIBBONS 1964, MEDSGER; B61M, B61M{S}, C99, H60, H70M, 174, J48, L3J{S}, M16

*Opuntia* sp. - *Supra nopalito* {PL}. The completely spineless pads are used as a vegetable, being especially thin and succulent. They are about six inches long and have an attractive deep forest-green color. Discovered by Kima Joseph. 174

*Pachycereus pecten-aboriginum* - *Cardon hecho hecho* {S}. Seeds are ground into a meal that is made into cakes, eaten by Indians and Mexicans. Mexico. The fruits are also edible. NOBEL, UPHOF; A26, A69, C98, F73D, F80, G73, G73{PL}, 133, 181M, N84, Q41, R88

*Pachycereus pringlei* - *Cardon* {S}. The ripe fruits are eaten raw or made into a refreshing drink. Pulp of ripe and unripe fruits are mixed together, mashed and kneaded and the juice poured off, and the resulting sticky mixture is made into cates and dried. Toasted seeds are ground into an oily paste, formed into balls, and eaten with salt. It tastes something like sesame butter, only better. The flowers are eaten fresh. Mexico. FELGER 1974, TATE; A0M{PL}, A69, B86{PL}, C95, C98, G73, H52{PL}, 133, N84, Q41, R88

*Peniocereus greggii* - *Deerhorn cactus* {S}. Bright scarlet, fleshy fruits are eaten raw, cooked, or made into jam. The tubers are parboiled, dipped in batter, and made into fritters. In Louisiana, they are roasted in ashes in a fireplace. They can also be cut into small strips, soaked in cold water for thirty minutes, drained and dried, and then deep fried. Southwestern North America. HEDRICK 1919, KUNKEL, TATE [Re]; A69, F85, G91M{PL}, 133, I57{PL}, 174{PL}, K47M, N84

*Pereskia aculeata* - *Barbados gooseberry, Lemon vine, Blade apple* {PL}. Fruits are juicy, somewhat acid, occasionally eaten raw but usually stewed or made into jam and preserves. The succulent leaves and young shoots can be used as a substitute for purslane in salads, marinades and cooked dishes. Tropical America, cultivated. MORTON 1987a, OCHSE, TATE, UPHOF; E29, E48, G18, H4, 183M, N7J, N84, P38

*Polaskia chichipe* - *Lemaireocereus chichipe*

*Rhypsalis cassutha* - *Mistletoe cactus* {S}. The edible fruits are produced in great numbers. They are soft, juicy and sweet, like small grapes. Cultivated. HEGYI; F85

*Selenicereus megalanthus* - *Pitahaya amarilla* {PL}. The fruits are eaten out of hand. Some varieties have thin peels and an extremely delicious flavor. Cultivated commercially in Columbia and Israel where selections have been made for various color combinations—such as fruits with yellow or red skin and white flesh, red skin and red flesh, and yellow skin and yellow flesh. Tropical America. NOBEL, PEREZ-ARBELAEZ; M17

*Stenocereus stellatus* - *Jocostle* {S}. The spiny red fruit is eaten, either fresh or dried. It is said to make the most delicious of all cactus jams. In Mexico, it is used as the filling for small turnovers which are served hot with local goat cheese. The juice of the

fruits is used in preparing *colonche*, an alcoholic beverage. Seeds, stems and flowers are occasionally eaten. The flower buds are parboiled, then fried with eggs or prepared with onions and vinegar. Mexico. CASAS 1997, KRAIG [Re], TANAKA, TATE; A69, B84{PL}, H52{PL}, 133, N84, Q38, Q41

*Trichocereus chiloensis* - *Cardon de candelabro, Quisco* {S}. Fruits are eaten raw or processed into a brandy and a syrup. Chile-Argentina. UPHOF, VALENZUELA; G73, H52, 133, Q38, Q41, R88

*Trichocereus spachianus* - *Torch cactus* {S}. Fruits are eaten raw or used in ice cream and sherbets. The new tender shoots, peeled and diced, may be added to a vegetable salad or boiled and served with butter. Argentina. KUNKEL, TATE; A0M{PL}, A26, A79M, B84{PL}, F73D, G18{PL}, 133, K47M, N84, Q38, Q41, R88

#### CAESALPINIACEAE

*Bauhinia carronii* - {S}. The white flowers secrete a considerable quantity of nectar. Australian Aborigines sucked this nectar directly from the flower or washed it out with water. Australia. CRIBB, DONKIN; P38, R33M

*Bauhinia esculenta* - *Tylosema esculentum*

*Bauhinia hookeri* - *Mountain ebony* {S}. Flowers produce a considerable quantity of nectar. This can be sucked directly from the flower, or washed out with water and used as a beverage or for sweetening. Australia. CRIBB; G73, P5, P17M, P38, Q46, R33M

*Bauhinia malabarica* - *Amli, Bentjuluk, Alibangbang* {S}. The young leaves are sour and are eaten raw as a side-dish with rice, or as a lime-like flavoring for meats, fish and hot and sour soups. Young shoots are used as a vegetable. Tropical Asia. JACQUAT, OCHSE, TANAKA, UPHOF; F85, Q12, Q18, Q46

*Bauhinia purpurea* - *Camel's foot tree, Deva kanchan, Koiralo* {S}. Flowers and flower buds are cooked and eaten as a potherb, used in curries, or pickled. In Nepal, they are often cooked with potatoes, spices and tomatoes. Leaves are also edible. Tropical Asia. MAJUPURIA [Re], MARTIN 1975, TANAKA; A79M, C9M, F80, F85, G66, 174, K38, N84, P5, P38, Q12, Q15G, Q18, Q32, Q46, R33M, etc.

*Bauhinia racemosa* - *Kachmal, Burmese silk orchid* {S}. Leaves are pickled. Seeds are also edible. Southeast Asia. KUNKEL, WATT; F80, F85, G73, N84, P5, P17M, Q12, Q18, Q32, Q41, Q45M, Q46

*Bauhinia retusa* - *Semla* {S}. A clear gum, resembling *gum arabic*, is collected by making cuts in the bark and used in sweetmeat manufacture. Himalayan region. TANAKA; G73, N84, P5, P17M, P38, Q12, Q18, Q32, Q41, Q45M, Q46

*Bauhinia tomentosa* - *St. Thomas tree, Kipu-kupu* {S}. Young, sour leaves are eaten as a vegetable with rice, added to soups, or used as a flavoring for other foods. Seeds are eaten. Tropical Asia. HEDRICK 1919, OCHSE; A79M, F85, H4{PL}, N84, P5, P38, Q46, R33M, S28M

*Bauhinia variegata* - *Mountain ebony, Kanchanar, Kurol* {S}. Young leaves, young pods, and flowers are eaten as a vegetable. Flower buds are pickled. The seeds are also much appreciated. Tropical Asia. HEDRICK 1919, KUNKEL, TANAKA; F85, G66, 183M{PL}, N84, 093, P5, P17M, Q12, Q18, Q46, R60

*Caesalpinia gilliesii* - *Bird of paradise tree* {S}. Flower stamens are used to adulterate saffron. Brazil to Argentina, cultivated. CORREA; A79M, C9M, F63M, 133, 183M{PL}, K38, L13, N37M{PL}, N84, 053M, P5, P17M, R33M

*Caesalpinia pulcherrima* - *Peacock flower, Pride of Barbados* {S}. Young seeds, having a sweetish flavor, are eaten fresh or cooked. Flowers are cooked and eaten. Tropics, cultivated. PONG-PANGAN, TANAKA; A79M, C9M, F63M, F80, 133, 183M{PL},

L13, N84, 053M, P5

*Cassia auriculata* - *Tanner's senna*, *Ranawara*, *Matar tea* {S}. Young leaves, pods and flowers are occasionally eaten. Dried flowers are used as a coffee substitute, while the dried leaves are used as tea. Tropical Asia. MACMILLAN WATT; F85, N84, P5, P17M, Q12, Q18, Q46, R88

*Cassia bicapsularis* - *Wild currant*, *Cafe de pobre* {S}. The pulp of the fruit is sweet and edible with somewhat the flavor of tamarind. Toasted seeds are used as a coffee substitute. Tropical America. DUKE, WILLIAMS, L.; F85, H4{PL}, H14M{PL}, H71, N37M, N79M, N84, 093, P17M, P38, Q32, S92

*Cassia fistula* - *Golden shower* {S}. Flowers are edible. Leaves and fruits are also eaten, however they act as a mild laxative. Southern Asia, cultivated. CRIBB, DUKE, MARTIN 1975; A41M, A79M, C9M, D56M, F80, N84, 094, P5, P17M, P38, Q12, Q18, Q32, R33M, S92

*Cassia floribunda* - *Smooth senna*, *Tajumas* {S}. The steamed young shoots and leaves are eaten as a potherb or cooked in soups and stews. Unripe seeds are cooked or roasted and eaten as a side-dish with rice. Seeds are used as a coffee substitute in some parts of Guatemala. Tropical America, cultivated. OCHSE, UPHOF; F85, JO, N84, 093, P5, P17M, Q12, Q18, R33M

*Cassia grandis* - *Pink shower*, *Stinking toe* {S}. The malodorous, sugary pulp of the fruit is eaten although it can be purgative if eaten in excess. Tropical America. DUKE, WILLIAMS; A79M, D92M, F80, N84, 093, P5, P17M, Q12, Q18, Q32, Q45M, Q46, R32, R33M, R88

*Cassia laevigata* - *Cassia floribunda*

*Cassia obtusifolia* - *Sicklepod*, *Ebisu-gusa* {S}. The leaves are used as a vegetable. In the Sudan, they are fermented into a high protein (20%) meat substitute and extender called *kawal*. A pale yellowish juice that accumulates during the fermentation process is skimmed off and made into a stew with okra, beef jerky, and salt. Seeds are used as a tea substitute. Tropics. DIRAR 1984, DIRAR 1993 [Nu], TANAKA; F85, M34M, N84, Q12

*Cassia occidentalis* - *Coffee senna*, *Kasamaidah* {S}. Young leaves, unripe pods, and flowers are eaten as a steamed vegetable. A traditional coffee substitute, *Magdad coffee* or *Florida coffee*, is prepared from the roasted seeds. Also used in *Raja's Cup*, an Ayurvedic coffee substitute. Tropics, naturalized in Southern North America. DUKE, FERNALD, MEDSGER, OCHSE; F15M{PD}, F85, H14{PD}, M7M, N79M, N84, P5, P17M, R33M

*Cassia siamea* - *Cassod tree* {S}. The young leaves and flower buds are eaten in curries, after having been parboiled two or three times to reduce their bitterness. Indonesia, cultivated. BURKILL, JACQUAT, TANAKA; C9M, F85, N79M, N84, 093, P5, P17M, Q12, Q18, Q32, Q46, R33M

*Cassia tomentosa* - *Alcaparro* {S}. Tender pods, leaves, and flowers are eaten as a vegetable. Buds are used as a caper substitute. Tropics. DUKE, MACMILLAN; D92M, F85, H71, 093

*Cassia tora* - *Sickle pod*, *Sickle senna*, *Coffee weed* {S}. Young leaves and shoots are steamed as a potherb or cooked and eaten with rice. They contain about 6% protein. The seeds, roasted or cooked in the pod, are eaten as a side-dish at the rice table. Roasted seeds are also used as a coffee substitute. Tropics. DUKE, JACQUAT, OCHSE; B49, F85, J82, Q12, Q18

*Ceratonia siliqua* - *Carob*, *St. John's bread*, *Locust bean* {S}. Pods are sweet, rich in sugars and protein, and somewhat fibrous. They are sometimes eaten as a sweetmeat, but are usually made into a molasses or syrup called *pasteli* or *dibs el kharoub*, alcoholic beverages, or ground into powder. Carob powder is used as a chocolate substitute in drinks, cakes, candies, baked goods, etc. *Locust bean gum* or *tragasol*, extracted from the seeds, is used to thicken sauces, pickles, salad dressings and ice cream. Roasted seeds

are used as a coffee substitute. Cultivated. COIT, CUSUMANO [Cul, Re], DAGHER, GOULART [Nu, Re], HEDRICK 1919, MORTON 1987a, UPHOF; A7{DF}, A79M, C9M, D95{PL}, F97M{PD}, K370{DF}, K38, K63G, L50M{PD}, N84, 053M, S92

#### CULTIVARS {GR}

**Casuda:** Medium-long, flat fruit, 5 to 7 inches in length and about 1 inch wide; of a dark brown color; sugar content about 50%, protein about 5%, quality very good; not susceptible to worms. Tree a good bearer. In California best adapted to foothill areas, but also does very well in the desert. Originated in Valencia, Spain. THOMSON 1971; U26{SC}

**Santa Fe:** Large, slightly curved fruit, up to 7 inches long; skin thin, light brown; good sugar content, 47.6%, flavor very good; usually harvested during September and the first 10 days of October; immune to worms. Tree spreading, precocious; self fertile, bears heavy crops annually; does especially well in coastal foothills. Originated in Santa Fe Springs, California. Introduced in 1922. BROOKS 1972, MORTON 1987a; T49M{SC}

**Sfax:** Very large, thick fruit; sugar content about 51 %; ripens very early, September 10 to 30 at Vista; milling quality good. Excellent for eating out of hand as it is soft, very sweet and tasty. Tree vigorous, spreading; yields heavily in alternate years. In southern California best suited to foothills some distance from the coast. Originated in Tunis, Tunisia. Introduced into the U.S. in 1959 by Dr. J. Elliot Coit, Vista, California. BROOKS 1972, THOMSON 1971; U26{SC}

**Tvlliria:** Large fruit, 6 to 9 inches long; sugar content averages 47.4%, protein 5.81%, good flavor; excellent quality for milling; ripens late, in October. Tree comes into bearing late, with no commercial yields before 10 years from budding. In California best adapted to foothills near the coast. Good commercial cultivar; widely grown for export on Cyprus where it originated in ancient times. BROOKS 1972; U26{SC}

*Cercidium floridum* - *Palo verde* {S}. Immature seeds and pods are eaten as a vegetable, having a pleasant taste similar to peas and beans. Dry seeds are ground and made into breads, cakes, and beverages. Leaves are eaten as greens. Southwestern North America. CLARKE, FELKER, KUNKEL, UPHOF; A79M, B94, C9M, C98, D56M, E66M, F63M, H71, 133, 198M{PL}, JO, J86{PL}, 093

*Cercidium microphyllum* - *Small-leaved palo verde* {S}. The seeds are eaten fresh or ground and mixed with mesquite meal. Southwestern North America. CLARKE, KIRK, YANOVSKY; A69, B94, C9M, C98, E66M, F63M, F85, H71, 133, 198M, 198M{PL}, JO, N84

*Cercidium torreyanum* - *Cercidium floridum*

*Cereis canadensis* - *Red bud* {PL}. Acid flowers are eaten raw in salads. Unopened buds are pickled in vinegar and used as a caper substitute. Buds, flowers, and young pods are good sauteed in butter or made into fritters. High in vitamin C. North America. FERNALD, GIBBONS 197, ZENNIE [Nu]; A50, B9M, C9, C9M{S}, D95, E87, F80{S}, G23, H4,14,177M, K38{S}, K63G{S}, M77, N84{S}

*Cereis occidentalis* - *California redbud* {S}. Roasted pods and seeds are eaten. Flowers are used in salads. Buds are pickled like capers. Western North America. KIRK, YANOVSKY; A2, C9M, C95, D95{PL}, F80, G59M, G60{PL}, H4{PL}, I83M{PL}, K38, K63G, L13, N84

*Cereis siliquastrum* - *Judas tree* {S}. The flowers have a pleasant acid taste and are eaten raw in salads or dipped in batter and made into fritters. Flower buds are pickled in vinegar and used as a condiment. Mediterranean region. HEDRICK 1919, MACNICOL; C9M, D95{PL}, E87{PL}, H4{PL}, K38, K63G, N71M, N84, 053M, 093, P5, Q32

*Cynometra cauliflora* - *Nam-nam* {S}. The fleshy, subacid fruit has a pleasant flavor suggesting an unripe apple and is eaten fresh, stewed or preserved. Fried with batter, it is said to make a good fritter. Young fruits are pickled, eaten with sambal, or prepared with fish. Tropical Asia. HEDRICK 1919, JACQUAT, MACMILLAN, TANAKA; N84

*Dialium guineense* - *Velvet tamarind* {S}. The aril surrounding the seeds has an agreeably acid flavor and is commonly eaten. When dry, it is chewed or macerated in cold water to form an acid beverage. West Tropical Africa. DALZIEL, HEDRICK 1919, MACMILLAN; F85

*Dialium indum* - *Tamarind plum, Keranji madu* {S}. The small, dull velvety-black fruits have a delicious subacid flavor somewhat reminiscent of tamarind, but not as acidic. They have thin, brittle shells which preserves the desiccative pulp perfectly for several months. Considered a delicacy in some areas and sold in local markets. Tropical Asia. HEDRICK 1919, JACQUAT, TANKARD, UPHOF; 019

*Dialium* sp. - *Keranji ayer* {S}. Small, roundish fruits, about 3/4 of an inch long; thin, brittle shells, dull velvety-black in color, easily opened; soft, burnt-orange flesh that separates easily from the seed. The flavor of the raisin-like flesh, which keeps for months, is tangy but not too tart. Although slow growing, it may fruit quickly. Borneo. TANKARD; 019

*Gleditsia triacanthos* - *Honey locust, Sweet locust* {S}. Seed pods are cooked and eaten while still small and tender. The sweetish pulp is eaten as a nibble, made into sugar, and fermented into a beer. Has a unique, nearly overwhelming, bittersweet flavor Young seeds are eaten, tasting like raw peas. Source of an under-utilized but highly desirable smoking wood that imparts a distinct honey wood flavor to grilled foods, especially wild game. Considered to be the hardest, hottest, and longest-lasting of the native Northeastern hardwoods. North America, cultivated. FERNALD, GIBBONS 1979, LOGSDON 1981, MESSINA; B61M, C9M, F80, F85,149G{PL}, K38, K63G, L15G{PD}, N84, 053M, P49

#### CULTIVARS {GR}

**Ashworth:** Very sweet pulp said to have a melon-like flavor, although others report the fruit quality as being inferior. Tree extremely haidy, thornless. Produces male flowers for pollination. F43M

**Calhoun:** Large, thick pods. Unusually high sugar content, up to 39 percent. Vase-like growth habit, as opposed to Millwood which is more upright. Produces 30 to 35 pounds of pods per tree at 5 years of age. Hardy in central Pennsylvania, Massachusetts, southern Michigan. Discovered near Gadsden, Alabama for a TVA contest held in 1934. DETWILER; F43M, F43M{PL}

**Hershey:** Very prolific and precocious. Hardy to Zone 5. Named after the late John W. Hershey, noted tree-crops specialist and nurseryman from Downingtown, Pennsylvania who at one time worked on honeylocusts for the Tennessee Valley Authority. F43M

**Millwood:** Large, thick pods, filled with syrupy pulp; has an unusually high sugar content, up to 37 percent. Vigorous and productive tree; grows 12 to 15 feet tall after five years; thornless even if cut back severely. Yields 60 to 65 pounds of pods per tree after 5 years. The best known of all the honey locust cultivars. Discovered near Lake Junaluska, North Carolina for a TVA contest held in 1934. DETWILER; F43M, F43M{PL}, I60{PL}

**Schofer:** Discovered in 1946 northeast of Reading, Pennsylvania by Robert Schofer of Reading. Pods are considered to be equal in size and flavor to Millwood. Tree very haidy, possibly north into Canada. Introduced by John W. Hershey. DETWILER; F43M{PL}

*Gymnocladus dioicus* - *Kentucky coffee tree* {S}. The fully ripe seeds may be roasted, ground, and used as a coffee substitute. Thorough roasting, at least three hours at 300° F., is necessary to destroy the poisonous hydrocyanic acid in the ripe seeds. Eastern

North America. GIBBONS 1979; A79M, D95{PL}, E7M, F51{PL}, F80, K38, K63G, M35M{PL}, N37M{PL}, N84, 053M

*Haematoxylum campechianum* - *Logwood* {S}. The flowers are the source of a light-colored honey of delicious flavor and superb quality. Considered by some to be the finest table honey in the world. The principal export honey of Jamaica. Tropical America. CRANE 1975, PELLETT, UPHOF; N84

*Hymenaea courbaril* - *West Indian locust, Courbaril, Guapinol, Stinking toe* {S}. The dry, whitish-yellow pulp around the seeds is sweet and is eaten. Also mixed with water to make an *at ole*, added to *peppercot*, or fermented into an alcoholic beverage. In Jamaica, it is eaten like candy by children or used in making custards and ice cream. The protein content is high for a fruit. Tropical America. DE CERDAS, GRIME, HEDRICK 1919, TANAKA, UPHOF, WALSH [Cul, Re], WILLIAMS, L.; F80, F85, G0{DF}, I12{PL}, N84

*Parkinsonia microphyllum*-*Cercidium microphyllum*

*Poinciana gilliesii*-*Caesalpinia gilliesii*

*Poinciana pulcherrima*-*Caesalpinia pulcherrima*

*Saraca bijuga* - *Sok nam, Ashok* {S}. The aromatic flowers, having a sourish flavor, are eaten locally as a potherb. Fruits are chewed instead of Areca nuts. Leaves are also edible. Southeast Asia. BURKILL, PONGPANGAN, TANAKA; C9M, P17M, P38, Q12, Q18, Q46, R50{PL}

*Saraca indica*-*Saraca bijuga*

*Tamarindus indica* - *Tamarind* {S}. The acid fruit pulp is used in drinks, preserves, curries, jellies, syrups, *Worcestershire* and *Pickapeppa* sauces, and chutneys. Compressed blocks of pulp are sold as *wet tamarind* in ethnic stores. Less sour forms are mixed with salt, sugar and chiles and eaten as a snack. Sweet-fruited types, considered a delicacy, are eaten out of hand. Young, immature pods are eaten fresh mixed with spices or fish sauce, pickled like green mango, or added whole to soups, stews and sauces, such as *nam prik ma-kahm*. Leaves are eaten in soups, salads, and curries. Seeds are roasted and eaten, ground to flour, used as a coffee substitute, and also yield an edible oil, gum, and starch. The bark of the tree is chewed as a delicacy. Flowers are eaten raw in salads or cooked. The seedlings, when about a foot high, are used as a vegetable. Cultivated. COST 1988 [Cul, Be], CRAWFORD [Re], DUKE, LOHA-UNCHIT, MORTON 1987a, OCHSE, POPENOE, W. 1920 [Cu, Nu], RICHARDSON, M. [Re], ROUTHIER 1989 [Cul, Re], TANAKA, VON MAYDELL; A79M, B60M{PR}, E21D{PL}, E29{PL}, F80, I83M{PL}, J58{ED}, K17J{ED}, L90G{ED}, N40{PR}, P5, P17M, Q32, R47

#### CULTIVARS {PL}

**Mekong Dream:** Sweet fruited type collected on the Mekong river border of Laos and Thailand. Completely free of any tartness, being very rich, sweet and delicious. Chewy, raisin-like texture. Straight, easily cracked pods yield seeds that are roasted and eaten. 174

*Tylosema esculentum* - *Marama bean, Gembok bean* {S}. After roasting, the seeds have a delicious nutty flavor that tastes like coffee beans or roasted cashews. They have a protein content comparable to soybeans, and an oil content that approaches that of the peanut. The edible oil is similar to almond oil in consistency and taste. Sweet tubers can be baked, boiled, or roasted. Southern Africa. FOX, E, MENNINGER, NATIONAL RESEARCH COUNCIL 1979; C95

#### CALYCANTHACEAE

*Calycanthus floridus* - *Carolina allspice, Sweet shrub* {PL}. The aromatic bark is sometimes used as a spice. Eastern North America. HEDRICK 1919; A50, B96, C9, C9M{S}, D92M{S}, D95, E33M, F51, F80{S}, G23, H4, I11M, N71M{S}, 053M{S}

*Calycanthus occidentalis* - *California allspice* {PL}. Said to be used as a spice. Southwestern North America. TANAKA; B92, B94{S}, D95, G60, G66{S}, H4, 198M, J75, 053M{S}

*Calycanthus praecox* -> *Chimonanthus praecox*

*Chimonanthus praecox* - *Wintersweet*, *Kara-ume* {S}. Flowers are eaten with oil and salt. The flower petals are used to flavor and scent tea. Korea-China, cultivated. REHDER, TANAKA; D95{PL}, E7M, E63{PL}, E87{PL}, H4{PL}, K38, K63G, N37M{PL}, 053M, 093, P5, R78

#### CAMELLIACEAE

*Camellia japonica* - *Garden camellia* {S}. The dried flowers are eaten as a vegetable or used in the preparation of *mochi*. Seeds are the source of an oil, called *tsubaki oil*, used for culinary purposes. The leaves serve as wrapping for *tsubaki-mochi*, festive rice cakes traditionally eaten on May 5th, in celebration of Boy's Festival or Sekku. They are also brewed into a tea. Eastern Asia, cultivated. BROUK, MACNICOL, SUGANO, TANAKA, ZEVEN; A79M, B32{PL}, B96, B96{PL}, E66T{PD}, GO{PD}, H4{PL}, I52{PL}, K38, N1M{PL}, N84, 053M, P49

*Camellia kissi* - *Let-pet tea*, *Kissi* {PL}. Leaves are used locally as a tea. The seeds yield an oil said to be similar to olive oil. Fruits are reportedly edible. Subtropical Asia. ALTSCHUL, TANAKA, WATT; 152, 152{SC}

*Camellia sasanqua* - *Sazanka*, *Sasanqua tea* {S}. Seeds are the source of *tea seed oil*. When refined it is suitable for use in foods. In Japan, the leaves are mixed with tea to give it a pleasant aroma. Japan-China, cultivated. HEDRICK 1919, TANAKA, UPHOF, ZEVEN; B32{PL}, B96, B96{PL}, G96{PL}, H4{PL}, I52{PL}, K38, N1M{PL}, N84, 093, P5

*Camellia sinensis* - *Tea plant*, *Cha* {S}. Cured leaves are the source of common tea. *Leppet*, *laphet* or *leppet tea* consists of green tea-leaves pressed and preserved, and afterwards prepared as a vegetable by mixing with garlic, salt, oil, and other ingredients. Both the leaves and brewed tea add flavor to meat and fish dishes. *Tea egg*, popular in China, is an egg boiled in leftover or fresh tea. Leaves are added to the paste that coats *pidan* or *hundred-year-old egg*. Green tea powder or *matcha* is used in Japanese confectionery, pasta and ice cream. *Kombucha* or *tea cider* is an effervescent, sub-acid, fermented beverage made from tea leaf extracts. *Bai-ming* are sour, fermented tea leaves eaten as a snack in Burma and northern Thailand. Smoke from the leaves flavors *tea-smoked duck*. In Tibet, salt and butter are added to boiled brick tea, and the mixture is churned until it resembles cocoa. The flowers are made into tempura using the edible seed oil. Fruits are eaten. Leaves are chewed to remove the odor of garlic or onions. Subtropical Asia, cultivated. ALTSCHUL, CAMPBELL-PLATT, CHOW, CREASY 1982 [Cu, Pre], HOU, LEE, G. [Re], MACMILLAN, MITCHELL [Cu], SCHERY, STEINKRAUS, TAIK [Re], TANAKA, VON REIS, WILKES; A79M, B74{PL}, C22{PD}, C27G{PD}, E60P{PD}, G20M{DF}, G39G{PD}, G47C{PD}, H4{PL}, H91{PD}, I52{PL}, N37M{PL}, N84, 093, P17M, Q46, etc.

#### CULTIVARS {GR}

**Blushing Maiden:** Similar to the Tea Breeze cultivar, except for the single flowers which are an attractive blushing pink color. Lush, dark green-red foliage. Hardy. Tolerates full sun. E87, 139, J61M

**Carolina:** Hybrid developed at the Charleston Tea Plantation in South Carolina. Produces a unique, limited edition, first flush black tea harvested only during the month of M\*y. Has a bright character, a smooth, mellow finish and the complexities of a fine wine. C22{DF}

**Large Leaf:** Similar to Small Leaf, but with larger foliage and flowers and slightly less hardy. Striking evergreen with very rich texture; very vigorous and free flowering. Hardy in Zone 7A. B96, B96{S}

**Longjing:** (Dragon Well) {DF} One of the most renowned teas in China. Famous for its green color, attractive shape, pleasant aroma, and mellow flavor. Flat green leaves produce a clear yellow-green tea with a sweet, aromatic fresh flavor and a lingering aftertaste. Frequently served in hot weather due to its cooling effect. Originated in the village of Longjing, in the province of Zhejiang. CHOW; C27G, C60D, G73, H36, H44M, L88D, N54

**Small Leaf:** An excellent shrub for the landscape that has small white flowers in the autumn, and a compact habit all year. The type of tea that is widely cultivated in Japan. Hardy in Zone 6B. B96, B96{S}

**Tea Breeze:** Dense, dark green leaves. Ornamental, single fragrant white blooms from September to November. Hardy. A cultivar that is extensively planted in commercial tea plantations. E87, 139, J61M

**Tiequanvin:** (Iron Goddess of Mercy) {DF} Most famous of all Chinese oolong teas. Short, spreading shrub with glossy, dark green leaves, soft and thick with curling serrated edges. Tightly twisted leaves produce an aromatic brownish-orange brew of high astringency, orchid-like flavor and long-lasting aftertaste. Can be used through many more infusions than other types. Often brewed *gongfu* style in tiny pottery teapots and sipped through thimble-sized cups. Named after Guanyin, the Buddhist Goddess of Mercy. CHOW; C60D, H36, H44M

*Thea sinensis* - *Camellia sinensis*

#### CAMPANULACEAE

*Adenophora triphylla* var. *japonica* - *Tsurigane-ninjin*, *Ch'andae* {S}. Young shoots are parboiled and used in soups, fried, sauteed, or preserved in salt or dried for future use. Very common in the markets of Korea where it is occasionally cultivated. Eastern Asia. PEMBERTON, TANAKA; 046

*Campanula glomerata* - *Clustered bellflower* {PL}. In Turkey, the bluish flowers are eaten raw. They have an excellent sweet flavor and make an attractive addition to a salad, along with the sweet leaves. Eumsia. OZTURK; B98T, D11T, D92M{S}, F35M, G89M, H29M, H63, I77M, K22, K63G{S}, L66, M82, Q24{S}, R49, R88, S55{S}, etc.

*Campanula punctata* - *Hotaru-bukuro* {S}. Flowers and leaves are used as potherbs. Eastern Asia. KUNKEL, TANAKA; A51M{PL}, A61, A61{PL}, B28{PL}, B98T, D92M, J37M{PL}, L66{PL}, L91M, M82{PL}, N84, 046, 053M, Q24

*Campanula rapunculoides* - *Rover bellflower*, *Creeping bellflower* {S}. The fleshy roots are somewhat sweet and are a pleasant addition to tossed green salads. They are also good when boiled for twenty minutes and served with butter or a cream sauce. Eurasia, naturalized in North America. CROWHURST 1972, FERNALD, GIBBONS 1979, HARRINGTON, H.; A61, B61M, F80, L66{PL}, N9M, N9M{PL}, N71M, N84, 053M, Q24, R88

*Campanula rapunculus* - *Rampion* {S}. Tender young leaves can be added to tossed salads or cooked as a potherb. The white, fleshy roots, when young, are agreeable sliced and eaten like radishes in salads, while the older roots are boiled, roasted, or fried like turnips. The young shoots may be blanched like asparagus and prepared in the same manner. Eurasia, cultivated. GRIEVE, LAUNERT, ORGAN, PAINTER, VILMORIN [Cu]; A61, B98T{PL}, F35M{PL}, J82, M82{PL}, N71M, N84, 053M, Q24, R88, S17, S55

*Campanula versicolor* - *Variouly-colored bellflower* {S}. The young leaves are very good in salads, tasting somewhat like sweet garden peas. In parts of Greece, they are eaten as a cooked vegetable. The flowers are also very good to eat. Eurasia. UPHOF; N84, Q24, R49{PL}

*Canarina campanulata* - *Canarina canariensis*

*Canarina canariensis* - *Bicacaro*, *Canary bellflower* {S}. Fruits are eaten out of hand or made into preserves. Roots and young shoots are also said to be edible. Canary Islands. HEDRICK 1919, KUNK-EL; 053M, R77{PL}

*Codonopsis lanceolata* - *Todok*, *Tsuru-ninjin* {PL}. The large, fibrous white root is commonly eaten in Korea after having been pounded, washed in salted water and cut into strips. It is then often seasoned with sesame oil, soy sauce and *kochujang* and grilled over charcoal or eaten as a salad. Also occasionally mixed with milk and honey to make a beverage. Said to be an appetite stimulant. Available in Korean stores—fresh, dried or frozen or as a prepared deli food. Eastern Asia, cultivated. LEE, F. 1988 [Re], MILLON [Cul, Re], NOH [Pre, Re], PEMBERTON; L59P, N84{S}

*Codonopsis pilosula* - *Dang shen*, *Bastard ginseng* {S}. Roots are eaten raw, baked or preserved in miso. In China, they are often an ingredient of sweet tonic drinks and soups—combined with rock sugar, Chrysanthemum petals, bird's nest, and *Astragalus membranaceus*. Frequently used as a substitute for ginseng. One of the ingredients of *Emperor's Secret* classic herbal tea, *Change of Season Soup*, and *Dragon Herbal*. Eastern Asia. BENSKY, FLAWS 1995, LEUNG, TAN [Re], TANAKA, TEEGUARDEN; A61, D40G, D56M, E14T{DF}, F35M{PL}, F37T{DF}, F68T, F86G, G6, G19P{DF}, H36{PD}, 174, J82, K18M{DF}, ZJ4{DF}, L90J{PL}, R53M, R53M{PL}, R47, etc.

*Phyteuma orbiculare* - *Round-headed rampion* {S}. The leaves and fleshy roots are occasionally consumed in salads and as a cooked vegetable, like the true rampion. Europe. UPHOF; A61, A61{PL}, N84, 048, Q24

*Phyteuma spicatum* - *Spiked rampion* {S}. The thick, fleshy roots can be eaten in salads or as a boiled vegetable. Europe. HEDRICK 1919; A61, A61{PL}, F80, N71M, N84, 053M, Q24, R88

*Platycodon grandiflorus* - *Balloon flower*, *Toraji*, *Mountain bellflower* {S}. The crunchy white root is a popular vegetable in Korea where it is usually cut into strips, seasoned with chilis, vinegar, sesame oil and soy sauce and eaten as a salad. Also used in soups and other dishes, vinegared dishes. One of the seven herbs that flavor *tosu*, sweet Japanese sake. Said to taste like a Available in Korean stores—fresh, dried or frozen and also as a prepared food. Boiled young leaves are eaten as a salad in mountainous regions of Japan. Eastern Asia, cultivated. COOK, LEE, F. 1988 [Re], MILLON [Cul, Re], NOH [Pre, Re], PEMBERTON YASHIRODA; A2, A61, C9{PL}, D24{PL}, D40G, D56M, E7M, F37T{PL}, F68T, F80, H63{PL}, J82, L94M, M98{PL}, N23, R47

## CANELLACEAE

### *Canella alba* - \**Canella winterana*

*Canella winterana* - *Canella*, *White cinnamon*, *Cinnamon bark* {PL}. The aromatic leaves and the bitter, very pungent bark are used as condiments in the West Indies. Was a common ingredient, along with *Capsicum*, in the food and drink of the ancient Caraiibs. In Russia, it was used to flavor *clove vodka*. Dried bark is exported to spice merchants and utilized in seasoning mixtures. Florida, West Indies. GRIEVE, GRIMfi, MORTON 1976, TOOMRE, UPHOF; D87G

## CANNABIDACEAE

*Cannabis sativa* - *Hemp*, *Marijuana* {PD}. Seeds are parched and eaten as a condiment, used as a substitute for coffee, or made into cakes and fried. In Japan, they are called *asanomi*, and are used in *ganmo* (deep-fried tofu burgers). They are also one of the ingredients of the Japanese spice mixture called *shichimi*, most commonly used as a topping for udon noodles. In natural foods cuisine they are eaten in cookies, brownies, pancakes, imitation cheese, porridges, nut butters, etc. *Hempen Ale* and *Hempen Gold* are beers made with hemp seeds. In Estonia, hemp seed milk was poured on soups and porridges. The highly nutritious seed oil may be used for culinary purposes. The herb is mixed with dried fruits, nuts and spices in the

Moroccan candy called *majoun*. In northern India, it is added to a type of sake known as *pachwai*. Considered an essential flavoring herb in Rastafarian *Ital* cooking. Sprouted seeds are eaten. Central Asia, cultivated. ERASMUS [Nu], FERNALD, FORGET, HARRINGTON, H., HEDRICK 1919, KALVIK, KIRK, MILLER, C. [Pre, Re], OSBORNE, SHURTLEFF 1975, TSUJI, WOLFERT 1973; A7, A25G, E14T, GO, H13M, I59L, 166, I76T, I79M, N49M

*Humulus lupulus* - *Hops* {S}. A bitter substance found in the glandular hairs of the female cones is used in beer to give it flavor and aroma, and to prevent decomposition by bacteria. Also used in herbal beers. Mennonite settlers in America boiled the cones with potato water to make a yeast starter for baking bread. *Hopfenkase* cheese is matured between layers of hops. Young shoots are eaten in salads or used as a substitute for asparagus. In France and Belgium, the cooked shoots are known as *jet de houblon*. The flavor is unique and to many tastes delicious. Leaves and cones are brewed into tea. Fleshy rhizomes are sometimes eaten. For the production of shoots, young root cuttings are grown in clumps or small hillocks. Northern temperate region, cultivated. BIANCHINI [Cul], CAMPBELL-PLATT, CREASY 1982, FERNALD, GRAY, P. [Cul], GRIEVE [Cu, Re], KUNKEL, MARCIN, ORGAN [Cu, Re], UPHOF, VOTH [fe], WEAVER 1993; A26, C82{PL}, D76{PL}, E12{ED}, E81M, G73{PL}, K54{PD}, N84, 053M, R47

### CULTIVARS {PL}

**Brewers Gold:** High quality hop with a pungent aroma and high alpha acid content. Similar to Bullion but the cone tends to be smaller, and matures a week to ten days later; exhibits the same lack of stability in storage. Perennial vine requires strong trellis and ample water. Mildew-resistant, high yielding. Hops ripen August to September. ROMANKO; H49, L90J, M81M

**Bullion:** A rich, aromatic hop with high bittering compounds and resins. Unusual taste and aroma. Very vigorous, produces 1,800 to 2,400 pounds per acre. In Oregon, it is harvested after Fuggle, usually during the first week in September. The oil content increases as the harvest is delayed. Lacks storage stability unless kept at temperatures below 32° F. Used mostly as a bittering hop in strong English-style bitter ales and stouts. ROMANKO; A99, L90J

**Cascade:** A Fuggle hybrid developed at Oregon State University. The cones are buttery to the rub and the aroma is at once fragrantly aromatic and powerful. In Oregon, it matures after Fuggle and before Bullion. It is a poor keeper and requires cold storage immediately after baling. Resistant to downy mildew. Excellent for giving both flavor and aroma to American light lagers. ROMANKO; A99, B8P, C43M, E12, E12{DF}, E68, F67T{PD}, F99, H65, I39, I39{DF}, J9P, J76, J82, L90J, L94M, L94{DF}, M81M, N24M, etc.

**Chinook:** Potential dual purpose hop. Similar to the new high alpha bittering cultivars, but also has an interesting pine-like aroma, much appreciated by some. Excellent for American-style pale ales. Average alpha acid content 12 to 14%. Matures early to mid-season. High yielding. Developed by C.E. Zimmerman. Introduced in 1985. B55M, B55M{DF}, E12, E12{DF}, F99, I39{DF}, J9P, L90J, L94M, L94{DF}

**Early Cluster:** An excellent hop with a consistently high brewing value. Has a relatively unrefined aroma and is usually blended with other hops that are more aromatic. Produces hops in small to medium clusters, averages 8 to 9 bales of cones per acre. Resistant to verticillium wilt; susceptible to downy mildew. The dominant hop cultivar in the United States. Originated in Oregon around 1908 as a mutation of English Clusters. ROMANKO; L90J

**Fucycyle:** Has an aroma which is fairly pronounced and somewhat spicy but not pungent. Usually used in dark beers and stouts. Vine reaches 20 feet in length. The most mildew resistant cultivar grown in the Northwest. It is early maturing and low yielding. Considered to be a cool weather hop. Baled hop has fair keeping qualities. The best cultivar for the home brew enthusiast. ROMANKO; A99, B55M, B55M{DF}, E12, F99, L90J, M81M, N84, 081, R53M

**Galena:** Outstanding high alpha acid hop. Clean and well balanced. Often used for double bocks and other heavy beers. Matures in mid-season. Average alpha acid content 12 to 14%; high storage ability. High yielding. Grown commercially in Washington and Idaho. Seedling of Brewer's Gold selected by R.R. Romanko. Released in 1978. E68, L90J

**Golden:** (Yellow. Aureus) An ornamental hop that grows 15 feet tall and has attractive, bright yellow-golden climbing foliage when young. Matures to a medium green color. Produces light green cones in September. B92, E87, H63, J76, N84{S}, R53M

**Hallertauer:** (Hallertauer Mittelfrueh) An excellent hop with a mellow, spicy aroma and flavor. Excellent for dry hopping, but a poor bittering hop. Good for light and dark lagers. Produces 700 to 900 pounds per acre. Susceptible to mite infestations. Grown commercially in the Kootenai Valley of Idaho. The traditional German aroma hop. Full German name translates as "Midseason Hop of the Hallertau District". ROMANKO; A99, B8P, E12, E12{DF}, F35M, F99, J82, L90J, L94{DF}, M15M{DF}, N24M, 081

**Hersbrucker:** (Hallertauer Hersbrucker) A German hop similar to Hallertauer but easier to grow. Versatile bittering and herbal finishing hop with a mild, crisp and spicy fragrance. Alpha acid content 2-5%. Used in wheat beers, American and German lagers, Belgian ales, and Pilsner-style beers. L90J

**Kent Golding:** Classic English aroma hop traditionally used for finishing premium pale ales, bitters, porters and stouts. Adds a distinctive, earthy, spicy flavor. Excellent for dry hopping ales. Alpha acid content 4 to 6%. Moderately productive. Also grown in British Columbia, Canada. E12, F67T{ED}, J9P, L90J, 081

**Mount Hood:** American hop with good aroma, mild flavor, and medium bitterness. Used as a Hallertauer equivalent, but with improved agronomic characteristics. Provides a light, delicate finish to American and Bavarian-style lagers and ales. Can also be used as a flavoring hop. Alpha acid content 4-8%. A99, B55M, B55M{DF}, C43M, E12, E12{DF}, F99, J9P, J82, L90J, L94M, L94{DF}, N24M

**Northern Brewer:** Strong, fragrant hop with a distinctive mint-like flavor. Good all-purpose hop, but ideal for steam beers and ales. Has a more pleasant aroma and flavor than most other older high alpha types. Alpha acid content 8 to 10%. Low to moderate yields. Grown commercially in Kent, England, Oregon and Washington. B55M, B55M{DF}, E12, E12{DF}, F99, J9P, L90J, L94{DF}

**IMuaaet:** A good yielding, high alpha bittering hop. Alpha acid content 11-16%. Used for giving a strong bitter flavor to ales and stouts. Heavily spiced and herbal. Occasionally used for lagers. Aroma only fkir. An American hop derived from Brewers Gold. Introduced in 1970. B8P, D95, E12, E12{DF}, 139, J9P, J76, J82, L90J, L94M, L94{DF}, N24M

**Perle:** Medium to high alpha hop with a pleasant, slightly spicy aroma similar to Hallertauer. Can be used for ales, lagers, wheat beers and pilsners. Alpha acid content 7 to 10%. Poorly adapted to high temperature areas like the Yakima Valley in Washington. Relatively new German cultivar. B8P, E12{DF}, L90J, L94M, L94{DF}

**Saaz:** Classic Bohemian aroma hop. The traditional cultivar for finishing true pilsner beers such as Pilsner Urquell. Famous for its spicy, clean bitterness. Also used in wheat beers. Alpha acid content 3 to 5%. Poor storage stability. Low yielding and difficult to grow outside its native region in the Czech Republic. B55M, B55M{DF}, E12, E12{DF}, F35M, F99, L90J

**Soalt:** Classic German aroma hop. Can be used as a replacement for Saaz. Very light, smooth bittering effect, but more assertive than Hallertauer. Excellent for all types of lagers and lighter bodied beers, especially where a delicate hopiness is needed. Alpha acid content 3 to 6%. L90J

**Sunbeam:** Ornamental type with brilliant golden-yellow foliage and red stems. Can also be used as an aroma hop in northern European style pilsners. Alpha acid content 4 to 5 %. Grows vigorously in filtered light or partial shade. Foliage may brown in full sun. Dual purpose Saaz hybrid released by the USDA in 1995. E12,139, J9P, L90J, L94M

**Tettnang:** (Tettnanger, Deutscher Fruehhopfen) Has an exceptionally mild aroma that seems to enhance grain aromas. Medium bitterness. Excellent for finishing lagers. Matures a few days earlier than Hallertauer. Produces about a thousand pounds of dried hops per acre. Used by some of America's major brewers. Originated in the Tettnang district of Germany. ROMANKO; A99, B55M, B55M{DF}, E12, E12{DF}, F35M, F99, K22,139,139{DF}, J9P, J76, L90J, L94M, L94 {DF}, N24M, etc.

**Willamette:** Excellent all-purpose hop. An improved Fuggle hybrid. Disease resistant. Traditional English ale type. Low in bitterness with a spicy, noble aroma. Often used as a finishing hop in ales and stout. Alpha acid content 5 to 7%. Introduced in 1967. A99, B8P, C43M, E12, E12{DF}, F35M, K22,139,139{DF}, J9P, J76, J82, L90J, L94M, L94{DF}, N24M, etc.

**Wve Challenger:** A red-stemmed, free flowering cultivar that is resistant to mildew. Vine reaches 15 to 20 feet in length. A female flowering type. N84, R53M

## CANNACEAE

*Canna coccinea* - *Indian shot* {PL}. The fleshy rhizomes are the source of a starch known as *corn le mois*. Tropical America, cultivated. HEDRICK 1919; N84

*Canna edulis* - *Achira*, *Edible canna* {PL}. Starchy rhizomes are sometimes boiled and eaten. In Peru, they are baked for up to twelve hours after which they become a white, translucent, fibrous and somewhat mucilaginous mass with a sweetish taste. Even after baking the large, glistening starch kernels can be seen with the naked eye. At Cuzco, the baked rhizomes are sold at the festival of Corpus Christi. Young shoots can be eaten as a green vegetable. Leaves are used for wrapping tamales. Immature seeds are cooked in *bocoles* (fat tortillas). Also the source of an *arrowroot* which is made into cakes in Colombia. Tropical America, cultivated. ALCORN, FRIED [Re], GADE 1966, HERKLOTS, MACMILLAN, NATIONAL RESEARCH COUNCIL 1989, OCHSE, UPHOF; C95, L55J, P38

## CULTIVARS {PL}

**Esmeralda's:** Improved type selected by Esmeralda Cazar in Ecuador. Introduced by Oregon Exotics Nursery. 174

## CAPPARIDACEAE

*Boscia albitrunca* - *Shepherd's tree* {S}. Flower buds are pickled and used as a caper substitute. The roasted and ground roots are used as a substitute for coffee. Fruits are crushed in fresh milk to make a tasty dish. Seeds are edible. Roots are also the source of meal and a syrup. Southern Africa. FOX, F., TREGOLD, UPHOF; M17{PL}, N84, 093, S28M

*Capparis aphylla* -> *Capparis decidua*

*Capparis decidua* - *Sodad*, *Kureel*, *Kerda*, *Kair* {S}. In India, the flower bud is eaten as a potherb or pickled. Both the ripe and unripe fruit are prepared into a bitter-tasting pickle. The unripe fruit is also cooked and eaten. Children enjoy sucking the floral nectar. The roots, when burned, yield a vegetable salt. North Africa. BHANDARI, HEDRICK 1919, SINGH, S., TANAKA; F74{ED}, Q46

*Capparis mitchellii* - *Native pomegranate*, *Wild orange* {S}. The aromatic fruits are eaten by the Aborigines, and are well regarded. Also becoming popular in the bushfoods market. When ripe, the pulpy flesh has an excellent bittersweet flavor and may be cooked with chicken, lamb, couscous and rice, or added to ice cream and

other desserts. Australia. CHERIKOFF, ROBINS [Re], UPHOF; N79{PL}, N84, P38, R15M

*Capparis sepiaria* - *Indian capers* {S}. Flower buds are pickled and used as a substitute for capers. Southern Africa to Asia. TANAKA; Q46

*Capparis spinosa* - *Caper*, *Alcapparra* {PL}. Flower buds are pickled and used to flavor *remoulade* and *putanesca* sauces, butters, salads, stuffings, hors d'oeuvres (<*caponata*), fish, meat, cheese, etc. Those preserved in sea salt are favored by many gourmets, because their fragrant bouquet and firm texture are better maintained. The young fruits, known as *caperberries*, and the tender branch tips are also pickled, the latter especially in Cyprus. These are sometimes found in specialty stores. In Turkey, the flowers are eaten and are often pickled together with the buds. Young sprouts are eaten like asparagus. Mediterranean region, cultivated. BIANCHINI, CREASY 1982, CUSUMANO [Cul, Re], GRIGSON, S., HEDRICK 1919, LANZA 1996, OZTURK, PAINTER [Re], PLOTKIN, SITAS, VILMORIN [Cu]; B71G{PD}, D92M{S}, E23M{PD}, E69{PQ}, F37T, I83M, I91{S}, I94{PD}, J66M{ED}, K85, O53M{S}, O89{S}

#### CULTIVARS {S}

**Pantelleria:** {PD} Very large capers from the island of Pantelleria, between Sicily and North Africa. Famous throughout the world. Plump, juicy, strongly aromatic and flavorful. Average size 1/4 to 1/2 inch. Usually cured in salt to maintain flavor. Harvested from May until the end of August. Will keep in excellent condition for 2 years. LANZA 1996; B71G, C60D, N54

**Spineless:** (Senza Spine, Inerme) A cultivar that is free of spines, making it easier to harvest. The flower buds and immature fruits are pickled in vinegar or brine and used as a condiment. D92M, N84, Q11M

*Crateva nurvala* -> *Crateva religiosa*

*Crateva religiosa* - *Garlic pear* {S}. Young shoots and leaves are eaten as a spinach substitute. The fruit is occasionally eaten, usually roasted. In Burma, the flowers are pickled and eaten for their digestive action. The seeds are also consumed. Tropical Africa, Tropical Asia. HEDRICK 1919, MENNINGER, TANAKA, UPHOF; F85, Q46

#### CAPRIFOLIACEAE

*Leycesteria formosa* - *Himalayan honeysuckle*, *Chocolate berry* {S}. The edible red berries are said to have the flavor of bitter chocolate. Himalayan region. D95{PL}, E87{PL}, J61M{PL}, K63G, L91M, M7M, M7M{PL}, N84, O53M, Q24

*Lonicera caerulea* var. *edulis* - *Edible honeysuckle*, *Sweetberry honeysuckle*, *Blueberried honeysuckle* {PL}. Milder in flavor than the fruits of other honeysuckles, they can be eaten raw but mostly they are used to make jams, jellies and refreshing drinks. Temperate Asia, cultivated. DARROW, TANAKA; A65, B47, G54, 160, 174, J61M, K64, L27M, L90J, M16, M35M, N24M

#### CULTIVARS {GR}

**Georae Buanet:** Dense upright bush with pale green leaves. Makes an excellent hedge. Edible blue fruits that make a very interesting jam. K81

*Lonicera japonica* - *Japanese honeysuckle*, *Suikazura* {S}. Leaves, buds, and flowers are made into a tea. The flowers are sucked for their sweet nectar, used as a vegetable or made into syrup, puddings and sorbet. Parboiled young leaves are eaten as a vegetable. China, Japan, naturalized in North America. BARASH [Re], CROWHURST 1973 [Re], LEGGATT [Re], TANAKA; F32D{PL}, F85, G66, H4{PL}, K38, N84, O93, P5, P49, R78

*Lonicera kamtchatica* - *Kamchatka honeysuckle*, *Honeyberry* {PL}. The aromatic, vitamin rich fruits are eaten, being juicy and somewhat sweet, with a sour after-taste. They are eaten as a dessert, and are also used for making juice, jams, jellies and fruit drinks. The

ascorbic acid content may reach 50 milligrams per 100 grams. Eastern Asia. BURMISTROV; D37

#### CULTIVARS {GR}

**Berry Blue:** Small fruits, about the size and flavor of a blueberry. Ripens early, about 2 weeks before strawberries. Very vigorous and upright growth habit. One of the largest varieties, often reaching 8 feet or more in height. Cross-pollination required from another variety. H49, 146, 149P, I66T

**Blue Belle:** Small, bluish-purple fruits with a flavor reminiscent of blueberries. Ripens early, about 2 weeks before strawberries. Moderately vigorous and more spreading in growth habit. Should grow 4 to 5 feet in height with an equivalent spread. Cross-pollination required from another variety. B74, 146, 149P, I66T

**Blue Bird:** Small, elongated, glaucous fruit, about the size of a blueberry; wry tasty. Ripens about 2 weeks before strawberries. Not self-fertile; plant with another variety if fruit is desired. Upright growth habit, but less vigorous than Berry Blue growing only 5 or 6 feet tall. H49, 146, 149P, I66T, J61M

**Blue Velvet:** A newer cultivar with attractive, grayish-green, velvet-like foliage. Should grow 3 to 4 feet tall with an equivalent spread. Cross-pollination required from another variety. B74, 146, 149P, I66T

*Symphoricarpos albus* - *Snowberry* {PL}. The fruits are eaten or made into jelly. They are white, juicy, fleshy, somewhat acid and have an aromatic wintergreen flavor. Leaves can be used for brewing a pleasant, wintergreen-flavored tea. The flowers are the source of a very light-colored honey with a mild, delicate flavor. An important source of honey in Washington and British Columbia. North America. CRANE 1984, FREITUS [Re], PELLETT, YANOVSKY; C9, C43V{S}, E47, F88M{S}, G66{S}, G89M, H47{PD}, H90, 147{S}, K38{S}, K63G{S}, L90M, M35M, M69M

*Symphoricarpos racemosus* -> *Symphoricarpos albus*

*Triosetum aurantiacum* - *Wild coffee*, *Horse gentian* {S}. The roasted seeds are ground and used as a substitute for coffee. North America. PETERSON, L., UPHOF; H61M, N84

*Triosetum perfoliatum* - *Tinker's weed*, *Wild coffee* {S}. The dried and roasted berries were highly regarded by the early Pennsylvania Germans as a substitute for coffee. Eastern North America. FERNALD, HEDRICK 1919, MEDSGER, UPHOF; N84

*Viburnum alnifolium* - *Hobblebush*, *Moosewood* {S}. Ripe fruits are sweet and palatable, tasting like raisins or dates. However, the stone is large and the edible pulp is thin. North America. FERNALD, GIBBONS 1979, SIMMONS 1972; 131

*Viburnum cassinoides* - *Withe-rod*, *Nannyberry*, *Appalachian tea*, *False Paraguay tea* {PL}. The scant pulp of the fruit is sweet and well flavored, hanging on the tree into the winter. A bright amber tea with a pleasant taste can be prepared from the dried leaves. They are first steamed over boiling water, rolled between the fingers, allowed to stand overnight, and then dried in an oven. Eastern North America. GIBBONS 1966b; B15M, B47, D95, K63G{S}, M16, M92, N84{S}

*Viburnum edule* - *Squashberry*, *Mooseberry* {S}. Fully ripe fruits are mildly acid, pleasant tasting, and can be eaten raw. They are also used for *squash*, juice, sauces, jams, and jellies. The Indians dried or preserved them for winter use. North America. FERNALD, GIBBONS 1966b, HARRINGTON, H. [Re], HELLER; D95{PL}, 147, K49Q, N61

*Viburnum lentago* - *Wild raisin*, *Sweet viburnum*, *Sheepberry* {PL}. The bluish-black fruits are edible. They are variable in size and quality, the best being half an inch long, pulpy, very sweet, somewhat juicy, and pleasant to the taste. North America. GIBBONS 1966b, MEDSGER, SIMMONS 1972; C47, E33M, H45M, I49G, K38{S}, K63G{S}, K64, K89, L27M, M16, M35M, M69M, N24M

*Viburnum nudum* - *Smooth withe-rod*, *Possum haw* {PL}. The fruits are apple-shaped, compressed, about a quarter inch long, deep blue in color, of a sweetish taste and may be eaten raw. Eastern North America. HEDRICK 1919; A50, A93M, C9, E87, H4, H14M, I31{S}, N37M

*Viburnum opulus* - *Guelder-rose*, *European cranberry-bush* {S}. Bright red fruits are sour and are used as a substitute for the cranberry in making jelly, preserves, sauce, and wine. In Norway and Sweden they are eaten with honey and flour. Northern temperate region, cultivated. HEDRICK 1919, SIMMONS 1972; C9M, C47{PL}, F80, K38, K63G, M69M{PL}, N84, 053M, Q32, R53M{PL}

#### CULTIVARS {GR}

**Ukraine:** Selected at the Kiev Botanic Garden for its productivity and for its large fruit of superior quality. I66T

*Viburnum opulus* 'Xanthocarpuntf' - *Yellow guelder-rose*, *Golden European cranberry* {PL}. The yellow fruits, becoming translucent gold in the fall, are recommended for wine making. Makes an excellent color accent when grown with red-fruited forms. Cultivated. SIMMONS 1972; A74, D95, I77M, K63G{S}, L49, N84

*Viburnum pauciflorum* - *Viburnum edule*

*Viburnum prunifolium* - *Black haw*, *Stagbush* {PL}. Bluish-black fruits are variable as to size, sweetness, and amount of pulp. At their best they are good to eat out of hand, otherwise they are used for jams, jellies, sauces, drinks, etc. North America. GIBBONS 1966b, MEDSGER; A93M, B9M, B32, C9, D95, E33M, G66{S}, H29M, 174, K38{S}, K63G{S}, K67, K89, L12, M77, etc.

*Viburnum setigerum* - *Tea viburnum* {PL}. Leaves are used as a tea substitute. China. UPHOF; B96, C9, F85{S}, H8, H29M, 160, I77M, K22, K38{S}, K63G{S}, M77, M92, M92, N84{S}

*Viburnum theiferum* - \**Viburnum setigerum*

*Viburnum trilobum* - *High-bush cranberry*, *American cranberry-bush*, *Pembina* {PL}. The red fruits make an excellent substitute for cranberries. They can be used to make sauce, juice, jams, jellies, syrup and wine. A good source of vitamin C. The flowers can be added to pancake and cake batters or made into fritters. North America. DARROW, GIBBONS 1966b, SCHOFIELD, SIMMONS 1972, TURNER 1979; A15M{PD}, A91, C47, D45, D65, D76, G66{S}, G89, H68M{PD}, K63G{S}, L49, M35M, N9M, N9M{S}

#### CULTIVARS {GR}

**Canber:** Improved type with very large fruits. Tart, aromatic, brilliant red fruits make excellent sauce and cranberry-like jelly. Maple-like leaves turn scarlet in the fall. Fruits hang on plant all winter. N24M

**Phillips:** Selected for fruit in which the bitterness has disappeared, making it excellent for jelly. Jells without added pectin. Does not omit offensive musky odor when heated. Red-veined, red-tinged leaves. Developed from plants found in West Acton, Maine. Introduced by Professor E.M. Meader of New Hampshire. Much superior to Wentworth. D69, F43M

**Wentworth:** An outstanding early cultivar selected and named by the United States Bureau of Plant Industry in the early 1900\*8 after analyses of acid and pectin content of 3,000 accessions were made, and jelly tests were undertaken. Abundant, large red fruits with excellent flavor. Good for making preserves. DARROW; A74, D69, E63, G4, G66{S}, G89M, H8, 174, K63G{S}, K89, L27M

### CARICACEAE

*Carica candamarcensis* - *Carica pubescens*

*Carica chrysopetala* - *Carica x heilbomii*

*Carica goudotiana* - *Papayuelo* {S}. Fruits are pale yellow tinged with magenta, and can be eaten raw. The flesh has the taste of a mildly acid apple, with the pulp around the seeds being milder and

more pleasant. Natives eat the pulp with sugar as a dessert. Colombia. BADILLO, NATIONAL RESEARCH COUNCIL 1989, VON REIS; N84, P38

*Carica x heilbomii* (C. pubescens x C. stipulata) - *Mountain papaya* {S}. Natural and artificial hybrids. The fruits are eaten raw or cooked. Usually produces parthenocarpic fruit. Andean South America. BADILLO. N84

#### CULTIVARS {GR}

**Babaco:** Fruits are bright-yellow, commonly 12 inches in length, 5-angled, with hollowed sides. The juicy flesh is distinctly fragrant and somewhat acid in flavor. The large cavity in the center contains a white cottony substance that is usually sweeter than the outside flesh. Eaten out of hand skin and all, stewed, added to salads, or made into *dulces*, preserves, cakes, puddings, and sauces. A small amount of sugar sprinkled over the fruit greatly improves the flavor. Sometimes available in specialty markets. BADILLO, BISSELL, ENDT [Pre, Re], FRIED [Re], NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, UPHOF, VAN AKEN; A41G, D57, E13G{PR}, G49, 174, I83M, J61M, L55J, N40{PR}, 097, Q49M

**Toronchi:** Fruits are yellow, 4 to 6 inches long, very fragrant. The higher level of the papain enzyme in the Toronchi makes it less desirable as a fresh fruit. The best way to eat this one fresh is to blend it together with a banana as this seems to counteract the enzyme. To deactivate the enzyme altogether, boiling is the only way. It is useful in making sauces, jams, pie fillings, and pickles. ENDT [Pre, Re], FRIED; D57, L55J{S}, Q49M

*Carica monoica* - *Orange papaya*, *Peladera* {S}. Small to very small fruits that have a high level of papain. Most can only be eaten in a cooked form, when they are said to resemble stewed apricots. The flesh is somewhat tough and is excellent for dried or candied fruit, and also freezes well. Used for hybridizing with other mountain papayas. Andean South America. BADILLO, ENDT [Pre, Re], NATIONAL RESEARCH COUNCIL 1989; P38, Q49M{PL}

*Carica papaya* - *Papaya* {S}. Ripe fruits are eaten out of hand, preserved, dried, candied, added to salads, or made into pies, jams, ice cream, juice, jellies, sherbets, etc. Unripe green fruits are boiled, baked, pickled, made into chutney, jam or relish, added to mixed vegetable soups or used as an extender in soy *tempeh*. In Mexico, they are cooked in cane juice during raw sugar manufacture. The peppery seeds are used as a spice, especially in salad dressings. Leaves, inflorescences, and flowers are steamed and eaten with rice, or added to soups and stews. In Indonesia, the flowers are candied. The Balinese often wrap a chicken or a tough piece of meat in papaya leaves and let it sit for several hours or overnight, the leaves tenderizing the meat. In Jamaica, pork is wrapped in green papaya skins before roasting. *Papain*, a latex collected from unripe fruits, is widely used in tenderizing commercial meat products, and is the active ingredient of *Accent* and other instant meat tenderizers. Papain is also used for chillproofing beer, clarifying fruit juices, modifying dough in baking, and in manufacturing edible collagen films and sausage casings. Green papaya powder is a papain-rich food supplement that aids digestion. Young stems are cooked and eaten. The pith of older ones is eaten raw. Tropical America, cultivated. ALCORN, EISEMAN, GARNER [Pio], HAWKES [Re], LEUNG MAY, R. [Nu, Re], MORTON 1987a, OCHSE, ORTIZ 1973 [Re], POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], SCHNEIDER 1986 [Cul, Re], SHURTLEFF 1979, STURROCK, TANAKA, UPHOF, WALDRON [Re]; A79M, B60M{m}, C9M, F85, H13M{ED}, J82, L33M{PR}, L54{PD}, N84, 053M, 093, P5, Q12. (for cultivars see Papaya, page 447)

*Carica parviflora* - *Papaya de monte*, *Coral* {PL}. The small, edible fruits are orange-colored, nearly red when ripe, and are said to have the fragrance and flavor of Spondias. Ecuador, Peru. BADILLO; Q49M

*Carica pentagona* - *Carica x heilbomii*

*Carica pubescens* - *Mountain papaya, Chamburo, Chihualcan* {S}. The small, fragrant fruits are usually too acid for eating out of hand. They can be stewed, preserved, candied, or used in cakes, sauces, chutneys, marmalades, cocktails, etc. When cooked, the fruit holds its shape and the juice remains clear. South America, cultivated. BADILLO, ENDT [Pre, Re], FRIED, MACMILLAN, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1920, SIMMONS 1972, UPHOF; A26, A79M, D56M, I49M{PL}, I74{PL}, I83M{PL}, M7M{PL}, N40M, N51{PL}, N84, 093, Q49M{PL}, R47

#### CULTIVARS

**Ababai:** Small to medium-sized, smooth, angled fruits; skin yellow-orange; flesh firm and succulent. Usually not eaten out of hand due to the high papain content. Only available as preserves or marmalade, which can be used in salads, salsas, with entrees, or as a dessert. The wide seed cavity also makes it ideal for stuffing. Grown commercially within a unique climatic niche along the Petorca River Valley of Andean Chile. UMANAMURRAY [Re]; G5M{PD}, N40{PD}

*Carica quercifolia* - *Higuera del monte* {S}. The date-sized fruits, said to have a quite agreeable flavor, are eaten candied or made into preserves. Tropical South America. BADILLO, POPENOE, W. 1920, UPHOF, WILDER; F85, N7J{PL}, N84, 093

*Carica stipulata* - *Chamburo, Siglalon* {S}. The seedy fruits have a high papain content and are best eaten cooked and peeled. They are excellent for jams and sauces, and are also made into fruit drinks, normally in blends with other juices. Small, firm fruits can be frozen fresh. Tropical South America. BADILLO, ENDT [Pre, Re], NATIONAL RESEARCH COUNCIL 1989; L55J, N84, Q49M{PL}

#### CARYOCARACEAE

*Caryocar nuciferum* - *Souari nut, Butternut* {S}. Large white kernels, having a rich, delicious, almond-like flavor, are eaten raw, roasted or cooked in salt water. They also yield an edible oil that is excellent for preparing meat, fish, and bakery products. The oily, yellow pulp of the fruit may be cooked and eaten as a vegetable. Brazil, Guiana. HEDRICK 1919, MACMILLAN, MENNINGER, ROSENGARTEN, UPHOF; X79

*Caryocar villosum* - *Piquia, Arbre a beurre* {S}. The fruit pulp is eaten, having a faint smell of rancid butter. Also the source of an edible oil. Seeds are edible. Guiana, Brazil. BURKILL, IDONE, NATIONAL RESEARCH COUNCIL 1975a, PRANCE, SCHERY, VON REIS; X88M

#### CARYOPHYLLACEAE

*Agrostemmagithago* - *Corn cockle* {S}. Young leaves have been used as a vegetable with vinegar and bacon for emergency food during times of want. Eurasia. UPHOF; F85, K49T, N71M, N84, 053M, 089, Q34, R32, S55

#### *Arenaria peploides* - *Honkenya peploides*

*Dianthus barbatus* - *Sweet William* {S}. The flowers have a mild flavor and are used as a garnish for vegetable and fruit salads, cakes and other desserts, soups, cold drinks, icings and deviled eggs. Cultivated. A53M, D92M, E7M, F24D, F80, F85, I63Z, 191, J5M, J5M{PL}, J99D, K53, K66, M82, N40M, N84, R47

*Dianthus caryophyllus* - *Clove pink, Carnation* {S}. Flower petals smell strongly of cloves and are candied, used as a garnish in salads, for flavoring fruits, fruit salads, ice cream and vinegars, or as a substitute for roses in the making of syrup. The flowers can also be infused in wine or pickled in vinegar and mashed into a sauce for lamb. They should be removed from their calyx and have the bitter white bottom of the petals snapped off. Cultivated. GESSERT, MACNICOL [Cul, Re], MORTON 1976, PAINTER [Re]; C81M{PL}, D92M, E7M, E81M, F24D, J82{PL}, M82{PL}, N84

*Dianthus plumarius* - *Cottage pink* {S}. Flower petals are made into butters, cordials, syrups, sauces, vinegars, etc. Cultivated. CLARKE [Re], GESSERT; D11T{PL}, D92M, E7M, E81M, F24D, F80, K53, L91M, M82{PL}, N84, 053M

*Dianthus superbus* - *Fringed pink, Nadeshiko* {S}. Leaves, stems, and tops are boiled and steeped in water, then eaten as a potherb, fried, oil-roasted, etc. Young plants are also eaten. Children suck the flower for its sweet nectar. Eastern Asia, cultivated. TANAKA; E7M, F24D, J5M, J5M{PL}, K53, L66{PL}, L91M, N71M, N84, 053M, Q24

*Gypsophila paniculata* - *Baby's breath, Soapwort root* {S}. The roots can be used in the preparation of *natif*— a foaming white, vegetable cream much appreciated in parts of the Middle East. They add a frothy texture and an unusual, bittersweet flavor. *Natif* is often used as a dip for Arabic cookies such as *mamool*. Eurasia, cultivated. DWIDSON 1994; A2, C95, E5T, F92, 191, I99P{PL}, J5M, J88, K49M, N84, R47

*Honkenya peploides* - *Seabeach sandwort, Sea chickweed* {S}. Young leaves and stems are eaten raw as a salad or relish, or boiled and used as a potherb. The succulent stems can be made into pickles which are said to have a pleasant pungent taste. In Iceland, the plant is steeped in sour whey and allowed to ferment. The resulting liquor is said to taste like olive oil and is used as a beverage. Northern temperate region. FERNALD, HEDRICK 1919, HELLER, SCHOFIELD [Re], UPHOF; C95, N84, 048

*Paronychia argentea* - *The Arabe, Algerian tea* {S}. An infusion of the flowers is used as a tea. Mediterranean region. HUTCHINSON, UPHOF; N84

*Saponaria officinalis* - *Soapwort, Bouncing Bet* {S}. An extract of the roots is used as an emulsifying agent in the manufacture of sesame seed *halava*, a popular Middle Eastern confection. It gives the product a light color and a distinctive fluffy texture. In the Ukraine, it is added to sunflower seed *halava*. The flowers are occasionally added to salads. Eurasia, naturalized in North America. BREMNESS, DAGHER, DWIDSON 1994; A2, A61, A61IPL, E5T, E7{PL}, E7M, E14T{DF}, F68T, F80, GO{DF}, H49IPL, H61M, H63{PL}, 139, I99P, J5M, J5M{PL}, J82, K18M{DF}, R47, etc.

*Silene acaulis* - *Moss campion* {S}. It has been reported that boiled parts of the plant with butter are consumed as a vegetable among the Icelanders. Arctic and Alpine regions. FERNALD, KIRK, UPHOF; D35G, H98{PL}, J93T, K79{PL}, L66{PL}, N84, 053M, Q24

*Silene alba* - *White campion* {S}. In the Val Colvera region of Western Friuli, Italy the leaves are mixed with more than fifty other greens in a spring dish known as *pistic*. This dish is known as *frita* in Carnia, *lidiim* in Pinzano al Tagliamento, and *litum* in Cividale del Friuli. Northern regions. PAOLETTI; E7M, N71M, 053M, Q24, S55

#### *Silene cucubalis* - *Silene vulgaris*

*Silene dioica* - *Red campion* {S}. Young leaves are added to *pistic*, like those of *S. alba* and *S. vulgaris*. They are boiled for several minutes, drained, then sauteed with butter, garlic and small pieces of lard. *Pistic* is eaten as an ancient rite of spring in parts of northern Italy. Europe. PAOLETTI; C95, D92M, M77M{PL}, N71M, N84, Q24, R32, S55

*Silene vulgaris* - *Bladder campion* {S}. The young shoots when about two inches long are a palatable cooked green, having a flavor suggestive of green peas, but with a slight bitter taste. Blanching the new shoots as they emerge from the ground will reduce bitterness. A puree made from the boiled shoots is said to be nearly equal to the best puree of spinach. The leaves can be chopped and added to salads or used in soups, stews, sauces, *herbal cheese*, and *pistic*. Eurasia, naturalized in North America. CROWHURST 1972, FERNALD, GIBBONS 1979, HEDRICK 1919, LAUNERT, OZTURK, PAO-

LETTI, WEAVER 1993; H61M, K63G, M34M, N71M, N84, 053M, Q24, Q34, S55

*Stellaria media* - *Chickweed* {S}. The tender, juicy leaves and stems are added to tossed green salads and sandwiches, or they can be boiled and eaten like spinach. Natural foods enthusiasts liquify chickweed, along with other assorted greens, to make what they call *green drink*. Indians used the tiny seeds for bread or to thicken soup. Young seedlings can be cut with scissors and left to regrow. Flowering tops are used as a vegetable or garnish. Northern temperate region. CLARKE [Re], CRIBB, FERNALD, GIBBONS 1966b, HARRINGTON, H., LARKCOM 1984, LEGGATT [Re], MABEY, MICHAEL [Re]; A2, A49D{DF}, C95, F68T, F85, J82, N7G, N71M, N84, PIG, R47

#### CECROPIACEAE

*Cecropia palmata* - *Trumpet tree, Snakewood tree* {S}. The ripe fruits have die consistency and somewhat the flavor of figs. They are eaten fresh or used as a filling for cakes Young buds are eaten as potherbs. West Indies, Northern South America. KUNKEL, MOWRY, RICHARDSON, M. [Re]; N84, 093

*Cecropia peltata* - *Indian snakewood, Trumpet tiee* {S}. Young buds are eaten as a potherb. The leaves and flowers were used by Black Americans in their broths. Tropical America. GRIME, HEDRICK 1919; F85, P38

*Myrianthus arboreus* - *Monkeyfruit* {S}. The large, yellow fruit has numerous four or five-sided sections that release a flavorful juice when bitten into. The juice can be either sweet or sour, depending on the tree and ripeness of the fruit. Young shoots and leaves are eaten in soups. Tropical Africa. DALZIEL, DANFORTH, TANAKA; Y40

*Pourouma cecropiaefolia* - *Amazon grape, Uvilla* {S}. Fruits are purple, grape-like, up to an inch and a half in diameter, with a large pit and a sweet, juicy white pulp. They are consumed out of hand and are also made into wine, jams and jellies. A relatively fast grower, it begins to fruit in three years. The tree is recommended for testing as a home-garden crop throughout the humid tropics. Western Amazon. MORTON 1987a, NATIONAL RESEARCH COUNCIL 1975a, WILLAN; I74{PL}, N84, 019, R78M

#### CELASTRACEAE

*Catha edulis* - *Khat, Arabian tea, Abyssinian tea* {PL}. Dried leaves are occasionally used in the preparation of a tea, much esteemed in Arabia and adjacent territories. More commonly, the fresh leaves and tender shoots are chewed to produce a stimulating effect not unlike amphetamines or several cups of strong black coffee. In Ethiopia, the leaves form an ingredient of *tej*, a honey wine or *mead*. Drier Africa to Arabia. FOX, E, HEDRICK 1919, MACMILLAN, SCHERY, UPHOF, VARISCO; A26, C43M, D92M{S}, F37T, F85{S}, G96, 112, I81M, I81M{S}, J73{S}, L90J, M7M, M17, M82, N84{S}, P38{S}, etc.

*Euonymus europaeus* - *Spindle tree* {S}. Fruits and seeds are the source of a yellow dye used for coloring butter. Also reported to be the source of an edible manna. Eurasia. DONKIN, UPHOF; G66, G89M{PL}, K38, K63G, N71M, N84, 053M, 093, P49, R78

*Euonymus japonicus* - *Japanese spindle tree, Masaki* {S}. Young leaves are eaten. Older ones are powdered and used for coloring other foods. Japan, cultivated. HEDRICK 1919, TANAKA; B41{PL}, F53M{PL}, F85, K63G, N84, P49, R78

*Maytenus boaria* - *Mayten tree* {S}. The seeds are the source of a cooking oil. Chile, Argentina. CORREA; C9M, G66, H71, 76S{PL}, I83M{PL}, K46{PL}, 053M, 093

#### CELTIDACEAE

*Celtis australis* - *European hackberry, Lotus berry* {S}. The small, insipidly sweet, cherry-like fruits are eaten raw or made into wine. Sometimes sold in markets of the Balkans. Said to have been the

lotus fruit of the ancient Lotophagi or Lotus eaters. Mediterranean region. DARBY, HEDRICK 1919, SIMMONS 1972, UPHOF, WATT; C9M, D56M, D95{PL}, 7777, 76S{PL}, I74{PL}, K63G, 053M, 093, P5, P49, Q46, R78

*Celtis laevigata* - *Southern hackberry* {PL}. The orange-red fruits, although sweet and edible, are generally small with very little pulp. North America. HENDRICKSON, MEDSGER, SIMMONS 1972; D95, F57, F73, F85{S}, G66{S}, H14M, 160, K63G{S}, N73

*Celtis mississippiensis*-*Celtis laevigata*

*Celtis occidentalis* - *Hackberry, Sugarberry* {PL}. The small, cherry-like fruits are very sweet and pleasant to the taste. They are eaten out of hand or can be used to make jellies and jams. The Indians ate the pounded fruits with parched corn and fat, or used them as a flavoring for meat. North America. FREITUS [Re], GIBBONS 1979, HENDRICKSON, MEDSGER, YANOVSKY; B9M, C9M{S}, C33, D45, D95, F57, G66{S}, H49,19M, 147{S}, K38{S}, M69M, 053M{S}

*Celtis reticulata* - *Western hackberry, Palo blanco* {S}. The sweet, fleshy berries are eaten raw, made into jelly and cakes or used as a seasoning for meat. Western North America. KINDSCHER, MEDSGER, YANOVSKY; B94, D95{PL}, F85, G66, 147,198M, K63G, L55J, N84

*Celtis sinensis* - *Chinese hackberry* {S}. Leaves are eaten boiled, or used as a substitute for tea. Ripe fruits are also eaten. Eastern Asia. TANAKA; C9M, D56M, F85, G66,7777,160{PL}, K63G, L47{PL}, N84, 053M, 093, R78

#### CEPHALOTAXACEAE

*Cephalotaxus drupacea*-*Cephalotaxus harringtonia*

*Cephalotaxus harringtonia* - *Japanese plum-yew, Inu-gaya* {S}. The female plant bears a fleshy fruit that is thick, juicy, and remarkably sweet, with a faint suggestion of the pine in its flavor. Eastern Asia. HEDRICK 1919; D95{PL}, B96{PL}, G66, H4{PL}, K38, K63G, M75{PL}, N37M{PL}, N51{PL}, N84, 093, P49, R78

#### CHENOPODIACEAE

*Ambrosinia mexicana* - \**Chenopodium botrys*

*Atriplex canescens* - *Fourwing saltbush, Chamisa*{S}. The seeds may be ground into a meal, mixed with water, and drunk as a refreshing beverage, or mixed with some other meal and used as flour. The leaves and young shoots have a distinct salty taste and can be used as greens. When burned the green herb yields culinary ashes high in mineral content, which are used by Hopi cooks to enhance the color in blue corn products, especially *piki* bread. Southwestern North America. KAVENA [Pre, Re], KIRK, UPHOF; A12M, C9M, C98, E53, F63M, G66,147,198M{PL}, J25M, J25M{PL}, J26{PL}, N84, 053M, P5, R33M, etc.

*Atriplex confertifolia* - *Shadscale* {S}. Seeds are ground into a meal that is used for bread and mush. Water in which the leaves are boiled is used for corn pudding. Southwestern North America. YANOVSKY; C4, C43V, C98, E53, E66M, G66, 7777,147, K15, K63G, K62, N79M, N84, P17M

*Atriplex halimus* - *Sea orache, Sea purslane* {S}. Young leaves and tips of branches are eaten raw in salads or used in soups, casseroles, pastas, quiches, and vegetable dishes. Also the source of an edible manna. Mediterranean region, Southwest Asia. BRACKETT [Re], DONKIN, KUNKEL; N61, N79M, N84, 093, P5, P17M, Q15G, R49{PL}

*Atriplex hastata* - *Hastate orache* {S}. The leaves are used as a spinach substitute. They are somewhat bland and are best mixed with stronger flavored greens, such as Portulaca, Lepidium, or Alliaria. Their natural salt content blends well with a little lemon juice. Seeds can be ground into a flour. Northern temperate region. CLARKE, LAUNERT; N84

*Atriplex hortensis* - *Orach, Mountain spinach, Butter leaves* {S}. Young leaves are used as a warm weather spinach substitute. Traditionally, they are mixed with sorrel leaves to modify the acidity of the latter. Also used in soups, stews, pastas, quiches, and crepes. Seeds are used in soups and muffins. Eurasia, cultivated. HALPIN, HEDRICK 1919, KRAFT [Re], KUNKEL, VILMORIN [Cu]; A2, C95, D92M, E24, F35M{PL}, 139, J20, J82, K49M, R47

#### CULTIVARS

**Chakwat:** An improved cultivar from northern India with dark green leaves. Both the leaves and plant size are slightly smaller than Yellow orach. E83T, RO, R50

**Crimson Plume:** Ornamental red orach that does not lose its color when cooked. Popular as a garnish in the restaurant trade. C53, D92M, Q34

**Giant Calite:** Hardy strain that can apparently withstand temperatures of 16° F. Large, rather juicy leaves of fine flavor, remain tender well into the growing season. Leaves do not turn bitter, even after boiling. B49

**Green Spires:** Dark green leaves that are delicious either raw or cooked. Grows to 5 feet tall. Also a very ornamental plant, having been bred for the European florist trade. F80

**Magenta V:** Vigorous new strain with true magenta foliage and much more vibrant color than Crimson Plume. About 40% of plants will be velvety green in color. Uniform, husk free seed for precision planting. Recommended for mesclun mixes as an inexpensive substitute for radicchio. 177

**Purple:** Very dark purple leaves, almost black under some growing conditions. Useful raw in salad mixes or as a colorful cooked "green". Suitable for edible landscaping due to its colorful foliage and ornamental seed heads. Developed by Peters Seed & Research. J9M

**Purple Savoved:** An especially thick-leaved and ruffled selection. Very ornamental as well as useful. Excellent for edible landscaping. Becoming popular in the gourmet restaurant market as a specialty salad green. F80, N7G

**Red:** (Rubra) Both stems and leaves are a dark-red color, giving the whole plant an attractive appearance. Popular as a garnish in the restaurant trade. Usually turns green when cooked, it is claimed that some clones retain their color. A2, D92M, E24, F35M{PL}, F80, H73{PR}, J9M, J20, K17M, K49M, M82{PL}, S55

**Ruby:** (Magenta Purple) Very attractive, brilliant deep-purple orach with excellent flavor. The 2 to 3 inch long leaves turn green when cooked. Harvest when young for salads or gather older leaves and saute. Grows 4 to 6 feet tall. An heirloom, cultivated since at least the 1800's. C95, K23{PL}, K49T, L11

**Yellow:** (Golden, White, Blonde, Belle Dame) Leaves are very pale green, almost yellow. The most widely grown cultivar in France, considered to be the sweetest and most tender type for use as a boiled or steamed vegetable. D92M, F80, N7G, 048, S55

*Atriplex patula* - *Halberd-leaved saltbush, Spearscale* {S}. Young plants, or tender growing tips of older plants, are very good eaten raw in salads or cooked and served like spinach. Zuni Indians mix the ground seeds with black Indian corn to make round meal-balls which are steamed on a rack over boiling water. Northern temperate region. FERNALD, GIBBONS 1979, HARRINGTON, H.; F88M, G47M{PL}, M34M, N84, 048

*Atriplex patula* ssp. *hastata* -+ *Atriplex hastata*

*Atriplex semibaccata* - *Australian saltbush* {S}. The red berries are eaten as tasty snacks or they are added to salads. The flavor is said to be reminiscent of tomatoes. Young leaves are eaten raw in salads, steamed like spinach, or cooked with meat. Australia, naturalized in North America. CLARKE, FARNSWORTH [Re]; A41M, C9M, E66M, G66, H71, K15, N79M, N84, 093, P5, P17M, Q15G, R15M, R33M

*Axyris amaranthoides* - *Inu-hdkjgi* {S}. Young plants and young leaves are eaten as potherbs. China. TANAKA; N84

*Beta vulgaris* ssp. *maritima* - *Wild sea beet, Sea spinach* {S}. Young, tender leaves are eaten in salads. Older ones are boiled or steamed and used as a spinach substitute. The flavor is considered to be superior to the cultivated beets and chards. Mediterranean region, Atlantic Coast of Europe. MABEY, MICHAEL [Re]; N84, 048

*Beta vulgaris* Cicla Group - *Swiss chard, Spinach beet, Seakale beet, Indian spinach*. The leaves are used as a hot weather substitute for spinach. They are also a popular wrapper in "nouvelle cuisine". Leaf stalks of chard are usually cut from the leaf and cooked separately as an asparagus substitute. One popular way is to braise them and serve with buttered breadcrumbs. Some cultivars of chard have edible roots. BRYAN [Cu, Re], CUSUMANO [Cul, Re], FELL 1982b, ROUTHIER 1993, SCHNEIDER 1986 [Cul, Re]; (for cultivars see Swiss Chard, page 551)

*Beta vulgaris* Crassa Group - *Beet, Sugar beet, Mangel wurzel* (PD). Young leaves can be used in salads, either raw or lightly cooked. Older leaves are sometimes used as a spinach substitute. Roots are eaten cooked, pickled, made into *borscht*, or grated and used raw in salads. Cooked roots are also added to salads when cold. Shredded roots are one of the ingredients of *Cafix*, a commercial coffee substitute. In the Middle East, cut beets or beet juice are added to pickles, especially the pickled turnips called *lift makboos*, to give them a bright pinkish-red color. Fermented beet root juice is sold under the brand names *Biotta* and *Eden*. Sugar beets are a source of sugar, syrup and molasses. *Belgian candi sugar*, made from sugar beets, is used by professional brewers in Belgium to produce some of their unique indigenous beer styles. Powdered beet root and beet root juice are used commercially for coloring and flavoring various food products. CARCIONE [Pie], COLE, C. 1990 [Re], HAMADY [Re], HUNTER 1973a, LARKCOM 1984, LEUNG; A25G, A52M, B8P, G29, J19M, K32M{EQ}, L17, L36M, N84{S}. (for cultivars see Beet, page 299)

*Chenopodium album* - *Lamb's quarters, White goosefoot, Fat hen* {S}. Leaves and young stem tips, while still tender, make a very acceptable spinach substitute. They are particularly good when mixed with dock greens (*Rumex* spp.). Seeds are ground into a flour used in breads, pancakes, muffins, and biscuits. Young inflorescences are cooked and eaten. Sprouted seeds are edible. Eurasia, naturalized in North America. CUSUMANO [Cul, Re], FERNALD, GIBBONS 1962, GIBBONS 1979, MICHAEL [Re]; A2, C43M, C95, D92M, F80, F85, J82, K22, K49M, L3J, M34M, N71M, N84

#### CULTIVARS

**Edulis:** Selected for its very compact growth habit. The stem internodes are approximately half the length of the common form, so the plants are twice as leafy. Excellent flavor for salad use, picked by the leaf or by cutting the tender stem tips. Very high in protein, potassium, calcium and Vitamin A. Introduced by Peace Seeds. C95, N7G

**Magenta:** A distinct strain developed by Oak and Stone of Covelo, California which supplies the San Francisco restaurant trade. Leaves are an attractive, fluorescent magenta. Considered by the developers to be one of the best tasting of all potherbs. B49, J9M

*Chenopodium ambrosioides* - *Epasote, Mexican tea* {S}. The herb is used to flavor corn, black beans, mushrooms, fish, soups, stews, chili sauces, shellfish, and freshwater snails. An infusion of the leaves is used as a tea substitute. Tender leaves are sometimes used as a potherb. Cooking the leaves with beans is said to reduce flatulence. In the Himalayas, the seeds are ground into a black flour that is mixed with warm water and eaten, and they are roasted and added to *chang* and *rakshi*—alcoholic beverages. Mexico, naturalized in North America. DUKE, HUTSON 1987 [Re], LATORRE 1977a [Re], MORION 1976, PAINTER, POHLE, WILLIAMS, L.; B73T{PR}, C34G{DF}, C43M, D92M, F80, 116, 116{DF}, J25M, J73, K22{PL}, K370, K370{DF}, N40{DF}, R47

*Chenopodium berlandieri* - *Southern huauzontle*, *Bledo extranjero* {S}. Leaves are fried in butter with onion and used like spinach. Young leaves and tender shoots are sometimes used in salads. Seeds are the source of a meal used for bread or gruel. Southwestern North America. HARRINGTON, H., HUGHES, P. [Re], KINDSCHER, TANAKA; C95,116, L77D, K49M, N84

## CULTIVARS

**Aztec Red:** (Aztec Red Spinach) Excellent summer spinach substitute, as heat only produces a larger crop of leaves without the plants bolting to seed. Lower leaves turn bright magenta as they mature, cook in only 30 to 60 seconds, and retain their color after cooking. Selected to grow among corn stalks, so its size and shape resembles a corn plant, growing 3 to 12 feet tall and only 1 foot across. May produce up to one pound of leaves per plant. J73

**Chual:** Leaves are eaten raw or cooked. Collected from a Mayo gardener near Piedras Verdes, Sonora, Mexico. Planted in the fall there. 116, N84

**Guerrero:** Cultivated race from Guerrero, Mexico. Leaves and stems are eaten when young. Seed stalks are blanched then fried in a batter of egg and cheese, or stripped from the stem and made into patties. 116

**Quelite:** Cultivated race originally from Atlixco, Mexico. Leaves and stems are prepared and eaten like spinach, having an excellent flavor. Seeds are translucent amber-brown in color. Planted in the spring and summer. 116, N84

*Chenopodium bonus-henricus* - *Good King Henry*, *Mercury*, *Allgood* {S}. The young leaves are eaten as a potherb, either alone or mixed with other greens like cabbage, chad, or spinach. Young shoots are cut under the ground like asparagus, peeled, and used as a substitute for that vegetable, called *Lincolnshire asparagus*. Tender flower clusters are eaten, considered by some to be the best part. Eurasia, cultivated. HALPIN [Cul], HEDRICK 1919, ORGAN, PAINTER [Re], VILMORIN [Cu]; B49, C67M{PL}, E61{PL}, F35M{PL}, F80, 139, J6, K22, K22{PL}, K49M, K85, N71M, N84, 053M

*Chenopodium botrys* - *Jerusalem oak*, *Feather geranium*, *Ambrosia* {S}. Leaves are sometimes used as a potherb. Also used as a tea substitute. Northern temperate region. FERNALD, TANAKA; A2, C43M, C81M{PL}, C95, D92M, E81M, F37T{PL}, F80, J20, K2{DF}, M82{PL}, N84, 053M

## CULTIVARS

**Green Magic:** 31 days. Vigorous plant with oak-leaf shaped leaves; taller than the type. Relatively strong scented. Delicious, nutty flavor. Used like epasote in Mexican bean dishes and sauces. Developed in The Netherlands. D68, D92M, J82, K49M, K57{PL}, N84

*Chenopodium capitatum* - *Strawberry blite*, *Strawberry spinach*, *Beetberry* {S}. The young leaves and tender shoots are used raw in salads or cooked like spinach. Succulent fruits may be added to a tossed salad, or eaten boiled and seasoned. They can also be used as a red dye for other foods. Northern temperate region. FERNALD, GIBBONS 1979, HARRINGTON, H., HELLER; B49, D92M, F80,139, J9M, K20M, K49M, K49Q, K71, M82, M82{PL}, N7G, 053M, Q34

## CULTIVARS

**Strawberry Sticks:** Branching plant, to 16 inches tall. Produces numerous very bright red fruits all along the stem until the end of September. Suitable for border plantings or in patio containers. D11M, D56M, F70, L91M, M65, N84, 053M, S55

*Chenopodium foliosum*-*Chenopodium capitatum*

*Chenopodium giganteum* - *Tree spinach*, *Purple goosefoot* {S}. The leaves are used as a potherb. Eurasia. KUNKEL; F80, L3J, N84

## CULTIVARS

**Maentaspreen:** (Magentaspreen Lamb's Quarters) Vigorous plant, 5 to 8 feet tall; large leaves; new growth is a brilliant iridescent magenta color. Tastiest eaten young, raw or cooked as spinach. Young flowers are also showy and of good flavor. Sow spring into early summer. A2, C43M, C95, D92M, E24, K49M, L11, L77D, L88J, N7G, 053M

*Chenopodium murale* - *Australian spinach*, *Sowbane*, *Salt greens* {S}. Leaves are eaten as a potherb or used in the preparation of sauces. Seeds are parched and ground and made into gruel or popped like popcorn. Eurasia. CRIBB, FELGER 1985, FCK, E, WATT, YANOVSKY; C95,116, L77D, N84

*Chenopodium nuttaliae* - *Huauzontle* {S}. Flower clusters are steamed like broccoli, or mixed with cheese, dipped in egg batter, and fried. They are a menu item at some of the finer Mexican restaurants. Young leaves are used as a mild flavored spinach substitute. Seeds are eaten or ground into a flour. Southwestern North America to Central America. KRAIG [Re], NATIONAL RESEARCH COUNCIL 1975a, QUINTANA 1994, WILSON, H.; DIT, F80, J82, N84

## CULTIVARS

**Chia Roia:** Rare grain type, only grown by Tarascan Indians of Michoacan, Mexico near Lake Petzcuaro. Has red seeds which are made into red tamales called *chapates*, for the fall holiday season. Also toasted and used for *pinole* and *atole*. Leaves are eaten. 116

*Chenopodium pallidicaule* - *Cahihua*, *Kaniwa* {S}. The small seed is toasted and ground into a nutty-tasting flour that is mixed with sugar and milk and eaten as a breakfast cereal. Cahihua flour or *cahihuaco* is also made into small cookies (*quispiho*), is used with wheat flour in breads, cakes and puddings, and is made into a hot beverage similar to hot chocolate. Andean South America, cultivated. GADE 1970, NATIONAL RESEARCH COUNCIL 1989, SIMMONDS 1965; L3J

*Chenopodium quinoa* - *Quinoa*, *Petty rice* {S}. The nutritious seeds are used in soups, stews, breads, biscuits, cakes, cereals and pasta, made into *tempeh* and *chicha*, puffed, or eaten as a side dish like rice. Young leaves can be used like spinach. Sprouted seeds are eaten in salads. An alkaline ash from the burned stems is chewed with coca leaf. Andean South America, cultivated. BROUK, CUSUMANO [Cul, Re], FRIED [Re], KHAC [Nu, Re], NATIONAL RESEARCH COUNCIL 1989, SIMMONDS 1965, STEINKRAUS, WOOD, R. [Pre, Re]; B31{DF}, E31{PD}, E56{DF}, E56{PD}, G29{DF}, H91{DF}, I43T{PD}, J25M, J56{DF}, J56{PD}, K49M, L14G{DF}, L14G{PE>}, M63M{DF}, N84, Q34, etc. (for cultivars see Quinoa, page 499, see also Sprouting Seeds, page 524)

*Chenopodium* sp. - *California Yokuts lamb's quarters* {S}. The seeds, which resemble amaranth, are used as a grain crop. They are easily harvested when ripe, and can be readily cleaned through a screen. Leaves are also edible. Semi-domesticated plant found at Yokuts Indian village sites in the Central Valley of California. J73

*Enchylaena tomentosa* - *Barrier saltbush*, *Ruby saltbush* {S}. Young leaves can be used as a green vegetable. Red berry-like fruits are sweet and succulent. Australia. CRIBB; N84, 053M, R15M, S92

*Halimione portulacoides* - *Sea purslane* {S}. Leaves are eaten raw in salads or cooked as a potherb. They are thick and succulent, and have a good crunchy texture and natural saltiness. Mediterranean region, Eurasia. KUNKEL, LARKCOM 1984, MABEY, MICHAEL [Pre, Re]; F85

*Spinacia oleracea* - *Spinach*, *Epinard*, *Hdren-so* {DF}. Leaves are eaten raw in salads, steamed, sauteed, pureed, used in soups, pastas, omelettes, souffles, as wrappers, etc. Also widely used as a filling for pies and pie-like pastries such as *hortopita* and *spanakopita*. For the sweetest tasting spinach it is best to remove the leaves from their stalks before cooking or eating. In France, the phrase *a la florentine*

usually refers to a dish containing spinach since it was a favorite of Catherine de' Medici of Florence. The leaf stalks and the top of the root, called *testine* or *spinach heads* by Italian Jews, are removed from the leaves and prepared as a separate vegetable, usually in a warm salad dressed with oil and vinegar. They have a much more earthy flavor than the leaves, reminiscent of beets or chard. Spinach juice is often combined with carrot, parsley and celery juices. Sprouted seeds are used in salads. Eurasia, cultivated. GURSCHE [Nu], HEDRICK 1919, MACHLIN [Pre, Re], ROOT 1980a, ROUTHIER 1993, VILMORIN [Cu], WOLFERT 1994a [Cul, Re]; B21P, E14T, E68M{PD}, G73, L17. (for cultivars see Spinach, page 523)

*Suaeda maritima* - *Sea blite* {PR}. Leaves and tender growing tips are eaten as a cooked vegetable after some of the saltiness has been removed. Or the salty leaves can be added to other foods to season them. Young shoots are pickled in vinegar and eaten alone or used as a relish. Widespread. CRIBB [Pre], GIBBONS 1964 [Pre, Cul], GIBBONS 1979; N79

*Tecticornia verrucosa* - {S}. The small seeds were ground into flour and used for making bread by the Aborigines. A salt-tolerant species recommended for saline agriculture. Australia. CHERIKOFF, NATIONAL RESEARCH COUNCIL 1990; N84

#### CHLORANTHACEAE

*Chloranthus braehystachys* -> *Sarcandra glabra*

*Hedyosmum mexicanum* - *Te azteco*, *Vara blanca* {S}. Mature fruits are whitish, succulent, sweet and edible. A substitute for tea can be made by placing two or three leaves in a cup of hot water. Leaves are used to flavor contraband liquor in Colombia. Tropical America. DUKE, WILLIAMS, L.; YOM

*Sarcandra glabra* - *Tea scent*, *Senryo* {S}. Seeds are dried, roasted and used as a substitute for sesame seeds. Leaves are used for scenting tea. Indomalaya, cultivated. MARTIN 1975, TANAKA; F85

#### CHRYSOBALANACEAE

*Chrysobalanus icaco* - *Coco plum*, *Icaco plum* {S}. Fruits are eaten raw, stewed with sugar, dried like prunes, or made into jams and jelly. In Cuba, the wild fruit is gathered and made into a sweet preserve, which is served in Havana restaurants as a *sobremesa* or dessert. Seed kernels are roasted and eaten. In preserving the fruits, they are pierced right through the seed which permits the syrup to penetrate, and after separation from the shell, the nut-like kernel is eaten with the fruits. Tropical America, cultivated. HEDRICK 1919, JOHNS [Cul], MENNINGER, MORTON 1977, POPENOE, W. 1920, STURROCK; D87G, E29, N84{S}, S97M

##### CULTIVARS

Butt: Largest of all coco plums. Grown for its large seeds. Quality of fruit only fair. Introduced into Florida from Costa Rica. WHITMAN; T73M

*Couepia polyandra* - *Olosapo*, *Zapote bolo*, *Zapotillo amarillo* {S}. The fruit is two to three inches long with juicy, yellow pulp, sweet and quite good but fibrous. Not popular enough to be sold at local markets. Central America. UPHOF, WILLIAMS, L.; F85

*Licania platypus* - *Sansapote*, *Monkey apple* {S}. The fruit has deep yellow fibrous flesh that is sweet and juicy, and an odor that is similar to pumpkin pie. Often sold in markets but not universally appreciated since it is thought to be unwholesome. Tropical America. MORTON 1987a, TANAKA, UPHOF, WILLIAMS, L.; T73M

*Parinari capensis* - *Dwarf mobolo*, *Sand apple* {S}. The sweet outer flesh of the fruit, although somewhat dry and astringent, is eaten. It has a strong characteristic flavor, and is buried in the sand for some time before it is considered fit to eat. It can also be dried and eaten as a soft cake. In Botswana, it is used for making beer. Juice of the fruit can be drunk fresh or boiled to the consistency of a

liquid porridge or gruel. Crushed kernels are eaten as a relish with meat. Southern Africa. FOX, E; F85

#### CISTACEAE

*Cistus albidus* - {S}. Leaves are used among the Arabs of Algeria as a tea. Dried leaves are often used to adulterate marjoram. Mediterranean region. BROUK, UPHOF; N84, 053M, 093, P10

*Cistus ladanifer* - *Labdanum*, *Spanish manna* {S}. Source of a fragrant, balsam-like resin that is sometimes eaten. In the food industry, it is employed for flavoring baked goods, soft drinks, ice cream, candy, and chewing gum. The seeds are ground into flour and used for making cakes and breads. Also yields a sweet manna. Mediterranean region. DONKIN, HEDRICK 1919, KUNKEL, MORTON 1976; C95, E61{PL}, F53M{PL}, G66, H71, 139, JO, K15, K49T, N84, 053M, 093, Q32

*Cistus salviifolius* - *Rock rose* {S}. Dried leaves are used as an adulterant of marjoram. Mediterranean region. BROUK; F80, H71, H94M{PL}, K15, N84, 053M, 093, P5, P17M, Q32

*Cistus villosus* - *Shaggy rock-rose* {S}. The plant is used in Greece as a substitute for tea. Also said to be used as a condiment. Mediterranean region. HEDRICK 1919, KUNKEL; C9M, E7M, G66, H71, K15, 093, P17M

#### CLEOMACEAE

*Cleome gynandra* - *Gynandropsis gynandra*

*Cleome icosandra* -> *Cleome viscosa*

*Cleome integrifolia* - *Rocky Mountain beeplant* {S}. Young shoots, leaves, and flowers are boiled and eaten as potherbs. Plants were gathered by the Tewa Indians of New Mexico and after removing the alkaline taste, were eaten with commel porridge. The seeds were sometimes ground into a meal for gruel or bread. Seedpods can be boiled and eaten. North America. GIBBONS 1979, HARRINGTON, H., KINDSCHER, UPHOF, YANOVSKY; C43V, E66M, 116, J25M, L55J, N7M, N84

*Cleome serrulata* -+ *Cleome integrifolia*

*Cleome viscosa* - *Spider flower* {S}. Young shoots and leaves, having a sharp, mustard-like flavor, are eaten boiled with chilis and salt. The pungent seeds are used as a substitute for mustard in curries. Pods are made into pickles. The juice is used as a condiment. Tropics. BURKILL, HEDRICK 1919, TANAKA, UPHOF, WATT; D92M, F80, F85, N84, 033, 053M, R15M

*Gynandropsis gynandra* - *Cat's whiskers*, *Spiderherb*, *Mamang* {S}. Leaves are eaten as a potherb, added to soups and stews, or used to flavor sauces. The pungent seeds are used as a substitute for mustard. They also yield an edible oil. In Thailand, the leaves are mixed with salt and sugar and fermented into a pickle-like product, called *pak-sian-dong*. Flowers are also eaten. Tropics, Subtropics. FOX, E, HEDRICK 1919, JACQUAT, OCHSE, STEINKRAUS, UPHOF; F85, J73, N84, 053M

*Gynandropsis pentaphylla* - *Gynandropsis gynandra*

*Isomeris arborea* - *Bladderpod* {S}. Green pods are eaten cooked by the Cahuilla Indians. Southwestern North America. UPHOF, YANOVSKY; B94, C43V, E66M, F85, G60{PL}, 198M, 198M{PL}, K15, N84

#### CLUSIACEAE (GUTTIFERAE)

*Calophyllum inophyllum* - *Alexandrian laurel*, *Kamani* {S}. Ripe fruits and seeds are edible. Unripe fruits are pickled. Tropics. ALTSCHUL, GIBBONS 1967, TANAKA; E21D{PL}, F85, N84, 094, P5, P17M, R15M, R50{PL}, Q46

*Garcinia atroviridis* - *Asam gelugur* {S}. The acid pulp of the large yellow fruit makes very good jelly and compote. Dried rind segments are used as a sour tamarind-like flavoring in curries,

soups, fish dishes, and the famous spicy meat dish of Sumatra called *rendang*. Traditionally eaten with fatty foods to prevent weight gain and obesity. Also rubbed on fatty meats to dissolve fat. Occasionally available in ethnic markets as *tamarind slices* or *tamarind skins*. Tropical Asia. FAIRCHILD 1930, OWEN [Cul], UPHOF, YOONG [Re]; N84

*Garcinia benthami* - *Bentham mangosteen*, *Bunag* {S}. Small, obpyriform fruits that are eaten out of hand, having acid white pulp of an agreeable flavor. Malaysia. UPHOF; F85

*Garcinia cambogia* - *Goraka* {DF}. Fruits are eaten as an appetizer, having succulent yellow pulp and a pleasant subacid flavor. The rind is dried, or made into a brine with salt, and used as a sour tamarind-like condiment for fish, curries and other foods. It has the ability to tenderize other ingredients. An extract is added to *Colombo-cured fish*. Considered essential in Sri Lankan cuisine. Seeds are the source of an edible fat. Tropical Asia. BALASURIYA [Re], CAMPBELL-PLATT, GARNER, HEDRICK 1919, MACMILLAN, UPHOF, WATT; GO, K18M

*Garcinia cochinchinensis* - *Bua nha* {S}. The fruit is the size of a plum, reddish-yellow, with a juicy, pleasantly acid pulp. Cut in slices, it is eaten raw or used as a flavoring in place of vinegar. The leaves are used as a condiment in fish dishes. Indochina. HEDRICK 1919, TANAKA; X88M

*Garcinia dulcis* - *Sweet garcinia*, *Taklang-anak*, *Moendoe* {S}. Despite the specific epithet, the fruits are usually sour. They can be eaten fresh, but are mostly used in preserves, jams, drinks, candied, or dried. Indonesia to the Philippines RIFAL, TANAKA; E29{PL}, F85, N84

*Garcinia hombroniana* - *Bruas*, *Mangis hutan*, *Luli* {S}. Fruits are eaten raw or in preserves, being of fine quality. The juicy, melting white pulp has a subacid flavor reminiscent of the peach. Has been recommended for improvement by selection and hybridization with other species. Malaysia. BURKILL, TANAKA, TINGGAL, UPHOF; N84, 019

*Garcinia indica* - *Cocum*, *Kokam butter tree* {DF}. The purple fruits are eaten raw or made into jelly, syrup and vinegar. They have a pleasant, somewhat acid flavor. Dried fruits are used for flavoring curries, fish dishes, and other foods, and for making acidulous beverages. Seeds are the source of *kokam butter*, reportedly used for adulterating ghee or butter. The dried fruits are usually available at Indian markets. HEDRICK 1919, MISRA [Re], REEJHSINGHANI 1975 [Re], UPHOF, WATT; F74, G0{PD}

*Garcinia kola* - *Kola bitter* {S}. Seeds are chewed with those of true kola (*Cola* spp.), and are thought to enhance one's enjoyment of the latter as well as allowing for consumption of larger quantities without indisposition. They have a bitter, astringent, aromatic flavor which enhances a local liquor. The extremely sour fruits are occasionally eaten. Sometimes available in African markets in the United States. West Tropical Africa. DANFORTH, DALZIEL, MENNINGER, UPHOF; Y40

*Garcinia livingstonei* - *Imbe*, *African mangosteen* {PL}. Ripe fruit is the size of a small plum, orange-red, with a thin layer of sweet, acidulous flesh of very pleasant taste. The highly colored pulp is used in the preparation of a purplish, claret-like wine. Tropical Africa, cultivated. KENNARD, MOWRY, UPHOF; E29, M17, N84{S}

*Garcinia mangostana* - *Mangosteen* {S}. One of the best tasting tropical fruits, often called the "queen of fruits". The white pulp is aromatic, juicy, with a texture so soft it almost melts in the mouth, and a sweet, delicate flavor. Usually eaten out of hand, but also made into desserts or cooked with rice or syrup. Seeds are occasionally eaten after boiling or roasting. They add a delicious, nutty flavor to preserves when cooked with the pulp. Indonesia, cultivated. ALMEYDA 1976a [Cu, Pro], CORONEL 1983, GARNER [Pro], MORTON 1987a, POPENOE, W. 1920 [Cu], UPHOF; E8M{PL},

F85, J22{PL}, K8{PL}, N84, 019, 093, Q93{PL}, R50{PL}, R78M

#### CULTIVARS {PL}

**Yellow:** Upright growing tree. More cold hardy than the common purple mangosteen. Somewhat more precocious, will generally begin fruiting in about seven years. The fruit is said to have the flavor of a tangy mango. Q93

*Garcinia morella* - *Indian gamboge tree*, *Tamal* {S}. The small, yellow fruit is eaten, being esteemed as a dessert fruit. Seeds yield a yellow fat used in cooking and confectionery, and also as a substitute for *ghee*. Source of *gamboge*, a gum-resin sometimes used in food. Indochina. HEDRICK 1919, TANAKA, UPHOF, WATT; F85

*Garcinia parvifolia* - *Brunei cherry*, *Assam aur aur* {S}. Very popular in Brunei where various parts of the fruit, both young and mature, have special culinary uses. Ripe fruits are eaten as a dessert, having juicy white pulp with a delicious sweet-tart flavor. Young golden-brown fruits are sliced into wedge shaped pieces, sun-dried and used as a sour condiment. The dried, brilliant crimson rind is the most esteemed product and is considered an essential flavoring for curries and other dishes requiring a sour flavor. Southeast Asia. TINGGAL, UPHOF; 019

*Garcinia pictorius* - *Cochin gorka* {S}. The yellow, juicy fruits have a pleasantly acid flavor and can be eaten raw. Also used for jams and preserves. Southeast Asia. MACMILLAN, TANAKA; E29{PL}, F85, N84, P38

*Garcinia prainiana* - *Cherapu* {S}. The roundish fruit is smooth, yellow in color, and has an acid edible pericarp and a subacid pulp. It is eaten like the mangosteen. Malaysia. TANAKA, UPHOF; R78M

*Garcinia venulosa* - *Gatsan* {S}. The fruit is oblate, about 2 inches in diameter, smooth, greenish in color and has agreeably acid pulp. In the Philippines, it is usually eaten with fish. Southeast Asia, Philippines. BROWN, W, TANAKA; F85

#### *Garcinia xanthochymus* - \**Garcinia pictorius*

*Mammea africana* - *African mammee apple* {S}. Seeds are consumed as food in some parts of Africa. The fruit is also edible. It has fibrous, musly, whitish-yellow flesh and a mostly acidic flavor, although sweet types are known. Tropical Africa. DALZIEL, DANFORTH, UPHOF; Y40

*Mammea americana* - *Mammee apple*, *Mamey de Santo Domingo*, *Abrico do Bard* {PL}. The ripe fruit is eaten out of hand, with wine, with sugar and cream, or made into sauces, pies, tarts and jams. Preserves made from the pulp taste remarkably like apricot preserves. Mature green fruits are high in pectin and make an excellent jelly when combined with high-acid fruits that are low in pectin, like the pineapple. From the fragrant white flowers a liqueur is distilled, which is known as *eau de creole*, or *creme de creole*. In Brazil, fermented *toddy* is made from the sap of the tree. Caribbean region, cultivated. JOHNS [Cul], MORTON 1987a, POPENOE, W. 1920, STURROCK; E21D, E29, F85{S}, K8, N84, 019{S}, S97M

#### CULTIVARS {GR}

**Lancetilla:** An improved type with large fruits of good quality. Originated in Lancetilla, Honduras. E8M

**Waimanalo:** An improved type with large fruits of good quality. Originated in Waimanalo, Hawaii. E8M

*Mesua ferrea* - *Ceylon ironwood*, *Nag champa*, *Indian rose chestnut* {S}. Young leaves, having a sourish, astringent flavor, can be eaten raw. If well cooked, the oily seeds are edible. The fruit is reddish and wrinkled when ripe. It resembles a chestnut in size, shape, and taste. Also a major ingredient of *Amrit Kalash*. Tropical Asia. HEDRICK 1919, PONGPANGAN, TANAKA, ZEVEN; F85, H14{ED}, N84, P5, Q12, Q18, R50{PL}

*Ochrocarpus africana* - *Mammea africana*

*Pentadesma butyracea* - *Owala oil tree*, *Butter tree* {S}. Seeds are the source of a pale yellow edible fat, known as *Sierra Leone butter*, used for cooking and in the manufacture of margarine. When young they are edible, but become sour or bitter when old and are then occasionally used as a substitute for cola nuts. West Tropical Africa. BURKILL, DALZIEL, IRVINE 1961, UPHOF; F85

*Rheedia acuminata* - *Madrone* {PL}. The fruits have a translucent whitish pulp that is juicy, slightly aromatic, and pleasantly subacid. They can be eaten out of hand or used in jams, preserves and drinks. Tropical America. KENNARD, MORION 1987a, POPENOE, W. 1924, UPHOF; E29,174, N84, 019{S}

*Rheedia brasiliensis* - *Bacuparl* {S}. The aril-like, translucent, subacid white pulp of the fruit is eaten, having an excellent flavor suggesting that of the mangosteen. It is highly prized eaten out of hand, or especially when made into a *doce* or jam. Brazil. IDONE, MORTON 1987a, POPENOE, W. 1920; T73M, X88M

*Rheedia edulis* - *Limao do Motto*, *Berba* {PL}. The oval, yellowish or orange fruits are eaten, having white flesh and an agreeable acid flavor. Often used for making jams. Cultivated locally, especially in Brazil. Central America. MORTON 1987a, POPENOE, W. 1920, UPHOF, WILLIAMS, L.; E8M

#### *Rheedia madruno* - *Rheedia acuminata*

*Rheedia magnifolia* - *Madrone* {S}. The fruits are eaten, and are rated by some as the best in the genus. They have smooth skin and a delicious, subacid flavor, sweeter than other types. South America. N84, R78M

#### COCHLOSPERMACEAE

*Cochlospermum religiosum* - *Silk cotton tree* {S}. The oil-cakes from the pressed seeds may be eaten. Source of an insoluble gum used as a substitute for tragacanth in ice-cream making. Tropical Asia. BURKILL, TANAKA, UPHOF; F85, N84

#### COMBRETACEAE

*Anogeissus latifolia* - *Ghatti tree* {S}. Source of *ghatti gum* or *India gum*, an exudation of the stem that is used in sweetmeats. Also used in the food industry as an emulsifier. Southern Asia. BROUK, SCHERY, UPHOF; F85, N84, Q46

*Anogeissus leiocarpus* - *Savannah tree* {S}. Source of an insoluble gum, eaten in Kordofan mixed with or as a substitute for gum arabic. The calyx and the fruit are used for the preparation of sauces or tea. Roots are made into chewsticks. Tropical Africa. UPHOF, VON MAYDELL; F85

*Combretum hereroense* - *Russet bush-willow* {S}. The brilliant red fruits are eaten fresh. Leaves are dried and brewed into a substitute for tea, called *mokabi* or *mokata*. Southern Africa. FOX, F.; N84, S28M

#### *Terminalia arjuna* -> *Terminalia glabra*

*Terminalia bellarica* - *Beleric*, *Vibhitaki* {S}. Fruits are dark red, somewhat like a small plum, with a pleasant, subacid flavor. They are called in commerce *baleric myrobalans* and are used for making preserves. The kernels are also edible but are said to have a narcotic effect. Also an essential ingredient of the Ayurvedic tonic formula known as *triphalala*, along with *T. chebula*. The bark is fermented into a type of wine known as *akshi-ki-sidhu*. Southern Asia to the Philippines. BURKILL, CAMPBELL-PLATT, FRAWLEY, MORNINGSTAR, SIVARAJAN, TANAKA, UPHOF, WATT; F85, M15M{PD}, N7D{DF}, N7D{PD}, N84, Q12, Q18, Q46

*Terminalia catappa* - *Tropical almond*, *Indian almond*, *False kamani* {S}. Seed kernels are eaten out of hand or roasted, having the flavor of almonds. They may be chopped and added to cookie or bread mixes, or stirred into icings, dessert fillings, candies, soups, or stews. The sun-dried kernels yield 38-54% of a bland, yellow, semi-drying oil which is edible and not as likely to become rancid as

true almond oil. It is used in cooking. The fruits have a tender skin and a thin layer of edible, subacid, juicy flesh. Tropical Asia, cultivated. DUKE, GIBBONS 1967, KENNARD, MENNINGER, MORTON 1985 [Nu], ROSENGARTEN; A79M, E29{PL}, F85, M17{PL}, N84, P5, P17M, Q12, Q18, Q46, R50{PL}

*Terminalia chebula* - *Black myrobalan*, *Chebula*, *Haritaki*, *Indian gallnut* {S}. The seed kernels are occasionally eaten as a snack, having a flavor reminiscent of almonds or filberts. They also yield an edible oil. The sour fruits are eaten raw in salads or with *nam phrik*, preserved in brine, or fried. They are also an essential ingredient of *Triphala* and *Amrit Kalash*, famous Ayurvedic tonic formulas widely used in India since ancient times. They have also been used there in the manufacture of *black salt* or *kala nimak*. Black salt, actually reddish-gray, has a distinctive smokey flavor and is a major ingredient of the spice blend known as *chat masala*. Tropical Asia. DEVI [Be], FRAWLEY, JACQUAT, KIRCHNER, MENNINGER, MORNINGSTAR, NORMAN [Re], PONGPANGAN, SIVARAJAN, TANMCA, WATT; C34G{DE}, F74{DF}, H14{PD}, H36{DF}, M15M{PD}, N7D{DF}, N7D{P£}, Q12, Q18, Q46

*Terminalia ferdinandiana* - *Kakadu plum*, *Billy goat plum*, *Mammohpan* {S}. The fruit, which looks and tastes like an English gooseberry, is one of the world's richest known sources of natural ascorbic acid. Samples of the fruit were found to contain between 2,300 and 3,150 milligrams of ascorbic acid per 100 grams of edible fruit. Aborigines have eaten the fruit for years, but it was not until 1981 that scientists from Sydney University discovered its unusual properties. Has become a popular bushfood for making preserves, pickles, sauces, chutneys and jams. Australia. BRAND, CHERIKOFF, ROBINS [Cui, Re]; C95, N79{PR}, N84, 032M{PD}, R15M, R33M, S92

*Terminalia glabra* - *Arjoon sadura* {S}. In India, a decoction of the bark with milk is used as a beverage. Seeds are also edible. Tropical Asia. HEDRICK 1919, KUNKEL, WATT; C9M, F85, G66, N84, Q12, Q18, Q46, R50{PL}

*Terminalia kaernbachii* - *Okari nut* {S}. Seed kernels, having an excellent mild, almond-like flavor, are eaten raw, roasted or baked. The flavor is improved by light roasting, with salt. Also the source of a vegetable butter. New Guinea, cultivated. ALTSCHUL, MASSAL [Nu], MAY, R., MENNINGER, UPHOF; F85, 019

*Terminalia tomentosa* - *Saj*, *Laurel* {S}. The astringent juice from the bark is employed in the manufacture of palm sugar. Ashes of the bark are used as a substitute for lime in betel-nut chewing. Southern Asia. TANAKA, UPHOF, WATT; Q12, Q18

#### COMMELINACEAE

*Commelina communis* - *Day-flower* {PL}. Young leaves, shoots, and flowers are cooked as a potherb, and served with butter, salt and miso, or rice. They can also be chopped fine and added to salads. Japan-China, naturalized in North America. ALTSCHUL, FERNALD, GIBBONS 1979, MEDSGER, PETERSON, L., TANAKA; N9M, N9M{S}

*Tradescantia virginiana* - *Spiderwort* {PL}. Very young shoots and leaves are eaten in tossed salads, parboiled and fried, or chopped fine they can be added to potato salad. Also good as a potherb served with butter or an oil and vinegar dressing, or added to soups and stews. The flowers make an attractive edible garnish, and can also be candied. North America. CROWHURST 1972 [Re], FERNALD, KINDSCHER, PETERSON, L., UPHOF; B29, B29{S}, C81M, E33M, F37T, I37M, J5M, L55, N7T, N84{S}, 053M{S}

#### CONVOLVULACEAE

##### *Calonyction aculeatum* - *Calonyction album*

*Calonyction album* - *Moonflower* {S}. Young leaves and fleshy calyces are steamed and eaten as a vegetable, or used in curries, soups, stews, etc. They may be used either fresh or dried. In India, the young seeds are also eaten. North America, cultivated.

BURKILL, MACMILLAN, MACNICOL, MARTIN 1975, MORTON 1977, OCHSE, WATT; C44, D92M, E7M, F73D, F80, H54, L91M, N84, 053M, 089

*Ipomoea alba* - \**Colonyction album*

*Ipomoea aquatica* - *Water spinach, Kangkong, Ong choy, Engtsai* {S}. Young leaves and stems are eaten boiled, steamed, stir-fried, or added to soups, stews, curries and sambals. Young stems are used as an ingredient in pickles. The protein content of the leaves is high making this one of the best green-leaved foods. Cultural methods emphasize the production of young, succulent tips. These can be eaten raw in salads. The roots are occasionally cooked and eaten. Tropics, cultivated. COST 1988, DAHLEN [Pre, Re], HEDRICK 1919, HERKLOTS [Cu, Re], MACMILLAN, MARTIN 1975, OCHSE, ROUTHIER 1989 [Cul, Re], UPHOF; C74{PL}, F73D, F85, 177, J82, L59, L79G, N24M, N40{PR}, N84, PIG, Q34, R47, S55, S70, etc.

CULTIVARS

**Bamboo Leaved:** New and unique strain of water spinach with small, light-green, arrow-shaped leaves on long hollow stalks. Very vigorous; tolerant of heat and dampness. Requires less water for growth than other types. N84, Q34, S70

*Ipomoea batatas* - *Sweet potato* {S}. Tubers are eaten raw, boiled, steamed, baked, fried, mashed, batter-fried as tempura, dried for later use, or fermented into the alcoholic beverages *aw amori, shochu, masato*, and *chicha*. They can also be used in pies, cakes, breads, puddings, cookies, ice cream, candies, jams, *dulce de batata*, etc. In Japan, they are used for *imo miso* and *harusame* noodles. Chopped and dried tubers are boiled with rice or ground into flour which is mixed with wheat flour and made into cake or bread. *Mushikiriboshi, imokarinto*, and *sembei* are popular Japanese snacks made from sweet potato. Also the source of a starch, called *Brazilian arrowroot*. The leaves and tips of actively growing shoots are used as a substitute for spinach. In Korea, the leafless stems, both fresh and dried, are made into *namul* and *kimchi*. In Japan, the petioles are boiled in soy sauce. Part of the traditional diet of the Majorcan black pig, the sweet potatoes adding a unique flavor to the famous pork products made from this breed. Tropical America, cultivated. BROWN, G., CARCIONE, CARTER, FELL 1982b, HALPIN [Cu, Cul], HERKLOTS [Cu], HESSELTINE, LEE, F. 1988 [Re], MILLON, OCHSE, ORTIZ 1973 [Re], SHURTLEFF 1976, STEINKRAUS, TANAKA, UPHOF, VILMORIN, WOODRUFF [Re], WOOLFE; A7{DF}, D97{ED}, E60P{PD}, N84. (for cultivars see Sweet potato, page 549)

*Ipomoea digitata* - *Spanish woodbine, Khoai xiem* {S}. The oblong tubers have a slightly sweet taste, and are eaten like sweet potatoes. Leaves are also eaten. Tropics. HEDRICK 1919, MARTIN 1975, TANAKA; A79M, C95, F85, G73, 181M, 181M{PL}, 053M, Q38

*Ipomoea tuberosa* - \**Ipomoea digitata*

*Ipomoea turpethum* - *Operculina turpethum*

*Ipomoea* sp. - *Jicama montes* {S}. Vining plant with heart-shaped leaves and white flowers that grows in wet areas. Produces sweet tubers that are edible. Oaxaca, Mexico. THEODOROPOULOS; F80

*Operculina turpethum* - *Indian jalap, Turpeth* {S}. The soft, sweet stem is sucked or chewed. Fleisty, unripe fruits are eaten raw or boiled like peas. Leaves are also edible. Tropical Asia, Australia. CRIBB, HEDRICK 1919, MARTIN 1975; F85

*Rivea corymbosa* - *Ololuiqui, Aguinaldo blanco* {S}. Source of a water-white, low mineral content honey with a delicate flavor. It is reportedly the lightest honey in the world. Tropical America. CRANE 1975; A26, C43M{PL}, F73D, F80, G73{PL}, G73, 181M{PL}, 181M, J82{PL}

CORNACEAE

*Cornus canadensis* - *Bunchberry, Dwarf cornel* {PL}. The rather dry fruits can be added to breakfast cereals, or used in jellies, fruit sauces, pies, and puddings. Bunchberries are said to be an excellent ingredient for steamed plum puddings. Northern temperate region. CROWHURST 1972, FERNALD, GIBBONS 1979, HALL [Re], KIRK, MEDSGER, TURNER 1979 [Re]; A2{S}, D75M, D95, E15{S}, 144, J26, K63G{S}, K75M, N84{S}

*Cornus capitata* - *Thammal, Thanboi* {S}. The fruit is sweetish, mingled with a slight bitter taste, and is eaten or made into preserves in India. Himalayan region. HEDRICK 1919, WATT; D95{PL}, G66, H4{PL}, I77M{PL}, K38, K63G, N37M{PL}, N84, 093, P17M, P38

*Cornus kmsa* - *Yamaboshi* {PL}. The oblate red fruits, called *yang-mei*, are very juicy and of a fair flavor. Consumed in some parts of China. Young leaves are eaten by mountain people in Japan. Japan-China. TANAKA, WILSON, E.H.; B32, B74, C92{S}, D37, E47, E47{S}, F51, G66{S}, H4, J16, K38{S}, K63G{S}, J61M, NO, N84{S}, 093{S}, etc.

CULTIVARS {GR}

**Big Apple:** A vigorous and unique variety with large, attractive flowers in the spring followed by cascades of very large, bright red fruit in the fall. Grows to 15 feet tall. Striking both in bloom and in fruit. D37, 146, 149P, I66T

**Milky Wav:** Large, one inch fruits that are said to have somewhat the flavor of papaya. Ripens in October. Also a prolific producer of attractive white flowers beginning in late June. Heavier blooming and more fruitful than other types. A50, B52, C9, D95, G21M, H4, 160, 177M

*Cornus mas* - *Cornelian cherry, Sorbet* {PL}. The pleasant-tasting fruits are eaten raw, dried, preserved in syrup (*rob de comis*), or made into tarts, conserves, sauces, sweetmeats and marmalades. In England, they were at one time commonly kept in brine and used like olives. Cornelian cherry juice is used in the Turkish fruit drink *serbert*, carbonated beverages, and as an addition to cider and *perry*. Also the source of an alcoholic beverage, known in France as *vin de cornouille*. In Norw<sup>^</sup>, the flowers are used for flavoring distilled spirits. Seeds were ground and used as a coffee substitute. Eurasia, cultivated. BIANCHINI, BRYAN [Cul, Re], GOLDSTEIN [Re], HEDRICK 1919, HENDRICKSON, JOHNS, SIMMONS 1972 [Cu], UPHOF; B32, D37, D95, E47{S}, E87, F43M, G66{S}, I77M, J61M, K38{S}, K63G{S}, N84{S}, 053M{S}

CULTIVARS {GR}

**Bulgarian:** Large, pear-shaped fruit; skin deep scarlet to violet; flesh lighter scarlet, high in sugar, of excellent flavor; stone small. High in vitamin C. Tree very productive. Originated in Bulgaria. Introduced into the United States by Alexander I. Eppler. D47

**Cream:** An improved cream-colored cultivar from eastern Europe. Creamy skin; lighter cream flesh. Excellent quality. Introduced into the United States by Alexander I. Eppler. D47

**Elegant:** Striking, bright red, long pear-shaped fruit; very large, 1 to 1 1/2 inches in length; sweet and delicious. A superior cultivar developed by Svetlana Klimenko at the Kiev Botanical Garden in the Ukraine. D37, E87, 146, 149P, I66T

**Eppler's Yellow:** Medium to large, barrel-shaped fruit, 3/4 to 1 inch in length; golden-green in color; honey sweet, with a nice balance of acidity. Heavy bearing shrub. Originated in Seattle, Washington as a chance seedling. Introduced by A.I. Eppler. D47

**Pioneer:** Large, dark red, pear-shaped fruit, up to 1 1/2 inch long; juicy, sweet and aromatic. A superior cultivar developed by Svetlana Klimenko at the Kiev Botanical Garden in the Ukraine. E87, H49, 146, 149P, I66T

**Red Star:** Large, long oval fruit, about 1 1/4 inch long; glos<sup>^</sup>, dark-red skin; sweet, very juicy and aromatic. A superior cultivar

developed by Svetlana Klimenko at the Kiev Botanical Garden in the Ukraine. E87, H49,146,149P, 166T

**Red Stone:** Blooms very early, before leaves appear, flowers over a long period. Red fruits appear in late summer. More productive of fruit than the common type. Reddish-purple fell color. Resistant to anthracnose. Hardy to -30° F. Released by the USDA. B74{PL}

**Romanian:** Large, spherical fruit; skin bright red; flesh lighter red, high in sugar, very delicately flavored; quality excellent. Tree highly productive. Originated in Romania. Introduced into the United States by Alexander I. Eppler. D47

**Russian Giant:** Very large, barrel-shaped fruit; skin deep scarlet; flesh lighter scarlet, high in sugar, of excellent flavor; stone small. Tree high yielding. Originated in the former U.S.S.R. Introduced into the United States by Alexander I. Eppler. D47

**Yellow:** An improved yellow cultivar from eastern Europe Yellow skin; lighter yellow flesh. Excellent quality. Introduced into the United States by Alexander I. Eppler. D47

**Yellow Kiev:** Large cylindrical fruit, 1 inch in length; an attractive yellow color. Delicious sweet-tart flavor. Makes excellent jam and compote. A superior cultivar developed by Svetlana Klimenko at the Kiev Botanical Garden in the Ukraine. I66T

*Cornus officinalis* - *Sanshuyu* {PL}. Fruits are eaten fresh, although they are not very sweet. In Korea, they are used for making a liqueur-like beverage by placing them in a jar with sugar and allowing them to ferment, then adding *soju*, a distilled spirit made from sweet potatoes. Eastern Asia. PEMBERTON, TANAKA; B96, C9, D95, E87, F37T{DF}, G21M, G66{S}, H8, I77M, K38{S}, K63G{S}, J61M, M92, O93{S}, P5{S}, etc.

*Dendrobenthamia capitata* - \**Cornus capitata*

*Dendrobenthamia japonica* - *Cornus kousa*

*Macrocarpium mas* - *Comus mas*

#### CORYLACEAE

*Corylus americana* - *American hazelnut*, *Wild filbert* {PL}. The thick-shelled nuts have small, sweet kernels that are eaten raw or used in soups, breads, cookies, cakes and candies. Indians of the prairie regions preferred them in the milk stage when they are softer and sweeter. North America. FERNALD, GIBBONS 1979, KINDSCHER, MEDSGER, TURNER 1979 [Pre, Re]; A91, B52, B74, C11M, C38, D45, G23, G66, G72, H4,160, K38{S}, K63G{S}

#### CULTIVARS

**Winkler:** Prolific bearer of large nuts. Winter hardy to at least 30° below zero. Highly resistant to eastern filbert blight. Widely used as a parent in breeding with *C. avellana*. Introduced by Snyder Bros., Center Point, Iowa, in 1918. B99,125M{SC}

*Corylus avellana* - *Filbert*, *Hazelnut*, *Cobnut* {S}. The nut is eaten raw, as *noces* in oil, or roasted and used in breads, cakes, *torrone* and other confections, cookies, pies, *picada* and *romesco* sauces, cereals and nut milks. Also the source of a clear, yellow, edible oil with a buttery flavor used in salad dressings, sauces, cookies, etc. In Egypt, ground hazelnuts are an ingredient of *dukka*, a spice blend that is used with olive oil as a dip for bread. *Frangelico* is a hazelnut-flavored liqueur. In Turkey, the leaves serve as wrappers for *samosas*. Eurasia, cultivated. CUSUMANO [Cul, Re], GRAY, P. [Cul], MABEY, MENNINGER, NORMAN, ROSENGARTEN, UPHOF, VON WELANETZ, WOLFERT 1998; A52M{PD}, B31{PD}, G29{PD}, G66, G66{PL}, G72{PL}, H72{PD}, H73{PD}, 166 {PD}, I66M{PD}, K38, K54{PD}, K63G, L14G{PD}, L17{PD}, M63M{PD}, N71M, O53M, O93, R78, etc. (for cultivars see Filbert, page 369)

*Corylus avellana* f. *fusco-rubra* - *Red filbert*, *Red-leaf filbert*, *Purple-leaved filbert* {GR}. Nuts are edible, having a reddish or deep purple husk. Cultivated. REHDER. D37, P68M, R77, R83

#### CULTIVARS

**Fortin:** Superior to other red leaf filberts in that it maintains its red foliage throughout the summer. Catkins and nut husks are also red. Produces an abundance of small flavorful nuts. Pollinated by Butler and Ennis. Selected by Michael Dolan of Burnt Ridge Nursery. 174

**Rote Zeller:** Ornamental tree with small, oval-shaped, tasty nuts. Long reddish-purple catkins appear in winter and early spring, red leaves in spring, and reddish husks and nuts in summer. Leaves later turn bronze, except for the tips of new growth. Light producer. B74, D95,174, J15M, NO

*Corylus californica* - *Corylus comuta van californica*

*Corylus chinensis* - *Chinese tree hazel*, *Chen* {S}. The nuts are edible. A large upright tree that does not produce suckers. Drought resistant. Eastern Asia. TANAKA; D95{PL}, G66

*Corylus colurna* - *Turkish tree hazel*, *Constantinople nut* {PL}. Nuts are edible. The tree is upright, non-suckering, and very drought resistant. Useful in hybridizing with *C. avellana*. Eurasia. JAYNES, ZEVEN; A91, B74, D95, E87, G66, G66{S}, H4, H49, 174, K38{S}, K63G{S}, N71M{S}

*Corylus colurna van chinensis* - \**Corylus chinensis*

*Corylus x colurnoides* (*C. avellana* x *C. colurna*) - *Trazel*, *Turkish trazel* {PL}. Artificial hybrid. The edible nut can be eaten raw or used in breads, cakes, puddings, nut milks, etc. Combines the non-suckering, winter-hardy, vigorous growth of the tree hazel with the free falling, early bearing, large nut size of the filbert. TANAKA; A91, B74, E97, J61M

#### CULTIVARS {GR}

**Bill's Hybrid:** Hybrid of Turkish trazel back crossed to filbert, making the progeny 3/4 filbert and 1/4 trazel. Appears to retain most of the desirable nut qualities of both parents, especially a large, clean kernel. Hardy to Zone 4. A91, A91{PL}

**Chinoka:** Attractive, medium to large nut with a mild flavor; free falling; matures early. Tree bears heavy crops annually; a good producer of catkins, making it a good pollinator. Selected by J.U. Gellatly. N24M

**Faroka:** Plump, light colored nut of excellent quality, strongly resembles the tree hazel parent. Resistant to hazel blight. Strong, upright growth habit. Selected by J.U. Gellatly. Presumed to be a natural hybrid. E62{SC}

**Finaerlakes:** Large, elongated nut of excellent quality. Vigorous, shapely tree; precocious and productive; very hardy. Resistant to aphids and bud mites. Requires a pollinator. Introduced by Miller Nurseries. H65

**Gellatly Mix:** A mixture of seedlings of the best named trazels, mostly Gellatly selections, including Chinoka, Eastoka, Faroka, Laroka, Erioka, Zeroka, and Morrisoka. A91{PL}

**Laroka:** Long nut of good size and very good flavor; shell thin; generally free falling. Excellent landscape value; vigorous growth; large, dark green leaves to 6 inches in diameter. Selected by J.U. Gellatly. E62, E62{DF}, E62{SC}, E91M{PL}, I60{PL}

*Corylus cornuta* - *Beaked hazelnut* {PL}. The nuts can be eaten raw, dried for later use, or ground into a flour or meal. The meal can be mixed with sugar, water, and candied orange peel and then used to fill turnovers, pies, etc. North America. GIBBONS 1979, HARRINGTON, H., MEDSGER; A91, B74, G66{S}, J41M, K63G{S}, K89, N84{S}

*Corylus cornuta* var. *californica* - *California hazel* {PL}. The nuts are eaten fresh or preserved for winter use by several Indian tribes, among which the Cowlitz, Squaxin, and Snohomish. Western North America. UPHOF; B92, B94{S}, D95, E15{S}, G60, N84

*Corylus ferox* - *Himalayan hazelnut* {S}. The small, thick-shelled nuts are edible, tasting like the common filbert. Himalayan region. HEDRICK 1919; N84

*Corylus heterophylla* - *Siberian filbert* {S}. Nuts are hard-shelled, of a relatively good flavor, and are eaten raw. Leaves are variegated, with a deep carmine, heart-shaped spot at the center. Eastern Asia. TANAKA, ZEVEN; F85, G66, G66{PL}, N73{PL}

*Corylus maxima* - *Lambert's filbert*, *Giant filbert* {PL}. The large, edible nuts are eaten raw or used in nut milks, nut butters, cakes, pies, breads, etc. Nuts of this species were once called filberts and those of *C. avellana*, hazelnuts or *comnuts*, but the distinctions have been obscured by breeding and selection. Mediterranean region, cultivated. MASEFIELD; E87, G66{S}, 081, R83. (for cultivars see Filbert, page 369)

*Corylus rostrata* - *Corylus cornuta*

*Corylus tibetica* - *Tibetan tree filbert* {S}. The nuts are edible. A non-suckering upright grower, whose eventual height is the smallest of the tree hazels. Himalayan region. TANAKA; T41M

*Corylus x vilmorinii* (*C. chinensis* x *C. avellana*) - *Chinese trazel* {PL}. Artificial hybrid. Nuts are eaten. The Chinese tree hazel parent contributes a characteristic rounded nut with a slightly thinner shell than the Turkish trazel. REHDER; A91, H49

*Corylus x sp.* (*C. avellana* x *C. americana*) - *Hazelbert, Mildred filbert* {PL}. Artificial hybrid. The nuts are edible. Combines the cold hardiness and resistance to eastern filbert blight of the American hazelnut, with the desirable nut qualities of the European filbert. JAYNES; H49

CULTIVARS

**Buchanan:** Rush x a European filbert. Pale brownish-gray nut; medium-brown, ovoid pointed kernel of good flavor. Hardy, productive tree; reaches 10 feet in height. Originated in Lancaster, Pennsylvania by J.F. Jones. Introduced in 1930. Named after President Buchanan who is buried in Lancaster. BROOKS 1972; B99,160

**George Slate:** Mixed seedlings of hybrids made by George Slate at Geneva, Nov York, using *C. americana* 'Rush' as one of the parents. They were never named due to poor yield, shy catkin production, and susceptibility to big bud mite. JAYNES; E62{PL}, E62{DF}, E62{SC}

**Graham:** Nut is large, of good quality. Tree is resistant to Eastern filbert blight; an annual bearer. Originated in Ithaca, Nov York. Winkler x Longfellow. BROOKS 1972; B99, E62, E62{SC}

**Potomac:** Rush x Du Chilly, introduced in 1951. Nut averages 185-195 per pound, yields 50% kernels, resembles Barcelona. Tree is vigorous, productive, suited to areas where the European filbert cannot be grown due to lack of hardiness. BROOKS 1972; B99

**Reed:** Rush x Bolwyller, introduced in 1951. Nut averages 180-190 per pound, yielding 48% kernels, resembles Red Aveline. Tree is vigorous, productive, suited to areas where the European species cannot be successfully grown due to lack of hardiness. BROOKS 1972; B99

**Rutter:** Seedlings from named cultivars growing as an F<sub>2</sub> population in Minnesota. Nuts are similar to wild American hazels but have a much thinner shell. Some seedlings will produce very large nuts. Particularly valuable to growers in short season areas. A91

**Skinner:** Originated by Fred Ashworth, St. Lawrence Nurseries, Heuvelton, Nov York. Nut large, a little wider than long; kernel plump, flavor good; resembles Barcelona; ripens Sept. 24 in Heuvelton. Tree is very hardy, tolerant of blight. Dropmore x Italian Red seedling. BROOKS 1972; A91, L27M

*Corylus x sp.* (*C. avellana* x *C. cornuta*) - *Filazel* {PL}. Artificial hybrid. Nuts are edible. The hybrids are intended to combine the hardiness of the beaked hazel with the nut quality of the European

filbert. Many of the hybrids have the Peace River strain erf C. comuta as the pistillate parent. JAYNES; D69, H49, J61M

CULTIVARS

**Big Red:** Nut large, about the size of a Barcelona, kernel well-filled; moderately thick shell. Early ripening. Tree has a multi-stem, suckering habit of growth. Of interest to short season growers for home use, breeding material, or local markets. A91

**Gellatlv 502:** Medium-sized nuts with good quality and excellent flavor; very good kernel filling. Haidy, productive tree; produces vigorous seedlings. Peace River x European. E91M, E91M{GR}

**Gellatlv Mix:** A mixture of seedlings from the best quality, early ripening Gellatlv selections including Myoka, Petoka, and Manoka. Recommended for growers in short season areas. Seedlings from seeds collected at the original Gellatlv planting. A91, B74,160

**Grimo 188P:** A seedling selection resulting from a cross of the Myoka and Petoka cultivars. E91M, E91M{GR}

**Mvoka:** Nut is well filled, with a prominent fuzzy skin on the kernel; thick shell. Ripens very early, making it suitable for short season areas. E91M, J89M

**Peace River Cross:** Seedlings of the original Peace River hybrids made by J.U. Gellatlv. Likely back-crossed to *C. avellana*. Of interest to breeders and growers in short season areas as it produces large nuts early in the season. A91

COSTACEAE

*Costus guanaiensis* - *Cahahuate* {S}. The stalks yield a very tasty, acidulous juice which can be consumed as is or made into a refreshing beverage by sweetening with sugar. The flowers are also edible, having the same flavor as the juice squeezed from the stalks. Ecuador. N40M, N84, R78M

*Costus speciosus* - *Crepe ginger, Tebu, Setamr* {PL}. Tender shoots are boiled or steamed and eaten as a vegetable. Fruits and rhizomes are occasionally eaten. Tropical Asia. BURKILL, HEDRICK 1919, MACMILLAN, TANAKA, WATT; A28, A79M, A79M{S}, F85{S}, H4, J27, L43, L62M, N84{S}, 053M{S}, 093{S}, P5{S}

CRASSULACEAE

*Dudleya edulis* - *Mission lettuce* {PL}. The fleshy leaves are eaten raw. Stems are slightly sweet and are refreshing to chew, though often leaving a chalky aftertaste. These plants were considered a delicacy by the Cahuilla Indians. Southwestern North America. CLARKE; F85

*Rhodiola rhodantha* - *Sedum rhodanthum*

*Rhodiola rosea* - *Roseiroot* {S}. Young, succulent leaves and shoots are eaten raw in salads, steamed and served like spinach, pickled, or preserved in oil. The stems can be cooked and eaten like asparagus. Roots are boiled, seasoned with butter, and served with meat or fish. Northern temperate region. ANGIER, FERNALD, GIBBONS 1979, HELLER, UPHOF; A61, A61{PL}, D92M, D95{PL}, N84, 053M, Q24

*Sedum acre* - *Wall pepper, Biting stonecrop* {S}. The leaves are dried and ground for a spicy seasoning. Eurasia, naturalized in North America. D92M, H4{PL}, I37M{PL}, L26{PL}, N42{PL}, N71M, N84, 053M, 093, Q24, Q41

*Sedum reflexum* - *Jenny stonecrop* {PL}. Young leaves and shoots are eaten raw in salads by the Dutch. The slightly astringent sour taste of this plant makes it a useful addition to a tossed green salad. It can also be used as a potherb or added to soups. One of the ingredients of Alexander von Humboldt's favorite soup. Eurasia. LARKCOM1984, LAUNERT [Re], ROOT 1980b, UPHOF; B77, F80{S}, G23D, H4, J37M, N71M{S}, N84{S}, 053M{S}, Q24{S}

*Sedum rhodanthum* - *Queen's crown* {S}. The young shoots can be cut into small pieces and mixed with lettuce for a salad. Young leaves are very acceptable eaten raw or boiled as a potherb. North America. HARRINGTON, H.; A61, A61{PL}, D35G, J93T, N84{PL}

*Sedum roseum* -> *Rhodiola rosea*

*Sedum sarmentosum* - *Tsuru-mannen-gusa, Tollamul* {PL}. Young leaves and shoots are eaten. In Korea, both the leaves and flowers are used in *namul*, cooked side dishes usually seasoned with sesame oil and soy sauce. Eastern Asia. PEMBERTON, TANAKA; G23D, H60, J37M, L26, N42

#### CUCURBITACEAE

*Acanthosicyos horridus* - *Naras, Narra melon* {S}. The fruits have a pleasant, sweet-acid flavor and are eaten fresh or preserved. Seeds, called *butter pits*, are eaten roasted or boiled or stored for later use. The kernel has a soft consistency like butter. They also yield an edible oil. Pulp of the fruit is used to separate casein from milk after being heated. Southern Africa. FOX, E, MENNINGER, UPHOF; F85

*Acanthosicyos naudinianus* - *Herero cucumber* {S}. Fruits are eaten boiled, roasted, or made into pickles. When fresh they are a thirst quencher. Also used as a rennet for curdling milk. The seeds contain 35% protein and are roasted and ground into flour or used in confectionery. Southwest Africa. FOX, F., MENNINGER; N84, S28M \*

*Benincasa cerifera* - \* *Benincasa hispida*

*Benincasa hispida* - *Wax gourd, Winter melon, White gourd, Ash pumpkin, Doan gwa, Tong qua, Petha* {S}. Mature fruits are eaten raw, stir-fried, braised, stuffed, pickled in miso, added to curries and *moon cakes*, or made into sweet pickles, preserves, and sweetmeats. Also used as an adulterant of candied citron. In the classic Chinese dish *tung kwa chung* or *winter melon pond*, the pulp and seeds are scooped out, the cavity is filled with soup ingredients, and the gourd is steamed for 2 1/2 hours. Young leaves, flower-buds, and immature fruits are steamed and eaten or added to stews. Seeds are eaten fried or roasted. Tropical Asia, cultivated. BURKILL, COST 1988 [Cul], DAHLEN [Pre, Cul], HARRINGTON, G. [Cu, Cul], HAWKES [Re], HERKLOTS [Cu, Re], KRAFT, OCHSE, PARMAR, P. [Re], SHURTLEFF 1976, VILMORIN; A79M, C27G{PD}, C82, D33, F73D, G33, G93M, 139, J82, N84, RO

#### CULTIVARS

**Larae Round:** 90 days. Fruits are round in shape, 20 inches in diameter; weight 15 to 20 pounds; skin is light green covered with a white bloom when mature. Fine, white flesh. Very productive plant. Round type wax gourds are very popular in Japan. C20M, D55, K49M, L59, N84, S70

**Oblong:** 90 days. Extra long cylindrical fruits, can be up to 2 or 3 feet long and 20 inches in diameter, weighing about 20 pounds. Oblong wax gourds are widely grown in Taiwan and Southern Asia. D55, N84, S70

**Small:** Small fruits, weighing about 5 pounds. Fine, white flesh. Matures early, therefore it does well in more temperate climates. Good for home gardens and for making *wax gourd pond*. L59

*Benincasa hispida* 'Chieh-Qwa' - *Fuzzy gourd, Hairy melon, Mao qua, Mao gwa, Chieh-kwa, Small white gourd* {S}. Young fruits are cooked and eaten like zucchini in soups, breads, casseroles, stir-fried dishes, etc. Their size and shape are ideal for stuffing, just large enough so that each half makes a single portion. To prepare, the fuzzy coat is removed and the green skin peeled. CHANG, W. [Re], DAHLEN [Cul, Re], HARRINGTON, G. [Cu, Cul], HERKLOTS, TANAKA; A79M, C82, D55, E13G{PR}, F73D, F80, G93M, K20M, K49M, L42, L59, N84

*Cephatandra quinqueloba* - \* *Coccinia quinqueloba*

*Citrullus colocynthis* - *Colocynth* {S}. The fruits, after being boiled repeatedly to remove the bitter principles, are pickled or made into preserves. Seeds are roasted and eaten or ground into flour and used in the preparation of *chapaties*. They also yield an edible oil. Northern Africa, Southern Europe. BHANDARI, HEDRICK 1919, KUNKEL, TANAKA, WATT; D56M, F85, N40M, N84

*Citrullus ecirrhosus* - *Namib tsama* {S}. The nutritious seeds are eaten by Bushmen in remote parts of the Kalahari Desert. Southern Africa. FOX, E; N84, S28M

*Citrullus lanatus* - *Watermelon* {S}. Ripe fruits are cooled and eaten raw, in fruit salads, preserved, or made into wine and pottage. Watermelon juice is a popular item in natural foods stores. Watermelon syrup—the favorite sweetener for baking among Russian Mennonites—was made from a small, syrupy, cream-colored melon called *zuckerarbus*. The syrup was used as a spread, in jam making, and in baking cookies and cakes such as *Kuchen* and *Siaroppspapanat*. Unripe fruits are eaten in soups or pickled in sake lees. In China, the roasted seeds are widely eaten and the fruit pulp is made into jam. Seeds are also ground into flour for breads and cakes, added to soups and stews, pressed for their edible oil, or fermented into *rob heb* and *amilinguwi*. Leaves are used as potherbs or relish. Tropical Africa, cultivated. BHANDARI, CHANG, W., DIRAR 1993, HEDRICK 1919, JOHNS [Cul], MENNINGER, OCHSE, ROSENGARTEN, TANAKA, TREGOLD, UPHOF, VILMORIN [Cu], VOTH [Re]; C27G{DE}, C73P{ED}, F85, H72{DF}, L50M{DF}, N84. (for cultivars see Watermelon, page 570, see also Rootstocks, page 510)

*Citrullus lanatus* ssp. *coiocynthoides* - *Wild watermelon, Tsama, Egusi-ibara* {S}. Seeds can be eaten whole as snacks but are more often dried, stripped of their coats, ground, and used to enrich and thicken sauces, broths, stews, and egusi soup. Cakes of egusi mixed with pepper are sold in West African markets. Fermented seeds are employed as a seasoning for soup or pottage. Roasted seeds, along with peanuts and chilis, are ground into a delicious oily paste called *ose-aji*, eaten with kola nuts, eggplants, or spread on bread. They also yield an edible oil used in salads and cooking. Leaves are cooked and eaten as potherbs. Tropical Africa. FOX, F., OKOLI 1984, VANEPENHUSEN, WILSON, E.G. [Re], ZEVEN; D33, S28M

*Citrullus lanatus* Citroides Group - *Citron melon, Preserving melon, Jam melon* {S}. The rind of the fruit is pickled, crystallized, or made into jams, jellies, sweetmeats, and preserves. Fruit pulp is inedible. BURR, CARCIONE [Re], HAWKES [Re], JOHNS [Cul], TANAKA; B65{PD}, C95, J24M{PD}, R47

#### CULTIVARS

**A Confiture a Graine Verte:** 90 days. A green-seeded type from France. Average weight of fruit is 10 to 15 pounds. K20M

**D'Espaane a Confiture:** 100 days. A red-seeded type that originated in Spain. Average weight of fruit is 10 to 15 pounds. K20M

**Green Seeded:** (Colorado Preserving Melon) 100 days. This is quite distinct from the ordinary preserving melon, the seeds being of light green color. Flesh very firm and solid, with few seeds. Very productive, one vine producing up to 25 fruits. Makes beautiful, clear, nearly transparent preserves. ANONYMOUS 1888; G87, J39

**Red Seeded:** 100 days. Round, light green fruit, marbled and striped with darker shades of green; flesh white with red marks, solid, seedy; seeds red. Will keep until December. Makes excellent transparent preserves, C95, G87, J39, K49M, K71, L88J, PIG

**Red Shine:** 85 days. Small, dark-green fruits with light striping, 6 to 7 inches across; light colored, very firm flesh. The whole melon is cut into chunks and used for making sweet pickles. Widely used commercially for the production of candied fruit, only recently made available to home gardeners. L89

*Citrullus vulgaris* -+ *Citrullus lanatus*

*Citrullus vulgaris* var. *fistulosus* -\* *Praecitrullus fistulosus*

*Coccinia cordifolia* - *Coccinia grandis*

*Coccinia grandis* - *Ivy gourd*, *Scarlet gourd*, *Tindora* {S}. The young leaves and long slender tops of the stems are cooked and eaten as a potherb, in soups, or as a side dish with rice. Young and tender green fruits are eaten raw in salads, boiled, steamed, fried, added to curries, or fermented and added to soups. The ripe, scarlet fruit is fleshy and somewhat sweet and is eaten raw, or it is occasionally candied. Sometimes available at ethnic and specialty food markets. Tropical Asia, cultivated. GRIGSON, J. 1986 [Re], GRIGSON, S. [Re], HERKLOTS, JACQUAT, OCHSE, RAMACHANDRAN [Nu], TANAKA; B60M{PR}, F74{PD}, F85, N84

CULTIVARS {PL}

**Sweet:** A form with mild, sweet non-bitter fruit that is eaten when green and immature. Young leaves and leafy shoots can also be used. Fast growing perennial with tuberous roots. Propagated from stem cuttings as the seed is sterile. H29

*Coccinia quinqueloba* - *Bobbajaankomkommer* {S}. The leaves are used as a potherb. In Malawi they are cooked with peanuts and tomatoes, and are also mixed with pumpkin leaves or *Bidens pilosa* to form a well-liked dish. Southern Africa. FOX, R, MARTIN 1975; N84, S28M

*Colocynthis vulgaris* - *Citrullus colocynthis*

*Cucumis africanus* - *Horned cucumber*, *Jelly melon* {S}. Young leaves are eaten as a potherb. The bitter fruit is occasionally eaten. Southern Africa. FOX, E, MARTIN 1975; F80, N84

*Cucumis anguria* - *West Indian gherkin*, *Bur cucumber* {S}. Young, prickly fruits are peeled and eaten raw, boiled and served with hot pepper sauce, added to soups or made into pickles. The flesh is white, firm, and of a very agreeable cucumber flavor, without the slightest bitterness. In the process of pickling, the spongy flesh absorbs a large quantity of vinegar. Young leaves are said to be edible. Tropics, cultivated. BURR, HAWKES [Cu], HERKLOTS, KUNKEL, UPHOF, VILMORIN [Cu]; D56M, E5T, F60, G57M, I63Z, J20, J73, K71, N84

*Cucumis dipsaceus* - *Teasel gourd*, *Arabian cucumber*, *Ekaleruk* {S}. Seeds are cooked and eaten. Leaves and fruits are also edible. Tropical Africa. KUNKEL, MARTIN 1975, MORGAN, W; F80, F85, N84

*Cucumis melo* - *Melon* {S}. Fruits are eaten out of hand, dried, candied, or made into jams, compotes, jellies, syrups and preserves. Italians traditionally serve melon with *prosciutto* (cured ham) as an appetizer. In the Van region of Armenia, melons are stuffed with rice and meat, then baked. Surplus melons are sometimes converted into molasses and sugar. Seeds are eaten as a snack or blended with fruit juice to form a refreshing drink. In India, a type of *burfi* is made from roasted *chamagaz*—a mixture of peeled melon, cucumber, pumpkin and watermelon seeds. Also the source of an edible oil. Cultivated. CARCIONE, HEDRICK 1919, MENNINGER, PARMAR, P. [Re], RODALE [Cu], TANAKA, UVEZIAN [Re], VILMORIN [Cu], VON BREMZEN; B65{PD}, F85. (for cultivars see Melon, page 422)

*Cucumis melo* ssp. *agrestis* - *Wild melon* {S}. The bitter fruit pulp is edible, and the seeds are collected and eaten. Tropical Africa, naturalized in Southwestern North America. TANAKA, UPHOF, ZEVEN; X54, Z91

*Cucumis melo* Chito Group - *Vine peach*, *Mango melon*, *Vegetable orange*, *Lemon cucumber* {S}. The fruit is the size of an orange or a lemon, yellow or greenish yellow when ripe, with a thin, leathery skin. It is peeled and eaten out of hand, added to fruits salads, or more commonly made into pies, preserves, and marmalades. Unripe fruits are pickled whole. FISHER, TANAKA, UPHOF; B73M, DI 1M, F60, F70, G57M, K49M, K71

*Cucumis melo* Conomon Group - *Pickling melon*, *Tea melon*, *Tsa gwa* {S}. Fruits are eaten raw, preserved, or stuffed with minced meats and then cooked. They are also chopped fine and used to season steamed meat or fish, salads and soups. Both immature and mature fruits are made into sweet or sour pickles, or pickled in shiro-miso. Those pickled in sake lees, called *nara-zuke*, form one of the most expensive and popular pickles sold in Japan. CHANG, W. [Re], HARRINGTON, G [Cu, Cul], HAWKES [Re], HERKLOTS [Re], SHURTLEFF 1975, TANAKA, UPHOF, VON WELANETZ, YAMAGUCHI [Re]; G20M{PD}, L59

CULTIVARS

**Ao-Uri:** (Viridis, Green Melon, Green Striped) 73 days. Medium-sized fruit, 10 to 12 inches long, 4 to 4 1/2 inches in diameter; rind smooth, bright deep-green with distinct slender white stripes; flesh white, thick. Excellent for pickles as well as for cooking. G33, S63M

**Havauma:** (F.) Cylindrical fruits, about 10 inches long and 2 to 3 inches in diameter; dark green skin, mottled and streaked with light green; white flesh. Very good flavor, suitable for eating raw in salads as well as pickling. D55, N84, S70

**Katsura Giant:** Oblong fruit; 14 to 15 inches long, 4 to 8 inches in diameter, slightly tapered at the stem end; skin light green, turning almost white when fully ripe; flesh white, crisp, very thick. Good for pickling. An old favorite. Imported from Japan. C20M, K73, S63M

**Imumame Early:** Cylindrical fruit, 8 to 12 inches long and 2 to 3 inches in diameter. Light green skin turns almost white when fully ripe. Very thick, juicy, crisp flesh with a relatively small seed cavity. Excellent for pickling. Popular in cool northern areas of Japan. C20M, E83T, 139, S63M

**Shima-Uri:** (Variegata, Striped Melon) Rich green fruits with pale green stripes, about 6 or 7 inches long. Good for home gardens and pickling. Popular Japanese pickling melon. D55, N84, S70

**Shiro-Uri:** (Albus, White Melon) 50 days. Long-oval fruit, somewhat club-shaped; 8 inches long, 3 inches at the widest section at full maturity; very light green rind, turns white on maturing. Medium-thick, crisp flesh. Can be harvested when young for the early market. Widely used for *nara-zuke*. YAMAGUCHI; G33, Q39

**Silver Charm:** (F.) 68 days. Slender, straight fruit; 10 inches long, 2 to 2 1/2 inches in diameter; light green skin with few shallow ribs; thin, tender flesh. For salads, pickling and cooking. Vigorous, prolific vine; mosaic and downy mildew resistant. Also tolerant to wet, hot and humid weather conditions. Q39

**Tokyo Earlv White:** Medium fruits, about 10 inches long. Much earlier in maturity than Tokyo Large White. Very good for fresh market and pickling. S70

**Tokyo Lame White:** Large fruit, about 12 inches long; light green, turning almost white when fully ripe. Good for pickling. Very prolific. S70

*Cucumis melo* Dudaim Group - *Queen Anne's pocket melon*, *Pomegranate melon*, *Plum granny* {S}. Small fruits, having a very fragrant, musky aroma, are occasionally used for preserves. Popular in some areas of the South where the rind is said to make excellent marmalade, or pickles similar to watermelon rind pickles. Primarily used as a fragrance material. Has been employed by plant breeders to introduce resistance to foliar disease and to incorporate aroma into the fruit of sweet melons. HEDRICK 1919, UPHOF, VILMORIN; A21, E7M, K20M, L4, N84

*Cucumis melo* Flexuosus Group - *Serpent melon*, *Snake melon*, *Kakri*, *Adzhur* {S}. The fruits, tasting like cucumber, are often crooknecked or coiled. They are refreshing when eaten raw in hot weather. Or they may be added to salads with salt and vinegar, preserved, cooked in curries, or pickled. Seeds are eaten or used in confectionery. CHAUHAN, D., TANAKA, UPHOF, VILMORIN. D11M, F70

## CULTIVARS

**Lucknow Linen:** Long, slender fruit with sweet, juicy flesh. Grown during the hot, dry season in India. S36, S93M

**Mektv White Trailing:** 70 days. Slightly curved fruit, 30 inches long and 3 1/2 inches in diameter; skin creamy white, spineless. Recommended for home gardens and fresh market. Also a good item for specialty and ethnic markets. Monoecious, indeterminate vine. C20M

**Painted Serpent:** (Chinese Sweet and Striped) 65 days. Very long, slim fruits, 11/2 inches in diameter and 18 inches or more in length. Light greenish-yellow skin, overlaid with dark green ribs. Mild, sweet, crisp flesh. Slices into perfect scallop shapes. Long twining vines, best grown on trellises or stakes. G57M, K66, 089, Q34

Cucumis melo Flexuosus Group 'Armenian' - *Armenian cucumber*, *Yard long cucumber* {S}. Fruits are eaten raw or cooked. They are long, ribbed, pale green in color, sometimes coiled in shape, and are easily digested even by those who cannot digest standard cucumbers. The flesh remains crisp and hard even when the fruit becomes soft or flexible. Vines should be trellised if straight fruit is desired. CARCIONE, CREASY 1982; B73M, F60, F80, G33, G68, G83M, H95, 139, J73, 089, R47

## CULTIVARS

**The Duke:** Improved type with bitter-free, crunchy fruits that never get pithy or hollow-hearted. Their texture is juicy and crisp, and the skins do not need peeling. Best harvested at about 12 inches. When cut crosswise, the ridged exteriors form neatly scalloped slices. K66

Cucumis melo Momordica Group - *Phoot*, *Kachra*, *Snap melon* {S}. Fruits are small, smooth, oval or cylindrical, with mealy, somewhat insipid or slightly sour flesh. When young and tender, they are eaten raw or cooked as a vegetable. Ripe fruits are used as a dessert. CHAUHAN, D., WATT; S36, S93M

Cucumis metuliferus - *African homed cucumber*, *Kiwano*, *Jelly melon* {S}. The distinctive fruit is orange-red when ripe and studded with numerous spiny protuberances. The flesh is bright green, translucent, slightly mucilaginous, with a more or less bland flavor. Can be eaten raw, cooked, sun-dried or pickled. Sold in specialty markets in the United States, where it is promoted as having a banana-lime flavor and recommended for use in fruit cups, cocktails, sundaes, parfaits, and drinks. In France, it is used in making a seaweed sorbet. Leaves are sometimes cooked and eaten with peanut butter. Used as a rootstock and a source of resistance to diseases for *C. sativus*. Tropical Africa. FOX, F., MATIGNON [Re], RICHARDSON, J. [Re], TANAKA, TREGOLQ VAN AKEN [Re], ZEVEN; C89{PR}, C95, E13G{PR}, F15{PR}, F80, H53M, J82, N40{PR}, N84, 053M, 093, PIG, P5, R47, S28M,

**Cuke-Asaurus:** Selected strain used at two different stages of development. The young, green fruit is eaten in salads or pickled like a cucumber. Mature fruits, ripening to a yellow-orange color and having the flavor of wild bananas, are marketed as fresh fruits. Introduced by Ismael Gomberoff of Artistic Farms. A62{PR}, A62{PD}

Cucumis prophetarum - *Globe cucumber* {S}. Unripe fruits are pickled like the common cucumber. Ripe fruits are bitter, but are sometimes boiled and eaten. The leaves are edible. Tropical Africa to Arabia. BURR, MARTIN 1975, VILMORIN; X77M

Cucumis sativus - *Cucumber* {DF}. The fruits are eaten raw, in salads, sauteed, marinated, added to stews, stuffed with minced meat, oil-roasted or pickled. In Japan, they are pickled in rice bran. Often mixed with sour cream or yogurt, mint and garlic to form cool refreshing sauces or dips, such as the Indian *kheera raita* or the Greek *tzatziki*. *Kimchi* made from cucumbers is known as *oisobaegi* and *oiji*. *Kurundu*, a Sudanese meat substitute, is made from a local cucumber. Seed kernels are eaten raw or roasted. They yield an oil,

*huile de concombre*, resembling olive oil, used in salads and French cooking. Young leaves and stems are eaten as a potherb. In Indonesia, the steamed leaves are pounded together with rhizomes of galanga, wrapped in banana leaves and roasted. Southern Asia, cultivated. DEVI [Re], DIRAR 1993, FELL 1982b, HARRINGTON, G. [Cu], LARKCOM 1984, OCHSE, STEINKRAUS, TANAKA, UPHOF, VILMORIN [Cu], WOLFERT 1994a [Re]; H72. (for cultivars see Cucumber, page 351)

*Cucurbita argyrosperma* - *Cucurbita mixta*

*Cucurbita ficifolia* - *Chilacoyote*, *Malabar gourd*, *Figleaf gourd*, *Zambo[S]*. Young fruits can be cut and used like a cucumber or zucchini. Ripe fruits are sometimes boiled and eaten with milk and cinnamon, or made into an alcoholic drink. A confection is made from the flesh by boiling it with crude sugar. Seeds are roasted and eaten like peanuts. The fruits will keep for two years or longer, the flesh becoming sweeter with age. Central America, cultivated. BROUK, FRIED [Re], HERKLOTS, LOVELOCK, NATIONAL RESEARCH COUNCIL 1989, TANAKA, WILLIAMS, L.; F80, 116, L55J, N81, N84, 053M, PIG. (see also Rootstocks, page 510)

## CULTIVARS {PD}

**Alcayota:** Unique type with a brittle, cream-colored, easy to peel shell and pulp that separates into crystal white strands resembling shredded daikon, marketed as *du kon* or *vegetable noodles*. The sweet, crunchy "noodles" can be eaten as a fresh salad with dressing, stir-fried, pickled, in tempura, or added to soups and stews. The young green, squash-like form is marketed as *chilagreño*. Developed by Ismael Gomberoff from seed originally collected in the Andean highlands of Chile: Very popular with Asian Americans. UMANA-MURRAY [Re]; A62, N40

**Zambo Grande:** Large-fruited form collected at 11,000 feet in the Andean highlands of Ecuador. Introduced by Oregon Exotics Nursery. 174

*Cucurbita foetidissima* - *Buffalo gourd*, *Calabazilla* {S}. The seeds, containing 30-35% protein and up to 34% oil, are roasted and eaten, ground into a meal for gruel, or pressed for their edible oil. Roots are the source of a starch used as a sweetener or stabilizer, and for making pudding similar to tapioca. Young fruits, although bitter, are sometimes eaten or dried for future use. Flowers are said to be edible after preparation. Southwestern North America. DE VEAUX, KINDSCHER, KIRK, NATIONAL RESEARCH COUNCIL 1975a, NIETHAMMER [Re]; C95, F80, 198M, J25M, N84, R88

*Cucurbita maxima* - *Calabaza*, *Winter squash*, *Pumpkin* {DF}. Fruits are eaten baked, boiled, fried, steamed, mashed, used in pies, breads, cakes, and confectionery, or processed into starch. Seeds are eaten raw, roasted and salted, or ground to a meal. Young stems, leaves, and flowers are cooked and eaten. Leaves contain 5% protein. Southern America, cultivated. DUKE, HERKLOTS, TANAKA, VILMORIN [Cu]; H72, L50M. (for cultivars see Pumpkin, page 497, and Squash, page 528, see also Rootstocks, page 510)

*Cucurbita melanosperma* - \**Cucurbita flcifotta*

*Cucurbita mixta* - *Cushaw*, *Winter squash*. Fruits are eaten boiled, baked, fried and mashed, or made into pies, breads, cakes, candies, etc. They are generally strigry, watery, and less rich in flavor than those of *C. maxima*, *C. moschata*, and *C. pepo*. Widely grown in Mexico for the large, tasty seeds, which are eaten raw, fried, roasted, or ground and used in sauces. In Mexico, the flowers are fried, sometimes with cotton-seed. Central America. ALCORN, BROUK, HERKLOTS, SCHERY, VILMORIN; (for cultivars see Squash, page 528)

*Cucurbita moschata* - *Kabocha*, *Winter squash*. Fruits are eaten raw, boiled, fried, baked, mashed, steamed, stuffed, or used in pies, puddings, soups, breads, cakes, etc. They are sometimes dried, ground into flour and made into bread. Young fruits can be pickled. Mashed butternut squash makes an excellent fat substitute for cakes containing pineapple, orange or apple. Flowers, leaves, and young

stems are eaten as potherbs or added to soups and stews. The oily seeds are eaten raw, or roasted in salt. Central America, cultivated. DUKE, FELL 1982b, HERKLOTS, MORTON 1977, OCHSE, TANAKA, VILMORIN, WOODRUFF [Re]; (for cultivars see Squash, page 528, see also Rootstocks, page 510)

*Cucurbita pepo* - *Summer squash, Rimpkin* {PD}. Young fruits are eaten steamed, boiled, fried, stuffed, in breads, etc. Mature fruits are baked, mashed, pureed, or used in pies, soups, stews, cakes, breads, custards, fruit butters and pancakes. The pulp can be used as a natural fat substitute in pumpkin breads and cakes. Paper-thin slices of zucchini are a popular wrapping for other foods. Seeds are eaten raw, parched, roasted and salted, ground into meal, made into nut butter, nut milks, or pressed for their edible oil. Roasted seeds are known as *pepitas*. *Pepitorio* is a confection, resembling popcorn balls, made of the seeds combined with a heavy syrup. Leaves, young shoots, and tendrils are eaten as potherbs or stir-fried. Flowers and flower buds are eaten boiled, stuffed, added to sandwiches, made into fritters, or dried for later use. Sprouted seeds are used in salads. Central America, cultivated. COLE, C. 1990 [Re], FELL 1982b [Cul, Re], HARRINGTON, G. [Cul], HERKLOTS, LEGGATT [Re], MACNICOL [Re], ROSENGARTEN, ROUTHIER 1993, SAWYER, TANAKA, UPHOF, VILMORIN [Cu], WILLIAMS, L., WILSON, G., WOODRUFF [Re]; C56G, D87D, H72,166, L14G, L50M. (for cultivars see Pumpkin, page 497, and Squash, page 528)

*Cyclanthera explodens* - *Pepino diablito* {S}. The small, protuberance-covered fruits are eaten in salads, pickled or boiled like squash. They often explode when ripe, hence the Latin name. Andean region. NATIONAL RESEARCH COUNCIL 1989, PEREZ-ARBELAEZ; 174,174{PL}

*Cyclanthera pedata* - *Achocha, Korila, Pepino de rellenar* {S}. Young fruits, having the taste of cucumbers, are eaten raw or made into pickles. Mature fruits are cooked with oil and vinegar, added to soups and stews, or stuffed with ground meat or other fillings and baked. Leaves and tender shoots are eaten. Tropical America. DUKE, FRIED, HERKLOTS, NATIONAL RESEARCH COUNCIL 1989, UPHOF, WILLIAMS, L.; 174,174{PL}, N84, P38

#### CULTIVARS

**Fat Baby:** Smaller, thicker fruit than Lady's Slipper. Well suited for use in salads when immature, or for making pickles. L55J, 053M

**Lady's Slipper:** Longer, thinner fruit than Fat Baby. Perfect for stuffing and baking or adding to soups and stews. L55J, 053M

*Fevillea cordifolia* - *Sequa, Antidote vine* {S}. The seeds yield an edible, pleasant tasting oil with an odor somewhat reminiscent of peanut oil. On a weight per fruit basis, the seed oil content of *Fevillea* is apparently higher than in any other dicotyledon and among the highest ever recorded for any plant. Recommended as a commercial oil crop for tropical rain forests. Tropical America. GENTRY; U71M

*Gynostemma pentaphyllum* - *Amacha-zuru, Jiao gu lan* {S}. Leaves and stems are cooked and eaten. The leaves have a sweet taste and are used as tea. *Panta tea*, a popular herbal tea with a rich, slightly smoky flavor, is a mixture of the leaves and toasted rice. Eastern Asia. TANAKA; E48{PL}, F85, H36{DF}, H36{PD}

*Hodgsonia capniocarpa* - \**Hodgsonia macrocarpa*

*Hodgsonia macrocarpa* - *Hodgsonia seed, Lard seed, Akar kapajang* {S}. Seed kernels are eaten after roasting or baking. They are often crushed and cooked together with fish, meat or vegetables. Also the source of an oil used for culinary purposes. The yellow fruits are also edible. Indomalaya, cultivated. MENNINGER, SING, TANAKA, UPHOF, ZEVEN; F85

*Lagenaria leucantha* - *Lagenaria siceraria*

*Lagenaria longissima* - *Lagenaria siceraria*

*Lagenaria siceraria* - *Bottle gourd, Calabash, Lauki, Opo* {S}. Young fruits are eaten boiled, steamed, fried, pickled, added to soups and curries, or made into fritters. They vary in quality, but the carefully selected cultivars of India and China are choice vegetables, as good as summer squashes of the Temperate Zone. Leaves and young shoots are used as potherbs. In West Africa, the seeds are sometimes used in melon soups. A vegetable curd similar to soybean *tofu* can be made from the seeds. They also yield an oil used in cooking. Paleotropics, cultivated. CHAUHAN, D., DAHLEN [Cul, Re], DALZIEL, FOX, F., HERKLOTS, MARTIN 1979 [Cu, Nu]; A79M, B60M{PR}, C20M, E13G{PR}, F85, N40{PR}

#### CULTIVARS

**Early Green Long:** Fruits about 11/2 feet long and 3 1/2 inches in diameter, with the stem end somewhat narrower than the blossom end. L59, L79G

**Larae Lona:** Fruits about 3 feet long and 8 inches in diameter, weighing about 20 pounds. For vegetable use, they should be picked when young. L79G

**Long White Prolific:** Bears a heavy crop of fruits 16 to 20 inches in length and 3 to 4 inches in diameter, but when fully matured the fruits will attain 30 inches in length. An all-season strain. Q45M, S59M

**Medium Long:** 90 days. Bat-shaped, yellowish green fruit, 15 inches long by 3 or 4 inches in diameter. Firm white flesh, sweet and delicious. Used for stir-frying and soup when young. Can be grown on the ground like a pumpkin or along a trellis. Very popular in southern China and Taiwan. D55

**Pusa Summer Prolific Lona:** Large fruits, 1 1/2 to 2 feet long and of very good quality. Best picked when young and tender. An improved cultivar that is a prolific bearer. Suitable for growing in spring and summer. E83T, R0, R50, S59M

*Lagenaria siceraria* 'Clavata' - *Yugao* {S}. *Kampyo*, the dried, ribbon-like, peeled pulp of the fruit, when seasoned with soy sauce, forms one of the essential ingredients of *sushi*, and the Buddhist ceremonial dishes *gomoku-meshi* and *shojin-ryori*. Also called *dried gourd shavings*, they are reconstituted in lightly salted water for 20 to 30 minutes before use. Used for tying foods into rolls, little packages, or bundles, they are simmered until soft and transparent and can be eaten with the rolled food. SHURTLEFF 1975, TANAKA, TSUJI [Pre, Re]; D55, G20M{DF}, G33, N49M{DF}, N84, S63M, S70

*Lagenaria siceraria* 'Longissima' - *Cucuzzi, Cucuzzi caravasi, Italian edible gourd, New Guinea bean, New Guinea butter vine* {S}. The fruits are thin, up to 4 feet long or more, and have a flavor and texture said to be like cooked green beans. Normally harvested when 6 to 25 inches long, under ideal growing conditions they can remain tender up to 5 1/2 pounds. They are eaten steamed, sauteed, stuffed and baked, or coated with an egg-flour batter and fried in hot oil. In Sicily, they are boiled with their tender shoots (*tennerumi*), and are also made into *marmellata di zucca*. For straight, blemish-free fruits, grow on a trellis. DARK, LANZA 1993 [Re]; B73M, C44, C92, D33, E13G{PR}, F80, G93M, H61, 139, J20, K49M, L59, N16, N40{PR}, 089, Q11M, etc.

#### CULTIVARS

**Healing Squash:** Very long fruits, up to 4 feet when mature. When 15 to 18 inches long, half the fruit can be cut off for eating. The remainder of the fruit will "heal" itself and continue to grow, hence the name. Maintained in the family of Edith and Bill Gambrel of Clayton, Georgia for almost 200 years. Originally from Italy. L4

*Lagenaria vulgaris* - *Lagenaria siceraria*

*Luffa acutangula* - *Angled luffa, Cee gwa, Chinese okra, Jhinga* {S}. Young fruits are eaten raw in salads, boiled, steamed, stuffed, stir-fried, coated with batter and fried, pickled, cooked with coconut milk, or added to soups, stews, and curries. In China and Japan, they are sliced and dried before being cooked in broths. Young leaves may be eaten in salads or cooked as greens. Flowers and

flower buds are dipped in batter and sauteed. Mature seeds are roasted, salted, and eaten as a snack. Tropical Asia, cultivated. COST 1988 [Cu, Re], HALPIN [Cu, Cu], HARRINGTON, G. [Cu, Cu], HERKLOTS [Cu], KRAFT [Re], OCHSE, TANAKA; A79M, C82, D55, F80, G93M, K49M, L42, L59, N84

CULTIVARS

**Pina-Ann:** (F.) Long, slender green fruit with 10 angular ridges; ready for harvest when 13 to 14 inches long and 1 1/2 to 2 inches in diameter. Used as a summer squash after the peel is removed. Early, prolific vine; highly tolerant to heat and wet weather. Q39

**Pusa Nasdar:** Light-green, medium size fruit. Mid early plant; flowers in 60 days in summer crop only; bears 15-20 fruits. Recommended for sowing in spring and also during the rainy season. Also used for frame culture. N91, Q45M, R0, S36, S59M

*Luffa aegyptiaca* - \**Luffa cylindrica*

*Luffa cylindrica* - *Smooth luffa*, *Vine okra*, *Dishcloth gourd*, *Dhundhul* {S}. Young fruits are eaten raw in salads like cucumbers, sliced and dried for later use, pickled, or used in soups, stews, and curries. The stem tops, young leaves, flower-buds, and flowers are steamed and served with rice. Seeds are roasted with salt and eaten as a delicacy. Also the source of a cooking oil and a product similar to *tofu*. Tropical Asia, cultivated. HERKLOTS, JACQUAT, MARTIN 1979, OCHSE, TANAKA; A21, B75, C9M, C43M, C43M{PL}, C82, D33, D55, D92M, E13G {PR}, F80, J73, M46, N84, 053M, R47, etc. (see also Rootstocks, page 510)

CULTIVARS

**Long Green:** Cylindrical fruits of excellent quality. Very heavy bearing over a long period of time. R0, S36, S93M

**Satputla:** Also known as "bunch sponge gourd", since it produces up to 7 fruits at one node. R0, S36

**Seven Star:** (F.) Short, cylindrical, light green fruit; 7 inches long, 2 1/2 to 3 inches in diameter; weight 17 1/2 ounces. High quality fruit with very good texture. Vigorous, prolific, early plant; not sensitive to day-length for fruit setting. Especially recommended for long day planting. Q39

**Smooth Short:** 90 days. Round, short cylindrical type Young fruits are harvested for vegetable use when about 6 inches long. L59

*Momordica balsamina* - *Balsam apple* {S}. The fruits are pickled, or after prolonged soaking are cooked or added to soups. Young leaves and tendrils are used as potherbs. Seeds are eaten. Tropics, cultivated. DALZIEL, FOX, E, HEDRICK 1919, WATT; F80, F85, K49M, N84

*Momordica charantia* - *Bitter melon*, *Balsam pear*, *Bitter gourd*, *Foo gwa*, *Karela* {S}. Unripe fruits are eaten boiled, stuffed, fried, pickled, or used in soups, stews, chop suey, and stir-fried dishes. In classic Chinese cuisine, they are prepared with fermented black soybeans. To prepare the fruit, cut in half lengthwise, scoop out seeds and fiber, and parboil or soak in salt to reduce bitterness. Leaves and young shoots are boiled and eaten as a vegetable or added to curries. Tropics, cultivated. CREASY 1982, HARRINGTON, G. [Cu, Cu], HERKLOTS [Cu, Re], KRAFT [Re], OCHSE, TANAKA; A79M, C82, E13G{PR}, F80, G33, G93M, 139, J82, K49M, L42, N40{PR}, N84

CULTIVARS

**Coimbatore Long:** (Coimbatore Long White) Fruits are greenish-white, pale cream in color when ripe, 5 to 8 inches long. Prolific bearer. Most popular cultivar of South India. Usually grown during the rainy season. Developed by the National Seed Corporation of India. R0, R50, S59M, S93M

**Hona Kona:** 80 days. Short, slightly tapered fruit, about 5 inches long. Dark green, relatively smooth skin. Rich bitter flavor. Used in Canton for making various stuffed foods. Plant is susceptible to wind damage; needs to be grown with supports. Very productive. D55, N84

**Moonshine:** (F.) Attractive, ivory-white fruits; 6 inches long, up to 1 pound each. Needs a long growing season. Does well trellised in a cold frame. A second generation hybrid. C20M

**Prodigy:** Oblong-shaped fruit, about 8 inches long and 2 1/4 inches in diameter. Distinctive white skin and flesh. Refreshing slight bitterness. Good for stir-frying; also very tasty in salads. Vigorous, heat-tolerant plant. Suitable for open field growing. S63M

**Taiwan Large:** (Large) 80 days. Large, dark green fruit, 10 inches long by 3 inches in diameter, with a tapering end. Relatively smooth skin. Thick, white flesh. Quality very high. Very popular in Taiwan. Disease resistant plants. A high yielder for planting in spring or summer. D55, L59, N84

**Taiwan White:** (F.) Unique white bitter gourd developed in Taiwan. Top quality, attractive, white-skinned fruits; slightly less bitter than green-skinned types. Has good market appeal and is becoming one of the dominate varieties sold in the supermarkets of Taiwan and the West Coast. D55, N84

**Uchchhe:** (Small Bitter Gourd) Very small fruit, 3 to 4 inches long. Excellent boiled and mashed, sliced and fried crisp, or added to *shukto*. Prolific plant. Sown from February to July in India. BANERJI [Re]; N91, S59M

*Momordica cochinchinensis* - *Spiny bitter melon*, *Bhat karela*, *Fakkao*, *Kantola* {S}. Young, immature fruits are boiled and eaten as a vegetable, stuffed, stir-fried, or cooked in curries. In Vietnam, they are usually cooked with sweet rice to form the popular dish called *xoi gac*. Not as bitter as *M. charantia*, and therefore requires less time soaking in salt. Young leaves and shoots are blanched and served with chili sauce or added to soups. Tropical Asia, cultivated. BISSELL [Pre], BROWN, W., BURKILL, GRIGSON, J. 1986 [Re], GRIGSON, S. [Re], HERKLOTS, JACQUAT, MARTIN 1975, UPHOF, VAN DUONG; F85, N84, Q41

*Momordica dioica* - *Kaksa*, *Kakiol* {PL}. Young, green, spiny fruits are much esteemed as a curry-vegetable. They are quite palatable, rather sweet, and free from bitterness. The tender shoots and leaves, and the roots are also edible. Occasionally cultivated on the Gangetic plain of India for its fruits. Tropical Asia. CHAKRAVARTY, HEDRICK 1919, MACMILLAN; N84

*Momordica grosvenorii* - *Thladiantha grosvenorii*

*Praecitrullus fistulosus* - *Tinda*, *Squash melon*, *Dilpasand* {S}. The young fruits are cooked and eaten as a vegetable, either alone or with lentils, dal, gram, etc. They can also be pickled, candied, or made into preserves. The fruit is at its best for cooking when it can be easily cut with a knife and the seeds have not hardened. It is the most popular vegetable during summer in North India. The seeds are roasted and eaten. Cultivated. CHAKRAVARTY, CHAUHAN, D., TANAKA, WATT, ZEVEN; A79M, F74{ED}, N16, Q45M, R50

CULTIVARS

**Round White:** Globular, whitish fruits produced in great abundance. Sown from February to July in India. S36, S93M

**Summer Prolific Long:** Fruits are best harvested when immature. They should be tender and somewhat hairy. Sown from February to April or during June and July in India. S59M

*Sechium edule* - *Chayote*, *Vegetable pear*, *Mirliton*, *Christophine*, *Chocho* {PL}. Fruits are eaten raw, pickled, sauteed, baked, steamed, stuffed, or made into fritters, sauces, tarts, puddings, sweet-meats, etc. In tropical areas, they are mixed with lime juice and used as a substitute for apples in pies and tarts. The mature, protruding seeds, which might be called *vegetable scallops*, are the best part. Briefly sauteed in butter they have a delicious nutty flavor. When deep-fried, they taste remarkably like french-fried potatoes. Young shoots, leaves, and tendrils are eaten like asparagus. The roots, known as *chinchayote* or *chinta*, are eaten boiled, baked, fried, or candied in syrup. Also the source of a starch. Tropical America, cultivated. BENGHIAT [Cu, Re], FELL 1982b, HALPIN [Cu,

Cul], HAWKES [Re], HERKLOTS [Cu], OCHSE, ORTIZ 1973 [Re], SCHNEIDER 1986 [Re], SHURTLEFF 1979, TANAKA, WILLIAMS, L.; *B60M*{PR}, C82, D35, E13G{PR}, G47F{PR}, H4, K49M, L55J, N40{PR}, N84, S70

#### CULTIVARS

**Perlita:** (Little Pearl) Small, translucent white fruit; firm and dense. Slightly richer and nuttier in flavor than the common light-green chayote offered in supermarkets. Ideal for stuffing or single servings. Two or more should be planted for better production. Originated in Guatemala. D57

*Sicana odorifera* - *Casa banana*, *Melocoton*, *Musk cucumber*, *Zucchini melon* {S}. The ripe fruits, having a pleasant aromatic flavor, are sliced thinly and eaten raw, or made into jams, fudge, preserves and alcoholic beverages. In Nicaragua, they are used to flavor a refreshing drink known as *cojombro*. Unripe fruits are cooked as a vegetable or added to soups and stews. Tropical America. DE CERDAS [ft], DUKE, HAWKES, KENNARD, MACMILLAN, MORTON 1987a [Cu], NATIONAL RESEARCH COUNCIL 1989, UPHOF, WILLIAMS, L.; D26G, D56M, F80, G73, L55J, N40M, N84, 053M, R47, R78M

*Telfairia occidentalis* - *Fluted gourd*, *Fluted pumpkin* {S}. The seeds, having a pleasant almond-like flavor, are eaten roasted, boiled, or ground and used in egusi soup. When thoroughly dried they are powdered and used to thicken soups. They also yield a cooking oil, and are fermented into *ogiri-nm*. Young shoots and leaves are eaten as a potherb, added to soups and stews, or cooked with yam and palm oil. Tropical Africa. CAMPBELL-PLATT, HERKLOTS, MARTIN 1975 [Cu], OKOLI 1983 [Cu], OOMEN, TANAKA, VAN EPENHUHSEN; X82

*Thladiantha dubia* - *Wang kua*, *Tu kua*, *Red bone vine* {PL}. The reddish fruit has sweet succulent flesh that is occasionally eaten. The young spring shoots and the crisp, sweet, starchy carrot-like roots are also edible. China. HEDRICK 1919, TANAKA; 174

*Thladiantha grosvenorii* - *Lo han kuo*, *Buddha's fruit* {DF}. The pulp of the fruit is intensely sweet, owing to the presence of a glycoside, and may have economic potential as the source of a non-caloric sweetener. An extract is made into a refreshing, bottled drink sometimes available at Oriental markets. Widely used in Chinese tonic soups, often combined with *ma tsao* and sweet and bitter almonds. Eastern Asia. HSU, JEFFREY, TAN [Re]; F85{S}, G19P, H36, H36{PD}, L21T

*Trichosanthes anguina* - \**Trichosanthes cucumerina*

*Trichosanthes cucumerina* - *Snake gourd*, *Padval*, *Chichinda*, *Chichinga*, *Snake tomato* {S}. The young fruits are peeled, sliced or cut into pieces, and boiled and eaten like green beans, baked, stuffed, or used in curries, sambals, and stews. The bright red pulp around the mature seeds is extracted and used in cooking, like tomatoes. Leaves and young shoots are eaten. It is the usual practice to tie a small stone to the tip of a developing fruit to ensure that it grows straight. Tropical Asia. GRIGSON, J. 1986 [Re], HEDRICK 1919, HERKLOTS [Cu, Re], MACMILLAN, MARTIN 1975, OKOLI 1984, VAN EPENHUHSEN; A79M, D33, F85,174, J82, K71, N84, N91, P38, R15M, S36, 570, S92

#### CULTIVARS

**Deccan Queen:** Long, narrow green fruit, with or without stripes. Should be grown on a trellis for best results. N91

**Green Stripe:** Broadly cylindrical fruit, tapered on either end; deep green, with 4 or 5 narrow yellowish stripes; about 3 feet long. Should be grown on a trellis for best results. N91

**Extra Long:** (Extra Long Special) Very long, narrow fruits, 3 to 4 feet in length. May also be picked while quite young. Q45M, RO, R50

*Trichosanthes cucumeroides* - *Japanese snake gourd*, *Karasu-uri* {S}. Immature fruits are preserved in salt or miso. Tubers are the source of a starch. Japan, China. TANAKA; 053M

*Trichosanthes dioica* - *Parval*, *Pointed gourd*, *Patol* {PD}. The young, unripe fruits are widely eaten as a vegetable in India. They can be fried, curried, pickled, added to stews, or used in confectionery. In Nepal, they are stuffed with mutton or beef. Similar to tindora but more highly prized, and commanding greater prices. The bitter leaves and tender shoots are used for making soups and stews such as *shukto*. Both striped and unstriped forms are grown. Available fresh or canned at Indian markets. Tropical Asia, cultivated. BANERJI [ft], CHAKRAVAKTY, CHAUHAN, D. [Cu], HEDRICK 1919, MAJUPURIA [Re], REEJHSINGHANI 1975 [Re]; F74

*Trichosanthes kirilowii* - *Chdsen-karasu-uri* {S}. Fruits are eaten. Young budlings are boiled and eaten as a vegetable. Roots are the source of a starch. Eastern Asia. TANAKA; F37T{PL}, F68T, F85, F86G, J82, N84, 053M

*Trichosanthes kirilowii* var. *japonica* - *Ki-karasu-uri* {S}. Fruits are preserved in salt or made into gruel. Seeds are the source of an edible oil. The starch obtained from the roots is mixed with rice or wheat flour and made into rice crackers, dumplings, or noodles. Japan. TANAKA; V29M

#### CUNONIACEAE

*Weinmannia racemosa* - *Kamahi* {PD}. Flowers are the source of an extra light amber, creamy honey that is exported from New Zealand. The sweet, pleasant-tasting fruits are also edible. New Zealand. CRANE 1975, HEDRICK 1919; C3M, G5M, H15T, N84{S}, 053M{S}

#### CUPRESSACEAE

*Callitris quadrivalvis* - \**Tetraclinis articulata*

*Juniperus communis* - *Juniper* {S}. The aromatic fruits are used as a pepper substitute and for flavoring sauerkraut, stuffings, pickling brines, and pates. In Sweden, they are made into a conserve. They are often used in cooking to cut the odor of cabbage and turnips. Roasted berries are used as a substitute for coffee. The dried berries and the oil distilled from them are utilized commercially to flavor *gin*, liqueurs such as *Ginepro*, cordials, meat products, etc. In France, a kind of beer called *genevrette* is made from fermented juniperberries and barley. Tea made from the berries has a spicy, gin-like flavor. *Westphalian ham* is smoked with both juniper twigs and berries. Eurasia, cultivated. BRYAN [Cu, Culi], CAMPBELL-PRATT, CUSUMANO [Cul, ft], GRAY, P. [Cul], GRIEVE, HEDRICK 1919, HENDRICKSON, KNAB, MARGIN, MICHAEL [Pre, Re], MORTON 1976, PAINTER [Re], UPHOF; B55M{DF}, B94, C94M{DF}, E47, F80, *G89M*{PL}, K32M{ffi}, K38, K63G, L17{DF}, L36M{DF}, M35M{PL}, 053M, 093, P5, *Q32*, R53M, etc.

*Juniperus deppeana* - *Juniperus pachyphlaea*

*Juniperus horizontalis* - *Creeping juniper* {PL}. Fruits are roasted and used in the preparation of a coffee-like beverage. Young branch tips are used as a substitute for tea. North America. TURNER 1978; B9M, B94{S}, *G66*{S}, *G89M*, K38{S}, M92, N84{S}

*Juniperus osteosperma* - +*Juniperus utahensis*

*Juniperus pachyphlaea* - *Alligator juniper*, *Sweet-fruited juniper* {S}. The fruits are eaten raw, roasted, or dried, ground into meal, and prepared as mush or cakes. They are purplish, globose, half an inch in diameter and have a sweetish, palatable pulp. Southwestern North America. HEDRICK 1919, KIRK, YANOVSKY; B94, F80, H4{PL}, I83M{PL}, J25M, K38, K63G, L55J, N84, 053M, 093

*Juniperus scopulorum* - *Rocky Mountain juniper*, *Colorado red-cedar* {S}. Fruits are eaten raw, boiled, or roasted. They can be used to flavor meat, imparting a taste somewhat like sage. The fruits and the young shoots have been used to make a kind of tea. Dried fruits are ground into a meal for mush and cakes, or roasted and made into a substitute for coffee: Western North America.

HARRINGTON, H., TURNER 1978; B94, D95{PL}, E47, G66, G66{PL}, 147, 183M{PL}, J25M, J26{PL}, K38, K63G, L55J, L75

*Juniperus utahensis* - *Utah juniper* {S}. Fresh and ground fruits were consumed by the Indians. They were often put into cakes. Ash made from burned twigs is added to blue com products to enhance color, as well as boost flavor and release more nutrients. Southwestern North America. KAVASCH [Re], UPHOF; B94, C43V, N84, 093

*Tetraclinis articulata* - *Arartree* {S}. The tree exudes a resin called *sandarac*, which is distilled into an essential oil used commercially as a flavoring for alcoholic beverages. In Greece, the dried and powdered resin is added to *retsina* and *kokkineli* wines. Northern Africa. BURDOCK, LIPINSKI; Q15G

*Thuja occidentalis* - *American arbor-vitae*, *Northern white cedar* {PL}. The Ojibwe Indians made a pleasantly sweet soup from the pith of the young shoots. Leafy branchlets are sometimes brewed into an aromatic tea. North America. FERNALD, GIBBONS 1966b, HEDRICK 1919; C9M{S}, C33, E47, H49, 14, J16, K38{S}, £75{S}, N71M{S}

*Thuja plicata* - *Western red cedar* {S}. The wood is used for making planks, on which salmon and other foods are oven baked. Foods cooked on the planks retain more of their moisture, and they also acquire a sweet, smoky flavor. The bark is also edible: Western North America. BEAN, A. [Re], HEDRICK 1919; A2, A18{PL}, C9M, C26M{PD}, E87{PL}, E15, F88M, G66, 147, J26{PL}, K38, K43{PD}, K63G, £75, £75{PL}, NO{PL}, 093, etc.

#### CYCADACEAE

*Cycas circinalis* - *Sago tree* {PL}. The trunk and seeds both yield a sago starch, that from the trunk being of commercial importance. Fruits are occasionally eaten. Tropical Asia. HEDRICK 1919, MACMILLAN, MENNINGER [Pie], UPHOF; A41G, C78, 157, K47G, N84{S}, 093, P17M{S}, R33M{S}

*Cycas revoluta* - *Japanese sago-palm*, *Sotetsu* {S}. Seeds are eaten fresh or roasted. Dried and ground to a powder, they are mixed with brown rice and fermented into *date miso* or *sotetsu miso*. After the removal of a toxic principle, the heart of the trunk is sliced and eaten baked or powdered. It also yields a starch from which dumplings are made. These are eaten together with sugar and sweet potato. An intoxicating drink is also made from it. Japan, cultivated. BURKILL, SHURTLEFF 1976, TANAKA, UPHOF; A79M, C9M, C78{PL}, D43{PL}, H4{PL}, K47G, N84, 053M, 093, P5, P5{PL}, R33M

#### CYCLANTHACEAE

*Carludovica palmata* - *Panama hat plant*, *Hat palm* {S}. Young leaves and shoot tips, called *nacunas*, are eaten in salads. They are said to have the flavor of asparagus. The inner portions of the lower leafstalks and the berries are edible. Rhizomes are used as a salad and potherb in various parts of Latin America. The young inflorescences are also consumed. Tropical America. DUKE, KUNKEL; A79M, C9M, F69{PL}, F85, N40M, N84, 053M, 093, P5

#### CYPERACEAE

*Cyperus esculentus* - *Chufa*, *Earth almond*, *Tiger nut*, *Nut-sedge* {PL}. The tuberous roots are eaten raw, boiled, roasted, candied, cooked and added to soups, or used in confectionery, cookies, puddings, ice cream, sherbets, *ras el hanout*, etc. They have an agreeable, slightly sweet, nut-like flavor reminiscent of water chestnuts. Ancient Egyptians cooked them in barley juice to add a sweet taste, then ate them as dessert nuts. In Valencia, Spain, a refreshing beverage called *horchata de chufa* is prepared by mixing the ground tubers with water, cinnamon, sugar, vanilla, and ice. In Ghana, *atawbe milk* is made from the ground tubers, water, wheat flour, and sugar. Roasted tubers are a coffee substitute. Chufa oil is considered to be a superior table oil that compares favorably with olive oil. The base of the plant can be used in salads. Pantropic, cultivated. ANGIER [Re], CLARKE, DOMINGO, FERNALD,

GIBBONS 1966b [Re], HARRINGTON, H., HERKLOTS, ROSENGARTEN, VILMORIN [Cu], WOLFERT 1973 [Cu]; D47M, E50, F73D, F80, G1M, G47J{ED}, H24, K71, L13P{ED}, M34M, Nil, N84

*Cyperus haspan* - *Dwarf papyrus* {PL}. Salt is prepared from the ash of the plant. Made on a small scale by some tribes in Eastern Africa. Pantropic UPHOF, WATT; A54, G85, H30, 190M, K34, K85M, M73, M73M, N3M

*Cyperus longus* - *Galingale* {PL}. Tubers are used as a spice in soups, pies, and sweets. Galingale was one of the favorite spices of the medieval kitchen. It was an ingredient of *pokerounce*, a sort of medieval cinnamon toast. Europe. MABEY [Re]; C74, H30, M73M, N3M, N84

*Cyperus rotundus* - *Coco grass*, *Nut-grass* {PD}. The nut-like tubers are eaten raw, boiled, or roasted. When freshly dug, the flavor is very strong, resembling Vicks VapoRub. If tubers are allowed to dry, they become milder. Also a major ingredient of *Amrit Kalash*. Tropics, Subtropics, naturalized in North America. CRIBB, FERNALD, MEDSGER, MORTON 1977; H14, N84{PL}

*Eleocharis dulcis* - *Chinese water chestnut*, *Matai* {PL}. The sweet, crisp corms are eaten raw, cooked, stir-fried, or dried for later use. Widely used in Chinese dishes, especially chop suey. A flour or starch made from the dried, powdered corms, is used to thicken sauces, and to give a crispy coating to foods that are deep-fried. The plant is used for making salt in Zimbabwe. Tropical Asia, cultivated. ALTSCHUL, CHANG, W. [Re], CREASY 1982, GESSERT, HARRINGTON, G. [Cu, Cul], HEDRICK 1919, HERKLOTS, ROSENGARTEN, SCHNEIDER 1986 [Cul, Re], VON WELANETZ; A54, C27G{PD}, E13G{PR}, G85, H30, 174, 190M, K34, K85M, L14G{PD}, M15, M39, M73, N3M, N40{PR}, etc.

*Eleocharis tuberosa* - \**Eleocharis dulcis*

*Scirpus acutus* - \**Scirpus lacustris*

*Scirpus californicus* - *Totora*, *California bulrush* {PL}. The rhizomes and the peeled, lower twelve inches of the stem are baked and eaten, or dried for later use. North and South America. HEISER 1978; C74, F73, K15{S}, K85M

*Scirpus lacustris* - *Great bulrush*, *Me* {S}. Young shoots are eaten raw or cooked. The pollen can be collected and mixed with meal for making bread, mush, or pancakes. Seeds are ground into a meal and used in the same manner as the pollen. The rootstocks are eaten raw or cooked, and can be made into syrup and flour. Buds at the ends of the rhizomes are crisp, sweet, and excellent eaten raw. Widespread. GIBBONS 1979, HARRINGTON, H., KIRK; D47M, E66M, F88M, G26{PL}, G47M, H30{PL}, J39M, K15, M34M, N3M{PL}, N11{PL}, N84, Q24

*Scirpus lacustris van creber* - *Scirpus validus*

*Scirpus paludosus* - *Alkali bulrush*, *Nutgrass* {S}. Rhizomes were consumed raw or made into a flour for bread. Also the pollen was mixed with bread by several Indian tribes. North America. FERNALD, UPHOF; M34M, Nil

*Scirpus validus* - *Tall bulrush*, *Great American bulrush* {PL}. Young shoots and roots are eaten cooked or preserved in rice bran. The tender base of the stem is eaten raw in salads. Pollen is used in soups and breads. The bruised young roots, boiled in water, furnish a sweet syrup. Seeds are edible. North America. FERNALD, MEDSGER, TANAKA; B9M, B32, C74, D47M{S}, F73, G26, H30, J39M, J39M{S}, J41M, J42, M16

#### CYRILLACEAE

*Cliftonia monophylla* - *Ti-ti*, *Buckwheat bush* {PL}. The flowers yield a red, strong-flavored honey mostly suitable for baking purposes. Southern North America. PELLETT, UPHOF; D95, H4, H14M, K63G{S}, N37M, N84{S}

*Cyrilla racemiflora* - *White ti-ti*, *Leatherwood* {PL}. Flowers are the source of a commercial honey. It is somewhat dark in color, and has a mild flavor. Southern North America. PELLETT, UPHOF; A50, D95, H4, H14M, K63G{S}, M77M, N37M, N84

## DAVIDSONIACEAE

*Davidsonia pruriens* - *Davidson's plum*, *Ooray* {S}. The plum-like fruit, bluish-black when ripe, has soft, juicy, purple flesh with relatively small seeds. Although very acid, when stewed with sugar or made into jam or jelly, it is very enjoyable with a distinctive sharp flavor. Also used for salad dressings, sauces and vinegar. Considered one of the best native fruits of Australia. Australia. CHERIKOFF [Re], CRIBB, MACMILLAN, ROBINS [Cul, Re]; N79{PL}, N79{PR}, 032M{ED}, 094, P38

## DILLENIAEAE

*Dillenia indica* - *Elephant apple*, *Chalta* {S}. Fruits are aromatic, juicy, acid, and are usually used in curries, preserves, drinks, or fermented into vinegar. The fleshy calyx has an agreeable acid taste and is eaten raw or cooked, put in curries, or made into jellies, drinks, and sherbets. Southern Asia. HEDRICK 1919, MACMILLAN, TANAKA; A79M, E29{PL}, F85, N84, 053M, 093, P5, P38, Q12, Q18, Q45M, Q46, R50{PL}, R88

*Dillenia philippensis* - *Katmon* {S}. Fruits are smooth, green, somewhat flattened and sour in flavor. They are used in jellies, preserves, refreshing drinks, curries, eaten with salt or used to flavor other foods. Philippines. BROWN, W., TANAKA, UPHOF; F85, N84

## DIOSCOREACEAE

*Dioscorea alata* - *White yam*, *Air potato*, *Greater Asiatic yam* {PL}. The tuber is eaten boiled, roasted, baked, mashed, fried, made into chips, french fries, flours, *fufu*, or used as a thickener in soups. Bulbils, or aerial tubers, are cooked and eaten in the same manner as the tubers. Pacific Islands, cultivated. HAWKES [Re], HERKLOTS [Cu], MARTIN 1976b [Cu, Nu], OCHSE, SCHNEIDER 1986 [Cul, Re], TANAKA, WILSON, E.G. [Re]; E13G{PR}, L14G{PD}, P38

## CULTIVARS

**Florida:** Compact tubers, produced singly or in pairs; surface nearly free of roots; quality and flavor very good. Early sprouting, early maturity. High yields. Susceptible to leaf-spot disease and nematodes; intermediate resistance to anthracnose. Originated in Puerto Rico by Franklin W. Martin. U7P

**Forastero:** Somewhat irregular tubers, produced singly or in multiples; surface smooth and almost free of roots. Superior cooking and processing qualities. Irregular sprouting, vigorous growth. Excellent yields. Susceptible to leaf-spot disease. Originated in Puerto Rico by Franklin W. Martin. U7P

**Gemelos:** Compact, cylindrical, perfectly shaped tubers; produced in multiples; surface smooth, nearly free of roots. Quality very high. Early sprouting, usually gives excellent yields. Originated in Mayaguez, Puerto Rico by Franklin W. Martin. U7P

*Dioscorea batatas* - *Dioscorea opposita*

*Dioscorea bulbifera* - *Air potato*, *Potato yam* {PL}. Underground tubers are sometimes eaten. Bulbils are more commonly consumed having an agreeable taste. They are eaten boiled, baked, mashed, fried, etc. Produces large numbers of bulbils over long periods of time, making it especially suited to the home garden. Inflorescences are apparently eaten. Tropics, cultivated. HEDRICK 1919, MARTIN 1974 [Cu, Nu], ROOT 1980a, TANAKA; A79M, F85{S}, G73, H4, N84, P38

*Dioscorea cayenensis* - *Yellow yam*, *Guinea yam*, *Attoto yam* {PL}. The tubers have a rough outer skin, the flesh is pale yellow and when cooked is palatable, mealy and dry. Eaten boiled, mashed, roasted, fried, baked, put in soups and stews, made into fritters, etc. A tea is made from the leaves. Tropics, cultivated. ALTSCHUL,

BENGHIAT [Cul, Re], HERKLOTS, TANAKA, WALSH [Re]; U7P, W59M, X51, X56, Z72

*Dioscorea esculenta* - *Lesser Asiatic yam*, *Goa yam*, *Fancy yam* {PL}. Tubers are eaten after being cooked or roasted. The taste is sweet and pleasant, with somewhat the flavor of sweet potatoes or chestnuts. They can be used in soups, stews, mashed and fried as cakes, boiled, baked, etc. Tropics, cultivated. OCHSE, TANAKA, UPHOF; X51, X62, Z72

## CULTIVARS

**Doli:** Good-sized tuber cluster, produces both normal tubers and one oversize tuber. Tubers larger than normal, white-fleshed. Yields only fair. U7P

**Muni:** Good-sized tuber cluster, tends to produce another tuber on the same head. Tubers have good size and shape, white flesh. Good yields. U7P

*Dioscorea japonica* - *Jinenjo*, *Glutinous yam*, *Yama-no-imo* {PL}. The tubers are eaten boiled or baked. Grated, they are called *tororo-imo* and are eaten with vinegar, added to soups, mixed with eggs and served as a topping for noodle and rice dishes, or used as a binding agent for other foods, such as the flour in *soba*. Vine tips are eaten steamed or stir-fried. Bulbils are edible. Eastern Asia. BELLEME 1993 [Re], SHURTLEFF 1975 [Re], SHURTLEFF 1976 [Re], TANAKA, TSUJ, VON WELANETZ; C95, E56{PD}, E66T{PC}, F80, G20M{PR}, H91{ffii}, 160, 174, N7J, N84{S}, P38

*Dioscorea opposita* - *Cinnamon vine*, *Chinese yam*, *Naga-imo*, *Wai shan* {PL}. The tubers resemble *D. japonica* and are used similarly, but have little binding strength. They are eaten boiled, baked, fried, mashed, grated and added to soups, or mixed with vinegar. Often combined in tonic soups with *Lycium barbarum* and *Polygonatum odoratum*. A starch derived from the tubers is called *Guiana arrowroot*. Hardy as far North as Canada. Eastern Asia, cultivated. FELL 1982b, FERNALD, LEE, G., TAN [Re], TANAKA, UPHOF, VILMORIN [Cu]; C43M, E2M{DF}, E7M, E28M, F35M, F37T, F86G, G19P{DF}, H36{DF}, 174, J82, K49M, L21T{DF}, M16, N24M, N84{S}, R49, etc.

*Dioscorea pentaphylla* - *Fiji yam* {PL}. The large tubers are roasted and eaten or added to soups. Male inflorescences and young leaves are occasionally eaten. Tropical Asia, cultivated. HEDRICK, HERKLOTS, OCHSE, WATT; 174

*Dioscorea trifida* - *Cush cash yam*, *Mapuey* {PD}. The flesh of the edible tubers varies from white to purple. They may be baked whole or peeled and cut into pieces for boiling. The cooked flesh is smooth in texture, attractive, and of an unusual rich flavor that is readily appreciated and sufficiently moist in the mouth. Caribbean region, cultivated. HERKLOTS, MARTIN 1978b [Cu, Nu], ORTIZ 1973 [Re]; L14G

*Tamus communis* - *Black bryony*, *Tamoio* {S}. Young shoots are cooked and eaten as a vegetable. In classical times, they were actually preferred over the true asparagus and continued to be popular in areas such as Tuscany for many centuries. In modern Friuli, they are traditionally gathered in the spring and mixed with more than fifty other wild greens in a dish known as *pistic*. In Turkey they are used as stuffing for *boreks*. Eurasia. HEDRICK 1919, LOVELOCK, PAOLETTI, UPHOF, VIARD, WALKER; N84, 053M

## DIPTEROCARPACEAE

*Shorea robusta* - *Sal tree* {S}. Seeds are the source of *sal butter*, used in cooking like ghee and as a substitute for *cocoa butter* in chocolate manufacture. The fruits are occasionally eaten. Southern Asia. BURKILL, TANAKA, UPHOF, WATT; G0{PD}, Q46

*Shorea stenoptera* - *Borneo tallow tree* {PD}. The nuts are the source of a fat, sometimes called *illipe butter*, used as a substitute for cocoa butter in the production of chocolate. Indonesia. TANAKA; GO

## DRACAENACEAE

*Cordyline australis* - *Ti-kouka*, *Cabbage tree*, *Whanake* {S}. Young leaves and shoots are eaten raw or roasted. The roots are sometimes eaten or brewed into an intoxicating drink. New Zealand. COLENSO, FULLER [Re], TANAKA; C9M, E53M, F85, 128{PL}, L91M, M7M{PL}, N84, 053M, P5, P17M, Q32, Q41, R33M, S43M, S92

*Cordyline fruticosa* - 77, *La'i*, *Andong* {S}. The root is high in sugar and when baked it has a flavor not unlike that of molasses candy. This confection can be eaten or used to sweeten puddings and other foods. Roasted roots are fermented in water and then distilled into an alcoholic beverage; *okolehao*. Young leaves are eaten as a potherb. In Hawaii, they were used for wrapping poi, limu, fish, fruits, and *lulau*, a dish of taro and pork cooked in an underground oven. Tropical Asia, Oceania. DEGENER, GIBBONS 1967, HEDRICK 1919, JOSSELYN, OCHSE, ROUTHIER 1993 [Re], WALDRON [Re]; A28{PL}, A79M, F85, H49{PL}, 133, N84, 093, P5, Q32, Q41, R33M

*Cordyline terminalis* -> *Cordyline fruticosa*

*Dracaena angustifolia* - *Semar*, *Sudji* {S}. Very young leaves are cooked and eaten as a side-dish with rice. More often they are pounded and mixed with water to yield a juice that is used for giving green color to an Indian pastry made of glutinous rice. Roasted fruits are eaten in the Andaman and Nicobar Islands. Tropical Asia. BHARGAVA, BURKILL, OCHSE; F85

*Pleomele angustifolia* - *Dracaena angustifolia*

## DROSERACEAE

*Drosera rotundifolia* - *Roundleaf sundew* {S}. The juice is used to curdle milk. The curds and whey that are produced are apparently consumed directly. In Italy, the herb is mixed with brandy, raisins and sugar and fermented into a cordial known as *Rossolis*. Northern temperate region. FERNALD, GUNDA, HEDRICK 1919, SCHOFFIELD; B91P, I37M{PL}, J8, J8{PL}, K26M{PL}, N84, 042, 042{PL}, Q41, S28M, R88

## EBENACEAE

*Diospyros digyna* - *Black sapote*, *Chocolate pudding fruit* {PL}. The fruit pulp is soft, rich, dark chocolate brown in color and somewhat sweet. It is best eaten mashed with a little orange, lemon, or lime juice and then chilled before serving. Also used in preserves, pies, ice cream, cakes, and other desserts, or fermented into a brandy-like beverage. Central America, cultivated. MORTON 1987a, MOWRY, POPENOE, W. 1920 [Cu, Pro], QUINTANA 1986 [Re], RICHARDSON, M. [Pre, Re]; A41G, B60M{PR}, D57, E29, H53M, 112, 183M, M17, N84{S}, 019{S}, P38{S}, Q93  
CULTIVARS {GR}

**Bernecker:** An improved cultivar that is popular in Australia, Florida and Hawaii. Medium to large, nearly spherical fruit; usually with few seeds, only 1 or 2. A prolific producer. Originated in Homestead, Florida by Don Bernecker. E8M, Q93

**Cuevas:** An unusual seedless cultivar. Roundish, green-skinned fruit; sweet, dark brown to black flesh. Handsome, evergreen tree with shiny, dark green leaves, resistant to wind. E8M

**Maher:** Very large fruit, flattened at both ends, average weight 24 ounces; quality good to very good. Usually with few seeds. Prolific, self-fertile tree. Originated in West Palm Beach, Florida in the 1960's or 1970's, in the yard of a Rare Fruit Council member. Q93

**Reineke:** Very large, oblate fruit, often weighing 2 to 2 1/2 pounds; quality good to very good. Requires cross-pollination with another tree for best yields, although the fruits will be seedier. Originated in Florida. Q93

*Diospyros discolor* - *Mabolo*, *Velvet apple*, *Butter fruit* {S}. Fruits are eaten fresh as dessert or in salads, and are fried in butter as a vegetable. They are apple shaped, with a velvety, reddish-brown

skin. The flesh of ripe fruits is white or cream colored, mealy, aromatic, and somewhat sweet. In the Philippines, the unripe fruit is preferred, being crisp like an apple but juicier and sweeter. Tropical Asia. JOHNS [Cul], KENNARD, MORTON 1987a, POPENOE, W. 1920, STURROCK, TANAKA; E29{PL}, F85, M17{PL}, N84

*Diospyros ebenaster* -> *Diospyros digyna*

*Diospyros kaki* - *Japanese persimmon*, *Kaki* {S}. Fruits are eaten fresh, dried or after being frozen on the tree by a frost. Used in pies, puddings, cakes, breads, cookies, ice cream, and many other desserts. Koreans used the dried fruit to make a delicious, spicy, syrupy punch called *sujonggwa*. Non-astringent varieties can be sliced and tossed into a green salad. Leaves are used to improve the flavor of pickled radishes. The peel can be powdered and used as a sweetener. Roasted seeds have served as a coffee substitute. Asia, cultivated. GRAY, P. [Cul], GRIFFITH [Pre, Re], MORTON 1987a, NOH [Cul, Re], POPENOE, W. 1920 [Cu, Pro], SCHNEIDER 1986 [Cul, Re], TANAKA; G66, G73, H4{PL}, K38, K63G, N84, 053M, P5, P17M, P38, Q32. (for cultivars see Persimmon, page 481)

*Diospyros lotus* - *Date plum* {S}. The fruits are the size of a cherry, yellow in color, changing to blue-black when ripe. They are eaten fresh, dried, or over-ripe (bletted), like the medlar. Dried fruits are sweet, with somewhat the flavor of dates. Also used as a rootstock for *D. kaki*. Asia, cultivated. HEDRICK 1919, UPHOF; G66, G73, G73{PL}, H4{PL}, K38, K63G, N71M, N84, 093, R78

*Diospyros mespiliformis* - *Rhodesian ebony*, *Jackal berry* {S}. Pulp of the fruit is very sweet and is eaten raw, made into preserves, dried for future use or fermented into an alcoholic beverage. It is said to have the flavor of guavas. The Hausas use it for making a soft toffee, called *ma di*. Tropical Africa. FCX, F., TANAKA, TREGOLD, UPHOF; F85, M17{PL}, N84

*Diospyros texana* - *Black persimmon*, *Texas persimmon*, *Sapote prieto* {S}. The small fruits are black when ripe, with a soft, very sweet flesh that stains the tongue black. They can be eaten fresh or dried. Southwestern North America. HEDRICK 1919, MEDSGER, RILEY 1976; ^79{PL}, B94, H4{PL}, N84

*Diospyros virginiana* - *American persimmon* {S}. Fruits are eaten raw or dried, in cakes, breads, pies, puddings, tarts, jams and pancakes or fermented into beer, wine and vinegar. Molasses can be made from the pulp. A tea made from the leaves tastes like sassafras and is high in vitamin C. Roasted seeds are used as a coffee substitute. North America, cultivated. FERNALD, GIBBONS 1962, GRIFFITH; A80M{PL}, A82{PL}, B94, C9M, D26, D26{PD}, D95{PL}, G66, H4{PL}, K38, K63G, N0{PL}, N37M{PL}, N84, 053M, etc. (for cultivars see Persimmon, page 481)

*Diospyros whyteana* - *Bladder nut* {S}. Fruits are edible. The seeds are used as a coffee substitute. Southern Africa. FOX, F., KUNKEL; F85, N84, 053M, S28M

*Euclea crispa* - *Blue guarri* {S}. The fruits are pleasantly sweet and are eaten or chewed as a nibble. Leaves are also edible. Southern Africa. FOX, E, KUNKEL, TREGOLD; N84

## EHRETIACEAE

*Bourreria ovata* - *Oval-leaf strongback* {PL}. Ripe fruits are edible although not very palatable. In the Bahamas, a tea is made from the bark. Also one of the principal ingredients of Jamaican *roots tonic* or *roots drink*, a delicious blend of various roots and herbs. Southeastern North America. ALTSCHUL, MORTON 1977; D87G

*Cordia abyssinica* - *Cordia myxa*

*Cordia alliodora* - *Laurel negro* {S}. The fruits are used as food by a number of Indian tribes. According to Kunkel, the bark is used as a condiment. Tropical America. KUNKEL, UPHOF; A79M

*Cordia dichotoma* - *Clammy cherry*, *Thanapet*, *Lasora* {S}. The sticky, mucilaginous fruit is eaten or used for making pickles. Unripe fruits are cooked as a vegetable or salted and made into paste or cakes. Flowers, leaves and seeds are also eaten. Southeast Asia. ALTSCHUL, CRTOB, MARTIN 1975, MENNINGER, SINGH, S., TANAKA; F85, N84, 094, Q12, Q18, Q46, R15M

*Cordia myxa* - *Sebestan*, *Sapistan plum*, *Assyrian plum* {S}. Ripe fruits have a sticky, mucilaginous pulp that is mixed with honey to make a sweetmeat called *alewa*, or to sweeten gruels and porridges. Unripe ones are eaten as a vegetable or pickled. The kernel is eaten, tasting somewhat like a filbert. Flowers and leaves are used as vegetables. Tropics, cultivated. DALZIEL, GRIGSON, J. 1986, HEDRICK 1919, MARTIN 1975, MENNINGER, TANAKA; N84, P17M, P38, R50{PL}

*Cordia sebestena* - *Geiger tree* {S}. Ripe fruit is eaten raw, boiled, or pickled. It is somewhat fibrous and not particularly sweet. Tropical America, cultivated. MORTON 1977, TANAKA; C95, F85, N84, 093, P5, P17M

*Ehretia acuminata* - *Koda tree*, *Puna* {S}. Fruits are the size of a pea, red-orange in color, and insipidly sweet. They are eaten raw when ripe. The unripe fruits are pickled. China, Himalayan region. HEDRICK 1919, WATT; N84, P5, Q46

*Ehretia buxifolia* - \**Ehretia microphylla*

*Ehretia microphylla* - *Philippine tea*, *Pala* {S}. Leaves are used as a substitute for tea in parts of the Philippines. The fruit is also edible. Tropical Asia. TANAKA, UPHOF; F85

#### ELAEAGNACEAE

*Elaeagnus angustifolia* - *Russian olive*, *Oleaster* {PL}. Yellow fruits are dry, mealy, and somewhat sweet. They are eaten fresh, or made into jellies, sherbets, wine, etc. Mediterranean region to Southwest Asia, cultivated. HEDRICK 1919, SIMMONS 1972; C9M{S}, C33, D95, E87, F80{S}, G16, H4, J16, K38{S}, K63G{S}, N24M, 053M{S}

*Elaeagnus angustifolia* var. *orientalis* - *Trebizond date*, *Senjed*, *Igde* {PL}. The fruit is similar to the above, but of much better quality, almost melting in one's mouth. It is eaten fresh, dried, or stewed in milk. In Iran and Afghanistan, it is one of seven fruits made into a festive fruit compote called *haft miveh* or *miwa nauroze* served at the traditional New Year (Norouz), on the first day of spring. Sold in local markets of Turkey and surrounding areas. Western Asia. BATMANGLU [Re], OZTURK, REICH, SABERI [Re], SIMMONS 1972, TANAKA.

#### CULTIVARS {GR}

**King Red:** Large, burgundy-red fruits, up to 1 inch long; produced in autumn. Grows to 30 feet tall with ornamental, silvery foliage. Very tolerant of alkaline soils, drought, and extreme heat and cold. Hardy to Zone 4. A new introduction from the New Mexico experiment station, from seeds collected in Afghanistan in 1958. REICH; C54, D95, H78, 174, N24M

*Elaeagnus argentea* - \**Elaeagnus commutata*

*Elaeagnus commutata* - *Silverberry*, *Gin'yo-gumi* {S}. The dry, mealy fruits may be eaten raw or cooked. They are good when used in soup and make an excellent jelly. Alaskan Indians fry them in moose fat. North America. FERNALD, HELLER, KIRK; D95{PL}, E7M, E87{PL}, G66{PL}, 147, K38, K63G, M35M{PL}, N71M, N84, 053M

*Elaeagnus latifolia* - *Bastard oleaster*, *Wild olive* {S}. When ripe the olive-shaped fruit is pale red or cherry colored and is acid or somewhat astringent. Cooked and sweetened with sugar, it makes a very agreeable compote. Also used in cakes and tarts. Tropical Asia. HEDRICK 1919, TANAKA; P38, Q46

*Elaeagnus multiflora* - *Goumi*, *Natsu-gumi*, *Longipe bush*, *Mu-pan-hsia*, *Cherry elaeagnus* {S}. Ripe fruits are reddish-orange, juicy, pleasantly acid and are sometimes eaten out of hand. Usually

made into pies, tarts, jellies, sauces, wine, etc. China, Japan. BRYAN [Cu, Re], SIMMONS 1972 [Cu]; H4{PL}, I74{PL}, I83M{PL}, J61M{PL}, K63G, K67{PL}, M16{PL}, N71M, 093, P49, R78

#### CULTIVARS {GR}

**Sweet Scarlet:** Large, attractive red fruit with a very good flavor. Medium-sized shrub; 6 feet by 6 feet; self-fertile. Will bear fruit 2 to 3 years after planting. Selected at the Kiev Botanic Garden, Ukraine. E87, H49, I49P, I66T

*Elaeagnus orientalis* - \**Elaeagnus angustifolia* var. *orientalis*

*Elaeagnus philippensis* - *Ungaro* {PL}. The fruits are pink to pale red, juicy, tart-sweet, and pleasant to eat out of hand when fully ripe. Also used to make a highly-colored jelly. Philippines. MOWRY, STURROCK; C95, E29, 183M, N84{S}

*Elaeagnus pungens* - *Nawashiro-gumi* {S}. Fruits are edible. Usually manufactured into jam, soft drinks, liqueurs, etc. Japan. TANAKA; C9M, F85, H4 {PL}, K63G, N84, 053M, Q15G

*Elaeagnus umbellata* - *Autumn olive*, *Aki-gumi* {PL}. The ripe fruits are bright red when ripe, juicy, pleasantly acid, and good to eat out of hand. They are also used dried, or made into jams, sauces, preserves, and pies. China, Japan, cultivated. TANAKA; A91, B9M, C11M, F51, F80{S}, G66{S}, H4, 14, I47{S}, J16, J26, K63G{S}, N24M, 053M{S}, Q46{S}, etc.

#### CULTIVARS {GR}

**Brilliant Rose:** Has one of the largest fruits of any improved variety. Good flavor. Attractive shrub, to 15 feet tall; silver foliage; fragrant, yellow flowers; produces great quantities of fruit. F43M

**Sweettart:** Sweet tasting fruit with a wonderful tart undertone. Should be left on the tree until completely ripe before harvesting. Attractive shrub with fragrant flowers. Hardy in Zones 4 to 7. F43M

*Hippophae rhamnoides* - *Sea buckthorn*, *Sea berry*, *Tsarap* {S}. Acid fruits are very high in vitamins C and A. They are eaten with milk and cheese, or made into sauces, marmalade, syrup, and jelly. The juice can be preserved in honey and used as an addition to fruit preserves, as a sweetener for herbal teas, or as a basis for liqueurs. Common in European health food stores. Eurasia. HEDRICK 1919, LAUNERT [Nu], SIMMONS 1972 [Cu], TANTTU; B94, F43M{PL}, G66, G66{PL}, H49{PL}, I66T{PL}, K38, K64{PL}, M35M{PL}, N71M, 053M, Q46, R53M{PL}

#### CULTIVARS {GR}

**Dorana:** Excellent home garden cultivar. Medium-sized fruit that turns deep orange when ripe; especially high in Vitamin C; will remain on the bush for most of the winter if not harvested. Early bearing and very productive plant; compact growth habit. Developed in the former East Germany. B74, 146, I49P

**Fruanaa:** Mild flavored fruits that begin to ripen in early August in Oregon. Should be harvested early as the flavor of the fruit begins to decline after September. Long fruit stems that facilitate hand harvesting. Very upright, strong and open growth habit; generally planted 8 to 10 feet apart. Developed in the former East Germany. D37, 146, I49P, I66T, 174

**Herqo:** Round, yellowish-orange fruits, high in Vitamin C, used for sauces and jelly. The juice is sour but has an orange-passionfruit-like flavor when sweetened. Ripens in mid-August, or midseason. Upright bushes produce plentiful quantities of fruit; should be spaced 4 to 6 feet apart. Commercial cultivar developed at a breeding station in the former East Germany. 146, I49P, I66T, 174, J61M

**Lei kora:** Large, bright orange fruits produced in great abundance. Will generally start bearing when two years old. Begins ripening in September, and fruits remain on the branches well into winter. Compact plants can be spaced 5 to 8 feet apart. Fruit-laden branches can also be used in florist displays. Developed in the former East Germany, by a team headed by Hans-Joachim Albrecht. A91, B74, I49P, I66T, 174, M77, P68M

**Male:** Used as a pollinator for female cultivars. One male will pollinate up to eight females. Should be planted close enough to female plants to allow for wind-blown pollination. A91, B74, D37, H49, I49P, I66T, 174, J61M

**Pollmix:** Male cultivar selected as being the best suited for pollinating Leikora. Grows 4 to 5 feet tall and 5 to 6 feet wide. Selected by the Berlin Nursery of the former East Germany. M77, P68M

*Hippophae salicifolia* - *Willow-leaved sea buckthorn* {S}. The ripe fruits are rather acid when eaten raw but make delicious jellies and syrups. They are very rich in Vitamin C and many other vitamins and minerals. Himalayan region. TANAKA, WATT; D95{PL}, G66, Q40, R49{PL}

*Shepherdia argentea* - *Silver buffalo-berry*, *Nebraska currant* {PL}. The fresh fruits are tart but pleasant and are eaten raw, cooked or dried for winter use. Also used to make jelly, sauce, pies, preserves, soups and drinks. North America. GIBBONS 1979, HARRINGTON, H. [Re], KINDSCHER, TURNER 1979 [Nu, Re]; A91, C33, D65, D95, E67T, F43M, G5M{PD}, H49, I47{S}, 174, J25M{S}, J26, K38{S}, K64, L27M, M35M, N84{S}, etc.

*Shepherdia canadensis* - *Russet buffalo-berry* {S}. The bitter fruits are eaten dried, smoked or pressed into cakes. Also made into jelly and a lemonade-like drink. An Indian confection, *Indian ice cream*, is made by beating the berries in water until a foam is formed, then adding sugar. Small amounts of saponin in the fruits cause the foaming action. North America. FERNALD, HARRINGTON, H., HELLER, TURNER 1979 [Nu, Re], UPHOF; C55{PL}, D95{PL}, E66M, F88M, G66, 147, I74{PL}, J26{PL}, K63G, M35M{PL}, N84

#### ELAEOCARPACEAE

*Aristotelia chilensis* - *Chilean vineberry*, *Maqui* {S}. The small fruits are eaten raw, having the flavor of blueberries. Much esteemed in some areas of Chile. Also used for juice or brewed into a wine, called *tecu* by the native Indians. Chile. HEDRICK 1919, TANAKA, UPHOF, VALENZUELA; N84

*Elaeocarpus bancroftii* - *Johnstone River almond*, *Kuranda nut*, *Kuranda quandong* {S}. The kernel of the very thick and hard nut is eaten raw. Its flavor has been variously described as comparable to that of a coconut, inferior to that of the commercial almond, as delicate as a filbert, or just plain delicious. Australia. CRIBB, MENNINGER; F85

*Elaeocarpus grandis* - *Blue quandong*, *Silver quandong* {S}. Thin layer of fruit pulp is eaten, either out of hand, or by squashing the flesh and mixing it with water to make a paste which is then eaten raw. Australia, Fiji. ALTSCHUL, CRIBB; F85, N79M, 094, P5, P38, Q32, R33M

*Elaeocarpus serratus* - *Ceylon olive*, *Wild olive*, *Veralu* {S}. Fleshy, subacid fruits can be eaten raw. They are also used in drinks and curries, or they are pickled in the manner of olives. Southern Asia. MACMILLAN, TANAKA, UPHOF; F85, P38

*Muntingia calabura* - *Strawberry tree*, *Panama berry*, *Jamaica cherry*, *Capulm* {PL}. The fruits, about half an inch in diameter, have a sweet, juicy flesh that is very good to eat out of hand. They are also used in jams, tarts, pies, or added to cold cereal like blueberries. There are both red and yellow fruited forms. Fruits have a high vitamin C content. An infusion of the leaves is used as a tea. Tropics, cultivated. HEDRICK 1919, KENNARD, MORTON 1987a, STURROCK [Nu]; F85{S}, G2M, 112, N84{S}, Q93, R50

#### EMPETRACEAE

*Empetrum atropurpureum* - *Purple crowberry* {S}. Fruits are watery, with a mildly medicinal flavor that is improved by freezing. They are usually eaten cooked with the addition of sugar and an acid fruit, such as the cranberry. In puddings they make a good substitute for currants. Also fermented into an alcoholic drink. Eastern North America. FERNALD, GIBBONS 1979; Z25M

*Empetrum hermaphroditum* - *Empetrum nigrum* ssp. *hermaphroditum*

*Empetrum nigrum* - *Crowberry*, *Curlewberry*, *Moss berry* {S}. Watery fruits are used in drinks, puddings, pies, jellies, ice cream, or made into wine. The Eskimos dry or freeze them for winter use. They thaw the frozen berries and mash them together with seal oil or whale blubber to produce a kind of pudding. In Iceland they are made into a beverage with sour milk. The twigs are brewed into a tea. Northern temperate region. HELLER, SIMMONS 1972 [Cu], TURNER 1979 [Re], UPHOF; A15M{PB}> D95{PL}, N84, 053M, Q24, R53M, R53M{PL}

*Empetrum nigrum* ssp. *hermaphroditum* - *Mountain crowberry* {PL}. Fruits are edible, being similar to *E. nigrum*, except the flowers are bisexual. Therefore, only one tree is needed for fruit production. Northern temperate region. SIMMONS 1972; K79

*Empetrum rubrum* - *South American crowberry* {S}. Fruits are eaten in Antarctic regions. Supposed to have tonic properties. Chile, Patagonia, Falkland Islands. UPHOF; N74

#### EPACRIDACEAE

*Styphelia triflora* - *Pink five corners* {S}. The fruits have a sweetish flesh around a large seed. They are edible. Australia. CRIBB, UPHOF; N79M

*Styphelia viridis* - *Five corners* {S}. The tasty, sweetish pulp of the fruit is eaten out of hand. CHERIKOFF; Australia. R47

#### EPHEDRACEAE

*Ephedra distachya* - *Sea grape* {PL}. The reddish fruits are eaten when ripe. They have a succulent or mucilaginous texture, and are somewhat sweet in flavor or slightly acid and pungent. Eurasia. HEDRICK 1919; N84{S}, R49

*Ephedra nevadensis* - *Mormon tea*, *Squaw tea*, *Nevada jointfir* {S}. A pleasant tea is prepared by steeping the green or dried twigs in boiling water until they turn an amber or pink color. The seeds are roasted and ground into flour to make a bitter bread or mush. Western North America. CLARKE, GIBBONS 1979; A61{PL}, C43M{PL}, D95{PL}, E14T{DF}, E61{PL}, E66M, F68T, F63M, F80, I47, J25M, J25M{PL}, J82, K15, K18M{DF}, N84, etc.

*Ephedra viridis* - *Green ephedra*, *Mormon tea* {PL}. The twigs are broken into small pieces and brewed into a tea. In some parts of Utah, Nevada and Arizona, they add sugar, lemon juice or strawberry jam. Roasting the twigs before brewing the tea is said to improve its flavor. Seeds are roasted and eaten or ground into a meal or flour. Western North America. HARRINGTON, H., KIRK; A2{S}, A61, C43M, C43M{S}, D95, E66M{S}, E67T, I47{S}, J76, J82{S}, K63G{S}, L90J

#### EQUISETACEAE

*Equisetum arvense* - *Horsetail*, *Sugina* {PL}. The young spore-bearing stems, known as *tsukushi* in Japan, are boiled and eaten as a potherb, salted, dressed with miso, added to scrambled eggs, baked and served with soy sauce, or made into tsukudani. They have a distinctive flavor when prepared with soy sauce, somewhat reminiscent of seafood. Sometimes available in Japanese markets. The Kiowa Indians used the base of the plant for food. Northern temperate region. HARRINGTON, H., TANAKA, UPHOF, YASHIRODA; C43M, E48, F37T, F93G, K22, L94M

#### ERICACEAE

*Andromeda glaucophylla* - *Bog rosemary* {PL}. The leaves are used to brew a delicious, aromatic tea. Boiling or steeping is said to extract a harmful toxin, andromedotoxin. A safer method would be to place the leaves in a jar of water and set it in direct sunlight to make "sun tea". North America. FERNALD; A65, B9M, C76, D95, L26, M92

*Andromeda polifolia* - *Andromeda glaucophylla*

*Arbutus menziesii* - *Pacific madrone*, *Madrona* {S}. The attractive fruits may be eaten raw, boiled or steamed. After boiling they can be dried and stored for future use. Source of a rare, medium-colored honey with a rich, candy-like flavor. Western North America. HEDRICK 1919, KIRK, PELLETT; A2, B74{PL}, B94, C9M, D96, E15, F88M, G60{PL}, G66, H47{PD}, I98M, I98M{PL}, K63G, N84

*Arbutus unedo* - *Strawberry tree*, *Killarney strawberry* {S}. The sweet, somewhat mealy fruits are eaten raw, preserved, used in sherbets, or made into syrup, wine, *aguardente*, liqueurs, or a cider-like beverage. In Portugal there is a large-fruited form grown from seeds which is sold in the markets. Source of the famous *miele di corbezzolo* of Sardinia, a rare chestnut-colored honey that is highly esteemed for its pungent, spicy flavor featuring overtones of peppery mint or menthol. Mediterranean region. ANDERSON, J., BIANCHINI, HEDRICK 1919, ISRAEL, KUMMER, SIMMONS 1972 [Cu], UPHOF; A79M, B94, C9M, G66, J61M{PL}, K63G, L91M, N84, 053M, P5, Q32

## CULTIVARS {GR}

**Melita:** Large fruits, 1 to 1 1/4 inches in diameter; sweet, juicy and delicious when picked fully ripened on the tree; slightly gritty. Slender, upright shrub with little branching. Ripens in the fall; continues to ripen for about a month after Werner finishes. Originated in Walnut Creek, California. ISRAEL; T49M{SC}

**Werner:** Large fruits, 1 to 1 1/2 inches in diameter, of fine flavor. Rounded to upright shrub, reliably produces good crops of fruit. Ripens in October and November in Southern California, 2 to 3 weeks earlier than Melita. Originated in Santa Cruz, California. ISRAEL; T49M{SC}

*Arctostaphylos Columbiana* - *Columbia manzanita* {S}. Fruits are eaten fresh, cooked, or made into jelly or a cider-like beverage. It is best to harvest the fruit when slightly underripe, as fully mature pulp becomes mealy. Northwestern North America. ALDERMAN 1975; A2, B94, F88M

*Arctostaphylos glauca* - *Great-berried manzanita* {S}. Fresh fruits are eaten raw or made into jelly and a beverage that resembles cider in flavor. Dried ones are ground into flour. Southwestern North America. CLARKE [Re], YANOVSKY; B94, F85, G60{PL}, I98M{PL}

*Arctostaphylos patula* - *Greenleaf manzanita* {S}. The ripe fruits are pleasantly acid, the taste being similar to that of green apples. They are used for making jelly and cider. Western North America. MEDSGER; B94, C43V, D95{PL}, D96, F85, G0{DF}, G60{PL}, G66, G73, I47, K38, K63G, L3J, N84, 053M, etc.

*Arctostaphylos stanfordiana* - *Stanford's manzanita*, *Myacoma manzanita* {PL}. The yellowish-brown fruits, when dry, are said to be more flavorful than those of other manzanitas. California. B94{S}, G60, I98M

*Arctostaphylos uva-ursi* - *Bearberry*, *Kinnikinnik* {PL}. Fruits are bland and mealy and are usually eaten cooked, preserved, or made into jellies, jams, marmalades, sauces and pastes. The dried leaves are used as tea in some parts of Russia, called *Ku'ai tea* or *Caucasian tea*. Northern temperate region. FERNALD, FREITUS [Re], GIBBONS 1966b, HARRINGTON, H., UPHOF; A50, C33, D95, E15{S}, G60, I47{S}, J25M{S}, J26, K63G{S}, K75M, N84{S}, 053M{S}, R47{S}

## CULTIVARS {GR}

**Massachusetts:** An improved type with scarlet globose berries. Fragrant pinkish-white, urn-shaped flowers in April and May. Glossy, leathery medium to dark green leaves. Prostrate, rapidly spreading habit; height 6 to 12 inches. Disease resistant. B9M, C9, D95, E87, F53M, K75M, J61M

*Azalea nudiflora* - *Pinxterflower*, *Honeysuckle azalea* {PL}. An irregular growth, called *May apple*, that forms on the twigs is crisp, juicy, and refreshing. It is eaten as a thirst quencher, sliced and

mixed into tossed salads, or pickled in spiced vinegar. North America. GIBBONS 1979, MEDSGER; B9M, C76, D46, E87, K63G{S}, L55, M8, N84{S}

*Azalea periclymenoides* - *Azalea nudiflora*

*Calluna vulgaris* - *Scotch heather*, *Ling heather* {S}. The dried flower heads make a good tea, and it is said that Robert Burns drank a *Moorland tea* of heather mixed with dried leaves of bilberry, blackberry, speedwell, thyme, and wild strawberry. The ancient Piets once brewed a kind of *mead* or ale from the flowers. They can be substituted for hops in flavoring beer. Also the source of an excellent, dark amber honey. Heather honey is one of the ingredients of *Drambuie* and *Irish Mist* liqueurs. *Atholl Brose* is a mixture of oatmeal, heather honey, and Scotch whisky. Mutton from the Welsh hills has a special flavor derived from the heather eaten by sheep. Northern temperate region. CAMPBELL-PLATT, HEDRICK 1919, LEYEL 1987a, MABEY, MACNICOL [Re], MCNEILL [Re], MICHAEL [Pre, Re], RAY, C., UPHOF; A99{PE}, B9M{PL}, C17{PD}, D46{PL}, D92M, F22{PL}, F80, G66, K22{PL}, K38, K54{PD}, N54{PQ}, N71M, 053M, 093, Q24, S55, etc.

*Chamaedaphne calyciata* - *Leather-leaf*, *Bog-rosemary* {S}. An aromatic tea-like beverage can be brewed from the leaves. Boiling or steeping is said to extract a harmful toxin, andromedotoxin. An alternative would be to place the leaves in a jar of water and set it in direct sunlight to make "sun tea". Northern temperate region. FERNALD; D95{PL}, M92{PL}, N84

*Chiogenes hispidula* - *Creeping snowberry*, *Birchberry*, *Moxie-plum* {S}. The white fruits are refreshing, pleasantly acid, with a delicate flavor of wintergreen. They are eaten raw with cream and sugar, or made into delicious preserves. A tea made from the leaves has a mild flavor of wintergreen. North America. FERNALD, MEDSGER, SIMMONS 1972 [Cu]; F85

*Epigaea repens* - *Trailing arbutus*, *Mayflower* {PL}. The fragrant flowers are spicy and slightly acid and may be eaten raw as a nibble or added to salads. Eastern North America. FERNALD, GIBBONS 1979, PETERSON, L.; A61, BO, D75M, E33M, K22, K85, L59P, M92, N7T, N84{S}

*Erica cinerea* - *Bell heather* {PL}. Source of a distinctive, strong-flavored honey with a brownish color somewhat reminiscent of port wine. Europe. CRANE 1975; D46, F22, K79, N84{S}

*Gaultheria antipoda* - *Snowberry*, *Koropuku* {S}. The small white fruits are eaten, being of good flavor. New Zealand. COLENSO, UPHOF; N84, 093, S43M

*Gaultheria hispida* - *Snowberry*, *Waxberry* {S}. The white or pale pink fruits are edible but somewhat bitter. They can be eaten raw or cooked. Tasmania. CRIBB, ROBINS; N84, P17M, R33M

*Gaultheria hispidula* - \* *Chiogenes hispidula**Gaultheria humifusa* *Gaultheria myrsinites*

*Gaultheria miqueliana* - *Miquel berry*, *Shiratama-no-ki* {S}. Fruits are white or pink, and are eaten preserved in sugar. Eastern Asia. SIMMONS 1972, TANAKA; C76{PL}, D95{PL}, M77{PL}, N84, Q24

*Gaultheria myrsinites* - *Western wintergreen* {S}. The small red fruits are eaten raw, cooked, or preserved, or used in jams and pies. Young, tender leaves are especially suited for use as greens. Both the fruits and leaves have the flavor of wintergreen. Fresh or dried leaves are used as tea. Western North America. HARRINGTON, H., KIRK; E15, N84

*Gaultheria ovatifolia* - *Mountain checkerberry*, *Oregon wintergreen* {S}. Fruits are red, very spicy, and are eaten raw or cooked. Western North America. GESSERT, KIRK, SIMMONS 1972; 147

*Gaultheria procumbens* - *Wintergreen*, *Checkerberry*, *Tea-berry* {PL}. The spicy fruits are eaten raw, used in pies, or made into jam, jelly, and syrup. Leaves are made into a very agreeable tea, called *mountain tea*. Stronger tea, candy, and wine are made from the fermented bright-red leaves. Source of oil of wintergreen, used to flavor birch beer, candy, and chewing gum. Very young leaves make a pleasant nibble. Eastern North America. GIBBONS 1966b [Pre, Re], MARCIN, MORTON 1976, UPHOF; A20M{DF}, C9, D75M, D92M, E33M, E63M, F16, F65{DF}, K75M, K85, L36M{DF}, N7T, N19M, N84{S}

*Gaultheria shallon* - *Salal* {S}. Sweet, juicy fruits are eaten raw, cooked, dried, preserved, or used in pies, jellies, jams, syrups, pancakes, drinks, or made into wine. Northwest Indians used them to sweeten other fruits, or ate them with oil, fish eggs or salmon. Dried fruits can be used like raisins in cookies and fruit cakes. Western North America. CLARKE [Re], CREASY 1982 [Cu], TURNER 1979 [Re]; A2, B74{PL}, D95{PL}, E15, G5M{PD}, G59M, 147, J61M{PL}, K38, K63G, N84, Q24, R47

*Gaylussacia baccata* - *Black huckleberry* {PL}. The deliciously spicy, sweet fruits are eaten raw, dried, preserved, cooked with sugar, used in pies, jams, puddings, tarts and preserves, or made into wine. Eastern North America. FERNALD, GIBBONS 1979, HENDRICKSON [Re]; D95, D97{ED}, M16

*Gaylussacia dumosa* - *Dwarf huckleberry* {PL}. Fruits are black, juicy, deliciously spicy and are eaten raw, used as a pie filling, or added to pancakes and muffins. Eastern North America. CROWHURST 1972, FERNALD; D97{PD}, H4

*Gaylussacia frondosa* - *Dangleberry*, *Blue tangle* {S}. The dark-blue berries are juicy and sweet, and can be eaten raw or used in puddings, fruit salads, jellies, and fruit sauces. Eastern North America. CROWHURST 1972 [Re], FERNALD, HEDRICK 1919, MEDSGER; U7D

*Ledum glandulosum* - *Glandular Labrador tea* {PL}. An aromatic tea can be brewed from the fresh or dried leaves. Dried leaves are sometimes mixed with other non-aromatic teas, such as goldthread or comfrey. The fresh leaves can also be chewed. Western North America. GIBBONS 1979; B92, D95

*Ledum groenlandicum* - *Labrador tea* {PL}. The spicy leaves make a very palatable and refreshing tea. When lemon is added they can be used as an iced tea. The leaves were once added to beer to make it heady. Eastern North America. ANGIER, HEDRICK 1919, MARCIN, MEDSGER; D95, 131{S}, M92

*Ledum palustre* - *Crystal tea ledum*, *Wild rosemary*, *Bog-tea* {S}. Aromatic leaves are used as a substitute for tea. Considered by some to make a better tea than *L. groenlandicum*. Northern regions. FERNALD, HELLER; N84, R53M{PL}

*Macleania popenoei* - *Joyapa* {S}. The small round fruits are soft, juicy and sweet to the taste. Esteemed in parts of Ecuador, where they are usually collected in the wild and eaten out of hand. Occasionally sold in local markets. Andean region. POPENOE, W. 1924, UPHOF; L55J, N84

*Oxycoccus erythrocarpus* - \* *Vaccinium erythrocarpum*

*Oxycoccus macrocarpus* - + *Vaccinium macrocarpon*

*Oxycoccus palustris* - \* *Vaccinium oxycoccus*

*Oxydendrum arboreum* - *Sourwood*, *Sorrel tree* {PL}. Source of a very light, heavy-bodied honey with an exceptionally fine flavor and aroma. Regarded by many as the finest honey produced in America. The acid leaves are sometimes chewed to allay thirst. Eastern North America. CRANE 1975, FERNALD, PELLETT; A50, A82, B70{PD}, C9, D27M{PD}, D97{PD}, E33M, E87, F80{S}, G23, G66{S}, H49, 14, K38{S}, K63G{S}, L33, M69M, M77M, NO, N7T

*Rhododendron arboreum* - *Tree rhododendron*, *Burdns* {S}. Tender leaves are eaten as a cooked vegetable. The flowers have a sweet, sour taste, and are said to make a good subacid jelly. A juice is extracted from them which is used commercially for the preparation of soft drinks. Also used for coloring drinks and syrups. Large quantities may cause intoxication. Himalayan region. CHAUHAN, M., HEDRICK 1919, MACNICOL [Ife], SRIVASBAVA, TANAKA, WATT; E87{PL}, K38, N1M{PL}, N84, 053M, P49, Q40, Q46, R78

*Rhododendron ferrugineum* - *Alpine rose* {S}. Flowers are the source of very light and mild honey that is high in enzymes. Europe. CRANE 1975; M56M{PD}, N1M{PL}, N84, 053M, P49, R78, R88

*Rhododendron hirsutum* - *Alpine rose* {S}. Flowers are the source of very light and mild honey that has a high enzyme content. Europe. CRANE 1975; M56M{PD}, N1M{PL}, N84, 053M, R78

*Rhododendron mucronulatum* - *Kara-genkai-tsutsuji*, *Chindallae*, *Manchurian azalea* {PL}. The flowers are eaten raw, made into dumplings and wine, or used for decorating Korean rice cakes. Eastern Asia. PEMBERTON, TANAKA; A50, B30, C9, C76, D46, E47, E47{S}, G66{S}, H8, K38{S}, K63G{S}, K77, M92, N1M, 053M{S}, etc.

*Vaccinium alaskaense* - *Alaska blueberry* {PL}. The berries are eaten fresh or dried. In parts of Alaska, they are the preferred berries for pie. Dried berries were soaked in water and eaten with animal grease during the winter months. Also canned, frozen or used for making jams and jellies. Northwestern North America. NORTON; C34

*Vaccinium angustifolium* - *Lowbush blueberry*, *Wild blueberry* {PL}. The fruits are eaten raw, cooked, dried, in jellies, puddings, pies, cakes, soups, etc. They are smaller than *V. corymbosum* or *V. ashei*, but are very sweet, with a slight honey flavor. Ripens about one month sooner than the highbush blueberry. Grown commercially in cold, northern areas like Maine and largely used for canning. Yields an amber honey of good flavor. Eastern North America, cultivated. FERNALD, HENDRICKSON [Cu, Pro], MEDSGER, PELLETT, SIMMONS 1972; A38M{DF}, A84M, A91, B9M, B26, B32, B68, C76, D60, D95, F16, H8, 174, L25M{PR}, L25M{PD}, L68{P£}, M92, etc.

#### CULTIVARS {GR}

**Augusta:** Large, attractive, oval fruit; quality good for fresh eating or freezing; ripens in midseason. Matures uniformly for a single harvest, thus adapted to mechanical harvesting. Productive plant that roots readily; self-incompatible. Originated in Oiono, Maine. Introduced in 1975. BROOKS 1997; G50

**Blomidon:** Large, uniform, ovate fruit with fair flavor. Ripens uniformly, with 95% mature by August 10th. Upright-spreading plant, vigorous and productive. Originated in Kentville, Nova Scotia. Introduced in 1982. The first cultivar developed from controlled breeding. Named after Cape Blomidon, a local landmark in Nova Scotia. BROOKS 1997; G50

**Brunswick:** Selected clone with a delicious true wild blueberry flavor. Pea-sized, sky blue fruit. Forms a vigorous, dense ground cover, 6 to 8 inches high; waxy, deep-green foliage. Attractive, orange to crimson fall color. Somewhat erratic production. Grows well in both maritime and colder climates. Originated in New Brunswick in 1965. REICH; C34, D60, E87, G50, 149M, J61M, M81M

**Chianecto:** Medium-small fruits, 345 per cup; thick skins; excellent wild berry flavor; ripens late. Can be held fresh for more than 10 days in refrigerated storage. Very easy to pick, the berries forming clusters near the outer ends of the stems. Can be stripped off in handfuls. Resistant to leaf diseases such as leaf spot and mildew. Selected from the wild in Nova Scotia. REICH; B26, G50, J82

**Cumberland:** Medium-blue fruits, about 317 per cup; excellent wild berry flavor, fresh or frozen. Ripens in 2 major pickings—the

first early in the season, the second, a smaller picking, about 10 days later. Yields well consistently, despite a tendency to winter stem tip damage; requires cross-pollination. Selected in Nova Scotia in 1964. REICH; B26, J82

**ME-3:** Dark-blue fruits, about 304 per cup. Has the sweetest flavor of any clone currently available. Most fruit ripens at once, in mid-season or late midseason. Picking is easiest if berries are left on the plants until very ripe. Vigorous, upright growing plant, a consistent and heavy producer. B26

**NB-3:** Attractive, light-blue fruits, about 292 per cup. Flavor somewhat bland until late in the season when an excellent wild blueberry flavor develops. Produces a light mid-season crop, and a final harvest very late in the season. Ripe fruit releases very easily from the plant. Good fresh storage potential. Productive plant; blooms slightly later than other clones. B26

**Putte:** A true lowbush type. Plants mature at 8 to 14 inches tall and yield large, sweet, blue-black berries in dense clusters. Has survived -40° F. in central Sweden. Developed at the Swedish University of Agricultural Science, Balsg&rd, Sweden. Patented. L27M

*Vaccinium angustifolium* var. *laevifolium* - *Vaccinium lamarckii*

*Vaccinium arboreum* - *Farkleberry*, *Tree huckleberry*, *Sparkleberry* {PL}. Fruits are dry and insipid. They are occasionally eaten. Reported to be an excellent rootstock for rabbiteye blueberries. North America. BLOUNT, TANAKA; D95, H4, H14M, N37M

*Vaccinium arctostaphylos* - *Caucasian whortleberry*, *Chemika kavkazk* {S}. The edible fruits are small, purplish, and round to pear-shaped. Leaves are used as a substitute for tea. Eastern Mediterranean region. DURAND 1979, REHDER, TANAKA; U7D

*Vaccinium ashei* - *Rabbiteye blueberry* {S}. Fruits are eaten raw, cooked, dried, or used in muffins, jams, nut breads, pies, pancakes, etc. The plants are low-chill, heat and drought resistant, and are recommended for southern and Gulf Coast states. Southeastern North America. HENDRICKSON; H4{PL}, P38. (for cultivars see Blueberry, page 306)

*Vaccinium atrococcum* - *Black highbush blueberry* {S}. The large, blue-black fruits are sweet, juicy, and very flavorful. They are eaten out of hand, with cream and sugar, or used in jellies, tarts, and wines. North America. CROWHURST 1972, SIMMONS 1972; T41M

*Vaccinium Caesariense* - *New Jersey blueberry* {S}. When ripe, the dark-blue fruits are eaten raw or used in jams, jellies, pies, dumplings, etc. North America. CROWHURST 1972 [Re], TANAKA; U7D

*Vaccinium calycinum* - *Ohelo kaulaau*, *High-bush ohelo* {S}. Small quantities of the bitter fruits are added to the true ohelo berry before cooking to impart a special flavor to them. Hawaii. DEGENER; F85

*Vaccinium canadense* - *Vaccinium myrtilloides*

*Vaccinium cereum* - *Ohelo berry* {S}. Fruits are pale yellow to dark red in color and are eaten raw, or cooked in the form of pies and sauces. Pacific Islands. DEGENER; F16{PL}, F85

*Vaccinium corymbosum* - *Highbush blueberry* {S}. The large, sweet fruits are widely grown and marketed. They may be eaten fresh, dried, preserved in water or syrup, used in compotes, pastries, pies, muffins, pancakes, cereals, jellies, jams, fritters, puddings, etc. Dried fruits are used like raisins or currants in many recipes or added to soups and stews. Source of a mild-flavored honey of good quality. North America. ANGIER, CRANE 1975, GIBBONS 1962 [Re], HENDRICKSON [Cu, Proj], UPHOF; A38M{DF}, B9M{PL}, B68/PL, C29{DF}, C29{PD}, G47D{DF}, F42M{PD}, G58{PD}, H73{DF}, I66M{PD}, K38, K63G,

M92{PL}, N84, 093, etc. (for cultivars see Blueberry, page 306)

*Vaccinium corymbosum* var. *pallidum* - *Blue Ridge blueberry* {S}. The sweet fruits are eaten raw. Said to be superior to all other blueberries. Berries are borne in dense clusters at the end of the previous year's wood, making them easy to pick. Eastern North America. BRITTON 1913, HENDRICKSON; U7D

*Vaccinium crassifolium* - *Creeping blueberry* {PL}. The fruits are eaten. Southeastern North America. TANAKA; D46, D95

CULTIVARS {GR}

**Welfs Delight:** Fruit edible; black to purplish-black; has a slight aromatic flavor; ripens in late July to September. Plant grows only 5 to 8 inches tall, has a trailing effect as it forms a nearly solid evergreen carpet. Evergreen leaves are reminiscent of Japanese holly. Recommended as an ornamental, low maintenance ground cover. C76, D46, D60, D79M, D95, E87, F48, I49M, N37M

*Vaccinium darrowi* - *Harrow blueberry* {PL}. Fruits are eaten. Also used in breeding low-chill Southern highbush blueberries, along with *V. ashei* and *V. corymbosum*. Eastern North America. ECK 1988, TANAKA, ZEVEN; H14M, N37M

CULTIVARS {GR}

**Jonblue:** Small, blue-black fruit; very sweet, having a distinct blueberry flavor. Plant grows only 2 to 3 feet tall, will spread 4 to 5 feet, making a very large spreading bush. Foliage bluish, attractive, evergreen in the South. Flowers pink, ornamental. Recommended for dry, sandy, upland soil. Northernmost hardiness unknown. N37M

*Vaccinium deliciosum* - *Alpine blueberry*, *Rainier bilberry* {PL}. When fully ripe, the fruits are sugary sweet with a delightful aroma and a full, rich flavor. They are best eaten out of hand. Rare in cultivation. Western North America. ABRAMS, EIGHME; J61M

*Vaccinium elliotii* - *Mayberry*, *Elliott's blueberry* {PL}. The delicious, bluish-black fruits are eaten. Eastern North America. TANAKA; A80M, H14M, N37M

*Vaccinium erythrocarpum* - *Southern cranberry*, *Mountain cranberry*, *Dingleberry* {S}. The transparent, scarlet berries are excellent in flavor, second only to the lingonberry. They are eaten raw or used in jellies. Recommended for improvement by cultivation. Eastern North America. HEDRICK 1919, HENDRICKSON, SIMMONS 1972, UPHOF; N84

*Vaccinium floribundum* - *Mortiho*, *Colombian blueberry* {PL}. The fruits are round, glaucous blue, juicy, subacid, and pleasant to the taste. They are eaten raw, made into preserves, and used in a special dish with molasses, spices and other chopped fruits on All Souls' D<sup>A</sup>. Sold in the local markets of Ecuador and Colombia. Andean South America. FRIED, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, UPHOF; 174

*Vaccinium globulare* - *Blue huckleberry* {S}. The berries are eaten raw, cooked, dried or preserved, having an excellent, sweet flavor. Considered to have a more concentrated flavor than *V. membranaceum*, the other commercially important species of the Rocky Mountains and Pacific Coast. Also used in pies, jams, jellies, syrups, pancakes, muffins, wines, vinegars, etc. Gathering the wild fruits is a multi-million dollar industry in Montana. Western North America. BOWEN [Re], HART, VON REIS; U7D

*Vaccinium lamarckii* - *Early sweet blueberry* {PL}. The fruits are eaten. Considered to be the best of the lowbush type blueberries. Eastern North America. TANAKA; M16

*Vaccinium macrocarpon* - *Cranberry* {PL}. The fruits are too acid to be eaten raw. However, they are widely used in sauces, juice cocktails, jellies, syrups, pies, muffins, puddings, ice cream, sherbet, cookies, tarts, etc. The Indians sweetened cranberry sauce with maple syrup, and also used the berries for *penmican*. A teaspoon of salt, added to the cooking berries, is said to take the place of half the sugar ordinarily used in recipes. Sweetened dried cranberries, sometimes called *craisins*, are becoming a popular item in natural

food and gourmet shops. Source of a medium-amber honey with good body and a mild flavor. Leaves are used as a substitute for tea. The pulp of the fruit is the source of a pigment used commercially as a food colorant. Northern temperate region. ANGIER, CRANE 1975, ECK 1990, FERNALD, GIBBONS 1962 [Re], LEUNG, MEDSGER, SIMMONS 1972 [Cu], TURNER 1979 [Re]; A38M{DF}, C3M{PD}, C29{DF}, C29{PD}, C34, C67{PD}\D69, E97, F87, G47D{DF}, G58{PD}, H58, H73{DF}, K38{S}, L27M, L50M{DF}, M16, M77, M92, etc.

CULTIVARS {GR>

**A.J.:** Searles x Early Black. Small to medium-sized fruit, cup count 70 to 95; reddish black in color with a moderate bloom; ripens in midseason; colors well in storage. Tends toward early blossoming. Originated in New Jersey. F16

**Beckwith:** McFarlin x Early Black. Large, round to oblong deep red fruit, about 55 to 60 per cup; firm and with excellent flavor. Bears fruit high on vigorous uprights; ripens late and keeps well in storage. Resistant to fruit rot disease but susceptible to false blossom disease. Introduced in 1951 by the USDA. ECK 1990; C93, D60, F16

**Ben Lear:** Medium to large, pyriform fruit, pointed at the stem end; deep red in color; ripens early; susceptible to storage rot. Medium-textured vine with tall uprights; produces good crops of berries. Planted commercially in New Jersey and British Columbia. Originated in Berlin, Wisconsin before 1901. ECK 1990; A84M, C93, D37, F16, H49

**Bennett Jumbo:** Medium-sized, oblong fruit, cup count 76; deep red in color; ripens late in the season; very susceptible to end rot fungus. Colors and keeps well in cold storage. Vigorous, tall upright plants; blooms rather late, escaping most spring frosts. Selected by A.C. Bennett near Grand Rapids, Wisconsin, circa 1890. ECK 1990; F16

**Bergman:** Early Black x Searles. Large to medium-sized, pyriform fruit, 65 to 80 per cup; ripens in midseason. Good for processing. More productive and less susceptible to fruit rot than Early Black or Howes. Major commercial cultivar, particularly adapted to Massachusetts. Selected from a cross made at Whitesbog, New Jersey in 1930. ECK 1990; C93

**Cropper:** Round to oval, rather small fruit, 95 to 105 per cup; medium red in color; ripens in midseason and keeps fairly well; good for processing. Moderately vigorous vines produce good crops of berries. Adapted to the Pacific Coast. Selected from the wild near Tabernacle, New Jersey, in 1930. ECK 1990; F16

**Crowiev:** McFarlin x Prolific. Medium large, round-oblate fruit, flattened on both sides. Has a high pigment content and low astringency, making it desirable for processing. Moderately vigorous vine with short uprights, produces consistently large crops early in the season. Introduced by Washington State University in 1970. ECK 1990; C93

**Early Black:** Small to medium fruit, when ripe almost black, about 90 to 130 per cup; flesh firm, good for keeping, shipping, and the table; ripens very early and all at once, colors well in storage when picked green. Vines comparatively slender, producing many more uprights than runners, well adapted to different soils. The standard cultivar in the Eastern U.S. Originated about 1825 with Captain Cyrus Cahoon, a Cape Cod cranberry-grower. DANA, ECK 1990; C93, N84, P68M

**Franklin:** Early Black x Howes. Large to medium-sized, round berries, 57 to 90 per cup; red to dark red color; ripens early and has good to excellent keeping qualities. Moderately vigorous vines with medium length uprights; resistant to the blunt-nosed leafhopper. Original cross made at Whitesbog, New Jersey. ECK 1990; C93, N84, S30

**LeMunvon:** Very good flavor. A prolific grower. One of the top producers in New Jersey and Wisconsin. Also does well in other

areas. Selected around 1960 by Norman LeMunyon, from native New Jersey vines. F16, F43M, J61M

**McFarlin:** Berries medium to large, about 65 to 95 per cup, red becoming dark red when ripe; flesh tender, extra fine in flavor; ripens in midseason, variable in keeping and shipping quality. Vines coarse, rather large; resistant to frost and false blossom disease. One of the few cranberries grown in both the East and West. Originated with T.H. McFarlin, South Carver, Mass., about 1874. DANA, ECK 1990; F16

**IVU. 33:** Howes x Searles. Medium-sized berry, free of bloom, glossy when ripe; ripens very late. Does not color well in storage. Tall, upright vines. Originated in New Jersey. F16

**Olson's Honkers:** Very productive plant with extremely large berries. Originated in Washington state. F16, F43M

**Pilgrim:** Prolific x McFarlin. Fruit large; skin purplish-red with yellow undercoat; ripens late, keeping quality good. Bush a prolific bearer, greater than Early Black or Howes; resistant to feeding by the leafhopper that spreads false blossom virus. Originated in Whitesbog, New Jersey by the USDA. Introduced in 1961. BROOKS 1972; B74, C93, 149M, 149P, S30

**Shaw's Success:** Very small, spindle-shaped, blackish-red fruit about 110 to 139 per cup; keeps very well in storage. Fine textured vines that produce short uprights and good crops. Very resistant to false blossom disease. Discovered by A.M. Shaw in 1890. First planted in South Carver, Massachusetts. ECK 1990; D60

**Stevens:** McFarlin x Potter. Exceptionally large, round to oval berries, averaging 50 to 55 per cup; deep red in color; ripens in midseason between Early Black and Howes. Keeps exceptionally well in storage. Vigorous, productive vines, suitable for cranberry soils that are low in organic matter. The leading cultivar in the Northwest. ECK 1990; A84M, B74, C93, D11M, D37, D95, F16, F70, H49, J61M

**Thunder Lake:** Large, oblong fruits; glossy dark red to black in color; very good flavor; ripens in September and October. Low, spreading plants, 3 to 4 feet wide and 12 inches high; dark green foliage, reddish-bronze on new growth; fuchsia-pink flowers. Recommended for home yards and hanging baskets. Selected in Wisconsin. B74, D60, H65

**Wilcox:** Howes x Searles. Medium to large fruit, about 73 to 98 per cup; skin deep red; quality excellent. Ripens very early, keeps well. Precocious and productive, quickly covering a bog when newly planted and coming into bearing early. Somewhat resistant to false blossom disease. Originated in Beltsville, Maryland by the USDA. Released in 1950. BROOKS 1972, ECK 1990; C93

*Vaccinium membranaceum* - *Mountain huckleberry*, *Big whortleberry* {S}. The edible fruits are black or maroon in color, borne singly or in pairs, and are among the largest and best flavored of all wild blueberries. They can be eaten raw, dried, preserved, etc. The plant is extremely drought resistant. Collected commercially in Idaho, Montana and other areas of the West. North America. BOWEN [Re], CLARKE, HELLER, HENDRICKSON; A2, C11T{PR}, C34{PL}, D95{PL}, E15, F88M, G66, 147, J26{PL}, K75M{PL}, N84, 053M

*Vaccinium myrsinites* - *Florida evergreen blueberry* {PL}. Fruits are blue or blackish, and are eaten raw or in compotes and pies. Southern North America. MORTON 1977, UPHOF; H14M, N37M

*Vaccinium myrtilloides* - *Canada blueberry*, *Sour-top blueberry* {S}. The fruits, blue with a heavy bloom, are more acid than is usual for a blueberry and have an agreeable piquancy. They are eaten fresh or used in pies, cakes, preserves, etc. Leaves are used for tea. North America. FERNALD, KUNKEL, SIMMONS 1972; C34{PL}, G66, K38, N84

*Vaccinium myrtillus* - *Whortleberry, Bilberry, European blueberry* {S}. Fruits are eaten raw, with milk or cream, or used in pancakes, tarts, jellies, preserves, compotes, confectionery, as a side dish for game or meat, etc. In Italy, they are sprinkled with sugar and lemon juice and eaten with ricotta cheese. They are also brewed into wine or used to color other wines. The leaves are used as a substitute for tea. Eurasia. BIANCHINI, GRAY, P. [Cu], MABEY, MICHAEL [Re], SIMMONS 1972 [Cu], TANAKA; F86G{DF}, J82, K63G, N84, 053M, P49, P68M{PL}, Q24, R47, R53M, R53M{PL}

*Vaccinium ovalifolium* - *Black huckleberry, Kuro-usugo* {S}. Fruits are light-blue, sweet, borne singly rather than in clusters, and are eaten raw, dried, or cooked. Western North America, Eastern Asia. HELLER, TANAKA, TURNER 1979; C34{PL}, D95, E15, F88M, J61M{PL}, N84

*Vaccinium ovatum* - *California blueberry, Evergreen huckleberry* {PL}. When ripe, the berries are black and somewhat sweet. They are eaten fresh, cooked, or dried. Because of their strong flavor they are better for cooking in pies and other dishes than for eating out of hand. Western North America. CLARKE, HENDRICKSON; A2{S}, B74, C34, D60, E15{S}, E87, F88M{S}, G59M{S}, G60, 147{S}, I49M, 174, J61M, N84{S}, 053M{S}, etc.

*Vaccinium oxycoccus* - *Small cranberry* {PL}. The acid fruits are used for jellies, sauces, refreshing drinks, pies, and preserves. While smaller than *V. macrocarpon*, the flavor is said to be superior. Northern temperate region. FERNALD, HEDRICK 1919, MEDSGER, SIMMONS 1972; B74, C34, D60, D95, E87, J61M, K22, N84{S}

*Vaccinium pallidum* - *Vaccinium corymbosum* var. *pallidum*

*Vaccinium palustre* *Vaccinium oxycoccus*

*Vaccinium parvifolium* - *Red whortleberry, Red huckleberry* {S}. Bright red, sour fruits are eaten raw, dried for later use, or used in tarts, jams, jellies, and pies. They make an attractive lead jelly, and a light jam that is excellent on waffles or Fiench toast. Western North America. CLARKE, EIGHME, HEDRICK 1919, HELLER; A2, B74{PL}, D95, E15, F88M, G66,147, J61M{PL}, N84, 053M

*Vaccinium pennsylvanicum* - *Vaccinium angustifolium*

*Vaccinium praestans* - *Kamchatka bilberry, Cherry blueberry, Iwa-tsutsuji* {PL}. The large, red fruits are eaten. They are said to have a delicious flavor. Northeast Asia. DURAND 1979, HEDRICK 1919; S69

*Vaccinium reticulatum* - *Vaccinium cereum*

*Vaccinium scoparium* - *Gmuseberry, Whortleberry* {PL}. Fruits are eaten raw with cream and sugar, cooked into a sauce, made into pies, jams, and jellies, or added to muffins, breads, and pancakes. Dried fruits are used to flavor other foods or to thicken soups. Fresh or dried leaves can be used to make a kind of tea. Western North America. HARRINGTON, H. [Re]; D95,147{S}

*Vaccinium sempervirens* - *Rayner's blueberry* {PL}. The fruits are edible. Southeastern North America. N37M

#### CULTIVARS {GR}

**Bloodstone:** Fruit edible; black to purplish-black; has a slight aromatic flavor; ripens in late July to September. Evergreen plant, 5 to 8 inches high, indefinitely broad; has a trailing effect as it spreads. Makes a very good, low maintenance ground cover. Not recommended for areas with excessive soil moisture, high temperatures, and high humidity. C34, D79M, N37M

*Vaccinium stamineum* - *Deerberry, Squaw huckleberry* {PL}. The fruit is eaten raw, although the quality varies greatly from shrub to shrub. When cooked and served cold they are considered delicious, suggesting a combination of gooseberry and cranberry sauce, with the slight bitter taste of grapefruit marmalade. Jelly made from the fruit has a novel greenish-amber color. Eastern North America.

CROWHURST 1972, FERNALD, GIBBONS 1979, MEDSGER; D95, H14M, N37M

*Vaccinium uliginosum* - *Bog bilberry, Alpine blueberry* {S}. The black, juicy fruits are eaten raw, preserved, made into jam, or fermented into an alcoholic beverage. In France, they are said to be used for coloring wine. Tanaina Indians use them for making *nivagi* or *Indian ice cream*—a favorite, traditional dish that is a mixture of berries, whitefish or other fish or meat, lard and sugar. Nivagi is eaten either frozen or unfrozen. Northern temperate region. HEDRICK 1919, HELLER, KARI, TANAKA; N84, 053M

*Vaccinium vacillans* - *Late low blueberry* {PL}. The berries are very sweet and may be eaten raw or used in pies, puddings, and muffins. Considered to be one of the very best blueberries. Eastern North America. CROWHURST 1972, FERNALD, MEDSGER; E33M

*Vaccinium vitis-idaea* - *Cowberry, Lingonberry, Mountain cranberry* {PL}. The acid fruits are regarded by many as the best of the cranberries. They are made into sweet cranberry-like sauces and served with Swedish pancakes, omelettes, and puddings. In Finland, they are used to make a popular sweet fruit soup called *mehukeitto*. They also make excellent tarts, jellies, and preserves. In Scandinavian countries, the berries are placed in barrels filled with cold water, and sold on world markets. Leaves are used as a substitute for tea. Northern temperate region. FERNALD, HEDRICK 1919, MEDSGER, SIMMONS 1972 [Cu], TURNER 1979 [Re], VON WELANETZ; A15M{PD}, B9M, B26, D95, I41G{ED}, K75M, K79, M92, Q24{S}, R53M, R53M{S}

#### CULTIVARS {GR}

**Erntedank:** Relatively new cultivar from Germai. Notable for producing abundant quantities of fruit in both spring and summer. Grows to about one foot tall. Evergreen foliage makes a nice background for the bright red fruit. A84M, D95, E63, E87

**Erntekrone:** Large dark red fruit of very good quality. Recent introduction from Germany where it is much appreciated. Hardy to Zone 5, withstanding temperatures of -20 to -10° F. A84M, D95

**Ernteseaen:** Medium to large, bright red fruits. Pleasant, tart flavor with some sweetness. Vigorous, spreading plant, 12 to 15 inches tall. Produces well when mature. Resistant to most diseases including phytophthora root rot. Originated in Uchte, Germai. Introduced in 1981. C93, F16, F43M

**European Red:** Medium-sized red fruits of excellent flavor. Vigorous, consistently productive plant; grows to 16 inches tall and spreads rapidly; brilliant green foliage. Taller and a more rapid spreader than Koralle. Selected from the wild in Scandinavia for flavor and ornamental qualities. C34, D60,149M, J61M

**Koralle:** Widely planted commercial cultivar. Similar to large-fruited forms but fruits are larger than normal, a darker red, and hold on the plant all winter if not picked and eaten. Much in demand by those who want fruit production for various lingonberry products. Upright, bushy plant, 12 to 14 inches tall. Originated in Holland, in 1969. A84M, B74, C34, C61, C93, D37, D60, D95, E63, E87, F16,149M, 174, J61M, S69

**Masovia:** Large-fruited seedling selection that originated at the Warsaw Agricultural University. Bushy plants that yield heavy crops of fruit. ANONYMOUS 1990; A84M, D95, E63

**Red Pearl:** Medium to large fruits, 5 to 12 per cluster. Typical sweet-acid flavor. Ripens 1 to 2 weeks earlier than Splendor. Very vigorous, spreading plant, 12 to 18 inches tall. Yields 1 to 1 1/2 pounds of fruit per plant. Particularly resistant to phytophthora root rot. Originated in Boskoop, Holland. Introduced in 1981. B74, C93, F16, F43M, 174, P68M

**Regal:** Large, firm fruits with good flavor and quality. Vigorous plant, 8 to 15 inches tall at maturity. Adapts well to transplanting. Resistant to phytophthora. Developed at the University of Wisconsin

by Eldon Stang from seed collected in Finland. Selected for its superior size and precocious bearing. C93, FI 6, L27M

**Sanna:** Large, bright red fruit. Distinct flavor, with a good balance of sweetness and acidity. Spreading plant, 6 to 8 inches tall at maturity. Grows slowly but becomes productive when mature. Resistant to disease, including phytophthora root rot. Developed at the Swedish University of Agricultural Science, Balsgard, Sweden. C93, F16,174

**Scarlet:** Mainly used as a pollinator for other cultivars to increase production. Grows 12 to 15 inches tall at maturity, spreading 15 to 18 inches. Produces heavy crops of bright scarlet-red fruits. A84M, C61, E63,174

**Splendor:** A sibling selection of Regal. Selected for its vigor and production. Medium to large, bright red fruit, firm and of good quality. Grows 8 to 15 inches tall, spreading to 18 inches. Adapts well to transplanting. Resistant to phytophthora. Developed at the University of Wisconsin by Eldon Stang from seed collected in Finland. C93, F16, H49, L27M

**Sussi:** The first lingonberry to be bred for size and quantity of fruit per plant. Large, bright red fruit with a good balance of acidity and sweetness. Grows 12 to 18 inches tall, spreading to 18 inches. Slow growing but productive. Developed at the Swedish University of Agricultural Science, Balsgard, Sweden. C93, FI6, H49, 174, L27M

#### ERYTHROXYLACEAE

*Erythroxylum coca* - *Coca* {S}. The leaves are chewed by the natives of the Andean region for their stimulating properties. Coca extract, along with kola, cinnamon, ginger and other spices, is used as a flavoring for cola soft drinks, as well as candy, dairy products and alcoholic beverages. South America, cultivated. BROOK, BURDOCK, HEDRICK 1919, LEUNG, UPHOF; V84M, W59M

#### EUCOMMIACEAE

*Eucommia ulmoides* - *Du Thong, Tou chong, Hardy rubber tree* {PL}. The bark is used in Chinese tonic soups, often with pork and chicken. Also added to wines, liqueurs and elixirs. One of the most popular herbs used by the Cantonese. Eastern Asia. BENSKY, FLAWS 1994, TAN [Re]; A74, C9M{S}, D56M{S}, E14T{DF}, E87, F37T{DF}, G19P{DF}, G66{S}, 160, 174, K37M, K38{S}, L21T{DF}, M92, NO, 093{S}, P5{S}, etc.

#### EUCRYPHIACEAE

*Eucryphia lucida* - *Leatherwood* {S}. Source of an excellent light amber honey with a strong, distinctive flavor somewhat reminiscent of almond. Regarded by many connoisseurs as one of the finest of all honeys. Rated highly for quality, flavor and texture. The hard granulated honey, which has a somewhat milder flavor, is occasionally packed in small paper-wrapped cubes. Tasmania. CRANE 1975, CRANE 1984; A67M{PD}, C94M{PD}, D95{PL}, G5M{PD}, H15T{PD}, N84, P17M, R33M

#### EUPHORBIACEAE

*Aleurites moluccana* - *Candle nut, Kukui, Kemiri* {S}. Roasted seeds are eaten in small quantities, as larger amounts can be laxative. In Hawaii, they are made into a condiment called *inimona*, by pounding them into a paste that is mixed with salt and chilis. *Sambal kemiri* is a similar Indonesian preparation that also includes fish sauce. Also used to flavor and thicken Indonesian and Malayan curries. An edible oil is extracted from the roasted seeds and the presscake that remains is fermented into *dageh moonchang*. The powdered seeds are used as an adjuvant in the manufacture of palm sugar. Southeast Asia, cultivated. DEGENER, GIBBONS 1967, OCHSE, SHURTLEFF 1979, SOLOMON; A7{DF}, A45{DF}, A45{PD}, A79M, C34G{DF}, F85, L16M{DF}, N84, P5, P38, Q46, R33M, R78M

*Baccaurea dulcis* - *Chupa, Rambai, Kapundung* {S}. The small, round, yellow fruits are eaten fresh. They have pleasant, melting white flesh that is normally sweet, sometimes acid. Sold in local markets. Southeast Asia. HEDRICK 1919, MORTON 1987a, RIFAI; R78M

#### *Baccaurea griffithii* - \**Baccaurea macrocarpa*

*Baccaurea macrocarpa* - *Tampoi* {S}. The golden-yellow fruits are eaten. They have soft, juicy, off-white flesh and a sweet, pleasant flavor. Suitable for eating fresh, preserving, or fermenting into vinegar. Southeast Asia. TINGGAL; N84

*Baccaurea motleyana* - *Rambai, Rambeh* {S}. The small, oval, brownish-yellow fruits are sweet to acid and are eaten fresh, stewed or preserved. Vinegar and an alcohol beverage are prepared from the juice. Has good potential for increased cultivation. Malaysia, cultivated. MACMILLAN, MORION 1987a, RIFAI, TANAKA, TINGGAL; N84, 019

*Bridelia cathartica* - *Munohya-menda* {S}. The small, round, dark-red to almost black fruits are eaten raw. In Rhodesia, the Tonga chew the leaves, then drink water, the leaves causing the water to acquire a sweet taste. Southern Africa. FOX, E, VON REIS; F85

*Chrozophora plicata* - *Giradol* {S}. Petals, fruits, and sap are the source of a red and blue dye, *tourmesol*, used for coloring liqueurs, wine, pastries, and Dutch cheeses. Northern Africa. UPHOF; F85

*Cicca acida* - *Otaheite gooseberry, Star gooseberry* {S}. Fruits are usually too sour to eat raw. When cooked they become bright red and make excellent jams, preserves, and pies. They are also pickled, made into vinegar, or used as a tamarind substitute to give a sour flavor to other foods. They may be of value as a natural red coloring agent in preserves made from mixed fruits. The young leaves are cooked as greens in India and Indonesia. Tropics, cultivated. ALTSCHEUL, KENNARD, MORTON 1987a, OCHSE, OWEN [Re], TANAKA; A79M, D56M, E29{PL}, F85, G73, M17{PL}, N84

*Cnidoscolus chayamansa* - *Chaya, Tree spinach* {PL}. Young, tender leaves and stem tips are cut into small pieces and cooked as a potherb. They are also used in soups, stews, and *atoles*, or mixed with onion and egg to make a delightful *tortilla*. In the Yucatan, they are used as wrappers for tamales or are added to the masa used in the tamale filling. Contains hydrocyanic acid and should not be eaten raw. When properly cooked the leaves are high in protein, calcium, iron, and vitamins A and C. Central America. COE, GERLACH [Re], MARTIN 1978c [Cu, Nu], NATIONAL RESEARCH COUNCIL 1975a, WILLIAMS, L.; A79M, D33, E29, H29, N84

*Emblic officinalis* - *Emblic, Myrobalan, Amla, Amalaki, Aonla* {S}. Acid fruits have a very high vitamin C content. They are eaten raw with salt, sugar, or chilis. Also used in jellies, preserves, pickles, tarts, sweetmeats, chutneys, *murabba*, or as a sour flavoring. Dried fruit chips are seasoned with caraway seeds, salt, and yogurt and eaten after fasting. One of the principal ingredients of various Ayurvedic tonic preparations including *Chyavanprash*, *Triphala*, and *Amrit Kalash*. Unripe seeds and leaves are edible. Also used in the manufacture of *black salt*. Tropical Asia, cultivated. FRAWLEY, MARTIN 1975, PARMAR, C., MENNINGER, MORTON 1960 [Cu, Nu], MORTON 1987a, REEJHSINGHANI 1975 [Re], SINGH, S, SIVARAJAN TIERRA, WATT; A79M, F37T{PL}, F85, G73, H14{PD}, I74{PL}, J82, M15M{PD}, N7D{DF}, N7D{ED}, N84, P38, Q12, Q18, Q46

#### CULTIVARS {GR}

**Banarasi:** Large, flattened-oblong fruit with 6 paired segments; smooth, yellow skin, thin and translucent; soft, nearly fiberless, semi-transparent flesh, medium juicy, moderately astringent. Makes preserves of very high quality. Good keeping qualities. Upright growing tree, somewhat of a shy bearer. An important cultivar in parts of Uttar Pradesh. BOSE 1990, MORTON 1987a, SINGH, S.; R50

*Euphorbia helioscopia* - *Tddai-gusa* {S}. Young stems are edible when cooked or oil wasted. Young leaves are used as a tea substitute. Northern temperate region. TANAKA; F85, N71M, N84

*Leichhardtia australis* - *Doubah, Native pear, Bush banana* {PL}. The fruits were roasted and eaten by the Aborigines. They are very rich in thiamine. Young, immature fruits are said to have the flavor of peas, squash and zucchini. Seeds are eaten raw or cooked, having the flavor of fresh peas. The flowers can be eaten whole, and are brimming with sweet, flavorful nectar. Leaves and roots are also edible. Australia. CHERIKOFF, CRTOB, O'CONNELL, ROBINS [Cui, Re]; N79

*Macaranga grandifolia* - *Samae* {S}. Leaves, bark, and fruit are added to sugar cane juice that is fermented into *basí*, a traditional alcoholic beverage of the Ilocanos on Luzon. Philippines. STEINKRAUS; F85

*Macaranga tanarius* - *Samae* {S}. The dried leaves, bark and fruit are used like those of *M. grandifolia* in the preparation of *basí*. Tropical Asia. STEINKRAUS, UPHOF; F85, P38

*Manihot esculenta* - *Cassava, Yuca, Manioc, Mandioca* {PL}. Young leaves are boiled like spinach or added to stews, such as the Amazonian *manigoba*. In Asia, they are used for wrapping various steamed, grilled and baked foods. Roots are eaten boiled, fried, baked, made into meal, sweetmeats, *bannies* and other breads, *farina*, syrup, pastries, *fufu*, *dumbcy*, chips, and *arrowroot*. The refined starch from the tubers, known as *tapioca pearls*, is used in soups, puddings, and dumplings. In powdered form it is called *tapioca flour* or *goma de tapioca*, and is employed as a thickening agent for soups, sauces and crepes. Juices from the root are boiled to make *cassareep*, a condiment and an essential ingredient for the Amerindian stew called *peppercot*, or fermented into *chicha*, *kaschiri* and other alcoholic beverages, and also vinegar. In Brazil, the juice is known as *ucupi* and is often bottled with Pimenta de Cheiro. Other fermented products are *gari*, *tape*, *ontjom*, *uji* and *tempeh*. Tropical South America, cultivated. BENGHIAT [Cul, Re], HAWKES [Re], HEDRICK 1919, IDONE [Re], MARTIN 1975, MAY, R. [Nu, Re], OCHSE, ORTIZ 1973 [Re], PASSMORE, ROUTHIER 1989 [Cul, Re], SCHERY, SCHNEIDER 1986 [Cul, Re], STEINKRAUS, TANAKA, UPHOF, WILSON, E.G. [Re]; A79M{S}, B60M{PR}, D4{PD}, D33, D43G{PD}, E13G{PR}, E29, F85{S}, G29{PD}, H4, 128, J66M{PD}, L14G{PD}, L55J{S}, L90G{PD}, N40{PR}, N84{S}, 053M{S}, P38, etc.

*Manihot glaziovii* - *Manigoba, Mandioca brava, Ceara rubber* {S}. Tubers are sometimes eaten. Otherwise they are a source of starch. The oily seeds are also eaten. Brazil. TANAKA; F85, N84

*Marsdenia australis* - \**Leichhardtia australis*

*Phyllanthus acidus* - *Cicca acida*

*Phyllanthus emblica* - \**Emblica officinalis*

*Plukenetia volubilis* - *Wild peanut, licazo* {S}. The leaves are consumed as a vegetable by the natives. Seeds are roasted and eaten, having an excellent flavor. Tropical America. ALTSCHEUL, UPHOF; N84, R78M

*Ricinodendron africanum* - *Ricinodendron heudelotii*

*Ricinodendron heudelotii* - *Manketti nut, Essang nut* {S}. The dried kernels are ground and used in stews or eaten as a relish. They also yield an edible oil, sometimes called *essang oil*. Tropical Africa. DALZIEL, DANFORTH, MENNINGER, UPHOF; Y40

*Ricinodendron rautanenii* - *Mongongo nut, Manketti nut* {S}. Pulp of the fruit is eaten raw or cooked, and is also dried and ground for use in porridge. When eaten fresh it resembles a date, though not as sweet. After boiling, it turns maroon and tastes like apple sauce. The nutritious and tasty kernels are eaten raw or roasted. Roasted kernels taste like roasted cashew or Brazil nuts but after prolonged roasting have the flavor of "fine old cheese". Also the source of

*manketti nut oil*, used for cooking. Tropical Africa. FOX, F., TREGOLD, UPHOF; S28M

*Ricinus communis* - *Castor bean* {S}. Seeds are the source of *castor oil*, used by the food industry for adding butter and nut flavors to various foods including baked goods, candy, non-alcoholic beverages, and frozen dairy desserts. In India, castor oil is commonly used for coating grains and legumes such as *oily toor dal*. In Nigeria the fermented seeds, known as *ogili* or *ogiri*, are added to soups and stews. Cultivated. BURDOCK, CAMPBELL-PLATT, DEVI, LEUNG; A25, E7M, F37T{PL}, K38, F68T, F80, H49, J5M, J20, J82, J97M, K71, L55J, Q12, Q46

*Sapium sebiferum* - *Chinese tallow tree, Petroleum tree* {S}. Outer covering of the seed produces a waxy fat sometimes used as a substitute for lard or cacao butter. In Hangzhou, China it is used in the unique frying processes employed for *Longjing* or *Dragon Well* tea, a small amount being rubbed on the inside of the wok firing pan. The wax is absorbed by the leaves and small droplets can be seen on the surface of brewed tea. The flowers yield a light amber, well-flavored honey that is high in enzymes and low in sucrose. Eastern Asia. CORTI, TANAKA; A80M{PL}, C27G{PD}, C60D{PD}, F85, G66, H4{PL}, K38, L8{PD}, N54{PD}, 053M, P5, P17M, Q12, Q32, Q46, etc.

*Sauropus androgynus* - *Rau n'got, Sweet leaf bush, Katook, Chekkurmanis, Pak wan* {S}. The tender tips, young leaves, flowers, and immature fruits are steamed and eaten as a potherb or put into soup. Young leaves and tips are sometimes eaten in salads, having a strong, characteristic odor. One of the most nutritious of all leafy vegetables, with a protein content of six to ten percent. Leaves are used to give a green color to pastry, preserves, fermented glutinous rice, and the alcoholic beverage *brem ball*. Ripe fruits can be made into sweetmeats. Southern Asia. HACKETT, JACQUAT, MARTIN 1975, OCHSE, OOMEN, STEINKRAUS; E8M{PL}, F85, H29{PL}, I12{PL}, N84, 019, P38

*Schinziophyton rautanenii* - \**Ricinodendron rautanenii*

*Tetracarpidium conophorum* - *Owusa nut* {S}. Leaves, young shoots and fruits are eaten with rice in Sierra Leone. The tasty seeds are eaten boiled or roasted, and are often served with com on the cob. They also yield an edible oil, called *n'ghat oil*. West Tropical Africa. DALZIEL, DANFORTH, MENNINGER, TANAKA; Y40

#### EUPOMATIACEAE

*Eupomatia laurina* - *Native guava, Bolwarra* {S}. The soft, yellow-green fruits are eaten out of hand. They have soft, clear pulp which is sweet, very aromatic and pleasant to eat. The flavor is somewhat reminiscent of kiwi or guava, with overtones of nutmeg. Juice from the fruits may be added to ice cream or yogurt. Australia. CHERIKOFF, CRIBB; N79{PL}, P5, P38

#### EURYALACEAE

*Euryale ferox* - *Gorgon, Foxnut, Khee sat* {S}. The soft, pulpy, glutinous fruit is highly esteemed in China as a cooling tonic food. Fresh or dried seeds are pickled, added to curries, ground and made into cakes, popped, or cooked with longans in sweet tonic soups. They are also a source of starch. Very young stalks and rhizomes are edible. Has been cultivated in India and China for thousands of years. The dried seeds are available in Chinatown markets. China to Southeast Asia. HEDRICK 1919, LEYEL 1987a, MENNINGER, MOLLISON, TAN [Re], TANAKA, UPHOF; H36{DF}, J7M, L21T{DF}, M15{PL}, 054

#### FABACEAE

*Abrus pulchellus* - *Malay licorice* {S}. Roots are used as a substitute for licorice in Malaysia. Old World Tropics. UPHOF; F85

*Aeschynomene indica* - *Kusa-nemu* {S}. Leaves are eaten fresh, parboiled and added to soups, cooked as a potherb, stir-fried, etc.

The whole plant is dried in the shade, finely chopped, roasted and used as a tea substitute. Old World Tropics. TANAKA; F85

*Amorpha canescens* - *Leadplant, Wild tea* {S}. An infusion of the dried leaves makes a yellow, pleasant tasting tea. Western North America. KINDSCHER, YANOVSKY; E7M, G47M, H61M, I47, J39M, J40, J40{PL}, J41M, J41M{PL}, J42, J42{PL}, J43, K62, L41

*Amorpha fruticosa* - *Indigo bush, False indigo, Itachi-hagi* {S}. The fruit is crushed and used as a condiment. Western North America, Japan. TANAKA; B94, D92M, I11M{PL}, I98M, I98M{PL}, J25M, J39M, K89{PL}, M69M{PL}, O53M

*Amphicarpaea bracteata* - *Amphicarpaea monoica*

*Amphicarpaea monoica* - *Hog peanut, Ground peanut* {S}. The subterranean, peanut-like seeds are sweet and delicious eaten raw, having more the flavor of shelled garden beans than peanuts. They can be boiled and served with butter or cream, or used in soups and stews. Seeds produced by the above ground pods can be boiled and eaten. Formerly cultivated for its seeds in the southern United States. North America. CROWHURST 1972, FERNALD, GIBBONS 1979, KINDSCHER, MEDSGER; F85, M16{PL}, N84

*Apios americana* - *Groundnut, Potato bean, Indian potato* {PL}. The sweet, starchy tubers are eaten raw, boiled, fried, roasted, or otherwise prepared like potatoes. They can be added to soups, stews, and casseroles, or mashed and used in breads. Menomini Indians made a preserve by boiling the tubers in maple syrup. Groundnuts contain seventeen percent crude protein, more than three times that of potatoes. The seeds are sometimes used like peas or beans. North America. ANGIER, BLACKMON 1986b [Cu, Re], FERNALD, KINDSCHER, MEDSGER, NATIONAL RESEARCH COUNCIL 1979, VILMORIN; B61M{S}, C74, C95{S}, D47M, D95, H4, I60, I74, M16, N84{S}

#### CULTIVARS

#784: Reddish-brown tubers, about 2 inches in diameter. A very dependable grower and producer. Yields numerous tubers. Developed at Louisiana State University. E91T

**Aquarius:** Reportedly has one of the largest tubers of any of the improved types found thus far. Not as productive as some. E91T

**Corona:** Produces tubers which are slightly smaller than those of Aquarius, however they are produced in greater abundance. E91T

**Draco:** Produces tubers which are relatively small compared to most others, however they are notably flavorful and are produced in great abundance. E91T

**Gemini:** A very productive plant yielding tubers which are slightly larger than those of #784. E91T

**Lyra:** Very large tubers comparable to those of Aquarius. However, the skin is nice and smooth. E91T

**Orion:** Large tubers, comparable to those of Gemini. However, it has a growth habit that produces tubers closer to the crown. E91T

**Serpens:** Improved type selected in North Carolina. Tubers are slightly larger than the commonly found native species. Older mother tubers have occasionally reached nearly a foot in length. E91T

**Sirius:** Tubers 2 to 3 inches in diameter; skin somewhat light-colored. Tubers are located closer to the crown than most. E91T

**Virgo:** Improved type selected in Vermont. Produces numerous tubers, however they are much smaller than those of typical improved forms. E91T

*Apios tuberosa* - *Apios americana*

*Arachis hypogaea* - *Peanut, Groundnut* {S}. Seeds are eaten raw, boiled, steamed, roasted, salted, in confectionery, made into peanut butter, ground into meal and flour for breads, etc. Source of peanut

oil, used in salads, margarine, and preferred over all others for stir-fry cooking. Used for the universally popular groundnut soup in Africa. In Asia and Africa, peanuts are used as a substrate for *miso*, *onjom*, *dageh*, *tempeh*, *rob Jul* and other fermented foods. Once used as an adulterant of coffee, called *Austrian coffee*. Young shoots, leaves, and unripe pods are eaten as potherbs. Sprouted seeds are consumed. Peanuts are fed to pigs destined to become *Virginia* and *Smithfield* hams, and are said to contribute a distinctive flavor. South America, cultivated. BISSELL, DIRAR1993, HALPIN [Cu, Cul], HERKLOTS, OCHSE, ROSENGARTEN [Re], ROUTHIER 1989 [Cu, Re], SHURTLEFF 1979, SMITH, C., STEINKRAUS, TANAKA, UPHOF, WILSON, E.G. [Re]; D4, E7M, G73, L55J, N84, O53M. (for cultivars see Peanut, page 462, see also Sprouting Seeds, page 524)

*Aspalathus contaminatus* - *Aspalathus linearis*

*Aspalathus linearis* - *Rooibos tea, Red tea* {DF}. Source of a low tannin, caffeine-free tea with a very agreeable aroma and a pleasant, non-astringent taste. Can be drunk hot or cold (sweetened or not), diluted with milk, flavored with cinnamon or other spices, or used as an excellent base for soups, sauces, punch and baked goods. Has a high protein and vitamin C content. A portion will yield twice as much full-flavored brew as the same amount of ordinary tea. An extract is used in schnapps and a liqueur known as *buchenbosch*. Usually marketed as *Kaffree tea* in the United States. South Africa. BOWN, CHENEY [Cu], FCK, F., MORTON 1983 [Nu, Pre]; C95M, E14T, F37T, GO, G73, K18M, N7D, N54, N84{S}, S28M{S}

*Astragalus boeticus* - *Swedish coffee* {S}. Cultivated in certain parts of Europe for its seeds, which are roasted, ground, and used as a substitute for coffee. Mediterranean region. HEDRICK 1919, ZEVEN; T66M, U63

*Astragalus caryocarpus* - *Astragalus crassicaarpus*

*Astragalus crassicaarpus* - *Groundplum milk-vetch, Buffalo pea* {PL}. The thick, fleshy, unripe pods, which resemble green plums, are eaten raw or cooked. When cooked, they are usually prepared and served whole in the same manner as the edible-podded sugar pea or Chinese snow pea. Sometimes the pods are cooked and spiced for pickles. North America. KINDSCHER, MEDSGER; B29{S}, J39M, J39M{S}, J41M, N84

*Astragalus gummifer* - *Tragacanth* {DF}. One of the principal sources of *gum tragacanth*, much appreciated as an emulsifying and thickening agent in salad dressings, syrup, sauces, ice cream, beverages, gelatins and puddings, confectionery, etc. Has been in use since ancient times. Eurasia. KUNKEL, LEUNG, UPHOF; A49D, E14T, F37T, GO, K18M, N7D, N19M

*Astragalus membranaceus* - *Huang qi, Pak kei* {S}. The pale yellow roots are eaten in tonic soups, often with chicken and meats or combined with *Codonopsis pilosula* and *Angelica sinensis*. Also used in teas, wines, and dilute rice porridge dishes called *congee*, *jook* or *shifan*. One of the most popular tonics in Chinese herbalism. China, cultivated. FLAWS 1995 [Re], LEUNG, TAN [Re], TIERRA; A2, B21P{DF}, D26G, D40G, E14T{DF}, F68T, F80, G6, G19P{DF}, H94M{PL}, I49M{PL}, I74, I81T{PR}, J5M{PL}, J82, K18M{DF}, K49T, ZJ4{DF}, R47, etc.

*Cajanus cajan* - *Pigeon pea* {S}. Very young seeds are cooked and eaten like green peas, especially in rice dishes. Dried seeds are used in soups and curries, or fermented into *dhokla* and *tempeh kacang iris*. Unripe pods are also eaten in curries. The leaves and young shoots, having a protein content of about nine percent, are cooked as a potherb. In Indonesia, the germinated seeds are eaten when about one inch long. Split dried pigeon peas are available as *toovar*, *toor*, *oily toor* or *arhar dal* in Indian markets. Known as *gandules* in Latin America, the canned fresh peas can be found in the specialty sections of some supermarkets. Southern Asia, cultivated. CHANTILES [Re], DEVI [Re], DUKE, HAWKES [Re], HERKLOTS, JAFFREY, MARTIN 1975, OCHSE, ORTIZ 1973 [Re], SHURTLEFF 1979, STEINKRAUS, VON WELANETZ; A52M{ED},

A79M, A90M{DF}, D33, E21D{PL}, F74{DE}, F85, H73{DF}, J11M{DF}, N84, PIG, P38, Q12, Q46, R47, etc.

#### CULTIVARS

**2-B:** Bushy plant that only grows to 3 feet tall, or about half the size of other types. Originally from Puerto Rico. T69

**Black:** Black-seeded cultivar from Peru that has performed well in Florida and in other areas where it has been distributed by ECHO. T69

**Short Dav:** Early maturing strain that is day length independent and does well under short day conditions. T69

#### *Cajanus indicus* - *Cajanus cajan*

*Canavalia ensiformis* - *Jack bean*, *Chickasaw lima* {S}. The immature pods, before the seeds inside them have swelled, are eaten raw, preserved in salt, or boiled and served like snap-beans. Ripe seeds are used as a substitute for coffee. Unripe seeds can be eaten boiled, roasted with salt, or peeled and used like fava beans. In Indonesia, the seeds are fermented into *tempeh kara bedog*. The young leaves are prepared like spinach. Fresh unripe seeds are considered poisonous. West Indies, cultivated. HAWKES [Re], HERKLOTS, NATIONAL RESEARCH COUNCIL 1979 [Nu, Pre], SHURTLEFF 1979, TANAKA, UPHOF; A79M, F85, K63G, N84, Q12, Q46, S70

*Canavalia gladiata* - *Sword bean* {S}. Unripe pods are boiled and served as a green vegetable like string beans. The full-grown but still green seeds are cooked and eaten. Dry, fully mature seeds are edible after extensive boiling and peeling of the seed coat. They can also be detoxified by fermentation to *tempeh*. In Japan, the young pods are sliced and pickled in soy sauce with radishes, eggplants, and lotus, and the seeds are boiled and mashed with sugar. The sour-tasting leaves are blanched and eaten with vermicelli and peanut curry or added to *tom yam* soup. Tropical Asia, cultivated. HERKLOTS [Cu], JACQUAT, NATIONAL RESEARCH COUNCIL 1979 [Nu, Pre], TANAKA; N84, S70, S93M

*Canavalia maritima* - *Mackenzie bean* {S}. In Malaysia, the flowers are eaten as a flavoring. The young pods are eaten when young. Young seeds are said to make a good *pease porridge*. Paleotropicals. BURKILL; F75{PL}, F80, F85, G73, 181M, N79M, N84, 093, P5, P17M, P38, R15M, S92

#### *Canavalia rosea* *Canavalia maritima*

*Caragana arborescens* - *Siberian pea tree* {PL}. Young, green pods are eaten as a vegetable in some parts of Siberia. The mature seeds, containing up to thirty six percent protein, can be used in recipes calling for dried beans or peas. Bland in flavor, they are best cooked in spicy dishes like chili. Siberia, cultivated. HEDRICK 1919, PETERSON, T., UPHOF; C33, E47{S}, F80{S}, I47{S}, I49G, J26, M35M, M69M, 053M{S}, R47{S}

*Cicer arietinum* - *Chick pea*, *Garbanzo* {S}. Fresh or dried seeds are consumed in soups, stews, sweetmeats, rice dishes, *falafel*, *hummus*, etc. The fresh green seeds have an appealing lemon-like flavor. Also fermented into *dhokla*, *miso* and *tempeh*. Parched or roasted seeds are eaten as a snack, or they can be ground and used as a coffee substitute. Roasted roots are also a coffee substitute. Widely utilized in India, where it is called *Bengal gram*, and when split, *chana dal*. Chick-pea flour or *besan* is used in batters, sauces, soups, sweetmeats, fritters, pizza, pancakes, and dumplings. Crisp, chick-pea flour noodles, called *sev*, are a popular snack food in India. A strong, acid dew forms on the plant overnight which is gathered and made into vinegar or cooling drinks. Young leaves, shoots and pods are used as potherbs. Sprouted seeds are eaten. Eurasia, cultivated. DUKE [Nu], GRAY, R, HEDRICK 1919, HERKLOTS, JAFFREY [Re], SHURTLEFF 1979, STEINKRAUS, UPHOF, VILMORIN [Cu], VON WELANETZ; B75, B31{PD}, E13G{PR}, F85, F88{PD}, G71, H19M{PD}, L50M{PD}, L99{PD}, M46, N84, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Black Seeded:** {DF} Small black seeds, one or two per pod. Deeper, fuller flavor and more distinct texture than common cream-colored types. Excellent in salads or with rice side dishes. Plants produce numerous pods. Should be planted close together to form a lush canopy of blue-green foliage. Likes hot weather and is drought tolerant. A7, A90M, F86T, H99J{SP}, L24M{SP}

**Kabuli Black:** 95 days. Very hardy and vigorous cultivar originating in Kabul, Afghanistan and released by Washington State University. Medium-sized, solid black seed; two seeds per pod; rich, full flavor. Somewhat tolerant of cold soils. Drought resistant. Has grown to maturity easily in the Bitterroot Mountains of Montana. A2, D68, E24, E56{DF}, F73D, J97M, K49T, L3J, L11, L77D, N84

**Kala Chana:** Small, brown-seeded type from India. Used whole in Northern Indian cuisine. When husked and split as *dal*, it is eaten throughout India, especially in Eastern areas. Also hulled and roasted to produce chickpea flour (*besan*). Does wdl in dry, short-season regions and home gardens. DEVI; F80

**Mayo Winter:** Plump, beige seeds. Dry farmed on a Sonora, Mexico ejido (communal form). Adapted to the low, hot desert where it is planted with the winter rains. An introduced staple. 116, N84

**Mvles:** Small-seeded "desi" type of Indian origin, better suited to home gardens than the large commercial types. Developed and recommended for use in the interior Northwest and other short-season, dry areas. Not appropriate for coastal fog belts. Resistant to ascochyta. A2

**Red Chana:** 105-110 days. Small-seeded "desi" type from India. Commonly eaten as a dry toasted snack available from street vendors and food stalls. Also eaten like green shell peas. Pleasant, earthy flavor. Yields well. L3J

**Tarahumara:** Small, dark-brown seeds, smaller than Mayo Winter. Prolific, very drought and insect resistant plant. Fall crop from the bottom of Copper Canyon, Mexico where it is dry farmed. Adapted to growing at different elevations, from sea level to 10,000 feet. L3J

*Clitoria tematea* - *Butterfly pea*, *Kordofan pea* {S}. Flowers are used to give a blue tinge to rice cakes and boiled rice. The young pods are consumed like string beans. Leaves are also used to dye food or are eaten as a potherb. Tropics, cultivated. ABBIW, BURKILL, HEDRICK 1919, MARTIN 1975, TANAKA, ZEVEN; A79M, E53M, F80, J27{PL}, 053M, 093, P5, P17M, Q12, Q18, Q32

*Cordeauxia edulis* - *Yeheb*, *Ye-eb*, *Jeheb* {S}. The nutritious seeds, the size of a small macadamia nut or large filbert, have a smooth consistency and a delicious, chestnut-like flavor. They can be eaten raw or cooked. An infusion of the leaves is used as a substitute for tea. An endangered species adapted to hot, dry regions of uncertain rainfall. Begins to bear prolificacy when only 3 to 4 feet high. Somalia. MACMILLAN, NATIONAL RESEARCH COUNCIL 1979 [Nu], UPHOF; T66M

*Crotalaria longirostrata* - *Chipilm*, *Chepil* {S}. The young shoots are steamed and served whole, the leaves and flowers having been stripped off and eaten separately for their pronounced snap-bean-like flavor. The leaves can be ground with garlic and brushed on bread or added sparingly to white sauce. When added to tamales that are made with butter instead of oil, the flavor combination is said to be unforgettable. Central America, cultivated. QUINTANA 1994, THEODOROPOULOS, UPHOF, WILLIAMS, L.; F80, F85, N84

#### *Cyamopsis psoraloides* - *Cyamopsis tetragonolobus*

*Cyamopsis tetragonolobus* - *Guar*, *Cluster bean* {S}. The unripe pods, called *guarfali*, are eaten in curries, fried in oil, salted, or dried for later use. The protein-rich seeds are also eaten. Source of

guar gum, used by food manufacturers as a stabilizer and thickener in ice creams, bakery goods, gluten-free foods, and salad dressings. Sprouted seeds are occasionally eaten. Young pods are available at Indian markets in New York and other large cities. Tropical Asia. HAGMAN, HERKLOTS, MACMILLAN, NATIONAL RESEARCH COUNCIL 1975a, REEJHSINGHANI 1973 [Re], TANAKA; A25G{DF}, A79M, B31{DF}, D4{DF}, E14T{DF}, F37T{PL}, F74{DF}, G73, K18M{DF}, L77D, M15M{DF}, N84, Q46

## CULTIVARS

**Deshi Small:** An improved form with short, blocky pods. Low seed to pod ratio. Sown from April to May and from July to August in India. Adapted to hot, dry conditions. R0

**Long Podded:** 60 days. Climbing, branching type plant, grows to 3 feet. Adaptable to a wide range of climatic conditions. Matures early. Q45M, R50

**Pusa Navbahar:** 40 days. Single-stemmed, high yielding plant, bears at every node. Smooth, glossy green pods, 6 inches long. Can be grown during both spring and rainy seasons. Q45M, R0, R50, S36

**Surati Makhani Lona:** An improved type from India with long, smooth pods. Low seed to pod ratio. Sown from July to August in India. R0

*Cyclopia genistoides* - *Cape tea, Honey bush tea* {DF}. An infusion of the leaves is used as a substitute for tea. The most common of the *Cyclopia* species used for this purpose. Cultivated locally and in other areas. South Africa. CHENEY, HEDRICK 1919; GO

*Cytisus scoparius* - \**Sarothamnus scoparius*

*Dalea candida* - \**Petalostemon candidum*

*Dalea* sp. - *Toronjil* {S}. The highly aromatic herb is used to prepare a tea resembling lemon grass or lemon verbena, but with a more subtle and complex flavor. Annual plant with short racemes of small blue-purple flowers and lacy, delicate pinnate foliage. Lew, sprawling trailer when grown in poor, compacted soil, as by paths. Grows to four feet in good soil. Oaxaca, Mexico. THEODOR-OPOULOS; F80, N84

*Daviesia latifolia* - *Hop bitter-pea* {S}. Leaves have been used as a substitute for hops. Australia. CRIBB; N79M, N84, R15M

*Desmanthus brachylobus* - *Illinois bundleflower* {S}. The protein rich seeds are edible but without much flavor. Being evaluated by the Land Institute of Salina, Kansas as an edible legume for growing with perennial grains in a non-tillage permaculture system. North America. F73D, F80, G47M, 111, I81M, J25M, J39M, J39M{PL}, K62, L31, L41, L90J{PL}, M25, N84

*Desmanthus iltinoensis* - \**Desmanthus brachylobus*

*Diphysa robinoides* - *Cuachipil, Guachipilin* {S}. The yellow flowers become mucilaginous when steamed, and are often added to beans or are eaten with tortillas. Central America. THEODOR-OPOULOS; F85

*Dipteryx odorata* - *Tonka bean* {DF}. The dried seeds have a strong, penetrating coumarin-like aroma and flavor. An extract of them has been employed as a vanilla substitute in flavoring candy, baked goods, ice cream, liqueurs, cocoa, tobacco, snuff, etc. Still used in some products in various countries, including Mexican vanilla. Prohibited from commercial use in the United States. Tropical America, cultivated. BROUK, BURDOCK, MENNINGER, MORTON 1976; A49D, E14T, F32D, F37T, F73D, GO, G84, J82, K2, K18M, M15M, M15T, N7D, N19M

*Dotichos biflorus* - \**Macrotyloma uniflorum*

*Dolichos lablab* - \**Lablab purpureus*

*Dolichos lablab* var. *lignosus* - \**Dotichos lignosus*

*Dolichos lignosus* - *Australian pea, Ballar* {S}. The tender seeds are eaten fried, or cooked and salted like green peas. Pods are eaten at all stages of development. The dried seeds are consumed as a split pulse. Southern Asia. TANAKA; 053M, R47, S92

*Ervum monanthos* - \**Vida monantha*

*Erythrina americana* - *Flor de colorin, Tzompantele* {S}. In Mexico, the petals and young inflorescences are fried and eaten, especially in tamales at Easter time. Tender leaves are used for greens. Central America. ALCORN, KUNKEL; F73D, F80, F85, G73, I81M, I83M{PL}, N84

*Erythrina berteroaana* - *Coral-bean, Pito* {S}. Flowers and immature inflorescences are eaten as a vegetable with meat, in stews, and in egg dishes. Tender shoots and leaves are eaten raw, or more commonly, cooked in stews with other foods. Tropical America. MARTIN 1975, TANAKA, WILLIAMS, L.; A12G, A79M, I12{PL}, L55J, N84, R32

*Erythrina edulis* - *Basul, Balu, Chachafruto* {PL}. The extremely large, succulent seeds have a pleasant, slightly sweet flavor and are usually boiled and eaten like lima beans with corn, cassava, bread or potatoes. They are sometimes mashed with cheese and are also fried. Contains about twenty percent protein. Northern South America. NATIONAL RESEARCH COUNCIL 1989, PEREZ-ARBELAEZ; 174, L55J{S}, N84{S}, P38

*Erythrina fusca* - *Chang kering, Thong long* {S}. Young leaves are eaten raw or cooked. In Thailand, they are eaten raw in papaya salad or with *plan naem*—a rice and fish dish eaten with Thai sour sausage and various vegetables, such as lettuce and cilantro. Tropical Asia. JACQUAT, UPHOF; A79M, G73, N84

*Erythrina herbacea* - *Eastern coral-bean, Cherokee bean* {PL}. The flowers make an acceptable vegetable when boiled. Young leaves are occasionally cooked and eaten. Southeastern North America. MORTON 1977; B61M, B61M{S}, C36, F85{S}, H4, H14M, M7M, N37M, N84{S}, P5{S}

*Erythrina indica* - \**Erythrina variegata*

*Erythrina rubrinervia* - *Galitto, Pito* {S}. Flowers and flower buds are eaten like string beans in El Salvador and Guatemala. Young leaves are used in soup. Central America. ALTSCHUL, UPHOF; F85

*Erythrina variegata* - *East Indian coral tree* {S}. Young leaves are steamed and eaten or added to soups, stews and curries. In Vietnam, they are used for wrapping a popular food known as *nem*—\* kind of hashed meat. At one time used in the cooking of human skulls in Papua New Guinea. Tropical Asia. HEDRICK 1919, MAY, R., OCHSE, VAN DUONG; C95, N84

*Faba vulgaris* - *Fava bean, Broad bean* {S}. The unripe seeds, when small and tender, can be eaten raw as an hors d'oeuvre with *feta* and *marzotica* cheeses. Older ones are steamed, sauteed, pureed, or eaten with pasta or rice. Dried seeds are boiled, ground into flour, pureed, pickled in salt, added to soups, or made into *tofu*, *miso*, and nut milk. Small brown ones are used for *foul medammes*, a stewed dish of lavas, *hamine* eggs, olive oil, lemon juice, garlic and spices, that is a nearly universal breakfast food in Egypt. In China and Indonesia, they are fermented into *soy sauce* and *tempeh kacang babi*, respectively. The fermented beans are a main ingredient of *Szechuan chili paste*. Dried and peeled seeds, called *habas peladas* are popular in Mexican cooking, especially purged and folded into thick *tortillas*. In Egypt, they are widely used for making *Egyptian falafel* or *taamia*. Sprouted seeds, called *silk bean sprouts* in China and *foul nabet* in Egypt, are cooked and eaten. Young pods are cooked as a vegetable or added to soups and stews. Popped seeds are salted and eaten as a snack, or roasted like peanuts. Leaves are eaten as a potherb. Cultivated. COST 1988 [Cu], COTTERELL [Re], EVANS [Cu, Re], GRAY, P. [Cu, Re], HALPIN [Cu, Cu], HARRINGTON, G., HERKLOTS, KHALIL [Re], KRAFT [Re], LARKCOM 1991, MARTIN 1975, SALLOUM [Re], SCHNEIDER

1986 [Pre, Re], STEINKRAUS, TANAKA, VILMORIN [Cu]; A25, J25M, K71, L24G{SP}, L50M{PD}, M46, N40{PR}, N40{PD}, S55. (for cultivars see Fava Bean, page 363)

*Flemingia vestita* - *Soh-phlong* {S}. The soft, fleshy, tuberous root is eaten raw, being somewhat sweet and juicy and having an agreeable, nut-like flavor. Rich in iron and phosphorous, and contains more than three times the protein of cassava. Also employed as a source of starch. Cultivated as a minor food crop in the Khasi and Jaintia hills of Assam. India. NATIONAL RESEARCH COUNCIL 1979, SINGH, H., TANAKA, WATT; Y81

*Galega officinalis* - *Goafs rue* {S}. Young leaves are eaten like spinach. The herb is used as a substitute for rennet in making cheese. Eurasia. GRIEVE, HEDRICK 1919; C43M{PL}, D92M, K22{PL}, L66{PL}, L90J{PL}, N71M, N84, 053M, R47

*Genista tinctoria* - *Dyer's greenwood*, *Dyer's broom* {S}. The flower buds are pickled and used in sauces as a substitute for capers. Seeds have been suggested as a possible substitute for coffee. Eurasia. GRIEVE, HEDRICK 1919; C43M{PL}, D92M, D95{PL}, E61{PL}, F80, J82, J82{PL}, K22{PL}, K38, N71M, 053M, P49

*Geoffroea decorticans* - \**GourUea decorticans*

*Gliricidia sepium* - *Madre de cacao* {S}. The flowers are cooked as potherbs or folded into an egg batter and fried. Tropical America. WILLIAMS, L.; A12G, A79M, E21D{PL}, F80, F85, G66, N84, 093, P5, P17M, Q12, Q18, Q32, Q46, R32

*Glycine max* - *Soybean*, *Soyabean* {PD}. Unripe seeds are boiled or steamed and eaten like green lima beans or peas. The protein-rich dried seeds are boiled, baked or pressure-cooked, and used in soups, stews and casseroles. Also the source of an oil used in salads and cooking. Toasted seeds are eaten as a peanut-like snack called *soy nuts*. Strongly roasted ones are ground into an excellent coffee substitute. Soy flour is used in making noodles, pasta, confectionery, and *hoisin* sauce. *Kinako*, a tan or beige flour made from whole roasted soybeans that has a nutty flavor and fragrance, is used in many of Japan's most popular confections. *Textured vegetable protein* or *TVP*, widely used as a meat substitute, is made from defatted soy flour that is cooked under pressure, extruded and dried. Soybean sprouts may be eaten raw, or added to omelettes, soups, souffles and stir-fried dishes. In Indonesia, the young leaves are eaten, raw or steamed, and served with rice. Soybeans are the principal source of *lecithin*, used as a food supplement, and as an emulsifier in vegetable oil sprays, nutmilks, smoothies, and commercial fat and egg substitutes such as *Wonderslim*. Made into numerous fermented and unfermented products, including *soy milk*, *tofu*, *koridofu* (snow-dried tofu), *okara*, *yuba*, *shoyu* (soy sauce), *tamari*, *kecap*, *miso*, *temp eh*, *natto*, *hama-natto*, and *sufu*. Bean curd skins are used as food wrappers. Fermented soybean cakes, known as *meju*, are used as starter cultures for Korean soy sauce (*kanjang*) and soybean paste (*toenjang*). Eastern Asia, cultivated. BATES [Nu, Re], BELLEME [Re], CHANG, W. [Cul, Re], COLE, C. 1990 [Re], COLE, C. 1993 [Re], HALPIN [Cu, Cul], HARRINGTON, G., HERBST, S., HERKLOTS [Cu], NOH [Cul, Re], OHSE, PASSMORE, PIPER [Cu, Re], SHURTLEFF 1975 [Re], SHURTLEFF 1976, SHURTLEFF 1979, STEINKRAUS, TANAKA, WOLF [Pre, Re], WOODRUFF; A52M, C27G, F17, F88, F97M, G20M, G47B, H14I, H72, I8M, M34M{S}, N7D, N49M. (for cultivars see Soybean, page 522, see also Sprouting Seeds, page 524)

*Glycine tnbacina* - *Vanilla glycine* {S}. The taproot is reported to have the flavor of licorice, and to have been chewed by the Aborigines. Australia. CRIBB; N84, R15M

*Glycyrrhiza echinata* - *Wild licorice* {S}. Roots are a source of Russian and German licorice. Southern Eurasia. HEDRICK 1919; A26, C43M{PL}, D56M, D92M, F80, J61M{PL}, J82, M82{PL}, N40M, N61, N84, 053M, Q24

*Glycyrrhiza glabra* - *Licorice*, *Italian licorice*, *Spanish licorice* {PL}. The sweet roots are used for chewing. Also the source of licorice powder and extract, widely employed in candy, baked

goods, ice cream, soft drinks, etc. Licorice sticks and *brewer's licorice* are added to beer for increased head retention, and to give thickness, flavor and blackness to porter and stout. The leaves, called *nakhalsa*, are used as a substitute for tea in Mongolia. A tea made from the powdered rootstock is consumed directly, or added to other herbal teas to sweeten them naturally. Grain coffees can be flavored with the extract. The roots contain glycyrrhizin, which is fifty times sweeter than sucrose. Mediterranean region, cultivated. DAGHER, GRIEVE [Cu], HEDRICK 1919, MARCIN, MORTON 1976, RITTER [Re], TANAKA; C43M, F37T, F64{PD}, F68T{S}, G40{PD}, G66{S}, G96,149M, J82, K85, L90J, M82, N17{PD}, R47{S}

#### CULTIVARS

**Pontefract:** A hardier and tougher cultivar than Poznan, but has less flavor. Introduced into Great Britain by Dominican monks. Slow growing. Grows to about 3 feet tall. N84, R53M, R53M{S}

**Poznan:** A vigorous improved cultivar of Polish origin with a high sugar content. Also a free flowering type. Grows to about 4 feet tall. Should be grown in a cold frame in more northerly climates. N84, R53M

*Glycyrrhiza glandulifera* -> *Glycyrrhiza glabra*

*Glycyrrhiza lepidota* - *American licorice* {S}. The long, sweet, fleshy roots are chewed, added to other foods for flavoring, or dried and brewed into tea. American Indians roasted them in embers, and they were then said to taste like sweet potatoes. The young, tender shoots can be eaten raw. Roots contain six percent glycyrrhizin. North America. FERNALD, HART, KINDSCHER, KIRK, MEDSGER, UPHOF; E67T{PL}, J39M, J39M{PL}, L3J, N84

*Glycyrrhiza uralensis* - *Chinese licorice*, *Gan cao* {S}. Roots are used as a sweetener for foods and tobacco. They have a glycyrrhizin content of up to 24%. Widely cultivated in China. Eastern Asia. LEUNG, TANAKA; A2, D40G, D56M, D92M, E14T{DF}, F68T, F86G, G6, G19P{DF}, G73{DF}, 174, J76{PL}, J82, L21T{DF}, L90J{PL}, L94M, M65, R47, etc.

*GourUea chilensis* - \**GourUea decorticans*

*Gourliea decorticans* - *Chanal*, *Chahar* {S}. The fleshy, subacid fruits are usually eaten when sweet and over-ripe, as a "honey" or *arropo*. They are also used in the preparation of an alcoholic beverage called *aloja de chahar*. Leaves are cooked and eaten. An important food in the Chaco region of Chile. Temperate South America. CARDENAS, HEDRICK 1919, TANAKA, UPHOF, VALENZUELA; JO, N84

*Hardenbergia violacea* - *Purple coral-pea*, *False sarsaparilla* {S}. A slightly sweet, pleasant-flavored beverage can be prepared by boiling the leaves in water. At one time the roots were also reportedly used for this purpose. Australia. CRIBB; F80, G96{PL}, I28{PL}, L91M, M7M{PL}, N79M, N84, 033, P5, Q32, R15M, R33M, S92

*Hedysarum alpinum* - \**Hedysarum boreale*

*Hedysarum boreale* - *Licorice-root*, *Sweet root* {S}. The young, tender roots are eaten, having a somewhat sweet, carrot or licorice-like flavor. They can be sliced and eaten raw, boiled, baked, fried or added to soups. North America. FERNALD, GIBBONS 1979, HELLER, KARI, MEDSGER, UPHOF; E66M, E67T{PL}, H95, 147, K49Q

*Hedysarum mackenzii* - *Licorice-root*, *Sweetbroom* {S}. The long, flexible roots have a sweet, licorice-like flavor and are much eaten in the spring but become woody and lose their juiciness and crispness as the season advances. Western North America. FERNALD, HEDRICK 1919, KIRK, UPHOF; K49Q

*Hedysarum occidentale* - *Sweetvetch*, *Licorice root* {S}. The roots have a sweet, licorice-like taste and can be eaten raw or cooked. Western North America. KIRK; E67T{PL}, 147

*Indigofera pseudo-tinctoria* - *Koma-tsunagi* {S}. The leaves and flowers are boiled and eaten. Eastern Asia. TANAKA; C9M, F80, H4{PL}, N84

*Indigofera tinctoria* - *Indigo* {S}. Leaves are the source of a deep blue dye sometimes used to counteract the slightly yellow color of icing sugar. Southern Asia, cultivated. BROUK; C43M, C43M{PL}, D92M, F15M{PL}, F37T{PL}, F85, J82, L94M, N84, 053M, Q12, Q18, S55

*Inocarpus edulis* - *Polynesian chestnut*, *Tahitian chestnut* {S}. Seeds are eaten raw, boiled, roasted or baked, having somewhat the flavor of chestnuts. Although quite palatable, they are reputed to be somewhat indigestible, even when cooked. Grated seeds are used for making flat cakes, breads and puddings. In the Marquesas, a puree of the cooked seeds is flavored with coconut cream. Malaysia, Pacific Islands, cultivated. MASSAL, MENNINGER, ROSENGARTEN, TANAKA, UPHOF; F85

*Kennedyia prostrata* - *Running postman* {S}. The leaves are used as a substitute for tea. Australia. CRIBB; F80, N79M, N84, 033, 053M, 093, P5, Q32, R15M, R33M, R47, S92

*Lablab purpureus* - *Bonavista bean*, *Hyacinth bean* {S}. Young, tender pods and immature seeds are boiled and used as a curry vegetable. The fresh or dried leaves are eaten like spinach. Flowers are eaten raw, steamed, or added to soups and stews. Dried seeds can be cooked and eaten as a vegetable, prepared as *tofu*, or fermented into *tempeh kara kara*, *vada* and *dosa*. Slit seeds are known as *vail dal* in India. The sprouted seeds are comparable to soybean or mung bean sprouts. The large, starchy root is edible. Tropics, cultivated. CAMPBELL-PLATT, FERNALD HAWKES [Re], HEDRICK 1919, HERKLOTS [Cu], MACMILLAN, NATIONAL RESEARCH COUNCIL 1979 [Nu], OCHSE, SHURTLEFF 1979, STEINKRAUS; A79M, B75, E7M, F74{DF}, F80, F85, 191, K22, L90M, L91M, N84, 093, PIG, S70

#### CULTIVARS

**Hiahworth:** The pods are non-shattering, mature at the same time, and grow above the foliage at the top of the stems so that harvesting them is easy. Quick maturing, and yields well in widely different environments. Developed in Queensland, Australia. NATIONAL RESEARCH COUNCIL 1979; P17M, P83M

**Purple:** 75 days. Ornamental plant with purple pods and purple flowers. Seeds are black. Pods retain their purple color if sauteed quickly. S70

**Red:** Attractive, shiny scarlet pods. Do not become tough too quickly; even larger pods can be eaten raw. Produces well during long day conditions as well as short. May be suitable for growing in northern states. D33

**Red Fortune:** Striking magenta, lima bean-like pods on attractive, magenta vines; 6 to 10 inch long flower spikes produce large fragrant, sweet-tasting, violet and white blossoms. 177

**Surti Paodi:** The pods are harvested when young and tender and eaten like French beans. Grown extensively in gardens in the Bombay area of India. Available at Indian markets, either fresh or canned. WATT; RO

**Valor:** Long, tender white pods produced in abundance. Matures in 1 1/2 to 2 months. R50

**Walpaodee:** Produces flat, light green pods in clusters. R50

*Lathyrus davidii* - *Itachi-sasage* {S}. The young plants, including stems, pods, and inflorescences, are parboiled and then eaten as a potherb, fried, roasted, or used as ingredients of soups and other cooked dishes. Leaves and stems may also be cooked and eaten separately. Eastern Asia. TANAKA; X54

*Lathyrus japonicus* ssp. *maritimus* - *Beach pea* {S}. Young seedpods, when less than an inch long, can be stir-fried like Chinese snow pea pods. Immature seeds are eaten raw, boiled and served like green peas, or used in soups. The ripe, dried seeds are powdered and

made into dumplings, or roasted and used as a substitute for coffee. Seeds may be sprouted and used like garden peas. Northern temperate region. BRACKETT [Re], FERNALD, GIBBONS 1964, KIRK, TANAKA, UPHOF; A2, E15, F85, F88M, K38, K49Q, N84, 053M

#### *Lathyrus maritimus* - *Lathyrus japonicus* ssp. *maritimus*

*Lathyrus sativus* - *Chickling vetch*, *Grass-pea*, *Wedge-pea*, *Doukhorbor pea* {S}. The unripe seeds are eaten like green peas. When ripe and dried, they may be used to make pea-soup. The flour from the dried seeds is occasionally mixed with that of wheat or rye, and made into bread. In India, the seeds are parched and boiled, and made into *chapatties*, paste-balls, and curries. Unripe pods and leaves are also boiled and eaten. A disease called lathyrism occasionally occurs in people whose diet consists of thirty to fifty percent chickling vetch. Southern Eurasia, cultivated. BROUK, BURKILL, BURR, HEDRICK 1919, LOVELOCK, TANAKA, VILMORIN, WATT; E7M, J39, N81, N84, 048, 053M

*Lathyrus tuberosus* - *Earth chestnut*, *Tuberous vetch*, *Dutch mice* {S}. In Europe, the plants are sometimes cultivated for their tubers, which have an agreeable, pleasant taste, much resembling that of the sweet chestnut. They can be eaten either boiled or roasted. Eurasia. BURR, FERNALD, HEDRICK 1919, VILMORIN; D47M, E83T, N84, 053M, 048, R49{PL}

*Lens culinaris* - *Lentil* {S}. The seeds are parched and eaten, or boiled and used in soups, stews, casseroles, curries, purees, stuffings, etc. The lentil and rice dish *mujaddara*, still eaten in Middle Eastern areas today, is said to be the *mess of pottage* referred to in the Biblical account of Esau and Jacob. Lentil flour, derived from yellow lentils, can be mixed with cereal flour and used in making breads. In Ethiopia, the roasted, ground seeds are used in the hot spice mixture called *mit'in shiro*. The young pods are eaten fresh or cooked like string beans. Sprouted seeds are widely eaten in salads, vegetable dishes, soups, etc. Southwest Asia, cultivated. BROUK, HEDRICK 1919, MACMILLAN, MESFIN [Re], MOLDENKE, SALLOUM [Re], UPHOF, VILMORIN [Cu]; H51{PD}, L14G{PD}, N84, 053M. (see also Sprouting Seeds, page 524)

#### CULTIVARS {DF}

**Black Beluga:** Tiny, plump, glossy black seeds; 2.5 to 3 mm in diameter; yellow cotyledons. Fast cooking, mild-flavored lentils that hold their shape well. Turn brownish when cooked. Excellent in soups, salads and side dishes. Can also be used for sprouting. Originated in the Middle East. Named for their resemblance to Beluga caviar. A7, A90M, E23T, E56, F86T, H73, J11M, K18M, L24M{SP}, N55

**Brewer:** Large, uniform seeds, 6.0 to 6.5 mm. in diameter; beige with slight brown mottling; yellow cotyledons; 1 or 2 seeds per pod. Semi-upright, heavy bearing plant. Matures 4 to 7 days earlier than Chilean. Standard Chilean type lentil grown in Washington and Idaho. Developed at Washington State University. Introduced in 1984. B49{S}, G47{S}

**Castelluccio:** Tiny, light-brown lentil from the Italian province of Umbria. Mild, earthy flavor and creamy texture. Holds its shape well. Often cooked with sausage or duck. Harvested in late July and early August. Relatively short plants, usually harvested by hand. Considered by many gourmets to be the best lentils in Italy. PLOTKIN; B71G

**Chilean:** Plants are short in height with attractive fern-like leaves. Can be grown in the winter in areas where winter vegetables can be grown. Generally considered a group name for large-seeded lentils with yellow inner seed color. The principal type grown commercially in the Pacific Northwest. A90M

**Crimson:** (Petite Crimson) Small, uniform, light brown seeds with some darkly mottled spots; attractive, bright reddish-orange cotyledons. Petite masoor type popular with gourmet and specialty food markets. Also very good for sprouting. Moderately branched, erect plants; 1 or 2 seeds per pod. Developed by Washington State Uni-

iversity from a germplasm line introduced from Giza, Egypt. A7, A90M, B31, C95{S}, E23T, F86T, F91{SP}, G47{S}\ H73, H99J{SP}, K18M, L13P, L24M{SP}, N40, N55

**Eston:** Small, flat seeds, about 2.5 mm. in diameter; light greenish-beige, sometimes mottled with purple; yellow cotyledons; 2 seeds per pod. Will turn brown when stored at room temperature for 2 years. Considered one of the best lentils for sprouting. Normally outyields Laird. Developed at the University of Saskatchewan from seed stock originating in Turkey. A90M, C14, G50{S}, H73, H99J{SP}, L24G{SP}

**Laird:** Large, thick seeds free of mottling, of good color; yellow cotyledons. Ripens about 2 weeks later than Chilean in the Pacific Northwest, a major disadvantage as the pods may not fill out. Often used as a sprouting seed. Grown extensively in Saskatchewan, Canada. Developed by A.E. Slinkard. A90M, C14{S}, H99J{SP}

**Pardina:** (Spanish Pardina) Very small, greenish-brown lentil with orange cotyledons, about 2.5 mm. in diameter. Excellent for cooking, having a firm texture and deep, nutty flavor. Available at gourmet specialty markets. Preferred in Spain over other types. Becoming more popular in the United States. Grown commercially in the Pyrenees. A7, A90M, B31, E23T, H73, J11M, K18M, L13P, N40, N55

**Red:** (Egyptian, Masoor) Seeds the size and form of those of the common lentil but with a dark skin and of a salmon color inside. Flowers light red. Season of maturity the same as the common lentil. Hulled, split seeds, called *masoor dal*, are used in Indian and Middle Eastern cuisines. Turns yellowish when cooked. BURR, HEDRICK 1919; A7, A52M, A90M, A90M{PD}, B31, B31{PD}, C94M, E31, E56, F74{DF}, F80{S}, I19M, J11M, J11M{ED}, L3J{S}, L50M, L99, M63M, etc. (see also Sprouting Seeds, page 524)

**Red Chief:** 95-105 days. Large, beige seeds with bright red cotyledons, 5.5 to 6.5 mm. in diameter; 1 or 2 seeds per pod. Semi-upright plant; consistently heavy bearing; free from insect and disease problems. Standard red lentil grown in the United States. Developed at Washington State University. Introduced in 1980. C95{S}, G47{S}

**Spanish:** Old landrace mixture of similar but slightly different varieties. Small, globular or roundish seeds. Seedcoat color ranges from mostly brown, through creams to black; some have greenish hues or are mottled with black. Inner seed color is yellow. G47{S}

**Vanaard:** Chilean type with extra-large seeds. Flattened, lens-shaped seeds; greenish-tan without mottling. Yellow inner seed color. Selected by the KUSA Seed Research Foundation as having good performance potential for the home garden. G47{S}

**Verte du Puy:** (Puy Green, Lentille Verte, Petite French) Distinct type with small seeds, only about 1/4 inch in diameter, but very thick; pale-green in color, spotted and marbled with dark green. Holds its shape when cooked. Considered a great delicacy and used primarily as a salad, dressed with vinaigrette, to be part of a tray of *hors d'oeuvres varis*. Grown in the departments of Haute-Loire and Cantal, France. VILMORIN, VON WELANETZ; A7, A90M, B31, C73P, C94M, E23T, E31, E56, E60P{PD}, E60P{SP}, G47{S}, H73, H99J{SP}, J66M, K18M, L3J{S}, L54{SP}, L89C{SP}, N40, etc.

#### *Lens esculenta* -> *Lens culinaris*

Lespedeza bicolor - *Yama-hagi* {S}. Young leaves, stems, and flowers are eaten boiled or fried. The leaves can also be used as a substitute for tea. Seeds are occasionally boiled and eaten with rice. Eastern Asia. KUNKEL, TANAKA; D47M, D95{PL}, F80, G26, H61M, K38, M69M{PL}, M95M, Nil, N84, 053M

*Lotus corniculatus* - *Bird's-foot trifol* {S}. Young pods are occasionally nibbled. The flowers yield a light-colored honey of good quality with a flavor reminiscent of clover honey. Eurasia, naturalized in North America. CRANE 1975, CRANE 1984, KUNKEL; A15Z, A25, C9{PL}, C43V, D26D, D47M, D68,

D92M, E38, F80, G19T, G26,199M, K95M, L41, M34M, M95M, R32, etc.

#### *Lotus tetragonolobus Tetragonolobus purpureus*

*Lupinus albus* - *White lupin, Lupini, Turmos* {S}. The seeds, after soaking for about three days in salted water to free them of their bitter taste and soften them, are cooked and eaten or used in soups. They are sold in some European countries, especially during village festivals. In Egypt they are extensively consumed during spring, especially on *shamm el-nesiem—mtiom* Spring D^, which is concurrent with Easter D^ . The toasted seeds are eaten as a snack, much like peanuts, salted almonds, or roasted pumpkin seeds. De-bittered and salted seeds are served in bars and cafes as an appetizer. In Turkey, the ground seeds are mixed with breadflour. The peduncles are pickled. Roasted seeds are used as a substitute for coffee. Mediterranean region. BIANCHINI, CUSUMANO [Cul], DAGHER, GLADSTONES, GRIEVE, KUNKEL, UPHOF; A7{DF}, F85, G50, J39, L3J, L13P{DF}, N81, N84, 053M, S17

*Lupinus albus* Saccharatus Group - *Sweet lupin, Snowbean* {S}. The seeds are relatively free of bitter tasting alkaloids and can be used without any preparation. Sweet lupin flour is used in the preparation of *lupini pasta*, a recently introduced commercial product. Immature pods can be sliced and eaten like snap beans. In 1928-29, the German breeder R. von Sengbusch was the first to succeed in finding low alkaloid or "sweet" lupin plants out of many thousands being tested. Later breeding produced cultivars that combined sweetness with early maturity and more rapid growth. GLADSTONES, SASS; (see also Sprouting Seeds, page 524)

#### CXJLTIVARS

**Kiev:** (Kievskij) Edible, sweet type developed in the Ukraine. Nutritious seeds are high in digestible protein (40%). Hardy annual to 3 feet tall. Also an excellent nitrogen fixing green manure crop. F73D, L77D, P17M

**Ultra:** 110 days. Low alkaloid seeds, 1,440 per pound; average protein content 34.3%. Short plants; height 30 to 32 inches. Blooms early, 57 days from planting. The cultivar most commonly used for sweet lupin pasta. Originated in Germany by Schultz and Velsen. Introduced in 1950. H7M

*Lupinus angustifolius* - *Blue lupin, Narrow-leaved lupin* {S}. The seeds, of low alkaloid cultivars, are used in the preparation of *tempeh*. Mediterranean region, cultivated. SHURTLEFF 1979, STEINKRAUS; N81, N84, 048, P17M, P49, R47, S55

#### CULTIVARS

**UniwHITE:** Low alkaloid type with a permeable seed coat. White seeds and flowers. Reduced pod-shattering. One of the leading cultivars in western Australia. Developed there by J.S. Gladstones. Introduced in 1967. GLADSTONES; JO

*Lupinus luteus* - *Yellow lupin* {S}. Roasted seeds have been used as a substitute for coffee for centuries. They are also ground into flour. The fresh seeds contain lupinotoxin, a poison, that is removed by a special process. Low alkaloid strains were developed prior to 1930 by von Sengbusch. Mediterranean region, cultivated. GLADSTONES, KUNKEL, MALLOS, TANAKA, UPHOF; D92M, JO, L91M, N81, 048, 053M, S17

*Lupinus mutabilis* - *Tarwi, Andean lupin, Pearl lupin, Chocho* {PL}. The seeds are soaked in water for several days to leach out bitter alkaloids, and are then boiled and eaten. In some countries, they are salted and served as a popular snack. Tarwi seed has a protein content of up to fifty percent, which is among the highest of any legume seed. The seeds also yield a light colored oil suitable for culinary use. Andean South America. FRIED [Re], NATIONAL RESEARCH COUNCIL 1979, NATIONAL RESEARCH COUNCIL 1989; G47G{DF}, 174

*Lupinus perennis* - *Wild lupin* {S}. The seeds are eaten like peas after proper preparation. North America. FERNALD, HEDRICK 1919, MEDSGER; C43V, E7M, F59, G47M, H63{PL}, H80,

J39M, J39M{PL}, J40, J40{PL}, J41M, J41M{PL}, J43, N11M, N23, etc.

*Macrotyloma uniflorum* - *Madras gram, Horse gram, Gahatko dal* {S}. Seeds are parched, and then boiled, fried, or used in curries and soups. Also the source of an edible oil, and flour that is processed into sweetmeats. The fleshy root was roasted and eaten by the Aborigines of Australia. Tropical Africa, Tropical Asia. CRIBB, HEDRICK 1919, MAJUPURIA [Re], SCHERY, TANAKA, WATT; D56M, F80, F85, N40M, N84, 093, Q12, Q46

*Medicago hispida* - *Medicago polymorpha*

*Medicago laciniata* - *Handagug-hadhari* {S}. The herb is used as a condiment for tea, or is mixed with boiled water and sugar to form a beverage. Macaronesia to Southwest Asia. BAILEY, C.; U63, X54

*Medicago lupulina* - *Black medic, Hop clover* {S}. The herb is used as a potherb. Seeds may be parched and eaten, or ground into flour. Eurasia, naturalized in North America. KIRK, TANAKA; D47M, E24, M34M, N71M, N81, N84, 053M, S55

*Medicago orbicularis* - *Medicago polymorpha*

*Medicago polymorpha* - *Chinese clover, Kam fa tsoi, Toothed bur-clover* {S}. Young leaves, stems, and flowers are eaten raw in salads, cooked as a potherb, stir-fried, or used in soups. Also dried or preserved. Very popular in the markets of Shanghai. Widespread. LARKCOM 1991 [Cu, Cul], TANAKA; F85, N84

*Medicago sativa* - *Alfalfa, Lucerne* {S}. Sprouted seeds are widely eaten in salads, sandwiches, omelettes, breads, soups, stews, etc. The vitamin rich leaves may be dried and sprinkled on cereal or added to soups and stews. Fresh or dried leaves and flower-heads are blended with red clover and spearmint or peppermint, and brewed into tea. In China, the young branch tops are lightly cooked and added to meat dishes. The young leaves are added to salads. Seeds can be ground into meal for making mush or bread. Yields a light-colored honey with good body and a mild, spicy flavor of excellent quality. It granulates rapidly and is often blended with other honeys. The herb is a source of chlorophyll used as a food supplement or for whitening the curd in the preparation of *Danablu* cheese. Eurasia, cultivated. CLARKE [Re], CRANE 1975, CROWHURST 1972, HERKLOTS, KULVINSKAS, LARKCOM 1984 [Cu], LEUNG, MARCIN, PELLETT, ROBINSON, R. 1995; A49D{DF}, B49, D17{PD}, D47M, E31{PD}, E38, F85, G93M, J19M{DF}, J82, J99G, N84, 053M, R47, S55, etc. (see also Sprouting Seeds, page 524)

CULTIVARS

**Buffalo:** Recommended for the Central Plains, where long, dry periods are common. Grows early in the spring and recovers quickly after cutting. High yielding. One of the first cultivars bred for resistance to bacterial wilt. Susceptible to pea aphid. Introduced in 1942. HANSON; K62, K71

**CUF 101:** A non-hardy or non-dormant cultivar grown from southern New Mexico to the Central Valley of California. Resistant to pea aphid, spotted alfalfa aphid and blue alfalfa aphid. One of the principal cultivars used for the production of alfalfa seeds for sprouting. Introduced in 1977. HANSON; B90, DIT, P17M

**Dakota:** A dormant cultivar occasionally used for sprouts. Dormant alfalfas are sometimes preferred for growing sprouts because they are considered easier to grow than non-dormant alfalfas, especially for beginning commercial growers. F91 {SP}

**Iroquois:** A very winter hardy North American alfalfa. The most dependable cultivar for the far North. Resistant to bacterial wilt. Seed in spring and late summer, 15 to 20 pounds per acre. Requires good drainage and sweet soil (pH at least 6.5) with adequate potash and phosphorous. Introduced in 1966. HANSON; A15Z, M95M

**Kansas:** (Kansas Common) Extremely hardy; also wilt and drought resistant. Successfully grown in all climates. Makes a good hay and

pasture crop, also excellent for improving the soil. Use 15 to 25 pounds per acre for drilled sowing, 25 to 30 pounds for broadcast sowing. A superior strain during the early periods of alfalfa development. K71

**Moapa 69:** An intermediate-dormant cultivar selected from the widely grown Moapa. Resistant to spotted alfalfa aphid. Widely used in California for producing alfalfa seeds for sprouting. In sprout production it has been shown to have higher yields but a lower protein percentage. HANSON; B90, DIT

**Nitro:** An annual, nonwinter-dormant alfalfa. It is superior to regular perennial alfalfas for nitrogen fixing because it does not enter dormancy and continues to fix nitrogen until it is killed by frost. In tests Nitro provided 124 pounds of nitrogen per acre versus 95 pounds for dormant types. The seeding rate is 8 to 15 pounds per acre. Discovered by University of Minnesota researchers. Introduced in 1986. HANSON; A15Z, E24, G6, I99M, J20, K95M, L77D, L89

**Ranger:** The hardiest, most prolific, and economical type of alfalfa to plant in the northern Great Plains and New England. Semi-dormant type. Sow 15 to 20 pounds per acre in well-drained, thoroughly prepared and limed soil. One of the first cultivars bred for resistance to bacterial wilt. In sprout production, it has lower fresh-weight yields and higher protein percentage. Introduced in 1942. HANSON; A15Z, C4, C43V, E53, E66M

**Vernal:** A hardy, heavy-yielding cultivar with high winter hardiness. Resistant to the deadly bacterial wilt. Will withstand early and frequent cuttings. Good for both hay and pasture. Introduced in 1953. Was the leading cultivar for nearly 25 years. Being replaced by newer cultivars that have higher levels of multiple-pest resistance and increased yield potential. HANSON; A15Z, B13, C4, D26D, E53, E66M, G50, H49, I93M, K71, M95M

*Melilotus alba* - *White sweet-clover* {S}. The fresh, young leaves are eaten in tossed green salads. They can also be cooked and served as a potherb, or added to soups and stews. Flowers are used as a vanilla-like flavoring. The pea-like seeds can be used as a seasoning for bean and split-pea soups. Produces a light-colored, mild honey with a delicate flavor said to be reminiscent of cinnamon or vanilla. Eurasia. CRANE 1975, CROWHURST 1972, KUNKEL; D47M, E53, F85, H80M{PD}, I99M, M34M, N71M, N84, 053M, S55

*Melilotus altissima* - *Sweet-clover* {S}. The herb is used like that of *Trigonella caerulea* for flavoring green cheese in Switzerland. Young shoots are consumed as a vegetable. Eurasia. UPHOF; N84

*Melilotus macrorrhiza* *Melilotus altissima*

*Melilotus officinalis* - *Yellow sweet-clover* {S}. The herb is used in Switzerland for flavoring *Schabzieger* or *Sapsago* cheese. The crushed, dried leaves can be used as a substitute for vanilla in flavoring puddings, cookies, and pastries. Young shoots are eaten like asparagus. Roots are consumed as food among the Kalmuks. Eurasia, cultivated. CROWHURST 1972, GRIEVE, KUNKEL, MACNICOL [Re], ROOT 1980b, UPHOF; B13, C85M, D47M, E53, F85J{PD}, H49, I99M, J97M, K5M, K71, M34M, M95M, N51M{ED}, N71M, N84, 053M, S55, etc.

*Moghania vestita* - *Flemingia vestita*

*Mucuna pruriens* - *Velvet bean, Cowitch, Cowhage, Benguk* {S}. Young pods are cooked and eaten like string beans. The seeds are utilized in *miso* manufacture. In Indonesia, they are fermented into *tempeh benguk*, *tapeh* and *dageh benguk*. The young leaves are steamed or boiled and eaten with rice. Tropical Asia, cultivated. HEDRICK 1919, OCHSE, SHURTLEFF 1979, STEINKRAUS, TANAKA; A26, A79M, C95, D33, F73D, F80, F85, G66, G73, I81M, N84, PIG, Q12

*Myroxylon balsamum* - *Balsam of Tolu* {S}. The trunk is the source of an aromatic, slightly bitter resin and essential oil used for flavoring chewing gum, baked goods, candy, ice cream, and soft

drinks. Tropical South America. MORTON 1976; E14T{PD}, F32D{PD}, G73{DF}, N84, 093, P5

*Myroxylon balsamum* var. *pereirae* - *Balsam of Peru* {PD}. Source of a hot, spicy, bitter resin and essential oil used as a flavoring in chewing gum, baked goods, candy and other foods. In Guatemala, the seeds are added to *aguardiente*, just as a bitter almond may be put into a bottle of *tequila* in Mexico. Central America. MORTON 1976; E14T, F32D, F85{S}, GO, G73{DF}, L34

*Myroxylon pereirae* - \**Myroxylon balsamum van pereirae*

*Olneya tesota* - *Desert ironwood* {S}. The seeds are parched or roasted and eaten for their peanut-like flavor. They may be used in place of navy or pinto beans in chowders and casseroles. They are also ground into flour by the Cahuilla Indians and used in gruels and cakes. Southwestern North America. CLARKE [Re], HEDRICK 1919, KIRK; C98, E66M, F63M, F85, 133, 198M{PL}, J86{PL}

*Onobrychis viciifolia* - *Sainfoin*, *Esparsette* {S}. Important honey plant in Iran and other areas. Yields a pale light amber honey that is very sweet and has a more pronounced flavor than honey produced by other legumes. Believed to be the source of the famous *Gatinais honey* of France. The sprouted seeds are eaten. Eurasia. CRANE 1975; C4, C43V, C95, E7M, E53, E66M, G26, G50, K62, Nil, N71M, N81, N84, 053M, S17, S55, etc. (see also Sprouting Seeds, page 524)

*Ononis arvensis* - *Ononis spinosa*

*Ononis repens* - *Ononis spinosa*

*Ononis spinosa* - *Rest-harrow*, *Wild licorice* {S}. Young, tender shoots are eaten raw in salads, as a potherb, or pickled and used as a sauce with cold meat. In Turkey, they are added to *herbal cheese*. The roots are chewed for their licorice-like flavor. Mediterranean region. GRIEVE, HEDRICK 1919, LEYEL 1987h, MABEY, OZTURK; E61{PL}, J82, K22{PL}, K63G, N71M, N84, Q24, S55

*Pachyrhizus erosus* - *Jicama*, *Yam bean*, *Mexican water chestnut*, *Potato bean*, *Saa got* {S}. The crisp, juicy, sweet tubers are eaten raw, stir-fried, boiled, roasted, braised, or used in soups. They are often sliced thin and sprinkled with salt, chili pepper, and lemon juice. Their crunchy texture is retained even after cooking, which makes them a popular substitute for water chestnuts in Chinese cooking. Also the source of a starch used in custards and puddings. Tropical America, cultivated. CUSUMANO [Cu, Re], HALPIN [Cu, Cu], HERKLOTS, NATIONAL RESEARCH COUNCIL 1979 [Cu], SCHNEIDER 1986 [Pre, Re], TANAKA; A79M, D33, E7M, E13G{PR}, F71M, F80, G47F{PR}, G93M, 133, J73, N40{PR}, 053M, R47

#### CULTIVARS

Mexican Turnip: Somewhat different in shape than the typical flattened globe-shaped type found in supermarkets. Has more of a taller oval shape reminiscent of a sugar beet. Snow white flesh. Excellent flavor and productivity. C92, K10

*Pachyrhizus tuberosus* - *Pachyrhizus erosus*

*Petalostemon candidum* - *White prairie-clover* {S}. A tea-like beverage can be made from the dried leaves. The roots are eaten raw or chewed for their pleasant, sweet flavor. Western North America. KINDSCHER, UPHOF, YANOVSKY; G47M, H70M, H70M{PL}, 111, 131, J39M, J39M{PL}, J41M, J41M{PL}, J42, J42{PL}, J43, L41

*Petalostemon purpureum* - *Purple prairie-clover* {S}. The dried leaves are used as a substitute for tea. Roots were used for chewing by Indians of the Missouri River region. Western North America. UPHOF, YANOVSKY; D82, F80, G47M, 111, J25M, J40{PL}, J41M, J41M{PL}, J42, J42{PL}, J43, K62, L41, N11M

*Phaseolus aconitifolius* - *Vigna aconitifolia*

*Phaseolus acutifolius* - *Tepary bean* {S}. The dried seeds are eaten boiled or baked. When well cooked, teparies are light and

mealy and have a rich bean-like aroma. In northern Mexico, teparies are popular as a base for soups and stews. They are also parched and ground into meal that can be added to boiling water for *instant beans*. The plant can produce large quantities of nutritious seeds in climates too arid for other beans. Southwestern North America. HERKLOTS, KAVENA [Re], MEDSGER, NATIONAL RESEARCH COUNCIL 1979, NIETHAMMER [Nu, Re]; D33, I16{DF}, N84, R47. (for cultivars see Tepary Bean, page 552)

*Phaseolus acutifolius* var. *tenuifolius* - *Wild tepary*, *Willow-leaf tepary* {S}. Seeds are cooked and eaten. The wild tepary is a vine, sometimes up to three meters high, that often climbs up desert shrubs. In comparison, domesticated types are either semi-vining or bushy, self-standing plants that can be grown as a field crop or in small gardens. Southwestern North America. KIRK, NATIONAL RESEARCH COUNCIL 1979; 116, N84

*Phaseolus angularis* - \**Vigna angularis*

*Phaseolus calcaratus* - \**Vigna umbellata*

*Phaseolus caracalla* - \**Vigna caracalla*

*Phaseolus coccineus* - *Runner bean*, *Seven year bean* {S}. The young, tender pods are eaten boiled, steamed, sauteed, baked, etc. They are usually French-cut in lengthwise strips before cooking. Immature seeds are used as shelled beans. Ripe, dried seeds can be used like dried kidney or lima beans. The flowers have a bean-like flavor, and are eaten in salads. Young leaves are used as a potherb. The starchy, tuberous root is sometimes eaten. Central America, cultivated. BRENNAN, BRYAN [Cu, Re], FELL 1982b, HALPIN [Cu, Cu], HERKLOTS, KUNKEL, MARTIN 1975, NATIONAL RESEARCH COUNCIL 1979, VILMORIN [Cu]; FIG. (for cultivars see Runner bean, page 516)

*Phaseolus limensis* - \**Phaseolus lunatus*

*Phaseolus lunatus* - *Lima bean*, *Sieva bean*, *Madagascar bean* {S}. The shelled beans are boiled and used in soups, stews, *succotash*, etc. Dried seeds are eaten in soups and stews or fermented into *tempeh kara*. Occasionally used for Japanese *an* production. The sprouted seeds are used as a vegetable in Chinese dishes. Young pods are steamed and eaten as a side dish with rice, or added to soups and stews. The leaves are also steamed and eaten, though they are often bitter. Tropical America, cultivated. DUKE [Nu], HERKLOTS, LUMPKIN, OCHSE, RODALE [Cu], SHURTLEFF 1979, VILMORIN; E13G{PR}, FIG. (for cultivars see Lima Bean, page 415, see also Sprouting Seeds, page 524)

*Phaseolus metcalfei* - *Metcalfe bean*, *Wild cocolmeca* {S}. The pea-sized seeds are cooled and eaten. Young pods are also used for food. In parts of Mexico, the roots are used as a catalyst in the preparation of *tesguino*, an alcoholic beverage. Southwestern North America. HEDRICK 1919, KIRK, KUNKEL, MEDSGER, STEINKRAUS; 116

*Phaseolus retusus* - *Phaseolus metcalfei*

*Phaseolus vulgaris* - *Kidney bean*, *French bean*, *Common bean* {DF}. Young pods are eaten raw in salads, boiled, steamed, sauteed, marinated, pickled, etc. *Ditty beans*, spicy pickled green beans, are popular in the Southern States. The immature seeds are boiled or steamed and served as a vegetable, or used in *succotash*, stews, etc. Dried seeds are boiled, baked, pureed, used in soups, dips, casseroles, salads and chili or fermented into *tempeh*. Young leaves are used as a potherb. The flowers are sauteed and added to cooked beans and fresh salsas. Sprouted seeds of Red Kidney and Pinto beans are commonly eaten. Cultivated. HERKLOTS, OCHSE, QUINTANA 1994, SHURTLEFF 1979, VILMORIN [Cu], WITHEE [Pre, Re]; F68P{PD}, L17. (for cultivars see Kidney Bean, page 391, see also Sprouting Seeds, page 524)

*Piscidia piscipula* - *Jamaica dogwood* {PL}. An important source of honey in the Yucatan where some of the world's best honeys originate. Florida, West Indies. CRANE 1975; D87G

*Pisum elatius* - *Pisum sativum* ssp. *elatius*

*Pisum sativum* - *Pea* {DF}. Unripe seeds are eaten raw, boiled, steamed, sauteed, etc. Dried seeds are used in soups and stews, pureed, ground into flour, or fermented into *dhokla*, *tempeh* and *dosa*. In Ethiopia, the roasted, ground seeds are used in the mildly hot spice mixture called *nech' shiro* and a hotter mixture known as *mit 'in shiro*. Unroasted pea flour is also widely used in Ethiopian cuisine, in various sauces, pastes and stews such as *bozena*, *doyyo*, and *infirfir*. Roasted seeds are also used as a substitute for coffee. The immature pods of some cultivars are eaten raw or used in stir-fried dishes. *Shanxi vinegar*, a delicious molasses-like vinegar from northern China, is made from peas, sorghum and barley. The flowers are eaten in salads. Young leaves and shoots are used as a potherb. Sprouted seeds are eaten in salads, vegetable dishes, soups, etc. In Burma, they are added to a fried rice dish known as *htamin kyaw*. Cultivated. BARASH, CARCIONE, HERKLOTS, MESFIN [Re], STEINKRAUS, TAIK [Re], UPHOF, VILMORIN [Cu], WEINZWEIG 1996; E13G{PR}, G17M, H51{PD}, N54{PD}. (for cultivars see Pea, page 450, see also Sprouting Seeds, page 524)

*Pisum sativum* ssp. *elatius* - *Wild pea*, *Pea of the oasis*, *Maquis pea*, *Hammez* {S}. Seeds are eaten when dried or are made into flour. Mediterranean region. Often cultivated in the oasis of the Sahara. North Africa, Southwest Asia. UPHOF, ZEVEN; 053M, S55

*Platymiscium pinnatum* - *Quira macawood*, *Cachimbo*, *Cristobal* {S}. Roasting corn meal in the leaves of this tree is reputed to impart an agreeable flavor. Tropical South America. DUKE; F85

*Psophocarpus palustris* - *Niamadi soso* {S}. Young pods and rhizomes are consumed as vegetables in some parts of Africa. The leaves are also edible. Tropical Africa. DALZIEL, MARTIN 1975, UPHOF; Q12

*Psophocarpus tetragonolobus* - *Winged bean*, *Goa bean* {S}. The immature pods can be eaten raw or cooked, having the taste of snap beans. Young leaves and shoots are used as potherbs. Unripe seeds can be used in soups. The protein-rich dried seeds are roasted and eaten like peanuts, used as a coffee substitute, or fermented into *tempeh*. Also the source of an edible oil. The slightly sweet, tuberous roots contain twenty percent protein or more, which is much higher than contained in other roots and tubers such as cassava. They are eaten raw, or cooked like potatoes. Flowers and flower buds can be eaten in salads, steamed, or batter-fried like tempura. The light blue flowers are also used for coloring foods. Crisp hypertrophies, formed by a parasitic mold, are consumed as a delicacy by the Sundanese in Indonesia. They are known as *djaat keked*. Tropical Asia, cultivated. CUSUMANO [Cul, Re], HERKLOTS [Cu], NATIONAL RESEARCH COUNCIL 1975b, OCHSE, SCHNEIDER 1986 [Cul, Re], SHURTLEFF 1979 [Cul, Re], UPHOF; A79M, £60M{PR}, D33, D55, F73D, F85, K63G, L59, N84, PIG, Q12, R47, S70

## CULTIVARS

**Boaor:** Long-podded type, often reaching 8 inches in length. Although larger than other strains, the pods retain their tenderness. Originated in Indonesia. D33

**Chimbu:** Grown for the long pods which stay tender to a large size. They also have an attractive crimson-red color. D33

**Day Neutral:** Most cultivars will not produce blossoms until days are quite short. These special day-neutral cultivars will produce regardless of day length and so can potentially be grown considerably north of their usual limit in southern Florida. The seed should be scarified first for good germination. D33

**Square:** Selected for its potential as a commercial cultivar due to the unique shape of the pod which makes it better suited to packing in containers. D33

**Thai:** 50 days. An improved type from Thailand. Very vigorous vine, easy to grow. Prefers relatively cool weather. C20M

*Psoralea esculenta* - *Prairie turnip*, *Indian breadroot* {S}. The starchy, glutinous root is eaten raw, boiled, baked, fried, roasted, or dried and stored for future use. Dried roots can be ground into flour and used for seasoning other food, thickening soups, and making bread and puddings. The raw root is said to have a sweetish, turnip-like taste. Has been recommended for improvement by breeding and selection. North America. ANGIER [Re], FERNALD, HARRINGTON, H., KINDSCHER, MEDSGER, NATIONAL RESEARCH COUNCIL 1979; J6, J39M, J39M{PL}, N84

*Psoralea glandulosa* - *Jesuit's tea*, *Cilen* {S}. Leaves are used as a substitute for tea. In Valparaiso, Chile a delicious carbonated beverage is made from the boiled leaves. Andean South America. ALTSCHUL, HEDRICK 1919, MACMILLAN; F85, K63G

*Psoralea lutea* -> *Psoralea glandulosa*

*Psoralea pinnata* - *Blue pine weed*, *Taylorina* {S}. Source of a light to extra light amber honey with good body and a distinctive flavor said to be reminiscent of desiccated coconut. The honey is slow to granulate. South Africa, Australia and New Zealand. CRANE 1975; N84, S28M

*Pterocarpus indicus* - *Rosewood*, *Narra*, *Padauk* {S}. The young leaves and fragrant flowers are eaten. Tropical Asia. BURKILL, TANAKA; A79M, E21D{PL}, F85, N84, P17M

*Pterocarpus marsupium* - *Gun-kino tree* {S}. Flowers and seeds are eaten. Also used in the preparation of some European wines. Southern Asia. MENNINGER, TANAKA; E21D{PL}, F85, N84, P5, Q46

*Pterocarpus santalinus* - *Red sandalwood*, *Red sanders* {DF}. The wood is ground to a powder and used as a red food dye in commercial spice blends and sauces. In Medieval England, it was often employed for dyeing jellies, gingerbread, pottages and other foods. Tropics. BURDOCK, WILSON, G; E14T, GO, K18M, L34, N7D

*Pueraria lobata* - *Kuzu*, *Kudzu* {S}. The roots are occasionally steamed or boiled, and served with soy sauce, miso, or salt or they are used to make a sweetish broth that is used in soups. In Korea, the roots yield a tonic juice drink and a starchy soup-like tea. Also the source of an excellent starch used as a crispy coating for deep-fried foods, or for thickening sauces or soups. It is also made into noodles, or like agar or gelatin serves as a jelling agent for salads, confections, and desserts. The tender, young leaves and shoots are eaten raw, boiled, sauteed, fried, or pickled. Fresh picked shoots are said to taste like a cross between a bean and a pea. The flowers are cooked and eaten or made into pickles. Eastern Asia, cultivated. DAHLEN [Pre, Cul], FERNALD, HERKLOTS [Cu], ROSS [Cul, Re], PEMBERTON, SHURTLEFF 1977 [Pre, Re], TANAKA; A25G{PD}, B21P{DF}, E14T{DF}, E56{PD}, E66T{PD}, F68T, I19M{PD}, J82, K18M{DF}, K38, L34{DF}, N84, 093

*Pueraria phaseoloides* - *Tropical kuzu*, *Kuzu-ingen* {S}. The tuberous root can be eaten. Tropical Asia. BURKILL, TANAKA; A79M, F85, P17M, Q12

*Pueraria thumbergiana* - *Pueraria lobata*

*Robinia neomexicana* - *New Mexico locust* {S}. Flowers are eaten raw. Southwestern North America. YANOVSKY; A12M{PL}, B94, D95{PL}, E66M, E67T{PL}, G89M{PL}, J25M, J25M{PL}, K63G, L13, L55J

*Robinia pseudacacia* - *Black locust*, *False acacia* {PL}. The flowers are dipped in egg batter and fried, added to pancake batter, or made into a pleasant drink. Young, tender pods are sometimes boiled and eaten. The slightly acid, oily seeds may be boiled and used like peas or beans. Flowers are the source of *acacia honey*, a light-colored, heavy bodied honey popular in Hungary, Romania and other parts of eastern Europe. Acacia honey often has walnuts added to it. North America, cultivated. BUGIALLI, CRANE 1975, CROWHURST 1972, DE VITA [Re], FERNALD, GIBBONS 1979, MEDSGER; A7{PD}, B71G{PD}, C9M{S}, C60D{PD},

D95, E84, F80{S}, H4, 14, I94{PD}, J16, J26, K32M{PD}, K37P{PD}, K63G{S}, 053M{S}, etc.

*Sarothamnus scoparius* - *Scotch broom* {S}. Flower buds are added to salads, made into wine, or pickled in vinegar and used like capers. The tender green tops have been used like hops to give a bitter flavor to beer. Roasted seeds are used as a substitute for coffee. Eurasia, cultivated. GRIEVE [Cu], HEDRICK 1919, MABEY [Re], MACNICOL [Cul, Re], UPHOF; B61M, C43M, C43M{PL}, D92M, E33M{PL}, E81M, J76, J76{PL}, K38, K63G, M69M{PL}

*Sesbania aegyptiaca* - *Sesbania sesban*

*Sesbania grandiflora* - *Agati, Vegetable hummingbird* {S}. The flowers are eaten raw in salads, boiled, fried, or used in curries, soups, and stews. They are rich in sugar and iron and are said to taste like mushrooms. Before eating, the center part of the flower is removed to reduce bitterness. The long, narrow pods are eaten as a vegetable dish, much like string beans. In Indonesia, the protein-rich seeds are fermented into *tempeh turi*. Young leaves and shoots are eaten in salads, stews, or as a potherb. Tropics, cultivated. HEDRICK 1919, HERKLOTS, MACNICOL [Re], MARTIN 1975, NATIONAL RESEARCH COUNCIL 1979 [Nu], OCHSE, SHURLEFF 1979; A12G, A79M, E21D{PL}, F80, F85, N79M, N84, 033, P5, P17M, Q12, Q32, Q46, R47, R50, etc.

CULTIVARS

**Coccinea:** A form with attractive scarlet flowers. Collected in India. F85

*Sesbania pachycarpa* - *Sesbania sesban*

*Sesbania sesban* - *Egyptian sesban* {S}. The flowers, leaves, and immature fruits are cooked and eaten. In tropical Africa, the seeds are used to make a fermented flavoring paste called *soumbara*. Old World Tropics. DALZIEL, MARTIN 1975, TANAKA; A12G, E21D{PL}, F85, N84, 093, P5, P17M, Q12, Q18, Q46, R50

*Sophora japonica* - *Japanese pagoda tree, Enju, Wai-shue* {S}. Young leaves and flowers are cooked and eaten or used as a substitute for tea. The seeds are the source of a starch. Eastern Asia. ALTSCHUL, TANAKA; A79M, C9M, D95{PL}, E7M, E47, G66, H4{PL}, I77M{PL}, I83M{PL}, K38, L91M, N79M, N84, 053M

*Sphenostylis stenocarpa* - *African yam bean* {S}. The protein-rich seeds are eaten as a vegetable, either alone, in soups, or with yams, maize or rice. In Nigeria, the hard seeds are soaked in water overnight before being ground for use in the local dish *make*. The spindle-shaped tubers are also rich in protein. Their white flesh is eaten raw, or cooked like potato, which it resembles in taste. Leaves are also edible. Tropical Africa. MARTIN 1975, NATIONAL RESEARCH COUNCIL 1979, VAN EPENHUSEN; U37M

*Tephrosia purpurea* - *Purple tephrosia* {S}. Roots are used in Africa for flavoring milk. The seeds are used as a substitute for coffee. Tropics. BURKILL, DALZIEL, UPHOF; F85, N84

*Tetragonolobus purpureus* - *Asparagus pea, Winged pea, Bindow* {S}. The young, tender pods can be eaten raw in salads, sauteed in butter, stir-fried, or added to soups and stews. Their flavor is said to be like asparagus. It is best to harvest the pods before they reach one inch in length, for they quickly become tough. Seeds are eaten like peas. Roasted seeds are used in the preparation of a coffee-like beverage. Mediterranean region, cultivated. FELL 1982b, HARRINGTON, G. [Cu], KUNKEL, LARKCOM 1984, ORGAN [Cu], VILMORIN; A79M, G73, K38, L91M, N84, 053M, Q34, R32, S55

*Trifolium hybridum* - *A Is ike clover* {S}. Dried flower-heads make a delicate and healthful tea when mixed with other teas. The leaves and flower-heads can be eaten boiled, or after soaking for several hours in salty water. Dried flower-heads and seeds can be ground into a nutritious flour. An important source of honey in the United States, the honey being light, mild and of good flavor.

Eurasia, cultivated. CRANE 1975, PELLETT, PETERSON, L.; A25, B13, B49, D68, E24, E38, E53, G71, H54, 193M, 199M, J20, J97M, K62, K71, M34M, M95M, etc.

*Trifolium incarnatum* - *Crimson clover* {S}. The sprouted seeds can be eaten in salads, sandwiches, soups, etc. They are the largest of the clover sprouts and have a crisp texture and robust flavor. Also notable for producing sprouts free of hulls. Dried flower-heads are used as a substitute for tea. Seeds can be ground into flour. Mediterranean region, cultivated. MEYEROWITZ 1994a, PETERSON, L.; B49, C14{SP}, D68, E24, F11, F91{SP}, G93M, H54, H80, I99M, K71, L24{SP}, L54{SP}, L41, L89, M34M, N11M, N84, etc. (see also Sprouting Seeds, page 524)

*Trifolium ornithopodioides* - *English fenugreek* {S}. The dried leaves are coumarin-scented and have been suggested as a substitute for fenugreek. England. MABEY; U63

*Trifolium pratense* - *Red clover* {SP}. Leaves and flower-heads are dried, powdered and sprinkled on boiled rice. Fresh, young leaves and flower-heads can be eaten in salads and sandwiches, boiled, cooked in soy sauce, or added to soups. Sprouted seeds are preferred by some over alfalfa sprouts for their crisper texture and more robust flavor. Red clover is one of the main ingredients of *herbal chews*, substitutes for chewing tobacco. Fresh or dried flowers are brewed into a delicate, sweet tea. Eurasia, cultivated. LEGGATT [Re], MACNICOL [Cul, Re], MARCIN, MEDSGER, MICHAEL [Pre, Re], TANAKA; B49{S}, B90, C41{PD}, C85M{S}, E14T{PD}, E60P, F37T, F97M, G91, H49{S}, H99J, I81T{PR}, I81T{DF}, L24M, L34{DF}, N7D{PD}, R47{S}, etc. (see also Sprouting Seeds, page 524)

CULTIVARS

**Kenland:** Seeds are commonly used for growing high protein clover sprouts used in salads. Fresh or dried blossoms are brewed into tea. Short-lived perennial with strong reseeding ability. High yielding, and also a good fixer of nitrogen. Excellent for attracting bees and beneficial insects. C43V, E53, E66M, F11, G19T, G93M, I99M, J73, M95M

*Trifolium repens* - *White clover* {S}. Leaves are eaten in salads or as a potherb. The dried flower-heads are used as a substitute for tea. They are also ground, along with the seeds, into a powder that is sprinkled on other foods. Flowers are eaten in sandwiches or made into syrup. Also the source of a light, mild honey with uniform granulation. Eurasia, cultivated. CRANE 1975, FERNALD, HEDRICK 1919, MICHAEL [Pre, Re]; B13, B49, C61G{PD}, D27M{PD}, G26, H54, 193M, N84, 053M, R47, S55

CULTIVARS

**New Zealand White:** Similar in habit to White Dutch, but more vigorous, slightly taller, and more heat-tolerant. Often planted in lawns, pathways, and irrigated orchards and vineyards. Fixes nitrogen and attracts beneficial insects. Will spread and thicken when infrequently mowed. Sow 15 to 30 pounds per acre in fall or spring. B49, G19T, G93M, I99M, K95M, P17M

**White Dutch:** Low-growing, creeping, perennial clover with small white flower-heads and small leaves. Used primarily for lawns but also in pasture mixtures, as a green manure, or for h<sup>^</sup>. Also used for undersowing in vegetable beds as a living mulch. Must be watered in the summer. Sow 4 to 10 pounds per acre. A25, B49, C85M, D65, E53, F11, G6, G71, G93M, H49, I99M, J97M, K27M, K95M

*Trigonella arabica* - *Nafal* {S}. In the Sinai and Negev desert areas, the Bedouins use the leaves as a condiment for clarified butter (*samin*). Saharo-Arabian region. BAILEY, C; U63

*Trigonella caerulea* - *Sweet trefoil, Curd herb, Utskho suneli* {S}. The dried, powdered leaves and flowers are used in Switzerland for flavoring and coloring *Schabzieger* or *Sapsago* cheese, which is used in fondues. In some parts of Tyrol it flavors *brownwürze* bread. Also used as a condiment in soups and potato dishes. An important component of the Georgian spice mixture known as *khmeli-suneli*, and *kharcho*, a sour beef soup. A decoction of the herb is used as an

aromatic tea, or for flavoring China tea. Young seedlings are eaten with oil and salt. Mediterranean region to Southwest Asia. GOLDSTEIN [Re], HEDRICK 1919, MACNICOL, MARGVELASHVILI [Re], TANAKA, UPHOF, WALTER, WOLFERT 1994a; F73D, F85J{PD}, J82, N51M{PD}, N84

*Trigonella corniculata* - *Champa met hi*, *Lukaika*, *Piring* {S}. The young leaves and stem tips are eaten as a potherb. Kasuri types are often dried and sold in packages at Indian stores. These can be soaked in water and used as a flavoring in cooked dishes. Mediterranean region to Southwest Asia. DEVI, TANAKA, WATT; U63, X54

#### CULTIVARS

**Kasuri:** (Kasuri Methi) An excellent soft-core cultivar of methi used as a *sag* or a potherb. Several cuttings can be taken from a single crop. Slower growing than common methi or fenugreek, and remains in a rosette condition during most of its vegetative growth period. Produces bright, orange-yellow flowers. Grown in cooler northwestern parts of India from September through the winter months. BOSE 1993; E83T, F74{DF}, S59M, S93M

*Trigonella foenum-graecum* - *Fenugreek*, *Methi* {S}. The aromatic leaves are a popular potherb in India. They can also be used sparingly in salads. In the Near East, the germinated seeds are added to a lamb stew traditionally flavored with honey. The ground seeds are used to give a maple flavor to confectionery, and are one of the principal ingredients of curry powder. Roasted seeds are used as a substitute for coffee. Sprouted seeds can be braised in olive oil with parboiled cardoon stalks. Seeds and leaves may be brewed into a pleasant tea. The essential oil is employed as a flavoring for imitation maple syrup, vanilla compositions, rum, butterscotch, licorice, pickles and cheese seasoning. Mediterranean region to Southwest Asia. ATAL, GRIEVE, HEDRICK 1919, KRAFT, LARKCOM 1984 [Cu], MALLOS [Re], MARCIN, ROOT 1980b [Cui]; C81M, C85M, D92M, E7M, F80, F97M{DF}, G57M, G68, G87,199M, J73, K22, L17{DF}, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Duma:** Improved type selected for its leaves which are milder in flavor than other strains. They are used in cooking. The seeds, which are smaller than those of common fenugreek, are ground and added to curries. J73, N84

**Kashmiri:** A strain from Kashmir in northern India. In Kashmir, fenugreek is often cooked with minced meat. MATTOO [Re]; Q18

*Ulex europaeus* - *Gorse* {S}. Flower buds are pickled in vinegar and eaten in salads. The leaf-buds are used as a substitute for tea. The flowers are made into a wine which is popular in Great Britain. Europe, North Africa. EAVIES [Re], EVELYN, GRIEVE, MACNICOL [Cul, Re], MICHAEL [Pre, Re]; G66, K38, K63G, L91M, N71M, N84, 053M, P49, Q46, R78

*Vicia cracca* - *Cow vetch* {S}. Young stems and leaves are eaten as a potherb. Leaves are also used as a substitute for tea. The seeds are eaten boiled or roasted. Eurasia. HEDRICK 1919, ZEVEN; F80, N71M, N84, 053M, S55

*Vicia faba* - *Faba vulgaris*

*Vicia grandiflora* var. *kitaibeliana* - *Bigflower vetch* {S}. The leaves of some cultivars can be eaten as a green vegetable. Eastern Asia.

#### CULTIVARS

**Woodford:** Makes a good salad plant. The leaves are as mild as a raw lettuce leaf, without the grassy flavor of raw clover and the bitter taste associated with most edible but non-salad plant leaves. Primarily used as a winter-annual pasture plant for feeding livestock and as a green manure. Developed at the University of Kentucky. LOGSDON 1980; U53T

*Vicia monantha* - *Auvergne lentil*, *Bard vetch*, *One-flowered tare* {S}. The thick, floury, lentil-like seeds are eaten boiled or in soups. Mediterranean region. BAILEY, C, BURR, UPHOF, VILMORIN; W54, Z23M

*Vicia sativa* - *Common vetch*, *Winter tare*, *Lentil of Canada* {S}. Fresh or dried seeds are eaten in soups. Dried seeds are also ground into flour, mixed with that of corn, rye, or wheat, and made into bread. Young leaves and shoots are eaten. Also used as a substitute for tea. Eurasia, cultivated. BURR, HEDRICK 1919, TANAKA; FI 1, F73D, G19T, H61M, M34M, N81, N84, 053M, R32, S17, S55

*Vicia tetrasperma* - *Smooth tare*, *Kasuma-gusa* {S}. Young leaves and shoots are cooked and eaten as a vegetable. Also used as a coffee substitute. Eurasia. TANAKA; N84, 048

*Vigna aconitifolia* - *Moth bean* {S}. In India, the protein-rich seeds are used as a pulse, either whole or split. The split beans, or dal, are boiled, parched, fried in oil or used in the preparation of a salted snack called *bhujia*, which looks like broken macaroni. They are also substituted for Bengal gram in the preparation of *dhokla*, a fermented cake made from rice and dal. Young, tender pods are eaten as a vegetable. Tropical Asia. DEVI [Re], HERKLOTS, KUNKEL, NATIONAL RESEARCH COUNCIL 1979, STEINKRAUS, WATT; B49, F73D, F74{DF}, F80, F85, N84

*Vigna angularis* - *Azuki*, *Adzuki bean*, *Aduki bean*, *Red bean* {S}. The seeds are candied, boiled and served with rice or other cereals, added to soups, stews and salads, and are an ingredient of *hoisin sauce*. They can be popped like corn or used as a coffee substitute. Also made into *sweet bean paste* or *an*, which is used as a filling in *mochi*, steamed buns (*manju*), *taiyaki* waffles, Chinese *moon cakes*, *yokan*, and other Oriental sweets and confections. A festive rice and azuki dish, *sekihan*, is often served at weddings or birthdays. The young, tender pods can be eaten like snap beans. Eastern Asia, cultivated. CUSUMANO [Cul, Re], HARRINGTON, G. [Cu, Cul], HAWKES [Re], KRAFT, LUMPKIN, SACKS, SHURTLIFF 1975, SHURTLIFF 1977 [Re], SUGANO [Re], TANAKA; A52M{DF}, E56{DF}, F80, F97M{DF}, H91{PD}, I19M{DF}, I19M{PD}, J11M{DF}, M46, PIG, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Buff:** Rare buff-colored strain. Slightly sweet seeds. Easily shelled pods, 4 to 5 inches long. Grows about 2 feet tall. Requires a long, warm growing season of approximately 100 days. F73D

**Express:** 118 days. Small beans, about 2/3 the size of Navy beans. Shiny and dark red, the edible quality is unique. Express was developed by Johnny's Selected Seeds, and is a genuine Japanese type. It is one of the earliest maturing adzuki beans. Vigorous, upright plants. G6, L77D, N84

**Hokkaido:** {DF} Extra fancy, red beans. Organically grown in the rich volcanic soils of Hokkaido Island, Japan. Renowned for their nutritional and medicinal properties. F88, G47B, H91, I19M

**Takara:** Early-maturing adzuki with good yields of small, dark-red beans. Good for sprouting or adding to soups. Grows about 2 feet tall. K46T

*Vigna caracalla* - *Snail vine*, *Corkscrew flower* {S}. In Mexico, the Warihios employ the large root as a riser in making their fermented drink, *batari*. Paleotropics. ALTSCHUL; B41 {PL}, F53M{PL}, F85, G96{PL}, L90M, L91M, N84, 089, 093

*Vigna catjang* - \**Vigna unguiculata* ssp. *cylindrica*

*Vigna cylindrica* - \**Vigna unguiculata* ssp. *cylindrica*

*Vigna mungo* - *Black gram*, *Urad*, *Urd* {S}. Seeds are boiled and eaten, ground into meal for bread, or made into spiced balls. They are the chief constituent of the wafer biscuits known in India as *papar* or *papadam*. Also an essential ingredient of *idli* and *dosa*, acid-leavened fermented cakes made from rice and dal. The split, unhusked beans are known as *chi lke urad*, while split and husked beans are simply called urad dal. Roasted and ground seeds are an ingredient of *sambhar*, a spice mixture that is widely used in the vegetarian Brahmin cooking of southern India. The leaves are edible. Tropical Asia, cultivated. DEVI [Re], JAFFREY [Re],

MACMILLAN, MARTIN 1975, NORMAN, STEINKRAUS, WATT, ZEVEN; A7{PD}, A90M{DF}, C34G{DF}, C95, F73D, F74{DE}, H73{DF}, L77D, N7D{DF}

*Vigna radiata* - *Mung bean*, *Golden gram* {S}. The seeds, either whole or as dal, are boiled and eaten, added to soups and stews or fermented into *idli*, *ontjom hitam* and *tempeh kacang hijau*. A famous Korean pancake called *pindaetok* is made from mung beans. *Kicharee* or *kichadi* is a basic Ayurvedic food of mung beans, rice and spices valued for its ease of digestion and assimilation. Peeled and split beans, called *yellow mung beans*, are often used in preparing starchy dishes and sweets, such as Chinese *moon cakes*. Sprouted seeds are widely eaten in salads, stir-fried dishes, soups, etc. *Silver sprouts*, sprouts with roots and seeds removed, often garnish special dishes such as braised shark's fin. The ground seeds are used in place of, or to adulterate adzuki-bean meal. Mung bean flour is used in Korea to make *chongpo muk* or jellied *mung bean curd*. Immature seeds are boiled, pureed, and served as a dip. Young pods are eaten like Chinese snow peas. Young leaves are steamed and eaten. The seeds are the source of a starch, *hunkwe*, used in the manufacture of *cellophane noodles* or *fun see*, and *Tientsin fen pi*—transparent, brittle round sheets soaked in boiling water and eaten as a cross between cellophane noodles and rice noodles. Tropics, cultivated. RALLENINE [Re], CUSUMANO [Cul, Re], HARRINGTON, G. [Cu, Cul], HERKLOTS, MILLON [Re], MORNINGSTAR, OCHSE, PASSMORE, ROUTHIER 1989 [Cul, Re], SO [Re], SHURTLEFF 1979, STEINKRAUS, TANAKA, TIERRA; A75, B49, C27G{PD}, C85M, L77D, PIG, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Berken:** (Berken's Jumbo) Small, round, olive-green beans; pods 3 inches long, with up to 12 seeds per pod. Somewhat twining plant, averages 24 inches tall. Produces sprouts in 3 to 5 days, dry shell beans in 90 days. May be sprouted indoors or grown outdoors for a seed crop. Standard, widely adapted cultivar. D11M, F70, G71

**Min Guana No. 1:** 87 days. One thousand-kernel weight, 58 to 65 grams. Protein content 23.5%; rich in minerals and B vitamins. Tolerant to poor soil and drought; not tolerant to waterlogging. Used for medicinal purposes, food and beverages or sprouts. 054

**TexSorout:** Large, shiny green seeds; shatter-resistant pods, 12 or more seeds per pod. Upright bush produces an abundance of pods. Seeds germinate rapidly to produce sprouts superior in both sprout size and sprout yield. Moderate resistance to powdery mildew, pod borer, aphids, and drought stress. Generally earlier maturing and higher yielding than Berken or Lincoln cultivars. Used as a dry bean or for sprouts. L89G

**Ying Ge:** 90 days. Medium late cultivar, most suitable for producing sprouts. One thousand-kernel weight, 47.5 to 50 grams. Protein content 23.96%; rich in vitamins and minerals. Plant height about 2 feet; tolerant to drought and poor soil. 054

**Zhona Lu No. 1:** 67 days. Medium early cultivar with dark green seeds. Concentrated pod set high on the plant; matures evenly; pods do not split. Resistant to lodging, leaf blight and powdery mildew. 054

*Vigna sesquipedalis* - *Vigna unguiculata* ssp. *sesquipedalis*

*Vigna sinensis* *Vigna unguiculata*

*Vigna umbellata* - *Rice bean*, *Red bean*, *Masyang ko dal* {S}. The young leaves and pods are steamed and eaten as a side-dish with rice. Dried seeds are boiled and served with rice, or used in soups and stews. Sprouted seeds are eaten. Tropical Asia, cultivated. HERKLOTS, MAJUPURIA [Re], NATIONAL RESEARCH COUNCIL 1979, OCHSE; F73D, F85, N84

*Vigna unguiculata* - *Cowpea*, *Southern pea*, *Protopea*, *Lobia* {S}. Immature seeds are steamed, boiled, sauteed, stir-fried, etc. The dried seeds are used in soups, stews, *hoppin\* John*, purees, ground into flour, or fermented into *dosa* and *tempeh kacang merah*. Split seeds are known as *chowla dal*. Cowpea fritters, known as *akara*,

*akkra* or *calas*, are popular in West Africa and the Caribbean. Roasted seeds are used as a substitute for coffee. In tropical Africa, large-leaved forms are cooked and eaten like spinach. They are used in Indonesia for the preparation of *oorab*, a dish consisting of steamed young leaves mixed with grated coconut and chili paste. Young pods can be eaten like French beans. Sprouted seeds are eaten, and are sold as *Chinese Red Bean* or *red pea* in the United States. Tropics, cultivated. BRENNAN [Re], DEVI [Re], FELL 1982b, HALPIN [Cu, Cul], HERKLOTS [Cu], HESS, OCHSE, ORTIZ 1973 [Re], SHURTLEFF 1979, TAIKAKA, VAN EPENHUSEN, WILSON, E.G. [Re]; D27M{PD}, E13G{PR}, F85, K95M, N84, PIG. S17. (for cultivars see Cowpea, page 350, see also Sprouting Seeds, page 524)

*Vigna unguiculata* ssp. *cylindrica* - *Catjang* {S}. Young pods are eaten as a vegetable. Seeds are also consumed. Tropics, cultivated. TANAKA, WATT; F85, M25, N84, Q46

*Vigna unguiculata* ssp. *sesquipedalis* - *Asparagus bean*, *Yard long bean*, *Dow gauk*, *Snake bean* {S}. The immature pods, which may grow to twenty four inches, are eaten raw, steamed, stir-fried, or sauteed. They are best if harvested when young and tender. The raw pods are sweet, crisp, and have a delicious mushroom-like flavor. Young leaves and stems can be boiled or steamed, and served like spinach. Seeds are eaten boiled with rice, or mashed. The sprouted seeds are also consumed. Cultivated. FELL 1982b, HALPIN, HARRINGTON, G. [Cu, Cul], HERKLOTS, KRAFT [Re], ORTIZ 1973 [Re], ROUTHIER 1989 [Cul, Re], TANAKA; A79M, B73M, C82, D33, E13G{PR}, G33, G71, N40{PR}, R47

#### CULTIVARS

**Black-Seeded:** 70 days. Long, round, thick deep-green pod; 12 to 15 inches long, 1/4 inch in diameter. Seeds are blackish when mature. Good garden or market cultivar. C20M, F73D, J73, L7M, L59, N84, PIG, Q34

**Black Striped-Seeded:** 60 days. A newly developed cultivar, producing high quality, crisp, flavorful beans. High yielding plant. Developed in Taiwan. D55, F73D, L79G, N84

**Charlotte:** 70 days. An earlier maturing type which produces longer pods, 16 to 24 inches, while still remaining tender; deep green color. Heat and drought tolerant; climbs well. Small, black seeds. Good quality for home or market use. M32

**Dwarf:** Light green pods, 8 1/2 to 10 1/4 inches long; should be picked daily; early maturing at 11 weeks. Prolific plant, likes lots of heat and water if drainage is sufficient; tolerates shade. Unusual in that it will not climb. PIG

**Extra long Black-Seeded:** Pods are longer and more slender than the red-seeded type; will grow 2 to 2 1/4 feet long under optimum conditions, but are usually harvested at 15 to 18 inches when the pods are more tender. Deep green color; fine quality for snap bean use. Seeds are small and black. C20M, S63M

**Extra Long Red-Seeded:** A leading market cultivar that will grow pods two feet long under optimum conditions, but is usually harvested at 12 to 16 inches when the pods are more tender. Heat and drought tolerant. Seed brownish-red. G93M, S63M

**Green Pod Kaohsiung:** Long, slender, round dark green pods; 17 1/4 to 18 inches long; thick, meaty, crisp but tender, sweet and delicious, of fine quality for snap bean use. Rampant, very prolific vine; tolerant of heat and wet weather. Famous yardlong bean named after its place of origin—Kaohsiung, Taiwan. Black-seeded. D55, F73D, N84, Q39

**Liana:** 80 days. Very slender pods, about 1/4 inch in diameter; may reach 30 inches in length; tender, sweet and succulent, especially when harvested young. Excellent raw, steamed or stir-fried. Vigorous vines, 8 to 10 feet long; should be trellised for best results. C20M, L89, M46

**Orient Wonder:** (Oriental Wonder) 70 days. Specially selected Japanese strain. Rich green pods, loqg and slender, 15 to 18 inches

in length; tender and fleshy, of excellent eating quality. Seeds are slow to develop so pods stay smooth. Sets better in cool or drier weather than similar cultivars. A16, B49, C20M, C85M, G27M, I18M, K16M

**Purple:** 80-90 days. Pods are purple, 18 inches long, medium-thick. Vines are vigorous, productive, ornamental in foliage and fruit. When ready for harvest, the pods are easy to pick as their bright purple color stands out among the green foliage. They are unique in retaining their pigmentation even after being cooked. F73D, K49M, L11

**Purple Mart:** Slender, purple pods, 15 to 19 inches long; weight 0.7 to 1 ounce; tender and tasty. Vigorous plants; tolerant of heat and wet conditions. Q39

**Red-Seeded:** 75 days. Light-green pods, slightly smaller in diameter than Black-Seeded; tender and flavorful. Seeds maroon-brown with darker brown streaks. Good garden cultivar. Very popular in Southern Asia and Japan. A75, D55, F73D, L7M, L59, N84

**Sabah Snake:** 80 days. Longest of the snake beans, growing up to 33 inches long, about 10 inches longer than other very long types. Light green pods, wrinkled like the skin of a snake. Unusual white seeds. A favorite heirloom in Malaysia. J73

**White-Seeded:** Relatively new strain of asparagus bean that is becoming very popular in Taiwan. Long pods with light green skin. Very crisp and sweet. Grows vigorously in warm climates. C20M, D55, F73D, N84

*Vigna vexillata* - *Wild mung* {S}. The tubers have a soft, easily peeled skin and creamy, edible, tasty flesh. They can be eaten raw, boiled, or roasted, like sweet potato or cassava. Particularly rich in protein, tubers analyzed in India having shown a fifteen per cent protein content. Old World Tropics. FCK, F., NATIONAL RESEARCH COUNCIL 1979; I74{PL}, N84

*Voandzeia subterranea* - *Bambara groundnut*, *Congo goober* {S}. Seeds are eaten fresh, boiled, roasted and ground to a meal, and popped like maize. The meal is mixed with oil and condiments, fried, and made into cakes or balls known as *bakuru* in Nigeria. Young pods are eaten in stews. Roasted seeds are a coffee substitute. The leaves are also edible. Consumed during the Christmas holidays in the Dominican Republic. Tropical Africa, cultivated. C ARIAS, DALZIEL, FOX, E, HERKLOTS [Cu], MACMILLAN, MARTIN 1975, MENNINGER, NATIONAL RESEARCH COUNCIL 1979 [Nu], OCHSE, TREGOLD; F85, N84

*Wisteria floribunda* - *Japanese wisteria*, *Riji* {S}. Young leaves and flowers are boiled and eaten. Japan. TANAKA; D95{PL}, F80, H4{PL}, I49M{PL}, K38, K63G, 093, P5, P17M, P49, Q32, R47

*Wisteria frutescens* - *American wisteria* {S}. The fresh flowers are eaten in tossed green salads. They are said to be excellent when dipped in batter and fried in oil as fritters. North America. FERNALD, PETERSON, L.; A93M{PL}, D95{PL}, E7M, H4{PL}, K38, K63G, L55{PL}, N37M{PL}, N84, P5

*Wisteria sinensis* - *Chinese wisteria* {PL}. The raw flowers are full of nectar and very sweet. They can be folded into egg-batter and made into fritters, used for preserves, or brewed into wine. Flower buds are eaten as a vegetable after blanching in salted water. China, cultivated. MACNICOL [Re], TANAKA, VIARD; C9, C9M{S}, C36, D95, F51, G23, H4, I83M, K38{S}, L91M{S}, 053M{S}, P17M{S}

#### FAGACEAE

*Castanea alnifolia* - *Downy chinquapin*, *Trailing chinquapin* {PL}. The edible nuts are small, but larger than *C. pumila*, and of excellent quality. Burs have few prickles. Grows into a clumping bush by means of underground stems. Southeastern North America. MEDSGER, SMITH, A.; H14M

*Castanea crenata* - *Japanese chestnut*, *Kuri* {PL}. Nuts are eaten raw, cooked like potatoes, roasted, boiled with rice, seasoned with sugar, etc. Individual trees are variable in regards to size of nut, resistance to blight, and astringency of the kernel. Boiling in salted water removes the astringency. Some cultivars have the largest nuts of any species. Japan. JAYNES, SMITH, A., TANAKA; I49M, K63G{S}. (for cultivars see Chestnut, page 332)

*Castanea dentata* - *American chestnut* {PL}. Nuts are small, but the sweetest of any species. They are eaten raw, roasted, pureed, added to stuffings or breads, etc. The Indians used the roasted nuts as a coffee substitute, and also made a chocolate substitute from the kernels. Eastern North America. FERNALD, MEDSGER; A91, B94{S}, C11M, D45, E84, G66, J61M, K63G{S}, K89

#### CULTIVARS {GR}

**Kelly:** Has exhibited the most blight resistance, and is the most consistent bearer of any tested at Niagara-on-the-Lake, Ontario. Small to medium nut with very good flavor. Vigorous, upright, healthy tree. Originated in Pennsylvania. E91M, K63G{S}

**Watertown #3:** Small nut with very good flavor; very good kernel filling. Hardy and productive Watertown, New York selection from the wild. E91M

**Wexford:** From Wexford County in northern Michigan where blight is not a problem. Useful for isolated blight free areas in the Midwest. I60{PL}

*Castanea mollissima* - *Chinese chestnut* {PL}. Nuts are eaten raw, roasted, boiled, pureed, etc. The skin, or pellicle, of the kernel is easily peeled. Unlike other nuts, chestnuts are high in carbohydrates and low in fats and oils. Trees are resistant, though not immune, to the chestnut blight. China. CREASY 1982, DAHLEN [Pre, Re], JAYNES, MENNINGER; D76, F43M, F51, G66{S}, H4, J16, K63G{S}, L99G{DF}, NO, N84{S}. (for cultivars see Chestnut, page 332)

#### *Castanea nana* - *Castanea alnifolia*

*Castanea pumila* - *Chinquapin*, *Allegheny chinkapin* {PL}. Nuts are small, about half the size of *C. dentata*, and have a very sweet and nutty flavor. They are eaten raw or masted. Trees are usually dwarf and are prolific producers of nuts. Sometimes sold in southern markets. North America. JAYNES, MEDSGER; B32, D37, H4, H14M, I53M, K63G{S}, K67

*Castanea sativa* - *Italian chestnut*, *Spanish chestnut* {S}. Nuts are eaten raw, roasted, boiled, pureed, or dried. Also used in desserts, stuffings, pates, *polenta*, confectionery (*marrons glacés*), brandy, etc. Made into a flour, *farine de châtaigne*, that is used in breads, cakes (*castagnaccio*), puddings, or for thickening soups. Also a coffee substitute. *Banon*, *Dreux a la Feuille*, and *Couhe Verac* cheeses are often wrapped in chestnut leaves. The flowers yield a dark amber, often reddish honey with a strong, rich, slightly bitter flavor that is much appreciated in parts of France: In Italy, it is traditionally used in baking. Chestnut wood is used for aging wine and *balsamic vinegar*. Sugar is extracted from the nuts. Cultivated. BIANCHINI, CAMPBELL-PLATT, CRANE 1975, FERNALD, HEDRICK 1919, KASPER, MASUI, ROBINSON, J. 1994, ROSENGARTEN [Re], TANAKA, UPHOF; C94M{PD}, E84{PL}, H19M{DF}, H19M{PD}, H73{PD}, I94{PD}, J66M{DF}, K37P{PD}, K63G, L99{DF}, L99{PD}, N71M, P5, P49, Q46, R78, etc. (for cultivars see Chestnut, page 332)

*Castanea* x sp. (*C. crenata* x *C. mollissima*) - *Korean chestnut* {PL}. Artificial hybrid. Japanese chestnut x Chinese chestnut. Nuts are edible. By nature of their origin the trees are quite hardy. JAYNES.

#### CULTIVARS

**Meader New Hampshire #4:** Blight resistant Korean seedlings that survive in New Hampshire. Trees grow to 30 feet tall and produce 1/2 bushel of clean good quality nuts each. Shows greater blight resistance than some American hybrids. Selected by Professor E.M. Meader. A91

*Castanea x sp. (C. crenata x C. sativa) - {PL}*. Artificial hybrid. Japanese chestnut x Italian chestnut. The nuts are eaten.

CULTIVARS {GR}

**Bisalta #3:** Very large nuts, one of the largest of all chestnuts. Covered with a thick pellicle. Not as easily peeled as Colossal, but very sweet. An early and heavy bearer. B74

*Castanea x sp. (C. mollissima x C. dentata) - American hybrid chestnut {PL}*. Artificial hybrid. Chinese chestnut x American chestnut. Nuts are eaten. The hybrids combine the sweet nut quality of *C. dentata*, with the larger nut size and blight resistance of *C. mollissima*. JAYNES; D76, H65, K63G{S}, K67. (for cultivars see Chestnut, page 332)

*Castanea x sp. (C. mollissima x C. sativa) - {PL}*. Artificial hybrid. Chinese chestnut x Italian chestnut. Nuts are eaten.

CULTIVARS

**Simpson:** Broad, spreading tree, hardier and much more vigorous as a seedling than Chinese chestnut. Larger nut size than Chinese chestnut. Originated in New York. B99, E62, E62{DF}, E62{SC}, E91M{GR}

*Castanopsis chrysophylla Chrysolepis chrysophylla*

*Castanopsis cuspidata - Japanese chinquapin, Tsubura-jii {PL}*. The cotyledon of the nut is eaten either boiled or roasted. China to Japan. KUNKEL, TANAKA; H4

*Castanopsis sempervirens - \*Chrysolepis sempervirens*

*Chrysolepis chrysophylla - Golden chinquapin, Giant chinquapin {S}*. Nuts are less than half an inch long and have a hard shell. The kernel is very sweet and is much appreciated. Attractive evergreen foliage makes it a good ornamental. Western North America. MEDSGER, SMITH, A.; B94, D95{PL}, F85

*Chrysolepis sempervirens - Bush chinquapin, Sierra chinquapin {S}*. The nuts, which resemble filberts, are sweet and can be eaten raw or roasted. Evergreen shrub is a good candidate for edible landscaping. Grows better at lower elevations than *C. chrysophylla*. Western North America. CLARKE, KIRK, MEDSGER, SMITH, A.; A2, B94, C43V, D96

*Fagus americana - Fagus grandifolia*

*Fagus grandifolia - American beech {PL}*. Nuts are small but very sweet and nutritious. They are eaten raw, roasted, or made into flour. Also the source of an edible oil. Young expanding leaves may be cooked as a potherb. Germinating seeds are tender, crisp, sweet, and nutty, and are very good raw or cooked. Roasted seeds are a substitute for coffee. North America. ANGIER [Re], FERNALD, GIBBONS 1979, MEDSGER, ROSENGARTEN; A82, B9M, B96, D95, H4, H49, K28, K38{S}, K63G{S}, K89, M69M, M77, N37M, N84{S}, etc.

*Fagus sylvatica - European beech {S}*. Nuts are eaten raw, or roasted and salted. An oil extracted from the nuts is said to be equal in delicacy to olive oil. It is used in salads, for frying, or made into *beechnut butter*. Beechwood is one of the best woods for smoking foods, such as *Bamberger Rauchbier*—a dark, smoky bottom-fermented beer from Germany, *Idiazabal*—a sheep's milk cheese from the Basque region of Spain, *Piquillo peppers*, and *Westphalian* and *Prague* hams. Beechwood chips are used in aging beer. Young leaves are eaten in salads or used to make a potent liqueur, *beech leaf noyau*. Eurasia, cultivated. BROUK, CAMPBELL-PRATT, FERNALD, FORGET, MABEY [Re], MICHAEL [Re], ROBINSON, R. 1995, SCHERY; B8P{PD}, B9M{PL}, B74{PL}, C9M, D95{PL}, F67T{PD}, G40{P£}, G47J{PD}, G66{?L}, H49{PL}, J3{PJ2}, K32M{PQ}, K38, K63G, K89{PL}, N54{PD}, N71M, N84, 053M, etc.

*Lithocarpus densiflora - Tamark oak {S}*. Evergreen tree of California and Oregon. California Indians ate the acorns, leaching them in hot water to remove the tannins, and then drying and grinding them for baking. Western North America. KROCHMAL; B94,

C9M, D95{PL}, G60{PL}, G59M, G66, 198M{PL}, N84

*Quercus acutissima - Sawtooth oak, Kunugi, Sangsurinamu {PL}*. The acorns are processed into a brownish, opaque gelatin-like food called *dotori muk* or *acorn curd* which is seasoned with chilis, green onions, and soy sauce and eaten as a cooling summer food. Available in Korean markets as cakes or slabs, ready to eat. Eastern Asia. MILLON [Re], PEMBERTON; A80M, B32, £52, C38, D95, F43M, G66{S}, H4, H14M, H45M, K37M, K38{S}, K60, K63G{S}, M69M, P5{S}, etc.

CULTIVARS {GR}

**Carruthers:** (Gobbler) Produces acorns that are somewhat smaller than regular Sawtooth oak strains, but yields are twice as large. Begins bearing when 5 to 8 years of age. Space 20 feet apart for best acorn production. Winter hardy from northern Florida to -10° F. Disease and insect resistant. G21M, H4, 14

*Quercus aegilops - \*Quercus macrolepis*

*Quercus agrifolia - Coast live oak, California live oak {S}*. Acorns were leached in water until the astringency was removed, and then ground into meal for use in breads and soup. The wood is preferred over others for smoking steaks, chicken and other foods in Santa Maria style barbecues, a style unique to the Santa Maria, California area. CLARKE; B74{PL}, B94, C9M, D95{PL}, F85, G59M, G60{PL}, G66, H71, I83M{PL}, J81M{PD}, K63G, L47{PL}, N84

*Quercus alba - White oak {PL}*. Acorns are eaten after leaching. It is said that those with red or pink splotches on the shell are the sweetest. They can be baked slowly in a low oven, mixing in butter and salt, until the acorns no longer taste raw. When cooled they make a tasty, salted nut, something like a cross between sunflower seeds and popcorn. Source of American white oak wine barrels used for aging wine, the oak wood contributing a vanilla-like flavor to the wines. Also yields oak chips, used as a replacement for true barrel aging or to supplement the oak flavor imparted by used barrels. White oak wood and chips are also used as smoke flavorings, especially for brisket. Lightly moistened wood releases tannins which impart flavors reminiscent of a good red wine. Also used for cooking planks, which impart a distinctive woody flavor to foods cooked on them. North America. JAMISON, LOGSDON 1981, MEDSGER, MESSINA, ROBINSON, J. 1994, TURNER 1979; A20M{PD}, A80M, A84{PD}, A91, A99{PD}, £52, B74, C11M, C25P{PD}, D45, F51, H4, H49, 14, 160, J3{PD}, J21H{m}, K63G{S}, K54{PD}, L15G{PD}, M69M, M85{ED}, N17{ED}, etc.

*Quercus bicolor - Swamp white oak {PL}*. Acorns are quite large, and unlike those of other oaks, are attached to long stems. After leaching, they are roasted and ground into a meal, which are molded into cakes or loaves or mixed with other food. North America. MEDSGER; B9M, B53, C11M, D45, D95, F51, G66{S}, G89M, 160, K63G{S}, K89, M69M, N84{S}, P5{S}

*Quercus cerris - Italian oak, European turkey oak {S}*. Acorns are ground into flour and made into bread. A manna-like substance, *gaze*, is collected from the branches, and boiled down to a syrup. The syrup can be used for sweetening food or mixed with flour to form a sweetmeat, *gazenjubeen*. Eurasia. DONKIN, HEDRICK 1919, UPHOF; G66, H4{PL}, H45M{PL}, I60{PL}, K38, K63G, N24M{PL}, N71M, N73{PL}, N84, P5, P49, R78

*Quercus dentata - Dainty oak, Kashiwa {S}*. In Japan, the leaves are wrapped around the festive rice cakes known as *kashiwa mochi*, the cakes absorbing the scent of the leaves. *Kashiwa mochi* is traditionally eaten on May 5th, in celebration of *Boy's Festival* or *Sekku*. Acorns are roasted and used as a coffee substitute. Also the source of a starch. Eastern Asia. COOK, HOMMA, SUGANO, TANAKA; G20M{PD}, G66, H4{PL}, K63G, N84, P49

*Quercus garryana - Oregon white oak {PL}*. The acorns have a high tannin content and should be leached before using. They can then be roasted and ground to a flour for use in cakes, breads, and muffins. Also a good thickener for soups and sauces. Occasionally used as a source of wine barrels for aging wine, and oak chips.

Western North America. ROBINSON, J. 1994, TURNER 1979; A84{PD}, B74, B94{S}, C9M{S}, D95, E15{S}, G66{S}, H45M, J26, K63G{S}, NO

*Quercus graeca* - *Quercus macrolepis*

*Quercus ilex* - *Holm oak*, *Holly oak* {S}. Acorns are mixed with clay and made into a kind of cake or bread, something like a delicate soft chocolate or black nougat. It is eaten with lard, milk, cheese, or honey. Also the source of an edible oil. Mediterranean region to Southwest Asia. KUNKEL, USAI; C9M, G66, H4{PL}, H71, I83M{PL}, K63G, N84, P5, P49, R78

*Quercus ilex* ssp. *ballota* - *Ballota*, *Spanish holm oak* {PD}. The acorns are round, almost as sweet as chestnuts, and are commonly eaten in Mediterranean countries. They are used in breads, soups, muffins, couscous, etc. An edible oil is extracted from them. They are also fed to a special breed of pig, called *cerdo iberico* or *pata negra*, that is the source of the Spanish delicacy known as *Iberian ham* or *jamon iberico*. The acorns give the meat a unique texture and flavor. *Pimenton de La Vera*, a gourmet quality paprika from the Extremadura region of Spain derives its characteristic aroma, flavor and color stability from smoke produced by burning ballota wood. An Arabic porridge, known as *racahout*, is made from acorn flour, cocoa, sugar, rice flour, and *salep*. Southwestern Europe. CAPEL, FAIRCHILD 1930, HEDRICK 1919, HESS, ORTEGA, WOLFFERT 1973; C60D, L13P, N54

*Quercus lobata* - *Valley oak*, *California white oak* {S}. Acorns are ground to a meal or flour and used in breads, muffins, cookies, pancakes, etc. Some types are almost entirely free of tannin. Western North America. CLARKE, MEDSGER; B94, C9M, D95{PL}, D96, G59M, G60{PL}, G66, H71, K63G, L47{PL}, N84, P5

*Quercus macrocarpa* - *Burr oak*, *Mossy-cup oak* {PL}. The acorns of this species are among the most palatable of all. They are used in breads, muffins, griddle cakes, soups, dumplings, etc. In the leaching process, gelatine can be used to remove the bitterness without extracting the sugar. North America. FERNALD, JAYNES; A80M, A91, B74, C9M{S}, C11M, D45, F51, G66{S}, I4, I9M, I49G, 160, K63G{S}, M69M, N24M, N37M, etc.

CULTIVARS {GR}

**Ashworth:** Precocious producer of small to medium, high quality acorns containing little tannic acid. Biennial bearing. Original tree was discovered by Fred Ashworth while delivering milk by horse and wagon. He stopped along the way, and having little to eat decided to try some of the acorns from a nearby tree, which turned out to be good and sweet. Reselected over a 25 year period. LOGSDON 1981; L27M

**Kreeder:** A vigorous seedling selection from the Midwest noted for its very large acorns and fast growth. Shows twice the vigor of other seedlings. Originally from Illinois. 160

**Sweet Idaho:** Found in northern Idaho from two isolated cross-pollinating trees. Eaten dry or still fresh, they are not just non-bitter but actually sweet, with a distinctive flavor. Best used ground in cakes and breads, after proper leaching. Apparently self-fertile. A91

*Quercus macrolepis* - *Valonia oak* {PL}. The acorns have no bitter principle and are eaten raw or boiled. Also the source of an edible manna. Eurasia. DONKIN, TANAKA; D95, K63G{S}

*Quercus muehlenbergii* - *Yellow chestnut oak* {PL}. Acorns are quite sweet and are rather pleasant eating. They are good roasted in an oven with butter and salt, or dipped in clarified sugar. North America. GIBBONS 1962, JAYNES, MEDSGER; A74, C11M, G21M, G66{S}, H4, H14M, 160, J39M, K37M, K38{S}, K63G{S}, M69M, N24M, N37M

*Quercus obtusiloba* - *Quercus stellata*

*Quercus palustris* - *Pin oak* {PL}. Acorns are sometimes eaten. In parts of Texas, the wood is preferred over other species of oak for use as a smoke flavoring in barbecue cooking. North America.

BYRNE-DODGE, KUNKEL; A82, C9M{S}, C11M, F51, H49, I4, I9M, J16, K38{S}, K63G{S}, M69M, P5{S}

*Quercus petraea* - *Durmast oak* {S}. The acorns are eaten or used as a substitute for coffee. Leaves can be made into a medium-dry white wine of good flavor. Along with *Q. robur*, one of the principal European oak species which produces barrels used for aging wine. Europe. BROUK, MICHAEL [Re], ROBINSON, J. 1994; A84{PD}, G66, K63G, N24M{PL}, N71M, N73{PL}, N84, P49, R78

*Quercus robur* - *English oak*, *French oak*, *Russian oak*, *Truffle oak* {PL}. Acorns are eaten or ground into flour. They are used as a substitute for coffee, called *eichel kaffee*. Also the source of a manna, *diarbekei*, used instead of butter in cooking. One of two principal European species of oak which produce oak barrels used in the aging of wine. Source of the famous *Memal oak* barrels of the Baltic region, rated very highly by the Coopers Guild of England, and contributing vanilla-cognac type flavors to wine. Wine-flavored shavings from French oak barrels, sometimes called *Cape smoke*, are used for smoking foods in barbecue cooking. Eurasia, cultivated. ANONYMOUS 1995, HEDRICK 1919, MABEY [Pie], ROBINSON, J. 1994, UPHOF; A71G{PD}, A84{PD}, A91, B8P{PD}, B74, E47{S}, H4, I4, I23M{PD}, 160, K38{S}, K63G{S}, K89, N37M, N84{S}, P5{S}, etc.

*Quercus x schuettei* (*Q. macrocarpa* x *Q. bicolor*) - *Schuettes oak* {PL}. Natural hybrid. Burr oak x swamp white oak. Native hybrid found where the above two species overlap. Produces large, edible acorns that are usually very low in tannin. North America. 160

*Quercus sessiliflora* - \**Quercus petraea*

*Quercus stellata* - *Post oak* {PL}. The acorns are pounded into a meal, cooked and eaten. Also used as a substitute for coffee. In parts of Texas, the wood is preferred over other species of oak for use as a smoke flavoring in barbecue cooking. North America. BYRNE-DODGE, UPHOF; D95, G21M, G66{S}, J21H{PD}, H14M, K63G{S}, M69M, N37M, N84

*Quercus suber* - *Cork oak* {S}. Acorns are eaten, especially after roasting. In parts of Spain they are fed to pigs which are the source of *jamon iberico* and *jamon serrano*, as well as other gourmet pork products such as *eam de lomo*, *chorizo*, *salchichon* and *morcon*. The acorns give a special flavor to the meat. Mediterranean region, cultivated. CAPEL, CLARKE, HEDRICK 1919; C9M, D95{PL}, H71, I83M{PL}, K63G, L13P{PD}, L47{PL}, N24M{PL}, P5, P49

*Quercus x sp.* (*Q. lyrata* x *Q. virginiana*) - *Compton oak* {PL}. Natural hybrid. Overcup oak x live oak. Rare hybrid found only where the above two species overlap. Notable for its sweet acorns and fast growth. North America. A80M, 160

*Quercus x sp.* - *Ooti oak* {PL}. Hybrid of *Q. macrocarpa*, *Q. muehlenbergii* and *Q. robur*. Seedlings of a grafted parent selected for lustrous leaves, fast growth and low tannin acorns. Cultivated. 160

FLACOURTIACEAE

*Dovyalis abyssinica* - *Abyssinian gooseberry* {S}. A small, globose fruit with thin, tender skin and juicy, melting flesh with an aroma and flavor faintly suggestive of apricot. More desirable for eating out of hand than the Ceylon gooseberry. When ripe it makes a very agreeable jelly and fruit punch. In Kenya, the roots and stems are eaten in tonic soups. Eastern Africa. GACHATHI, KENNARD, MORTON 1987a, STURROCK, UPHOF; T73M

*Dovyalis caffra* - *Kei apple*, *Umkokolo* {S}. Fruits are yellow-orange, juicy, aromatic, and pleasantly acid when fully ripe. Sometimes eaten out of hand, but mostly used in jams, jellies, marmalades, compotes and pickles. The fruit pulp is high in pectin and small amounts can be added to fruits that do not jell well. Southern Africa, cultivated. FOX, F., KENNARD, MORTON 1987a,

POPENOE, W. 1920 [Cu, Pro], UPHOF; E29{PL}, I83M{PL}, M7M{PL}, N84, P5, P38, S28M, S97M{PL}

*Dovyalis hebecarpa* - *Ceylon gooseberry*, *Ketembilla* {S}. Fruits are maroon-purple, velvety, somewhat juicy, and usually acid in flavor. Some types are sweeter and are said to taste like gooseberries. Otherwise used in jams, jellies, preserves, and to flavor meat and fish. Tropical Asia, cultivated. KENNARD, MORTON 1987a, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], STURROCK, UPHOF; A41G{PL}, A79M, D56M, F85, G73,174{PL}, N40M, N84, P38

*Dovyalis* x sp. (*D. abyssinica* x *D. hebecarpa*) - *Florida gooseberry*, *Tropical apricot*, *Apricot velvet berry* {S}. Artificial hybrid. The fruits are brownish-orange, somewhat luzzy, with a juicy, melting, orange-yellow flesh of a very agreeable acid apricot flavor when fully ripe. Good eaten out of hand, or made into jams, preserves, syrups, soft drinks and pies. MORTON 1987a, STURROCK; M17{PL}, P38

#### CULTIVARS {GR}

**Prodigal:** An improved form with excellent flavor. Tree very productive. Selected in Florida. E29, N84

*Flacourtia cataphracta* - *Rumealma plum*, *Paniala* {S}. The fruit is round, about the size of a cherry, and a russet-purple color when ripe. The flesh is firm, dark red when ripe, with a pleasant, mildly acid flavor. Sometimes eaten out of hand, otherwise it makes excellent jams, jellies and preserves. Acid young shoots are eaten in Indonesia. Tropical Asia. MACMILLAN, MORTON 1987a, MOWRY, STURROCK, UPHOF; F85, N84, P5, P38, Q46

*Flacourtia indica* - *Governor's plum*, *Ramontchi* {S}. Fruits resemble crabapples or small plums in shape and are deep red to purple in color. The soft juicy pulp is, at its best, sweet and agreeable and can be eaten out of hand. Otherwise used in jellies, jams, preserves and pies. Tropical Asia, cultivated. MORTON 1987a, MOWRY, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Pre, Re], STURROCK; E29{PL}, F85, N84, P38, Q46

*Flacourtia inermis* - *Lovi-lovi*, *Plum of Martinique* {S}. The reddish-purple fruits are the size of a small cherry. They are usually too acid to eat out of hand, though sometimes the fruits are sweet. Mostly used for jelly, syrup, pies, tarts, preserves and pickles. Tropics. HEDRICK 1919, KENNARD, MORION 1987a, RIFAI, TANAKA, UPHOF; F85, N84

*Flacourtia jangomas* - *Flacourtia cataphracta*

*Flacourtia ramontchi* - *Flacourtia indica*

*Flacourtia rukam* - *Rukam*, *Indian prune* {S}. Ripe fruits are purple, juicy, subacid, and can be eaten out of hand, especially after rolling them between the palms to reduce astringency. Also used to make jellies, jams and preserves. In Indonesia, they are cooked with tamarind, chilis, palm sugar, shallots, and fish sauce. The beautifully red young shoots are eaten raw in salads. Tropical Asia. KENNARD, MORTON 1987a, MOWRY, OCHSE, STURROCK; F85, N84

*Oncoba spinosa* - *Oncob*, *Snuffbox tree* {S}. The mealy fruits are edible, having somewhat the flavor of pomegranates or green apples. Seeds are the source of an edible oil. Tropical Africa. FOX, F., TANAKA; N84

*Pangium edule* - *Pangi*, *Pakem*, *Kepayang* {PD}. Seeds are eaten after the poisonous hydrocyanic acids have been removed. Unripe ones are used for preparing *sayor lodeh*, a spicy Indonesian side-dish. Ripe ones are fermented in pits, after which they become chocolate-brown, greasy and slippery and are known as *keluwak* or *kloowak*. *Keluwak* has a distinctive, slightly bitter flavor and serves for the preparation of stews, soups and condiments. Another fermentation produces *dageh peechong*, which is similar to *keluwak* but is sweeter and more slippery in texture. Also the source of a good cooking oil. The leaves are used to wrap and preserve meat. Southeast Asia. RREMNES, BURKILL, MAY, R., OCHSE, OWEN

[Re], SHURTLEFF 1979 [Cul, Re], TANAKA, TINGGAL; A45

#### FLAGELLARIACEAE

*Flagellaria indica* - *Supplejack* {S}. Young leafy shoots are boiled and eaten as a potherb. The fruits are also edible. In the Andaman and Nicobar Islands the sweet stems are chewed like sugar cane. Islands of Pacific and Indian Oceans. BHARGWA, CRIBB; F85

#### FOUQUIERIAEAE

*Fouquieria splendens* - *Ocotillo*, *Coach whip* {S}. Bright red flowers are soaked in an equal amount of water overnight and used as a beverage. This may be mixed with other fruit juices or consumed as is. The capsules and flowers can be eaten raw or cooked. Southwestern North America. CLARKE, KIRK; A69, C98, C98M{PL}, C99{PL}, F85, 133, I98M{PL}, K47M, L13, L55J, N84, 053M, Q41, R88, T25M, etc.

#### FUMARIACEAE

*Fumaria officinalis* - *Fumitory* {S}. The herb, including the flowers, is added to sour milk, a few sprays to every pint. When the milk has soured thickly, the fumitory is shaken free of the curd and discarded. It gives a tangy taste to the milk and also acts as a preservative, preventing the rancid taste that often spoils soured milk. Both fresh and dried leaves may be used. Eurasia, cultivated. DE BAIRACLI-LEVY; F37T{PL}, K18M{DF}, N7IM, N84, 048, 053M

#### GENTIANACEAE

*Centaurium erythraea* - *Centaury* {S}. The flowering tops are used in bitter tonic preparations and vermouth formulas. Has been used for this purpose in England for centuries, often combined with gentian. Eurasia, naturalized in North America. BURDOCK, LEUNG, LEYEL 1987a; C95, F37T{PL}, F68T, J82, L94M, N84, 053M, Q24, R53M, S55

*Gentiana cruciata* - *Cross gentian* {S}. Roots are sometimes used in the manufacture of *gentian bitters*. Eurasia. BROUK, UPHOF; D11T{PL}, F80, H98{PL}, J99D, L66{PL}, N84, 046, Q24, R88

*Gentiana lutea* - *Yellow gentian* {S}. The roots are used in the preparation of bitter liqueurs, called *gentian bitters*, *gentian brandy*, *enzian schnapps*, or *edelenzian*. Most of the enzian drinks are only flavored with gentian and their alcohol is derived from other sources. They are consumed as appetizers or taken with heavy or fatty meals to aid digestion. Also one of the main ingredients of *Angostura Bitters* and some very old, secretive, monastic liqueurs such as *Alpenkrauter*, *Fleur de Alpes* and *Millefiori*. *Psychaud's bitters*, said to contain gentian, are used in the famous *Sazerac* cocktail of New Orleans. They are also used for flavoring pork, poultry and rice dishes. Eurasia. BROUK, BROWN, G., CAMPBELL-PLATT, LAUNERT, MILLER, J., RAY, C., UPHOF; A49D{DF}, E38M{PD}, E61{PL}, F68T, H15T{PD}, J82, K18M{DF}, K29M{PD}, K54{PD}, L34{DF}, N7IM, 053M, R53M, R53M{PL}

*Gentiana punctata* - *Spotted gentian* {S}. Roots are sometimes used in the manufacture of *gentian bitters*. Europe. BROUK, UPHOF; A61, N84, 053M, PIO, Q24, R88

*Gentiana purpurea* - *Purple gentian* {S}. Roots are sometimes used in the manufacture of *gentian bitters*. Europe. BROUK, UPHOF; F80, N84, 053M, Q24

#### GERANIACEAE

*Erodium cicutarium* - *Red-stemmed filaree*, *Alfiliree*, *Heron's-bill* {S}. The young leaves are eaten raw or used as a potherb. They are added to salads, sauces, omelettes, sandwiches, or soups. May be used in recipes that call for the leaves of beet, plantain, sow thistle or amaranth. Eurasia, naturalized in North America. CLARKE [Re], FERNALD, HARRINGTON, H., LAUNERT [Re]; E66M, F63M, K15, N7IM, N84

*Geranium thunbergii* - *Gen-no-shoko*, *Chuisoni-phul* {S}. Young leaves are edible. Older leaves, when the plant is at its peak of growth, are dried and used as a tea substitute. Himalayan region to Eastern Asia. TANAKA, YASHIRODA; A61, K22{PL}, N84

*Geranium viscosissimum* - *Sticky geranium*, *Sticky crane's bill* {S}. The flowers are edible. They can be added to salads or used to decorate hors d'oeuvres. Western North America. C43V, E15, E66M, F44, G89M{PL}, 147, J26{PL}, J75{PL}, N84, 053M

*Pelargonium acetosum* - *Sorrel-leaved stork's bill* {PL}. The buds and acid leaves have been eaten as vegetables in the Cape of Good Hope area. They can be added to salads like sorrel. South Africa. HEDRICK 1919; J82, N84

*Pelargonium citronellum* - *Lemon geranium* {S}. The fresh leaves are used in cooking to impart a complex lemon flavor to foods, such as desserts, punch and vinegar, like those of *P. crispum*. Also infused into a tea. Southern Africa, cultivated. BOWN; C89M{PL}, N84, 053M

#### CULTIVARS

**Galwav Star:** Small, crinkled, deeply-cut leaves with a fine white edge and an exceptionally strong lemon-to-lime scent. Stems form stiff upright columns to create a small, tight shrub; lavender blossoms. E61, I32M, M82

**Mabel Grey:** Palm-sized, dark green, maple-shaped leaves with an intense and complex lemon scent. Arguably the best variety for culinary use. Makes excellent lemon sorbet. Shrubby, upright growth habit; showy, lavender blossoms. New growth frequently arises through the soil from the roots. Discovered in Kenya around 1960. C2, C89M, E61, F35M, F37T, G80, G96, I32M, J66, J76, J82, K2, K22, L56, L90J, L94M, M35, M82, etc.

*Pelargonium crispum* - *Lemon geranium* {PL}. Crushed leaves are used to flavor soups, poultry, fish, sauces, fruit dishes, and vinegar. Cake pans can be lined with the leaves and the batter will be infused with their essence. The flavor of jellies may be enhanced by adding leaves to the jar when the hot jelly is poured in. Southern Africa, cultivated. CLARKE, MORTON 1976; E61, F93G, G80, J76, L90J, N84{S}, S28M{S}

#### CULTIVARS

**Cinnamon:** Small, glossy, crinkled leaves with a spicy lemon scent and a hint of cinnamon. The cinnamon scent is most noticeable during cool winter temperatures. Compact, shrubby plant, a very prolific bloomer; pale lavender blossoms. C89M, F37T, G80, G96, H94M, I32M, /57{ES}, J66, J82, K2, K22, L56, M15T, M35, M82, N42, etc.

**French lace:** (Variegated Prince Rupert) Smaller, variegated form of Prince Rupert. Small ruffled leaves with a creamy-white edge, giving the plant, from afar, an almost white appearance. Small, pale lavender blossoms; stiffly upright growing under full sun conditions. A good pot plant. C67M, C81M, C89M, F35M, G80, G96, I32M, /57, J66, J82, K22, K57, K85, L56, N42, etc.

**Lemon Crispum:** (Fingerbowl Geranium) Small, crinkled leaves with a strong lemon fragrance. Lavender blooms; stiffly upright growth habit. Good for cooking and potpourri. The geranium traditionally put in finger bowls. A97, C81M, C89M, F35M, G96, H51M, I32M, /57{ES}, J66, K2, K22, K85, L56, M82

**Lemon Meringue:** Crinkled and cut leaves, about the size of a quarter or half dollar. Distinctive scent reminiscent of a lemon meringue pie. Strongly upright growing under full sun conditions, sprawling in less ideal exposures. Lavender flowers. Useful in cooking and potpourri. Developed by Frances Hartsook. C89M, I32M, K22, M35

**Limoneum:** Small, fan-shaped leaves with a distinctive citrus scent. Upright to sprawling growth habit; striking, neon rose-pink flowers. Very good in hanging baskets. E61, F35M, I32M, K85, M82

**Orange:** Exceptional viola-like blooms of mauve with maroon spots. Lew, bushy plant. Large leaves with a strong mandarin orange fragrance. Especially nice for adding to cakes, frostings and other desserts. Often confused with Prince of Orange, which has small crinkled leaves. C89M, E61, F35M, F93G, G96, H51M, H94M, I32M, J76, K2, K22, K85, M82, N42

**Peach:** (Gooseberry Leaved) Small, crinkled, dark-green leaves heavily mottled with golden creamy-white variegation. Slightly fruity, peach-like scent. Delicious in jams and jellies. Small, sturdy plant with very pale lilac flowers. C89M, E61, F35M, G80, H94M, I32M, J82, K57, K66, L90J, N42

**Prince Rupert:** Small ruffled leaves, larger than Lemon Crispum; mild, lemon-like scent. Pale lavender blooms; strong, upright grower under full sun conditions. A good pot plant. Also one of the best cultivars for standards. C9, C67M, C81M, C89M, F35M, G96, H51M, I32M, J66, J82, K2, K22, K57, K85, M53, etc.

*Pelargonium exstipulatum* - *Pennyroyal geranium* {S}. Leaves can be used to flavor jellies, cakes, and desserts. Southern Africa. MORTON 1976; N84, S28M

*Pelargonium x fragrans* - *Nutmeg geranium* {PL}. Artificial hybrid. Probably *P. odontissimum* x *P. exstipulatum*. The leaves are used to flavor jellies, cakes, puddings, stuffings, punches, coffee and tea, pates, vinegars, and potato salad. They have a pungent, spicy scent somewhat reminiscent of nutmeg. Cultivated. BOWN, LATHROP, MCKILLIGAN, MORTON 1976; A97, C67M, F93G, G80, G96, H51M, I32M, /57, J66, J76, J82, K22, K57, K85, M55,

**Apple Cider:** Well-shaped, self-branching plant. Smooth, rounded, grey-green leaves. Sprays of tiny white flowers scattered throughout the year. Has a clear apple cider scent in cool weather, becoming a bit more pungent in die heat. C81M, C89M, F35M, G80, I32M, K85, M35, M82

**Variegated:** (Golden Nutmeg) A sport of Nutmeg with an almost golden appearance from afar due to the chartreuse variegation on the leaf edges. Pale slate-grey leaves. Forms a small shrub with almost constant sprays of small white flowers. Excellent in hanging baskets. C89M, F15M, F35M, K57, G80, G96, I32M, /57, J66, J82, K22, K85, L90J, M82

*Pelargonium graveolens* - *Rose geranium* {PL}. Leaves and flowers can be used to lend flavor and fragrance to juice, wine, desserts, soups, sugar, vinegar, jellies, sauces, custards, and canned and baked fruits. Flowers are also eaten in salads. Leaves are brewed into a tea. In Tunisia, an aromatic distilled water made from scented geraniums is popular for flavoring drinks, confections and pastries. Many cultivars may also have *P. capitatum* or *P. radens* in their background. Those listed below show more <f the *P. graveolens* influence. South Africa. BRYAN [Cu, Re], DAGHER, GESSERT, LARKCOM 1984, LEGGATT [Re], MARCIN, MORSE, MORTON 1976; F35M, F93G, J66{DF}, J82, K2, K85, L90J, M15T, N19M{DF}, 053M{S}, S28M{S}

#### CULTIVARS

**Attar of Roses:** Compact spreading mound of light green, trilobed leaves, less finely cut than typical *graveolens*; excellent, full-bodied, classic rose scent. Very attractive lavender flowers. Useful in cakes, perfumery and potpourri. Highly valued in the perfume fields of France. C67M, C81M, C89M, G96, H51M, H94M, I32M, J66, J76, J82, K22, K85, L90J, M35, M53, etc.

**Grev ladv Plymouth:** Very attractive variegated type with an excellent scent. Silver-grey, deeply cut leaves with a narrow creamy-white edge, strongly rose-scented. Vigorous, compact plant with lavender flowers. Excellent for training into topiary. C9, C67M, C89M, E61, F37T, G80, H94M, I32M, J76, J82, K2, K22, K53, K85

**Ladv Plymouth:** Very attractive variegated form of True Rose. Fresh green, deeply cut, irregularly shaped leaves with a broad

creamy-white edge; strongly rose scented. Vigorous, upright plant with lavender flowers. Excellent for training into standards. C67M, C89M, E61, G80, G96, I32M, J66, K57, M35

**Mint Scented Rose:** Deeply cut, fresh green leaves with a broad creamy-white edge. Vigorous plant with lavender flowers. Resembles Lady Plymouth but with an appealing minty scent and only a slight hint of rose. F15M, I32M, K2, K22, K85, J66, H94M, M82

**Old Fashioned Rose:** Sturdy, vigorous, tall, bushy plant; deeply cut grey-green leaves; extremely fragrant, the odor resembling *Rosa nigosa*. Lavender colored flowers produced in umbels. Ancestor of many scented geraniums. Has the classic rose scent, useful in cakes and for foliage filler in floral arrangements. A97, C89M, F37T, I32M, J66, J76, J82, K22, K57, K85, L56, M35, M82, N19M, N42, etc.

**Roberts Lemon Rose:** Irregularly lobed, grey-green, tomato-like leaves with a strong lemon-rose scent. Tall, compact plant; small umbels of lavender flowers. Source of an essential oil used as a flavoring by the food industry. Occasionally arises from below the crown of True Rose. BOWN; C67M, C81M, C89M, F35M, G96, I32M, J57{ES}, J66, K2, K22, K57, K66, K85, M35, M53, etc.

**True Rose:** Deeply cut, fresh green foliage with an outstanding old-fashioned rose fragrance; abundant lavender blooms. The favorite for potpourri and rose cake. Occasionally arises from below the crown of Roberts's Lemon Rose. Vintage rose geranium cherished since Colonial times, travelling across the country with the early pioneers. C81M, F37T, F35M, G96, H51M, I32M, J66, K22

#### *Pelargonium limonum* - *Pelargonium crispum*

*Pelargonium x melissinum* - *Lemon balm geranium* {PL}. The strongly scented leaves can be used to flavor cakes, jellies, vinegar, drinks, butter, salad dressings, cookies, tarts, etc. Cultivated. MCKILLIGAN [Re]; C89M, F15M, G80, G96, I32M, J66, J76, K22, K57, K85, L56, L90J, M82, N42

*Pelargonium x nervosum* - *Lime geranium* {PL}. Leaves and flowers are used to flavor cakes, jellies, puddings, drinks, vinegar, wine and soups. Cultivated. GESSERT, LATHROP; C81M, C89M, F93G, G96, H51M, H94M, I32M, J66, J76, J82, K22, K85, L90I, M55, N19M, etc.

*Pelargonium x nervosum* 'Toronto' - *Ginger geranium* {PL}. The ginger-scented leaves are used to flavor cakes, jellies, drinks, desserts, etc. They can also be eaten in sandwiches. Cultivated. MCKILLIGAN; A97, C89M, F35M, F93G, G96, H51M, I32M, J66, J76, J82, K2, K22, K85, M55, N19M, etc.

*Pelargonium odoratissimum* - *Apple geranium* {PL}. The apple-scented leaves are used to flavor jellies and desserts. Also used in syrups, sauces, salads, rolls, punch, as a substitute for paprika, etc. South Africa, cultivated. MCKILLIGAN, MORTON 1976; C67M, C89M, F35M, G96, /57, J66, J76, K2, K22, K57, K85, L90J, M53

*Pelargonium radens* - *Rasp-leaved geranium* {PL}. The lemon-scented leaves can be used to flavor many foods, classically cakes and tea. Flowers make an attractive edible garnish. Many cultivars may also have *P. capitatum* or *P. graveolens* in their background. Those listed below show more of the *P. radens* influence. South Africa, cultivated. F15M, F93G, G80, K22, K57, N84{S}, R88{S}

#### CULTIVARS

**Dr. Livinaston:** (Skeleton Leaf Rose, Crow Foot Rose) Pungent lemon and rose scent. Vigorous, tall, upright growth; rough, light green, deeply cut foliage. Lavender flowers with darker, wine-colored signal patches. Readily trained into a standard. C67M, C89M, E61, G96, H51M, H94M, I32M, J66, J76, J82, K22, K57, K85, L90J, M35, etc.

*Pelargonium tomentosum* - *Peppermint geranium* {PL}. The leaves have a strong mint scent and can be used for flavoring cakes, puddings, pies, cookies, tarts, teas, and other desserts. South Africa.

GESSERT, MORTON 1976; A97, C89M, F93G, G96, I32M, J66, J76, J82, K22, K57, K85, M35, M82, N19M

#### CULTIVARS

**Bode's:** Large, moss-green, deeply cut, velvety leaves with a refreshing mint-like scent. White flowers. More upright than regular peppermint geranium and with a stronger scent. C89M, E61, F35M, I32M, M53

**Chocolate Mint:** Velvety leaves with a dark chocolate-brown center under cool growing conditions. Mild mint-like aroma. Showy, pink blossoms. Trailing growth habit makes it suitable for hanging baskets. A97, C67M, C81M, C89M, F93G, G96, H94M, I32M, J66, J76, K2, K22, K57, K85, M53, etc.

**Pungent:** Deeply cut, skeleton-like, velvety grey-green leaves with an excellent strong peppermint scent. Large, robust, upright plant; lavender flowers, but rarely blooms. Excellent in peppermint tea or for potpourri. C67M, C81M, C89M, H94M, I32M, J66, J76, J82, K22, K57, K85, M55, M82, N42

#### GESNERIACEAE

*Swertia chirata* - *Chiretta* {DF}. Tinctures and extracts of the plant are used in bitter tonic formulations or for flavoring alcoholic and non-alcoholic beverages. Often used as a substitute for gentian. Himalayan region. BURDOCK, LEUNG, LEYEL 1987a; F37T, F68T{S}, GO, K18M, N84{S}

#### GINKGOACEAE

*Ginkgo biloba* - *Maidenhair tree*, *Ichd*, *Ya-chiao-tzu* {PL}. Fresh seeds, called *ginkgo nuts*, *ginman*, or *pai-kuo*, are harvested in the fall, roasted, and eaten as a seasonal delicacy, having a mild, sweet, crisp flavor. Canned or dried seeds are boiled and used in soups, stews, stir-fried dishes, tempura, with deep-fried tofu, etc. Ginkgo nuts are used as a garnish for festive Korean dishes like *shinsollo* or *royal hot-pot*. Also the source of an edible oil. Cultivated. CHANG, W. [Re], COST 1988 [Cul, Re], CUSUMANO [Cul], HEDRICK 1919, MENNINGER, MILLON [Re], ROSENGARTEN, SHURTFLEFF 1975; C9M{S}, C27G{ED}, D45, E47, E47{S}, F5I, H4, 14, M75, N84{S}, 053M{S}

#### CULTIVARS {GR}

**Mother Load:** Extremely productive female clone selected by Louisiana Nursery. Produces an abundance of delicious kernels. Also lacks the pungent aroma most often associated with female trees. H4

**Salem Dandv:** Male tree used as a pollinizer for Salem Lady. Selected in Salem, Oregon by Lucile Whitman. J61M

**Salem Ladv:** Heavy producing type selected in Salem, Oregon by Lucile Whitman. Grafted female trees. J61M

#### GNETACEAE

*Gnetum gnemon* - *Meninjau*, *Melinjo*, *Bagu* {S}. The kernels are boiled and eaten like peanuts, or are ground to flour and pressed into thin wafers called *emping* or *krupuk emping*, which are fried in coconut oil and eaten with rice, palm sugar, tea, coffee, beer, etc. Fruits and inflorescences are used in soups. Young leaves are steamed and used as a potherb, and are added to the sour vegetable dish known as *sayor asam* in Indonesia. Peels of ripe fruits are dried and used in soups or fried in oil. The sap from the stem is drinkable. Tropical Asia. EISEMAN, MAY, R. [Nu, Re], MENNINGER, OCHSE, OWEN [Re], SHURTFLEFF 1979, TANAKA; A45{ffi}, N84

#### GROSSULARIACEAE

#### *Grossularia cynosbati* - \**Ribes cynosbati*

*Ribes americanum* - *American black currant* {S}. The fruits have a distinct, musky flavor and are only palatable when cooked. They can be used in jellies and pies. Eastern North America. HEDRICK 1919, MEDSGER; U7D

*Ribes aureum* - *Golden currant* {PL}. The fruits are large and flavorful. They are used in jellies, sauces, and pies. Indian tribes mixed the dried berries with dried buffalo meat and tallow to form *pemmican*. Western North America. HARRINGTON, H. [Re], HEDRICK 1919, MEDSGER; A91, C58, D95, E87, F43M, G60, G66, G66{S}, I47{S}, J25M{S}, J26, M35M, NO, N71M{S}

CULTIVARS {GR}

**Gwen's:** A superior selection from the wild. Long, oval, iridescent bluish-black fruits follow aromatic yellow flowers. Excellent for making jam, jelly or juice. Productive, hardy, and drought resistant. Foliage turns red in the fall while the fruits are still apparent, making for an attractive contrast. A91

*Ribes bracteosum* - *Sink currant* {S}. Fruits are eaten fresh, or are boiled with salmon roe, dried, and stored for winter use. Western North America. HELLER, KUNKEL, UPHOF; E15, N84

*Ribes cereum* - *Wax currant*, *Squaw currant* {PL}. Fruits are eaten fresh or dried. Also used in *pemmican*, jellies, jams, sauces, and pies. The young leaves are sometimes eaten. Flowers are also edible. Western North America. CLARKE [Re], HARRINGTON, H.; D95, G66{S}, G89M, I47{S}, J26

*Ribes x culverwellii* (*R. nigrum* x *R. spp.*) - *Jostaberry*, *Yostaberry* {PL}. Artificial hybrids. The fruits, high in vitamin C, are eaten fresh or made into jam, juice, preserves, syrups and cordials. They combine the refreshing acidity of the gooseberry with the distinct aroma of the black currant. Far more vigorous than all existing cultivars of either of its parents. Leaves and shoots are fully resistant to all diseases causing leaf drop and mildew. KENNEDY, C; A91, C34, D11M, D37, D47, E97, F43M, F70, F87, G87, I49M, J61M, NO, N24M

CULTIVARS {GR}

**Jostaaranda:** (Jograndia) Large, round fruit, more than 1 inch in diameter; skin deep purple; quality excellent. Ripens at the end of the raspberry season; will stay on the bush at full maturity for a week or longer; has a long shelf life. Bush very productive, more so than the type; spineless. Cross-pollinates with Jostina. Developed in Germany by Rudolph Bauer. D47, P68M

**Jostaki:** Large, roundish fruit, about 1 inch in diameter; dark purple to black skin; excellent quality; resembles Jostagranda. Tree very productive and hardy, spineless. Developed in Germany by Rudolph Bauer. Schwarze Traube black currant x Worcesterberry. REICH; D47

**Jostina:** Large, round fruit, about 3/4 inch in diameter; larger than the type; skin deep purple; quality excellent. Tree very productive, more so than the type; spineless; very winter hardy. Cross-pollinates with Jostagranda. Resistant to white pine blister rust, powdery mildew and currant bud mite. Developed in Germany by Rudolph Bauer. D47, P68M

**Orus 8:** Medium-sized, round, dark purple fruit of very good to excellent flavor. Good for eating out of hand. Also makes good jelly or wine. Upright growing, somewhat thorny bush; very vigorous and productive; highly resistant to mildew and aphids; tolerates heat well. 174, J2M, J61M, NO

**Swiss Red:** A unique type from the Wadenswil station in Switzerland that has dull red rather than dark-purple to black fruit. Very vigorous, upright plant; free of thorns; relatively productive. D47, J61M, NO

*Ribes cynosbati* - *American wild gooseberry*, *Prickly gooseberry* {S}. The fruits are pleasantly subacid when ripe and are good for quenching thirst. They also make excellent pies, jellies, and preserves. North America. MEDSGER, UPHOF; U7D

*Ribes divaricatum* - *Coast gooseberry* {S}. Fruits are sweet and juicy and are eaten fresh or dried. Considered to be one of the finest flavored native gooseberries. Young leaves and unripe fruits are used to make a sauce. Western North America, cultivated. HEDRICK 1919, TURNER 1979. A2, B74{PL}, D95{PL}, F88M. (see also Gooseberry, page 372)

CULTIVARS {GR}

**Worcesterberry:** At one time thought to be a hybrid of *R. grossularia* and *R. nigrum*, and was sold as such by a nurseryman in Worcester. Berries are born in trusses like currants. They change from green to purplish black when ripe. Can be used liked cooked gooseberries or black currants. Said to be immune to mildew. MASEFIELD, SIMMONS 1972 [Cu], TURNER 1979; D47, 081, R83

*Ribes grossularia* - *European gooseberry* {S}. Fruits are eaten raw, pureed, pickled, in jam, jelly, pies, tarts, ice cream, puddings, relishes, syrups, gooseberry fool, or made into wine. In France, where it is called *groseille a maqueureau*, its use is limited almost entirely to a sauce made for mackerel and other oily fish. Eurasia, cultivated. HENDRICKSON, JOHNS [Cul], MABEY [Re], SCHNEIDER 1986 [Cul, Re]; C94M{PD}, N84. (for cultivars see Gooseberry, page 372)

*Ribes hirtellum* - *American gooseberry*, *Hairy gooseberry*. The pleasant tasting fruits are eaten raw, cooked or dried. Also used in jams, jellies, preserves, pies, tarts, and other desserts. North America, cultivated. FERNALD, TURNER 1979 [Re]; (for cultivars see Gooseberry, page 372)

*Ribes lacustre* - *Prickly currant*, *Swamp black currant* {PL}. The berries are very juicy and tart, have a foul odor when crushed, but when eaten by the handful the odor is inoffensive and when cooked they make a good sauce. North America. FERNALD, HELLER; D95, 160, L3J{S}

*Ribes missouriensis* - *Missouri gooseberry* {PL}. The fruit has a rich, subacid, vinous flavor, which is very agreeable. Somewhat too acid to be eaten raw but when ripe makes delicious tarts. North America. HEDRICK 1919; C33. (for cultivars see Gooseberry, page 372)

*Ribes nigrum* - *Black currant* {S}. Fruits are used in jellies, pies, tarts, puddings, drinks, etc. Also used in the preparation of a liqueur called *Creme de cassis*, much used in France as an additive to champagne, dry vermouth and white wine. Honey wine or *melomel* made with black currant juice is known as *black mead* in England. Dried leaves make a very pleasant tea. The fresh leaves are eaten in soups. In Belarus, they are used for flavoring pickled cucumbers, apples and tomatoes. In France, they are added to *Pastis*. Flower buds are used in ice cream and liqueurs. Seeds are the source of a high omega-6 oil that can be used in salads, dressings or mixed into foods, but more often is taken as a food supplement. Eurasia, cultivated. ACTON, BOLOTNIKOVA, DOMING, ERASMUS, HEDRICK 1919, LEYEL 1987b, M/CNICOL, MURRAY, RAY, C, UNDSSET, UPHOF; A25G{PD}, A91{PL}, C17{m}, E14T{ED}, G66, G66{PL}, N40{PR}, P49. (for cultivars see Currant, page 356)

*Ribes odoratum* - *Buffalo currant*, *Missouri currant*, *Clove currant* {PL}. The sweet, ripe fruits are eaten raw, cooked, dried or made into jams, jellies, pies, juice and syrup. Leaves are cooked with meat or dried and used for tea. North America. KINDSCHER, MEDSGER, UPHOF; A91, B47, D95, F67, N24M

CULTIVARS {GR}

**Crandall:** (Crandleberry, Pruterberry, Pewterberry) Fruit medium to large, produced in clusters; skin smooth, very thick, tough; skin color bluish-black; flavor tart-sweet; high in pectin; ripens late, period of ripening unusually long. Bush is upright, often 8 feet in height; very vigorous; with dark green leaves and fragrant, yellow blossoms. Succeeds in regions having hot summers. Originated by R.W. Crandall, Newton, Kansas. Introduced in 1888. HEDRICK 1925; B74, C34, D37, D47, D95, E87, F43M, F87, I49M, 174, J2M, J61M, L12, L27M, M81M, NO, etc.

*Ribes petraeum* - *Rock red currant* {S}. Fruits are eaten raw or in tarts, jams, jellies, and preserves. One of the species from which red currant cultivars are derived. Eurasia, cultivated. BROUK, MASEFIELD, TANAKA; N84. (for cultivars see Currant, page 356)

*Ribes sativum* - *Red currant, White currant* {S}. Fruits are eaten fresh, in compotes, jams, jellies, *Cumberland sauce*, puddings, pies, syrups, drinks, or made into wine. They have a high vitamin C content. *Confiture de Bar-le-Duc* or *compote de luxe* is a preserve made from sugar syrup and whole red or white currants whose seeds are meticulously removed by a goose feather. Red currants are excellent cooked together with raspberries. Red currant wine is often served with cherry pie. Honey wine or *melomel* made with red currant juice is known as *red mead* in England. Eurasia, cultivated. ACTON, HENDRICKSON, JOHNS, LEYEL 1987b, SCHNEIDER 1986 [Cul, Re], UPHOF, VON WELANETZ; E9{PQ}, N40{PR}, P49. (for cultivars see Currant, page 356)

*Ribes triste* - *American red currant, Drooping currant* {S}. Red berries are similar to the garden red currant. They are sometimes eaten raw, but are mostly used in pies, cakes, and preserves. North America. FERNALD, HELLER, KUNKEL, MEDSGER; U7D, Z25M

*Ribes ussuriense* - *Karafuto-kuro-suguri* {S}. The fruit is edible. Northeast Asia. TANAKA; U7D. (for cultivars see Currant, page 356)

#### GUNNERACEAE

##### *Gunnera chilensis* - *Gunnera Unctoria*

*Gunnera tinctoria* - *Ranke* {PL}. The young leaf stalks are peeled and eaten raw or cooked as a vegetable. They have a subacid flavor, said to resemble rhubarb. Chile, Argentina. HEDRICK 1919, KUNKEL; B28, D95, E87, F80{S}, 128, N84{S}, Q24{S}

#### HALORAGIDACEAE

*Myriophyllum brasiliense* - *Cavallinho d'agua, Parrot\*feather* {PL}. Young shoot tips are used as a vegetable. South America. CORREA; M73M

#### HELICONIACEAE

##### *HeUconia bihai* - *Heliconia caribaea*

*Heliconia caribaea* - *False plantain* {PL}. Young shoots are consumed as a vegetable. The rhizomes are a source of starch. Seeds are also edible. Tropics. HEDRICK 1919, KUNKEL; A28, A79M, C9M{S}, F85{S}, K8, N84{S}

#### HELLEBORACEAE

*Aquilegia bueigeriana* - *Yama-odamaki* {S}. The sweet flowers are eaten or sucked for their nectar. Leaves are also edible. Eastern Asia. TANAKA; A61, A61{PL}, N84

*Aquilegia caerulea* - *Rocky mountain columbine* {PL}. The nectar-laden flowers are eaten as a snack, added to salads, or made into a jelly. Western North America. SCHOFIELD; D35G{S}, E66M{S}, E67T, F44M, F80, G89M, H92{PD}, N84{S}

*Caltha leptosepala* - *Western marsh-marigold* {S}. Young leaves, before the flowers emerge, are used raw in salads or boiled and eaten with a cream sauce. The flower buds can be added to salads or pickled and used as a substitute for capers. Western North America. HARRINGTON, H.; D35G, E15, E67T{PL}, J93T, K49Q, L13, N84, 053M

*Caltha palustris* - *Marsh marigold, American cowslip* {PL}. Young leaves are eaten like spinach, especially after having been boiled in two or more changes of water and cooked in a cream sauce. Flower buds are pickled in vinegar and used as a substitute for capers. The attractive golden flowers make an excellent wine. Roots are also edible. Northern temperate region. CROWHURST 1972 [Re], FERNALD, GIBBONS 1966b, MACNICOL [Re], MEDSGER, TANAKA, UPHOF; B77, D75M, E33M, 144, K34, L22, M73M, N9M, N9M{S}, 053M{S}

*Nigella damascena* - *Love-in-a-mist* {S}. Seeds are used as a condiment. Mediterranean region, cultivated. HEDRICK 1919;

B77M, D92M, E7M, E24, E61, E81M, FI, F32D{PL}, 139, J82, M82{PL}, 053M, S55

*Nigella orientalis* - *Yellow fennel-flower* {S}. Seeds are sometimes used to adulterate pepper. Eurasia. MOLDENKE; D68, D92M, E7M, E61, E81M, N84

*Nigella sativa* - *Black cumin, Kallonji, Fennel flower, Kala jeera, Tikar azmud, Chamushka* {S}. The aromatic seeds, called *siyah daneh* or *onion seed*, are sprinkled on rolls, flatbreads and cakes, Jewish rye bread, or used as a flavoring in curries, pickles, preserved lemons, Armenian string cheese (*Tel-banir*), *Haloumi* and other white brined cheeses, and vegetable dishes. In the Sudan they are added to various fermented foods, especially *abreh, hulu-mur* and *mish*. One of the ingredients of *panch phoran*, an Indian spice mixture. Eurasia, cultivated. DER HAROUTUNIAN 1982, DIRAR 1993, HEDRICK 1919, JAFFREY, MALLOS, VILMORIN [Cu], VON WELANETZ; A7{DF}, A7{PD}, D92M, E7M, F74{DF}, F80, F85, H51{DF}, J66M{DF}, K17J{DF}, L16{DF}, L17{DF}, N71M, N84, 053M, etc.

#### HYDRANGEACEAE

*Hydrangea anomala* - *Climbing hydrangea, Tsuru-ajisai* {PL}. The leaves are crushed and eaten fresh with miso, tasting like cucumber. Boiled leaf decoction was used to make a kind of syrup. The sap is sweet and drinkable. Eastern Asia. TANAKA; A50, B28, C9, D46, D95, E87, H4, K38{S}, M77, M98, N84{S}, 053M{S}, R78{S}

*Hydrangea macrophylla* - *Garden hydrangea, Ama-cha* {PL}. Young leaves when dried and rubbed between one's hands become very sweet and are used to make a tea called *sweet tea* or *tea of heaven*, used in Buddhist ceremonies. The leaves contain phylloolucin, which may be used as a sugar substitute. Asia, cultivated. HEDRICK 1919, HSU, TANAKA, UPHOF, YASHIRODA; B75, B96, D46, D95, E87, H4, 177M, L49, N84{S}

##### *Hydrangea petiolaris* - \* *Hydrangea anomala*

#### HYDROCOTYLACEAE

*Centella asiatica* - *Gotu-kola, Indian pennywort* {PL}. The leaves are eaten raw in tossed salads, steamed and served with rice, or cooked in vegetable soups and stews. In Thailand the juice of the leaves, diluted with water and sweetened with sugar, is used as a refreshing summer soft drink. A tea made from the leaves, called *long-life tea*, was regularly consumed by Professor Li Chuig Yon, who reputedly lived 265 years and married 24 times. Also a major ingredient of *Amrit Kalash*. Warmer regions of the Old World. BOND, DUKE, LEYEL 1987a, OCHSE, VAN DUONG; A26, C43M, F37T, F68T{S}, F85{S}, G84{DF}, H14{PD}, H51M, 174, J82, K18M{DF}, K22, K85, U4{DF}, M82, etc.

##### *Hydrocotyle asiatica* - *Centella asiatica*

*Hydrocotyle sibthorpioides* - *Water pennywort, Chidome-gusa* {PL}. The whole plant, which has somewhat the odor of parsley, is eaten raw, steamed as a potherb, or cooked with chilis and other spices. Paleotropics, naturalized in North America. OCHSE, UPHOF; E48

#### CULTIVARS

**Crystal Confetti:** Low spreading plant, grows about 1 inch tall; forms a full carpet of one-inch, frilled, heart-shaped, jade green leaves that are edged in cream. The foliage develops pink margins and burgundy stems as the plant matures. Excellent for containers, window boxes, and baskets. C74

#### HYDROPHYLLACEAE

*Eriodictyon californicum* - *Yerba santa*. {DF} An aromatic, sweet tea is made from the fresh or dried leaves. The fresh leaves are chewed for their refreshing taste and to relieve thirst. An extract of the leaves is used to flavor baked goods, candy, ice cream and soft drinks. Western North America. CLARKE, FARNSWORTH, GIBBONS 1979, KIRK, MORTON 1976, ROOS-COLLINS;

A49D, E14T, F37T, F68T, F86G, GO, G73,123G, I81T, J58, J82, K2, K18M, L90J{PL}, M15M, N84{S}, etc.

*Hydrophyllum canadense* - *John's cabbage*, *Shawanese salad* {S}. The young leaves and tender stem tips are sometimes eaten raw, but mostly they are cooked as a delicate potherb. North America. FERNALD; I31, J37M{PL}

*Hydrophyllum virginianum* - *Virginia waterleaf* *Indian salad*, *Shawnee salad* {PL}. When young and tender the leaves make a tasty addition to a tossed salad. They are also good boiled or steamed as a spinach substitute. North America. FERNALD, HEDRICK 1919, MEDSGER; C13T, HIM, J39M, J42, J42{S}, M77M, N84

*Phacelia tanacetifolia* - *Tansy phacelia* {S}. The flowers yield an amber colored honey with a mild, aromatic flavor. Cultivated as a honey crop in the former Soviet Union and neighboring countries. Western North America. CRANE 1975, PELLETT; A2, B49, C85M, D92M, E66M, F80, G59M, H80,139,199M, J25M, K15, L3J, N11M, JO, R47, etc.

#### HYPERICACEAE

*Hypericum perforatum* - *St. John's wort* {PL}. The fresh or dried herb or flowering tops are sometimes used as a tea. Flowers can be used for making *mead*. In Scandinavia, they are added to a bitter, herbal brandy known as *Perkom*. Eurasia. CROWHURST 1973 [Re], LEUNG, UNDSSET, UPHOF; A97, C43M, C81M, J76, J76{S}, K85, M82, N9M, N9M{S}, N71M{S}, N84{S}

#### HYPOLEPIDACEAE

*Pteridium aquilinum* - *Bracken*, *Pasture brake*, *Eagle fern*, *Warabi*, *Kosari* {PL}. Young *croziers*, or uncoiled fronds, are boiled until tender, dressed with butter or cream sauce, and served on toast. Uncooked stalks are preferred by some for their mucilaginous qualities. In Korea, the fresh or dried fronds are prepared with sesame oil and soy sauce and eaten as *namul*. A starch, derived from the roots, is made into dumplings which are eaten with sugar and soy flour as a delicacy. Rhizomes have been used as a hops substitute. Cosmopolitan. ANGIER [Re], FERNALD, HEDRICK 1919, HOMMA, MEDSGER, MILLON [Cul, Re], TANAKA; E33M, N7T, N9M, N9M{S}

#### ICACINACEAE

*Citronella mucronata* - *Congonha verdadeira* {S}. The dried leaves are occasionally used as a substitute for tea in parts of Brazil. South America. CORREA, HEDRICK 1919, UPHOF; K63G, N84

*Villaresia congonha* - \**Citronella mucronata*

#### ILLICIAEAE

*Illicium verum* - *Star anise* {PL}. The unripe fruit is chewed after meals to aid digestion and sweeten the breath. Dried fruits are used for adding a licorice flavor to curries, pickles, cookies, cakes, tea, coffee, sweetmeats and *Chinese five-spice powder*. The distilled oil is used in candy, ice cream, soft drinks, and liqueurs. Southern Asia. CHANG, W. [Re], CUSUMANO [Cul, Re], HEDRICK 1919, MORTON 1976, ROOT 1980b, ROUTHIER 1989, TANAKA; A7{DF}, A49D{DF}, C27G{DF}, E8M, F85{S}, I77G, J11M{PD}, L17{DF}, M15T

#### IRIDACEAE

*Crocsmia aurea* - *Montbretia* {PL}. Flowers are the source of a yellow dye used as a substitute for saffron. Tropical Africa. UPHOF; H4, J37M, M7M, N84{S}, S28M{S}

*Crocus cancellatus* - *Cross-barred crocus* {S}. The bulbs are eaten after boiling and grilling. They have a delicious, chestnut-like flavor and are much esteemed in parts of the Mediterranean and Middle East. In Turkey, they are traditionally eaten in early spring in a yogurt soup colored with powdered safflower. Eurasia. HEDRICK 1919, PAILLIEUX, WOLFERT 1994a; N74, R52{PL}

*Crocus longiflorus* - *Wild saffron* {PL}. The stigmas are used locally as a cheap substitute for saffron. May have potential in breeding, and due to its higher dyeing power, could be of economic interest in coloring foods, beverages and liqueurs. Mediterranean region. CASORIA; N74{S}, N84{S}, R52, S69

*Crocus sativus* - *Saffron* {PL}. Flower styles are used to flavor and color sauces, creams, biscuits, preserves, liqueurs, *bouillabaisse*, curries, rice dishes (*paella*, *risotto*, *biryani*), cakes, puddings, sweetmeats, eggs, butter and cheese. Also used as a tea substitute. Roots are eaten roasted. Eurasia, cultivated. CUSUMANO [Cul, Re], HEDRICK 1919, KUNKEL, MACNICOL, MORTON 1976, PAINTER [Re], ROOT 1980b, WOLFERT 1973 [Pre]; EII, E33, F37T, H37M, 139,191,199M, J82, K2, M77, R52

#### CULTIVARS

**Cashmirianus:** Large size, high quality bulbs from Kashmir. Fragrant, violet-blue flowers in autumn. Rich orange stigmas which form commercial saffron. Yields about 24 pounds per acre. Q40

*Crocus sieberi* - *Sieber's crocus* {PL}. The bulbs are eaten raw by shepherds in the mountains of Greece. They are said to have a flavor similar to hazelnuts. Mediterranean region. PAILLIEUX; H37M, M37M, N74{S}, R52

*Freesia hybrida* - *Freesia* {PL}. The highly scented flowers are eaten or used as a garnish. They are excellent infused in a sugar syrup and added to sorbets for flavoring. Cultivated. ORTIZ 1992; D24, EII, D11M, F70, H37M, 191, K33M, M37M

*Gladiolus dalenii* - *Khahla-ee-kholo* {S}. The anthers are removed and the flowers are eaten raw as a salad or used as a potherb. Children suck the flowers for their copious quantities of nectar. Southern and Eastern Africa. FOX, E; N84, S28M

*Gladiolus italicus* - *Salepotu* {S}. The corms are added to ice cream and other dairy foods, in the manner of salep. Mediterranean region. OZTURK; N84, Q24

*Iris x germanica* - *German iris* {PL}. Rhizomes are dried and used as a flavoring or sometimes they are chewed. Eurasia. MORTON 1976, UPHOF; FI, H29M, J37M, K18M{DF}, L88M, N84, 053M{S}

*Iris x germanica* 'Florentina' - *Florentine iris*, *Fleur-de-lis*, *Orris root* {PL}. The dried rhizomes produce an essential oil, *orris oil*, used to flavor soft drinks, candy, *gin* and chewing gum, and to enhance fruit flavors in food manufacturing. One of the ingredients of *ras el hanout*. In Russia, it was often added to mead and mead-like beverages. Also chewed to sweeten the breath. MORTON 1976, RAY, G, TANAKA, TOOMRE, WOLFERT 1973; C67M, E14T{DF}, G84{DF}, J66, K18M{DF}, K22, K85, ZJ4{DF}, L56, M82, N19M

*Iris missouriensis* - *Rocky Mountain iris* {S}. Seeds are used as a substitute for coffee. North America. KUNKEL; A2, C98, D35G, E66M, F44, G60{PL}, 147, J25M, L13, L75, N84, Q24

*Iris pallida* - *Sweet iris* {PL}. *Orris oil*, derived from the dried rhizomes, is used to flavor soft drinks, candy, and chewing gum, and to enhance fruit flavors in food manufacturing. Europe. MORTON 1976; B77, M82, N84{S}, Q40

*Iris setosa* - *Hiogi-ayame* {PL}. Parched seeds are ground and used as a coffee substitute. Rhizomes are eaten or used as a source of starch. Northern temperate region. HEDRICK 1919, TANAKA, UPHOF; B77, E63M, I47{S}, K49Q{S}, M77M, N84{S}, Q24{S}, Q41{S}

*Moraea edulis* - \**Moraea fugax*

*Moraea fugax* - *Uintjie* {S}. The bulbous roots are eaten roasted, boiled, or stewed with milk. They are said to taste much like potatoes or boiled chestnuts. Southern Africa. FOX, F., HEDRICK 1919; D19M{PL}, N84, S28M

*Tigridia pavonia* - *Common tigerflower* {S}. Roasted starchy corms have been used as food by Mazatecs and other Indian tribes in Mexico since pre-hispanic times. The eyes from the corms, when they begin to sprout, are probably eaten. Central America, cultivated. UPHOF, WILLIAMS, L.; C95, F85, H37M{PL}, M7M{PL}, N84, R49{PL}

*Tritonia crocata* - *Greater African ixia* {S}. The flowers are used to adulterate saffron. Southern Africa. KUNKEL; D19M{PL}, N84, S28M

#### IXONANTHACEAE

*Irvingia gabonensis* - *Dika nut, Wild mango, Mopae* {S}. The seeds are used in soups and as a seasoner for various native dishes. When ground and heated they form the principal ingredient of the paste known as *dika bread* or *Gabon chocolate*, a staple food. They also yield *dika butter*, which is comparable to cocoa-butter and is used as an adulterant of chocolate. Tropical Africa. DALZIEL, DANFORTH, MENNINGER, TANAKA; F85

*Irvingia smithii* - *Denge* {S}. The seeds are rich in fat, and although smaller than those of other *Irvingia* species they are reportedly the best tasting. Eaten alone or as a supplement to other foods. Tropical Africa. DALZIEL, DANFORTH; Y40

*Klainedoxa gabonensis* - *Sopei nut* {S}. Seeds are eaten fresh, roasted or crushed into a paste. The paste is rich and oily and is mixed with other foods as a gravy or relish. Tropical Africa. DALZIEL, DANFORTH, UPHOF; Y40

#### JUGLANDACEAE

*Carya x brownii* (*C. cordiformis* x *C. illinoensis*) - *Pleas nut* {PL}. Hybrid. Pecan x bitter nut. The seeds are edible. Generally considered bitter. The claim by some that the name *pleas* refers to the pleasing flavor of the kernels is erroneous. Seldom productive north of St. Louis, Missouri. Introduced in 1916 by E. Pleas of Collinsville, Oklahoma. JAYNES, KELSEY, KRUSSMANN, ROOT 1980a; 140

*Carya caroliniae-septentrionalis* - *Carolina hickory nut, Southern shagbark* {S}. The large, sweet seeds are eaten. Southeastern North America. KROCHMAL, TANAKA; T41M, U7A

*Carya cathayensis* - \**Juglans cathayensis*

*Carya cordiformis* - *Bitternut, Swamp hickory* {S}. The bitter, astringent seeds are sometimes eaten. Natural hybrids between the bitternut and other hickory species are valued for their ornamental qualities. North America. JAYNES; B68{PL}, C11M, D95{PL}, G66, H14M{PL}, K63G, K89, N73{PL}

*Carya glabra* - *Pignut, Pignut hickory* {PL}. The edible seeds vary considerably in quality, some being bitter and astringent, others are sweet and pleasant tasting. Source of most of the hickory wood sold in the United States for smoking foods. Eastern North America. BJORKMAN, GIBBONS 1979, JAYNES, MEDSGER; B32, F51, G66{S}, H14M, 160, J21H{PD}, K63G{S}, K89, M69M, N37M, P49{S}, R78{S}

*Carya illinoensis* - *Pecan, Black hickory* {PL}. Seeds are eaten raw, salted, in pies, candies, cakes, cookies, breads, ice cream, *seed yogurt*, etc. *Hickory milk*, prepared from the seeds, was used to thicken soups, season corn cakes and hominy, or was fermented into an alcoholic beverage. Also the source of an edible oil. The leaves are said to be used as a tea. Pecan wood is becoming very popular as a smoking wood. It adds a strong, nutty flavor to meat, chicken, fish and other foods. North America, cultivated. BJORKMAN, COLE, C. 1990 [Re], FERNALD, HEDRICK 1919, KUNKEL, MENNINGER, MEYEROWITZ 1994b, ROSENGARTEN [Re], UPHOF; A52M{PD}, A91, C11M, E14T{PD}, G0{PD}, G23, G72, H72{PD}, I9M, I25M{S}, I99T{PD}, J3{PD}, J21H{PD}, K38{S}, L14G{PD}, L56M{PD}, M69M, etc. (for cultivars see Pecan, page 469 and Rootstocks, page 510)

*Carya laciniosa* - *Shellbark hickory, King nut* {PL}. The edible seeds are sweet and of very fine flavor. They can be eaten raw or used in cakes, pies, etc. Their cracking quality is poor in comparison to the shagbark hickory. The sap is sweet, and when boiled down makes a syrup or sugar as delicious as that of the maple. North America, cultivated. FERNALD, JAYNES, MEDSGER; A82, A91, C11M, D76, F51, H14M, H49, 14, I9M, K38{S}, K89, M69M, N37M. (for cultivars see Hickory, page 388)

*Carya x laneyi* (*C. ovata* x *C. cordiformis*) - {GR}. Probably a natural hybrid. Shagbark hickory x bitternut. Nuts are edible. Generally faster growing, bears at a younger age, and matures nuts earlier than shagbark but lacks the high quality kernel. JAYNES, KUNKEL.

#### CULTIVARS

**Roof:** Produces a large nut. Potential material for use as an interstem for grafting on *C. cordiformis*. Originated in Iowa. 140

*Carya myristiciformis* - *Nutmeg hickory* {PL}. The sweet nuts are eaten and are said to resemble nutmegs, hence the name. North America. KROCHMAL, TANAKA; D95, G66{S}, H4, H14M, 160, K63G{S}, N37M

*Carya x nussbaumeri* (*G. illinoensis* x *C. laciniosa*) - *Hican* {DF}. Natural and artificial hybrids. Pecan x shellbark hickory. Seeds are edible. The hybrids exhibit many of the desirable traits of the parent species, but are generally unproductive. JAYNES; E62, I53M. (for cultivars see Hican, page 387)

*Carya ovata* - *Shagbark hickory* {PL}. Seeds are sweet and delicious. They are eaten raw, roasted, in pies, cakes, breads, cookies, candies, etc. From them the Indians prepared a kind of oily *hickory milk*, or *powcohicora*, which was used like butter on bread, sweet potatoes and vegetables. They also ground the seeds into meal or flour and used it to thicken broths and soups. Sugar and syrup can be prepared from the sap, and also by boiling the hickory wood chips and bark. Hickory wood is the traditional smoking wood in the Southern states. Hickory sawdust is preferred for smoking sausage. Liquid hickory smoke, a natural product made by burning wet hickory wood, is often added to sausage meat for flavoring. The wood is also used for making cooking planks, which impart a distinctive woody flavor to foods cooked on them. North America. FERNALD, GIBBONS 1962 [Re], GILMORE, ROSENGARTEN, TURNER 1979 [Re]; A38M{DF}, A91, B74, B74{DF}, C9M{S}, C11M, C21M{PD}, D7{PD}, D95, F51, G16, H49, 14, J3{ffi}, K27T{PD}, K38{S}, L15G{ED}, L16{PD}, L27M, M69M, M85{PD}, etc. (for cultivars see Hickory, page 388)

*Carya pecan* - \**Carya illinoensis*

*Carya tomentosa* - *Mockernut, White-heart hickory* {PL}. Seeds are sweet and edible, but the shell is very thick and hard and the kernel is so difficult to extract the squirrels even leave them to accumulate under the trees. Eastern North America. GIBBONS 1979, HEDRICK 1919, JAYNES; A80M, G66{S}, H14M, K63G{S}, N37M, N84{S}

*Carya x sp.* (*G. illinoensis* x *C. ovata*) - *Hican* {DF}. Natural and artificial hybrids. Pecan x shagbark hickory. The seeds are edible. JAYNES; I53M. (for cultivars see Hican, page 387)

*Juglans ailantifolia* - *Japanese walnut, Siebold walnut, Onigurumi* {S}. Seeds are eaten raw, cooked, or used in confectionery. Young buds and fruit stalks are boiled and eaten. Recommended as an ornamental by some because of its tropical appearance and long clusters of seeds. Japan, cultivated. JAYNES, TANAKA; D95{PL}, G66, K38, K63G, R78

*Juglans ailantifolia* var. *cordiformis* - *Heartnut, Hime-gurumi* {S}. The seeds are eaten raw, used in cooking, or made into candies, pies, cakes, etc. The flavor is mild and pleasant, resembling that of the butternut. Also the source of an edible oil. Similar to Japanese walnut, but with a more pronounced heart shape. Japan, cultivated. JAYNES, ROSENGARTEN, TANAKA; B74{DF},

H65{PL}, I49M{PL}, K38, K63G, R47, R78. (for cultivars see Heartnut, page 386)

*Juglans x bixbyi* (J. cinerea x J. ailantifolia \ar. cordiformis) - *Buartnut*, *Bixby walnut*, *Butterjap* {PL}. Artificial hybrid. The seeds are edible. Combines the aromatic kernel flavor and superior climatic adaptability of the butternut, with the higher yield, better appearance, and crackability of the heartnut. JAYNES, ROSENGARTEN; D76, H49, I49M, 174, 160, K63G{S}, K89

#### CULTIVARS

**Butterheart:** Heart-shaped nut, cracks out in half or whole kernels. Kernels sweet and rich, with no trace of bitterness. Tree very winter hardy, ornamental, bears early. Requires a pollinator. Introduced by Miller Nurseries. H65

**Cobles #1:** Very large butternut type nuts. Tree vigorous but slow to come into bearing, ornamental. Produces nuts in clusters of 7 or 8. Originated in Pennsylvania. 140

**Corsan:** Full, round nut much like Fioka. Vigorous, productive tree. Named by J.U. Gellatly. Originated as a seedling from the Toronto suburban planting of the late George H. Corsan, at Echo Valley. A91, B99

**Fioka:** Produces 55 nuts per pound, up to 24% kernel; shell hard, cracking quality good. Has the flavor of the butternut. Tree vigorous; bears annually; extremely hardy; grafts well to black walnut rootstock. Originated by J.U. Gellatly. Introduced in the early 1930's. BROOKS 1972; A91

**Mitchell:** Nut intermediate between parents; shell spiry, cracks easily; flavor resembles a butternut. Tree slightly protogynous, but probably self-fruitful most years. Originated in Scotland, Ontario, Canada by Claude Mitchell. Introduced in 1930. Won first prize in 1932 in a Michigan nut contest. BROOKS 1972; B99, E91M, E91M{GR}, 140, N24M

**Pierce:** Extremely hardy, grows where heartnuts are not hardy. Very vigorous, one seedling at five years of age was 20 feet tall and producing a heavy crop. Nuts grow in clusters of 10 to 15 and have good cracking qualities. L27M

*Juglans californica* - *California walnut*, *Southern California black walnut* {PL}. Sweet, thick-shelled seeds are eaten raw, used in pies, cakes, cookies, etc. Said to have a better flavor than the Eastern black walnut. Sometimes used as a rootstock for Persian walnuts. California. CLARKE, KIRK, MEDSGER, WICKSON; B94{S}, G60, I83M, I98M, N84{S}

*Juglans cathayensis* - *Chinese walnut*, *Cathay walnut* {PL}. Seeds are eaten roasted with salt, or made into confections and sweetmeats. A considerable amount are processed into an edible oil. China. MENNINGER, UPHOF; G66{S}, M35M, N37M

*Juglans cinerea* - *Butternut*, *White walnut* {PL}. The oily, sweet-tasting nuts are eaten raw, or used in cakes, cookies, breads, muffins, candies, etc. The sweet sap can be boiled down to syrup and sugar or added to maple sap. Unripe fruits are pickled in vinegar, sugar, and spices. The seeds yield an oil is used in cooking. Butternut wood is used for smoking foods, and is especially recommended for game meats such as buffalo and venison. Eastern North America, cultivated. ANGIER [Re], FERNALD, GIBBONS 1962, MEDSGER, ROSENGARTEN; A82, B74, C11M, D45, D76, H65, 14, I49G, 160, J3{PD}. K63G{S}. (for cultivars see Butternut, page 314)

*Juglans hindsii* - *Hinds walnut*, *Northern California black walnut* {PL}. The small, thick-shelled seeds are good to eat raw. Commonly used as a rootstock for Persian walnuts. California. JAYNES, KIRK; B71M, B93M, B94{S}, C54, D18, G59M{S}, G60, G66{S}, 160, I68, K38{S}, K73M, L47, N84{S}. (for cultivars see Rootstocks, page 510)

*Juglans honorei* - \* *Juglans neotropica*

*Juglans m%jor* - *Arizona walnut*, *Arizona black walnut* {S}. Small seeds are sometimes eaten. Also used as a rootstock. Southwestern North America. JAYNES, KIRK, YANOVSKY; B94, K63G, L3J, L55J, N84

*Juglans mandschurica* - *Manchurian walnut*, *Siberian walnut* {S}. Seeds are eaten raw or roasted. Also the source of an edible oil. Kernels are well filled, but they are difficult to extract. Recommended for severe cold climates. Sometimes used as a cold-hardy rootstock. Eastern Asia. JAYNES, TANAKA; E62{DF}, G66, H85{PL}, K38, K63G, K81{PL}, M35M{PL}, P49

*Juglans microcarpa* - *Texas walnut*, *Texas black walnut*, *Nogalillo* {S}. The small, thick-shelled seeds are sometimes eaten. Also used as a rootstock. Southwestern North America. JAYNES, LATORRE 1977b; B94, G66, 160, N37M{PL}

*Juglans neotropica* - *Andean walnut*, *Nogal*, *Tocte*, *Ecuadorian black walnut* {PL}. The nuts have a very thick, bony shell and a kernel of rich and pleasant flavor. They are mixed with sugar and milk to make a sweetmeat, called *nogada de Ibarra*, that is sold at local markets in Ecuador. Trees are nearly evergreen and have a low chilling requirement. Ecuador, Colombia. NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, TANAKA, UPHOF; A41G, D57, 174, 183M, Q49M, Q49M{S}

*Juglans nigra* - *Eastern black walnut* {PL}. Nuts have a rich, distinctive, delicious flavor and are widely used in pastries, confectionery, ice cream, cakes, pies, nut-breads, cookies, puddings, and muffins. The oil extracted from the nut is used as a seasoning in bread, pumpkin, squash, and other foods. Unripe fruits are pickled. Yields sweet sap that can be made into syrup or sugar. North America. The wood is used by gourmet chefs for smoking venison and other foods. ANONYMOUS 1995 [Re], FERNALD, GIBBONS 1962 [Re], ROSENGARTEN, TURNER 1979 [Re]; A52M{DF}, A82, A86{DF}, £52, B74{DF}, C11M{S}, D45, F6IPD}, G29{DF}, H4, H65, H73{DF}, 14, J3{EQ}, L15M{DF}, L56M{DF}, etc. (for cultivars see Black Walnut, page 302)

*Juglans regia* - *Persian walnut*, *English walnut* {S}. Nuts are eaten raw, in baked goods, candies, ice cream, *pesto*, *satsivi* and other sauces, soups, nut milks, etc. Unripe fruits are pickled in vinegar, added to jams, preserved in syrup, or made into biandy. Finely ground shells are used in the stuffing of *agnolotti* pasta. Leaves are used as a tea or for wrapping *Cassette* and *Picadou* cheeses\* Walnut meal is used as a thickening agent for savory and sweet dishes. Also the source of an edible oil with a butternut-like flavor used in salad dressings with fruit-flavored vinegars. Eurasia, cultivated. CAMPBELL-PLATT, COLE, C. 1990 [Re], COST 1988 [Cul], CUSUMANO [Cul], GOLDSTEIN [Be], GRAY, P. [Cul], MALLOS [Re], MASUI, MENNINGER, ROOT 1980a, ROSENGARTEN, UPHOF; A82{PL}, C9M, D81M{PO}, D87D{ED}, E38M{PJ2}, H15T{PE}, K38, K63G, N84, 053M. (for cultivars see Walnut, page 568, and Rootstocks, page 510)

*Juglans regia* 'Carpathian' - *Carpathian walnut*, *Circassian walnut*, *Hardy walnut* {PL}. The nuts are eaten in the same manner as Persian walnuts. They are recommended for colder areas of northeastern United States and Canada. Introduced from the Carpathian mountains of Poland by Reverend Paul C. Crath. JAYNES; £52, D76, E82{S}, F93, G23, G66, H49, K38{S}, K63G{S}, L33, L47, M69M. (for cultivars see Walnut, page 568)

*Juglans sieboldiana* - \* *Juglans ailantifolia*

#### LAMIACEAE (LABIATAE)

*Acinos alpinus* - *Alpine basil thyme*, *Mountain calamint* {PL}. The herb is used for flavoring. Also brewed into a pleasant, cordial tea. Europe. MORTON 1976, NIEBUHR; C43M, E61, L94M, L94M{S}, N84{S}

*Acinos arvensis* - *Basil thyme*, *Acinos* {S}. In old English cookery, the flowering tops were used to season jugged hare. The herb is said to impart an appealing flavor to the flesh of animals that eat it.

Similar to thyme in odor and flavor but milder and more pleasant. Eurasia. MORTON 1976; F35M{PL}, F37T{PL}, J82, M82{PL}, N84, 048

*Acinos thymoides* - *Acinos arvensis*

*Agastache anethiodora* - *Agastache foeniculum*

*Agastache cana* - *Hoary balm of Gilead*, *Mosquito plant*, *Wild hyssop* {PL}. A very fragrant herb that is useful for putting in a *claret cup*. Southwestern North America. HEDRICK 1919; A61, D56M{S}, D92M{S}, E61, F44M, G89M, J25M, J25M{S}, K22, K85, L90J, L91M{S}, L13{S}, N7M{S}, M82, N40M {S}, etc.

*Agastache foeniculum* - *Anise hyssop*, *Licorice mint* {PL}. The anise-flavored leaves are used for making a pleasant tea. Fresh or dried leaves are added to fruit salads and drinks as seasoning. The flowers also have an anise or licorice flavor and can be used in a similar manner. North America. CROWHURST 1972, LATHROP, MEDSGER, MORTON 1976; A97, C43M, C67M, D92M{S}, E7M{S}, F80{S}, GO{DF}, G96, J76, K22, K85, L56, L90J, M35, N19M, R47{S}, etc.

#### CULTIVARS

**Texas American:** (Texas American Pennyroyal) Similar to anise hyssop but with an anise-pennyroyal fragrance. Height 2 feet. K85

*Agastache mexicana* - *Mexican giant hyssop*, *Lemon licorice mint* {PL}. The highly aromatic young leaves and flowers are used in salads, for flavoring, and for tea. Mexico. MORTON 1976, QUINTANA 1994; C43M, E61, F32D, F35M, H94M, K22, K49M{S}, K85, L94M, M77M, M82, N7G{S}, 053M{S}, S55

#### CULTIVARS

**Anise:** (Anise Mexican Hyssop) Selected form with very pleasant, anise-scented leaves. Makes a nice tea. Adapted to growing in Zone 8. E61

*Agastache neomexicana* - *Wild licorice mint* {S}. Leaves are used for flavoring and as a substitute for tea. Southwestern North America. MORION 1976, YANOVSKY; J93T, L3J, M77M{PL}, N84

*Agastache rugosa* - *Korean mint* {PL}. The fresh or dried leaves, anise-like in odor and flavor, are used for seasoning meats and dressings and are steeped for tea. Young shoots and leaves are boiled and eaten. Eastern Asia. MORTON 1976, TANAKA; C67M, D40G{S}, D92M{S}, J66, J82, K22, K49T{S}, K85, N7G{S}, R53M, R53M{S}

#### CULTIVARS {S}

**Superior Line:** An especially uniform, extra productive strain selected by Shoulder to Shoulder Farm. Stoutier, greener, and with uniformly larger flowers than the common form. N7G

*Agastache urticifolia* - *Giant hyssop*, *Sawtooth mountain-mint* {S}. Seeds are eaten raw or cooked. The dried flowers and leaves can be used to make an herbal tea. Western North America. KIRK, YANOVSKY; A61{PL}, C43V, F44, G60{PL}, 147, I98M, L13, N84, 053M

*Ajuga reptans* - *Bugle* {PL}. The leafy shoots are occasionally used in salads. Europe. BREMNESS; B28, B92, C9, C36, C58, C92{S}, E91G{S}, G89M, M16, M82, 053M{S}, R53M

*Amaracus dictamnus* - *Origanum dictamnus*

*Blephilia ciliata* - *Downy wood-mint* {PL}. The mildly aromatic leaves can be prepared as tea like those of the true mints. North America. PETERSON, L.; B29, B29{S}, E61, H70M, J39M{S}, J43{S}, M72, M77M, M82, N84{S}

*Blephilia hirsuta* - *Cherokee mint*, *Hairy wood-mint* {S}. Fresh or dried leaves are used as a substitute for tea. North America. PETERSON, L.; J39M, K85{PL}, M77M{PL}, N23, N84

*Calamintha acinos* - *Acinos arvensis*

*Calamintha grandiflora* - *Mint savory*, *Showy savory*, *Showy calamint* {PL}. The leaves have a pleasant mint-like fragrance and

flavor and can be used as a seasoning or for tea. Southern Europe. C43M, E61, G96, H51M, K22, K85, L56, M35, M82, N84{S}, Q24{S}

*Calamintha nepeta* - *Lesser calamint*, *Nepitella* {PL}. The herb can be used for flavoring and is especially delicious cooked with mushrooms. It has a stronger pennyroyal-like fragrance and a more pungent taste than calamint. Popular in Tuscan cooking. Eurasia. FIELD, MORTON 1976; B28, D92M{S}, E7M{S}, I18M, J82, K22, K57, K85, L91M{S}, M82, N84{S}, Q24{S}, S55{S}

*Calamintha officinalis* - *Calamintha sylvatica*

*Calamintha sylvatica* - *Calamint* {S}. An herb with a strong aromatic fragrance and a pleasantly pungent flavor. It is used in the preparation of zucchini and other "Roman style" vegetables, and has also been employed for flavoring roasts and stews. In Roman kitchens it was credited with removing the fetid odor and "gamey" taste of meat that had begun to spoil. The flavor is said to resemble a cross between mint and marjoram. Flowers are used for conserves. Eurasia. BIANCHINI, MABEY, MACNICOL, MORTON 1976; C2{PL}, C43M, C43M{PL}, C95, F15M{PL}, F35M{PL}, F37T{PL}, F80, J76, J76{PL}, N84, Q24

*Calamintha sp.* - *Niebita* {PL}. An Old World culinary herb, originally from Italy. Indispensable for bean and mushroom dishes. Hardy perennial, height 2 feet, does best in full sun. Showy, pale lavender flowers. C43M, C43M{S}, M82

*Cedronella cana* - *Agastache cana*

*Cedronella canariensis* - *Balm of Gilead* {PL}. Leaves are used in the preparation of a tea, called *the de Canarias*. Macaronesia. UPHOF; C43M, C43M{S}, C81M, F35M, F37T, G96, H51M, H94M, K22, K85, L56, M53, M82, N42, S55{S}, etc.

*Cedronella triphylla* - *Cedronella canariensis*

*Clinopodium vulgare* - *Wild basil*, *Field basil* {S}. Fresh or dried leaves are used for flavoring tomato sauce, omelettes, egg sandwiches, fish chowders, broiled fish, rice dishes, etc. The fresh leaves can be made into tea. Europe, naturalized in North America. CROWHURST 1972, MABEY, MICHAEL {Pre, Re}, PETERSON, L.; D92M, F37T{PL}, J82, L91M, M82{PL}, N71M, N84, 053M, S55

*Coleus amboinicus* - *Plectranthus amboinicus*

*Coleus aromaticus* - \**Plectranthus amboinicus*

*Coleus blumei* - *Sayabana*, *Jacob's coat* {S}. Tubers are eaten. The leaves are eaten with bread and butter, or bruised and put into country beer. Southeast Asia. BURKILL, DUKE; F73D, F85, G73, 053M

*Coleus dazo* - *Daju*, *Rizuka* {PL}. The starchy roots are washed by hand to remove the skin, then boiled and served. In flavor they are similar to an Irish potato. They can also be pickled. Sold in local markets. Tropical Africa. DALZIEL, DANFORTH, TANAKA; Y40

*Coleus dysentericus* - \**Solenostemon rotundifolius*

*Coleus parviflorus* - *Country potato*, *African potato* {PL}. The subterranean tubers are consumed like potatoes, either raw, baked, steamed, added to soups and stews, or mashed and fried as croquettes. Powdered tubers are sometimes used as a substitute for potatoes for the preparation of minced-meat balls. Southern Asia. MACMILLAN, OCHSE, TANAKA; Y81

*Coleus rotundifolius* - *Solenostemon rotundifolius*

*Coleus tuberosus* *Coleus parviflorus*

*Conradina verticillata* - *Cumberland rosemary*, *Mountain rosemary* {PL}. The leaves have a strong, pleasant scent reminiscent of rosemary and are occasionally used as a substitute in cooking, such

as in soups and stews. An endangered species. Eastern North America. REILLY, TUCKER 1994; B28, D46, D95, G96, HIM, I37M, K85, L55, M16, M82, N37M, N42, N84

*Coridothymus capitatus* - \**Thymus capitatus*

*Cunila origanoides* - *Maryland dittany*, *Stone mint* {PL}. The leaves have a pleasant, mint-like flavor and can be made into a refreshing tea. Both fresh and dried leaves are used. North America. CROWHURST 1972, MORTON 1976, PETERSON, L.; C43M, C67M, F32D, H51M, M77M

*Dracocephalum moldavica* - *Moldavian balm*, *Moldavian dragon's-head* {S}. The lemon-scented leaves can be used for tea. Young shoots are edible. Eurasia. VON REIS; C95, D92M, E7M, F80, I39, J20, J82, K71, L91M, N84, 053M, Q34, S55

*Elsholtzia ciliata* - *Vietnamese balm*, *Naginata-koju*, *Hsiang-ju*, *Kinh gidi ta* {PL}. Young plants are eaten raw in salads when finely cut, boiled as a potherb, or used as an aromatic condiment for vegetable dishes. Eastern Asia. BOND [Cul], TANAKA; H29M, J82, K22, K85, L77D{S}, M82, N84{S}, Q41{S}

*Elsholtzia cristata* - \**Elsholtzia ciliata*

*Galeobdolon luteum* - \**Lamium galeobdolon*

*Glechoma hederacea* - *Ground ivy*, *Alehoof*, *Gill-over-the-ground*, *Herbe St. Jean* {PL}. Fresh or dried leaves are used for making an herbal tea. The young shoots and leaves are eaten like spinach or cooked in vegetable soups, to which they lend a special flavor. The Saxons added the herb to their beer to clarify it and improve its flavor and keeping qualities. Eurasia, naturalized in North America. ARMSTRONG [Re], CROWHURST 1972, GIBBONS 1966b, GRIEVE, LAUNERT, MABEY, MICHAEL [Re], MORTON 1976; C43M, E33M, G89M, J82{S}, L90J, N71M{S}, N84{S}, 053M{S}, Q24{S}, R53M

*Hedeoma pulegioides* - *American pennyroyal*, *Squaw mint* {PL}. The leaves have a very strong mint-like aroma and taste and can be brewed into a refreshing tea, or used as a culinary flavoring. Source of an essential oil used in the food industry for flavoring beverages, ice cream, candy, and baked goods. North America. CROWHURST 1972, GIBBONS 1979, MORTON 1976, PETERSON, L.; C43M{S}, E5T{S}, F37T, J82{S}, K2{S}, K22, K85, M82, 053M{S}

CULTIVARS

**Lemon:** Lemon-scented form which has very much the same appearance as regular American pennyroyal, except the leaves are somewhat smaller. M82

*Hoslundia opposita* - *Mshwee* {S}. The small, orange to red fruit, composed of an elongated, succulent calyx, has soft, very sweet pulp and is eaten fresh. Has been recommended for improvement. Leaves are also eaten. Tropical Africa. DALZIEL, FOX, F., MARTIN 1975, TANAKA, TREGOLD, VON REIS; F85

*Hyptis suaveolens* - *Konivari*, *Bush tea plant*, *Chia gordo*, *Sangura* {S}. The tips of the shoots are added to food as a flavoring. A porridge or a refreshing beverage can be made by soaking the mucilaginous seeds in water. The aromatic leaves are used for preparing a mint-flavored tea substitute. Tropical America. ALT-SCHUL, DUKE, MORTON 1976, TANAKA, WILLIAMS, L.; F85, I16, N84

*Hyssopus officinalis* - *Hyssop* {PL}. The leaves and the tops of the young shoots are used for seasoning soups, salads, sauces, pickles, custards, meats, etc. Source of an essential oil employed as a flavoring for bitters and alcoholic beverages, especially liqueurs like *Chartreuse*. Flowers are added to salads or made into syrup. The dried herb can be brewed into tea. Mediterranean region, cultivated. GRIEVE, MACNICOL, MARCIN, MICHAEL [Re], MORTON 1976, ROOT 1980b [Cul], UPHOF; A7{DF}, A49D{DF}, A97, C9, C67M, D92M{S}, F80{S}, G84{DF}, H46{DF}, J66, K22, K54{PD}, K85, M35{S}, N19M, N84{S}, R47{S}, etc.

CULTIVARS

**Pink:** (Rose, Rosea) Very similar to common hyssop, but with attractive flowers that are pale pink in color. Grows approximately 18 inches tall. E61, F32D, F35M, M15T, M82, H94M, N84{S}, R53M, R53M{S}, S55{S}

**Sissinghurst:** Selected form with many terminal spires of blue flowers. Slightly larger brighter green leaves and more compact, erect habit than common hyssop. Grows to 12 inches tall. K22

*Koellia virginiana* - *Pycnanthemum virginianum*

*Lallemantia iberica* - *Balingu shahri* {S}. Leaves are used as a potherb in Iran. The seeds are the source of an edible oil, called *lalllemantia oil*. Southwest Asia. UPHOF; U63

*Lamiastrum galeobdolon* - *Yellow archangel* {S}. The young shoots and leaves are eaten boiled or sauteed in butter. Southern Eurasia. MABEY; B28{PL}, L59P{PL}, 048, Q24, S55

CULTIVARS {PL}

**Variegated:** Deep green foliage brushed with striking silver variegation; bright yellow flowers in spring; height 6 inches. Excellent rapid growing ground cover or rock wall plant, in partial sun and shade. A74, C9, D95, K22, K85, L21, L22

*Lamium album* - *White dead-nettle* {S}. The young leaves and stem tips are boiled and eaten as potherbs or added to omelettes. Also cooked with eel and sorrel in the French dish *anguille au vert a la flamande*. The flowers are candied. Eurasia. GRIEVE, HEDRICK 1919, MICHAEL [Re], UPHOF; N71M, N84, 048

*Lamium amplexicaule* - *Henbit*, *Hotoke-no-za* {S}. Young leaves and flowering tips are eaten in salads, boiled as a potherb, or used in dumplings. One of seven wild greens (*nanakusa*) traditionally mixed with rice gruel (*okaya*) on January 7th or 15th in warmer areas of Japan. Also dried and made into an herbal tea. Eurasia, naturalized in North America. BELLEME, FERNALD, HOMMA, KIRK, TANAKA; N71M, N84

*Lamium purpureum* - *Archangel red dead-nettle* {S}. The young leaves are used as a potherb. Young flowering tips are boiled or candied. Eurasia. HEDRICK 1919, KUNKEL, MABEY; A2, D26G, D56M, J76{PL}, J82, N40M, N71M, N84, Q24

*Lavandula angustifolia* - *English lavender* {PL}. Leaves, petals, and flowering tips are added to salads, dressings, soups, stews, vinegar, honey, jams and jellies, wine, and soft drinks. The fragrant flowers can be candied or used as a garnish for fruit cups. Fresh or dried flowers are brewed into tea. Source of an essential oil utilized as a flavoring by the food manufacturing industry. Produces a golden-colored, smooth honey of excellent aroma and flavor. Mediterranean region, cultivated. BRYAN [Cul], CRANE 1975, GRIEVE [Cu], LARKCOM 1984, LEGGATT [Re], MACNICOL [Re], MARCIN, MORION 1976, PAINTER [Re], ROOT 1980b; A7{DF}, C43M, C67M, C94M{PD}, D92M{S}, F35M, F80{S}, I49M{PD}, K22, K37P{PD}, L17{DF}, L74M{PD}, M35, N19M, N54{£D}, N84{S}, etc.

CULTIVARS

**Gray Lady:** Compact plant, to 18 inches tall, robust and rapid growing. Grayer foliage than the species. Dark-violet colored flowers. Introduced by J.J. Grullemans of Wayside Gardens, Mentor, Ohio, before 1967. C9, C43M, F32D, F35M, K22, K85, L74M, M82

**Hidcote:** Slow, compact grower, to 2 1/2 feet tall. Attractive shiny green foliage and rich, dark aster-violet flowers. Raised by Major Lawrence Johnston, Hidcote Manor, Gloucestershire, England, before 1950. C81M, D92M{S}, F37T, H94M, 139, J66, J76, J82, K22, K85, L74M, M65M, M82, N19M

**Jean Davis:** (Rosea) Forms small, compact tidy mounds, to 18 inches tall. Attractive, light-rose colored flowers. Excellent for borders and knot gardens. C43M, F32D, G96, J66, J76, K22, K85, L22, L56, L74M, M65M, M82, N19M

**Ladv:** Hairy, dwarf lavender, ideal for growing in pots or borders or where space is limited. Uniform, compact, branching habit; 8 to 10 inches tall; lavender-blue flowers. The first lavender cultivar to flower consistently the first year from seed. Can be treated as an annual north of Zone 5. All America Selections winner for 1994. B30, B75{S}, D11T, E7, F35M, F37T, G68, H29M, I91{S}, J76, J82{S}, K2, K66{S}, L91M{S}, M29{S}, M35, M82, etc.

**Munstead:** Dwarf, compact growth, 18 to 24 inches tall. Dark aster-violet flowers. Blooms several weeks earlier than other cultivars. Raised by Gertrude Jekyll, Munstead Wood, Surrey, England. Introduced in 1916. C43M, C67M, D92M{S}, F20M, F37T, H51M, J66, J76, K22, K85, L74M, M35, M65M

**Sharon Roberts:** Hardy to 0° E; has withstood temperatures of -10° F. Flowers are deepest lavender, intensely fragrant. Blooms twice each season, in June and again in September and October. Grows 20 to 24 inches tall. Developed in the Pacific Northwest. E61, F32D, 139, L74M, L94M, M82

*Lavandula x intermedia* (L. *angustifolia* x L. *latifolia*) - *Lavandin* {PL}. Natural and artificial hybrids. English lavender x spike lavender. The flowers are the source of an essential oil used for flavoring beverages, ice cream, candy, puddings, baked goods and aromatic vinegars. Hybrids of this cross are more vigorous growing, easier to grow, and yield more oil than their parents and are replacing them in some areas as an industrial source of essential oil. LEUNG, MORTON 1976; E14T{DF}, M82, N19M

#### CULTIVARS

**Pelohinensis:** (Lavender of Dauphine) Growing wild in France and Switzerland, this cultivar is collected for its oil. Larger and more robust growing, the flower spikes are longer and heavier. F37T, L74M, L90J, M82

**Grappenhall:** Large growing cultivar, to 3 feet tall. Slightly larger leaves than the type. Long spikes of richly colored, pale mauve flowers excellent for cutting and bunching. Introduced by Messrs. Clibran of Altricham, England, about 1902. C9, K22, L74M, L90J, L94M, M82, P92

**Grosso:** (Fat Spike) Vigorous hybrid with large, intensely fragrant gray leaves, twice the size of English lavenders. Excellent for landscaping purposes, a mature 5 year old plant forming an even mound about 16 inches high and 3 feet across with virtually no pruning. Disease resistant. Hardy to below 0° F. Holds its foliage well through the winter. Grown commercially in France for its oil. Named after the French lavender specialist Pierre Grosso. B28, C2, C9, C43M, E61, F32D, F44M, H94M, 139, J82, K66, L74M, L90J, L94M, M35, M82, M98, P92, etc.

**Provence:** Preferred by commercial growers in the Provence region of southern France. High oil content. Easier to harvest by machinery than other types. Grows to 2 feet tall. Mauve flowers. Begins to bloom in July and will continue into September if the old spikes are removed. C2, C9, C43M, D37, E7, E61, E87, F44M, F93G, H94M, I99P, 757{ES}, J82, L74M, L90J, L94M, M35, M82, M98, etc.

*Lavandula latifolia* - *Spike lavender*, *Sweet lavender* {PL}. Sun-dried flowers are the source of an essential oil sometimes used for flavoring salads, jellies and other commercially prepared foods. Mediterranean region. LEUNG, TANAKA; D92M{S}, E61, E81M{S}, F32D, H94M, J66, J82, K22, K85, M82, Q24{S}

*Lavandula officinalis* - *Lavandula angustifolia*

*Lavandula stoechas* - *French lavender*, *Spanish lavender* {PL}. Source of a golden to dark amber honey with an excellent, highly regarded flavor. When granulated, the honey is nearly as smooth as butter. Europe, cultivated. CRANE 1975; C43M, D92M{S}, E61, E81M{S}, F37T, F93G, H94M, 139, 199P, J82, L56, L74M, L90J, L94M, M82, Q24{S}, R53M, etc.

*Leonotis nepetaefolia* - *Giant lion's ear*, *Zungu* {S}. Flowers are eaten in Tanzania. In Uganda, they are cooked with green leafy

vegetables. Eastern Africa. GOODE, VON REIS; F37T{PL}, F73D, F80, F85, G80{PL}, G73, 139, J82, K22{PL}, K85{PL}, L94M, N84

*Leonotis ocymifolia* var. *raineriana* - *Leonotis raineriana*

*Leonotis raineriana* - *Wilde daggi* {S}. Young leaves are used as a condiment. Eastern Africa. KUNKEL; N84, S28M

*Leonurus cardiaca* - *Motherwort* {S}. The flowering tops are used as a flavoring for beers, ales, and stout. Fresh or dried flowers can also be added to soups, particularly lentil or split-pea soup, and can be brewed into a tea. Eurasia. CROWHURST 1973, MACNICOL [Re]; A26, A97{PL}, C43M{PL}, C95, D92M, E61{PL}, F35M{PL}, F80, M34M, 053M, R47

*Leonurus sibiricus* - *Chivirico*, *Siberian motherwort* {S}. Young plants and plant tops are eaten. In China, the roots are cooked with pork. Eastern Asia, cultivated. ALTSCHEUL, BURKILL, TANAKA; A26, C43M{PL}, C95, E61, F35M{PL}, F68T, F73D, F85, F86G, I81M, I81M{PL}, J82, L3J, L90J, L91M, L94M, etc.

*Lycopus uniflorus* - *Bugleweed* {S}. The crisp, white tubers are eaten raw in salads, boiled, pickled, or added to soups and stews. Boiled a short time in salted water, they are said to be an agreeable vegetable, much suggesting the *crossnes* of European markets. North America. CROWHURST 1972, FERNALD, PETERSON, L.; J6

*Majorana Heracleoticum* - *Origanum vulgare* ssp. *hirtum*

*Majorana hortensis* - \**Origanum majorana*

*Majorana onites* - *Origanum onites*

*Majorana syriaca* - *Origanum syriacum*

*Marrubium vulgare* - *Horehound* {PL}. The bitter, pungent leaves are candied, made into syrup and herb beer, or used as a flavoring for liqueurs. The crushed leaves can also be added to honey, and eaten off the spoon. Fresh or dried leaves are brewed into tea. Mediterranean region, naturalized in North America. CLARKE, GIBBONS 1966b, GRIEVE, MARGIN, MORTON 1976, PAINTER [Re], UPHOF; A49D{DF}, C3{S}, C67M, D92M{S}, D97{PD}, F35M, F80{S}, G84{DF}, H46{DF}, J66, J66M{PD}, J76, K22, K85, M35, N19M, N19M{DF}, etc.

*Melissa officinalis* - *Balm*, *Lemon balm* {PL}. The leaves have a pleasant lemon fragrance and are used for flavoring salads, soups, egg dishes, butter, tarragon vinegar, *claret cups*, sauces, etc. Also liqueurs such as *Chartreuse* and *Benedictine*. Fresh or dried leaves can be used to make a very refreshing tea. Eurasia, cultivated. GRIEVE, MARGIN, MICHAEL [Re], MORTON 1976, ROOT 1980b [Cul], TANAKA; A7{DF}, A49D{DF}, A97, C9, C67M, D92M{S}, F80{S}, G84{DF}, H46{DF}, K22, K54{PD}, K85, M35, N19M, R47{S}, etc.

#### CULTIVARS

**Ail Gold:** (Gold Leaf, Golden) The richly scented, pubescent leaves keep their bright chartreuse-yellow coloration throughout the season, unlike the faded Variegated cultivar. This property is fully developed when the plant is grown in partial shade. Grows 18 inches tall and 18 inches wide. C2, C43M, E48, F32D, F35M, J76, K22, M82, P92

**Dwarf:** (Compactum) Very compact, non-flowering strain, only growing to 6 inches tall. Deep green foliage. Of interest to gardeners with limited space or for those wanting only an occasional leaf. R53M

**Lime:** (Lime Balm) Grown and used the same as lemon balm, but has a distinct lime-like scent. Height 3 feet. Hardy in zones 4 to 9. C81M, F32D, F35M, F37T, H94M, J66, M82, N42

**Quedlinburger Niederliegende:** {S} Improved European type with higher yields and greater winter hardiness. Fresh leaves have an excellent lemon aroma. Suitable for use in salads and teas. G6, N84

**Variegated:** The new spring growth has attractive yellow variegations. These fade during flowering and summer heat, but provide color at a time of year when little else is available. After flowering, cut back to promote the growth of additional variegated leaves. LATHROP; C43M, C67M, F32D, F35M, H29M, H51M, J66, J76, K22, K85, L56, M82

Melittis melissophyllum - *Bastard balm* {S}. A coumarin-scented herb occasionally used for making a *Maiwein* or *Maibowle* type beverage. Europe. UPHOF; D92M, N84, 053M, Q24

*Mentha aquatica* - *Water mint* {PL}. The herb has a strong, distinctive, peppermint-like fragrance and flavor and is used as a seasoning for peas, potatoes, egg and cheese dishes, and for meat hash in Southeast Asia. In South Africa, it is used as a substitute for tea. Eurasia. GIBBONS 1966b, LATHROP, MABEY, MORTON 1976; C43M, C67M, H30, H94M, I90M, L56, M82, N3M, N42, N84{S}, 053M{S}, R53M, S55{S}>

*Mentha aquatica* var. *crispa* - *Curled mint*, *Crisp-leaved mint*, *Balm mint* {PL}. An herb with a resinous, pineapple-like odor that is used for flavoring jellies, sauces, dressings, punch, and liqueurs. The fresh or dried leaves make a pleasant tea. Eurasia, naturalized in North America. MORTON 1976, PETERSON, L.; C67M, F93G, G96, H4, H51M, K2, K22, K85, M35, M53

*Mentha aquatica* 'Citrate' - *Bergamot mint* {PL}. The leaves yield a citrus-scented essential oil similar to true bergamot oil. After being refined it can be used in food flavoring and forms an ingredient of *Chartreuse*. GRIEVE, MORTON 1976; C67M, F15M, G0{DF}, K54{ED}, M82

#### CULTIVARS

**Eau de Cologne:** (Eau de Cologne Mint, Perfume Mint) Dark-green, roundish leaves. Sweet, aromatic fragrance suggestive of old fashioned toilet water. Grows to 18 inches tall. Use in tea blends, cold drinks, and salads. LEGGATT [Re]; C67M, C81M, F35M, F93G, H94M, I39, K22, L90J, M53, M82, N42, R53M

**Lavender:** (Lavender Mint) Similar to Orange mint, but when steeped or dried, has distinct overtones of lavender. Smooth, oval grey-green leaves. The stems, veins, and undersides of the leaves are a dark-purple color. Lilac flower clusters. Plant in sun or semi-shade. Originated by Dot Montgillion of Smoke Camp Crafts in West Virginia. C81M, F32D, F35M, H94M, I39, J5M, 757, K66, L90J, M35, M53, M82, N42, R53M

**Lemon Bergamot:** (Lemon Mint) Light-green, crinkly leaves with a refreshing lemon and mint flavor and fragrance. Good for tea and in fish dishes. Small, pinkish, edible flowers. Grows to 20 inches tall. C67M, F32D, F35M, H94M, I99P, K22, K23, K85, M15T

**Lime:** (Lime Mint) Similar to orange mint, but with a slightly different lime-like scent and flavor. Attractive plant with round dark green leaves, dark purple runners and light purple flowers. Height 12 to 18 inches. Very good for tea and jellies. Can also be used for oils and potpourri. C43M, C67M, E61, F35M, F37T, F93G, H51M, H94M, J66, J66{DF}, J82, K22, K85, L90J, M82, N42, etc.

**Orange Bergamot:** (Orange Mint) Broad, smooth, dark-green leaves edged with purple. Purple flowers bloom from mid to late summer. Green, branching stems tinged with red, reach 2 feet in height. Very strong citrus-like scent and taste. Makes a very good tea. A97, C9, C67M, F35M, F93G, H46{DF}, J66, K22, K57, K85, L90J, M35, M53, N19M, N19M{DF}, N42, etc.

*Mentha arvensis* - *Field mint*, *Corn mint*, *Wild mint* {PL}. American Indians used the leaves for flavoring corn meal mush or for baking fish. Their strong odor and flavor makes them especially suited for adding to chutneys. The fresh or dried leaves can be made into tea. Also the source of an essential oil used in candies and beverages. Northern temperate region. CLARKE, KIRK, MABEY [Re], TANAKA; C43M, F37T, G0{DF}, G60, N9M, N9M{S}, N84{S}

*Mentha arvensis* ssp. *haplocalyx* - *Chinese mint*, *Hung gioi* {PL}. Used for scenting tea. Has an unusual sweet scent, reminiscent of sweet heliotrope. Southeast Asia. TANAKA; F32D, J82, K85, M82, N42, N84

*Mentha arvensis* var. *villosa* - *American wild mint* {S}. The fragrant, pleasant-tasting leaves are used as a seasoning. The Indians of Maine roasted them over a fire and ate them as a relish with salt. An infusion of the leaves is used as a beverage. North America. HEDRICK 1919, MEDSGER, YANOVSKY; G47M

*Mentha arvensis* f. *piperascens* - *Japanese mint*, *Japanese field mint*, *Hakka* {PL}. The flowers are used for scenting tea. Source of *Japanese mint oil* or *Japanese peppermint oil*, used in confectionery, cakes, and beverages. The leaves and shoots are eaten cooked or preserved. Has a strong peppermint or spearmint-like fragrance. Japan. MORTON 1976, SCHERY, TANAKA, YASHIRODA; C43M, F32D, F37T, J82, K22, K85, L90J, M35, M82

*Mentha australis* - *River mint*, *Native mint* {PR}. Fresh or dried leaves are used as a seasoning. Grown on a limited scale for the bushfoods industry. Also the source of an essential oil. Australia. ROBINS, TANAKA; N79

*Mentha canadensis* - \**Mentha arvensis*

*Mentha x cardiaca* - *Mentha x gentilis*

*Mentha cervina* - *Hart's pennyroyal*, *Holt's pennyroyal* {PL}. Leaves have a strong pennyroyal fragrance and can be used for tea. Europe. C43M, C81M, F32D, H51M, J66, J76, K22, K57, K85, L90J, M82, N42

*Mentha citrata* - \**Mentha aquatica*

*Mentha x cordifolia* - *Mentha x villosa*

*Mentha crispa* - *Mentha aquatica* var. *crispa*

*Mentha diemenica* - *Slender mint* {PL}. The herb is employed for culinary purposes. It has a unique flavor reminiscent of both spearmint and peppermint. Generally used sparingly to provide a subtle flavor to savory dishes as well as desserts. Becoming highly regarded in the bushfoods industry. Australia.

#### CULTIVARS

**Kosciusko:** Selected for its dense, mat-forming habit, strong scent and flavor, and profusion of delicate mauve flowers during warmer months. Small, oval leaves, about 3/4 inch long; strong, mint-like aroma. Ideal for garden beds, hanging baskets, window boxes, and courtyard gardens receiving partial to heavy shade. N79, N79{PR}

*Mentha x gentilis* (*M. arvensis* x *M. spicata*) - *American apple mint*, *Red mint* {PL}. Natural hybrid. Field mint x spearmint. The leaves are occasionally used for flavoring, having a refreshing odor and taste. In the United States, this plant is the principal source of *oil of spearmint*, used mainly in chewing gum. Naturalized in North America. MORTON 1976, UPHOF; B21P{DF}, C43M, F32D, F37T, F86G{DF}, I81T{DF}

#### CULTIVARS

**Austrian:** (Austrian Mint) Delightful flavor reminiscent of spearmint. Essential seasoning for the ravioli-like Austrian dish, *topfen nudeln* stuffed with mashed potatoes and cottage cheese. H94M, J82, M82, N84

**Ginger:** (Ginger Mint) Leaves light-green to grayish, slightly variegated with gold, pointed. Distinctive, brisk, fruity, mint-like flavor with a hint of ginger. Makes a nice tea. Grow in sun or partial shade. Ornamental novelty; grows 1 to 2 feet tall. C81M, E61, F35M, F37T, J76, J82, K2, K22, K57, K85, L56, M53, M82

**Golden:** (Golden Mint) Low, spreading plant to 1 foot tall. Smooth, green leaves variegated with yellow streaks. Stays bright golden throughout the summer. Pale purple flowers; appealing fruity flavor. K85

**Scotch:** (Scotch Mint, Variegated Scotch Mint) Erect growing plant, 1 to 1 1/2 feet tall; numerous short branches. Broad, spearmint-like foliage, variegated a vivid gold and green. Sweet smelling, mild, spearmint-like aroma and flavor. E61,139, H94M, K57, M15T, M82

**Vietnamese:** Excellent sweet spearmint-like flavor. The authentic strain widely used in various Vietnamese dishes. Grows to about 24 inches tall. Hardy in Zones 4 to 9. J82, MJ5, M82, N42, N84

*Mentha x gracilis* - *Mentha x gentilis*

*Mentha haplocalyx* - \* *Mentha arvensis ssp. haplocalyx*

*Mentha longifolia* - *Horse-mint* {S}. The fresh herb is used as a seasoning in Indian chutneys. In Afghanistan, it is sprinkled on mast (curds). Leaves are candied or used as a substitute for tea. The dried leaves and flowering tops are the source of a peppermint-like essential oil employed for flavoring candy. Eurasia. ALTSCHUL, MORTON 1976, TAN\KA, WATT; C43M{PL}, F32D{PL}, F35M{PL}, M82{PL}, N7D{DF}, N84, 053M, Q24, R88

CULTIVARS {PL}

**Caensis:** (Cape Spearmint) Unusual long, narrow, grey-green leaves and a soft, spearmint flavor and aroma. Height 2 feet. Can be used for tea. Originally from South Africa. C43M, L90J, M7M, N84{S}, S28M{S}

**Habak:** (Bible Mint) Tall growing plant with narrow, lanceolate leaves and lilac flowers. Distinctive spearmint-like aroma and flavor. May be the mint mentioned by Jesus in the Condemnation of the Pharisees. Marginally hardy in Zone 7. Introduced into the United States from Israel where it is common, each village or region apparently having its own strain. H49M, M82

**Silver:** (Silver Mint) Ornamental, slender, silver-grey leaves; grows 1 to 2 feet tall. Strong, refreshing spearmint odor and flavor. Good for tea or culinary use. Also attractive in dried arrangements. Hardy in Zones 4 to 9. C43M, C67M, E61, F37T, J82, K22, K85, L90J, M35, M82, N42

*Mentha x niliaca* - \* *Mentha x villosa*

*Mentha x piperita* (*M. aquatica* x *M. spicata*) - *Peppermint* {PL}. Natural hybrid. Water mint x spearmint. The aromatic leaves are widely used in sauces, jellies, jams, fruit salads, drinks, etc. In the Middle East, they are finely chopped and added to tossed salads as generous portions. The fresh or dried leaves make a refreshing tea that can be consumed hot or cold. Source of an essential oil utilized by the food industry in flavoring ice cream, candy, chewing gum, and alcoholic drinks, including *Benedictine* and *crime de menthe*. GIBBONS 1966b [Re], GRIEVE [Cu], MARCIN, MORTON 1976, ROOT 1980b [Cul], UPHOF; A97, C9, C67M, F80{S}, H46{DF}, J66, K22, K54{PD}, K85, M16, MJ5, M53, N19M. (for cultivars see Mint, page 427)

*Mentha pulegium* - *European pennyroyal*, *English pennyroyal*, *Mentuccia*, *Ombalo* {PL}. The leaves have a strong, pungent, menthol-like fragrance and taste and are used as a seasoning for meat sauces, stews, game, fritattas, *Carcifi alia Romana*, etc. In England, a famous stuffing was once made of pennyroyal, pepper, and honey. The dried leaves give a subtle flavor to stewed prunes, apricots, or mixed dried fruit. A favorite herb in western Georgia. Fresh or dried leaves and stem tips can be used for preparing an aromatic tea. Europe, cultivated. DE VITA [Re], FIELD, GOLDSTEIN, GRIEVE [Cu], MABEY, MARCIN, MICHAEL [Re], MORTON 1976; A49D{DF}, A97, C9, C67M, D92M{S}, F80{S}, G84{DF}, K85, M35, M53, N19M, N42, N84{S}, 053M{S}

CULTIVARS

**Dwarf:** (Cunningham Mint) Has a menthol-like aroma similar to regular English pennyroyal but is much lower in growth. Only grows to a height of 1 or 2 inches and is more compact, forming a tight mat of tiny leaves. C43M, E7, F32D, F35M, G80, H94M, J82, L94M, M82

*Mentha requienii* - *Corsican mint*, *Spanish mint*, *Crime de menthe* {PL}. The entire plant has a very strong creme-de-menthe fragrance and taste. As a flavoring, it is used mainly in liqueurs. Also widely grown as an ornamental ground cover in mixed herb plantings and rock gardens. Mediterranean region. GESSERT, LATHROP, MORTON 1976; A97, C9, C43M, C67M, G96, H51M, H94M, J66, J76, K22, K85, M82

*Mentha rotundifolia* - + *Mentha suaveolens*

*Mentha rubra* - *Mentha x smithiana*

*Mentha x smithiana* - *Red mint* {PL}. Natural hybrid of *M. aquatica*, *M. arvensis* and *M. spicata*. Used as a spearmint-like flavoring. Rare in cultivation. Mostly a sterile species, spreading vegetatively. ZEVEN.

CULTIVARS

**Red Raripila:** (Raripila Mint, Pea Mint, Rubra) Roundish, dull green leaves with unusual reddish veins; stems also reddish. Fruity scent; good spearmint-like flavor. Fine for use in salads, desserts and drinks, and is especially good with peas. Grows to about 2 feet tall. BREMNESS, LARKCOM 1984; N84, R53M

*Mentha spicata* - *Spearmint*, *Green mint*, *Lamb mint* {PL}. Leaves and flowers are used as a flavoring or garnish in salads, sauces, soups, fruit drinks, vegetable dishes, desserts, dressings, etc. Fresh or dried leaves are brewed into a refreshing tea that can be used hot or cold. Source of an essential oil that flavors ice cream, candy, soft drinks, etc. Pieces of dried spearmint leaves are often added to the salt sprinkled over *halloumi* cheese to enhance its characteristic flavor. Eurasia, cultivated. BRYAN [Cul, Re], GRIEVE [Cu], LEGGATT [Re], MARCIN, MORTON 1976, ROBINSON, R. 1991, ROOT 1980b [Cul], TANAKA, UPHOF; A97, C67M, H46{DF}, J66, K22, K85, M35, M53, N19M. (for cultivars see Mint, page 427)

*Mentha suaveolens* - *Pineapple mint* {PL}. Young leaves can be used for flavoring, as a garnish, or brewed into tea. The plant is low-growing, 10 to 12 inches high with small, white-blotched leaves. The foliage has a distinct pineapple-like fragrance and flavor when young, becoming more mint-like with age. GESSERT, LATHROP, MORTON 1976; A97, C9, C43M, C67M, E61, G96, H94M, J66, J76, K22, K85, M53, M82, N19M, N42, etc.

*Mentha sylvestris* - \* *Mentha longifolia*

*Mentha x villosa* (*M. spicata* x *M. x suaveolens*) - *Heart-leaved mint* {PL}. Natural and artificial hybrids. Pineapple Mint x spearmint. The leaves are used for flavoring. One type is grown commercially outdoors in southern England. MORTON 1976; N84. (see also Mint, page 427)

*Mentha x villosa* 'Alopecuroides' - *Applemint*, *Round-leaved mint* {PL}. The leaves have a delicate apple and spearmint-like aroma and taste and are used fresh for garnishing or flavoring. Considered by connoisseurs to be superior to spearmint for all culinary purposes but especially as a tea herb. Europe, cultivated. GESSERT, LATHROP, LEGGATT [Re], MORTON 1976; C67M, D3M{PR}, G96, H46{DF}, H94M, J66, J66{DF}, J76, K22, K85, M35, M53, M82, N19M, N19M{DF}, etc.

CULTIVARS

**Bowles':** (Bowles' Mint) Strain of a variable sterile hybrid between *M. spicata* and *M. suaveolens*. A fine-flavored, larger form of applemint with similar uses. Esteemed in England, especially for use in mint sauce. Originally from E.A. Bowles' garden. BOWN, MORTON 1976; R53M

**Egyptian:** (Egyptian Mint) The leaves have a strong, spearmint-like fragrance and taste and can be used in teas, iced drinks, fruit cocktails, and fish dishes. Ornamental plant with striking pale-lavender flowers, height 3 feet, very hardy. C43M, E61, F37T, H51M, H94M, K22, K85, L90J, M53, M82, N42

**Woolly:** (Woolly Mint) The fragrant leaves are highly esteemed in England for home use, especially in mint sauce. MORTON 1976; F32D, F37T

*Mentha x villosa-nervata* (M. longifolia x M. spicata) - *English mint*, *English spearmint* {PL}. Hybrid. Horse-mint x spearmint. A popular mint in England where it is grown in greenhouses for the fresh market trade. Lush, lustrous green leaves with a strong spearmint flavor. Delicious in mint sauce. MORTON 1976; F32D, F37T, J66, J82, K22, K66, K85, L90J, M53

*Mentha viridis* - *Mentha spicata*

*Mesona chinensis* - *Sian chhdu*, *Hsien-jen-ts'ao*, *Jellywort* {PD}. One of the sources of *grass jelly* drink found in Oriental markets. The product is prepared by boiling the plants in water to which potassium carbonate has been added. After removing the plants and boiling a second time, the liquid is cooled into a jelly. Cubes of the jelly are then mixed with water, sugar and corn starch. Southern China, Taiwan. HSU, TANAKA; L90G

*Micromeria brownei* - *St. John's mint* {PL}. Native ground cover, growing to three inches in moist areas. Hardy as far north as Richmond, Virginia. Strong peppermint-like flavor and fragrance. Popular locally for use as a culinary and tea herb. Florida. TUCKER 1994; C43M, K53M, M82

*Micromeria chamissonis* - \**Satureja douglasii*

*Micromeria obovata* - \**Satureja viminea*

*Micromeria viminea* - \**Satureja viminea*

*Micromeria* sp. - *Emperor's mint* {S}. Found thriving amidst the ruins of Emperor Hadrian's remarkable summer villa near Rome. Has a bold, mint-like fragrance and flavor. J82, M82, N84, O53M, S55

*Micromeria* sp. - *Roman mint* {PL}. Found growing wild near Rome where it is widely used in popular cooking. Sweetish, mint-like odor and flavor, reminiscent of both Menthol spearmint and pennyroyal. DEVITA; J82, M82, N84

*Monarda austromontana* - *Mexican bergamot*, *Mt. Pima oregano* {S}. Leaves are used as a seasoning in Mexico, especially for meat dishes. Also brewed into a tea. Can be used like commercial oregano but has a different and more subtle flavor. Mexico. ALTSCHUL, HUTSON 1987, MORTON 1976; E48{PL}, F35M{PL}, F80, I16{DF}, L13, L91M, N84

*Monarda citriodora* - *Lemon bee-balm*, *Lemon bergamot*, *Lemon mint* {S}. The lemon-scented leaves can be used for flavoring or brewed into tea. Hopi Indians boiled the leaves with hares and other wild game. Southwestern North America. GESSERT, YANOVSKY; C43M, C43MJPL, D92M, E61, F32D{PL}, F59, F80, I11, I91, J25M, K85, N11M

*Monarda clinopodia* - *White basil-balm* {PL}. Fresh or dried leaves and flower-heads are brewed into tea. Said to be excellent when mixed with other teas. North America. PETERSON, L.; A61, A61{S}, HIM, I37M, I37M, L55, M72

*Monarda didyma* - *Oswego tea*, *Bee balm*, *Bergamot* {PL}. The fresh or dried leaves and flower-heads are used for making an excellent aromatic tea. Young tips are used as a garnish for fruit salads and cool drinks and for flavoring cheese, stuffings, tossed salads, and apple jelly. The fresh flowers can be tossed on a mixed green salad. Leaves are eaten boiled with meat, by the Tewa Indians. North America. LARKCOM 1984, LEGGATT [Re], MACNICOL [Re], MARCIN, MEDSGER, MICHAEL [Re], MORTON 1976, PAINTER [Re], ROOT 1980b [Cul], UPHOF; A97, B39M, C67M, D92M{S}, F20M, F32D, I11M, J76, K22, K85, M53, R47{S}

CULTIVARS {S}

**Lavender:** (Lavender Bergamot) Citrus and oregano scented leaves and flowers that make a very pleasant and soothing tea. Grows to 4 feet tall. F86G, I99M, K49T, K85{PL}

*Monarda fistulosa* - *Wild bergamot*, *Horsemint* {PL}. The entire plant above ground may be used as a potherb, cooked with other foods as a seasoning, or dried for future use. Fresh or dried leaves are brewed into a refreshing, aromatic tea. The flowers make an attractive edible garnish in a salad. North America. GIBBONS 1979, KINDSCHER, KIRK, MORTON 1976, UPHOF; B51{S}, C43M, C43M{S}, D92M{S}, F32D, F80{S}, G47M{S}, G73{DF}, G89, G89{S}, H63, I11M, J39M, J42, J43{S}, etc.

CULTIVARS

**Wahoe Washtemna:** A lemon-scented form selected and grown by the Dakota Indians of the Missouri River region. Wahpe Washtemna means "fragrant leaves". Reportedly one of the plants associated with the Native American Sun dance. GILMORE; J39M

*Monarda fistulosa* var. *menthaefolia* - *Oregano de la sierra* {S}. The aromatic leaves have traditionally been used as a seasoning for cabrito, wild game and meat. The unique oregano-like flavor is favored by Southwestern chefs, especially for flavoring semi-soft ricotta cheese. Southwestern North America. HUTSON 1987, KAVENA [Re]; C11G{DF}, D92M, E61{PL}, *G89M?*?U, H94M{PL}, J25M, J25M{PL}, J93T, L3J, L13, L91M, N29{DF}, N84

*Monarda menthaefolia* - *Monarda fistulosa* var. *menthaefolia*

*Monarda pectinata* - \**Monarda citriodora*

*Monarda punctata* - *Horsemint*, *Spotted monarda* {S}. Leaves are brewed into an aromatic tea. North America. PETERSON, L.; B29, C43M{PL}, D40G, D92M, E61{PL}, F80, G47M, H94M{PL}, J39M, J40, M77M{PL}, Q24

*Monardella lanceolata* - *Mustang mint* {S}. Fresh or dried leaves and flower clusters can be used for brewing a pleasant mint-like tea. Western North America. CLARKE, YANOVSKY; L13, N84

*Monardella odoratissima* - *Mountain pennyroyal*, *Coyote mint* {S}. Fresh or dried, the aromatic leaves and flower-heads are steeped into a clear, refreshing, mint-like tea. Western North America. CLARKE; A61, A61{PL}, C43V, C95, E67T{PL}, I98M{PL}, L13, L55J, N84, Q24

*Monardella villosa* - *Coyote mint* {PL}. The leaves and flower heads, fresh or dried, are steeped (not boiled) in water to form a clear tea. It has a sweet, spicy aroma and a slightly bitter, mint-like flavor. Southwestern North America. CLARKE, MORTON 1976; B92, C2, G60

*Nepeta cataria* - *Catnip*, *Catmint* {PL}. The leaves can be candied, or brewed into an aromatic, mint-like tea. In France, the leaves and young shoots are eaten in salads or used for seasoning sauces, soups, and steaks. Eurasia, cultivated. GIBBONS 1966b, GRIEVE, LEYEL 1987b, MACNICOL, MARCIN, MORTON 1976, VILMORIN; A97, C67M, D92M, E61, F80{S}, G84{DF}, H46{DF}, H94M, K22, K85, M35, M53, N19M, R47{S}

CULTIVARS

**Lemon:** (Citriodora) Leaves have a pleasant, lemon-like aroma and flavor which makes it more appealing to humans and somewhat less so to cats. Lower growing than common catnip. Makes a refreshing tea. C43M, C43M{S}, C67M, D92M{S}, E61, H94M, I91{S}, J66, J76, J76{S}, K22, K85, M35, M82

*Nepeta hederacea* - *Glechoma hederacea*

*Ocimum americanum* - \**Ocimum canum*

*Ocimum basilicum* - *Sweet basil* {S}. Young leaves and flowering tops, both fresh and dried, are used for seasoning tomato sauce, vinegar, soups, salads, omelettes, etc. Also the principal ingredient of *pesto* sauce. Types with very large leaves may be used for wrapping chicken or fish before grilling. Flowers are also used as a garnish. In the Near East, the seeds are eaten alone or added to bread dough and other foods as a flavoring. They form a mucilaginous gel when soaked in water and are made into a refreshing beverage, called *cherbet tokhum* in Mediterranean countries. The dried stems,

known as *basilwood*, are used in barbecuing as a smoke flavoring, and are especially good with lobster and salmon. They can also be added to the water in cooking pasta or poaching fish or they can be used for making flavored oils and vinegars. Source of an essential oil used in catsups, mustards, sauces and vinegars. Old World Tropics and Subtropics. HAMPSTEAD [Cu, Re], LEGGATT [Re], MORTON 1976, ROOT 1980b [Cu], UPHOF; A45{DE}, B75, C43M, C81M, D92M, E61, G84{DF}, H41{PD}, J3{PD}, J20, J85T{PR}, M35{PL}, M53{PL}, N19M{PL}. (for cultivars see Basil, page 298)

*Ocimum canum* - *Hoary basil, Hairy basil, Maeng lak, Kemangi* {S}. Young leaves are eaten steamed, as a side-dish with rice, or added to curries and soups. Also used as a flavoring in sauces, salads, soups, poultry stuffings, meat dishes, etc. The seeds, when soaked in water, swell into a gelatinous mass called *indring* in Java, which is mixed with coconut milk and sugar to form a sweet, cooling beverage. Old World Tropics and Subtropics. FOX, E, JACQUAT, LOHA-UNCHIT, MORTON 1976, OCHSE, OWEN [Re], SHURTLEFF 1979 [Re], TANAKA; C95, F68T, F85, N84, S28M, S55. (for cultivars see Basil, page 298)

*Ocimum gratissimum* - *East Indian basil, Tree basil, Clove basil* {PL}. The leaves are eaten as a potherb, or cooked with other foods as a flavoring. Seeds are sometimes eaten in India. Tropics. BURKILL, MORTON 1976, WATT; C43M, D92M{S}, F37T, F85{S}, H94M, J66, J82, J82{S}, K57, L94M{S}, M35, M82, N84{S}, P1G{S}, S28M{S}, etc.

*Ocimum gratissimum* var. *viride* - *Tea bush, Green basil, West African basil* {PL}. The leaves have the flavor of lemon thyme and are used in salads and as a seasoning for soups, meats, and poultry stuffing. Also brewed into tea, which is drunk as a beverage with milk and sugar. Tropical Africa. DALZIEL, FOX, F., MORTON 1976; C43M, C43M{S}, J82, M35, N84

*Ocimum kilimandscharicum* - *Camphor basil, Karpoor basil* {PL}. The leaves have a very distinctive camphor-like fragrance and are occasionally brewed into tea. Used in the regional Vedic cuisines of Bihar and West Bengal, India—as a flavoring for rice, dais and vegetables. East Africa. DEVI; C43M, C43M{S}, D92M{S}, F15M, F37T, F68T{S}, F85{S}, F86G, J82, K57, M35, M53, M82, P38{S}, Q12{S}, etc. (for cultivars see Basil, page 298)

*Ocimum micranthum* - *Peruvian basil, Married man pork* {S}. The herbage is used in the preparation of soups and stews to which it imparts a characteristic flavor. Tropical America. OMAWALE, WILLIAMS, L.; C43M, C43M{PL}, D92M, F37T{PL}, F73D, J76, J76{PL}, K22, 053M

*Ocimum sanctum* - *Holy basil, Sacred basil, Tulsi, Pagoda basil, Besobila* {PL}. Fresh leaves are eaten raw in salads, cooked as a potherb, or used as a flavoring for fruit dishes, sweet yeast breads, chile pastes, jellies and preserves. They are sweetly spicy with a sharp, pronounced clove scent and pungency. Also brewed into a refreshing tea. Dried leaves are ingredients in the Ethiopian spice mixtures *berbere*, *awaze*, and *shiro* and the spiced butter *niter kibbeh*. Fragrant flowers are eaten. The mucilaginous seeds are made into a sweet, cooling beverage. Tropical Asia, cultivated. BURKILL, COOK, CRIBB, HAMPSTEAD, HERKLOTS, MESFIN [Re], MORTON 1976, ROBINS; C43M, C67M, E7M{S}, F80{S}, G44M{DF}, H51{DF}, H51{PD}, J76, K17J{PQ}, K22{S}, M53, M82, N19M, 032M{DF}, R47{S}, etc.

#### CULTIVARS

**Purple:** (Purple Tulsi, Krishna Tulsi) The whole plant has a reddish-purple tint and a clove-like aroma and taste, much sweeter than common tulsi. Development of full purple coloration requires strong sunlight and hot temperatures. The seeds are non-mucilaginous. DARRAH; C43M, C43M{S}, D92M{S}, F68T{S}, J76, J82{S}, M82

**Red and Green:** Distinctive type with reddish-purple markings on the leaves; height 16 to 20 inches. Originally from Thailand where it is often found being grown in backyards for home use. Milder in

aroma than regular holy basil. Used for making tea. C81M, C81M{S}, F93G, G6{S}, K57, Q34{S}

*Ocimum tenuiflorum* - *Ocimum sanctum*

*Ocimum viride* - *Ocimum gratissimum* var. *viride*

*Origanum dictamnus* - *Dittany of Crete, Hop marjoram* {PL}. The aromatic foliage is used for flavoring salads and vermouth. In Saxon kitchens it was an ingredient of a sauce to be used with fish. Combined with parsley, garlic, thyme, salt and pepper, it added a pleasant, aromatic flavor. The flowering tops are dried and brewed into tea. Mediterranean region. GESSERT, JONES, D., LATHROP, MORTON 1976; C43M, C67M, C81M, E61, F32D, F35M, G96, H51M, H94M, J76, J82, K85, L90J, M53, N7D{DF}, N19M, etc.

*Origanum heracleoticum* - *Origanum vulgare* ssp. *hirtum*

*Origanum majorana* - *Sweet marjoram, Knotted marjoram* {PL}. Leaves, flowers, and tender stems are used for flavoring syrups, stews, dressings, liqueurs, sauces, soups, sausages, stuffings, geese, etc. The aromatic seeds flavor candy, beverages, condiments, and meat products. Fresh or dried leaves are brewed into a sweet, mellow tea with a flavor that resembles a blend of thyme, rosemary, and sage. Thought to be one of the sources of the *Hymettus honey* of Greece. Dried stems can be used as a smoke flavoring. Eurasia, cultivated. BARASH [Re], CRANE 1975, LEGGATT [Re], MACNICOL [Re], MARCIN, MORTON 1976, TANAKA, UPHOF; C9, C43M, C43M{S}, C67M, D92M{S}, E13G{PR}, E14TIDF}, F80{S}, G84{DF}, H46{DF}, J66, K22, K22{S}, K27T{DF}, K66{S}, L17{DF}, M35, N19M, N42, etc.

#### CULTIVARS

**Compact Greek:** Small, bushy plant; height about 12 inches; white flowers. Strong marjoram flavor. Ideal for growing in containers. J66

**Golden:** (Golden Marjoram, Creeping Gold Marjoram, Aurea) Crinkled, yellow to white leaves. Grows to 6 inches tall. Makes an attractive, golden-green ground cover; also a good potted plant. C43M, C67M, E61, F35M, H51M, J66, L56, M82, N42

**Variegated:** Attractive plant with small slightly fragrant leaves, variegated with creamy-white and green. Grows to about 8 inches tall. Ideal for adding texture and color to the herb garden. Hardy in Zones 6 to 9. C43M, M35, M82, N42

*Origanum x majoricum* (*O. majorana* x *O. vulgare*) - *Hardy marjoram, Culinary oregano, Cooking oregano, Italian oregano* {PL}. Natural hybrid. Sweet marjoram x oregano. Has the appearance, aroma and flavor of marjoram, but some of the hardness of the oregano. Hardy to Zone 6. Released by the United States Department of Agriculture. Grows 18 to 24 inches tall. Does not set seed. Excellent flavor for culinary use. BOWN; C9, E7, F32D, F35M, H94M, J66, M82, N42

*Origanum maru* - *Origanum syriacum*

*Origanum onites* - *Pot marjoram, Cretan oregano, Rhigani, Turkish oregano* {PL}. The herb has a strong thyme-like aroma and flavor. Fresh or dried, it is used in salads or for flavoring, especially with heavy meats. One of the flavorings added to *Turkish Delight*. It can also be brewed into a tea. Eurasia. DE SOUNIN, LATHROP, MORTON 1976. NIEBUHR; C9, C43M, F32D, H94M, J66, J82, K22, K85, L90J, M82, N42

#### CULTIVARS

**Kaliteri:** Excellent culinary oregano from Greece, where it is grown commercially for the quality oregano market. Specially selected for its high essential oil content. Strong, spicy flavor. Compact plant, 8 to 12 inches tall; silver-gray foliage. Kaliteri means "the best" in Greek. F37T, J82, K57, L94M, M35, M82

*Origanum pulchellum* - *Showy oregano* {PL}. The herb is used for flavoring pizza and other Italian dishes. Mediterranean region. C2, C9, C43M, F15M, G96, J37M, K22, K79, K85, N42

*Origanum syriacum* -*Za'tar*, *Syrian oregano*, *Bible hyssop* {PL}. Leaves and flowering tops are used as a seasoning, having a flavor reminiscent of a blend of thyme, marjoram, and oregano. In the Middle East, the dried herb is mixed with sumac to form the spice blend known as *w'tar* which is used, along with olive oil, as a topping for breads. Bedouins grind the dried leaves, add salt, and eat the dry mixture on bread. Eastern Mediterranean region. BAILEY, C., FLEISHER, WOLFERT 1973; A7M{PD}, C9, E69{PD}, H94M, J66, J82, K22, K66, K85, L50M{£D}, L90J, M35, M82

## CULTIVARS

**Bevanii:** Form of Levant or Syrian oregano first grown in the United States in California. Silvery, gray-green, pubescent foliage. Strong, distinctive, oregano-like flavor. Forms a nice, compact mound. M82

*Origanum tythantum* - *Kyrgyz oregano*, *Turkestan oregano* {PL}. The herb has an excellent mild flavor and can be used for culinary purposes. Central Asia. A50, H94M, J82, K22, K85, L90J, M55, M82

*Origanum vulgare* - *Wild marjoram*, *Common oregano* {PL}. Fresh leaves and tender shoots are cooked as greens in India. The fresh or dried leaves and flowers season soups, stews, casseroles, sauces, olives, stuffings, tomato and egg dishes, etc. Also brewed into an herbal tea. The flowering tops are sometimes put into beer and ale to flavor and preserve it. Eurasia. BARASH [Re], GRIEVE, HEDRICK 1919, MABEY [Re], MARCIN, MICHAEL, MORTON 1976; C43M, C81M, E61, F32D, F35M, K57, M55, M53, N19M, S55{S}

## CULTIVARS

**Dark:** (Dark Oregano) More upright growth habit than common oregano, to 2 feet tall. Larger, very dark green, dense leaves. Excellent for seasoning. Whitish-pink flowers. K22, K85, L90J

**Dwarf:** (Dwarf Oregano, Compactum Nanum) Grows 2 to 4 inches high, 24 inches across. Produces a dense mat of dark-green foliage that turns purple in winter, and short purplish flower-spikes in summer. A fine ground cover for sunny areas; excellent for rockeries. Strong, spicy flavor. The dried foliage is a flavorful seasoning. Does well on a cool windowsill during the winter. C9, E61, F32D, F35M, J66, J82, K22, K79, K85, L90J, MJ5, M82, N42, R53M

**Gold Tipped:** Variegated type that is good for culinary use Very attractive greenish foliage with yellow-gold tips. Has a very good flavor and scent. Should be cut back in July to maintain the variegated effect. N84, R53M

**Golden:** (Golden Oregano, Golden Creeping Oregano) Compact, creeping habit, to 6 inches high. Attractive golden colored foliage. Good ground cover for rock gardens and edges of flower beds. Mild, thyme-like oregano flavor used in Mediterranean cooking. C9, C43M, C67M, J66, J82, K22, K85, L56, L90J, M55, M53, M82, N19M, N42

**Seedless:** (Seedless Oregano) Leaves resemble sweet marjoram; the flowers resemble a combination of sweet marjoram flowers and oregano flowers. An excellent culinary herb, as strong and distinct as Greek oregano but sweeter and less biting. Hardy to 10° F. Brought to the United States from Goeta, Italy in 1917. Likely a natural hybrid between oregano and marjoram. C43M, F32D, L90J

**Silver:** (Silver Oregano) Ornamental silver-gray leaves. Mild to medium oregano flavor and fragrance. Can be used in cooking. Tender perennial; loosely upright, height 12 inches. Does best when grown in full sun. F32D

**Variegated:** (Variegated Oregano) Attractively speckled and streaked with golden variegation that contrasts prominently against the deep green background. Mildly flavored. Prostrate habit, height 8 inches. Excellent for edging or in the rock garden. C9, H51M, J82, N42

**White:** (White Oregano, Viride) {S} Culinary type with a strong aroma and very good flavor. Excellent on pizza, with fish and in dressings. White flowers. Height 1 to 2 feet. D26D, G6

**White Anniversary:** Bright green leaves, broadly margined in white. Mild flavor. Spring growth is a white ground hugging mat, changing to a pale cream by fall. Height 8 inches. Inconspicuous flowers. Grows best in light shade. C2, D95, F32D, G96,139, /57, K79, L90J, M35, M82

*Origanum vulgare* ssp. *gracile* - \**Origanum tythantum*

*Origanum vulgare* ssp. *hirtum* - *Winter marjoram*, *Winter sweet marjoram*, *Righani* {S}. The herb is used for flavoring salads, soups, broths and stuffings. Fresh or dried leaves are steeped for tea. Mediterranean region. HEDRICK 1919, NIEBUHR, UPHOF; N84, R47

## CULTIVARS {PL}

**Greek:** (Greek Oregano) Bright green leaves; white flowers. Grows 1 1/2 to 2 feet tall. Strong, aromatic, spicy flavor. Excellent culinary oregano, a standard in pasta and tomato sauces. If you go to the store and buy ajar of "oregano", this is probably the kind you'll be receiving. A7M{DF}, A49D{DF}, A97, C9, C67M, D92M{S}, H51M, H94M, J85T{PR}, K22, K66{S}, K85, M55, M53, N19M, N42, etc.

**Italian:** (Italian Oregano) Somewhat narrow leaves. Aromatic, strong, resinous flavor. Used in spaghetti sauce and pizza. More bushy and upright than Greek oregano; height 12 inches. C67M, C81M, F93G, /57, J82

**Sicilian:** (Sicilian Oregano) White flowering oregano with a heady, sweet pungent aroma. Has somewhat the flavor of both sweet marjoram and oregano. Excellent for culinary purposes. Edible flowers. Height 18 inches. H94M, 139

*Perilla crispa* - *Petilia frutescens*

*Perilla frutescens* - *Shiso*, *Beefsteak plant*, *Tia to* {PL}. Leaves are eaten in salads or used as a wrapping for beef, pork or fish. Salted leaves are used as a condiment for tofu and as a garnish for tempura. The young cotyledons, called *mejiso*, are eaten with *sashimi* (raw fish). Immature flower-clusters, known as *hojiso*, serve as a garnish for soups and chilled tofu, while older ones are fried. The seeds (*shisonomi*) are preserved in salt or used as a spice in pickles, tempura, *shichimi*, and miso. They can also be sprouted. Source of an essential oil used to flavor candy and sauces. The seed oil is occasionally used for culinary purposes. Eastern Asia, cultivated. HAWKES [Re], LARKCOM 1991, MORTON 1976, SHURTLEFF 1975, SHURTLEFF 1976 [Re], TANAKA, TSUJI [Cul, Re], YASHIRODA; C67M, C95{S}, E56{PD}, E66T{ED}, F85{S}, G20M{PR}, K85

## CULTIVARS {S}

**Bronze:** Typical warm, spicy scent and flavor reminiscent of cinnamon. The leaves are not as deep purple as Aka Shiso. Preferred by some for culinary use. Grows to about 4 feet tall. C43M

**Green:** (Ao Shiso) Bright green leaves with a cinnamon-like scent and a taste reminiscent of ginger. The leaves are milder in flavor than Aka Shiso and are preferred for fresh use in salads and as a garnish. SHURTLEFF 1975, YASHIRODA; A2, C43M, C43M{PL}, D55, F37T{PL}, F80, G33,139, J76, J76{PL}, K49M, L59, N84, R47, S55, etc.

**Green Cumin:** A rare and unique type whose fresh green leaves have the aroma of cumin. Maturing flowering spikes have the typical cinnamon-like aroma of Ao Shiso and Aka Shiso. Excellent for culinary use, both fresh and dried, especially in salsas. D92M, K49T, L7M, L77D

**Hojiso:** Specially bred for the production of flower spikes. Shorter, more compact flower spikes. Usually harvested when about 3 inches long, pulling up the whole plant. Sometimes covered with black plastic in the morning and evening to reduce the daylength to 6 or 7

hours. Uniquely colored leaves—green in front, red in back. LARK-COM 1991; S70

**Kkaennio:** Large-leaved, green Korean strain lacking the typical cinnamon-like aroma and flavor of Japanese types. Very large leaves, 6 or more inches in diameter. Traditionally eaten raw with rice and *kochujang*, cooked with soy sauce and sesame oil as a side dish, fermented into *kimchi*, or wrapped around meat and fried in batter. Erroneously called *sesame leaves*. Available in Korean markets. LEE, F. 1988 [Re], MILLON [Re], NOH [Re]; Q3

**Purple Cumin:** Similar to Green Cumin but with ruffled purple leaves. Excellent aroma and flavor, a combination of cumin and cinnamon. Originated in Japan. D92M

**Red:** (Aka Shiso, Purple, Crispy) Reddish-purple leaves with a strong aroma and flavor. Used for giving a purplish-red color and unique flavor to pickled *ume* plums, ginger root, and the tubers of Chinese artichoke. Also pickled in salt and used as a wrapping for *mochi* in confections. SHURTLEFF 1975, TANAKA, YASHI-RODA; C43M{PL}, D55, E63D, F37T{PL}, F80, G6, G33, H49, J20, J76, J76{PL}, K49M, L7M, L59, R47, etc.

*Perilla nankinensis* - *Perilla frutescens*

*Perovskia atriplicifolia* - *Russian sage* {PL}. The small, lavender flowers are sweet and can be eaten in salads or used as a garnish. Himalayan region. TANAKA; B92, C9, E30, F35M, G96, H51M, H63, I37M, J37M, J76, K22, K85, L22, Q24{S}

*Phlomis armeniaca* - *Silvanok, Silvanoki* {S}. The yellow flower petals are eaten raw as a vegetable or used in the preparation of a tea. Ibrkey. OZTURK; P10

*Phlomis tuberosa* - *Tuberous sage, Bodmon sok* {S}. Roots are eaten cooked by the Kalmyks. Eurasia. HEDRICK 1919; D92M, E7M, M7M{PL}, N84, 053M, Q24

*Plectranthus amboinicus* - *Cuban oregano, Country borage, Spanish thyme, Five seasons herb* {PL}. The fresh leaves have an oregano-like aroma and are cooked with fish or goat's flesh in order to disguise their strong smell. They are also used as a potherb, added to chili paste, or mixed with minced young fruits to form a side-dish for rice. Often used in the preparation of the Vietnamese sour soup known as *earth chua*. In India, they are added to wine and beer. Also steeped for tea. Tropics, cultivated. DEWITT 1993 [Re], HERK-LOTS, MORION 1976, OCHSE, PAINTER, VAN DUONG; A97, C89M, E7, E48, G96, H51M, H94M, 112, J82, L56, L90J, L94M, M82, N42

#### CULTIVARS

**Variegated:** Thick, succulent, very pungent leaves; 2 to 4 inches long. Medium green in color, variegated with white around the edges. Leaves are chopped for use in Puerto Rican and Spanish dishes. E48, G80, G96, /57, J82, L90J, M82, N84

*Plectranthus tuberosus* - *Coleus parviflorus*

*Pogostemon cablin* - *Patchouli, Patchouly* {PL}. Fresh leaves are sometimes used as a seasoning. The dried, cured leaves yield an essential oil that flavors chewing gum, baked goods, and candy. Also used for perfuming a tea made from *Cleistocalyx operculatus*. Tropical Asia. MORTON 1976, TANAKA, VAN DUONG; C43M, E14T{DF}, E48, F35M, F37T, F93G, G84{DF}, H51M, K18M{DF}, K22, L54{DF}, L56, L90J, M53, M82, N42, etc.

*Pogostemon heyneanus* - *Java patchouli, Smooth patchouli* {PL}. The dried herb is used in the preparation of a country spirit. Southern Asia. TANAKA; A26, F37T, G73, G96, 112, J66, K22, K85, L90J, M82, N19M, N84{S}

*Poliomintha incana* - *Rosemary mint* {DF}. Fresh leaves and flowers are eaten off the stem with beans, added to scrambled eggs, boiled, or dipped in salt. The dried herb is used as a flavoring agent. A favorite of the Hopis. Southwestern North America. KIRK, YANOVSKY; N29

*Poliomintha longiflora* - *Mexican oregano* {PL}. The aromatic leaves have a strong oregano-like flavor reminiscent of *Lippia graveolens*. Used as a condiment by the Kickapoo Indians and also a popular oregano in Southwestern cuisine. Mexico. BUCHANAN, HUTSON 1987 [Cul], LATORRE 1977b; C43M, F93G, J66, K22, L90J, M82, N37M, N51

*Prostanthera rotundifolia* - *Australian mint bush* {PL}. The fresh or dried leaves are used for seasoning, having a very strong mint-like aroma and flavor with a pleasant peppery aftertaste. Suitable for both savory and sweet foods such as dressings, sauces, meat dishes, desserts, etc. They also make a good tea. The flowers can be added to fruit jellies or used as a garnish for cakes and desserts. Australia. ROBINS [Re]; C43M, F15M, F32D, F35M, G96, H94M, J66, K85, L90J, L94M, M15T, N79, M82, N84, 032M{DF}, R77, etc.

*Prunella vulgaris* - *Self-heal, All-heal* {PL}. A refreshing beverage can be made by soaking the leaves, either freshly chopped or dried and powdered, in cold water. Young shoots and leaves are eaten raw in salads, cooked with other greens as a potherb, or added to soups and stews. Eurasia, naturalized in North America. KIRK, LAUNERT, YANOVSKY; A2{S}, A97, C43M, C81M, D92M{S}, E81M{S}, F37T, F80{S}, K22, K85, N9M, N9M{S}, N71M{S}, R47{S}

*Pycnanthemum incanum* - *Hoary mountain-mint* {PL}. Fresh or dried leaves are brewed into an aromatic, mint-like tea. North America. GIBBONS 1979, PETERSON, L.; C13T, F32D, I11M, I11M{S}, I37M, K22, L55, M16, M77M, N84{S}

*Pycnanthemum muticum* - *Short-toothed mountain mint* {PL}. The leaves have a pleasant mint-like aroma and flavor and can be used for preparing a refreshing tea. North America. GIBBONS 1979, PETERSON, L.; C81M, F93G, H51M, K22, K57, L56, M16, M72, M82, N19M

*Pycnanthemum pilosum* - *Hairy mountain-mint* {PL}. Fresh or dried leaves are used for tea, having a delicious mint-like flavor. North America. PETERSON, L.; E61, F37T, G80, J39M, J39M{S}, J66, J82, J82{S}, K22, M35, M77M, M82, N84{S}, R53M, S55{S}, etc.

*Pycnanthemum virginianum* - *Virginia mountain-mint* {PL}. Chippewa Indians used the flowers and buds for seasoning meat and broth. The fresh or dried leaves are steeped into a refreshing mint-like tea. Eastern North America. YANOVSKY; B29, E61, G47M{S}, J39M, J39M{S}, J41M, J41M{S}, J42, J42{S}, J43{S}, K22, K85, L56

*Rosmarinus officinalis* - *Rosemary* {PL}. Young shoots and leaves are used as a seasoning for stuffings, soups, sausages, vermouth, sauces, fish, lamb, etc. The flowers have a somewhat milder flavor and are also utilized as a flavoring. They can be candied, preserved, or added to jellies, honey, vinegar, and wine. Fresh or dried leaves and flowers make a good tea, especially when combined with tan§r. Yields particularly fine and delicious honey, including the famous *Narbonne honey* of France. Rosemary honey is also one of the honeys preferred for making *turrone*s, the nougat-like sweetmeats of Spain. Mediterranean region. Dried stems are a popular smoking wood. BRYAN [Cu, Re], CRANE 1975, DE SOUNIN, GRIEVE [Cu], LEGGATT [Re], MACNICOL [Re], MARCIN, MICHAEL [Re], MORION 1976, WALDRON [Re]; C67M, D92M{S}, G84{DF}, G96, H46{DF}, J3{PC}, /57{ES}, J66, J76, J85T{PR}, K2{DF}, K85, L17{DF}, M35, N42, R47{S}, etc.

#### CULTIVARS

**Anaustifolia:** (Pine-Scented Rosemary) Thin, needle-like, light green leaves with a strong scent of pine; attractive dark blue flowers. Upright growing plant; height 2 to 3 feet; very haidy. Although not usually considered a culinary rosemary, it is actually preferred by some gourmet chefs. C9, C43M, C81M, F35M, F37T, F93G, G80, H51M, H94M, J66, J82, K2, K22, L90J, M55, M82, etc.

**Arp:** Thick, dull gray-green leaves, spread apart on the stems. Semi-upright growth\* height 5 feet. Light-blue flowers; dull fragrance. Haidy to -10° F., making it one of the hardiest cultivars

known at the present. Selected in 1972 from a plant growing in Arp, Texas, by Mrs. Madalene Hill. C9, C43M, C81M, F37T, G96, H51M, H94M, J66, K22, K85, M16, M53, M82, N19M, N42, etc.

**Benenden Blue:** Attractive, very thin, glossy dark-green foliage; large sky blue flowers; typical rosemary flavor. Small, dense plant with a semi-cascading habit; height about 2 feet; ideal for growing in containers. A prolific bloomer in winter. Recipient of the Royal Horticultural Society Award of Merit in 1933. Originated near Bonifacio, Corsica. BOWN; E61, F32D, F37T, H78, J66, J82, K85, L90J, M82, N84

**Blue Spire:** (Blue Spears) The new branches are spear-like and upright, arching and twisting downward with age. An interesting beginning for bonsai and topiary. It has a fine flavor, also. Origin unknown. C2, C43M, E61, F37T, K22, K57, K85, L94M, M82, N42

**Gorizia:** Long broad leaves, double the size of common plants, extend from thick, rigidly upright stems. The new growth is creamy; the more mature part of the stem is a reddish brown. Medium-blue flowers in spring and sometimes in late summer. The aroma of the leaves is mild with just a hint of ginger. From Gorizia, a city on the Italian-Slovenian border. C43M, E61, F32D, F37T, J66, K22, L90J, L94M, M35, M82, N42

**Joyce DeBaaio:** (Golden Rain) Medium-sized, pointed leaves, variegated with gold edge and green center. Compact, bushy habit; self-branching. Strong, sharp fragrance and flavor similar to the species, which is considered best for culinary use. Dark-blue flowers, very sparse. Attractive landscape specimen, appearing bright gold from a distance. C43M, E7, E61, F32D, F35M, F93G, G96, H51M, J66, J82, K22, K57, L90J, M53, M82, N42

**Soice Island:** Wider, more numerous leaves than standard rosemary. Very woody, upright-growing plant. Rosemary-blue flowers. The cultivar once used by the Spice Island seasoning company for the production of their dried rosemary. Highly recommended. B41, L90J

**Trailing:** (Creeping, Prostratus) Medium-green, short, narrow leaves; white, arching stems. Height 3 feet; grows rapidly, self-layers. Mild flavor. Excellent ground cover or hanging potted plant. A97, C9, C43M, C67M, C81M, E61, G96, H51M, H94M, J66, K22, K85, M53, M82

**Tuscan Blue:** Tall, vigorous, upright growth, moderate branching even with pinching; height 6 feet. Short, wide, light medium-green leaves, thickly clustered on the stems. The large leaves are ideal for drying in quantity. C43M, E61, F35M, F93G, H94M, J66, K22, K57, K85, L56, L90J, M82

*Salvia apiana* - *White sage* {S}. Seeds are sold as a natural food to be soaked in water overnight and drunk in water, fruit juice, or eaten with cereal. Leaves can be used in cooking. Western North America. WHISTLER, R.; C9M, C95, F37T{PL}, F80, G59M, G60{PL}, I98M, I98M{PL}, I99P{PL}, JO, K15, K22{PL}, K370{DF}, L13, L90J{PL}, N84, 053M, etc.

*Salvia azurea* var. *grandiflora* - *Pitcher sage, Azure sage* {S}. The nutritious seeds are eaten raw, roasted, popped, ground into flour or cooked with other grains. North America. B30IPL}, C9{PL}, E7M, E33{PL}, F44M{PL}, F59, H61M, H63{PL}, H70M, H70M{PL}, 147, J25M, K46T, K49T, L3J, M32, N7M, etc.

*Salvia ballotaeflora* - *Majorano mexicano* {PL}. An infusion of the flowering tops is used as an aromatic tea. Southwestern North America. VON REIS, YANOVSKY; H4

*Salvia calycina* - \**Salvia pomifera*

*Salvia carduacea* - *Thistle sage* {S}. Roasted seeds are ground into flour. Also made into a cooling beverage by the Indians of California. Southwestern North America. DOYLE, UPHOF; I98M, L13, N84

*Salvia clevelandii* - *Cleveland's sage, Blue sage* {PL}. The leaves have a pleasant fragrance and flavor and are a good substitute for common sage in cooking. Western North America. LATHROP; C9, C9M{S}, C43M, C81M, F80{S}, G60, G96, H51M, H94M, I98M, K22, K85, L90J, 053M{S}

#### CULTIVARS

**Aromas:** An improved selection that is very fragrant. Gray-green leaves; lavender flowers. Grows about 5 feet tall. N7J

*Salvia columbariae* - *Golden chia* {S}. The golden tan, nutty seeds were parched, ground into *pinole* and *at ole*, and made into dark-colored cakes and loaves. The Indians also mixed them with com meal when making mush or with ground wheat for gruel. After soaking in water, the seeds make a nourishing addition to pancakes, waffles, cookies, biscuits, honey, candy, and cakes. A refreshing beverage is made by soaking the seeds in water and adding sugar and lemon, lime, or orange juice. The leaves are occasionally used as a sage-like seasoning. The dried seed heads can be brewed into a pleasant tea. Sprouted seeds are eaten in salads and sandwiches. Western North America. ANGIER, CLARKE [Re], DOYLE [Cu, Nu], KIRK, MEDSGER, YANOVSKY; A2, F85, G59M, 116, I98M, JO, K15, L3J, L13, L55J, N7M, N29{DF}, N84

*Salvia dorisiana* - *Fruit-scented sage* {PL}. The strongly aromatic leaves, having a fragrance of mixed fruits, are occasionally used for flavoring salads and salad dressings. Also brewed into a flavorful tea. Central America. BOWN, BUCHANAN; C43M, F15M, F32D, F35M, G96, H29M, J66, J76, J82, K22, K85, M15T, M35, M82, N42, etc.

*Salvia elegans* -> *Salvia rutilans*

*Salvia fruticosa* - *Greek sage* {PL}. Leaves are used as a spice or as an adulterant of common sage, *S. officinalis*. Although somewhat inferior in quality, it is easier to grow indoors. In Cyprus, they are brewed into a tea known as *chanomilia*. Also mixed with the leaves of *S. pomifera* to make *faskomilo* tea. Sold locally in tavernas. Eastern Mediterranean region. BOWN GRAY, P., KUNKEL, MORTON 1976, NIEBUHR; C82, E61, F37T, F86G, H94M, J57{ES}, J66, J82, K22, K57, K85, L90J, M82, N42, P92

*Salvia gesneriflora* - *Grapefruit sage* {PL}. The large red, tubular flowers are excellent eaten out of hand. They are sweet, melting and filled with nectar. Ideal for garnishing or adding to salads. Mexico. K22, K85, L13, L90J

#### CULTIVARS

**Tequila:** Stunning, bright red flowers with black calyces, slightly larger than the common form; sweet, abundant nectar. Broad, fuzzy leaves. N7J

*Salvia glutinosa* - *Hardy sage, Yellow sage, Jupiter's distaff* {S}. In Holland, the aromatic leaves are used to give flavor to country wines. Eastern Mediterranean region. GRIEVE; A61{PL}, C43M{PL}, D92M, E61{PL}, I77M{PL}, N84, 053M, Q24

*Salvia hians* - *Amara, Ape* {S}. The fruity pith of the stem has a sweet taste and is eaten by children in Nepal. The flowers are sucked for the sweet nectar that accumulates in the tube. Himalayan region. POHLE; A61, A61{PL}, D92M, I77M{PL}, L66{PL}, N84, Q24

*Salvia hispanica* - *Mexican chia* {S}. When soaked in water, the seeds form a gelatinous mass which is flavored with lemon juice and cinammon and consumed as a cooling drink known as *agua de chia* in Mexico. The gelled seeds can also be prepared as a gruel or pudding. Sprouted seeds are eaten in salads, sandwiches, soups, stews, etc. Due to their mucilaginous properties, they are sprouted on clay or other porous materials, and clay animals or *chia pets* are sold commercially for this purpose. The seeds are ground into meal and made into breads, biscuits, muffins, and cakes. They also yield an oil recommended as a nutritional oil due to its high content of linoleic and alpha-linolenic acids. Central America, cultivated. ALTSCHEUL, DOYLE, ERASMUS [Nu], WHISTLER, R.; C43M, C43M{PL}, E56{DF}, F71M, F68T, F80, F97M{DF}, I16{DF},

J25M, K18M{DF}, L94M, N84, R47. (see also Sprouting Seeds, page 524)

*Salvia horminum* -> *Salvia viridis*

*Salvia indica* - {S}. Cultivated in India for its leaves, which are added to country beer to which they impart a fresh, pleasant aroma and taste. Tropical Asia. HEDRICK 1919; N84

*Salvia lavandulifolia* - *Spanish sage, Lavender sage* {PL}. Source of an essential oil used commercially to flavor ice cream, candy, baked goods, chewing gum, soft drinks, and alcoholic beverages. Also used as an adulterant of common sage. Southwestern Europe. MORTON 1976; B28, C43M, K22, K79, K85, M15T, M82, 053M{S}

*Salvia mellifera* - *Black sage, Button sage* {S}. The aromatic leaves can be brewed into a tea. Early settlers in California used them to season sausage, poultry, and meat stuffings. Also the principal source of *sage honey*, a heavy-bodied, light-colored honey with a delicious, delicate flavor and a tendency not to crystallize. Western North America. CLARKE, PELLET; B54M{PD}, C9M, C43M{PL}, F37T{PL}, G60{PL}, H80M{PD}, H94M{PL}, I98M, I98M{PL}, JO, K15, L13, L90J{PL}, M82{PL}, N84, etc.

*Salvia moorcroftiana* - *Moorcroft's salvia* {S}. The peeled stalks are occasionally eaten. Himalayan region. WATT; C43M{PL}, I77M{PL}, L90J{PL}, L91M, 046, Q40

*Salvia officinalis* - *Common sage, Broadleaf sage* {PL}. The herb is widely utilized as a seasoning for meats, fowl, stuffings, soups, stews, sausages, sauces, butter, sage-milk, etc. Young leaves and flowers are eaten raw, boiled, pickled, or in bread and butter sandwiches. Fresh or dried leaves are steeped into an aromatic tea. The flowers can be sprinkled on salads to add color and fragrance. Sage extract and oil are used commercially to flavor ice cream, candy, baked goods, etc. *Sage Derby* cheese, a marbled cheese, is flavored with moistened ground sage leaves. American Sage cheese, usually made from cheddar, uses sage extract for flavoring. The dried stems are used for smoking turkey and other foods. Mediterranean region, cultivated. BRYAN [Cul, Re], GRIEVE, HEDRICK 1919, LARKCOM 1984, LEGGATT [Re], MACNICOL [Re], MARCIN, MICHAEL [Re], MORTON 1976, ROBINSON, R. 1995, TANAKA, UPHOF, WALTER; A97, C67M, D92M{S}, E63K{PD}, F42M{FD}, F80{S}, G84{DF}, H46{DF}, J3{PD}, J66, K22, K66{S}, K85, M35, M53, N19M, N84{S}, etc.

#### CULTIVARS

**Beraarten:** (Giant German) The largest-leaved culinary sage. Similar to Holt's Mammoth but with larger grey-blue silvery leaves and a robust, low growth habit. Grows to 18 to 24 inches tall. Excellent flavor for culinary use. Originally from the Royal Gardens in Hanover, Germany. A97, B28, C2, C9, C43M, E7, E48, E61, F93G, H94M, I49M, J82, K22, L22, L90J, L94M, M35, M82, etc.

**Dwarf:** (Dwarf Sage, Nana, Compacta) Smaller leaves than common garden sage. Compact, low-growing habit; height 12 inches, spreads to 2 feet across. Bright-blue flowers. Makes a good border, rock garden, or container plant. C9, C43M, C67M, G96, H94M, I39, J82, K22, K85, L90J, M35, M82, N42

**Golden:** (Golden Sage, Aurea) Leaves brilliantly colored chartreuse-yellow with a few dark-green areas around the veins. Compact, dense growth habit, height 18 inches. Attractive border plant. Hardy to 10° F. Also a good culinary herb. C67M, F32D, F35M, G96, H51M, H94M, J66, J76, J82, K22, K85, M35, M53, N42

**Holt's Mammoth:** (Mammoth Sage, Giant) Very large, rounded leaves borne well above the soil, keeping them clean. Strong flavor; quality very good. Vigorous growth, to 3 feet tall and 3 feet in diameter. Heavy producer. Excellent for culinary use and good for drying in quantity. Rarely flowers and never runs to seed. Introduced prior to 1888. ANONYMOUS 1888; E61, F35M, I39, J66, J82, K22, K85, M82

**Purple:** (Purple Sage, Purpurea) Aromatic, deep red-purple, strap-like foliage; retains its color throughout the growing season. Compact, bushy growth habit, height 18 inches. Ornamental but also has a good flavor and can be used like common sage in cooking. A97, C9, C43M, C67M, E61, G96, H51M, H94M, J66, J82, K22, K85, L90J, M35, N19M, etc.

**Town of Bath:** Similar to garden sage in growth habit and with the same uses; however, has the added attraction of attractive lavender pink flowers. Adapted to full sun or partial shade. Hardy in Zones 3 to 9. N42

**Tricolor:** (Tricolor Sage; Variegated Sage) Leaves are brightly variegated in cream, purple-red, and pink. Grows to 2 feet tall. Hardy to 10° F. Very ornamental but also has the flavor of common sage and can be used as a culinary seasoning. Flowers irregularly and sometimes reverts to purple sage. C9, C67M, E61, G96, H51M, H94M, J66, J76, J82, K22, K85, L90J, M35, M53, N19M, etc.

*Salvia pitched* - \**Salvia azurea van grandiflora*

*Salvia polystachya* - *Salvia apiana*

*Salvia pomifera* - *Apple sage* {PL}. *Sage apples*, semi-transparent galls caused by the sting of an insect are collected from the branches and made into a kind of sweetmeat or conserve, which is regarded by the Greeks as a great delicacy. The leaves have a strong odor and flavor resembling lavender and common sage and are used as an adulterant of the latter. An infusion of the herb is used as a tea in some parts of Greece. Eastern Mediterranean region. GRIEVE, MORTON 1976, UPHOF; M82

*Salvia pratensis* - *Meadow sage, Meadow clary* {S}. The pungent, bitter-flavored herb was formerly used for flavoring beer and wine. It also serves as an adulterant of the common sage. Europe. KUNKEL, MORTON 1976; D11T{PL}, D92M, E61{PL}, L66{PL}, L91M, L94M, M15T{PL}, M82{PL}, N71M, N84, 053M

*Salvia rutilans* - *Pineapple sage* {PL}. The herb has a distinct pineapple-like fragrance and flavor and is added to fruit salads, desserts, and cold drinks. Fresh or dried leaves can be used as a mild-flavored substitute for common sage in cooking. The flowers are eaten in salads, having an excellent sweet, fruity flavor. An infusion of the leaves is used as a substitute for tea. Cultivated. BARASH [Re], GESSERT, LATHROP, MORTON 1976; A97, C9, C67M, G96, H94M, J66, J76, K22, K85, M35, M53, N19M, N42, N84{S}

#### CULTIVARS

**Dwarf:** (Gracilis) Small, compact form of pineapple sage. Good for flower borders and also makes a very good potted plant. Bright-red flowers. Tender to hard frosts. J66, M82

**Freda Dixon:** (Peach Pineapple Sage) Same growth habit and usage as pineapple sage, but with salmon-colored flowers instead of the typical bright red. Produces masses of flowers from September to November. C2, C43M, E61, K22, K57, M82, N7J, N42

**Honeydew:** (Honeydew Melon Sage) Oval leaves with a strong aroma of honeydew melons. Intense deep-red flowers. Similar to pineapple sage in growth habit and usage, but flowers over a much longer period. Height 24 to 30 inches. C43M, E61, F32D, F35M, F37T, J57, J76, K22, K85, L90J, M15T, M82, N42

*Salvia sclarea* - *Clary sage, Gaiden clary* {PL}. Young, tender leaves are dipped in cream, fried and eaten with sugar-and-orange sauce, or dipped in egg batter and fried as fritters. Finely chopped leaves are cooked in soups and omelettes. They are added to *Rhine* wine to impart a muscatel taste, and also flavor *vermouth*, beer, ale and liqueurs. The ornamental flowers have a pleasant taste and can be sprinkled on a tossed salad. Euiasia. GRAY, P. [Cul, Re], GRIEVE [Cu], HEDRICK 1919, LARKCOM 1984, LATHROP, MACNICOL [Re], MORION 1976, PAINTER [Re], UPHOF; A97, C67M, D92M{S}, F80{S}, H51M, J58{DF}, K22, K85, L90J, N19M, N42, N84{S}, 053M{S}

## CULTIVARS {S}

**Turkestanica:** (Turkish Clary, Vatican Clary) Similar to clary sage in appearance and usage except for the pinkish stems, larger white flowers that are tinged with pink, and the light bracts, often almost white. Blooms over an extended period during the summer. A61, A61{PL}, C43M{PL}, D92M, F80, I77M{PL}, J24{PL}, J76{PL}, L91M, M82{PL}, N84, 053M

*Salvia tiliaefolia* - *Lindenleaf sage, Tarahumara chia* {S}. Seeds are sold in the markets of Mexico for making a drink, which is sometimes mixed with barley water. They are roasted, ground and added to water, forming a gel. Central America. UPHOF; C43M, C43M{PL}, C95, F80, 116, K23{PL}, K46T, K49T, L3J, L77D, L94M, N84, 053M

*Salvia triloba* - *Salvia fruticosa*

*Salvia verbenaca* - *Vervain sage, Wild English clary* {S}. Young leaves are eaten fried, candied, or cooked in omelettes. The flowers are used for flavoring salads. Macaronesia to Southwest Asia. KUNKEL; C95, E61{PL}, K85{PL}, M82{PL}, N84, 053M, S55

*Salvia viridis* - *Joseph sage, Bluebeard sage, Annual clary, English clary, Painted sage* {S}. In England, the leaves were once added to salads, soups, and cooked greens. The seeds are eaten fried with honey and are also used as a condiment. Source of an essential oil used for flavoring certain wines and beers. Mediterranean region to Southwest Asia. GESSERT, GRIEVE, HEDRICK 1919, MORTON 1976, UPHOF; C53, D92M, F24D, 139, J82, M15T{PL}, M82{PL}, N84, Q34, S55

*Satureja biflora* - *Lemon savory, African savory* {PL}. The leaves are used as a flavoring for chicken, baked fish and other foods, having an intense lemon-like aroma and flavor. Also brewed into a tea. Southern Africa. F35M, /57, J76, J82{S}, L94M{S}, M82, N84{S}

*Satureja calamintha* -> *Calamintha sylvatica*

*Satureja douglasii* - *Yerba buena, Oregon tea* {PL}. The dried leaves steeped in water make a palatable tea. American Indians rolled the leafy stems into a ball and dried them for later use. Western North America. KIRK, MEDSGER, MORTON 1976; C43M, D95, E61, G60, G96, H51M, J82, L90J, L94M, M82, N84

*Satureja hortensis* - *Summer savory* {S}. Fresh leaves and shoots are used as a garnish in salads, and are rubbed on meat before cooking. They are often used in cooking to cut the odor of cabbage and turnips. Dried leaves and flowering tops are widely used for flavoring bean dishes, soups, stews, stuffings, cakes, puddings, and sausages. The leaves can be harvested before the plant blooms and brewed into a tea with a tangy, marjoram-like flavor. Eurasia, cultivated. BARASH [Re], GRIEVE [Cu], HEDRICK 1919, MARCIN, MORTON 1976, REILLY, ROOT 1980b [Cu]; A7{DF}, A97{PL}, C3, C81M{PL}, F35M{PL}, F80, G84{DF}, G93M, H46{DF}, 191, J20, J66{PL}, K22, R47

## CULTIVARS

**Aromata:** New improved type with a more intense aroma and a spicier flavor. Dark green leaves also have a higher essential oil content, up to 4%. Sturdier, shorter plant than regular summer savory, more uniform, longer lasting. Developed for commercial sausage making in Eastern Germany. G6, J82, K57{PL}, K66, M82{PL}, N84

*Satureja montana* - *Winter savory, Mountain savory* {PL}. Leaves and flowering tops are used for seasoning soups, salads, sauces, fish, stuffings, egg dishes; poultry, meats, vegetables, olives, etc. Has a stronger, sharper flavor than summer savory. Fresh or dried leaves are steeped for tea. Said to be a source of the famous *Hymettus honey* of Greece. Mediterranean region. BARASH [Re], CRANE 1975, GRIEVE, LATHROP, MARCIN, MICHAEL [Re], MORTON 1976, ROOT 1980b [Cu]; A7{DF}, A97, C67M, D92M{S}, H46{DF}, I77M, J66, J76, K22, K85, M35, M53, N19M, N19M{DF}, R47{S}

## CULTIVARS

**Adamovica:** (Yugoslavian Winter Savory) Very hairy, low shrub; height 12 to 18 inches. Superior flavor. Profuse, pinkish-white flowers. An excellent border plant. Originated in the mountains of the former Yugoslavia. C9, K22, K85, L90J, M82

**Creeping:** (Dwarf, Trailing, Nana, Repanda) Prostrate form making a mound of twisted branches; minute bright-green leaves; white flowers. Height 3 to 4 inches. Attractive in rock gardens and hanging baskets. Strong flavor similar to winter savory. Same usage as other savories. C9, E61, F32D, 139, J66, J82, K22, K85, L56, L90J, L94M{S}, M82

**Lemon:** (Lemon Savory, Citriodora) Small, spreading plant, grows to about 6 inches tall. Has a distinctive lemon savory flavor that adds a piquancy to foods. Should be cut back after flowering. Suitable for growing in a rock garden. N84, R53M

**Purple Mountain:** (Purpurea) An attractive^ compact form of savory; height 9 inches. Small, green leaves with a similar but sweeter flavor and aroma than the common winter savory. Can be used in all savory bean dishes. Showy heads of bright purple flowers in late summer provide an attractive garnish for foods. N84, R53M

*Satureja thymbra* - *Thryba, Barrel sweetener, Za'atar rumi, Roman hyssop* {PL}. The leaves are used as a seasoning for brine-cured olives, grilled meat, meat ragouts, and vegetables. A strong infusion of the herb is used in the fall to clean wine-barrels in preparation for the new vintage. In Crete, thryba is principally used as tea for pleasure and refreshment. It is said to be one of the best-tasting of all the herbal teas. Eastern Mediterranean region. GRIEVE, NIEBUHR, WHALLON; H94M, J76, K22, K85, M82, N84

*Satureja viminea* - *Costa Rican mint bush, Jamaican mint bush, Shrubby savory* {PL}. The small, bright-green leaves have a strong pennyroyal-like fragrance and flavor and can be used for tea or seasoning. Shrub-like perennial. West Indies. BURR, HEDRICK 1919; C43M, E61, F32D, F35M, F37T, H94M, 112, J66, J82, K22, K85, L90J, L94M, M82, N84, etc.

*Satureja vulgaris* -> *Clinopodium vulgare*

*Scutellaria baicalensis* - *Soksokeun-phul, Baikal skullcap* {S}. Young leaves are eaten as a boiled vegetable, while the whole plant is dried and used as a substitute for tea. Central Asia. TANAKA; D26G, D40G, E61{PL}, F68T, F86G, G68, J82, J82{PL}, L91M, L90J{PL}, L94M, N84, Q24, R47

*Sideritis syriaca* - *Mountain tea, Tsai, Tsailopita* {S}. Leaves and flowering tops are brewed into an excellent, golden-colored, aromatic tea. Sold in local markets and at ethnic stores in New York and other large cities. Mediterranean region. A7M{DF}, E81M, J82, J82{PL}, L91M, N84, Q24

*Solenostemon rotundifolius* - *Hausapotato, Fra-frapotato* {PL}. The tubers are eaten like potatoes, either cooked or raw. In Thailand, they are boiled and eaten with coconut meat, cooked in hot and sour soup, or added to *kaeng tai pla*—a curry made with fermented fish offal. Leaves are also edible. Tropical Africa, cultivated. DALZIEL, DANFORTH, FCK, F., HERKLOTS, JACQUAT, MARTIN 1975; W90, X56, Y40

*Stachys affinis* -> *Stachys sieboldii*

*Stachys annua* - *Woundwort* {S}. The flowers are the source of a very light amber honey with soft, fine granulation. Eurasia. CRANE 1975; D92M, N84

*Stachys lavandulifolia* - *Woundwort, Daggayi* {S}. In Turkey, the herb is used in the preparation of a tea. Eurasia. OZTURK; P10

*Stachys officinalis* - *Betony, Bishop's wort* {PL}. An infusion of the leaves and flowering tops makes a refreshing, aromatic beverage. Europe. MACNICOL, MARCIN, MICHAEL [Re], MORTON 1976, PAINTER; C43M, C67M, C95{S}, D92M{S},

F80{S}, H51M, J82, K85, L90J, M82, N84{S}, R47{S}

*Stachys palustris* - *Marsh woundwort* {S}. The crisp, white tubers are eaten raw, roasted, boiled, or dried and made into bead. Young shoots are cooked and eaten like asparagus. Northern temperate region. FERNALD, GRIEVE, HEDRICK 1919, KIRK; B28{PL}, C74{PL}, N3M{PL}, N71M, N84, 048

*Stachys sieboldii* - *Chinese artichoke, Crosnes, Chorogi* {PL}. The crisp, white tubers have a nutty, artichoke-like flavor and are eaten raw, fried, roasted, steamed, boiled, or pickled. In Japan, they are pickled like *ume* plums in a mixture of salt and red beefsteak leaves (Ferilla). Tubers quickly discolor when exposed to the air, and are said to lose their flavor when peeled. Eastern Asia, cultivated. HAWKES [Re], HEDRICK 1919, HERKLOTS [Cu], LARKCOM 1984 [Re], ORGAN [Cu], TANAKA, UPHOF, VERGfi [Re], YASHIRODA; C43M, C82, E61, F73D, H24, H25M{PR}, 174, J5M, J82, K49M, M16, N84, R49, R53M

*Teucrium chamaedrys* - *Wall germander* {PL}. Tinctures and extracts of the flowering tops are used commercially for flavoring bitter tonic wines and vermouth. Eurasia. BREMNESS, BURDOCK; B28, B92, C9, C43M, D11T, D92M{S}, E61, F37T, F93G, G89M, 139, 177M, L56, L90J, L22, M35, M82, etc.

*Teucrium polium* - *Ja'adah* {S}. The plant is mixed with boiled water and sugar to form a refreshing beverage. Also used as a spice. Mediterranean region, Southwest Asia. BAILEY, C., KUNKEL; E61{PL}, H94M{PL}, J93T, N84, 053M, Q24

*Teucrium scordonia* - *Wood germander, Sage-leaved germander* {PL}. A strong infusion of the bitter leaves and flowers, called *ambroise*, is used in France and the Channel Islands as a substitute for hops in flavoring ale. Europe. GRIEVE, HEDRICK 1919, MORTON 1976; C43M, D95, E61, F35M, F80{S}, H51M, J76, M82, N42, N71M{S}, 053M{S}, Q24{S}, R53M, R53M{S}, S55{S}, etc.

*Thymbra spicata* - *Za'atar hommar, Donkey hyssop* {PL}. Occasionally used as a condiment in salads and other dishes. The flavor of its essential oils is similar to those of *Origanum syriacum*, *Thymus capitatus*, and *Satureja thymbra*. In Turkey, the fresh leaves and flowering shoots are added to *herbal cheese*. Eastern Mediterranean region. FLEISHER, NIEBUHR, OZTURK, WOLFERT 1994a [Re]; M82

#### *Thymus azoricus* - *Thymus caespititius*

*Thymus caespititius* - *Azores thyme, Cretan thyme* {PL}. The fresh leaves have a tangerine-like scent and are used for flavoring custards. They are also used as a substitute for lemon thyme, or in combination with it. Macaronesia, Mediterranean region. MORTON 1976; C43M, F32D, H29M, K22, K85, L94M, M82, N42, N84{S}, R53M

#### CULTIVARS

**Celery:** (Celery Thyme) Lew, compact grower that forms small mounds of growth, about 3 inches tall. Narrow, very small, light green leaves that have a celery-like aroma. Light pink flowers. Half hardy. F15M, L56

**Tuffet:** Forms attractive, compact cushions of light green, aromatic leaves. Pinkish flowers are produced in late summer. Excellent in rock gardens. Adapted to growing in Zone 7. C2, E61

*Thymus capitatus* - *Conehead thyme, Za'atarfarsi, Persian hyssop* {PL}. Considered the strongest of all thymes, the leaves are used as a condiment for roasts and grills, and also make an excellent tisane. Source of the *pickled thyme* sometimes available in Middle Eastern stores. Also the source of an essential oil, called *Spanish origanum oil*, employed in the food industry for flavoring baked goods, condiments, meats, beverages, ice cream, and candy. The flowers produce the famous *Hymettus honey* of Greece. Mediterranean region. FLEISHER, GRAY, P. [Cul, Re], MORTON 1976, NIEBUHR, UPHOF; A7M{PD}, C43M, H94M, K22, K85, M82, N54{PD}, N84{S}, 053M{S}

*Thymus x citriodorus* (T. pulegioides x T. vulgaris) - *Lemon thyme* {DF}. The strongly lemon-scented leaves are used as a seasoning for salads, soups, sauces, fish, poultry, cheese, desserts, beverages, etc. An infusion of the leaves makes a very refreshing tea. GESSERT, MORTON 1976, VILMORIN; A97{PL}, E13G{PR}, E14T, F37T, H41, K2, K18M, K85{PL}, L90J, M82, N19M. (for cultivars see Thyme, page 553)

*Thymus herba-barona* - *Caraway thyme* {PL}. The herb has a fragrance reminiscent of caraway seeds and is an excellent seasoning for soups, vegetables, poultry, etc. It was once used to rub the baron of beef, before it was roasted, and came to be called *herbe baronne*. Mediterranean region. GESSERT, GRIEVE, LATHROP; A97, C81M, G96, H94M, J66, J82, K22, K85, L90J, M35, M53, N19M, N19M{DF}

#### CULTIVARS

**Lemon:** (Lemon Caraway Thyme) Small arching, creeping plant, grows to about 3 inches tall. The foliage is exotically flavored and scented with lemon and caraway. Attractive mauve flowers. Relatively drought tolerant. C2, K22, L94M, M82, N84, R53M

**Nutmeg:** (Nutmeg Thyme) Very low, creeping growth habit; height 4 inches. A rapid grower. Blooms a week later than caraway thyme with deeper pink flowers in late summer. Pronounced fragrance somewhat reminiscent of nutmeg. Same culinary use as caraway thyme. Excellent for paths between stepping stones. C43M, C67M, F37T, J76, J82, K22, K85, L56, M53, M82, N42

*Thymus mastichina* - *Mastic thyme, Spanish marjoram* {S}. Leaves are used for seasoning. Also the source of a distilled oil, called *oil of wild marjoram*, used extensively for flavoring meat sauces and soups. Mediterranean region. GRIEVE, MORTON 1976, UPHOF; C43M{PL}, N42{PL}, N84, 053M

*Thymus praecox* ssp. *arcticus* - *Mother-of-thyme, Wild thyme, Creeping thyme, Serpolet* {PL}. The herb is employed as a seasoning for salads, sauces, stews, seafood dishes, vinegar, stuffings, pickles, etc. In Iceland, it is used to give an agreeable flavor to sour milk. In Switzerland, it is rubbed over a goat's milk cream cheese, called *banon*, to which it imparts flavor. Dried flowers are steeped for tea. Also the source of an essential oil that flavors *Benedictine*. Eurasia. FOX, H., GIBBONS 1979, HEDRICK 1919, MORTON 1976, NIEBUHR; A97, C43M, C67M, D92M{S}, F37T, F80{S}, F85J{PD}, J76, K22, K54{PD}, K85, M53, N19M, N84{S}, 053M{S}, R47{S}, etc.

#### CULTIVARS

**Britannicus:** (Woolly Stemmed Sweet) Forms a fuzzy, gray-green mat; height 6 to 8 inches. Has an appealing scent of lemon, mint and thyme. Very hardy. Good for teas and culinary use. Also good as a ground cover and for gray gardens. E61, F32D, H94M, K22, K85

**Mint:** Hybrid of creeping Red-Flowered thyme developed by Sandy Mush Herb Nursery of North Carolina. Blooms one week later. Fuzzy, medium green leaves; delicate mint aroma. Grows to 2 inches tall. K22

**Red-Flowered:** (Creeping Red, Crimson, Coccineus) Forms dark-green mats of foliage; height 1 to 2 inches. Flowers profusely in early summer, with star-like scarlet flowers. Blooms later than mother-of-thyme. Withstands heat well. C9, C43M, E61, 139, J66, J76, K22, K85, L94M, M35, M82, N19M, R53M

*Thymus pulegioides* - *Greater wild thyme, Creeping thyme* {PL}. The leaves of some cultivars can be used for flavoring. Europe. C43M, D92M{S}, E61, K79, M82, N84{S}, 053M{S}, Q24{S}, R53M. (for cultivars see Thyme, page 553)

*Thymus quinquecostatum* - *Japanese thyme, Ibuki-jako-so* {PL}. Source of an essential oil used for flavoring. Central to Eastern Asia. TANAKA; C43M, E61, L94M, M82

#### *Thymus serpyllum* - *Thymus praecox* ssp. *arcticus*

*Thymus vulgaris* - *Thyme* {PD}. Leaves and flowering tops, both fresh and dried, are widely used for flavoring stuffings, fish, meat,

cheese, vinegar, gravies, sausages, etc. Also an essential ingredient in the spice mixtures *bouquet garni* and *herbes de Provence*. In Spain, they are added to the brine in which olives are pickled. An infusion of the herb is the basis for a Catalan soup called *sopa de farigola*, that also contains eggs and bread soaked in olive oil. The fresh or dried leaves can be brewed into a pungent, spicy tea. One of the sources for the famous *Hymettus honey* of Greece, a strongly aromatic, golden amber honey that is rich in enzymes. Dried stems can be added to the fire when grilling foods. Young shoots are used as a garnish. Mediterranean region, cultivated. BARASH [Re], BRYAN [Cul, Re], CRANE 1975, GRAY, P. [Cul], GRIEVE [Cu], HERBST, S., LEGGATT [Re], MACNICOL [Re], MARCIN, MORTON 1976, ROOT 1980b [Cul], WALDRON [Re]; A7M, A97{PL}, C94M, H41, J3, J11M, M53, N54. (for cultivars see Thyme, page 553)

*Thymus zygis* - *Sauce thyme* {S}. Leaves are used as a condiment. Southwestern Europe. BROUK, GRIEVE; N84{PL}, 053M

*Ziziphora seravschanica* - {PL}. In the Pamir Mountains, the aromatic foliage is used for making a tea. Central Asia. A61

#### LARDIZABALACEAE

*Akebia quinata* - *Akebi* {PL}. The somewhat sweet fruits are eaten raw with lemon juice or pureed and made into a cream or a drink. Soft young shoots are used in salads or for salt pickling. The bitter skin of the fruit is fried and eaten. Leaves are used as a tea substitute. Japan, cultivated. FERNALD, HEDRICK 1919, JOHNS, KAJIURA, SIMMONS 1972 [Cu], TANAKA; C9, C36, D37, E87, G66{S}, H4, I37M, J61M, M16, M77, N84{S}, R78{S}

##### CULTIVARS {GR}

#1: Sausage-shaped fruit, 3 to 4 inches long; white, fleshy pulp with jet black seeds. Semi-evergreen vine; fragrant deep-purple flowers. Plant with #2 for best production of fruits. 146, I49M, I66T, 174

#2: Sausage-shaped fruit, 3 to 4 inches long; pulpy, white flesh with jet black seeds. Semi-evergreen vine; fragrant light pink to white flowers. Plant with #1 for best production of fruits. 146, I49M, I66T, 174

*Akebia trifoliata* - *Mitsuba-akebi* {S}. Pulp of the fruit is white, fleshy, somewhat sweet, and is eaten out of hand or made into refreshments. Valued for the novel sausage-like shape and deep purple color. The dried, young leaves are used for tea. Japan. KAJIURA, SIMMONS 1972 [Cu], TANAKA, UPHOF; D37{PL}, D95{PL}, F85, G66, H4{PL}, K63G, N61, N84, 053M, 093, R78

#### *Decaisneafargesii* - *Holboellia fargesii*

*Holboellia coriacea* - *Sausage vine* {PL}. The fruit is purple, about 2 inches long and 1 inch wide. The pulp is white with jet black seeds. It is edible but the taste is generally considered to be insipid. China. SIMMONS 1972, TANAKA; D95, E87, I49M, I49P, I66T, N37M

*Holboellia faigesii* - *Wu-yieh-ku-t'eng* {PL}. The fruits are edible, having a sweetish white juicy pulp. They are of interest for their startling metallic-blue color. China. TANAKA; A79M{S}, B96, D37, D95, E63, E87, I49M, 174, J61M, K38{S}, K63G{S}, NO, N73, N84{S}, 053M{S}, etc.

*Holboellia latifolia* - *Domyem* {S}. Fruits are purple, sausage-shaped, with many black seeds contained in the white pulp. The taste is rather insipid, however in the Himalayas it is considered very palatable. Usually eaten out of hand but with experimentation other suitable ways of using it may be found. Himalayan region. HEDRICK 1919, SIMMONS 1972 [Cu]; F85, I74{PL}, Q40

*Lardizabala biternata* - *Aquiboquil*, *Zabala fruit* {S}. The fruits are somewhat sweet and are much appreciated in Chile where they are collected and sold in the local markets. Considered a novelty because of the sausage-like, deep purple fruits. Chile. Peru. HEDRICK 1919, SIMMONS 1972 [Cu]; D95{PL}, N84, 053M

*Stauntonia hexaphylla* - *Japanese stauntonia*, *Mube* {PL}. The purple, walnut-shaped fruits have white pulp with a sweet, honey-like flavor. They are eaten out of hand or made into refreshments. Highly esteemed in Japan. China to Japan. KAJIURA, SIMMONS 1972 [Cu], UPHOF; A93M, D95, I74, NO, N37M, N51, 053M{S}

#### LAURACEAE

*Aniba rosaedora* - *Rosewood-oil tree* {PD}. The wood yields an essential oil, known as rosewood oil or *bois de rose oil*, used commercially for flavoring baked goods, candy, frozen dairy desserts, gelatin, chewing gum, etc. Amazonian region. BURDOCK, LEUNG, MORTON 1976; E14T, GO, L34

*Beilschmiedia anay* - *Anay* {S}. Small, pear-shaped fruits that are eaten out of hand. They have yellow flesh that is high in oil and has a rich flavor. Central America, Northern South America. DUKE, WILLIAMS, L.; F85

#### *Benzoïn aestivate* - *Undera benzoïn*

*Cinnamomum aromaticum* - *Cassia*, *Chinese cinnamon* {DF}. The bark, and an essential oil derived therefrom, are used to flavor curries, confectionery, beverages, baked goods, chewing gum, and condiments. Immature fruits, or *cassia buds*, are used for flavoring breads, cakes, chocolate and pickles. China. COST 1988 [Cul], KUNKEL, MORTON 1976, NORMAN, UPHOF; A7, A49D, E14T, G66{S}, I83M{PL}, L16{DE}, N84{S}

*Cinnamomum burmannii* - *Batavia cinnamon*, *Korintje cinnamon*, *Indonesian cassia* {DF}. The dried bark, taken from the trunk, is the source of an important spice much used in the Netherlands and the United States. Cultivated in Java and Sumatra. Indonesia. MORTON 1976, UPHOF; A49D, D92M{S}, E14T, F37T, F85{S}, I74{PL}, K18M, L16, L17, L34, N84

*Cinnamomum camphora* - *Camphor tree* {S}. Young shoots and leaves are boiled and eaten. In India, edible crystalline camphor, known as *kacha karpoo*, is added in very small quantities as flavoring for milk puddings and confections—especially in Bengal and Orissa. *Camphor smoked duck*, a popular Chinese dish, is flavored with camphor wood smoke—along with smoke from tea leaves, tangerine peel and other spices. Source of an essential oil that flavors commercial baked goods, candy, non-alcoholic beverages, etc. Also an ingredient of *Swedish bitters*, a famous tonic formula. Southern Asia. ACHAYA, BURDOCK, DEVI, LEE, G. [Re], LIN [Re], ORTIZ 1992, PASSMORE [Re], TANAKA, TREBEN; A41M, C9M, D56M, F37T{PL}, F68T, G66, I74, J82{PL}, K38, K63G, M82{PL}, N40M, 053M, P5, P38, Q12, Q46, etc.

#### *Cinnamomum cassia* - *Cinnamomum aromaticum*

*Cinnamomum biers* - *Wild cinnamon* {S}. The aromatic bark and leaves are used for seasoning, especially in curries. An essential oil, distilled from the leaves, is used to flavor candy and sweetmeats. Tropical Asia. MORTON 1976, TANAKA; F85, N84

*Cinnamomum japonicum* - *Yabu-nikkei*, *Shan-kuei* {PL}. The bark is used as a substitute for cinnamon and cassia in flavoring foods. Fruits are collected and used as a substitute for cacao beans. Seed oil may be used in food. Eastern Asia. TANAKA; E87

*Cinnamomum loureiri* - *Saigon cassia*, *Saigon cinnamon*, *Baker's cinnamon* {DF}. The bark is very high in essential oil, has a sweet, rich pungent flavor, and is much esteemed in China and Japan. Considered superior to Ceylon cinnamon for seasoning cinnamon toast, apple pie, and other foods. Often regarded as the best cinnamon in the world. Unripe fruits are dried and sold as *cassia buds*. Southeast Asia. HEDRICK 1919, MORTON 1976, UPHOF, WOLFERT 1973; A49D, K27T, L16

*Cinnamomum tamala* - *Indian cassia*, *Tejpat*, *Indian bay* {DF}. The aromatic leaves are dried and used as a flavoring in Indian cooking, especially in Bengal and Orissa. They are often fried briefly first, releasing a strong, woody flavor then added to dishes such as pilafs, *shukta* and *charchari*. In Kashmir, they serve as a

substitute for *paan* (betel leaves). Tejpatt leaves are the *malabathrum* that was exported to Rome in classical times. The bark, known as *Indian cassia lignea* is commonly used to adulterate Ceylon cinnamon. India. ACHAYA, ATAL, DEVI [Re], HEDRICK 1919, MEHTA [Re], MORTON 1976; F74

*Cinnamomum zeylanicum* - *Cinnamon*, *Ceylon cinnamon*, *Canela* {PL}. The bark is commonly used to flavor curries, buns, rolls, apple butter, puddings, beverages, etc. Essential oils from the bark and leaves are similarly used. Cinnamon leaves are one of the ingredients used for flavoring  *jerked pork* in Jamaica, where they are also used in place of cinnamon bark in puddings and hominy dishes. *Cinnamon sugar*, a fragrant mixture of cinnamon and white sugar, is a popular topping for French toast and cappuccino. The preferred cinnamon in Europe and Mexico. Southern Asia, cultivated. BENGHIAT [Cul, Re], MORTON 1976, UPHOF; A7{DF}, A7{EE}, A79M{S}, C34G{DF}, D92M{S}, E29, F85{S}, I77G, I83M, L16{DF}, L17{DF}, L34{DF}, M17, M82, N84{S}, etc.

*Laurus nobilis* - *Sweet bay*, *Laurel* {PL}. Fresh or dried leaves are widely used for flavoring soups, stews, stuffings, tomato sauces, gravies, poultry, etc. The dried fruits and the leaf oil are also used for flavoring. In Ancient Rome, bay bark was one of the spices added to *mustacei*, predecessor of the modern day *mostaccioli* biscuits. The berries are distilled to make a liqueur called *floravanti*. In Corfu, the leaves are wrapped around *sikopsoma*, a flattened cake of dried, spiced figs. Dried leaves are brewed into an herbal tea. The wood is used as an aromatic smoke flavoring. Mediterranean region, cultivated. BIANCHINI, BREMNESS, BRYAN [Cu, Re], CHATTO, GIACOSA [Re], MARCIN, MORTON 1976; A97, C9M{S}, C67M, D92M{S}, H4, I77M, I83M, K22, K63G{S}, K67, K85, N19M, N40{PR}\ 053M{S}, R47{S}, etc.

*Lindera benzoin* - *Spice bush*, *Wild allspice* {PL}. Young leaves, twigs, and fruits contain an aromatic oil and make a very fragrant tea. The twigs are best gathered when in flower as the nectar adds considerably to the flavor. Dried and powdered fruits can be used as a substitute for allspice. The new bark is pleasant to chew. Eastern North America. FERNALD, GIBBONS 1979, HALL [Pre, Re]; B9M, B68, C95{S}, H4, H49, H70M, K63G{S}, M69M, M92, N7T, N9M, N9M{S}, N37M

*Lindera communis* - *Ta-hsiang-yieh-tzu-shu* {S}. Leaves are occasionally used as a condiment. In China, the dried powdered leaves and twigs are added to rice bouillon for flavor. Eastern Asia. TANAKA; M7M

*Lindera glauca* - *Yama-kalbashi*, *Shan-hu-shu* {S}. The fruits are used as a substitute for pepper. Powdered leaves are mixed into noodles and dumplings. Eastern Asia. TANAKA; F85, G66

*Lindera obtusiloba* - *Dankdbai*, *Shui-luo-po* {S}. Young buds and leaves are used as a tea substitute, called *jaku-zetsu-cha*. Young leaves are fried and served as a Buddhist ceremonial dish. Eastern Asia. TANAKA; D92M, D95{PL}, E63{PL}, E87{PL}, G66, H4, K38, K63G, M77M{PL}, N37M{PL}, 053M, P5

*Litsea cubeba* - *Mountain pepper*, *May-chang* {S}. Scented young fruits are used as a substitute for cubeb pepper in flavoring goat's meat and fish. The fragrant flowers are eaten or used to flavor tea. Roots are cooked with pork. All parts of the plant have a pleasant lemon-like aroma. Tropical Asia. ALTSCHUL, MORTON 1976, UPHOF; U71M, Y76

*Litsea garciae* - *Engkala*, *Pengalaban*, *Pepe babae* {S}. The fruit is eaten raw or cooked. It has thin, bright pink edible skin and creamy white flesh that is similar to avocado, but softer and with a more delicate flavor. Before eating, it is rolled or bruised briefly, as one would a lemon or pomegranate. Indonesia, Philippines. TANKARD, TINGGAL, VON REIS; 019

*Litsea glaucescens* - *Mexican laurel*, *Laurel de especia* {DF}. The aromatic leaves are used as a bay-like seasoning, especially in soups, stews and pickles. Also brewed into a tea, known as *te de laurel*. Dried leaves are commonly found in large markets of Guatemala.

Mexico, Central America. ALTSCHUL, QUINTANA 1994 [Re], VON REIS, WILLIAMS, L.; 116

*Litsea thunbergii* - *Tabu-no-ki* {PL}. Dried leaves are ground into a flour, mixed with wheat flour to make cakes and used as a substitute for rice cakes. The fruit is made into a steamed dumpling called *saji-mochi*. Eastern Asia. TANAKA; F85{S}, H4, H78, N37M, N51

#### *Machilus thunbergii* - *Litsea thunbergii*

*Persea americana* - *Avocado* {S}. Buttery fruits are much eaten in salads, soups, *guacamole*, sandwiches, spreads, ice cream, with tortillas, seasoned with salt, pepper, sugar and lime juice, made into wine, etc. In Bali, the fruits are added to sugar and water to form a popular iced drink known as *es apokat*, and are mixed with other fruits, chipped ice, and brilliant red sugar syrup in the dessert called *es campur*. The flesh is the source of avocado oil, a mild, pleasant tasting oil used in salad dressings and with strong-flavored greens such as chicory, watercress and arugula. A tea made from the leaves is commonly sweetened with sugar cane juice: Toasted leaves are used to season stews and bean dishes. The soaked leaves are occasionally used as smoke flavorings in Mexican barbecues. Tiiy, unpollinated fruits are marketed as *cocktail avocados*. Source of a dark-colored, heavy-bodied honey. Central America, cultivated. CRANE 1975, CUSUMANO [Cul], DUKE, EISEMAN, GIBBONS 1967, MORTON 1987a [Cu], ORTIZ 1973 [Re], POPENOE, W. 1920 [Cu, Pro], QUINTANA 1994, RICHARDSON, M. [Re], THOMSON 1983 [Cu, Pro], UPHOF, VON WELANETZ; B23P{PR}, B54M{PD}, B60M{PR}, C34G{DE}, D7{ffi}, E13G{PD}, E29{PL}, F32D{ffi}, F85, G66, I64M{ffi}, L34{PD}, N40{PR}, N84, P38, etc. (for cultivars see Avocado, page 292 and Rootstocks, page 510)

*Persea borbonia* - *Red bay*, *Tisswood* {PL}. Fresh or dried leaves are used to flavor soup, especially crab gumbo, stews, meats, stuffings, poultry, and other Creole dishes. The flavor and quality are comparable to *Laurus nobilis*. Also made into a tea. Southern North America. MEDSGER [Pre], MORTON 1977, UPHOF; B96, F73, H4, K63G{S}, M77M, N37M

*Persea schiedeana* - *Coy6 avocado*, *Cojou*, *Chucte*, *Chinini* {S}. The fruits are eaten in salads. Quality is variable from seedling trees. The best fruits are quite large, the brownish pulp free from fibers or nearly so, and the flavor a very appealing combination of avocado and coconut. Central America. MORTON 1987a, SIMMONS 1972, WILLIAMS, L.; F85

#### *Persea thunbergii* - *Litsea thunbergii*

*Sassafras albidum* - *Sassafras* {PL}. The roots are added to maple sap and brewed into a pleasant tea. Strong tea can be made into jelly. Young leaves are used in salads or dried and powdered to form *filet powder*, used in Creole cooking for thickening soups, stews, chowders, and gravies. A condiment is prepared by boiling the dried root bark with sugar and water until it forms a thick paste. Young buds are eaten. *Sassafras* wood is combined with that of hickory for smoking Southern dry-cured, country hams. North America. ANGIER, BISSELL, FERNALD, GIBBONS 1962 [Pre, Re], HEDRICK 1919, MILLER, J.; A82, B9M, B52, C17M{Pm}, C81M, C94M{ED}, D97{ED}, E38M{DE}, E97M{PD}, H4, H49, J3{m}, J66M{DE}, K63G{S}, K89, L36M{EC}, M69M, M82M{DF}, N37M, etc.

#### *Sassafras variifottum* - *Sassafras albidum*

*Umbellularia californica* - *California bay*, *California laurel*, *California nutmeg* {PL}. The leaves are used for flavoring soups, stews, and meat dishes. They are packaged commercially in San Francisco and sold as a sweet bay substitute. The flavor is much stronger. Nuts are parched and eaten or ground into flour for bread. Bark of the root is sometimes used as a coffee substitute: Western North America. CLARKE, CREASY 1982, KIRK, YANOVSKY; B74, C9M{S}, D95, E87, G59M{S}, G60, H41{ED}, I83M, J61M, L17{DF}, NO

## LECYTHIDACEAE

*Bertholletia excelsa* - *Brazil nut*, *Para nut* {DF}. Seeds are eaten raw, roasted, salted or used in ice cream, baked goods and confections. They are sometimes grated with the stilt roots of *Socratea* palms, forming a savory white mash called *leite de castanha*, that is stirred into cassava flour. Also the source of an oil, Brazil nut oil, suitable for culinary purposes Venezuela-Brazil. MENNINGER, ROSENGARTEN [Re], SMITH, N., UPHOF; G5M{PD}, 166{ED}, L14G{PD}, L56M{DE}, M63M

*Grias cauliflora* - *Anchovy pear* {S}. The fruits are pear-shaped, russet-brown, and are eaten raw, or when unripe are pickled like the mango, which they resemble in taste. Caribbean region. HEDRICK 1919, MACMILLAN; X88M

*Gustavia superba* - *Chupo*, *Membrillo* {S}. Eaten raw or cooked, the pulp of the fruit is also used like grease to cook rice. Panama. DUKE; N84

*Lecythis pisonis* - *Sapucaí nut* {S}. The oily seeds are similar to the Brazil nut in size and shape. They are eaten raw and are considered quite delicious. When fresh they are soft, not crisp like the cashew nut. Brazil. ALTSCHUL, MENNINGER; N84

## LEMNACEAE

*Lenina minor* - *Lesser duckweed* {PL}. Occasionally used as a vegetable. Somewhat harsh in taste compared to *Wolffia* because of a high oxalic content, but still considered far superior to *Chlorella* algae. Widespread. LANDOLT, MARTIN 1975; C7M, E13, H30, I90M, J7M, K34, M15, M39, M73M, N84, P38

*Wolffia globosa* - *Khai-nam*, *Mijinko-uki-kusa* {PL}. A floating, aquatic plant that is used as a vegetable in Burma, Laos, and northern Thailand. The taste is excellent, a little like sweet cabbage. Cultivated in ponds and sold in local markets. Recommended for mass culture because of its rapid multiplication and high nutrient content. Contains 20% protein, 44% carbohydrate, 5% fat, vitamins C, A, B<sub>6</sub>, B<sub>2</sub>, and nicotinic acid. One of the smallest flowering plants on earth. Kai-nam means "eggs of the water". Often cited as *Wolffia arrhiza*. Widespread. HILLS, C. 1978, LANDOLT, NATIONAL RESEARCH COUNCIL 1976, ZEVEN; F85

## LENTIBULARIACEAE

*Pinguicula vulgaris* - *Butterwort*, *Thickening grass* {S}. A Scandinavian cultured milk called *taemjolk* or *langfil*, a type of *ropy milk*, was prepared by pouring milk over a strainer on which fresh leaves of butterwort had been laid. The milk was apparently left for a day or two until it soured, the butterwort providing lactic acid and a degree of "ropy" thickening. The resultant product was a mildly acidic milk with a pleasing consistency and a delicious taste that had a shelf life of several weeks at ambient temperatures. A small portion could have been saved to inoculate another batch of milk. Northern temperate region. FERNALD, GUNDA, KURMANN, ROBINSON, R. 1995; N84, 042, R88

## LEONTICACEAE

*Bongardia chrysogonum* - *Chrysogomum* {PL}. The roots are roasted or boiled and used as food in Iran. Leaves are eaten in the same manner as sorrel. Southwestern Asia. HEDRICK 1919; N84

## LEPTOSPERMACEAE

*Astartea fascicularis* - *Dainty astartea* {S}. The leaves are used as a tea substitute. Australia. TANAKA; M7M{PL}, N79M, N84, 033, P17M, Q32, R15M, R33M, S92

*Backhousia anisata* - *Aniseed myrtle* {DF}. The leaves are a popular flavoring in Australian bushfoods cuisine. They have a mild anise-like flavor with a sweet aftertaste. Fresh leaves can be used whole like bay leaves in flavored vinegars and oils. Dried ground leaves flavor meats, seafood, cheeses, breads, teas, etc. Also the source of an essential oil that is especially good for flavoring ice

cream. Australia. ROBINS; N79{PL}, N79{PR}, N79{DF}, 032M, 032M{PD}

*Backhousia citriodora* - *Lemon myrtle*, *Sweet verbena tree* {S}. Leaves, flowers and seeds are used as seasoning, having an intense, extremely pleasant flavor reminiscent of lemon verbena. They also make an excellent tea. Also the source of an essential oil. Widely planted for the gourmet bushfood industries. Australia. ROBINS [Cul, Re], TANAKA; B76M{DF}, N79{PL}, N79{PR}, N79{DF}, N79{PD}, N79M, 032M{DF}, 032M{ED}

*Backhousia myrtifolia* - *Cinnamon myrtle* {S}. The leaves can be used for seasoning, having a flavor and aroma reminiscent of cinnamon or nutmeg. Will tolerate somewhat cooler temperatures than the other *Backhousia* species. Australia. ROBINS; N79{PL}, N79M, N84, P17M

*Baeckea virgata* - *Twiggy heath myrtle* {S}. Leaves are used as a tea substitute. It produces a pleasant drink with a good aroma similar to that of *Leptospermum*. Australia. CRIBB; F85, N79M, N84, 033, 093, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus albens* - *White box* {S}. The flowers are the source of an almost water-white honey of excellent flavor and rapid fine granulation. A major source of honey in New South Wales. Australia. CLEMSON, CRANE 1975; N79M, N84, 093, P5, P17M, Q32, R15M, S92

*Eucalyptus caleyi* - *Caley's ironbark* {S}. A major source of honey in New South Wales. The honey is exceptionally clear, has an excellent flavor, and is one of the lightest in color of all honeys. It granulates rapidly to produce a white candy with an extremely fine grain. Much in demand for producing premium quality packs of candied honey, and is also one of the best honeys for exhibition and trade purposes. Australia. CLEMSON, CRANE 1984; N79M, N84, 094, R15M, R33M

*Eucalyptus calophylla* - *Marri* {S}. Produces a light amber honey of excellent flavor that granulates slowly. One of the most dependable honey sources in Western Australia. Also the source of a delicious, high protein (28%), varietal bee pollen eaten as a nutritional food supplement. Australia. CRANE 1975; B2{ED}, C9M, H71, N79M, N84, 033, 093, P5, P17M, Q32, Q41, R15M, R33M, S92

*Eucalyptus citriodora* - *Lemon-scented gum* {S}. Produces a sweet, manna-like substance that is scraped off the leaves and eaten. Australia. DONKIN; C9M, C43M{PL}, C81M{PL}, D92M, E61{PL}, F80, G66, J76{PL}, K85{PL}, L91M, M82{PL}, N84, 053M, 094, R33M, etc.

*Eucalyptus crebra* - *Narrow-leaved red ironbark* {S}. A major producer of honey in New South Wales, although yields may be sporadic in some areas. The honey is of excellent quality, light in color, of good density, and has a pleasant, mild, sweet flavor. Australia. CLEMSON; N79M, N84, 093, 094, P5, P17M, Q32, R15M, S92

*Eucalyptus diversicolor* - *Karri gum* {S}. The tree produces large quantities of an extra light amber honey with a mild, characteristic flavor and of the finest quality. The honey granulates readily but fairly coarsely. Australia. CRANE 1975; C9M, N79M, N84, 033, 093, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus dives* - *Native peppermint*, *Broad-leaved peppermint* {S}. Fresh or dried leaves are a popular bushfoods seasoning, having a very strong peppermint-like aroma and flavor with hints of eucalyptus. Also the source of an essential oil used for flavoring sauces, dressings, desserts, dairy foods, etc. The dried leaves make a refreshing tea. Australia. ROBINS; N79{DF}, N79M, N84, 032M{DF}, 032M{PD}, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus dumosa* - *Congoo mallee*, *Water mallee* {S}. Produces a sweet, manna-like substance called eucalyptus manna or *lepp*, prepared into a delicious drink. The bark of young roots is baked and eaten. It is said to be rather sweet, resembling the taste of

malt. Australia. CRIBB, DONKIN, UPHOF; N79M, N84, 033, P5, P17M, Q32, R15M

*Eucalyptus eximia* - *Yellow bloodwood* {S}. The plant produces a sweet, manna-like substance. Australia. DONKIN; F85, N79M, N84, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus globulus* - *Blue gum* {S}. An essential oil, distilled from the fresh or dried leaves, is used to flavor candies, baked goods, ice cream, and liqueurs. Australia. MORTON 1976, TANAKA; C9M, C43M{PL}, D92M, E81M, F80, G66, K38, K85{PL}, ^{PD}, M82{PL}, N84, 053M, Q12, S92

*Eucalyptus gummifera* - *Red bloodwood* {S}. The flowers produce copious amounts of nectar which the natives sucked directly, or mixed with water to make a sweet drink called *bool*. Australia. CRIBB; N79M, N84, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus gunnii* - *Cider gum, Cider tree* {S}. A sugary sap that exudes from the trunk can be drunk directly or left to ferment into a sort of hard cider. Also the source of an edible manna. Australia. CRIBB, DONKIN, TANAKA; A41M, C9M, D95{PL}, E87{PL}, G66, H4{PL}, L91M, M16M{PL}, N79M, N84, 053M, 093, P5, Q32, R15M, R33M, R47, etc.

*Eucalyptus intermedia* - *Pink bloodwood* {S}. The copious nectar produced by the flowers can be sucked, or mixed with water to form a sweet drink. Australia. CRIBB; N79M, N84, 094, P17M, R15M

*Eucalyptus intertexta* - *Gum-barked coolibah, Western red box* {S}. The seeds were ground and used as food by the Aborigines. Produces and extremely light-colored honey with very good density and flavor. Australia. CLEMSON, UPHOF; N79M, N84, 094, P17M, R15M, S92

*Eucalyptus leucocylon* - *Yellow gum* {S}. Source of an essential oil used to flavor certain candies, baked goods and ice cream. Australia. MORTON 1976, ZEVEN; C9M, F80, H71, N79M, N84, 033, 093, P5, P17M, Q15G, Q32, R15M, R33M, S92

*Eucalyptus macrorhyncha* - *Red stringybark* {S}. Yields a clear, highly colored honey-bright amber with a reddish tint—and a strong but pleasant flavor. It blends well with milder honeys, especially yellow box honey, with which it frequently occurs as a natural blend. Australia. CLEMSON; N79M, N84, 093, P5, P17M, Q32, R15M, S92

*Eucalyptus maculata* - *Spotted gum* {S}. The plant is the source of a sweet, manna-like substance called eucalyptus manna or *lerp*. Australia. DONKIN; A41M, C9M, H71, N79M, N84, 033, 093, 094, P5, P17M, Q32, Q46, R15M, R33M, S92, etc.

*Eucalyptus mannifera* - *Manna gum* {S}. An exudation that forms on the leaves and twigs, called manna or *lerp* is used as food. Whitish, sugary deposits left on the leaf surface by evaporation of this exudate are generally termed manna. The exudate is produced by insects feeding on the leaves and in some cases contains a considerable concentration of sugar extracted from the plant. Australia. CRIBB, DONKIN; B94, N79M, N84, 093, P5, P17M, Q32, R15M, S92

*Eucalyptus marginata* - *Jarrah* {S}. The flowers yield a dense honey with a distinctive, slightly frothy quality. When produced near coastal areas, it has a pleasant nutty flavor. Also the source of a very tasty, high protein (22%), varietal bee pollen occasionally available at natural food stores. Australia. CRANE 1975; B2{PD}, I43T{m}> N79M, N84, 033, 093, Q32, R15M, R33M, S92

*Eucalyptus melliodora* - *Yellow box* {S}. Flowers are the source of a choice extra light amber honey of good density and sweet, cloying flavor. It is very slow to granulate when free of other honeys. Reportedly the most prolific honey producing plant in the world. Australia. CLEMSON, CRANE 1975; C9M, D92M, E61{PL}, F37T{PL}, H71, J76{PL}, J82, J82{PL}, M82{PL}, 033, 093, P5, P17M, Q32, R15M, etc.

*Eucalyptus microtheca* - *Coolibah* {S}. Source of a sweet, manna-like substance known as *lerp* in Australia. The powdered seeds are made into cakes which are baked and eaten. Sap from the roots is a well-known source of emergency water. Produces a light-colored honey with excellent density and flavor. Australia. CLEMSON, CRIBB, O'CONNELL; A67M{ED}, B94, C9M, F53M{PL}, H71, J86{PL}, N79M, N84, 033, 093, P5, P17M, Q32, Q41, Q46, R15M, S92, etc.

*Eucalyptus ochrophloia* - *Napinyah* {S}. One of the major honey producers in New South Wales. The honey is light in color, and has excellent flavor and density. It granulates very rapidly. Australia. CLEMSON; N79M, N84, R15M

*Eucalyptus pachyphylla* - *Red-bud mallee, Intjinya* {S}. The nectar from the flowers can be sipped directly, or mixed with water to make a sweet beverage. Australia. O'CONNELL; N79M, N84, 033, 093, P5, P17M, Q46, R15M, S92

*Eucalyptus paniculata* - *Grey ironbark* {S}. The flowers are the source of a light colored, medium honey with a pleasant aroma and excellent flavor. One of the most prolific honey yielders, comparable with *E. melliodora*. Australia. CLEMSON, CRANE 1975; G66, N79M, N84, P5, P17M, Q32, Q46, R15M, S92

*Eucalyptus papuana* - *Ghost gum, Ulimpa* {S}. A type of honey dew or manna is collected from under the bark and eaten. Australia. O'CONNELL; C9M, H71, N79M, N84, 033, 093, 094, P5, P17M, Q32, Q41, R15M, R33M, S92

*Eucalyptus polybractea* - *Blue mallee* {S}. The essential oil derived from the leaves is used as a flavoring in certain candies, baked goods, and ice cream. Australia. MORTON 1976; N79M, N84, P5, R15M

*Eucalyptus pulverulenta* - *Silver-leaved mountain gum* {S}. A sweet, manna-like substance that forms on the leaves and twigs is collected and eaten. It sometimes falls in such large amounts that a tree appears to be raining. Australia. CRIBB, DONKIN; B94, C9M, D95{PL}, E53M, F80, H71, N84, 053M, 093, P5, P17M, Q32, R15M, R33M, S92, etc.

*Eucalyptus radiata* - *White-top peppermint* {S}. Said to be the source of a nutritious, saccharine substance called eucalyptus manna or *lerp*. Australia. DONKIN; C9M, E61{PL}, J82, M82{PL}, N79M, N84, 033, 053M, 093, P5, P17M, Q32, R15M, S55, S92, etc.

*Eucalyptus resinifera* - *Kino eucalyptus, Red mahogany* {S}. The sap is the source of a saccharine drink. Also produces an edible manna. Australia. DONKIN, KUNKEL; C9M, G66, N84, 094, P5, P17M, Q32, Q46, R15M, R33M, S92

*Eucalyptus rubida* - *Candlebark gum* {S}. Source of an edible manna-like substance. It is said that one tree can produce up to twenty pounds. Australia. CRIBB, DONKIN; B94, M7M{PL}, N79M, N84, 053M, 093, P5, P17M, Q32, Q41, R15M, R33M, S92

*Eucalyptus sideroxylon* - *Red ironbark, Mugga ironbark* {S}. Produces a light amber, mild-flavored honey that granulates readily to form a fine-grained white candy. Often blended with other honeys. One of the most reliable sources of honey in Australia. Australia. CLEMSON, CRANE 1975; B94, C9M, F80, H71, N79M, N84, 033, 093, P5, P17M, Q32, R15M, R33M, S92

*Eucalyptus smithii* - *Gully gum* {S}. One of the principal producers of Eucalyptus oil, an essential oil distilled from the fresh or dried leaves. It is highly aromatic, pungent, bitterish, and is used to flavor certain candies, baked goods, and ice cream. Australia. MORTON 1976; C9M, G66, N79M, N84, 093, P5, P17M, Q32, R33M, S92

*Eucalyptus tereticornis* - *Forest red gum* {S}. Said to produce a nutritious, saccharine substance that falls from the leaves like manna. Australia. DONKIN; C9M, G66, H71, N84, 094, P5, P17M, Q12, Q15G, Q32, Q46, R15M, R33M, S92

*Eucalyptus terminalis* - *Kutcha bloodwood* {S}. An edible manna, procured from the leaves and young branches is eaten by the natives of northern Queensland. Australia. CRIBB, DONKIN, HEDRICK 1919; N79M, N84, P17M, Q46, R15M, S92

*Eucalyptus viminalis* - *Ribbon eucalyptus*, *Manna gum* {S}. Produces a white, manna-like exudate of a very pleasant, sweet taste, much esteemed by the Aborigines of Australia. They collected it after it fell to the ground or scraped it from the leaves. Heavily covered leaves were pounded and baked. Australia. CRIBB, DONKIN, UPHOF; B94, C9M, F80, 7/77, 7S{PL}, M16M{PL}, N84, 033, 053M, 093, P5, P17M, Q15G, R15M, R33M, S92, etc.

*Eucalyptus viridis* - *Green mallee* {S}. A major honey producer in New South Wales. The honey is of choice quality, light in color, of good density, and has a pleasant flavor. It is much sought after by packers. Australia. CLEMSON; C9M, N79M, N84, 093, P5, P17M, R15M, S92

*Eucalyptus wandoo* - *Wandoo* {S}. Source of a high quality amber to light amber honey of good density and mild flavor. Granulates to a medium grain, and light creamy color. Also the source of a delicious, high-protein (26%), varietal bee pollen eaten as a snack, added to cereal and yogurt, or used as a food supplement. Western Australia. CRANE 1975, CRANE 1984; B2{PD}, N79M, N84, 033, P5, P17M, Q32, R15M, R33M, S92

*Kunzea pomifera* - *Muntries*, *Munthari*, *Native apple* {S}. The fleshy capsules are gathered by the natives of sandy desert areas and eaten out of hand, dried, or used for jams, preserves, and tarts. They have a delicious flavor reminiscent of apples and raisins. Also excellent for chutneys, pickles, relishes, sauces and muffins. Becoming popular with bushfood chefs and restaurants. Australia. CRIBB, ROBINS [Cul, Re], TANAKA; N79{PL}, N79{PR}, N79{PD}, N84, 032M{PD}

#### CULTIVARS {SC}

**Rivoli Bav:** Vigorous, evergreen, prostrate or creeping shrub; 1 1/2 to 10 feet wide. Selected for its heavy crops of large (to 15 mm), brightly colored (dark-pink), flavorsome berries. Ripens in the summer. In hot dry climates, partially shaded conditions have a beneficial effect on fruit size and flavor. Begins fruiting in about 2 years. N79

*Leptospermum coriaceum* - *Green tea-tree* {S}. The flowers produce copious nectar that can be sucked directly, or added to water to make a sweet beverage. Australia. DONKIN; N79M, N84, R15M, S92

*Leptospermum flavescens* - *Yellow tea-tree*, *Tantoon tea-tree* {S}. Leaves are used as a tea substitute. Australia. CRIBB, UPHOF; F85, N79M, 093, P5, P17M, Q32, R15M, R33M

*Leptospermum liversidgei* - *Swamp may* {S}. The leaves can be used as a substitute for tea. Australia. BEAN, W.; M7M{PL}, N79M, N84, 093, 094, P5, Q52, R15M, R33M

*Leptospermum petersonii* - *Lemon tea-tree* {S}. Leaves are used to brew a strongly aromatic tea. A few leaves added to the pot when making Chinese tea produces a refreshing variation. Australia. CRIBB; D92M, F85, 183M{PL}, M82{PL}, N79M, N84, P17M, R15M, R33M, R47

*Leptospermum scoparium* - *Manuka*, *Broom tea-tree* {S}. Fresh, pungent leaves are used to produce an aromatic, very agreeable tea substitute. Manna is reported to form on the leaves. Source of a light amber, thixotropic honey with a distinctive flavor best obtained from comb honey. Australia and New Zealand. CRANE 1975, CRIBB, DONKIN, HEDRICK 1919, UPHOF; C3M{PD}, F80, F85, G5M{PD}, M82{PL}, M84{PD}, N79M, N84, 093, P5, P17M, Q32, R15M, R33M, S43M, etc.

*Lophostemon confertus* - *Brush box* {S}. The flowers yield an aromatic light amber honey with excellent flavor. It is of choice quality and granulates quickly to form a haidish white candy. Australia. CLEMSON, CRANE 1975; F80, G66, K63G, N79M, 033,

053M, 093, 094, P5, P17M, P38, Q32, R15M, R33M, S92, etc.

*Melaleuca leucadendron* - *Cajuput-oil tree*, *Paperbark tree* {S}. The fruits and leaves are used for tea. Also the source of an essential oil that flavors candy, baked goods, condiments, relishes, beverages, etc. Australia. ATAL, KUNKEL, LEUNG, TANAKA; H71, 76S{PL}, L34{FD}, N79M, N84, 033, 094, P5, P17M, Q32, R15M, R33M, S92

*Melaleuca preissiana* - *Freshwater paperbark* {S}. The soft, papery bark can be used as a wrapping when steaming or roasting foods such as fish, meats, poultry and vegetables. Makes an appealing presentation when foods are lifted and served within the earthy, multicolored bark. Produces a high quality paperbark for the bushfoods industry. Australia. N79{PL}, N79{DF}, N79M, N84, P5, R15M, S92

*Melaleuca quinquenervia* - *Broad-leaved paperbark* {S}. The bark was traditionally used for wrapping fish and large animals when cooking over outdoor fires. Produces a high quality paperbark for the native bushfoods industry. The blossoms and leaves can be used to make a tasty tea. Australia. CHERIKOFF; N79{PL}, N79{DF}, N79M, N84, 032M{DF}, 033, 093, 094, P5, P17M, Q32, R15M, R33M, S92

*Metrosideros excelsa* - *New Zealand Christmas tree*, *Pohutukawa* {S}. The flowers are the source of a highly valued, gourmet honey that is water-white in color and has a unique salty flavor. It granulates coarsely in a few days. New Zealand. CRANE 1975; G66, H71, 78{PL}, 76E{PL}, N79M, N84, 053M, 093, P5, P17M, Q32, Q41, R88, S92

*Metrosideros polymorpha* - *Ohia lehua* {PD}. Yields a particularly high grade honey with a unique, spicy flavor and a creamy consistency that is perfect for spreading. Hawaii. PELLETT; H15T, H80M

*Metrosideros tomentosa* - \**Metrosideros excelsa*

*Metrosideros umbellata* - *Rata* {PD}. The flowers are the source of a water-white honey with a delicate, distinctive flavor and fine, silky granulation. New Zealand. CRANE 1975; C3M, H15T, N84{S}

*Tristania conferta* - *Lophostemon confertus*

#### LILIACEAE

*Aloe arborescens* - *Candelabra aloe* {S}. The flowers are sucked for their sweet nectar. Southern Africa. KUNKEL; H4{PL}, I28{PL}, N84, Q38, R88, S28M, T25M

*Aloe barbadensis* - *Aloe vera* {PL}. The mucilaginous gel of the leaves is sometimes used as an ingredient of commercial juices and jellies. Aloe vera juice is a popular supplemental beverage among those following a natural foods diet. It is occasionally mixed with fruit juices or herbal extracts. Aloe extracts add a bitter flavor to commercial beverages and candy. Also one of the ingredients of *Swedish bitters*, a famous tonic formula developed by Dr. Samst, a Swedish physician and popularized by Maria Treben. Seeds are also eaten. Cultivated. LEUNG, TANAKA, TREBEN; B84, C43M, C67M, D87D{PD}, E13G{PR}, E31{ED}, E61, F35M, G18, G47C{PD}, H52, I19M{PD}, 157, J66, J82{PD}, K22, M75M{PD}, N7D{PD}, N19M, etc.

*Aloe ferox* - *Cape aloe* {S}. Flowers are sucked for their sweet nectar. Leaves are soaked and cooked as a vegetable or preserved in syrup flavored with ginger, lemon juice, and the very young shoots of fig trees. South Africa. FCX, E, TATE [Re]; AOM{PL}, A69, H52{PL}, I28{PL}, N84, Q38, Q41, R88, S28M, T25M

*Aloe greatheadii* - {S}. The flowers buds are considered a delicacy, but should be boiled in three changes of water before use. They are often flavored with dried leaves of cowpea and pumpkin. Tropical Africa. KUNKEL, TREDGOLD; AOM{PL}, N84, Q41, R88

*Aloe littoralis* - {S}. Flowers are used as a spinach-like potherb. The juicy leaves are said to be tasty both raw or boiled. Southwest Africa. FOX, E; A69, H52{PL}, N84, Q41, R88, S28M

*Aloe marlothii* - *Mountain aloe* {S}. The flowers are sucked for their sweet nectar. Southern Africa. FOX, F.; A0M{PL}, A69, B84{PL}, F85, G91M{PL}, H52{PL}, N84, Q38, Q41, R88, S28M, T25M

*Aloe vera* - *Aloe barbadensis*

*Aloe zebrina* - {PL}. Flowers and flower buds are eaten. In Angola, the flowers are boiled, pressed, and made into cakes. The sweet nectar of the flowers is consumed. The juicy leaves are used as a masticatory. Southern Africa. FOX, E, REYNOLDS, G.; AOM, B84, H52, N84{S}

*Arthropodium milleflorum* - *Pale vanilla-lily* {S}. The slender white tubers are eaten, and are considered an excellent substitute for potatoes. Australia. CHERIKOFF, CRIBB; R15M

*Asphodeline lutea* - *Asphodel*, *Jacob's rod* {S}. The ancient Greeks and Romans roasted the roots like potatoes and ate them with salt and oil, or mashed them with figs. The flowers are eaten, and are said to have a delicious, sweet flavor. Mediterranean region. HEDRICK 1919; A51M{PL}, A61, A61{PL}, B28{PL}, D11T{PL}, F80, N84, 053M, Q24, R49{PL}

*Calochortus gunnisonii* - *Gunnison mariposa* {S}. Fresh bulbs are eaten raw with salt and taste like a raw potato. When fried or baked they have a crisp nut-like texture and a pleasing flavor. Dried, they are pounded into a flour for making porridge or mush. Flower buds are eaten raw in salads. The seeds are ground and eaten. Western North America. HARRINGTON, H., KINDSCHER, UPHOF; L13, N84

*Calochortus nuttallii* - *Nuttall's mariposa-lily*, *Sego lily* {S}. The bulbs are excellent eaten raw, boiled or fried. Their flavor is greatly improved by steaming them in fire pits, or by roasting them over a smoky fire. Flowers and flower buds make a tasty addition to a tossed salad. The whole plant can be used as a potherb. Seeds are ground into meal. Western North America. CLARKE, GIBBONS 1979 [Pre], KIRK, MEDSGER; D35G, D82, 147, J25M, L13, N84

*Camassia esculenta* - \**Camassia leichtlinii*

*Camassia leichtlinii* - *Leichtlin's camass*, *Wild hyacinth* {S}. The bulbs are eaten raw, boiled, baked in pits, fried, used in pies, or dried for future use. They were boiled down to a molasses which was used on festival occasions by various Indian tribes. North America. CLARKE, HEDRICK 1919, KINDSCHER; A2, B0{PL}, C95, E15, E33M{PL}, F88M, G47M, H70M{PL}, J39M, 053M, 093, Q24

*Camassia quamash* - *Quamash*, *Blue camass* {S}. Bulbs are eaten raw, boiled, baked, fried, or used in camass pie. The Indian method of steaming and roasting in pits produces brown or blackish bulbs that are rich in sugar content. They were sometimes boiled down to a syrup, or pounded into cakes which could be sun-dried for future use. Western North America. GIBBONS 1979, HARRINGTON, H., HART, MEDSGER; A2, E15, E33{PL}, F44, F80, H37M{PL}, 147, 174{PL}, 053M, Q24, R47

*Camassia scilloides* - \**Camassia leichtlinii*

*Chlorogalum pomeridianum* - *Soap plant*, *Amole*, *Wild potato* {PL}. The bulb is roasted or baked, then peeled and eaten, or peeled first, and then boiled and eaten. Young shoots are slowly baked or steamed to provide nourishing greens. Tender, young leaves may be eaten raw. Southwestern North America. KIRK, MEDSGER; D95, F80{S}, G59M{S}, G60, 198M, I98M{S}, J75, L90J, N84{S}, R49

*Clintonia borealis* - *Corn-lily*, *Cow-tongue* {PL}. Very young, unrolling leaves are extensively used as a potherb by country people in parts of Maine. They also make a palatable salad, with a slightly sweetish, cucumber-like flavor. North America. FERNALD,

GIBBONS 1979; D75M, E33M, F85{S}, I31{S}, 144, L59P, N84{S}

*Eremurus spectabilis* - *Desert candle* {S}. Young leaves and shoots are eaten as a vegetable. They are said to have an agreeable flavor reminiscent of spinach and purslane. Sold in May and June at local markets of Turkey, Crimea, Kurdistan and the Caucasus. In Turkey, the leaves are also added to *herbal cheese*. Eurasia. HEDRICK 1919, OZCELIK, OZTURK; N74, N84, P10

*Erythronium albidum* - *White trout-lily* {PL}. The young leaves are crisp, tender, mild, and tasty eaten raw. Flower stalks, flower buds, and the white, bell-shaped flowers can be eaten raw or cooked. Boiled bulbs are considered to be delicious. North America. GIBBONS 1979; A51M, A61, BO, E33M, M82, N7T, N9M, N9M{S}, N84, R52

*Erythronium americanum* - *Yellow adder's-tongue*, *Trout-lily* {PL}. Bulbs are eaten raw, boiled, or roasted. They have a crisp, chewy, very pleasant taste. Flower stalks, flower buds, and flowers are edible raw or cooked. Leaves may be eaten raw in salads. North America. FERNALD, GIBBONS 1979, HARRINGTON, H.; A51M, BO, B9M, D75M, E33M, G47M{S}, H49, 144, M82, N7T, N9M, N9M{S}, N84, R52

*Erythronium dens-canis* - *Dog's-tooth violet* {PL}. Roots are eaten, often with reindeer's or cow's milk in Mongolia and Siberia. Also the source of a starch used in vermicelli and cakes. Leaves are eaten boiled. Eurasia. HEDRICK 1919, UPHOF; E33, H37M, K33M, N74{S}, N84{S}, 053M{S}, 057, Q24, R52, R83

*Erythronium dens-canis* var. *japonica* - *Erythronium japonicum*

*Erythronium japonicum* - *Katakuri* {S}. The bulbs are the source of a starch, *katakuri-ko*, used in dumplings, confectionery, fritters, to thicken soup, or in dietetic food. Preferred over other starches for use in sauces which must thicken but not jell upon cooling. Most starch currently sold as *katakuri-ko* is actually potato starch, due to the scarcity of this plant. Japan, Korea. SHURTLEFF 1975, TANAKA; N74, N84, 046, 057{PL}, R83{PL}

*Fritillaria camtschatscensis* - *Rice-of-the-earth*, *Kamchatka lily*, *Chocolate lily* {PL}. Bulbs are eaten raw, boiled, roasted, or are dried for winter use. In Kamchatka, the natives make puddings by mixing them with the berries of *Empetrum nigrum*. Also the source of a flour or starch used for bread, or put in soups. Northern temperate region. HEDRICK 1919, HELLER, LOVELOCK, TANAKA, TURNER 1979, UPHOF; F85{S}, F88M{S}, H37M, 174, K49Q{S}, N74{S}, N84, 057, R52, R83

*Fritillaria verticillata* - *Baimo* {PL}. Young plants, petals, and flower buds are parboiled and used in soups, seasoned potherbs, or cooked with soy sauce. The bulbs are eaten fried or candied. China, cultivated. TANAKA; N84{S}, 057, R52

*Hemerocallis dumortieri* - *Narrow dwarf day-lily*, *Hime-kanzo* {PL}. Flower buds may be fried when fresh, or dried and used in soups or chopped with tea. Young shoots are also edible. Eastern Asia. TANAKA; C11J, J5M, J48

*Hemerocallis flava* - *Hemerocallis lilio-asphodelus*

*Hemerocallis fulva* - *Tawny day-lily*, *Shina-kanzo* {PL}. Young shoots are eaten steamed, boiled, or sauteed in oil or butter. Flower buds are used in salads, boiled, pickled, or stir-fried. Flowers are dipped in batter and fried tempura style, or added to omelettes. Dried flowers, called *golden needles*, *gum-soy*, or *gum-jum*, are used in soups and stews. Bulbs are boiled and creamed, baked, eaten raw, mashed, or made into fritters. Eurasia, naturalized in North America. CHANG, W. [Re], GIBBONS 1962, HALPIN [Cul], HARRINGTON, H. [Cu, Pre], TANAKA, VON WELANETZ; A7{DF}, A91, BO, C27G{DE}, D65, E33M, F67, G28, 144, 178, M16, M65M, M92, N7T

- Hemerocallis fulva* 'Kwanso' - *Double tawny day-lily*, *Yabukanzo* {PL}. A starch is extracted from the bulb. Young leaves, shoots, and flowers are used as vegetables. TANAKA; B77, C9, F67, H29M, M82
- Hemerocallis lilio-asphodelus* - *Yellow day-lily*, *Lemon lily*, *Wasure-gusa* {PL}. Flowers and flower buds may be dipped in a batter of egg, milk, flour, and seasoning and browned like fritters in oil or butter. The fleshy roots, boiled in salted water, taste like a blend of sweet corn and salsify. Dried flowers give flavor to soups, stir-fries, and noodle dishes. Young shoots are eaten raw, or cooked like asparagus. China, cultivated. FERNALD, GESSERT; B77, C11J, C11J{S}, D95, F67, F85{S}, H37M, J5M, M16, M98, N84{S}, Q24{S}, R49
- Hemerocallis minor* - *Grassleaf day-lily*, *Hosoba-kisuge* {PL}. Young leaves and shoots are boiled and eaten. The flowers are eaten as a relish with meat, or dried and used in soups and stir-fries. The bulbs may be baked, steamed, roasted, or stir-fried. Japan, China. GESSERT, HEDRICK 1919, TANAKA; B28, C11J, H37M, N84{S}, S69
- Hosta longipes* - *Iwa-giboshi*, *Pibich'u* {PL}. The sourish leaves are cooked and eaten. In Korea they are used for *namul*, a side dish commonly seasoned with soy sauce and toasted sesame oil. Eastern Asia. PEMBERTON, TANAKA; J37M
- Leopoldia comosa* - *Tassel hyacinth*, *Cippolini*, *Volvi*, *Lampascione* {S}. The bulbs are eaten boiled with oil and vinegar, pickled, or added to omelettes. Cooked bulbs, preserved in oil, are used in antipasto or as a relish. Their slightly bitter flavor is appreciated by certain ethnic groups, especially Greeks and Italians, who believe they are diuretic and help stimulate the appetite. Preserved bulbs are common in ethnic markets of larger cities in North America. Fresh bulbs are less frequently available. Those from wild plants are preferred over cultivated types. Mediterranean region, cultivated. BIANCHINI, GRAY, P. [Cul], GRIGSON, S., KREMEZI 1993 [Re], UPHOF; D24, H19M{PR}, H19M{PD}, H37M{PL}, K33M{PL}, L99{PR}, L99{PD}, N84, 053M
- Lilium auratum* - *Goldband lily*, *Yama-yuri*, *Mountain lily* {PL}. The mucilaginous bulb is eaten boiled, sweetened, powdered and added to dumplings, or used in a savory Japanese egg custard known as *chawan-mushi*. It has a mild, sweet, somewhat nutty flavor and a soft, slightly mealy texture. Japan, cultivated. ALTSCHUL, HEDRICK 1919, TANAKA, TSUJI [Re]; A61{S}, J5M, M37M, M98, N84{S}, R83
- Lilium brownii* - *Hong Kong lily*, *Pai-ho*, *Paak-hop*, *Bok-hop* {PL}. The bulbs are eaten baked, or grated, when they may be added to soup to thicken it. Fresh bulbs contain protein, starch, and a small amount of cane sugar which gives them a pleasant taste. The starch is extracted and sold as *pai-ho-fen* or *lily-root flour*. Dried white bulb segments, called *one hundred unities*, are used to flavor soups and red-cooked dishes. According to Altschul, the fruits are edible. Bulbs are sometimes found in San Francisco's Chinatown. China. ALTSCHUL, CHANG, W. [Re], HERKLOTS, PORTERFIELD, UPHOF, TAN [Re], VON WELANETZ; C27G{DF}, E13G{PR}, H25M{PR}, H36{DF}, 174, L21T{DF}, L90GJPD, N40{PR}
- Lilium lancifolium* - *Tiger lily*, *Chia-peh-ho*, *Oni-yuri* {PL}. Bulbs are eaten boiled, pickled, or employed as a source of starch. When properly cooked they are highly esteemed and somewhat resemble the parsnip in flavor. The flowers, both fresh and dried, are eaten in soups, salads, omelettes, and rice dishes. China-Japan, cultivated. BRYAN [Cu, Re], HAWKES [Re], HERKLOTS, LEGGATT [Re], MACNICOL, PORTERFIELD [Nu], TANAKA; A61{S}, D24, E75, F67, J75, K63G, M37M, M82, M92, N51, N84{S}
- Lilium longiflorum* - *White trumpet-lily*, *Regal lily*, *Teppo-yuri* {PL}. The mild, slightly sweet bulbs are peeled, parboiled, and used as a delicacy in *chawan-mushi* and *ganmo* treasure balls. A starch is extracted from the bulb. Stems, leaves, and flowers are also edible. China-Japan, cultivated. SHURTLEFF 1975, TANAKA; A61{S}, H4, M77, N84{S}, Q40, R83
- Lilium maculatum* - *Elegant lily*, *Thunberg lily* {PL}. The flowers and flower buds are eaten as vegetables or dried for later use. They are considered a great delicacy in China and Japan. The Ainu ate the bulbs with rice or millets. Eastern Asia. LOVELOCK, TANAKA, UPHOF; N84
- Lilium superbum* - *American turkscap-lily* {PL}. Fleshy bulbs are cooked and eaten or are used for thickening soup. Eastern North America. HEDRICK 1919, MEDSGER, PETERSON, L.; A70, D47M{S}, E33M, E63M, H49, L31{S}, J40, N7T, N84{S}
- Lilium tigrinum* -+ *Ulium lancifolium*
- Muscari botryoides* - *Italian grape-hyacinth* {PL}. The flowers and flower buds can be pickled in vinegar. Mediterranean region, naturalized in North America. CROWHURST 1973 [Re], MACNICOL; D24, E11, E33, H37M, I99M, K33M, N84{S}, R83
- Muscari comosum* -+ *Leopoldia comosa*
- Muscari neglectum* - *Musk hyacinth*, *Nutmeg hyacinth* {PL}. The flowers, when sprinkled over pureed rhubarb, add a wonderful scented flavor. Bulbs are also eaten. Mediterranean region. HEDRICK 1919, LEGGATT [Re]; E33, H37M, K33M, M37M, N84{S}, 053M{S}, R32
- Muscari racemosum* -+ *Muscari neglectum*
- Nothoscordum fragrans* - *Nothoscordum inodorum*
- Nothoscordum inodorum* - *False garlic* {S}. The plant has been used like garlic to season smoked sausage. South America. HEDRICK 1919; A61{PL}, F85
- Ophiopogon japonicus* - *Mondo grass*, *Mai men dong* {PL}. The roots are occasionally eaten, after the bitterness has been removed. Also used in Chinese tonic wines and formulas, often combined with ginseng and other ginseng-like herbs. Eastern Asia. BENSKEY, FLAWS 1994, TANAKA, TIERRA; A19, B41, C9, C36, E2M{DF}, F51, F53M, G19P{DF}, H36{DF}, I74{S}, L21T{DF}, M7M, M16, M77M, N7D{DF}
- Ornithogalum narbonense* - *Salepotu* {S}. The bulbs are added to ice cream and other dairy foods, in the manner of salep. Mediterranean region. OZTURK; H4{PL}, N84, Q41
- Ornithogalum pyrenaicum* - *Prussian asparagus*, *Bath asparagus*, *French asparagus* {S}. Young, unexpanded inflorescence is cooked and served as an asparagus-like vegetable. Still collected and sold around Bristol and Bath, England. Western Europe. GRIEVE, LOVELOCK, MABEY; C95, N84, 048, 053M, Q24
- Ornithogalum umbellatum* - *Star-of-Bethlehem* {PL}. Flowers have been eaten baked in bread. The bulbs are sometimes eaten, however some authors report that they are poisonous to grazing animals. Eurasia, naturalized in North America. FERNALD, HEDRICK 1919; E33, E33M, F51, H37M, K33M, N84{S}, 053M{S}, Q24{S}, R53M
- Phormium tenax* - *New Zealand flax* {S}. The flowers produce a honey-like nectar that is very wholesome eating. A long hollow grass-stalk or straw can be used to suck the pure nectar from the calyx. New Zealand. COLENSO, NATUSCH; C9M, E61{PL}, H4, H71, N84, 053M, 093, P5, Q32, S43M
- Polygonatum biflorum* - *Small Solomon\*s-seal* {PL}. The young, tender shoots make an excellent vegetable when boiled and served like asparagus. Rhizomes can be sliced crosswise and fried in bacon fat, or boiled in alkaline water, washed and peeled, and then re-boiled. Also the source of a starch. Eastern North America. GIBBONS 1979, HEDRICK 1919, MEDSGER; B28, B77, C9, D75M, I11M, J43{S}, L90J, N7T, N9M, N9M{S}, N84{S}
- Polygonatum multiflorum* *Polygonatum biflorum*

*Polygonatum odoratum* - *Yu zhu* {S}. Young shoots are parboiled and eaten like asparagus or added to soups. Rhizomes are eaten raw or cooked. Also used in Chinese tonic soups and porridges—often combined with lotus seeds, dried longan, sweet and bitter almonds, and *Dioscorea opposita*. Widely used by Buddhist priests. Eurasia. FLAWS 1995, TAN [Re], TANAKA; B28{PL}, G19P{DF}, H36{DF}, N84, 053M, Q24, R52{PL}

*Smilacina racemosa* - *False Solomon's-seal, Treacle berry* {PL}. Young shoots are eaten like asparagus. The juicy fruits are bitter-sweet, suggesting bitter molasses. They can be eaten raw, cooked, or made into jellies and sauces. Caution is recommended, as they can be cathartic. Cooking them removes much of the purgative element. Rootstocks are soaked in lye, parboiled, and eaten like potatoes or pickled. North America. FERNALD, FREITUS [Re], HEDRICK 1919, KIRK; B77, C9, E33M, F88M{S}, G89,144, J39M, M77M, N7T, N9M, N9M{S}, 053M{S}

*Streptopus amplexifolius* - *Clasping-leaved twisted-stalk, Liver berry, Wild cucumber, Watermelon berry* (S). The juicy, cucumber-flavored berries may be eaten raw, cooked in soups and stews, or made into jelly. Reported to be slightly cathartic in some localities only. Roots are sometimes used in salads for their cucumber flavor. Young shoots are eaten raw in salads or cooked like asparagus. They also have a cucumber-like flavor. North America. ANGIER [Re], GIBBONS 1979, HELLER, KIRK, NORTON; A15MJP{D}, E15, 147, K49Q, N84, 053M, Q24

*Streptopus roseus* - *Bose mandarin, Scootberry* {PL}. Young leaves and shoots are added to salads to impart a cucumber flavor. Fruits are also edible, but are cathartic if eaten in large quantities. North America. HENDRICKSON, PETERSON, L.; E15{S}, 144, L59P, N7T, N9M, N9M{S}, N84{S}, 046{S}

*Tulipa x sp.* - *Tulip* {PL}. The flowers, which are said to have the flavor of peas or beans, are eaten or used as an attractive edible garnish. They are often stuffed with chicken or tuna salad, cottage cheese, fruit sorbets, mousses, minced vegetables, and other fillings. Cultivated. BARASH [Re], MORSE [Re], REILLY; D24, J20, K33M

#### CULTIVARS

**Flaming Purissima:** Attractive new hybrid of *Purissima*. Strong stems support delicate blond petals brushed with rose at the edges, with stronger rose flushes on the inner petals. Adapted in Zones 3 to 8. M37M

**Purissima:** (White Emperor) Large, single-flowered hybrid of the *Fosteriana* Group, one of the best types for use in the kitchen. Fragrant white blooms with yellow centers on strong stems. Blooms in mid to late spring. Grows about 18 inches tall. REILLY; H37M

*Uvularia sessilifolia* - *Bellwort, Wild oats* {PL}. Young shoots, while still tender enough to be broken off with the fingernail, are cooked and served like asparagus. Rootstocks are said to be cooked or used in diet drinks. Eastern North America. FERNALD, GIBBONS 1979; C13T, D75M, E33M, E63M, 144, J48, J75, M16

*Veltheimia bracteata* - *Winter red-hot-poker* {PL}. The flowers are eaten like spinach. Southern and Eastern Africa. HEDRICK 1919, KUNKEL; D19M, H37M, 174, N84{S}, R33M{S}, S28M{S}

#### LIMNANTHACEAE

*Limnanthes douglasii* - *Meadow-foam* {S}. The flowers are the source of a light-colored, thin-bodied honey with a distinct flavor reminiscent of vanilla. Western North America. D11M, G53M, M84{PD}, N61, N84, 053M, Q34, R32, S55, TIM

#### LIMNOCHARITACEAE

*Limnorcharis flava* - *Yellow velvetleaf, Berek* {PL}. The young leaves with their succulent petioles, the flower stalks, and the young inflorescences are steamed like endive or spinach, put in soups, or mixed with other vegetables and grated coconut. In Thailand, they

are blanched or grilled and served with chile sauce or *larp*—sour minced meat salad. Tropics. JACQUAT, OCHSE, OOMEN; C74, H30, M15, M73M, N84{S}

#### LINACEAE

*Linum lewisii* - *Prairie flax, Rocky Mountain flax* {S}. The seeds are cooked and eaten, both for their high nutritive value and for the agreeable flavor which they add to other foods. North America. KINDSCHER, MEDSGER; F44, F63M, F80, G47M, G59M, H80,115M, J5M{PL}, J88, L89, M47M, N7M, N11M, N23

*Linum perenne* - *Wild flax, Blue flax* {S}. Roasted seeds are dried, ground, and eaten. They have a high oil content and can also be used to flavor other foods. Due to their cyanide content they should not be eaten raw, but are safe after cooking. North America. KIRK; C67M{PL}, C95, D92M, E5T, F80, J82, K22{PL}, K85{PL}, N71M, 053M

*Linum perenne ssp. lewisii* - *Linum lewisii*

*Linum usitatissimum* - *Flax, Linseed* {S}. Seeds are eaten in breads and cereals, sprouted and added to salads, brewed into an herbal tea, or used to fortify smoothies and nut milks. They can be used as an egg substitute in making muffins, cakes and scones. Also the source of a high omega-3 edible oil, which has a light nutty flavor if consumed when fresh and not rancid. In Ethiopia, the seeds are mixed with water and honey to form a refreshing beverage and are roasted and ground to a paste that is spread on bread. Roasted seeds are also used as a coffee substitute. Unripe fruits are used in chutneys. In Transylvania, the leaves are eaten as a vegetable with sour cream and lemon. Eurasia, cultivated. COLE, C. 1990 [Re], COLE, C. 1993 [Re], ERASMUS, LANG, LOGSDON 1977 [Cu], MARCIN, MESFIN [Re], RITTER, SASS [Re], SCHERY, TANAKA; A25G{DF}, B31{DF}, D87D{PD}, D92M, E56{DF}, F80, F97M{DF}, F97M{PD}, I66{PD}, J73, J82, K22{PL}, L3J, 053M. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Essene:** Edible grain and oil seed type. High in alpha-linolenic acid, an essential dietary fatty acid. Grows well together with lentils. G47

**Foster:** Golden-yellow seeds with a mild flavor. Specifically bred for oil and culinary purposes. Can be used as a sesame seed substitute. The stalks are used for making high-grade paper. Does not perform as well on commercial farms as most brown-seeded types. B49, C95, F73D, L77D, N84

**Omega:** Golden tan seeds with a relatively mild, nutty flavor. High in omega-3 oil (linolenic acid), a fatty acid essential for human metabolism. Whole seeds are used in baked goods, juices, cereals and smoothies. Yields and performance are equal to brown-seeded cultivars. Resistant to flax rust. Developed at North Dakota State University. E5T, F23M{DF}, F37T{PL}, J82, L94M, N24M, N84

#### MAGNOLIACEAE

*Liriodendron tulipifera* - *Tulip tree* {PL}. Eastern North America. The flowers yield a dark brown, heavy bodied honey with a delicious quince-like flavor. In Canada, the root has been added to spruce beer to correct the bitterness and give a lemon flavor. CRANE 1975, HEDRICK 1919; A82, C9M{S}, C11M, C38, D17{PD}, D56MJS, E33M, E87, G66{S}, G72, H49,19M, K28, K38{S}, K63G{S}, M69M, NO, N7T, etc.

*Magnolia denudata* - *Yulan, Haku-mokuren* {S}. The flower-buds, after the calyx has been removed, are pickled and used for flavoring rice. They are also employed for scenting tea. China. CHOW, HEDRICK 1919; E63{PL}, E87{PL}, G66, H4{PL}, I77M{PL}, K38, NO, N1M{PL}, N37M{PL}, N84, 093, P49, R78

*Magnolia grandiflora* - *Bull bay* {S}. The flowers are pickled in some parts of England, and are considered exquisite in flavor. Also said to be used as a spice and condiment. Eastern North America, cultivated. HEDRICK 1919, LEGGATT, TANAKA; A79M,

B32{PL}, C9{PL}, C9M, D95{PL}, E63{PL}, H4{PL}, H49{PL}, K38, N0{PL}, N84, 053M

*Magnolia hypoleuca* - *Hd-no-ki*, *Japanese umbrella magnolia* {S}. Young leaves and flower-buds are boiled and eaten as a vegetable. Older leaves are powdered and sprinkled on food as a flavoring. Whole dried leaves are placed on a charcoal brazier or barbecue, filled with miso, leeks, daikon, and shiitake, and broiled. The delightful aroma of the leaves permeates the miso mixture, called *hoba miso*, which is then served with rice or rice patties. Eastern Asia. SHURTLEFF 1976 [Re], TANAKA; B96{PL}, H4{PL}, 177M{PL}, K63G, N84, R78

*Magnolia kobus* - *Kobushi*, *Hsin-i* {S}. Flowers and flower-buds are boiled and eaten. The leaves are eaten or used as a substitute for tea. Older ones are powdered and sprinkled on food as a flavoring. Japan. TANAKA; D95{PL}, E63{PL}, H4{PL}, K38, K63G, N0{PL}, N71M, N84, 053M, 093, P49, R78

*Magnolia virginiana* - *Sweet bay*, *Laurel magnolia* {PL}. Leaves are used to give flavor to roasts and gravies. Also used to brew an herbal tea. North America. MARCIN, MEDSGER; B9M, B32, C9, D95, E63, E87, H4, K63G{S}, NO, N1M, N37M, N84{S}

*Magnolia yulan* - *Magnolia denudata*

*Michelia alba* - *Yi-lan*, *Ginko-boku* {PL}. Flowers are used for scenting tea. China. TANAKA; H4,183M, N84{S}, P38, P38{S}

*Michelia champaca* - *Champaca* {S}. The aromatic, bitter bark is sometimes used to adulterate cinnamon. Fruits are said to be edible. Tropical Asia. HEDRICK 1919, TANAKA; A79M, D26G, D56M, F85, H4{PL}, 183M{PL}, N84, 053M, 093, P5, P38, Q12, Q18, Q46

*Michelia figo* - *Banana shrub* {PL}. Leaves are used for scenting tea. China. TANAKA; B96, D95, E63, G66{S}, G96, H4,183M, N84, R77

#### MALPIGHIACEAE

*Bunchosia argentea* - *Cirueta del monte*, *Peanut butter fruit* {PL}. The fruits are about the size of a quail egg, reddish-orange in color, not very juicy, but with concentrated sugars much like a dried fig or an American persimmon. They are usually eaten out of hand or made into milk shakes. Venezuela. CLIFT; E8M, E29, N84{S}, P5{S}, P38

*Bunchosia armeniaca* - *Cirueta verde* {S}. Round, light green to orange fruits have cream-colored, very sweet, rather cloying pulp that is eaten out of hand or made into preserves. Northern South America. MARTIN 1987, POPENOE, W. 1924; N84

*Byrsonima crassifolia* - *Nance*, *Golden spoon* {S}. The yellow, cherry-sized fruits are eaten raw, cooked as a dessert, used in jams, sherbets, soups, carbonated beverages, stuffings for meats, or fermented into an alcohol beverage, *chicha*. The *chicha* is often frozen on a stick or distilled into a rum-like liquor called *crema de nance*. In Costa Rica, nances preserved in *guaro* (cane liquor) are very popular. An edible fat is extracted from the fruits with boiling water. Mexico to Paraguay, cultivated. DE CERDAS [Re], DUKE, KENNARD, MARKS [Re], MORTON 1987a, WILLIAMS, L.; D57{PL}, F85, G5M{PD}, N84, P38, S97M

*Byrsonima spicata* - *Maricao* {S}. Fruits are edible. The juicy pulp is too acid for eating out of hand but can be used to make jelly or jam. Tropical America. KENNARD; N84, P38

*Malpighia coccigera* - *Singapore holly* {PL}. The fruits are eaten fresh or used in tarts, jellies, and marmalades West Indies, cultivated. KUNKEL, TANAKA; E48, F85{S}, G20, G96, N7J, N84

*Malpighia glabra* - \**Malpighia puniceifolia*

*Malpighia puniceifolia* - *Acerola*, *Barbados cherry*, *West Indian cherry* {PL}. Bright-red, somewhat acid fruits are eaten raw, stewed, or made into juice, sauces, syrups, jellies, jams, wines, or

purees. The sauce or puree can be used as a topping for cakes, puddings, ice cream, or sliced bananas. Fresh juice is used in gelatin desserts, fruit punches, or sherbets. The vitamin C content of the fruits is very high and they are widely used in the preparation of vitamin tablets and other nutritional supplements. Caribbean region. GARNER [Pro], KENNARD, MORTON 1987a [Cu], MOSCOSO, RICHARDSON, M. [Pre, Re], WALSH [Re]; A26{S}, A79M{S}, D57, E29, F85{S}, 112,177G, N7D{DE}\ N84{S}, P38, Q46{S}

CULTIVARS {GR}

**Fairchild:** Tiny leaves and a compact, weeping growth habit; frilly deep-pink flowers in spring and summer, followed by bright red edible berries. Excellent for bonsai or small hanging baskets. G20

**Florida Sweet:** Fruit large, 1 1/4 inches in diameter; skin thick; flesh very juicy, flavor apple-like, semi-sweet; vitamin C content high (1500 to 2000 mg per 100 mg juice). Tree erect, with open-type growth and outstanding yields. Originated in Homestead, Florida by die Florida Sub-Tropical Experiment Station. BROOKS 1972, MORTON 1987a; U27T{SC}

**Manoa Sweet:** Orange-red fruit of the sweet type. Preferred for eating out erf hand. Tree upright, spreading, very productive. Originated in Honolulu, Hawaii by Henry Y. Nakasone, University of Hawaii. Introduced in 1963. BROOKS 1972; E8M, G20,183M, J22

#### MALVACEAE

*Abelmoschus esculentus* - *Okra*, *Gumbo*, *Lady\*s finger* {PD}. Young fruits are eaten steamed, boiled, pickled, sauteed, deep fried, and braised. Fresh, dried or powdered, they are used to thicken soups, stews, and sauces. Seeds are eaten boiled, pickled, ground into meal for bread, made into *tofu* or *tempeh*, or used as a coffee substitute. Also the source of an edible oil. The leaves, flower buds, flowers, and calyces can be cooked as greens. Leaves are dried, crushed into a powder, and stored for future use. Tropical Asia, cultivated. DIRAR 1993, HALPIN [Cu, Cul], HEDRICK 1919, MARTIN 1982 [Nu], SCHNEIDER 1986 [Pre, Re], SHURTLEFF 1979, WILSON, E.G. [Pre, Re]; 134J. (for cultivars see Okra, page 435)

*Abelmoschus ficulneus* - *Inland roselle* {S}. Stems and roots are roasted. The seeds are often used in sweetmeats, and are employed in Arabia for scenting coffee. Widespread. KUNKEL, TANAIL, WATT; N84

*Abelmoschus manihot* - *Sunset hibiscus* {S}. Young leaves may be eaten raw, steamed, boiled, or added to soups. On account of their sweet taste and mucilaginous quality they are often eaten with papaya leaves in order to remove die bitter taste of the latter. In Tonga, they substitute for taro leaves in wrapping meat for the popular earth oven baked dish called *lu*. Flower buds are also eaten. Eastern Asia, cultivated. MAY, R. [Nu, Re], OCHSE, TANAKA, WHISTLER, W.; F24D, F73D, F80, F85, H29{PL}, 191, K53, L94, N37M{PL}, N84, Q24

*Abelmoschus moschatus* - *Musk mallow*, *Ambrette* {S}. Young leaves and shoots are eaten in soups. The leaves are also used to clarify sugar. Unripe pods, called *musk okra*, are eaten as a cooked vegetable. Seeds are used as a flavoring for breads, liqueurs and stews, to scent coffee, and are chewed to sweeten the breath. Also an ingredient of *ras el turnout*. Source of an essential oil used to flavor baked goods, ice cieam, candy, soft drinks, vermouh and bitters. Roots are edible. Southern Asia, cultivated. BOUQUET, CRIBB, LEUNG, MORTON 1976, TANAKA, WOLFERT 1973; C92, E9IG, F73D, F85, M82{PL}, N7D{DF}, N84, 093, P5, Q12

*Abutilon asiaticum* - \**Abutilon guineense*

*Abutilon guineense* - *Country mallow*, *Indian mallow* {S}. The flowers can be eaten raw. Leaves are eaten like marsh mallow. The edible seeds are rich in protein and fat. Also the source of an edible oil, comparable to soya and cotton seed oil. Old World Tropics. HEDRICK 1919, TANAKA, UPHOF; F85, N84

*Abutilon indicum*-*Abutilon guineense*

*Abutilon megapotamicum* - *Brazilian mallow* {PL}. The flowers are eaten as a vegetable. Brazil. LOVELOCK; G96, H4,I8, M7M, N37M, N84{S}, R77

*Alcea rosea* - *Hollyhock* {S}. Young leaves are used in Egyptian cookery. Flower petals and cooked flower buds are eaten in salads. Petals are also used to brew a refreshing tea. The roots yield a nutritious starch. Cultivated. GESSERT, HEDRICK 1919, LARK-COM 1984, LEGGATT, MACNICOL [Re], MARCIN; C95, E7M, E24, J25M, J82, K22{PL}, K49M, K66, N19M{PL}, 053M, 089

*Alcea rosea* 'Nigra' - *Black hollyhock* {S}. The purplish-black petals are used as a natural coloring for wines and herbal teas. When added to teas it imparts an attractive, deep rose-purple color. GRIEVE, ZEVEN; A61, A61{PL}, C9{PL}, F80, J82, J99D, K22{PL}, K66, L90M, M98{PL}, N84, 053M, Q24, Q34, S55

*Althaea officinalis* - *Marsh mallow* {PL}. Roots are boiled, sliced, and fried with onions. A decoction of the root may be used as a substitute for egg whites in meringue or chiffon pies. Also made into a tea or mixed with sugar, arabic gum, and egg whites to form a confection. Leaves are eaten as a potherb. Flowers are used for tea and were the base of a famous confection, *pate de ginauve*. Europe, cultivated. GIBBONS 1966b [Pre, Re], HEDRICK 1919, MACNICOL [Re], UPHOF; A49D{DF}, C43M, C81M, E5T{S}, E61, F80{S}, G84{DF}, I39{S}, I81T{PR}, I81T {DF}, J76, K85, 053M{S}, R47{S}

## CULTIVARS {S}

**Erfurter:** Improved, extra hardy cultivar. Has a high content of active mucilaginous substances. Tall, ornamental plant with velvety leaves; pink flowers with purple-red anthers. G6

*Althaea rosea*-*Alcea rosea*

*Azanza garckeana* - *Rhodesian tree hibiscus*, *Snot apple* {S}. The sweet, mucilaginous pulp of the fruit is eaten or sucked like chewing gum, usually before it is quite ripe. Dried fruits are used for jellies. Southern Tropical Africa. FOX, F., KUNKEL, TREDGOLD; M17{PL}, N84

*Callirhoe involucrata* - *Purple poppy-mallow* {PL}. The sweet, starchy root, having somewhat the flavor of a sweet potato, is cooked and eaten. The mucilaginous leaves have a pleasant flavor and are good for thickening soup. North America. HEDRICK 1919, KINDSCHER; C13T, F44M, G89M, H70M, H70M{S}, I11{S}, J25M, J25M{S}, J48, L91M{S}, N11M{S}

*Gossypium arboreum* - *Tree cotton* {S}. The seeds contain a large amount of oil, used as a substitute for olive oil. Leaves are also edible. Paleotropics, cultivated. MARTIN 1975, TANAKA; C95, M7M{PL}, N84

*Gossypium barbadense* - *Sea-island cotton* {S}. Seed oil is used in salads, canned foods, or manufactured into margarine. The seeds are also ground into a flour used in bakery products. Leaves are probably edible. Tropical South America, cultivated. KUNKEL, TANAKA; F73D, F85, N84

*Gossypium herbaceum* - *Short-staple American cotton* {S}. Seeds are the source of *cotton seed oil*, used as a salad or cooking oil, in margarine, vegetable shortenings, and canned fish. Often used in Egyptian cuisine. Presscakes from the seeds can be used for making *temphe*. The seeds are eaten roasted or used as a coffee substitute. The leaves are eaten. Cultivated. HEDRICK 1919, MARTIN 1975, ORTIZ 1992, SHURTLEFF 1979, TANAKA, UPHOF; D92M, E7M, F37T{PL}, F68T, F85, F86G, GO{PD}, J82, K53, M7M{PL}, N84, 053M, 093

*Gossypium hirsutum* - *Upland cotton* {S}. The seed oil is used as a salad oil or in the manufacture of margarine. Seeds are used as food after the toxic substance gossypol has been removed, or in the case of glandless cultivars they are consumed without this prepara-

tion. Immature fruits are also edible. North America, cultivated. ALCORN, TANAKA; B38, D87G{PL}, F73D, F85,181M, J73, L55J, M34M, N84, 053M

## CULTIVARS

**Hooi Short-Stapled:** 100 days. Rare, prehistoric cultivar with attractive white flowers. Productive. Selected over the centuries for northeastern Arizona's extreme conditions. Ceremonial and oilseed use. Grows well in low or high desert areas. 116, L3J, N84

**Sacaton Aboriginal:** Grown by the Pimans for food and fiber until 1900. Maintained for many years by the Field Station in Sacaton, Arizona. Traditionally planted "when the mesquite began to leaf out". Related to Hopi Short-Stapled. 116, N84

*Gossypium hirsutum* Nonglanduliferous Group - *Glandless cotton* {S}. Cotton that is free of the pigment glands that contain the toxic substance gossypol. The high protein (40%) kernels have a nutty flavor when roasted and can be eaten out of hand, boiled and used like rice in casseroles or soups, milled into flour for baking, or ground into a spread similar to peanut butter called *cotton nut butter*. A coagulated cotton seed protein curd, called *Tamucurd*, has also been developed and can be used as a cream cheese substitute or a link-sausage type meat substitute product. BLANKENSHIP [Nu], LUSAS [Nu].

## CULTIVARS

**Tamcot GCNH:** A glandless, multi-adversity resistant cultivar developed at the Texas Agricultural Experiment Station. Produces high quality seed for processing into end products. Yields and earliness of Tamcot GCNH are equal to that of glandular cultivars under many conditions. ANONYMOUS 1988; L89G{OR}

*Hibiscus abelmoschus*-*Abelmoschus moschatus*

*Hibiscus acetosella* - *False roselle*, *Asam susur*, *Som kop* {S}. Young leaves and shoots are eaten raw, steamed, or in soups and stews. They may be cooked with other foods to give them a sour, sorrel-like flavor. Tropical Africa. FOX, F., MARTIN 1975, MORTON 1987a, OCHSE; D33, E48{PL}, F85

## CULTIVARS

**Red Shield:** Stalks and leaves are vivid burgundy-red. Deeply lobed leaves have a metallic sheen. Purple-red flowers, 2 1/2 inches in diameter. Vigorous plant, to 5 feet tall, ideal for hedges or accents. May be grown as an annual, blooming ten months from seed. F80, N84

*Hibiscus bifurcatus* - *Vinagreira*, *Flor de paisto* {S}. The slightly acid leaves are cooked and eaten as a vegetable in some parts of Brazil. In Guatemala, the mucilaginous sap is said to have been used to clarify sugar syrup. Tropical America. UPHOF, WILLIAMS, L.; N84

*Hibiscus cannabinus* - *Kenaf*, *Hemp-leaved hibiscus*, *Ambari*, *Ambadi* {S}. Young leaves are used as a potherb, put in soups, or added to a mixture called *kwado*, made of *Parkia* pulp and condiments. The seeds, which yield an edible oil, are roasted and eaten, made into a type of cake, or fermented into *datou*. Flowers are edible. Tropical Asia, cultivated. BURKILL, CAMPBELL-PLATT, FOX, E, TANAKA; A79M, N84, 093, RO

*Hibiscus diversifolius* - *Cape hibiscus* {S}. Young leaf blades are used as a cooked vegetable. The flowers are eaten with groundnuts. Tropical Africa. CRIBB, FOX, F.; E48{PL}, F85, N84, 053M, Q41, P38, R88, S28M

*Hibiscus eetveldianus*-*Hibiscus acetosella**Hibiscus ficulneus*-*Abelmoschus ficulneus*

*Hibiscus heterophyllus* - *Native mella* {PL}. Young leaves, shoots, and flower buds and petals are eaten raw or cooked, having a pleasant acidic flavor. The large, showy flowers are often used as a decorative garnish for cold meats, fish, and salad dishes. Calyces are used in cooking like those of *H. sabdariffa*. Australia. CHERIKOFF, CRIBB, ROBINS [Re]; N79

*Hibiscus manihot* - \**Abelmoschus manihot*

*Hibiscus rosa-sinensis* - *Chinese hibiscus* {PL}. Flowers are eaten raw, steamed, made into a kind of pickle, or used for coloring foods, including preserved fruits, toddy, sliced pineapple, agar-agar jellies, and cooked vegetables. The young leaves are sometimes used as a spinach substitute. Eastern Asia, cultivated. HEDRICK 1919, LEGGATT [Re], TANAKA; E48, G0{DF}, G96, J27, K18M{DF}, N7D{DF}, N84{S}, 093{S}

*Hibiscus sabdariffa* - *Roselle, Jamaica, Florida cranberry, Indian sorrel* {S}. The fleshy calyx is used in salads, jellies, cranberry-like sauces, soups, chutneys, pickles, tarts, puddings, syrups, wine, *nata* (sweet gel), *hulu-mur*, or roasted and made into a coffee substitute. It is made into a refreshing beverage by boiling, sweetening with sugar cane, and flavoring with ginger and rum. Dried calyces are widely used in herbal teas such as *Red Zinger*, to add red color and a tart flavor. The mildly citrus-flavored flowers can be added to ice cream. Young fruits are blanched and eaten with chili sauce. Acid leaves are eaten in salads and curries. Seeds are roasted and ground into flour, then used in oily soups and sauces. In the Sudan, they are fermented into a meat substitute called *furundu*. Tropical Asia, cultivated. BARASH [Re], BENGHIAT [Cu], DIRAR 1993, DUKE, HEDRICK 1919, JACQUAT, LEUNG, MACNICOL [Re], MENNINGER, MORTON 1987a [Cu], ORTIZ 1973 [Re], POLVAY [Re], RICHARDSON, M. [Re], ROBINS [Re], TANAKA; A7{DF}, C4M{PD}, C73P{PD}, C95, C95M{PD}, E14T{DF}, E14T{PD}, G96{PL}, N40{DF}, N84, 032M{PD}, 053M, 093, P5, R47, S55, etc.

*Hibiscus surattensis* - *Mankin-aoi* {S}. Acid leaves are eaten raw in salads, cooked as a potherb, put in curries, or used to flavor meat and fish. The twigs are also used as greens. Tropical Asia and Africa. BROWN, W., BURKILL, TANAKA, UPHOF; F85, P38

*Hibiscus syriacus* - *Rose of Sharon* {S}. Leaves are eaten or used as a tea substitute. Flowers are edible. Eastern Asia, cultivated. HEDRICK 1919, TANAKA; B9M{PL}, C9{PL}, F80, G23{PL}, H4{PL}, H49{PL}, K38, K63G, 053M, 093, P5

*Hibiscus tiliaceus* - *Hau, Mahoe, Cotton tree* {S}. The flowers can be eaten as a potherb or dipped in batter and fried. Leaves are eaten, fermented into a sauce, used as a substrate for the *tempeh* starter culture, or boiled in salted water to form a beverage called *Onge tea*. Tropics, cultivated. BHARGWA, BURKILL, CRIBB, DUKE, MORTON 1977, SHURTLEFF 1979, STEINKRAUS; A28{PL}, A79M, C9M, F85, M7M{PL}, N84, 093, P5, P38, Q32, R33M

*Kosteletzkya virginica* - *Seashore mallow* {S}. Perennial halophyte recommended as a new grain and oilseed crop. The hulled seeds, resembling millet, contain as much as 32 % protein and 22 % oil. Will tolerate 2.0 to 2.5 % salinity during growth. Eastern North America, West Indies. NATIONAL RESEARCH COUNCIL 1990; N84

*Kydia calycina* - *Baranga* {S}. A mucilaginous material obtained from the stems is used for clarifying sugar. Southern Asia. TANAKA, WATT; Q46

*Lavatera trimestris* - *Rose mallow* {S}. Leaves and young plants are eaten raw or cooked. In Japan, they are roasted and then powdered. The flowers are edible, and are said to have a very fine flavor. Mediterranean region, cultivated. TANAKA; D68, D92M, E24, E91G, FI, F24D, F80, F82, G87, H95, 191, J9M, L42, M47M, M49, N11M, N23, etc.

*Malva crispa* - *Malva verticillata*

*Malva neglecta* - *Common mallow, Dwarf mallow* {S}. Tender shoots are eaten as a salad. Leaves are steamed or boiled like spinach, or added to soups. Immature fruits, called *cheeses* or *biscuits*, are eaten raw in salads, pickled, boiled, fried, or added to tomato or chicken soup. A decoction of the roots may be used as an egg white substitute in making meringue pies. Dried leaves are made into a tea. Eurasia, naturalized in North America. GIBBONS 1966b,

HARRINGTON, H., HEDRICK 1919, KIRK, NIETHAMMER, WEAVER 1993; D92M, N71M, N84, 053M

*Malva parviflora* - *Cheese weed* {S}. Leaves are eaten raw or as a potherb. Young fruits are eaten raw in salads, or cooked into many different dishes much like peas. The ground fruits, with a few leaves for color, can be used for a creamed vegetable soup that resembles pea soup. Eurasia, naturalized in North America. CLARKE [Re], TANAKA; L55J, N84

*Malva rotundifolia* - \**Malva neglecta*

*Malva sylvestris* - *Blue mallow, High mallow* {S}. Mucilaginous leaves are eaten as a spinach, put in soups to give them a good, smooth texture, or used as a tea substitute. The flowers are used as a vegetable or garnish. Unripe fruits, called *cheeses*, are eaten as a nibble. Eurasia, naturalized in North America. HEDRICK 1919, LEGGATT [Be], MABEY, MICHAEL, UPHOF; E61{PL}, F15M{PL}, F24D, F80, F85, J82, K2, L90M, N71M, N84, 053M, Q24, R32, R47, S55, etc.

*Malva sylvestris* 'Mauritiana' - *Mauritian mallow, Zeni-aoi* {S}. Leaves can be eaten in salads. The purple flowers yield an excellent natural coloring for drinks and herbal teas. In Japan, the leaves and stems are boiled and eaten. TANAKA; C9{PL}, D11T, D68, D92M, D95{PL}, E7M, E63M{PL}, J82, K63G, M49, M82{PL}, N71M, N84, Q24, Q34, etc.

*Malva verticillata* - *Whorled mallow, Aook* {S}. The young, mucilaginous leaves and shoots are eaten boiled, roasted, or added to soups. One of the earliest domesticated plants of China. About 500 AD, it was an important vegetable with cultivars like purple and white-stemmed, large and small-leaved. Occasionally available fresh in Korean markets. China, naturalized in North America. TANAKA, ZEVEN; Q3

*Malva verticillata* 'Crispa' - *Curled mallow, Castilian mallow* {S}. Leaves are eaten boiled, fried, roasted and dressed with soybean oil, or dried and eaten with soy sauce. They are very elegantly curled and crisped at the edges and are sometimes used for garnishing desserts and other dishes. TANAKA, UPHOF, VILMORIN [Cu]; A2, C95, D92M, E7M, F73D, F85, 139, N7G, N84, 053M

*Modiola caroliniana* - *Mauve, Cheeses* {S}. Cajuns make a refreshing drink by soaking a handful of the leaves in a quart of water for two or more hours. Many drink it every d<sup>o</sup>. Southeastern North America. THEODOROPOULOS; F80, N84

*Sida rhombifolia* - *Teaweed, Broomjue sida* {S}. The leaves are used as a tea substitute in some parts of the Canary Islands and Mexico. As a leafy vegetable they contain about 7.4% protein. Tropics. DUKE, MARTIN 1975, UPHOF; E67T{PL}, F85, N84, P38

*Thespesia populnea* - *Portia tree, Seaside mahoe, Milo* {S}. Young leaves are eaten raw, boiled, or put in soups. Flowers and flower buds may be eaten raw, cooked, or dipped in batter and fried. The fruits are eaten preserved. Tropics. BURKILL, DUKE, KUNKEL, MORTON 1977, TANAKA; A79M, E21D{PL}, F85, N84, 093, P5, P17M, Q12, Q18, Q46

*Urena lobata* - *Pink-flowered burr* {S}. Seeds are used in soups or porridge for the sake of their mucilaginous qualities. The young leaves are eaten as a vegetable or dried and used as an adulterant of patchouli leaves. Tropics. CRIBB, DALZIEL, MARTIN 1975, TANAKA; F85, N84

## MARANTACEAE

*Calathea allouia* - *Leren, Sweet corn-root, Topi-tambo* {PL}. When cooked, the crisp tubers are very agreeable, with a flavor like sweet corn. They are boiled and eaten with a flavored sauce or used as a side-dish. Their unique texture makes them a gourmet item that could compete with popular hors d'oeuvres. Young flower clusters are cooked and eaten. The leaves are used for wrapping tamales and

other foods, to which they impart flavor. A traditional Christmas food in the Dominican Republic. West Indies. CARIAS, DUKE, HAWKES [Cu], HERKLOTS, MARTIN 1976a [Cu, Pre], WILLIAMS, L.; U7P, X79

*Maranta arundinacea* - *Arrowroot*; *West Indian arrowroot* {DF}. Tubers are eaten raw, roasted, grated into a coarse meal, or made into *arrowroot powder*. The highly digestible starch is used in pastries, biscuits, and is preferred to flour in thickening soups, sauces, and gravies. Unlike flour it does not add a mealy taste. When mixed with chocolate and rice flour it forms a digestive food known as *racahout des Arabes*. Tropics, cultivated. BROUK, HERKLOTS, HESS, LEYEL 1987a, ORTIZ 1973 [Re], UPHOF; A7, A41G{PL}, A49D, A52M, B31, F32D, G29, G84, I19M, J11M, K2, K18M, L16, L17, N84, P38{S}, etc.

*Phrynium capitatum* - *Cay Id dong* {S}. In China, the leaves are wrapped around articles of food prior to boiling to impart color and an agreeable flavor. In Vietnam, they are used for wrapping the popular cakes *bank chung* and *bank gid*. They are also added to the liquid in the manufacture of vinegar. Southeast Asia. HEDRICK 1919, TANAKA, VAN DUONG; F85, N84

*Phrynium placentarium*-*Phrynium capitatum*

*Thalia geniculata* - *Swamp lily*, *Auma-mna* {PL}. Young leaves are edible. The rhizomes are baked and eaten or made into a kind of *arrowroot*. South America. TANAKA; A54, C74, F73, F85{S}, G85, H4, K85M

*Thaumatococcus daniellii* - *Sweet prayer-plant*, *Katenge* {S}. The seeds, when chewed, are very sweet and for an hour or so thereafter cause sour foods eaten or drunk to taste very sweet. They are also used for sweetening bread, fruits, palm wine and tea. In Ghana, the leaves are employed as food wrappers. Tropical Africa. ABBIW, BURKILL, DALZIEL, INGLET; F85

#### MARTYNIACEAE

*Ibicella lutea* - *Yellow unicorn-plant* {S}. The plant produces an abundance of fruits which are pickled or made into sweetmeats. Brazil, Argentina. BRETTING, HALPIN, VILMORIN; N84, 042

*Martynia fragrans*-*Proboscidea louisianica* ssp. *fragrans*

*Martynia lutea*-*Ibicella lutea*

*Martynia proboscidea*-*Proboscidea louisianica*

*Proboscidea jussieui*-*Proboscidea louisianica*

*Proboscidea louisianica* -*Devil's claw*, *Unicorn plant* {S}. Young fruits, while still tender enough to be pierced with a fork, can be sliced and added to soups as a thickening. Or they can be parboiled and eaten as a vegetable or pickled in vinegar. The seeds, high in protein, are consumed raw or cooked and also yield an edible oil. North America. GIBBONS 1979, HALPIN [Cu], HARRINGTON, H. [Re], KINDSCHER, KIRK, VILMORIN; C43M, C43M{PL}, E7M, K71, N84, 042, 053M, Q41

*Proboscidea louisianica* ssp. *fragrans* - *Chihuahuan devil's-claw*; *Cuemitos* {S}. The half-ripe seed-pods are cooked and eaten as a vegetable. Soft, immature seeds are eaten raw, roasted, or ground into a paste. The Tarahumara of Mexico boil and eat the fresh leaves as a potherb with beans. Southwestern North America. BRETTING, HEDRICK 1919; F73D, F85,116, N84

*Proboscidea parviflora* - *Una de goto*, *Devil's claw* {S}. Young seeds are eaten fresh for their milky or coconut-like taste. Mature seeds are oily and are being investigated as a source of an edible oil. The young fruits, while still tender, may be cooked and eaten like okra. Southwestern North America. BRETTING; C98M, F85,116, L3J, L55J, N84, R88

#### CULTIVARS

**Paiute:** White-seeded domesticated from the Shivwits Paiute Reservation in Southwest Utah. Adapted to the high semi-desert where it is planted in June. 116, N84

**Pima Bajo:** Originally collected from the fields of Pedro Estrella in Onavas, Sonora, Mexico. Prolific. Attractive lavender-pink flowers. Should be planted during the summer rainy season in low desert areas. 116

**Tohono O'odham White-Seeded:** The seeds can be eaten like sunflower seeds, or pressed for their oil. Beautiful purple flowers followed by 15 inch claws. The black claws are split and woven to produce the black designs on Pima and Papago Indian baskets in Arizona. 116, J25M, K20M, N84

#### MELASTOMACEAE

*Rhexia virginica* - *Meadow beauty*, *Deer grass* {PL}. The leaves have a sweetish and slightly acid flavor and make a pleasant salad, or they can be boiled and served with lemon or vinegar. Tubers can be chopped and added to salads, or eaten as a pleasant nut-like nibble. Eastern North America. CROWHURST 1972, FERNALD, GIBBONS 1979, MEDSGER, PETERSON, L.; A51M, D95, E61, 131 {S}, M77M, N84{S}, Q24{S}

#### MELIACEAE

*Aglaia odorata* - *Chinese perfume-plant*, *Mock lime*, *Juran* {PL}. The fragrant, bright yellow flowers are dried and used for scented tea. Said to be the most exquisitely scented of all flowers, like vanilla but with spicy undertones. Tender leaves are eaten as a vegetable. Southern China. GENDERS 1977, HEDRICK 1919, MORTON 1976; G96, N84

*Azadirachta indica* - *Neem tree* {S}. Leaves and flowers, having a very bitter flavor, are commonly eaten with other foods as a premeal appetite or palate stimulant. A popular Bengali luncheon dish called *shukto* includes neem or other bitter leaves, bitter gourd, eggplants, potatoes, radish, green bananas and spices like turmeric, ginger, and mustard and celery seed pastes. In Laos, the young leaves are eaten with water-buffalo meat salad. Neem honey is popular in parts of Asia where it commands premium prices. Sap from the branches and roots is fermented and drunk. Dried leaves and flowers are sometimes available in Indian markets. Southern Asia. ACHAYA, BANERJI [Re], BURKILL, DEVI [Re], IRVINE 1961, NATIONAL RESEARCH COUNCIL 1992, PONGPANGAN, SING, REEJHSINGHANI 1973 [Re], VON MAYDELL; A79M, E21D{PL}, E29{PL}, F85, I12{DF}, I83M{PL}, K18M{DF}, N84, P5, P17M, P38, Q12, Q46

*Cedrela sinensis*-*Toona sinensis*

*Lansium domesticum* - *Langsat*, *Lanzone* {S}. Fruits are juicy, aromatic, subacid, and are considered one of the best fruits of the Malay region. They are eaten out of hand, candied, preserved in syrup, or made into wine. Southeast Asia. ALMEYDA 1977 [Cu], GARNER [Pro], MORTON 1987a, POPENOE, W. 1920; E8M{PL}, K8{PL}, N84, 019, 093

#### CULTIVARS {GR}

**Conception:** Large, cream-yellow fruit, 1 1/2 inches in diameter; sweet pulp of excellent quality. Tree a heavy producer, bears fruit in clusters like grapes. Named after the Conception Mountains in the Philippines. Introduced into Florida in the 1950's by William F. Whitman. WHITMAN; U27T{SC}

**Duko:** (Doekoe) Fruit round, from 1 to 2 inches in diameter, with a thicker, darker-colored skin more leathery than that of the langsat. Produced in clusters of two to five fruits. Tree robust, symmetrical; crown wide; foliage dense. K8

*Melia azadirachta* - \**Azadirachta indica*

*Owenia acidula* - *Emu apple* {S}. The edible fruits are round, red, hard-fleshed, with deep red pulp that is intensely acid. It could

possibly be used for drinks, juices, or jellies. One recommendation is that the fruit be buried for several days before eating. Australia. CRIBB, SIMMONS 1972 [Cu]; N84, P5, R15M, S92

*Owenia reticulata* - *Desert walnut* {S}. Seed kernels have a pleasant taste, but so much force is needed to extract them from their hard shells, that only fragments are obtained for eating. They are usually roasted and eaten. The tree yields a sap-like liquid called *mamta*, somewhat reminiscent of *golden syrup*, which takes on a salty flavor upon crystallizing. Australia. HERIVEL, MENNINGER; N84, R15M, S92

*Sandoricum indicum*-*Sandoricum koetjape*

*Sandoricum koetjape* - *Santol*, *Kechap* {S}. The whitish, translucent, subacid pulp of the fruit is eaten fresh, with spices, dried, candied, cooked with fish, canned in syrup, used in jams, jellies, and marmalades, or fermented into an alcoholic beverage. Canned fruits and marmalade can be found in some Oriental markets. Tropical Asia, cultivated. MORTON 1987a, POPENOE, W. 1924, TANAKA; F85, M17{PL}, 019, Q93

CULTIVARS {GR}

**Bangkok:** Large, golden to yellow-brown fruit of superior eating quality; weight 9 to 10 ounces; about 4 seeds per fruit. Sold in local markets. Originated in Thailand. Introduced into Florida by William F. Whitman as the Manila cultivar. CORONEL 1983, WHITMAN; E8M, K8

**Chompoo:** A large-fruited type from Asia. Large, ornamental tree with trifoliate leaves that turn red before shedding. E8M

*Toona sinensis* - *Chanchin* {S}. Young leaves are boiled and eaten with rice, cooked with soy sauce, or used as a tea substitute. In Northern China, the young buds are blanched in nurseries and eaten as a vegetable. The fruits are also edible. China. ALTSCHUL, TANAKA; E87{PL}, G66,174{PL}, I77M{PL}, J61M{PL}, K38, K63G, N84, 053M, 093, P5, Q12, Q18, Q46

MELIANTHACEAE

*Melanthus major* - *Honey flower* {S}. The honey-like nectar of the flowers is collected and eaten. South Africa. HEDRICK 1919, SCHERY; E87{PL}, N84, 053M, 093, S28M

*Melanthus minor* - *Dwarf honey-flower* {S}. Flowers are very rich in nectar which is collected and eaten. South Africa. TANAKA; N84, 093, S28M

MENISPERMACEAE

*Dioscoreophyllum cumminsii* - *Serendipity berry*, *Ito-igbin* {S}. The intensely sweet, mucilaginous pulp of the fruit is considered the sweetest known naturally occurring substance (up to 3,000 times sweeter than sucrose). Has been recommended as a non-carbohydrate sugar substitute. Fruits keep for several weeks at room temperature. The small, yam-like tubers are eaten in southern Nigeria. Tropical Africa. HOLLOWAY [Pro], INGLET; F85

*Sphenocentrum jollyanum* - {S}. The roots are acid and bitter when first eaten, but are reported to create a sweet sensation when non-sweet foods are eaten thereafter. Fruits are also eaten, having a mango-like flavor. West Tropical Africa. DALZIEL, INGLET, IRVINE 1961, UPHOF; F85

*Stephania hernandifolia* - *Loi tien*, *La moi*, *Kua tom luet* {S}. A kind of jelly is prepared from the squeezed leaves. Southeast Asia. TANAKA; F85

*Tiliacora triandra* - *Yanang*, *Too yanang*, *Akar kunyit-kunyit* {PD}. The leaves are pureed and employed for dissipating bitterness in the preparation of spicy young bamboo shoots, eaten with rice in Thailand and Laos. Also used in soups and as a food coloring. Available in oriental markets—fresh, fresh-frozen or canned. Indochina, Malaya. JACQUAT, PONGPANGAN, SING [Re]; L90G

*Tinospora cordifolia* - *Heart-leaved moonseed*, *Kanda amrta* {S}. The herb forms one of the ingredients of *Amrit Kalash*, a popular Ayurvedic tonic formula. In Hindu mythology, *amrta* referred to a heavenly 'elixir' which saved the celestial people from senescence and kept them eternally young. Tropical Asia. SIVARAJAN; H14{PD}, N84

MENYANTHACEAE

*Menyanthes trifoliata* - *Buckbean*, *Bogbean* {PL}. The bitter leaves are used commercially in Sweden as a substitute for hops in brewing beer. Dries leaves are brewed into tea. Roots are employed for making *missen bread* (famine bread), or used as a masticatory. Northern temperate region. BREMNESS, FERNALD, HEDRICK 1919, HELLER; C74, H30,190M, K34, M15, M72, M73, M73M, N3M, N84{S}, 053M{S}

*Nymphoides cristata* - *Nymphoides indica*

*Nymphoides indica* - *Water snowflake*, *Yin-lien-hua*, *Gagabuta* {PL}. Young leaves, stems, flower buds, and fruits are eaten boiled or used in curries. Old World Tropics. BURKILL, TANAKA; C74, G85, H4, H30,190M, K34, K85M, M15, M73M, N3M, P38

*Nymphoides peltata* - *Floating heart*, *Asaza* {PL}. The young leaves and flower buds are used as potherbs. Eurasia. TANAKA; A54, G85, H4, H30,190M, K34, M15, M73, N3M

MESEMBRYANTHEMACEAE

*Carpobrotus aequilaterus* - *Pig's face*, *Sea fig* {S}. The leaves are baked and eaten. Juicy fruits are sometimes eaten, and are said to remotely suggest the flavor of strawberry. American and Australian coasts. HEDRICK 1919, UPHOF, WICKSON; N84, S92

*Carpobrotus deliciosus* - *Sweet Hottentot-fig* {S}. Succulent fruits are eaten fresh, as a garnish for fruit salads, dried and eaten like candy, or made into jams and preserves. South Africa. TATE; N84, S28M

*Carpobrotus edulis* - *Hottentot fig* {S}. The mucilaginous, sweetly acid fruits are eaten raw, dried, cooked, pickled, or made into chutneys and preserves. Succulent leaves are used in salads, or as a substitute for the pickled cucumber. South Africa, cultivated. CLARKE, FOX, E, HEDRICK 1919, JOHNS, KIRK, SIMMONS 1972 [Cu]; JO, N84, 053M, 093, R88, S28M

*Mesembryanthemum aequilaterale* - *Carpobrotus aequilaterus*

*Mesembryanthemum crystallinum* - *Ice plant*, *Ficoide glaciale* {S}. The acid, succulent, somewhat salty leaves are eaten raw in salads, boiled as a potherb, made into pickles like cucumbers, or used as a garnish. Macaronesia, Mediterranean region, cultivated. CLARKE [Re], HEDRICK 1919, LARKCOM 1984 [Re], VILMORIN [Cu]; F73D, F85,133,181M, N84, P59M, Q41, R88

*Mesembryanthemum edule* - *Carpobrotus edulis*

*Mesembryanthemum stellatum* - *Trichodiadema stellatum*

*Mestoklema tuberosum* - {PL}. The roots contain a ferment used for brewing beer and a yeast substitute for bread making. South Africa. FOX,E; H52, N84{S}

*Trichodiadema stellatum* - *Kieriemoor* {S}. In some parts of South Africa the plant is used for making beer. Also used as a yeast substitute for making bread. Southern Africa. UPHOF; H52{PL}, 133, N84, R88

MIMOSACEAE

*Acacia aneura* - *Mulga acacia* {S}. The seeds are ground, cooked, and eaten by the Aborigines of Australia. The bark exudes an edible gum. A sweet, red *leip* that forms on the leaves and branches is eaten. A large succulent gall produced by the tree, known as *mulga apple*, is said to quench the thirst. Australia. CHERIKOFF [Re], CRIBB, O'CONNELL, ROBINS [Cul, Re], UPHOF; A67M{PD},

B76M{DF}, C9M, F80, F85, *H7I, JO*, 032M{DF}, 033, 093, P5, P17M, *Q32, Q46, R15M, R33M, S92*, etc.

*Acacia arabica - Acacia nilotica*

*Acacia berlandieri* - *Uvalde honey plant, Huajilla* {S}. The flowers produce large quantities of nectar which is the source of a light-colored, mild-flavored honey of very fine quality. Southwestern North America. PELLETT; C9M, N84

*Acacia catechu* - *Cutch tree* {S}. *Cutch, katha*, or *khar*, a gum obtained by boiling chips of heartwood, is an indispensable ingredient of *paan*, or betel-leaf chew material. Southern Asia. BURKILL, TANAKA, WATT; A79M, F85, G73, N84, 093, Q12, Q18, Q46

*Acacia concinna* - *Soap pod* {S}. The acid leaves are eaten or use as a substitute for tamarinds in chutneys. In Laos, they are used in soups and for marinating fish before drying them. Fruits are roasted and eaten, or used as a sour flavoring for meat dishes. Flowers are used as a vegetable. India. ALTSCHUL, HEDRICK 1919, SING, VON REIS, WATT; F85, N84, Q46

*Acacia coriacea* - *Wiry acacia, Njirrima* {S}. The unripe green seeds are steamed and eaten like garden peas. They are favored over seeds of other species because of their large size. Mature seeds are parched or roasted and milled into meal. Australia. CHERIKOFF, O'CONNELL; N79M, N84, P5, P17M, R15M, R33M, R47, S92

*Acacia dealbata* - *Silver wattle, Mimosa* {S}. The flowers are the source of *mimosa absolute* used commercially for flavoring baked goods, beverages, candy, dairy foods and puddings. Also the source of a gum arabic. Australia. BURDOCK, UPHOF; A79M, C9M, D56M, D95{PL}, F80, *G66, K38, 033, 093, PIG, P5, Q12, Q18, Q32, Q46, R15M*, etc.

*Acacia decurrens van dealbata - Acacia dealbata*

*Acacia farnesiana* - *Cassie, Sweet acacia* {S}. Leaves may be used as a substitute for tamarind in flavoring chutneys. Sprouted seeds are reportedly consumed. The pods are roasted and eaten. Tropical America, cultivated. CRIBB, HEDRICK 1919, TANAKA; B94, E7M, F80, H4{PL}, I83M{PL}, N84, P5, Q18, *Q32, Q46, R15M, R33M*

*Acacia giraffae* - *Camel-thorn* {S}. The trunks are the source of an edible gum, called *Cape gum*. Seeds are used as a substitute for coffee. Southwest Africa. KUNKEL, TANAKA; A79M, D56M, F80, <766, M17{PL}, N40M, 053M

*Acacia greggii* - *Texas mimosa, Catclaw-acacia, Cat's paw* {S}. Pods are eaten raw, boiled, or pounded into a coarse meal and make into porridge or cakes. The dried seeds are said to make a good bean-substitute when added to ham dishes. They have a high protein and oil content. Southwestern North America. CLARKE [Re], KIRK, YANOVSKY; B94, C9M, C98, C98M, *E66M, F63M, G60{PL}, H4{PL}, I98M, I98M{PL}, L3J, L55J, N84, Q46*

*Acacia horrida - \*Acacia karroo*

*Acacia karroo* - *Doomboom* {S}. The stems produce a good, edible gum, called *Cape gum*. Seeds are used as a substitute for coffee. Southern Africa. FCX, F., UPHOF; *JO, N84, 053M, Q15G, Q41, S28M*

*Acacia leucophloea* - *Ruteeja gum, Safed* {S}. Young pods are used as a vegetable. Seeds are ground and mixed with flour. The ground bark is used to flavor a spirit brewed from sugar cane and palm juice. Southern Asia. HEDRICK 1919, TANAKA, WATT; A79M, N84, Q46

*Acacia myrtifolia* - *Myrtle wattle* {S}. The leaves have been used as a substitute for hops in beer making. Australia. CRIBB; *JO, N79M, N84, 093, P5, P17M, Q32, Q41, R15M, R33M, S92*

*Acacia nilotica* - *Egyptian mimosa, Egyptian thorn* {S}. Source of *Babul gum* or *gum arabic*, eaten mixed with sesame seeds, fried in ghee, or used in the preparation of candied flowers, almond paste,

and other sweetmeats. A perfumed water of Morocco is made by inverting a jug over gum arabic fumes, then filling the jug with water. Seeds are roasted and used as a condiment, or mixed with dates and fermented into an alcoholic beverage. Tender young pods and leaves are used as vegetables. The flowers are made into fritters. A type of wine known as *sak* is made from the bark. Tropical Africa to Southwest Asia. CAMPBELL-PLATT, HEDRICK 1919, MACNICOL, MARTIN 1975, TANAKA, UPHOF, WOLFERT 1973 [Cul]; A79M, F85, I81M, K38, N84, 093, P17M, Q12, Q18, Q46

*Acacia pendula* - *Weeping myall* {S}. The tree exudes a large quantity of superior, transparent gum. Australia. TANAKA; C9M, F80, I83M{PL}, N79M, N84, P5, P17M, *Q15G, Q32, R15M, R33M, S92*

*Acacia podalyriaefolia* - *Queensland silver-wattle* {S}. Flowers may be mixed in a light batter and fried to make small fritters which go very well served with sugar and whipped cream. Australia. CRIBB; *A41M, A79M, C9M, H7I, N84, 033, 053M, 093, 094, P5, Q32, Q41, R15M, R33M, S92*, etc.

*Acacia retinodes* - *Wirilda* {S}. The seeds are eaten, and are recommended for the bushfoods industry because of their delicious flavor. Produces good quality flour which can be used to make breads, cakes, pastries and desserts. Australia. CRIBB, ROBINS; N79{PL}, N79{DF}, N79M, N84, 033, P5, P17M, *Q32, R15M, R33M, S92*

*Acacia Senegal* - *Gum acacia, Gombier blanc* {S}. Source of a resin gum called *gum arabic* or *kordofan*, used in sweetmeats, jellies, crystallized flowers, and other confections. Said to be superior in quality to gum arabic from all other species of *Acacia*. Highly soluble in water, giving solutions with up to 50% gum content. Produces up to 90% of the gum arabic in commerce. North Africa to India. ORTIZ 1992, SCHERY, UPHOF, VON MAYDELL; A7{DF}, A79M, D56M, E14T{DF}, G73, I81M, J82, *L34{DF}, N84, P17M, Q12, Q18, Q45M, Q46*

*Acacia seyal* - *Sittim wood, Seyal acacia* {S}. Stems are the source of a gum traded in the Sudan under the name *Talh*. Although of inferior quality it constitutes up to 10% of the annually exported gum arabic. *Talh* gum is also mixed with the pulp of *Balanites aegyptiaca* to form a syrup. Tropical Africa. UPHOF, VON MAYDELL; W59M, Z19

*Acacia sophorae* - *Coast wattle* {S}. The ripening pods are roasted and the seeds inside removed and eaten. Valued by bushfoods enthusiasts for their delicious flavor. Also ground into a rich, nutty flour that is excellent sprinkled on salads and sandwiches. Australia. CHERIKOFF, CRIBB, ROBINS; C95, N79M, N84, P5, P17M, *Q32, R15M, R33M, S92*

*Acacia spectabilis* - *Mudgee wattle* {S}. The flowers are stripped from their stems and eaten. More distinctive in flavor than *A. oshanessii* and *A. podalyriaefolia*. They can be steeped in liqueur brandy and sugar, coated with batter and deep-fried. Australia. CRIBB; F85, N79M, N84, 093, 094, P5, P17M, *Q32, R15M, R33M, S92*

*Acacia suaveolens* - *Sweet-scented wattle* {S}. The immature seeds were steamed and eaten by the Aborigines. Aromatic leaves are used as a tea substitute. Australia. CHERIKOFF, HEDRICK 1919; F80, N79M, N84, 093, P5, P17M, *Q32, R15M, R33M, S92*

*Acacia tortilis* - *Israeli babool, Umbrella thorn* {S}. The tree is said to produce a superior *gum arabic* or *gomme rouge*. Drier Tropical Africa, Arabia. HEDRICK 1919, UPHOF; A79M, <766, I81M, M7M{PL}, N79M, N84, Q12, *Q15G, Q18, Q41, Q46, S28M, S92*

*Acacia victoriae* - *Elegant wattle* {S}. The delicious seeds are eaten or parched and made into a highly nutritious flour. Produces a high-quality, dark, rich flour with overtones of coffee and chicory. It can be added to breads, biscuits, pasta, ice cream, made into syrup, or used as a coffee substitute sometimes called *wattleccino*.

One of the principal species planted in Australia for the bushfoods industry. Australia. O'CONNELL, ROBINS [Cul, Re]; A67M{PQ}, B76M{DF}, D56M, G66, N40M, N79{PL}, N79{DF}, N79{PD}, N79M, O32M{DF}, 094, P5, P17M, Q15G, Q32, Q46, R15M, R33M, R47, S92, etc.

*Adenanthera pavonina* - *Red sandalwood, Coral pea* {S}. Seeds are eaten raw, or roasted and shelled and eaten with rice, tasting like soy beans. The husked kernels contain 25% of their weight of oil, with a protein content of 39%. Young leaves are cooked and used as a vegetable. Tropical Asia, cultivated. MENNINGER, PONG-PANGAN; A79M, E21D{PL}, F85, N40M, N84, P5, P17M, Q12, Q46

*Albizia julibrissin* - *Mimosa* {S}. Young leaves are used as a potherb. Dried ones are used as a tea substitute. Flowers are eaten as a vegetable or crystallized. Cultivated. HEDRICK 1919, KUNKEL, MACNICOL; C9M, C36{PL}, D95{PL}, E87{PL}, F80, 133, I83M{PL}, K38, A169M{PL}, N37M{PL}, N84, O53M, S92

*Albizia odoratissima* - *Fragrant albizia* {S}. Bark is used in the manufacture of a fermented sugar-cane wine, called *basi*, consumed in the Philippines. Tropical Asia. BROWN, W., STEINKRAUS, UPHOF; F85, Q12, Q18, Q46

*Inga dulcis* - *Pithecellobium dulce*

*Inga edulis* - *Ice-cream bean, Inga-cipo, Guavo-bejuco* {PL}. Fruits contain several large seeds surrounded by white, translucent, jelly-like pulp of a sweet, perfumed taste, much liked by Ecuadorians of all classes. Types with a slight cinnamon flavor are known. Tropical America, cultivated. POPENOE, W. 1924, WILLAN; D57, N84{S}, O19{S}, Q49M

*Inga feuillei* - *Pacay, Guama* {S}. The white, sugar-rich, frothy pulp of the fruit is mostly eaten as a snack in Peru and Ecuador, where it has been esteemed since the time of the Incas. Andean South America, cultivated. FRIED, NATIONAL RESEARCH COUNCIL 1989, UPHOF; J29M, L55J, N84, P38

*Inga laurina* - *Guama, Sackysac inga, Cuajiniquil* {S}. The sweet, white, slightly aromatic aril that surrounds the seeds is eaten out of hand. Seeds are edible, having somewhat the flavor of almonds. Tropical America. ALTSCHUL, KENNARD, PEREZ-ARBELAEZ; YOM, Y2

*Inga micheliana* - *Cushin* {S}. The leaves are used in Coban to wrap tamales, to which they impart a purple color. Central America. WILLIAMS, L.; YOM

*Inga paterno* - *Paterno, Ice-cream bean* {S}. Sweet, white pulp around the seeds is eaten raw and is much appreciated. The immature seeds are blanched, salted, and used in salads or desserts. They are occasionally available bottled in vinegar at Latin American markets. Central America. TANAKA, WILLAN, WILLIAMS, L.; F85, P38

*Inga preussii* - *Guajiniquil* {S}. The deep green pods are occasionally consumed as a vegetable, after prolonged boiling. The soft, velvety, succulent aril is eaten raw. Central America. TANAKA; F85

*Inga spectabilis* - *Guavo real, Guavo de Castilla* {S}. Sometimes cultivated for the pods which contain a sweet, white, juicy aril surrounding the black seeds. Central America, cultivated. HEDRICK 1919, PEREZ-ARBELAEZ; N84, P38

*Inga* sp. - *Ice-cream bean* {PL}. The white fruit pulp, or aril, is sweet, juicy, aromatic, somewhat like cotton candy, and is usually eaten out of hand. E21D, H53M, I83M, P38{S}

*Leucaena esculenta* - *Guaje, Guaje rojo* {S}. The immature, green seeds are stripped from the pods and eaten raw, roasted, dried, as a side-dish with salt, in soups, stews and salads, with tortillas, or ground and added to chili sauces. They have a unique, lingering, garlic-like flavor, much appreciated by some. Dried and salted seeds

are known as *guajesquite*. Pods turn red and open easily when the seeds are eady to eat. Young pods, leaves and flower buds are used as greens. *Polochocho*, galls which frequently develop on leaves and pods, are consumed raw, roasted or boiled. Mexico. CASAS 1996, HEDRICK 1919, KRAIG [Re], MARTIN 1975, THEODOROPOULOS; C95

*Leucaena glauca* - *Leucaena latisiliqua*

*Leucaena latisiliqua* - *Ipil-ipil, Jumbie bean, Lead tree, Green guaje* {S}. Young leaves, pods, and flower buds are eaten raw, steamed, in soups, with rice, or mixed with chilis and other spices. Unripe seeds are mixed with grated coconut and fish or meat, wrapped in banana leaves, and cooked. Mature but not dry seeds are eaten raw or cooked, as a delicacy. Dried seeds are used as a coffee substitute, or fermented into *tempeh lamtoro* and *dageh lamtoro*. Source of an edible gum used in sauces. Tropics, cultivated. CRIBB, MORTON 1976, OCHSE, SHURTLEFF 1979, TANAKA, VON MAYDELL; A12G, A41M, A79M, E21D{PL}, F85, I83M{PL}, N84, 093, P5, Q12, Q15G, Q46, R33M, R50

CULTIVARS

**Low-Mimosene:** The leaves of most clones contain mimosene, an unusual amino acid, which can be harmful if eaten in large quantities. Low-mimosene cultivars can be eaten with some caution. NATIONAL RESEARCH COUNCIL 1979; R47

*Leucaena leucocephala* - *Leucaena latisiliqua*

*Leucaena* sp. - *Guaje costeno, Coastal guaje* {S}. Pods are eaten when very young and tender. The immature seeds are stripped from the pods and eaten alone or with tortillas. Has a milder flavor than *L. esculenta* which is preferred by some. Oaxaca, Mexico. THEODOROPOULOS; F80, N84

*Mimosa pudica* - *Sensitive plant* {S}. The delicately fragrant flowers can be crystallized or used for the preparation of distilled flower water. Tropics, cultivated. CROWHURST 1973; C85M, C89M{PL}, C92, E38, G57M, H21, I67M, I81M, L59, M7M{PL}, Q18, Q32

*Neptunia aquatica* - *Neptunia oleracea*

*Neptunia oleracea* - *Water mimosa, Rau nhut, Phak krachet* {PL}. The floating leaves and stems are crisp and juicy and are eaten raw in salads, as a potherb with *nam phrik kapi*, fried, or served with vermicelli and peanut curry. Also used in sour vegetable salads and a hot and sour soup called *kaerg som*. Young seedpods are also cooked and eaten. Grown in tanks in Thailand and Vietnam and sold in markets. Tropics. HEDRICK 1919, JACQUAT, LOHAUNCHIT [Re], NATIONAL RESEARCH COUNCIL 1976, TANAKA, UPHOF; C74, G85, H30, I90M, J7M, K34, M15, N84{S}

*Parkia africana* - *Parkia biglobosa*

*Parkia biglandulosa* - {S}. Seeds are eaten roasted, used as a flavoring for other foods, or made into a sort of coffee. They can also be fermented into a strongly scented, cheese-like substance that is used as a seasoning. Seedlings are also consumed. Malaysia. KUNKEL, MENNINGER; A79M, F85, 093, Q12, Q18, Q46

*Parkia biglobosa* - *Monkey cutlass, Nutta* {S}. Pods have a sweetish farinaceous pulp that can be eaten fresh or made into sweetmeats and drinks. The pulp also yields a flour much used in parts of Africa. The seeds are fermented into an odoriferous paste, called *kinda, soubmara, or netetou*, which is preserved and used as a food or seasoner. A coffee substitute, called *café du Sudan*, is prepared from the parched seeds. West Tropical Africa. DALZIEL, MENNINGER, ODARTY [Re], TANAKA, UPHOF, VON MAYDELL; T66M, Y40

*Parkia filicoidea* - *West African locust bean* {S}. Seeds are boiled and fermented into *dawadawa*, a strong smelling, blackish cheese-like paste used as food and for seasoning certain vegetable stews. Its odor is destroyed by frying or roasting. The dry, soft pulp of the

fruit is eaten as a snack or ground to a yellow meal. Powdered seeds are used for flavoring soup and rice dishes, or mixed with water to form a refreshing gruel. West Tropical Africa. DALZIEL, HESSELTINE, MENNINGER, TANAKA, WILSON, E.G.; F85

*Parkia javanica* - *Kedawung, Kedaung* {S}. Young seeds are roasted and eaten as a side-dish, or added to fish and meat-dishes. Pods are used as a condiment. Indonesia-Philippines. KUNKEL, OCHSE; F85, 093, Q12, Q18, Q46

*Parkia roxburghii* -+ *Parkia javanica*

*Parkia speciosa* - *Nitta tree, Peteh, Sa-taw bean* {S}. Seeds are eaten raw, boiled, roasted or added to soups, having a rather strong garlic-like flavor that lingers for hours. Dried seeds are peeled and fried in oil. The light yellow, pear-shaped receptacles of the inflorescences are cut into slices and eaten raw. Young, tender pods are sliced and eaten with poultry, fish or stir-fried vegetable dishes. The young leaves are consumed raw. Available in Asian markets, usually packed in brine and labelled *peteh asin*. Malaysia, Indonesia. BURKILL, GRIGSON, J. 1986 [Re], JACQUAT, OCHSE, OWEN [Cul], PASSMORE [RE], SHURTLEFF 1979, TANAKA, UPHOF; A45{£D}, F85

*Pithecellobium dulce* - *Manila tamarind, Madras thorn, Guamachil* {S}. The sweet, pulpy aril surrounding the seeds is eaten out of hand, boiled, or made into a refreshing beverage. Seeds are eaten raw or in curries. They also yield an edible oil. Tropical America, cultivated. BURKILL, SINGH, S., TANAKA, UPHOF; A12G, E21D{PL}, F85, G66, N79M, N84, 093, P5, P17M, Q12, Q18, Q32, Q46, R50

#### CULTIYARS

**Blanco:** White-fleshed selection. Not as sweet as the Roja strain. C95

**Roja:** Red-fleshed selection. Much sweeter than the Blanco strain. C95

*Pithecellobium flexicaule* - *Texas ebony* {S}. Seeds are toasted and eaten. Young pods are consumed as a cooked vegetable. The thick seedcoat is used as a substitute for coffee. Southwestern North America. UPHOF; C9M, F80, F85, J86{PL}, L55J, N84

*Pithecellobium lobatum* - *Jengkol, Ngapi-nut* {S}. Seeds are eaten raw, boiled, salted, or cooked with coconut milk or oil. Young leaves, flowers, and fruits are eaten. A delicacy, called *emping*, is made by pounding the cotyledons one by one into the shape of cakes which are then sun dried. The *emping* is fried in coconut oil, sprinkled with salt, and eaten at the rice table. Seeds are the source of a starch. Southeast Asia, cultivated. MENNINGER, OCHSE, TANAKA, UPHOF; F85

*Prosopis chilensis* - *Kiawe, Algarroba, Mesquite* {S}. The pods contain a sweet, pulpy, nutritious material. They are ground whole and made into bread, cakes, mush, and porridge. Also used for a sweet drink, *atole*, or fermented into a beer. Seeds are also edible. South America, naturalized in North America. KUNKEL, YANOVSKY; C9M, D95{PL}, F53M{PL}, F85, H71, H78{PL}, J86{PL}, K46{PL}, K63G

*Prosopis glandulosa* - *Honeypod, Honey mesquite* {PL}. The green pods, often called *mesquite beans*, containing a sweet pulp, are cooked and eaten as a delicacy or made into jelly. Dried pods are ground into a meal and used in breads, cakes, crackers, muffins, pancakes, etc. Also the source of a gum resembling gum arabic. One of the most important honey sources in the Southwest, the honey being light amber, mild in flavor, and of good quality. Mesquite wood is popular for smoking foods, especially in the Southwest. It adds a strong, distinct flavor and bums hotter and faster than other hardwoods but is not recommended for use with light foods such as veal, fish, poultry or vegetables. Also used for smoking the red-ripe Jalapeno peppers known as *Chipotle*. Southwestern North America. BJORKMAN, BYRNE-DODGE, MEDSGER, MESSINA, NIETHAMMER [RE], PELLETT, TANAKA; C21M{PD}, D95, E56{PD}, E65P{PD}, G60, G66{S}, H4, H90G{PD}, J31{PD},

J21H{ED}, J86{PL}, L15M{ED}, L55J{S}, M85{PD}, N84{S}, etc.

*Prosopis juliflora* - *Mesquite, Kiawe* {S}. Pods are eaten raw, roasted, chewed, or ground into a meal. Ground meal is mixed with water to form a refreshing beverage, which is drunk immediately, made into pudding, or allowed to ferment into a sort of beer. Ripe seeds may be soaked overnight and baked with molasses and salt pork, like kidney beans. The sweet flowers are eaten raw, roasted, or made into tea. They also yield a gourmet white honey with a delicious, delicate yet rich flavor and a smooth, creamy texture. Trunks exude a sweet gum used in candy making. The wood is used as a smoke flavoring. Drier Tropical America. CLARKE [Re], GIBBONS 1979, HARRINGTON, H., HEDRICK 1919, NABHAN 1984a, NIETHAMMER [Nu, Re], UPHOF, WILDER; A69, A79M, C9M, D56M, G66, I16{ED}, I98M{PL}, K17J{ED}, K63G, L3J, L3J{£D}, L16{ED}, M57M{ffi}, N84, 093, Q12, Q18, Q46, R50, etc.

*Prosopis pubescens* - *Screw bean, Tornillo* {S}. Pods are eaten raw, roasted, ground into a meal for cakes, made into an alcoholic beverage, or boiled down to an excellent sweet syrup or molasses. Southwestern North America. KIRK, MEDSGER, UPHOF; B94, C9M, C98M, C98, F80,133, N84, 093

*Prosopis spicigera* - *Jhand* {S}. The mealy, sweetish pulp that surrounds the seeds of unripe pods is eaten raw, dried and preserved, or boiled with vegetables, salt, and butter. Mature pods are eaten as a fruit. Young leaves and a gum obtained from young plants are also edible. Southern Asia. BHANDARI, HEDRICK 1919; F85, Q18

*Tetrapleura tetraptera* - *Arida* {S}. The fruit, rich in sugar, is used in soups, sauces, and other foods after it is ground or roasted. The pulp is soaked in palm wine to strengthen or flavor it. Tropical Africa. DALZIEL, TANAKA; F85

#### MOLLUGINACEAE

*Mollugo verticillata* - *Carpet weed, Indian chickweed* {S}. The entire plant can be cooked and eaten as a potherb, or added to vegetable soups during the last minutes of cooking. Tropical America, naturalized in North America. CROWHURST 1972, FERNALD, KIRK; M34M, N84

#### MONIMIACEAE

*Peumus boldus* - *Boldo* {S}. The sweet, aromatic, fruits are eaten. Leaves and bark are used as condiments. Chile. KUNKEL, TANAKA; J82, K63G, N84, 053M

#### MORACEAE

*Artocarpus altilis* - *Breadfruit, Fruta depan* {PL}. The unripe fruit is eaten as a starchy vegetable either boiled, baked, roasted, fried, steamed, mashed, creamed, pureed, or turned into soups, puddings, cakes, and pies. Jamaicans sometimes stuff them with salted codfish and akee. Ripe fruits are somewhat sweet, and are occasionally eaten raw or fermented into a cheese-like food *popoi*, resembling Hawaiian *poi*. Dried fruits are made into flour. The male inflorescence is eaten as a vegetable or used in the preparation of a sweetmeat. Southeast Asia, cultivated. BENGHIAT [Cul, Re], DEGNER,DUKE, GIBBONS 1967, HAWKES [Re], MASSAL, MAY, R. [Nu, Re], MORTON 1987a [Cu], ORTIZ 1973 [Re], POPENOE, W. 1920 [Cu, Pro], ROSENGARTEN, SCHNEIDER 1986 [Pre, Re], WILSON, E.G. [Re]; B60M{PR}, R50

#### CULTIYARS {SC}

**Puero:** Large, spherical or elongated fruit; rind yellow-green with small brown spots, very rough, spiiy, thin; pulp light yellow, smooth, of excellent flavor. Cooks quickly. Highly esteemed Tahitian cultivar, considered one of the very best. MORTON 1987a; U27T

*Artocarpus altilis* 'Seminifera' - *Seeded breadfruit, Breadnut* {S}. The nutritious seeds, called *pan de pepita*, are boiled, fried or roasted and have a flavor somewhat reminiscent of chestnuts. They are commonly peeled before being eaten. Occasionally found in

Spanish markets of Nov York and other large North American cities. Cultivated. BENNETT [Nu], KENNARD, MASSAL, MENNINGER, POPENOE, W. 1920, ROSENGARTEN; F85, I77G{PL}, N84

*Artocarpus anisophyllus* - *Entawak* {S}. The oblong, spiiy, golden-brown fruit is usually eaten out of hand. It has delicious, bright-orange flesh, firmer in texture and less sweet than that of *A. sericarpus*. Sometimes cultivated in its native area. Malaysia, Indonesia. TANKARD; 019

*Artocarpus champeden* - *Artocarpus integer*

*Artocarpus communis* - *Artocarpus altilis*

*Artocarpus elasticus* - *Terap, Tekalong, Mendi* {S}. The sweet, white pulp of the fruit is eaten. Ripe seeds are roasted and eaten. Source of a latex used as a chewing gum base, known as *Gumihan Gum*. Indonesia, Malaysia. MENNINGER, TANAKA, TANKARD, UPHOF; N84, 019

*Artocarpus gomezianus* - *Tapang* {S}. Small fruits with deep crimson flesh that are too sour to be eaten raw but can be used for making jams and jellies. Unripe fruits are pickled and eaten with rice. Malaysia. BURKILL, TANAKA; F85

*Artocarpus heterophyllus* - *Jackfruit* {S}. The ripe, malodorous fruits are eaten raw, fried in curries, preserved in syrup, dried, cooked in milk, or made into an alcoholic beverage. Very young fruits and leaf-shoots are eaten in soups and stews. Seeds are boiled, fried, ground into flour and made into biscuits, or roasted like chestnuts. The young male inflorescences are eaten mixed with chilis, fish paste, sugar, salt, etc. Rind of the fruit yields a lair jelly. Southern Asia, cultivated. DUKE, KIRCHNER [Re], MORTON 1987a [Cu], OCHSE, POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Pre, Re], STEINKRAUS; A7{DF}, E13G{DF}, E21D{PL}, E29{PL}\ F85, H53M{PL}, I77G{PL}, I83M{PL}, J22{PL}, N40{DF}, N84, 019, P38, Q12, Q46, Q93{PL}, etc.

CULTIVARS {GR}

**Black Gold:** Large fruits with a delicious flavor. The edible pulp in one fruit may weigh over 16 pounds. Vigorous tree with deep green leaves. The leaves are of such a deep color, they appear almost black, hence the name. Originated in Australia. JOHNSTON, E.; J22

**Dana Rasimi:** Vigorous growing cultivar from Thailand. Large fruits with thick, pinkish flesh; sweet and crisp; quality very high. Recently introduced into Hawaii where it is becoming popular with home orchardists. JOHNSTON, E.; E8M

**NSill** An excellent cultivar widely grown in Southeast Asia. Medium to large fruit of unsurpassed quality. Deep yellow-orange flesh, crisp, sweet and flavorful. Consistent, heavy bearing tree; precocious. Originated in Malaysia. Introduced into Florida by William F. Whitman and Dr. Robert McNaughton. JOHNSTON, E., WHITMAN; E8M

**Singapore:** (Ceylon) Medium-sized fruit with small, fibrous carpels which are very sweet. Produces a summer crop in June and July and a second crop from October to December. Remarkably precocious, producing fruits in 18 months to 2 1/2 years from transplanting. Introduced into India from Sri Lanka. MORTON 1987a; E8M

*Artocarpus hypargyraeus* - *Kwai-muk* {PL}. When ripe, the pulp of the fruit is orange-red to red, and has an agreeable, subacid to acid flavor. It is eaten out of hand, or may be preserved in syrup or dried. Southern China. MORTON 1987a; E29, N84{S}

*Artocarpus integer* - *Champedak* {S}. The pulp of the ripe fruits is golden-yellow, rather slimy, strongly odoriferous, almost like that of the durian. It is eaten fresh, fried together with flour, or mixed into *dodol*, a kind of pudding. Unripe fruits are used as a cooked vegetable or may be added to soups. The ripe seeds are roasted and eaten as a delicacy. Leaves are also edible. Southeast Asia. MAR-

TIN 1975, MORION 1987a, OCHSE, RIFAI, TINGGAL; F85, M17{PL}, N84, 019

*Artocarpus integrifolia* -> *Artocarpus heterophyllus*

*Artocarpus lakoocha* - *Lakoocha, Monkey jack* {S}. Fruits have a pleasant, sub-acid flavor, and are occasionally eaten raw but are mostly used in curries or chutneys. The male inflorescence, acid and astringent, is pickled. The flat, broad seeds are edible. Bark is chewed as a substitute for betel nut. Southern Asia. HEDRICK 1919, KUNKEL, MACMILLAN, MORTON 1987a, UPHOF; F85, N84, 019, P38, Q12, Q46

*Artocarpus odoratissimus* - *Marang, Tarap* {S}. The ripe fruits are fleshy, aromatic, sweet and juicy, similar to the jackfruit but of much better quality. Usually eaten as a dessert fruit, and considered the finest fruit in Brunei. Unripe fruits are eaten as a boiled vegetable. Seeds are roasted or boiled and eaten. The rind of the fruit is said to be edible. Philippines to Indonesia. KUNKEL, POPENOE, W. 1920, TANAKA, TINGGAL, UPHOF; E8M{PL}, N84, 019, R78M

*Artocarpus polyphema* - *Artocarpus integer*

*Artocarpus sarawakensis* - *Pingan* {S}. The orange-brown fruits are eaten. They are sweet, juicy, fiberless and melting like the marang, but the segments are smaller. The flavor is excellent, comparable to the pedalai. Borneo. TANKARD; 019

*Artocarpus sericarpus* - *Pedalai* {S}. A round, bright orange fruit, similar to the marang inside but has a superior flavor, firmer flesh, slightly larger segments and less aroma. The sweet creamy flesh is easy to eat, with the segments clinging to the central core when the skin is removed. Seeds are considered to be among the tastiest of the *Artocarpus* species. They may be boiled, roasted or fried. Borneo, Philippines. ALTSCHUL, TANKARD; E8M{PL}, 019

*Artocarpus* sp. - *Utu* {S}. The fruit resembles a small, golden-brown jackfruit. Cream-colored flesh is "eat-all", with no waste. The flavor is neither sweet nor sour, but tangy and very pleasing, reminiscent of yogurt. Can be used in the same manner as breadfruit. The large, hard-shelled seeds can be roasted and eaten. Borneo. 019

*Artocarpus* x sp. (*A. heterophyllus* x *A. integer*) - *Champejak* {GR}. Artificial hybrid. Jackfruit x champedak. The hybrid fruits are eaten, having a shape like the jackfruit and with sweet, thick, soft arils that are easily detached from the fruit like those of the champedak. Developed in Malaysia. E8M, P38{SC}, R78M{S}

*Brosimum alicastrum* - *Ramon breadnut, Mayan breadnut* {PL}. Seeds are eaten raw, boiled and mashed like potatoes, made into juice and marmalades, or roasted, when they develop a nutty, cacao-like flavor. Ground seeds are made into a *masa* to mix with com for making *torillas*, added to milk and sugar to make a nutritious and tasty milk shake, mixed with honey, or steeped in boiling water to make a coffee-like beverage. The latex from the trunk is mixed with chicle or drunk like cow's milk. Central America. NATIONAL RESEARCH COUNCIL 1975a, PETERS [Nu], ROSENGARTEN; E29, F85{S}, 112, N84

*Cudrania tricuspidata* - *Chinese che, Cudrang, Silkworm thorn* {PL}. The fruits are similar to a mulberry and turn a dull maroon color when mature. While still firm they are relatively tasteless. When soft ripe, like a persimmon, they are sub-acid to sweet and may be quite delicious. Eastern Asia. DARROW, HENDRICKSON, UPHOF; A79M{S}, G17, H4,149M, 174,183M, N84{S}

CULTIVARS {GR}

**Female:** Large, flavorful fruit; ripens in late summer to fall. Small, thorny tree; bears heavy crops annually. Requires a male tree for fruit production. F43M

**Male:** Small, thorny tree. Used primarily as a pollinator for female trees. Occasionally produces a few small fruits. F43M

**Seedless:** Completely seedless strain discovered in Greenwood, Virginia. Small, rounded, reddish fruits; juicy and sweet when ripe, with a very pleasant fig-like flavor. Ripens in the fall. Bears heavy crops without requiring a pollinator tree. Ornamental as well as edible. D37

*Ficus auriculata* - *Roxburg fig, Timla* {S}. Fruits are eaten raw, in curries, or made into jam. When pollinated with a small stick dipped in olive oil, they are said to grow to four inches in diameter. Tropical Asia. BURKILL, FAIRCHILD 1930, HEDRICK 1919, KUNKEL, PARMAR, C.; H4{PL}, I83M{PL}, N84, 093, Q41

*Ficus awkeotsang* -> *Ficus pumila* var *awkeotsang*

*Ficus capensis* - *Cape fig, Brown cluster-fig* {S}. The fruits are sweet and are usually eaten out of hand or made into jam, pudding and preserves. Young aerial shoots are eaten as a vegetable. Bark is chewed with cola nuts for the alleviation of thirst. Tropical Africa. DALZIEL, FOX, F., KUNKEL, TREDGOLD; M17{PL}, N84, 093, Q41, S28M

*Ficus carica* - *Fig* {PL}. Fruits are eaten raw, dried, preserved, brewed into wine, dried and ground into a coffee substitute, candied, processed into jams, paste, syrup, used in cookies, bread, brownies, pastries, pies, etc. Often baked after having been stuffed with walnuts or almonds and small pieces of citron. Small, hard, unripe figs are sometimes used for making preserves. In ancient Greece, the pickled leaves served as wrappers for dishes resembling modern *dolmas*. A famous anise-flavored brandy of Morocco called *mahya*, brewed by the Jews of the High Atlas Mountains, is made from figs. In Turkey, the leaves are used for grilling fish and fowl such as sea bass and quail, the leaves imparting a subtle and pleasant flavor and aroma to the foods. The famous sausages of Majorca, such as *sobrasada* and *butifarra*, derive part of their flavor from the fresh and dried figs fed to the Majorcan black pig, a strain of Iberian pig. The latex is used to coagulate milk for making cheese and junket. Cultivated. ALGAR [Re], BIANCHINI, BRYAN [Cu, Re], CARTER, DALBV, KREMEZI 1994 [Re], MORTON 1987a, UPHOF, WOLFERT 1973 [Cui]; E9{E0}, G66{S}, G96, 157, N84{S}. (for cultivars see Fig, page 366)

*Ficus glabrata* - *Ficus insipida*

*Ficus glomerata* - *Ficus racemosa*

*Ficus hirta* - *Dieng-soh-rompian, Boowah kontol monjet* {S}. Very young top-shoots are eaten raw, as a side-dish with rice. The ripe, yellow or red fruits have a sweet taste and are relished by the natives, especially children. Tropical Asia. OCHSE; F85

*Ficus infectoria* - \* *Ficus lacor*

*Ficus insipida* - *Caxinguba, Amate* {S}. The tree yields a latex, called *fiucin* or *leche de oje*, used commercially in meat tenderizers, edible collagen films, sausage casings, in chillproofing beer, and in curdling milk for making cheese. Despite the name, in some areas the large fruits are reported as being very good to eat. Tropical America. LEUNG, WILLIAMS, L.; F85

*Ficus lacor* - *Kachimal, Ako, Fhak hueat* {S}. Young shoots and sour leaves are eaten raw or cooked. In southern Thailand, they are added to curries, especially coconut milk and salted fish curry. The reddish-pink fruits are eaten raw or mixed with fresh raw vegetables. Tropical Asia. HEDRICK 1919, JACQUAT, LEUNG, PONG-PANGAN; Q18

*Ficus palmata* - *Fagwara* {PL}. The sweet, juicy, succulent fruits are eaten. They are said to be on a par with the common cultivated fig in flavor, however they are rather small. Suitable for drinks (squash), jam and jelly or for drying. Unripe figs and young leafy shoots are boiled, fried and used as a green vegetable in the spring. Sold at local markets in the Himalayas. In Saudi Arabia, the latex is added to milk when making yogurt. North Africa to India. ALT-SCHUL, GHAZANFAR, HEDRICK 1919, PARMAR, C.; I83M, Q46{S}

*Ficus pseudopalma* - *Philippine fig* {S}. The young leaves are delicious eaten raw in salads or cooked as a potherb. Fruits are also edible. Philippines. KUNKEL, MARTIN 1975; T73M

*Ficus pumila* - *Creeping fig, Mu-lien, Hsueh-li, Mu-man-tu* {PL}. In China, the fruit is picked ripe and placed in a porous bag to squeeze the juice out. This juice is then cooked and cooled into a gelatinous jelly, called *pai-liang-fen*, which is cubed, mixed with water, syrup and flavorings and consumed as a refreshing beverage. Available canned as *grass jelly* or *ai-yu jelly* in ethnic stores. Eastern Asia. HSU, LEE, G., ROUTHIER 1989 [Cul], TANAKA, VON WELANETZ; A45{PD}, B41, F53M, G19M{PD}, G96, H4, I8, K22, L21T{DF}, L90G{PD}, M7M, M82, N7J, N84{S}

*Ficus pumila* var. *awkeotsang* - *Chinese jello-vine, Ai-yu-tzu* {S}. The fruit is sometimes eaten out of hand, but usually it is processed into an edible jelly or drink, in much the same manner as the species. Eastern Asia. TANAKA; F85

*Ficus racemosa* - *Cluster fig, Gular* {S}. Ripe fruits are eaten fresh, dried and ground into flour and taken with sugar and milk, or used for preparing a cold jelly. The powder from roasted fruits forms a valuable breakfast food. Unripe fruits are pickled or used in soups. Young shoots are eaten raw or cooked. Tropical Asia to Australia. CRIBB, HEDRICK 1919, OCHSE, TANAKA; F85, N84, P5, Q12, Q18, Q41, Q46

*Ficus roxburghii* - *Ficus auriculata*

*Ficus sur* - *Ficus capensis*

*Ficus sycomorus* - *Sycamore fig, Pharaoh's fig* {S}. The sweet, aromatic fruits have been eaten since the days of the ancient Egyptians. In parts of Africa they are eaten with millet or made into an alcoholic beverage. The leaves are eaten in soups or peanut dishes. Gashing of the immature fruits is an ancient technique that hastens their ripening. The latex is used as a vegetable rennet. Northern Africa to Southwest Asia. GALIL, HEDRICK 1919, MOLDENKE, UPHOF, VONMAYDELL; M17{PL}, N84, S28M

*Morus alba* - *White mulberry* {S}. Fruits are eaten raw, in pies, tarts, jellies, drinks, or brewed into a wine. In Turkey, they are made into a syrup known as *dut pekmezi*. *Morat* is an ancient mead-like drink made from mulberry juice and honey. Dried fruits are a delicious snack, or they can be used like dried figs or raisins in puddings, cookies, and muffins. Young shoots are sometimes eaten with rice and condiments, put in stews, or used as a substitute for tea. Mulberries are combined with elderflowers and other herbs to produce a delicious *kombucha* drink having champagne-like qualities. Mulberry wood is used for aging *balsamic vinegar*. Also the source of an edible manna. China, cultivated. DONKIN, GAYRE, GIBBONS 1962 [Re], KASPER, OZTURK, SIMMONS 1972 [Cu], TANAKA, TIETZ; C9M, E47M{DF}, F88{DF}, G47B{DF}\G47B{PD}, G73, H4{PL}, 147, K38, K46{PL}, K63G, NO{PL}, N84, 053M, P38{PL}, Q12, Q46. (for cultivars see Mulberry, page 428)

*Morus alba* var. *indica* - *Indian mulberry, Ainu mulberry* {S}. In Bombay, the dark red fruits are sold in the bazaars for making compotes and tarts. The leaves are also edible. Tropical Asia. HEDRICK 1919, MACMILLAN, TANAKA; P38

*Morus australis* - *Korean mulberry* {S}. The sweet, juicy, dark red fruit is eaten raw or brewed into a wine. Eastern Asia. HENDRICKSON, TANAKA; F85, D95{PL}, N84

*Morus indica* - *Morus alba* var *indica*

*Morus laevigata* - *Himalayan mulberry, Tut* {S}. The long, cylindrical, sweetish fruit is eaten raw and is also excellent when stewed with sugar. Southern Asia. HEDRICK 1919, TANAKA; P38, Q46

*Morus nigra* - *Black mulberry, Persian mulberry* {S}. The fruits are eaten raw, dried, made into jams, compotes, puddings, pies, syrups, sauces, or mixed with honey or mead to form refreshing

drinks. Dried fruits can be ground into a flour. Asia Minor, cultivated. BRYAN [Cu, Re], HACKETT, JOHNS [Cul]; D77M{PL}, G73, H4{PL}, I49M{PL}, K38, K63G, L50M{PD}, N84, 053M, P38, P49. (for cultivars see Mulberry, page 428)

*Morus rubra* - *Red mulberry* {S}. Ripe fruits are eaten fresh with cream and sugar, or made into pies, jams, jellies, marmalades, juices, muffins, fruit-cakes, etc. Dried fruits are ground and mixed with almond and other nuts to form a delicious confection. Young shoots and unfolding leaves are eaten raw or boiled and served with butter and salt. North America. ANGIER, FERNALD, GIBBONS 1962 [Re], MEDSGER, TURNER 1979 [Re]; D95{PL}, G66, G73, H4{PL}, H14M{PL}, I49M{PD}, K38, K63G, N84. (for cultivars see Mulberry, page 428)

*Streblus asper* - *Dieng-soh-khydang, Khorua* {S}. The yellow, aromatic fruit is eaten. Juice from the stem is used to curdle milk. Tropical Asia. MACMILLAN, TANAKA; Q46

*Treculia africana* - *African breadfruit* {S}. Seeds are boiled or roasted, peeled, and eaten as a dessert nut, or fried in oil. They are also ground to a meal, cooked, and used in soups or nut milks. An edible oil is sometimes extracted from them. Tropical Africa. DALZIEL, DANFORTH, MENNINGER, TANAKA; N84

#### MORINGACEAE

*Moringa oleifera* - *Horseradish tree, Drumstick, Malunggay* {S}. The long, bean-like pods are used in soups and curries or made into pickles. Young, mustard-flavored leaves, twigs, and flowers are eaten raw in salads, cooked as potherbs, or put in soups and curries. Immature seeds are eaten like peas. Mature seeds, when roasted or fried, are said to resemble peanuts. They also yield *ben oil*, used in salads and cooking. The pungent root is used as a substitute for horseradish. Young, tender seedlings make an excellent cooked green vegetable. A reddish gum produced by the bark, called *ben gum*, is used as a seasoning. Leaves contain 7-10% protein. Tropical Asia, cultivated. DUKE, GELLE [Re], GRIGSON, J. 1986 [Re], HAWKES [Re], HEDRICK 1919, MARTIN 1975, MENNINGER, MORTON 1976, OCHSE, REEJHSINGHANI 1975 [Re], VON MAYDELL; A26, A79M, C9M, C95, D33, D57{PL}, F68T, F85, I12{PL}, 174{PL}, N84, 093, P5, Q12, Q46, etc.

##### CULTIVARS

**Hybrid:** An improved hybrid type developed in India. R50

*Moringa ovalifolia* - *Phantom tree* {S}. Highly prized in Africa for its horseradish-like root, and its edible leaves and fruits. Southern Africa. FOX, R; 133, 147M{PL}, N84, S28M

*Moringa pterygosperma* - *Moringa oleifera*

*Moringa stenopetala* - *African horseradish tree* {S}. The young leaves are eaten as a vegetable. They are somewhat larger than those of *M. oleifera*, and reportedly milder in flavor when eaten raw. Eastern Africa. KUNKEL; H29

#### MUSACEAE

*Ensete edule* - *Ensete ventricosum*

*Ensete ventricosum* - *Abyssinian banana, Inset* {S}. The chopped and grated pulp of the corms and leaf sheaths is fermented and used as a flour in making *kocho* bread. One hundred percent *kocho* flour or a mixture of *kocho* and other cereal flours may be used. *Kocho* is usually eaten with cheese, kale, ground meat, chickpea or bean sauce, and seasoned with spiced butter or it can be used to make *injera* or *talla*. The endosperm of the seeds is consumed as food. Tropical Africa. MESFIN [Re], SIMMONDS 1966, STEINKRAUS, UPHOF; A41G{PL}, A79M, C9M, F53M{PL}, H71, 128{PL}, 157{PL}, I77G{PL}, I83M{PL}, L91M, N84, 053M, 093

*Musa acuminata* - *Pisang jacki, Kole* {PL}. The seedy fruits are occasionally eaten. Male inflorescences are roasted and eaten in a spicy dish known as *getjok*. Young shoots are cut finely and added to sauces. The leaves are occasionally used for wrapping food. One of

the parents of the common edible banana, *M. x paradisiaca*. It is considered more important in this respect than *M. balbisiana*, with most of the commercial clones derived from this species. Tropical Asia. BROUK, OCHSE, SIMMONDS 1966, UPHOF; E55M, I77G, N84{S}

*Musa balbisiana* - *Pisang batu, Pisang klunuk* {PL}. The fruits are occasionally eaten fresh, but are not popular due to their seediness. Young fruits are used like green papaya in salads and pickles. Male flower clusters are an ingredient of *tom kaa kai*, a chicken curry dish made with galangal and coconut milk. The inner part of the stem is also eaten in curries. Leaves are used as wrapping for rice dishes or desserts. Juice from the ripe fruits is mixed with sugar and fermented into vinegar. One of the parent species of the common edible banana, *M. x paradisiaca*. Tropical Asia. JACQUAT, OCHSE, OWEN [Re], SIMMONDS 1966, UPHOF; E55M, I77G, N84{S}

*Musa ensete* - *Ensete ventricosum*

*Musa x paradisiaca* - *Banana, Plantain* {S}. Unripe fruits are steamed, boiled, dried, baked, fried, made into meal, flour, *juju*, *dumboy*, chips, or parched and used as a coffee substitute. Ripe fruits are eaten out of hand, or used in ice cream, bread, muffins, cream pies, jams, sweetmeats, etc. Mashed bananas can be used as a fat substitute in baking. The leaves are widely used for wrapping food, especially glutinous rice dishes. They impart a distinctive flavor and a greenish color. Ashes of the plant may be used as a salt substitute. Male flower-heads are eaten in curries or cooked with coconut milk. Individual flowers are prepared separately in curries or with palm oil. In Jamaica, the peel of the fruit is added to *mannish water*, a type of goat's head stew. The inner part of the stem is eaten boiled or made into flour and starch. In Burma, where they call it *ngapyawoo*, it's an essential ingredient of *mohingar*—the national soup of fish and noodles. The pulp is fermented into vinegar, beer and wine. Blanched shoots which sprout from the base of the plant are roasted and eaten. The nectar of the flowers is consumed. Cultivated. DUKE, MORTON 1987a, OCHSE, ORTIZ 1973 [Re], PASSMORE, REYNOLDS, R, PASSMORE, ROUTHIER 1989 [Re], SIMMONDS 1966, STEINKRAUS, TAIK [Re], UPHOF, WALSH [Cul, Re], WOODRUFF [Re]; C56G{PD}, D4{£D}, E13G{DF}, G47F{PR}, G92{DF}, I28{PL}, L62M{PL}, N40{DF}, 053M, 093, Q41. (for cultivars see Banana, page 294)

*Musa sapientum* - *Musa x paradisiaca*

*Musa troglodytarum* - *Fe'i banana*. Origin unknown, possibly a natural hybrid. Very ripe fruits are eaten raw, or more commonly they are baked or boiled. The yellow flesh discolors the urine of those who eat it. In New Caledonia, bunches are buried in mud to hasten the ripening process. Polynesia, cultivated. MASSAL, SIMMONDS 1966; (for sources see Banana, page 294)

*Musa ventricosa* - *Ensete ventricosum*

#### MYRICACEAE

*Comptonia asplenifolia* - *Comptonia peregrina*

*Comptonia peregrina* - *Sweet fern* {PL}. The aromatic leaves, both fresh and dried, are made into a palatable tea. Menomini Indians of Wisconsin used them as a seasoning. Young fruits are eaten as a pleasant nibble. Eastern North America. ANGIER [Pre], FERNALD, GIBBONS 1979, MEDSGER, UPHOF; A74, B9M, E33M, E63, H8, I49M, J39M, M77M, M92, N37M

*Myrica cerifera* - *Wax-myrtle, Southern bayberry* {PL}. Aromatic leaves and berries make an attractive and agreeable substitute for bay leaves in flavoring soups, stews, roasted meats, and seafood. The leaves are also brewed into a robust tea. Fruits are eaten fresh, preserved, or fermented into wine. North America. FERNALD, GIBBONS 1979, TANAKA; B32, D92M{S}, F73, G66{S}, H4, H14M, I47{S}, K63G{S}, K85, N37M, N84{S}

*Myrica gale* - *Sweet gale, Bog myrtle* {DF}. Aromatic fruits and leaves are used to flavor broth, soups, stews, and meats. Dried leaves make a delicate and palatable tea. The herb is sometimes put

in beer and ale to add flavor and increase foaming In Yorkshire, England this type of brew is known as *Gale beer*. Northern temperate region. FERNALD, HEDRICK 1919, MABEY [Re], MICHAEL [Re], MORTON 1976, UPHOF; A20M, B55M, D95{PL}, E68, F65, K63G{S}, L36M, N84{S}, R53M{S}, S55{S}

*Myrica heterophylla* - *Evergreen bayberry* {PL}. The leaves and nutlets are used as substitutes for bay leaves in flavoring soups and other foods. North America. FERNALD; N37M

*Myrica nagi*-*Myrica rubra*

*Myrica pensylvanica* - *Northern bayberry* {PL}. Dried leaves are used to season crab-boil, stock, broth, soup, stew, or chowder. The leaves, which impart a delicate aroma and subtle flavor are removed before serving. Eastern North America. GIBBONS 1964; A50, B9M, C9, C47, D92M{S}, D95, H4, H49, 14, K22, K38{S}, K63G{S}, K85, M77, N84{S}, 053M{S}, etc.

*Myrica rubra* - *Chinese bayberry*, *Yang-mei*, *Kaiphal* {S}. The agreeable, subacid, deep red fruits are eaten fresh, cooked, preserved, or made into a refreshing drink or a kind of liqueur. Seed kernels are also said to be edible. Recommended for improvement by selection and breeding. Eastern Asia. HEDRICK 1919, PARMAR, C., TANAKA, UPHOF; D92M, G66, I74{PL}, K38, K63G, M7M, N84, P5, R47

MYRISTICACEAE

*Myristica argentea* - *Papua nutmeg*, *Macassar nutmeg*, *Gewz* {DF}. Both the oval, reddish-brown seed kernels and the orange aril or mace are used as spices. Slightly less aromatic and with a less refined flavor than true nutmeg and mace. Often used in Ethiopian cooking, especially for *zigni*-spiced ground beef dishes. Principal source of the wild nutmegs which enter into commerce. New Guinea. GRIEVE, MESFIN [Re], MORTON 1976, UPHOF; H51

*Myristica fragrans* - *Nutmeg* {S}. Seeds are the source of nutmeg, used to flavor custards, eggnog, sauces, cakes, puddings and pies. *Mace*, the dried aril, seasons soups, sauces, curries, fruit salads, cakes, pickles and baked goods. Powdered mace, sprinkled on cooked cabbage, masks the sulfide odor. Both nutmeg and mace are indispensable ingredients of *ras el hanout*. The flesh of the fruit is cut into slices and eaten as a delicacy with *sambal* (hot-pepper sauce), pickled, candied, preserved, or made into nutmeg-flavored jams, jellies and syrups. Indonesia, cultivated. CUSUMANO [Cul, Re], KENNARD, MENNINGER, MORTON 1976, OCHSE, ROOT 1980\ UPHOF, WOLFERT 1973; A7{PD}, C4M{PD}, F85, 18M{DF}, J22{PL}, L17{DF}, L55G{PD}

*Virola surinamensis* - *Ucuaba-branca* {S}. The seeds are the source of an edible fat. Tropical America. ALTSCHUL; G73

MYRSINACEAE

*Embelia ribes* - *Memory Improver*, *Butterfly pea*, *Areuj kathembang* {S}. Young leaves and branchlets are eaten raw as a side-dish with rice, usually mixed with other greens. The sour leaves are used as a substitute for tamarind in soups and vegetable dishes. Ripe fruits have a sour-sweet flavor and are eaten as a delicacy. Both the leaves and fruits are used to prepare a sweet, refreshing drink. Dried fruits are used as an adulterant of black pepper. Young stems are chewed as a delicacy. Also a major ingredient of *Amrit Kalash*. India to Indonesia. OCHSE, UPHOF; F85, H14{PD}, N84

*Myrsine africana* - *African boxwood* {S}. Fruits are eaten or used as an adulterant of black pepper. Tropical Africa. KUNKEL, TANAKA; B41{PL}, E53M, G66, N37M{PL}, N84, 093, Q46, S28M

MYRTACEAE

*Acca sellowiana* - \**Feijoa sellowiana*

*Acmena smithii* - \**Eugenia smithii*

*Austromyrtus dulcis* - *Midyim*, *Midgen berry* {S}. Small, pale lilac or almost white fruits that can be eaten out of hand or added to fruit salads and dessert garnishes. They have very soft skin, small seeds, and soft pulp with a sweet, mildly aromatic, somewhat ginger-like flavor. Considered one of the best native fruits of Australia. Australia. CHERKOFF, CRIBB, ROBINS; F85, N79{PL}, N84, P38, R15M

*Britoa acida* - \**Psidium acutangulum*

*Britoa sellowiana* - *Psidium acutangulum*

*Campomanesia lineatifolia* - *Guabiraba* {S}. The aromatic yellow fruits are eaten, and are considered one of the best of the genus. They have soft, fleshy pulp with a very agreeable subacid flavor. Very good eaten out of hand or used for juice, ice cream, jellies and marmalade. Recommended for increased cultivation. South America, cultivated. DUKE, WILLAN, ZEVEN; N84, P38, R78M

*Cleistocalyx operculatus* - *Rai jaman* {S}. In Tonkin, the leaves are used for making tea. They are often mixed with the leaves of *Sageretia theezans*. The fruits, resembling small black cherries, are also edible. Tropical Asia. BURKILL, HEDRICK 1919, UPHOF; N84

*Eugenia aggregata* - *Cherry of the Rio Grande* {PL}. When ripe, the fruits are reddish-purple, juicy, firm in texture, and pleasantly subacid. They are very good eaten out of hand or can be used for jams and jellies. In addition to producing desirable fruit, the tree is quite ornamental and deserves to be more widely grown. Brazil. DRYSDALE, MARTIN 1987, MAXWELL, RODALE; A41G, D57, G2M, H53M, 112, 177G, I83M, J29M{S}, N84{S}, P38{S}, S97M

*Eugenia apiculata* - *Myrceugenella apiculata*

*Eugenia aromatica* - *Syzygium aromaticum*

*Eugenia brasiliensis* - *Eugenia dombeyi*

*Eugenia cabelludo* - *Cabelludo* {S}. The edible fruits resemble large gooseberries in appearance. When fully ripe they are yellow, nearly one inch in diameter, downy externally, and with flesh that is juicy, subacid, and pleasant in flavor. Also has value as an ornamental plant. Brazil. POPENOE, W. 1920, TANAKA; X88M

*Eugenia carissoides* - *Eugenia reinwardtiana*

*Eugenia cumini* - *Syzygium cumini*

*Eugenia dombeyi* - *Grumichama*, *Brazil cherry* {PL}. Fruits are deep crimson, the size of a cherry, with soft, melting flesh of a mild subacid flavor reminiscent of a Bigg cherry. They are excellent to eat out of hand or may be used in jams, jellies and pies. Brazil, cultivated. GARNER [Pro], KENNARD, MORTON 1987a, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], STURROCK; A79M{S}, D57, E29, F85{S}, G2M, G73{S}, 177G, I83M, K8{S}, N84{S}, 019{S}, P38{S}, Q93, S97M

*Eugenia jambos* - \**Syzygium jambos*

*Eugenia klotzschiana* - *Per a do campo* {S}. The pear-shaped, golden yellow fruits are used for jellies. They have soft, juicy, acid flesh, and are highly aromatic in odor and flavor. Occasionally cultivated. Brazil. POPENOE, W. 1920, UPHOF; T73M

*Eugenia luehmannii* - \**Syzygium luehmannii*

*Eugenia luschnathiana* - \**Phyllocalyx luschnathianus*

*Eugenia malaccensis* - *Syzygium malaccense*

*Eugenia moorei* - *Syzygium moorei*

*Eugenia myrtifolia* - *Syzygium paniculatum*

*Eugenia operculata* - *Cleistocalyx operculatus*

*Eugenia polycephala* -+ *Syzygium polycephalum*

*Eugenia reinwardtiana* - *Cedar Bay cherry*, *Australian beach cherry*, *Agashiru* {S}. The edible fruits are red, pear-shaped, aromatic, and have a pleasant tart flavor. Australia. Tropical Asia. TANAKA; E29{PL}, I12{PL}, J29M, N84, P38

*Eugenia smithii* - *Lilly pilly* {S}. The fruits are sometimes eaten although they are not highly regarded. Grown mostly for its decorative and adaptive qualities. It has been suggested that this species could be hybridized with other species that have better fruit. Australia. CRIBB, JOHNS; F85, N79M, N84, 093, 094, P5, P17M, P38, Q32, R33M

#### CULTIVARS

**Purple:** A form that bears purple or violet fruit, instead of the more typical white or pinkish white types. N79M, N84, P5

*Eugenia stipitata* - *Guaba brasiliensis*, *Pichi*, *Araca-boi* {S}. The yellow fruits are eaten, being among the largest of the genus, often 2 1/2 to 3 1/2 inches wide—up to 4 3/4 inches when cultivated. Fruit pulp is pale yellow, soft and delicate, sour, very aromatic, and has excellent juicing characteristics. Also makes an excellent dessert when mixed with whipped cream or frozen dessert toppings. Loses flavor and aroma when cooked and is best quick-boiled for jam. Amazonian region. HOWELL, MORTON 1987a, WILLAN; A79M, N84, 019, R78M

*Eugenia uniflora* - *Surinam cherry*, *Brazilian cherry*, *Pitanga da praia* {S}. Ripe fruits are ribbed, crimson to purplish-black in color, and have juicy, aromatic, sub-acid flesh that is considered the best of the Eugeniads. They are delicious eaten out of hand or can be made into jams, jellies, pies, compote, sherbet, drinks, and syrup. Unripe fruits are used in relishes and chutneys. Red colored fruits make a light red wine while the black fruits lose their color on fermenting and make a clear white wine. The aromatic leaves are used as a substitute for tea. Tropical America, cultivated. GARNER [Pro], MORTON 1987a, POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M., RILEY 1971, STURROCK, UPHOF; A41G{PL}, A79M, D57{PL}, E29{PL}, F85, 174, J22{PL}, N84, P5, P38, Q93{PL}, R78M

#### CULTIVARS {GR}

**Black:** Large, black fruit, 1 inch or more in diameter. Delicious, nectarine-like flavor. A lighter producer, with fewer crops per year than California cultivars. Originated in Florida. G2M, M17

**Chamba:** Large, plump, rounded fruits; 1 inch or more in diameter; skin bright orange-red; flesh very juicy, not tart but sweet with a distinct, refreshing flavor. Small, bushy tree. Originated in Kona, Hawaii. D57{OR}, 174

**Lolita:** (Westree 317) Small black fruit, averages 1 inch in diameter; flesh moderately sweet; excellent, rich flavor. Recommended for fresh eating, jams, salads, jellies and ice cream flavoring. Tree usually bears two crops, one in January and another in June. Originated in Carlsbad, California by Nelson E. Westree. Introduced in 1957. BROOKS 1972; E8M, I83M

**Lorver:** Large fruit, 1 inch or more in diameter. Tree larger than Lolita and other California cultivars, can reach the size of a small tree. Produces fewer crops per year. Originated in Florida. 174

**Nacha:** (Westree 194) Large fruit, up to 1 1/2 inches in diameter; skin brilliant red, attractive; flesh firm but tender, juicy, sprightly subacid, sugar content moderate. Tree vigorous and productive, usually bears in June and January. Originated in Carlsbad, California by Nelson E. Westree. I83M

**New Zill Black:** An improved type that originated in Florida. Medium to large; purplish-black fruit. Very sweet, cherry-like flavor. I77G

**Vermillion:** Large, reddish fruit, 1 inch or more in diameter. Delicious, nectarine-like flavor. Vigorous shrub, under good condi-

tions can reach the size of a small tree. Originated in Florida. E8M, 174, I83M

**Westree 369:** (Tina) Medium-sized, very dark purple-black fruit; excellent flavor reminiscent of blackberry. Tree extremely heavy bearing; precocious, bears as early as 3 years of age; produces well in dry weather. Will bear continuously under optimal conditions. Originated in Carlsbad, California by Nelson E. Westree. Introduced in 1971. I83M

*Eugenia uvalha* - *Uvalha* {S}. A small, yellow or orange, thin-skinned fruit that is used principally for making refreshing drinks. The flesh is soft, juicy and acid, with an intense and agreeable aroma. Brazil. POPENOE, W. 1920; J29M, N84, S97M{PL}

*Eugenia victoriana* - *Guayabilla* {S}. The bright, glossy orange fruits are eaten or made into delicious juice and jams. They have a tart, aromatic flavor somewhat reminiscent of passionfruit. Makes jams and preserves without added pectin. One of the largest fruits in the genus with a diameter of three inches or more. South America. A79M, G73, G73{PL}, N84, R78M

*Feijoa sellowiana* - *Feijoa*, *Pineapple guava* {PL}. Ripe fruits have the flavor of pineapple and strawberry and a delightful, penetrating aroma that can scent a room. They are best eaten out of hand but can also be used in pies, cakes, puddings, jams, jellies, ice cream, mousses, etc. The flower petals are very sweet and spicy and can be nibbled or added to fruit salads. They should be harvested after they have begun to soften. Brazil, cultivated. CLARKE, CUSUMANO [Cul, Re], MORTON 1987a [Cu], POPENOE, W. 1920 [Cu, Pro], SCHNEIDER 1986 [Cul, Re]; C9M{S}, D3M{PR}, E13G{PR}, E29, G5M{PD}, H4, K38{S}, L91M{S}, M16, NO, N37M, N40{PR}, 053M{S}. (for cultivars see Feijoa, page 365)

*Luma apiculata* - *Myrceugenella apiculata*

*Mitranthes sartoriana* - *Pichiche*, *Arrayan* {S}. Often cultivated for its juicy fruits that are said to have a rich, spicy, subacid flavor. They are eaten fresh or after having been dried. Also the source of a refreshing beverage. Mexico. UPHOF; N84, P38

*Myrceugenella apiculata* - *Luma* {PL}. Ripe fruits are deep purple to black and have soft, translucent white flesh. The flavor is aromatic, mildly sweet, somewhat like eucalyptus, the better fruits being much like *Ugni molinae*. Texture may vary from succulent and juicy to nearly dry. They are eaten out of hand. Chile, Argentina. HEDRICK 1919, RILEY 1982, SIMMONS 1972; D95, F53M, N73, N84{S}

*Myrciaria cauliflora* - *Plinia cauttiflora*

*Myrciaria dubia* -+ *Myrciaria paraensis*

*Myrciaria floribunda* - *Rumberry*, *Guava berry* {S}. The dark red to black fruits are used as the basis of a strong wine and a liqueur that were formerly exported from St. Thomas to Denmark. They have sweet, aromatic pulp and are also eaten fresh or made into jams and tarts. West Indies, Tropical South America. MORTON 1987a, UPHOF; N84

*Myrciaria glomerata* - *Yellow jaboticaba*, *Cabeluda* {S}. The small, yellow fruits have sweet pulp and are eaten out of hand. Brazil. E8M, E29{PL}, N84, P38

*Myrciaria jaboticaba* -> *Plinia jaboticaba*

*Myrciaria paraensis* - *Camu-camu* {PD}. The fruits are maroon or purple-black when ripe, soft and juicy, and either acid or sweet in flavor. Half-ripe fruits contain high levels of ascorbic acid and the juice is frozen or bottled and exported to the United States for the production of vitamin C tablets for the natural foods market. In Iquitos, Peru a popular carbonated beverage is prepared from the juice. Brazil. MORTON 1987a, WILLAN; E14T, N84{S}

*Myrtus apiculata* -\* *Myrceugenella apiculata*

*Myrtus communis* - *Myrtle* {PL}. Dried fruits, leaves, and flower buds are used for flavoring meats\* poultry, sauces, liqueurs, and syrups. Widely used in Sardinia, Corsica and Crete. In Corsica, the myrtle liqueur called *myrthe* flavors *pate de merles*. The sprigs were formerly added to wine to increase its potency. An essential oil, distilled from the leaves and twigs, is used as a condiment, especially when mixed with other spices. In Italy, the flower buds are eaten. The wood is used as a smoke flavoring. Mediterranean region, cultivated. GRAY, P. [Cul], MORTON 1976, PLOTKIN, ROOT 1980b, SIMMONS 1972 [Cu], TANAKA, WOLFERT 1994b [Cul]; A79M{S}, C9M{S}, C67M, D92M{S}, G96,157, /57{ES}, K22, K85, L91M{S}, M53, M82, N84{S}, 053M{S}

CULTIVARS {GR}

*Triloba*: (Sacred Myrtle) A form with three leaves at every joint instead of two. Esteemed by Jews for use in religious ceremonies and for decorating at the Feast of Tabernacles. SIMMONS 1972; M82

*Myrtus molinae* - *Ugni molinae*

*Myrtus mucronata* - *Ugni molinae*

*Myrtus ugni* - *Ugni molinae*

*Phyllocladus luscinioides* - *Pitomba, Uvalha do campo* {PL}. When ripe, the fruits are bright orange-yellow, thin-skinned, and have soft, melting, juicy flesh with a highly aromatic, slightly acid flavor. They are good eaten fresh and are said to make an excellent jelly. In Brazil, they are also used in preserves and carbonated beverages. Brazil. GARNER [Pro], MORTON 1987a, POPENOE, W. 1920, STURROCK; D57, E29, G2M, I77G, M17, N84{S}, P38{S}

*Pimenta acris* - *Pimenta racemosa*

*Pimenta dioica* - *Allspice, Pimento* {PL}. Dried fruits, with the aroma and flavor of nutmeg, cloves, and cinnamon, are used to flavor pickles, sauces, ketchup, sausages, soups, ice cream, etc. Mexican Indians used them for flavoring chocolate. They are an essential ingredient of the rubs and marinades used in seasoning Jamaican  *jerked foods*, which are also flavored by the smoke of pimento wood fires. The leaves may be used as a condiment, steeped into tea, or used for smoking when the wood is unavailable. *Pimento dram* is a traditional Jamaican liqueur made by steeping allspice berries in rum. An essential oil, obtained from the leaves, seasons meat products, baked goods\* candy, and chewing gum. Tropical America, cultivated. ALCORN, BENGHIAT [Cul, Re], GRIEVE, MORTON 1976, ROOT 1980b [Cul], TANAKA, UPHOF, WALSH [Cul, Re]; A49D{DF}, A79M{S}, D92M{S}, E14T{DF}, F85{S}, H53M, 112, I77G, I83M, J3{PD}, J27, M17, M82, N84{S}, 093{S}

*Pimenta racemosa* - *West Indian bay, Bay-rum tree* {PD}. The bark and fruits are used as condiments. In the Caribbean, they are used in *blaff* fresh caught fish plunged into broth. In the food industry, the leaf oil, oleoresin, and extract are used to flavor soups, meats, and condiments. Caribbean region, cultivated. MACMILLAN, MORTON 1976, ORTIZ 1973, TANAKA, VON WELANETZ; E14T, L34, N84{S}

*Plinia cauliflora* - *Jaboticaba* {PL}. The thick-skinned fruits are purplish, grape-like, and have translucent, juicy pulp and a pleasant vinous flavor. They are primarily eaten out of hand but are also made into juice, jellies, jams, wine, and syrups. In taste and appearance they are remarkably similar to some cultivars of the muscadine grape. In Brazil, jaboticaba jam may be marketed as *Brazilian grape jelly*. Tropical South America, cultivated. GARNER [Pro], IDONE, MORTON 1987a [Cu], POPENOE, W. 1920, RICHARDSON, M. [Re], STURROCK; A79M{S}, B60M{PR}, D57{PL}, E8M, E29{PL}, F85{S}, 112, I77G, I83M, J22, N84{S}, 019{S}, 093{S}, P38{S}, Q93, etc.

CULTIVARS {SC}

*Paulista*: Large to very large fruit; skin thick and leathery; flesh juicy, subacid to sweet, quality very good; ripens relatively late; resistant to rust. Tree strong growing, highly productive though it

bears a single crop. Introduced into California in 1904. MORTON 1987a; T49M

*Plinia jaboticaba* - *Jaboticaba de Sao Paulo* {S}. A highly esteemed fruit in Brazil where it is eaten fresh, or used in jellies, wines and cordials. Closely related to *P. cauliflora*, it often furnishes many of the fruits sold as jaboticabas in the markets of Rio de Janeiro. Brazil. GARNER [Pro], POPENOE, W. 1920, UPHOF; P38

*Pseudanemomium umbellifera* - *Monos plum* {PL}. Small yellow fruits with juicy, sweet pulp that is eaten out of hand. Puerto Rico. KUNKEL; E29, N84

*Psidium acutangulum* - *Araga pem, Pard guava* {S}. The sulfur-yellow, apple sized fruits are eaten. They have creamy, tart-sweet flesh with a pleasant, aromatic flavor reminiscent of bananas and lemon. Very good for eating fresh; excellent sliced and served with honey or a sweet sauce, or made into jelly and juice. Occasionally cultivated. South America. HEDRICK 1919, MORTON 1987a, POPENOE, W. 1920, UPHOF, WILLAN; J29M, N84, P38, R78M

*Psidium angulatum* - *Psidium acutangulum*

*Psidium araca* - *Psidium guineense*

*Psidium cattleianum* - *Psidium Uttorale*

*Psidium friedrichsthalimim* - *Costa Rican guava, Cos* {S}. The sulphur-yellow fruits have soft, white flesh that is highly acid and lacks the musky aroma and flavor that characterizes some of the other guavas. Flavor of the shell is somewhat like the pear and is excellent for making pies. The white pulp is used to make jams, jellies, and lemonade-like drinks. In Costa Rica, the fruit is eaten fresh with a pinch of salt. Pectin content of the fruits is high and they make a good firm jelly, even when ripe. Central America, cultivated. DE CERDAS [Re], GARNER [Pro], MORTON 1987a, POPENOE, W. 1920, SIMMONS 1972, STURROCK, WILLIAMS, L.; A79M, E29{PL}, F85, G73, G73{PL}, N84, R78M, S97M

*Psidium guajava* - *Guava, Lemon guava* {S}. Aromatic fruits are eaten raw, stewed, baked, dried, sliced with cream, or made into jellies, preserves, pies, shortcakes, drinks, chutneys, etc. A thick jam, called *goiabada* or *guava cheese*, is of commercial value in Brazil, Florida and Cuba. In Goa, a type of guava cheese called *perada* is flavored with liquid from boiled guava seeds. *Cascos de guayaba*, the stewed fruitshells, are a much esteemed dessert in the West Indies. Roots are said to be used in soups. The seeds are the source of an edible oil. In Hawaii, the wood is used for smoking fish and meats. Tropical America, cultivated. DUKE, GARNER [Pro], JOSSELYN [Re], MENNINGER, MISRA [Re], MORTON 1987a [Cu], POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], SCHNEIDER 1986 [Cul, Re], STURROCK, UPHOF; A7{DF}, A79M, B60M{PR}, E29{PL}, L54{PR}, L54{PE}, N84, P5, P17M, P38, Q46, R47. (for cultivars see Guava, page 385)

*Psidium guineense* - *Brazilian guava, Araca, Guisaro* {S}. The small, greenish-yellow fruits are subacid to acid in flavor and lack the strong musky aroma of *P. guajava*. Ripe fruits are said to have a slight strawberry flavor and to make a distinctive, light pink jelly that is superior to that made from other guavas. Otherwise the fruits can be baked, stewed, or made into paste. Has been crossed with the common guava to produce dwarf, hairy, heavy-bearing hybrids. Tropical South America, cultivated. GARNER [Pro], MORTON 1987a, POPENOE, W. 1920, STURROCK, WILLIAMS, L.; A79M, F85, G73, G73{PL}, N84, P38, R78M

*Psidium littorale* - *Yellow strawberry guava, Chinese strawberry guava* {PL}. The sulphur-yellow fruits are larger, sweeter, and more delicate in flavor than the red strawberry guava. Many people prefer them for eating out of hand and they are also excellent for blending with high-acid fruits of low pectin content for jelly making. Tropical South America, cultivated. POPENOE, W. 1920, STURROCK, UPHOF; C9M{S}, D57, E29, F85{S}, G49, H71{S},

I83M, N84{S}, P38{S}, Q93

*Psidium littorale* var. *longipes* - *Red strawberry guava*, *Cattley guava* {S}. Ripe fruits are subacid, aromatic, with somewhat the flavor of strawberries, and are eaten fresh or made into jellies, custards, ices, jams, sauces, shortcakes, wines, and refreshing drinks. The flavor is more pronounced than that of the yellow strawberry guava but lacks the muskiness of the common guava. Tropical South America, cultivated. CLARKE, GIBBONS 1967 [Re], MORTON 1987a, POPENOE, W. 1920, STURROCK, UPHOF; C9M, D57, E29{PL}, G49{PL}, I83M{PL}, N84, 053M, P38, Q49M{PL}

## CULTIVARS {SC}

John Rilev: Large, round fruit, 1 1/2 inches in diameter; skin dark red, pebbled; flesh cherry red, flavor excellent; seeds small, innocuous, numerous; ripens over an exceptionally long period, June to January. Tree bushy, slow growing; very hairy, no damage noted at repeated exposures of 26° F. Originated in Los Altos, California by Gary Meltzer. T49M

*Psidium microphyllum* - *Puerto Rican guava*, *Guayaba agria* {S}. The small, yellow, aromatic fruits are relatively tart and are mostly used for making jelly, especially in Puerto Rico. West Indies. KENNARD, UPHOF; U27T

*Psidium molle* - \* *Psidium guineense*

*Psidium pyriferum* - *Psidium guajava*

*Psidium sartorianum* - *Mitranthes sartoriana*

*Rhodomyrtus tomentosa* - *Downy rose-myrtle*, *Ceylon hill-cherry*, *Hill gooseberry* {S}. The small, purple fruits may be eaten out of hand and are said to make excellent pies. In India and Ceylon they are made into a jelly, which in flavor somewhat resembles apple-jelly, and a jam called *theonti*. Also valuable as an ornamental shrub with rose-pink flowers that turn purple as they age. Southeast Asia, cultivated. MACMILLAN, MAXWELL, POPENOE, W. 1920, STURROCK, UPHOF; A6, F85, I74{PL}, N84, P5, Q93{PL}, R47

*Syzygium aqueum* - *Water apple*, *Watery rose apple* {PL}. Fruits are mildly fragrant, sometimes crisp and juicy, and usually of sweetish but faint flavor. They are eaten raw to quench the thirst, or made into a syrup. Superior types are sometimes sliced raw into salads. Tropical Asia, cultivated. BROWN, W., GARNER [Pro], MORTON 1987a, UPHOF, WESTER; D57, K8, K8{S}, N84{S}, Q93

*Syzygium aromaticum* - *Clove* {S}. Flower buds are dried and used as seasoning for ham, sausages, baked apples, mincemeat, *Friesian Clove* cheese, pies, preserves, pickles, sweet *vermouth*, etc. In India, they are sometimes chewed after meals. Also the source of an oil and extract important in the food industry for flavoring beverages, gelatine desserts, chewing gum, bakery products, ice cream, candies, and sauces. The fruit pulp is eaten. Dried flowers are also chewed. Indonesia, cultivated. BURKILL, CAMPBELL-PLATT, DE SOUNIN [Cul], DEVI, KUNKEL, MACNICOL [Re], MORTON 1976, ROBINSON, R. 1995, TANAKA; E8M{PL}, F85, K8{PL}, N84

*Syzygium australe* - *Scrub cherry*, *Creek lilly pilly* {S}. The crisp, juicy, refreshing fruits are eaten fresh, added to fruit salads, made into preserves, jellies and syrups, or baked in pies, cobblers, tarts and puddings. Australia. CHERIKOFF, ROBINS [Cul, Re]; N79{PL}, 094, P38

*Syzygium coolminianum* - *Blue lilly pilly*, *Scented satinash* {S}. The rounded, purple-blue fruits are eaten and are said to be among the best of the Australian species. They contain a single, small seed which often rattles in the central cavity when the fruit is ripe. They are eaten raw or made into jelly. Australia. CHERIKOFF, CRIBB, JOHNS, ROBINS; N79{PL}, N79M

*Syzygium cordatum* - *Water berry* {S}. The purple-black, pleasantly acid fruits are eaten raw, made into refreshing drinks, jam and jelly, or fermented into an alcoholic beverage. Southern Africa. FOX, R, SIMMONS 1972, TREGOLD; N84, S28M

*Syzygium cumini* - *Java plum*, *Jambolan*, *Duhat* {S}. Fruits are purple, olive-shaped, somewhat astringent, and may be eaten raw or made into jam, sherbet, jelly, juice, tarts, puddings, preserves, liquors, and a mild-flavored vinegar. The astringency is sometimes removed before cooking by soaking in salt water. In the Philippines, the powdered bark is used in the preparation of *basi*, a wine made from sugar cane juice. Tropical Asia, cultivated. GARNER [Pro], KENNARD, MORTON 1987a [Cu], POPENOE, W. 1920, RICHARDSON, M. [Re], STEINKRAUS; A41G{PL}, C95, D57{PL}, F85, I74{PL}, I83M{PL}, J29M, N84, 093, 094, Q46

*Syzygium guineense* - *Water pear*, *Water berry* {PL}. Very ripe fruits, red to purple-black in color, are palatable and are eaten fresh or used for making beverages and vinegar. Tropical Africa. DALZIEL, FOX, E, UPHOF; M17

*Syzygium jambos* - *Rose apple* {PL}. Ripe fruits are crisp, sweet, somewhat juicy, with a delicate rose-water fragrance. They can be eaten out of hand, stewed, candied, stuffed with rice and baked, preserved in syrup, used in marmalades, jellies, confectionery, and sauces, or fermented into wine. When cooked with custards or puddings they impart a rose flavor. The flowers are candied. Tropical Asia, cultivated. GARNER [Pro], HEDRICK 1919, MACNICOL, MORTON 1987a, POPENOE, W. 1920, RICHARDSON, M. [Re], STURROCK, UPHOF; A41G, D57, E29, F85{S}, G73, I77G, I83M, L55J{S}, M17, N84{S}, Q46{S}

*Syzygium luehmannii* - *Riberry*, *Clove lilly pilly* {S}. The red, pear-shaped fruits are often borne in great quantities, and are eaten out of hand or used to make jams, jellies, sauces, vinegars and marmalade. They have a distinctive, clove-like flavor that goes well with emu, kangaroo and wallaty. Also recommended for its highly decorative young foliage which has bright pink tints. Quite popular in the bushfoods industry. Australia. CHERIKOFF, CRIBB, JOHNS, ROBINS [Cul, Re]; N79{PL}, N79{PR}, N79M, 032M{ED}, 094, P5, P38, Q32, R33M

*Syzygium malaccense* - *Mountain apple*, *Malay apple* {PL}. Ripe fruits are crisp and juicy, with a mild, refreshing, subacid flavor. They are often stewed with cloves or combined with other fruits in pies, tarts, custards, salads, cocktails, and fruit punch. When baked, the petals of hibiscus flowers are employed to impart a pink or deep red color. The flowers are preserved in syrup or eaten in salads. Young leaves and shoots, while still red, are eaten raw with rice. Tropical Asia, cultivated. GARNER [Pro], HEDRICK 1919, JOHNS [Cul], KENNARD, MORTON 1987a [Cu], OCHSE, POPENOE, W. 1920, RICHARDSON, M. [Re]; A41G, A79M{S}, D57, E29, F85{S}, I77G, J22, K8, K8{S}, N84{S}

## CULTIVARS {GR}

Kingston: One of the largest of all malay apples, having produced fruit up to 6 inches long and weighing over a pound. Dark-red, juicy fruits of good quality. Introduced into Florida from Jamaica, by William F. Whitman. Now widely grown in the tropics. WHITMAN; E8M

Rookman: Long, medium-sized, very sweet fruit with a texture like that of a peach. Originated in Trinidad where it is grown commercially and sold in the markets. Introduced into Florida by A1 Will. E8M

*Syzygium moorei* - *Robby*, *Durobby* {S}. The large, rounded fruit is cream-colored and can be eaten raw or used to make jelly. Australia. CRIBB; N84, P17M, P38, R33M

*Syzygium oleosum* - *Syzygium coolminianum*

*Syzygium paniculatum* - *Australian brush-cherry* {S}. The juicy, aromatic, rose-purple fruits are often eaten out of hand to quench the thirst or made into jellies. Widely planted in California as an ornamental hedge. Australia. CHERIKOFF, CLARKE [Re], UPHOF;

B41{PL}, C9M, F53M{PL}, F85, H4{PL}, H71, N79M, N84, 093, 094, P5, P17M, Q32, R33M

*Syzygium polyanthum* - *Indonesian bay, Daun salam, Laurel leaf* {DF}. Dried leaves are used as an aromatic flavoring for sauces, soups, rice, tempeh, cookies, and vegetable dishes. The blackened leaves are simmered with the dish, then removed before serving. They can also be ground to a powder for use in marinades or in the making of Indonesian cookies. Ripe fruits are also edible. Available at Indonesian, oriental and specialty stores. Southeast Asia, cultivated. BURKILL, OCHSE, SHURTLEFF 1979 [Re], VON WELANETZ; A7, A45, C34G, L16M

*Syzygium polyecephalum* - *Gowok, Kupa, Kali asem* {S}. The violet-colored young leaves and shoots are eaten raw with rice. Ripe fruits have an agreeable sour flavor and are eaten out of hand or made into jelly and *njak*. Has been recommended for improvement by scientific breeding. Indonesia. EISEMAN [Re], GARNER [Pro], OCHSE, UPHOF; U27T

*Syzygium reinwardtianum* - \* *Eugenia reinwardtiana*

*Syzygium samarangense* - *Samarang rose apple, Wax jambu, Java apple* {PL}. The fruits are pear-shaped, waxy, with flesh that is spongy, dry to juicy, subacid, and very bland in flavor. In Malaya, they are eaten raw with salt, cooked as a sauce, or stewed with true apples. Tropical Asia. GARNER [Pro], MORTON 1987a; A41G, E29, 183M, J17, M17, N84{S}, P38{SC}

#### CULTIVARS {SC}

**Srinark:** (Copper Colored) Large, white-fleshed fruit, usually with a single seed. Pulp crisp in texture; flavor somewhat bland. Grown on a limited commercial scale in Florida, where it is thought to be the best flavored wax jambu. Introduced into Florida from Thailand, by William F. Whitman. WHITMAN; U27T

*Syzygium tomentosum* - *Eugenia cabelludo*

*Ugni molinae* - *Chilean guava, Temo* {PL}. The small, reddish-purple, aromatic fruits are pleasantly flavored and are very good eaten out of hand, added to cereals like blueberries, or made into jams, jellies, and refreshing drinks. Seeds are used as a substitute for coffee. The leaves are used for tea. Chile. GARNER [Pro], HEDRICK 1919, NATIONAL RESEARCH COUNCIL 1989, SIMMONS 1972 [Cu]; F80{S}, I49M, I66T, 174, K22, M82, N84{S}, 053M{S}

#### NAUCLEACEAE

*Nauclea esculenta* - *Nauclea latifolia*

*Nauclea latifolia* - *Negro peach, Pin-cushion fruit* {S}. The sweet, juicy, reddish pulp of the fruit is eaten, and is said to resemble the strawberry in flavor and texture. Flower-heads are eaten as a vegetable. Tropical Africa. HEDRICK 1919, MACMILLAN, UPHOF; F85

*Nauclea orientalis* - *Negoipeach, Gempol* {S}. Young leaves and tender tips are steamed and eaten with rice. The fruit is consumed in Africa. Southeast Asia. OCHSE, TANAKA; F85, N84, 094, R15M

*Sarcocephalus orientalis* -> *Nauclea orientalis*

*Sarcocephalus xanthoxylon* - *Ndea* {S}. The fruit is the size of a peach, with flesh-colored skin, and small black seeds arranged in a circular pattern like those of the kiwi. The edible pulp has somewhat the flavor of a mushy apple, and the texture of a pear. Tropical Africa. DANFORTH; C95, N84

#### NELUMBONACEAE

*Nelumbium speciosum* - *Nelumbo nucifera*

*Nelumbo lutea* - *Water chinquapin, American water-lotus* {PL}. Starchy rhizomes, when baked, are said to resemble sweet potatoes. Half-ripe seeds are delicious raw or cooked, having somewhat the flavor of chestnuts. Mature seeds are eaten parched, baked, boiled,

or ground and used for bread or thickening soups. Young leaf-stalks and unrolling leaves are eaten as a potherb. North America. FERNALD, KINDSCHER, MEDSGER, TURNER 1979 [Pre, Re]; E7M{S}, F73, G26{S}, G47M{S}, G85, H30, I90M, J7M, K34, K85M, M15, M34M{S}, N3M, N11{S}

*Nelumbo nucifera* - *Pink lotus, Chinese lotus, Lin ngau* {PL}. Rhizomes are eaten boiled, pickled, stir-fried, in tempura, or preserved in sugar. Also the source of a starch, *nagaufan*. The stems are a popular festive food among Kashmiri Pandits. Seeds are eaten raw, roasted, boiled, pickled, candied, or used as a coffee substitute. The puffed seeds, known as *makhana*, are made into candy, added to *kheer* (milk pudding), or used as a garnish for *panchamrita* (punch) and carrot *haba*. Young leaves can be used raw in salads or tossed with sesame oil. Dried ones are employed in China for wrapping various foods such as *dim sum*, the leaves imparting an appealing flavor and fragrance. Petals may be floated in soups or used as a garnish. The pollen and stamens are employed for perfuming tea. Tropical Asia to Australia. CHANG, W. [Re], COST 1988 [Cul], CREASY 1982, DEVI [Re], HARRINGTON, G. [Cu, Cul], HEDRICK 1919, HERKLOTS, MACNICOL, MATTOO [Re], ORTIZ 1992, PASSMORE, ROSENGARTEN, ROUTHIER 1989 [Cul, Re], ROUTHIER 1993 [Re], SHURTLEFF 1975 [Re], TANAKA, UPHOF, VAN DUONG, VON WELANETZ [Pre]; A7{DF}, A79M{S}, D3M{PR}, E13G{PR}, E56{DE}, E66T{DE}, G19M{DE}, G85, H91{PD}, K34, K85M, L14G{PD}, M15, N40{PR}, 093{S}, etc.

#### CULTIVARS {S}

**Man He:** 110 days. Medium cultivar. Mainly eaten cooked; after cooking it is glutinous and fragrant; can also be eaten raw. Sow late April for a harvest in late August. Rootstocks have a large number of branches, should not be grow too closely. 054

**Zao Hua:** 90-95 days. A high-quality and extremely early cultivar. Fresh, sweet, crisp and tender; good for eating raw. Sow early to late-April for a harvest at the end of July. Easy to harvest, the rootstocks being distributed in the upper layer of soil. Tolerant to fertile soil. Closer spacing gives higher yields. 054

*Nelumbo pentapetala* - *Nelumbo lutea*

#### NYCTAGINACEAE

*Abronia latifolia* - *Yellow sand verbena* {S}. The long stout roots are eaten by the Chinook Indians. Western North America. MEDSGER, YANOVSKY; A2, E15, F88M, N84

*Bougainvillea brasiliensis* - *Purple bougainvillea* {PL}. In Mexico, the flower bracts are used for making an attractive, violet colored water drink (*agua fresca*) called *agua de buganvilla*. It is said to have a refreshingly delicate taste. Other types of bougainvillea are not suitable for making the drink. Brazil. ZASLAVSKY [Re]; E48, F37T{DF}, GO{DF}, G20, 18

*Mirabilis expansa* - *Mauka, Miso* {PL}. Sun-dried tubers are boiled or fried, and eaten as a vegetable. Traditionally, they are chopped, boiled, and mixed with honey or syrup, toasted grain, tomatoes, and fish. The cooking water makes an especially flavorful drink. Their 7% protein content is an appreciable amount for a root crop. Leaves are eaten in salads. Grows well in cold, harsh climates. Andean South America. NATIONAL RESEARCH COUNCIL 1989, TANAKA; W79

*Mirabilis jalapa* - *Four-o'clock, Marvel of Peru* {S}. A crimson dye, obtained by steeping the flowers in water, is used for coloring cakes and jellies made from seaweeds. The seeds are used to adulterate black pepper. Leaves are occasionally eaten. South America, cultivated. ABBIW, TANAKA, UPHOF; A16, B77M, C44, E7M, F92, G57M, H54, J20, K53, 053M, 089

#### NYMPHAEACEAE

*Castalia tuberosa* - *Nymphaea tuberosa*

*Nuphar advena* - *Common spatterdock* {PL}. Rootstocks are sometimes eaten raw, roasted, or boiled with meat. Seeds can be ground into a flour or meal and used to thicken soups. Eastern North America. HEDRICK 1919, UPHOF; G26, G47M, M34M, Nil, N84

*Nuphar luteum* - *Yellow water-lily* {PL}. Rootstocks are boiled and eaten as a vegetable. Also a source of starch. Seed kernels are parched and eaten with salt and cream or ground into flour for bread making. When parched, they swell considerably but do not crack like popcorn. A refreshing drink is made from the flowers. Leaf stalks are edible. Europe, North America. FERNALD, HEDRICK 1919, MACNICOL; B32, F7J, H30, J7M, N84{S}

*Nymphaea advena* + *Nuphar advena*

*Nymphaea lotus* - *Egyptian lotus*, *White lotus* {S}. Seeds are pickled, put into curries, roasted in heated sand, or ground and mixed with flour to make cakes. Unripe fruits are eaten raw in salads. The flower-stems are eaten raw or cooked. Tubers are consumed raw or roasted. Tropical Africa, Tropical Asia. HEDRICK 1919, PONGPANGAN, TANAKA; F85

*Nymphaea lutea* - *Nuphar luteum*

*Nymphaea odorata* - *Fragrant water-lily* {PL}. Flowerbuds are pickled or eaten as a cooked vegetable. The leaves are used in soups and stews. Tubers are also edible. North America. FERNALD, KUNKEL, TANAKA; B32, C36, F7J, G85, H30, I90M, J7M, K34, K85M, M72, N3M, N84

*Nymphaea stellata* - *Blue lotus of India* {S}. Rhizomes are sometimes eaten raw or roasted. Seeds are parched and eaten. The flowers are also edible. Tropical Africa, Tropical Asia, cultivated. HEDRICK 1919, TANAKA, UPHOF; F85

*Nymphaea tuberosa* - *Tuberous water-lily*, *White water lily* {PL}. Seeds are rich in starch, oil and protein, and can be fried like popcorn or parched and the winnowed kernels ground into flour or creamed like corn. The bitter tubers are occasionally eaten. North America. FERNALD, GIBBONS 1979, PETERSON, L.; G26, G47M, I90M, J43{S}, M34M, M72, Nil, N84

NYPACEAE

*Nypa fruticans* - *Nipapalm* {PL}. Inflorescences are cooked in nipa syrup to produce an energy-giving sweetmeat. Sap is made into sugar, vinegar, or an alcoholic beverage, called *tuba*, *soom*, *tuwak*, or *toddy*. Also used as a coagulant for *cebu*, a buffalo milk cheese. Unripe seeds are eaten raw, preserved in syrup, or used in making sweetmeats. In Malaysia they flavor a commercial ice cream, *Atap Chi*, and enter local ice confections. In the Philippines, nipa vinegar is used to prepare chicken *adobo* and *pacsiw*. Tropical Asia, Australia. CAMPBELL-PLATT, HACKETT, HAMILTON, HEDRICK 1919, MENNINGER, STEINKRAUS, UPHOF; A41G, D87E, K47G{S}, N84{S}, R50

NYSSACEAE

*Nyssa aquatica* - *Water tupelo*, *Water gum* {S}. Fruits are sometimes eaten raw, but mostly they are made into preserves. Source of a white, fine-grained honey with a mild, pleasant flavor. The honey will not granulate if pure. North America. CRANE 1975, FERNALD, MEDSGER, PELLETT; B32{PL}, D95{PL}, F75{PL}, G66, H4{PL}, H14M{PL}, K38, K63G, N37M{PL}, N84, 093, P5, P17M

*Nyssa ogeche* - *Ogeechee lime*, *Sour tupelo*, *Ogeechee plum* {PL}. The large red fruits have an agreeably acid flavor and make very good preserves or refreshing lemonade-like drinks. Eastern North America. FERNALD; D95, H4, H14M, K63G{S}, N37M, N84{S}

*Nyssa sylvatica* - *Tupelo*, *Black gum* {PL}. The bluish fruits have a thin, sharply acid pulp that is pleasant to roll in the mouth as a masticatory. Also used in preserves. Source of a light-colored,

heavy-bodied honey with a unique, mild flavor. The honey will not granulate if unmixed with other honeys and is often blended with honeys that do granulate to retard this process. North America. FERNALD, MEDSGER, PELLETT; B32, B70{PD}, B89M{PD}, C9, C9M{S}, D95, E31{PD}, H4, H14M, H49, H80M{ED}, I66M{PD}, I77M, J16, K38{S}, M69M, N37M, 053M{S}, R47{S}, etc.

OLACACEAE

*Anacolosa luzoniensis* - *Galo* {S}. The thin-shelled nuts are eaten, and are said to have the flavor of a mixture of sweet corn and chestnut. They have good quality and may be eaten raw or cooked. Contains 3.9 to 11.1% protein, 1.8 to 8% fat, and 33.4 to 39.5% carbohydrates. Young fruits are delicious when boiled, while the pulp of mature fruits is also edible cooked. Philippines. CORONEL 1983, CORONEL 1984, MENNINGER, UPHOF; X62

*Ptychopetalum olacoides* - *Muiria puama* {DF}. The stem-wood and root have a long history of use in Brazil as a general food tonic and appetite stimulant. Also becoming popular with natural foods enthusiasts. South America. TYLER; E14T, F37T, F73D, GO, G73, K18M, L34, M15M, N7D

*Scorodocarpus borneensis* - *Woodland onion* {S}. The leaves are used for seasoning, as a substitute for onion or garlic. Seeds are boiled and eaten by natives in Malaya. Fruits are also edible. Malaysia, Indonesia. BURKILL, MENNINGER; F85

*Ximenia americana* - *Wild olive*, *Tallow-wood*, *Seaside plum*, *False sandalwood* {S}. The fruits, resembling yellow plums, have an acid-sweet, aromatic, almond-like flavor, and are eaten raw, pickled, preserved, or made into beer. Flower petals are eaten in soups. Seeds are the source of a non-drying oil, used in India as a substitute for *ghee*. Young leaves are used as a potherb. Roasted kernels are edible, but may be purgative if eaten in quantity. Tropics, Subtropics. HEDRICK 1919, KUNKEL, MENNINGER, MORTON 1977, ROSENGARTEN [Nu], UPHOF; Q46

*Ximenia caffra* - *Sour plum*, *Monkey plum* {S}. The flesh, just under the skin, is refreshingly tart and is eaten raw. Both over-ripe and dried fruits are said to resemble prunes. Juice of the pulp is boiled and mixed with sorghum meal to make a tasty sour porridge. Seeds are eaten and also yield an edible oil. Southern Africa. FOX, E; F85

OLEACEAE

*Chionanthus virginicus* - *Fringe-tree*, *Old man's beard* {PL}. The fruits are said to be pickled like olives. Eastern North America. KUNKEL; A50, C9, C9M{S}, D95, E63, H4, H49, I77M, K38{S}, K63G{S}, M77, N37M, 053M{S}

*Forestiera neo-mexicana* - *Wild olive* {PL}. Although small, it has been suggested that the fruits may be used like the true olive. Southwestern North America. TANAKA; A12M, D95, E67T, F44M, F55M, G66{S}, G89M, I98M, J25M, J25M{S}, L55J{S}, N37M

*Fraxinus angustifolia* - *Narrow-leaf ash*, *Lissan ettir* {S}. In Morocco, the fruits, often called *ash berries*, are added to the famous spice mixture *ras el turnout*—a blend of twenty or more herbs and spices. One of the ingredients of *Maa'ssel* and *Mrouziya*, festive dishes consumed during Aid Seghir, and for some weddings. Mediterranean region. BOUQUET, NORMAN, UPHOF, WOLFERT 1973; F85, G66, K63G, N73{PL}, N84, P5, P17M, P49

*Fraxinus excelsior* - *European ash* {S}. Very young winged fruits, or keys, are pickled in vinegar and used as a condiment for other foods. The leaves are sometimes used as an adulterant for tea. In France, they are occasionally used for making a fermented beverage known as *frenette*. Ash barrels, along with barrels made from cherry, oak, mulberry and chestnut, are used for aging *balsamic vinegar*, each wood contributing a different color and flavor. The wood is used for smoking *schinkenwurst*. Also the source of an edible manna. Europe. BISSELL, DONKIN, HEDRICK 1919,

KASPER, MABEY, MICHAEL [Cul, Re], SKELLY; G66, K38, K63G, N71M, N84, 053M, 093, P5, P17M, P49, Q32, R78

*Fraxinus ornus* - *Manna ash, Flowering ash* {S}. The stems are the source of a sweet, nutritious exudate, or manna, that is occasionally eaten or made into a conserve. Eurasia. ANDREWS, C. 1996, DONKIN, HEDRICK 1919, UPHOF; D95{PL}, G66, I77M{PL}, K38, K63G, N71M, N84, 053M, N73{PL}, P49, Q32, R78

*Fraxinus oxyphylla-Fraxinus angustifotta*

*Jasminum grandiflorum-Jasminum officinale*

*Jasminum humile* - *Raggul cha* {S}. The leaves are used as a condiment. In India, a tea is made from the leaves and bark. Eastern Africa. KUNKEL, VON REIS; F85, G96{PL}, H4, L90J{PL}, N7J{PL}, N84, Q40, Q46

*Jasminum odoratissimum* - *Madeira jasmine* {PL}. Flowers are used for flavoring or scenting tea. Madeira. TANAKA; GO{DF}, H4, N7D{DF}, N37M, R77

*Jasminum officinale* - *Poet's jasmine* {S}. The fragrant flowers are eaten, or used to flavor or scent tea. They are the source of an essential oil that imparts a bittersweet, floral tone to baked goods, ice cream, candy, chewing gum, and *maraschino cherries*. Taiwan. LEGGATT [Re], MACNICOL [Re], MARCIN, MORTON 1976; E14T{DF}, F15M{PL}, L34{DF}, L90J{PL}, M82{PL}, N37M{PL}, 093, Q32, Q40, Q46

*Jasminum officinale* 'Grandiflorum' - *Catalonian jasmine, Tea jasmine, Spanish jasmine* {PL}. Dried flowers are used to scent Chinese tea leaf. TANAKA; D95, G96, H4, L90J, M82, N7J, N84

*Jasminum paniculatum* - *Jasmine, Sieu-hing-hwa* {S}. Flowers are used with those of *J. sambac* for scenting tea, in the proportion of 10 pounds of the former to 30 pounds of the latter, 40 pounds of the mixture being required for 100 pounds of tea. China. GRIEVE, HEDRICK 1919; F85

*Jasminum sambac* - *Arabian jasmine, Pikake, Mali* {PL}. The dried flowers are used for scenting tea leaf, especially Chinese-style *jasmine tea*. *Hyson* green tea is often used as the base tea. They are the source of an aromatic water popular in Thai cookery, especially for making desserts. Also the source of an essential oil that is employed as a flavoring. Southern Asia. DOWN, CHOW, GRIEVE, JACQUAT, LOHA-UNCHIT [Re], MORTON 1976, TANAKA, ZEVEN; A28, B41, C27G{PD}, E48, G20, G96, H4, H36{DF}, H44M{ED}, I83M, J27, L88D{ED}, M82, N7J

*Noronhia emarginata* - *Madagascar olive, Noronha* {S}. The small, olive-like fruit is eaten, and is said to have somewhat the flavor of a fresh lychee. Madagascar. MACMILLAN, UPHOF; F85

*Olea africana* - *Wild olive, Golden-leaved olive* {S}. The fruit is used as a substitute for olives. Leaves are used as a condiment. Also a substitute for tea. Tropical Africa. FOX, F., KUNKEL; F85, G66, N79M, N84, 053M, P5, Q32, S28M

*Olea europaea* - *Olive* {S}. Fruits are usually pickled or cured with water, brine, oil, salt or lye. Those dried in the sun and eaten without curing are called *fachouilles*. Cured fruits are eaten as a relish, stuffed with pimentos or almonds, or used in breads, hors d'oeuvres, soups, salads, *tapenades*, etc. *Olives schiacciate* are olives picked green, crushed, cured in brine or oil, and used as a salad. Olive oil is used in salads and cooking and because of its distinct flavor is considered a condiment. *Mahon*, a cow's milk cheese produced on the island of Minorca, is often coated with olive oil. Martini cocktails are often topped off with a green olive, and a *wet martini* is one that has been mixed with olive pickling liquid, sometimes referred to as *olive juice*. Popcorn flavored with olive oil and nutritional yeast is a popular snack with advocates of natural foods cuisine. The tree is the source of an edible manna. Mediterranean region, cultivated. BIANCHINI, CAMPBELL-PLATT, DONKIN, KLEIN, LANZA 1993, UPHOF; A79M, C9M, D81{PO}, E23M{PD}, F80,

F85J{PD}, G96{PL}, I64M{ED}, J86{PL}, K38, K63G, L91M, M82{PL}, 053M, 093, P5, P17M, Q32, etc. (for cultivars see Olive, page 437)

*Osmanthus americana* - *American olive, Yen-kuei* {PL}. Fragrant flowers are used to flavor or scent tea leaf. The fruit is macerated in brine and eaten like the true olive. North America. TANAKA; B96, H4, H14M, N37M

*Osmanthus fragrans* - *Fragrant olive, Kwei-hua* {PL}. The unripe fruits are preserved in brine like olives. Very fragrant flowers are used by the Chinese to impart a pleasant aroma to *Chulan tea*, wines and liqueurs, and sweets such as lotus seed soup, pastries, and steamed pears. Available in oriental stores preserved in sweetened brine or as a sugary paste called *cassia blossom jam*. Eastern Asia. BREMNESS, COST 1988 [Cul], PASSMORE, TANAKA, UPHOF; B96{PL}, G66{S}, G96, H4, H14M, I83M, L88D{ED}, M82, N37M, N84{S}, P17M{S}

*Syringa microphylla* - *Little-leaf lilac, Sung-lo-cha*{PL} . Flowers are used as a substitute for tea. China. ALTSCHUL; A50

*Syringa vulgaris* - *Lilac* {PL}. Flowers are eaten raw or folded in batter and made into fritters. They can be crystallized by dipping in beaten egg white and then rolling in granulated sugar. Europe. MACNICOL; A91, C9M{S}, C33, C47, D69, F51, H45M, K38{S}, K63G{S}

#### ONAGRACEAE

*Chamaenerion angustifolium* - *Fireweed* {S}. The leaves are eaten raw, boiled, or used as a tea in some parts of Russia, known as *Kaporie tea* or *Kapor tea*. Vigorous new shoots are used as a substitute for asparagus. Young flower stalks may be added to salads. The sweet pith of the large stalks is chewed, used to flavor and thicken soups and stews, or made into ale and vinegar. Source of a light-colored honey of high quality and fine flavor. Eurasia, naturalized in North America. FERNALD, GRIEVE, HARRINGTON, H., HEDRICK 1919, PELLETT, UPHOF; A2, A15M{ED}, C60D{PD}, C82, E15, F44, F80, H47{PD}, H80M{ffi}, 147, J25M, J40, K49Q, M84{BQ}, N9M, N9M{PL}, etc.

*Chamaenerion latifolium* - *Dwarf fireweed, River beauty* {S}. The succulent new shoots and tender, fleshy young leaves are cooked and eaten. Leaves are used as a tea substitute. Preferred by some over common fireweed. Northern temperate region. FERNALD, GIBBONS 1979, HARRINGTON, H., HELLER, KUNKEL, PETERSON, L.; K49Q

*Epilobium angustifolium-Chamaenerion angustifolium*

*Epilobium hirsutum* - *Great hairy willow-herb* {S}. The leaves are used as a substitute for tea, known as *Kaporie tea*. In South Africa, they are sucked for their salty taste. Eurasia. FCK, F., GRIEVE; C74{PL}, N71M, N84, Q24

*Epilobium latifolium-Chamaenerion latifolium*

*Fuchsia excorticata* - *Konini, Kotukutuku* {S}. The purple-black, sub-acid, perfumed fruits are eaten raw, or may be used in pies, tarts, cakes, desserts, and dessert sauces. They have a unique flavor, and like rose hips, should be combined with potato flour or corn starch to temper the slight astringency. New Zealand. BRYAN [Cu, Re], COLENSO, SIMMONS 1972; N84, 053M, S43M

*Fuchsia splendens* - *Platanillo* {S}. The fruits are eaten raw or made into preserves, having a pleasant lemon-like flavor with no noticeable aftertaste. Central America. WILLIAMS, L., TANAKA; N84, R49{PL}

#### CULTIVARS {GR>

**Karl Hartwea:** Reportedly has the most pleasant flavor of any fuchsia fruit. The flavor is mild and somewhat lemon-like, and the fruits can be eaten in quantity. Flowers from mid-summer to autumn. Does well in full sun or deep shade. R49

*Oenothera biennis* - *Evening primrose, German rampion* {S}. The roots are sweet, somewhat resembling salsify or parsnips. They are scraped, sliced, and then eaten boiled, fried, scalloped, au gratin, or added to soups and stews. Young shoots are sometimes added to salads, but more commonly they are used as a potherb. The sweet flowers can be used as a salad or pickle garnish. Oil from the seeds, high in gamma-linolenic acid, is suitable for salad use but is more often taken as a food supplement. Young pods are steamed and eaten. Northern temperate region. ANGIER [Pre, Re], ERASMUS [Nu], FERNALD, GIBBONS 1979, HALL [Re], HITCHCOCK, MURRAY, VILMORIN [Cu]; C81M{PL}, D92M, E14T{PD}, F80, H61M, J43, J76{PL}, M75M{PD}, N9M, N9M{PL}, 053M, R53M

## CULTTVARS

EP 10: Improved type with high gamma-linolenic acid content. Seeds are also less likely to shatter before harvest. Highest linolenic acid levels are obtained when the plant is grown on poor garden soil with low nitrogen content. E28M, J82, L7M

Saguin: Has the highest content of gamma-linolenic acid of all commercially available strains, up to 13%. Selected from EP 10. Introduced by Richters. J82

*Oenothera hookeri* - *Hooker's evening-primrose* {S}. The young, blanched leaves and shoots can be used in salads or boiled as a potherb. Roots are boiled and cooked like parsnips. The young, pod-like fruits can be cooked and eaten. Western North America. HARRINGTON, H., KIRK; C98M, E66M, F59, H95, 198M{PL}, JO, K15, L13, L75, M47M, N7M, 053M

## ONOCLEACEAE

*Matteuccia pensylvanica* - *Ostrich fern* {PL}. The thick, succulent, unrolled fronds, called *fiddleheads* or *croziers*, are salted and boiled, and served on toast with oil, butter, cream, or a cream sauce. Or they may be cut into small pieces, mixed with bread crumbs, milk, and eggs, and baked into a superior escalloped dish. They are available fresh in specialty markets or as canned and frozen products. The crowns can be forced for winter use. Rootstocks are eaten boiled or roasted. Northern temperate region. CUSUMANO [Cul, Re], FERNALD, GIBBONS 1964 [Pie, Re], GUNST [Pre, Re], SCHNEIDER 1986 [Cul, Re], VON ADERKAS; B77, C9, C11T{PR}, D61, D75M, E33M, E63M, F42M{PD}, G5{PR}, H25M{PR}, H73{PR}, I34M{PR}, 144, J42, M98, N9M, N9M{S}, N40{PR}, etc.

*Matteuccia struthiopteris* - \**Matteuccia pensylvanica*

*Onoclea sensibilis* - *Sensitive fern* {PL}. The young *fiddleheads* are sometimes used as a vegetable. Rootstocks have also been used as food. North America, Northeast Asia. MEDSGER, YANOVSKY; C9, C36, D61, D75M, E33M, E63M, F51, 144, J39M, J39M{S}, J48, M42, N7T, N9M, N9M{S}

*Pteretis nodulosa* - \**Matteuccia pensylvanica*

## ORCHIDACEAE

*Aplectrum hyemale* - *Puttyroot, Adam and Eve* {PL}. The corms may be boiled for twenty minutes and served with butter. Eastern North America. PETERSON, L.; A61, E33M, L59P, N7T, N84{S}

*Dactylorhiza maculata* - *Adder's grass, Hen's kames* {PL}. *Salep* is made from the tubers. Eurasia. LOVELOCK, TANAKA; J71, M77, N84

*Epidendrum cochleatum* - *Tree orchis* {PL}. The pseudobulbs are used to provide an edible mucilage like that of okra. Tropical America. LOVELOCK; F75M, 157, N84

*Leptotes bicolor* - {PL}. The fruit is used in some parts of Brazil for flavoring food, especially ice cream. It has a coumarin-like odor and is sweeter than vanilla but less penetrating. Brazil, Paraguay. HEDRICK 1919, UPHOF; F75M, F94, H20, N84

*Orchis maculata* -> *Dactylorhiza maculata*

*Orchis mascula* - *Male orchis* {DF}. The dried root is sometimes cooked and eaten. Also a source of *salep*, *bassorine* or *sahlab*, a fine white to yellowish-white powder used as food. It is usually mixed with milk, honey, nuts, and spices to form a beverage or added to ice cream. In India, it is used in sweetmeats and chocolates. A sweet porridge, known as *racahout*, is made from rice flour, cocoa, acorn flour, sugar, and *salep*. Eurasia. HEDRICK 1919, HESS, KHALIL [Re], MABEY, UPHOF, WATT; F37T, GO, K18M, N84{S}, R53M{S}

*Orchis militaris* - *Soldier orchid* {S}. Tubers are cooked and eaten. They yield the starcify, mucilaginous substance known as *salep*, obtained by macerating the pulp in water. Also used for sweetmeats. Temperate Eurasia. HEDRICK 1919, KUNKEL; N84

*Orchis morio* - *Gandergoose, Green-winged orchis* {S}. The dried root is cooked and eaten. Also furnishes a *salep* of commerce. *Salep* is very nutritive and demulcent. It is boiled with milk and water and flavored with sugar and wine, cloves, cinnamon, and ginger. Eurasia. GRIEVE, HEDRICK 1919; N84

*Tetramicra bicolor* - \**Leptotes bicolor*

*Vanilla fragrans* - \**Vanilla planifolia* Ua

*Vanilla planifolia* - *Vanilla* {PL}. Principle source of vanilla pods or *vanilla beans*, used for flavoring ice cream, confectionery, chocolate, syrups, cakes, puddings, baked goods, soft drinks, yogurt, etc. Also the main flavoring of *Galliano*, an Italian liqueur that contains up to forty herbs and botanicals. *Galliano* is an ingredient of the *Harvey Walbanger* cocktail. *Vanilla sugar*, made by storing vanilla beans in granulated or confectioner's sugar for about one week, is used as a fragrant and flavorful decoration for baked goods, fruit, and other desserts. Tropical America, cultivated. BROWN, G., HERBST, S., MORTON 1976, TANAKA, UPHOF; C43M, E48, F32D{PD}, F37T, F69, F75M, F93G, H20, H49, 112, 157, K2{PD}, K54{ffi}, N7J, N84

*Vanilla pompona* - *West Indian vanilla* {PL}. The short, thick pods, called *vanillon* or *vanilloes*, are used as a substitute for true vanilla in flavoring foods. Caribbean region. MACMILLAN, MORTON 1976; H20, 157

*Vanilla tahitensis* - *Tahitian vanilla* {DF}. Pods are used for flavoring foods. Thought by some to be more delicate, more fragrant and moister than the common vanilla. Grown commercially in Tahiti and Hawaii. Polynesia, cultivated. MORTON 1976; A7, E14T, F32D, F37T, GO, G68, H15T, J66M, L16, L34

## OROBANCHACEAE

*Aeginetia indica* - *Dok din daeng* {S}. A leafless, parasitic herb that grows on the roots of various grasses. It is prepared with sugar and nutmeg and eaten as an antiscorbutic. A purple juice extracted from the flowers colors a Thai sticky rice flour dessert known as *kanom dok din*. Tropical Asia. HEDRICK 1919, JACQUAT; Y17M

## OSMUNDACEAE

*Osmunda cinnamomea* - *Cinnamon fern, Zenmai* {PL}. The young, unexpanded fronds, or *buckhorns*, are eaten as a nibble or cooked in soups. In Japan, they are prepared by simmering with deep-fried tofu in dashi (soup stock) and shoyu (soy sauce). Eastern North America. FERNALD, HOMMA [Re], SHURTLEFF 1975, YANOVSKY; B77, C9, C36, D75M, E33M, F51, G28, H63, 14, 144, 177M, J37M, M42, M77, N7T, N9M, N9M{S}, etc.

*Osmunda claytoniana* - *Interrupted fern* {PL}. Young fronds are eaten. The center of the clump below ground level is the source of a small edible pith called *fern butter*. Northern temperate region. FREY, TANAKA; A61, C9, D75M, E33M, G16, H63, L59P, M42

## OXALIDACEAE

*Biophytum sensitivum* - *Surelle sensitive, Chua me la me* {PL}. The leaves are eaten in Indochina. Southeast Asia. TANAKA; G96, N84

*Oxalis acetosella* - *Sour-grass* {S}. The sour leaves are high in oxalic acid, but small amounts may be used like sorrel in salads, soups, and sauces, or chewed for their mildly tonic and refreshing qualities. Said to be the original leaves and stems used by the French in their *Julienne* soup. Romanian shepherds of the Radna Mountains have used the herb for curdling ewe's milk. Northern temperate region. FERNALD, GRAY, P. [Cul], GUNDA, MABEY, MICHAEL [Re], VILMORIN [Cu]; J75{PL}, N84, 048

*Oxalis corniculata* - *Procrumbent yellow wood-sorrel* {S}. Leaves are eaten raw in salads, cooked as a potherb with milder flavored greens, or used to give a sour flavor to other foods. The fruits are chewed as a refreshing nibble. Cosmopolitan. OCHSE; N84

*Oxalis deppei* - *Deppe's wood-sorrel* {PL}. Young leaves are used like sorrel in salads and soups. The flowers are excellent in a salad, alone or mixed with corn salad. Fleshy roots are boiled and served like asparagus. Mexico, cultivated. BURR, HEDRICK 1919, VILMORIN [Cu]; C81M, D11M, F70, H49, J37M, R49

*Oxalis oregana* - *Redwood sorrel* {PL}. The leaves and stalks may be eaten raw in salads, or a mass of them is allowed to ferment slightly to make a tasty dessert. A sort of rhubarb pie is made from the sour leaf stalks. Western North America. KIRK; B92, D95, E63M, E87, 198M, J75, L26, N84{S}

*Oxalis stricfa* - *Yellow wood-sorrel* {S}. Leaves are consumed raw, cooked as a green vegetable, or chewed to quench the thirst. The seed pods, called *little bananas*, are edible. Flowers and roots are also eaten. North America. KINDSCHER, UPHOF, YANOVSKY; M34M, N84

*Oxalis tuberosa* - *Oca* {PL}. When dried in the sun the edible tubers become wrinkled, dry, floury, and sweet, and the calcium oxalate content is reduced. They are then eaten raw, boiled in soups and stews, or candied like sweet potatoes. Further drying produces *cavi*, which is eaten with honey or sugar cane as a dessert, and *chuha de oca*, a desiccated product that gives a distinctive flavor to stews. The leaves are edible. Andean South America. HERKLOTS, HODGE 1951, MARTIN 1975, NATIONAL RESEARCH COUNCIL 1989, ORGAN; E13G{PR}, F73D, N84, Q49M, R49, R53M CULTIVARS

**Blush:** Cylindrical, distinctly wrinkled tubers. Glossy white to cream colored skin, blushed with pink or purple. Firm white flesh. 174

**Mexican:** Very crisp, juicy, mild-flavored tubers. Attractive wine colored, velvety leaves and rosy flowers. Ornamental as well as useful. 174

**Orange:** Cylindrical, distinctly wrinkled tubers. Glossy orange to yellowish-orange skin. Firm white flesh. 174

**Red:** Cylindrical, distinctly wrinkled tubers. Glossy red to reddish-purple skin. Firm white flesh. E13G{PR}, 174

**White:** Cylindrical, distinctly wrinkled tubers. Glossy white to creamy white skin. Firm white flesh. 174

**Yellow:** Cylindrical, distinctly wrinkled tubers. Glossy yellow to creamy yellow skin. Firm white flesh. 174

*Oxalis violacea* - *Violet wood-sorrel* {PL}. The acid, salty leaves are eaten raw in sandwiches and salads or cooked as a potherb. Flowers make an attractive and tasty garnish for salads. Flower stalks and roots are also eaten. North America. KINDSCHER, MORTON 1976, YANOVSKY; I11M, J39M, L55

## PAEONIACEAE

*Paeonia albiflora* - \**Paeonia lactiflora*

*Paeonia lactiflora* - *Chinese peony, Shao-yao* {S}. Roots are boiled and eaten by the nomads of Northern Asia, who also powder the seeds to mix with their tea. Central to Eastern Asia. HEDRICK 1919; N84, Q24

*Paeonia officinalis* - *Peony, Common peony* {S}. In Europe, the hot seeds were once ground into a spice and used for flavoring ale or accompanying food. They were also used to decorate creams in the manner of sliced almonds, and the Mongolians made a tea from them. The flowers are eaten as a vegetable or used to scent tea. Eurasia. LEYEL 1987b, LOVELOCK, MACNICOL [Re], UPHOF; A61, A61{PL}, B77{PL}, C9{PL}, N84, 053M

*Paeonia suffruticosa* - *Tree peony, Botan, Mu-tan* {S}. Fallen flower petals are parboiled and sweetened for a teatime delicacy or cooked in various dishes. China. TANAKA; B9M{PL}, C9{PL}, K38, K63G, M65M{?L}, N84, 053M, P49, R78

## PANDACEAE

*Panda oleosa* - *Kana* {S}. The oily seeds have a nutty flavor and are occasionally eaten. In Gabon and Cameroon, the oil or crushed seeds are used as a condiment or sauce: West Tropical Africa. DALZIEL, DANFORTH, MENNINGER; Y40

## PANDANACEAE

*Freycinetia banksii* - *Kie-kie* {PL}. The large, fleshy, thick white floral bracts are sugary and are eaten raw or made into jelly. Ripe fruits are also eaten. New Zealand. COLENZO, FULLER, HEDRICK 1919; G96

*Pandanus amaryllifolius* - *Pandan wangi, Daun pandan, Bai toey* {DF}. The fragrant young leaves are cooked and eaten or used as a condiment. Fresh or dried, they add flavor, a distinctive musky odor and natural green color to tofu, jellies, doughs, curries, syrups, sauces, coconut rice, and the Indonesian and Malaysian sweets *chendol* and *nyonya kuey*. They are widely used in Sinhalese yellow rice and Indonesian *nasi kunyit* (glutinous yellow rice), being added to the cooking oil with other spices before the rice and liquid are added to the pot. Also used for wrapping foods, such as the festive Chinese glutinous rice dumplings known as *zongzi*. Southeast Asia. BALASURIYA [Re], COST 1988 [Cul], COTTERELL [Re], SHURTLEFF 1979, STONE, UPHOF, VON WELANETZ; A7, A45, C34G, L16M

*Pandanus fascicularis* - *Kevda, Padang* {S}. Male spadices, popularly called flowers, are the source of *kevda attar*, used for imparting flavor to betel nut (*pan masala*). They also yield *kevda water* or *kevra essence*, which is employed as a flavoring for syrups, soft drinks, Sinhalese curries, *rasgoola*, and an Indian rice dish called *biryani*. India. ATAL, DEVI [Re], DUTTA, VON WELANETZ; F74{PD}, N84, Q46

*Pandanus latifolius* - \**Pandanus amaryllifolius*

*Pandanus odoratissimus* - *Pandanus tectorius*

*Pandanus odoratus* - \**Pandanus amaryllifolius*

*Pandanus tectorius* - *Nicobar breadfruit* {S}. Fleshy pulp of the fruit may be eaten raw, cooked, or made into flour, paste and thin, flat cakes. The flour is mixed with palm syrup or diluted with water to form a popular drink. Tender, white bases of the young leaves are eaten raw or cooked. The terminal bud is consumed like palm cabbage. Aerial roots are cooked and eaten or processed into a beverage. Seeds are consumed after careful preparation. Flowers and pollen are also edible. Malaysia to Polynesia. ALTSCHUL, DEGENER, DUKE, HEDRICK 1919, MASSAL, TANAKA, UPHOF; A41G{PL}, F85, 174{PL}, N84, 093

## PAPAVERACEAE

*Glaucium flavum* - *Horned poppy* {S}. Seeds are the source of a clear yellow oil used in food. Mediterranean region. HEDRICK 1919, UPHOF; C43M, D92M, D95{PL}, E7M, F24D, F68T, F85, L91M, N84, 053M, Q24, S55

*Meconopsis nepalensis* - *Himalayan poppy*, *Satin poppy* {S}. An edible oil is extracted from the seeds. Himalayan region. TANAKA; D92M, F80, L91M, N84, Q24

*Papaver orientale* - *Oriental poppy* {S}. Said to be used as a condiment. Unripe capsules, though very acrid and hot in taste, are reportedly eaten as a delicacy. In Turkey, the seeds and flower parts are eaten. Turkey to Iran. HEDRICK 1919, OZTURK, TANAKA; F35M{PL}, F73D, H63{PL}, I81M, K53, K63G, L21{PL}, M65M{PL}, N23, N84, S55

*Papaver rhoeas* - *Corn poppy*, *Shirley poppy*, *Flanders poppy* {S}. Young leaves are cooked and seasoned like spinach, or used as a flavoring in soups and salads. A syrup prepared from the scarlet flower petals has been employed as an ingredient in soups and gruels. They also yield a red pigment used for coloring, especially wine. The seeds are used in cakes, breads, and rolls or pressed for their oil, an excellent substitute for olive oil. Eurasia, cultivated. BIANCHINI, GESSERT [Cu], GRIEVE, HEDRICK 1919, LARKCOM 1984, MABEY, MACNICOL [Re], UPHOF; A2, E7M, E33, F80, G59M, H80, J82, J88, K53, M47M, N11M, N23, 053M

*Papaver somniferum* - *Breadseed poppy*, *Opium poppy* {S}. Young seedlings are eaten as a vegetable. The seeds, called *maw seeds* in Europe and *khas-khas* in the Middle East, are widely used in breads, cakes, rolls, milky soups, rice dishes, stews, curries, salad dressings, and sweetmeats. When crushed and sweetened, they are used as a filling for crepes, strudels, pastries, etc. *Poppy-seed oil* is used like olive oil in French cooking, where it is known as *olive*. A paste made from poppy-seed oil and roasted, ground poppy seeds is widely used in Turkish cuisine. Mediterranean region to Asia Minor. BURR [Cu], HEDRICK 1919, HANNEMAN, KAPOOR [Nu], MORTON 1976, NORMAN, ORTIZ 1992, PAINTER [Cu], [Re], UPHOF, VON WELANETZ; A2, A49D{DF}, B31{DF}, C95, F68T, I49M{PL}, J11M{DF}, K63G, L3J, L79, L90J{PL}, M32, N84, R53M, S55, etc.

## CULTIVARS

**Carnation:** Heirloom English cultivar with flavorful, nut-brown seeds. Capsule pores open when mature so seeds can be poured out while preserving seed pods for dried arrangements. Hilly, pink petals, some with attractive purple tinges. N7G

**Elka:** White-seeded type with a sweeter, more nut-like flavor than the blue-seeded forms. Combined with Ziar and used as a walnut substitute in the local cuisine. Yields an excellent cooking oil, with 50% more oil than common types. Very large seedheads, 11/2 inches wide and 2 inches high, 75% unvented. Lavender flowers. Originally from Chrenovec in central Slovakia. D68, H15P, L88J

**Hungarian Blue-Seeded:** Capsules large; seeds grayish-blue, numerous. Flowers large, lavender, tulip-like. This is the cultivar commonly grown for its seeds which are used in baking and oil extraction. F35M{PL}, F73D, H15P, I81M, J73, J82, N7G, N84, 053M

**Hutterite:** Copious producer of seeds that are used in breads and cakes. Large, crinkled, pale white flowers with a lavender-banded throat. Best appearance when massed. Dried seed stalks can be used in wreaths and everlasting bouquets. Grows 3 to 4 feet tall. Brought to America by Hutterite immigrants. F73D, K49Z, L88J

**Pepperbox:** Nutty seeds can be added to pastries, breads and rolls. Graceful, 3 to 4 foot tall plants. Semi-double blossoms in shades of vivid red and dark purple. Large urn-shaped seed pods are suitable for dried arrangements. Developed in Holland. D92M, E7M, K66

**Przemko:** New improved breadseed type developed for extremely low morphine content in the dry seed capsule—less than 0.01%.

Easy to grow and very productive. Plants may need staking as seed pods have a tendency to fall over just before harvest. Przemko is Polish for “prize” or “premium”. C53, E28M, G6, L7M, M65, N84

**White Persian:** (White) Seeds white, smaller and milder in flavor than the blue-seeded cultivars. White-seeded forms are preferred in India, Japan and some Scandinavian countries for use in breads, halava, chutneys, cakes and cookies, and for thickening sauces and gravies. BANERJI [Re], DEVI [Re]; A7{DF}, A49D{DF}, C34G{DF}, F68T, F74{DF}, J39, J73, L3J, L16{DF}, N84

**Ziar:** Bluish-black seeds. Bred to eliminate the vents in the large seedhead, thus preventing the seeds from shattering. Combined with Elka and used as a walnut substitute in the local cuisine. White-lavender flowers. Originally from Chrenovec in central Slovakia. Reselected to adapt to the cold climates of Canada and Maine. D68

## PASSIFLORACEAE

*Passiflora alata* - *Maracuja grande* {S}. Large, yellow fruits with an agreeable flavor, much appreciated for making drinks. Peru, Brazil. UPHOF; D57{PL}, L91M, N7J{PL}, N84, 093, P5, P38, R77{PL}

## CULTIVARS {GR}

**Ruby Glow:** Very large flowers, 5 to 6 inches long; deep crimson petals and blue and white striped filaments with an intense sweet fragrance. Tropical looking, 6 inch, glossy green leaves are not bothered by caterpillars. Produces a delicious grapefruit-sized, yellow fruit when cross pollinated. Developed by Ithrick Worley. G20, J27, L90J, N7J

*Passiflora ambigua* - *Granadilla de monte* {PL}. The large, edible fruits are at first sweet, becoming sour after sucking for a while. Mexico to Panama. VON REIS, WILLIAMS, L.; N84

*Passiflora ampullacea* - *Gulin*, *Creampassionfruit* {S}. The tasty fruits are good to eat out of hand. A promising species for commercial cultivation. Hybridizes readily with *P. mollissima*. Ecuador. NATIONAL RESEARCH COUNCIL 1989; L55J, N84, 053M, P5

*Passiflora antioquiensis* - *Banana passionfruit* {S}. Yellow, ellipsoid fruits have an aromatic pulp that is eaten out of hand, or used to prepare refreshing drinks. Similar to *P. mollissima*, but the fruit is juicier and of better eating quality, and the flowers are bright red. Colombia-Ecuador. NATIONAL RESEARCH COUNCIL 1989, UPHOF; L91M, N84, 097{PL}, Q49M{PL}, R77{PL}

*Passiflora caerulea* - *Blue crown passion-flower* {S}. Ripe fruits are eaten raw or made into a refreshing drink. Unripe fruits are boiled and eaten. The flowers can be made into syrup. Brazil-Argentina, cultivated. CROWHURST 1973, KUNKEL, SIMMONS 1972, TANAKA; C92, D11M, F70, F80, G20{PL}, H4{PL}, J27{PL}, J61M{PL}, N7J{PL}, N84, Q32, R88, S92

*Passiflora coccinea* - *Scarlet passionfruit* {S}. The fruit is yellow-mottled and striped, edible. Mostly grown for the showy red and white flowers. Northeastern South America. MARTIN 1970, TANAKA; G96{PL}, H4{PL}, N84, 093, P5

*Passiflora cumbalensis* - *Curuba bogotana*, *Rosy passionfruit* {PL}. The banana-shaped fruits are eaten. They have attractive, bright red skin and aromatic, mildly biting orange flesh. Often added to ice cream, drinks, yoghurt and other food preparations. Sold in local markets and supermarkets. Andean region, cultivated. NATIONAL RESEARCH COUNCIL 1989; L55J{S}, N7J, N84

*Passiflora x decaisneana* (*P. alata* x *P. quadrangularis*) - {PL}. Artificial hybrid. Produces large, tasty fruit when pollinated with *P. caerulea*. It also has attractive, sweetly scented flowers. MARTIN 1970; N7J, N84{S}

*Passiflora edulis* - *Purple passionfruit*, *Purple granadilla* {PL}. When ripe, the aromatic fruits are allowed to wrinkle and develop sweetness, and are then eaten raw, juiced, made into syrup, or used in sauces, custard, cakes, sherbet, pies, fruit soups, candies, ice

cream, etc. A soft drink called *passaia*, and a wine sold as *parchita seco* are made from passionfruit. The seeds yield an edible oil. South America, cultivated. CUSUMANO [Cu, Re], MORTON 1987a, POPENOE, W. 1920 [Cu, Pro], SCHNEIDER 1986 [Re]; A79M{S}, B60M{PR}, C9M{S}, E13G{PR}, E29, F21MIPD}, F80{S}, G5M{DF}, G96, J61M{PD}, K38{S}, L17{PD}, L91M{S}, N40{DF}, 053M{S}, etc.

#### CULTIVARS {GR}

**Alice:** Selected by Clive Simms Nursery from numerous seedling plants. Self-fertile vine with excellent flavored sweet fruit. Selected for free flowering, delicious fruit, and its ability to produce fruit in small pots indoors. J61M

**Black Kniat:** Very fragrant, dark purple-black fruit, the size and shape of a very large egg; flavor excellent. Vigorous, compact vine; self-fertile, very fruitful. Fragrant white and purple flowers. Hand-some glossy foliage. Excellent for containers. Developed by Patrick Worley. N7J

**Crackerjack:** A selected, heavy bearing, large-fruited form with purple-black, rounded fruits, much larger than normal for this species and full of flavorful, juicy pulp. An espalier trained plant in a 12 inch pot can produce up to 50 fruits in a season. Fruits from early autumn through to winter. N84, 097, R77

**Frederick:** (Bountiful Beauty) Large, nearly oval fruit; greenish-purple with a reddish cast; aromatic, slightly tart flavor. Good for eating out of hand, excellent for juicing and sherbets. Extremely vigorous, self-fruitful vine, more compact than *P. edulis* f. *flavicarpa*; very productive, bears from June through frost. Hardy to 25° F. Kahuna x Brazilian Golden. Originated in Lincoln Acres, California by Patrick Worley. D57, F16, G20, G49, 183M, N7J

**Frostv:** Developed by Rick McCain for coastal areas of California. Tolerates lower temperatures and produces fruit in cooler areas. Has survived heavy frosts. Also does well in warm regions. Medium-sized, light purple fruit with a rich flavor. Attractive, sweet-scented, frilly flowers, white with a purple center. N7J

**Nancv Garrison:** Hardy cultivar developed by the University of California. Hardy to about 25° F. A good producer of 2 to 3 inch long purple fruit. Glossy, three-lobed leaves. Two inch long flowers with a white and purple corona. L90J

**Purple Possum:** Large, round, reddish-purple fruit of good quality. Frilled, white and purple flowers. Produces abundant crops. Very susceptible to nematodes and root diseases. Originated near Homestead, Florida by Robert Barnum. E8M, G2M, G20

**Red Panama:** Large, well-filled fruit, about 3 1/2 inches long; quality excellent. Grows well in tropical areas. Hybrid between *P. edulis* and *P. edulis* f. *flavicarpa*. N84{S}, 019{S}, P5{S}

**Red Riveira:** Large, round to elliptical fruit; weight 3 to 6 ounces; skin reddish-purple; flesh bright orange with orange juice in cavities, flavor tart-sweet. Natural hybrid between *P. edulis* and *P. edulis* f. *flavicarpa*. Originated in Kona, Hawaii by Confessor Riveira. D57{OR}

**Red Rover:** Medium to large, roundish fruit; rind an attractive, clear red color; sweet, notably rich flavor with tart overtones. Good for eating out of hand or juicing. Vine very vigorous and productive; compact; self-fertile. Large flowers, white with a dark center. Kahuna x Brazilian Golden. Originated in Lincoln Acres, California by Patrick Worley. I83M, N7J

**Sunnvpush:** Giant black passionfruit grafted to *P. caerulea* to promote a stronger vine. Produces heavier crops on a wider range of soil types. S59

*Passiflora edulis* f. *flavicarpa* - *Yellow passionfruit*; *Maracuja peroba* {S}. Origin unknown, may be a mutation of the purple passionfruit. The fruit is generally larger and the vines are much more vigorous and productive. The pulp and juice are more acid, and there is a higher percentage of juice to pulp than in the purple form.

Grown in somewhat warmer climates. AKAMINE; C9M, D57{PL}, K8, L55J, N7J{PL}, N84, 053M, 093, P5, P17M, P38, Q32, Q41, R88, S92

#### CULTIVARS

**Golden Giant:** (Yellow Giant) A large yellow-fruited cultivar that originated in Australia. N84, P5

*Passiflora incarnata* - *Maypop*, *Apricot vine* {PL}. Ripe fruits are eaten out of hand, or made into jellies, jams, wines, sherbets, and refreshing drinks. The leaves are said to be delicious as a cooked green or eaten raw in a salad. Flowers are eaten as a vegetable or made into syrup. Southeastern North America. FERNALD, GIBBONS 1979 [Re], MACNICOL [Re], MEDSGER, SIMMONS 1972 [Cu], SMITH, J.; H4, I11M, I49M, 174, L55, L90J, M16, N7J, N84{S}

*Passiflora laurifolia* - *Water lemon*, *Jamaica honeysuckle*, *Belle-apple*, *Sweet cup* {S}. The orange-yellow fruits have a fragrant, juicy, agreeably subacid pulp that is eaten fresh or processed into a refreshing beverage. One way of enjoying it is to make a hole in one end of the fruit and suck out the pulp and seeds. Tropical America, naturalized in Hawaii. MORTON 1987a; F85, N84, 093

*Passiflora ligularis* - *Sweet granadilla*, *Poka* {S}. Considered by many to be the best of the passifloras. The orange-yellow fruits contain a soft, translucent, perfumed pulp of very agreeable taste. They are cut in half and eaten with a spoon, or the strained juice can be used for making cooling drinks and sherbets. Tropical America, naturalized in Hawaii. MORTON 1987a, POPENOE, W. 1920; A79M, D57{PL}, G20{PL}, G73, I49M{PL}, K8, L55J, L90J{PL}, L91M, N7J{PL}, N84, P5, P38

*Passiflora maliformis* - *Chulupa*, *Sweet calabash* {S}. Sweet, juicy, aromatic fruits are said to have a grape-like flavor. The seedy pulp is eaten out of hand, made into cold drinks, or scooped from the shell and served with wine and sugar. Tropical America, cultivated. MARTIN 1970, MORTON 1987a, NATIONAL RESEARCH COUNCIL 1989; D57{PL}, L91M, N84, 053M, P5, R78M

*Passiflora manicata* - {PL}. The smallish, green fruits have orange pulp with few seeds and an agreeable, piquant flavor. They can be eaten out of hand or mixed with milk to make a pleasant beverage. South America. MARTIN 1970; D57, L90J, N7J, N84, 053M{S}

*Passiflora mixta* - *Curuba de indio* {PL}. Green to greenish yellow fruits have a pleasant, aromatic flavor similar to those of *P. manicata* and may be used in a similar manner. Central America to Bolivia. MARTIN 1970, PEREZ-ARBELAEZ; N7J, N84{S}, 053M{S}, R77

*Passiflora mollissima* - *Banana passionfruit*, *Tacso*, *Curuba de Castilla* {S}. The yellow, oblong, aromatic fruits are eaten out of hand, used in ice creams, cocktails, fruit salads, jellies, pies, puddings, sauces and sherbets, or made into a liqueur, *crema de curuba*. The juice is highly prized and is also fermented into wine. Andean South America. FRIED [Re], MORTON 1987a, NATIONAL RESEARCH COUNCIL 1989, UPHOF; A79M, F80, L90J{PL}, L91M, N7J{PL}, N84, 053M, P5, P17M, R88, S92

*Passiflora organensis* - *Nensi* {PL}. The round fruits are eaten. They have yellow pulp and a special flavor, much in demand in parts of Brazil for making pastries. Brazil. UPHOF; E48, N7J

*Passiflora pinnatistipula* - *Galupa* {PL}. The fruits are eaten raw or made into beverages. They have purple rinds and fragrant yellow pulp with an agreeable sweet-acidulous flavor. Andean region. CARDENAS, NATIONAL RESEARCH COUNCIL 1989; N7J, N84

*Passiflora platyloba* - *Montesa granadilla*, *Granadilla dcida* {PL}. The acid fruits are used in making ices and refreshing drinks. Central America. KUNKEL, WILLIAMS, L.; G20, G96, N7J, N84{S}, 053M{S}

*Passiflora popenovii* - *Granadilla de Quijos, Curubejo* {PL}. The juicy fruits are eaten, and are considered one of the best of all passifloras for eating out of hand. They have sweet pulp with a rich penetrating aroma and an exquisite flavor. A rare species occasionally cultivated in Ecuador and Columbia. Sold in local markets of Banos and Riobamba. Ecuador. NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924; N7J

*Passiflora quadrangularis* - *Giant granadilla* {S}. Unripe fruits are steamed or boiled and eaten in soups, or cut into pieces, breaded, and cooked in butter with pepper and nutmeg. The bland, melon-like pulp of the ripe fruit, with the inner skin removed, is eaten raw, candied, canned in syrup, used in fruit salads, pies, jellies, cold drinks, sauces, wine, or served with sugar and shaved ice. Roots of old vines are baked or roasted and eaten like yams. Tropical America, cultivated. DUKE, MORTON 1987a, OCHSE, UPHOF; A79M{PL}, E29{PL}, E48{PL}, F80, G20{PL}, G96{PL}, L55J, L90J{PL}, L91M, N84, 053M, 093, P5, P17M, Q32, etc.

*Passiflora serrato-digitata* - *Tagua-tagua* {PL}. The yellow, globose, brittle fruit has sweet, white pulp said to have the flavor of guava. Tropical America. MARTIN 1970; A26{S}, E29, F80, 112, N7J, N84

*Passiflora tripartita* - *Tacso* {S}. Fruits are oblong, deep yellow when ripe, often blushed with red on one side. The pulp is deep orange colored, juicy, of pungent subacid flavor. They are eaten out of hand or used to prepare refreshing drinks and ice creams. Ecuador. POPENOE, W. 1924; N84

*Passiflora van-volxemii* - *Passiflora antioquiensis*

*Passiflora vitifolia* - *Grape-leavedpassiflora* {PL}. Yellowish fruits with a thin, parchment-like shell. White pulp, very fragrant, with a sweet to subacid flavor. Used as a dessert or for making refreshing beverages. Central America to Peru. MARTIN 1970; D57, E48, F53M, G96, H4, H78, 183M, J27, N84{S}, 053M{S}, R77

CULTIVARS {GR}

**Scarlet Flame:** Large, 5 to 7 inch, bright red-scarlet flowers that cover the plant. If cross pollinated, an egg-shaped fruit is produced that is ornamental, with white spots and stripes on a watermelon green ground color. It is tart and fragrant with the taste of strawberries, and as with *P. edulis*, it should be allowed to become wrinkled before eating. G20, N7J, N84

*Passiflora* 'Elizabeth' - {PL}. When cross pollinated, yields a very large, golden-yellow, pentagonal fruit, somewhat reminiscent of a mountain papaya with sweet, fragrant, pale white flesh that is sweet and delicious. Very good for eating out of hand. Also produces large, sweetly scented, lavender blue flowers with extravagant frilled filaments. Developed by Patrick Worley. G20, N7J, N84

*Passiflora* 'Purple Tiger' - {PL}. When cross pollinated with *P. caerulea*, yields a very large fruit similar to Elizabeth, very fragrant and with outstanding flavor. Strong growing plant with large oval leaves, angled stems, and very large, sweetly scented flowers with deep red-purple petals and white filaments highly striped in violet-blue. *P. alata* x *P. quadrangularis*. Developed by Patrick Worley. N7J

*Tacsonia mollissima* - *Passiflora mollissima*

PEDALIACEAE

*Ceratotheca sesamoides* - *False sesame* {S}. Leaves are consumed as a vegetable or added to soups for their mucilaginous properties. Seeds are eaten like those of sesame, and are also put in soups with the leaves. They also yield an edible oil. Often sold in markets. Tropical Africa. TANAKA, UPHOF, ZEVEN; N84, S28M

*Pedalium murex* - *Burra gookeroo* {S}. The mucilaginous leaves are eaten as a vegetable. The leafy stems have been used to thicken

buttermilk. Tropical Africa, Tropical Asia. HEDRICK 1919, LEYEL 1987a, UPHOF, WATT; F85

*Sesamum alatum* - *Gazelle's sesame, Tacoutta* {S}. The seeds are ground into flour, used in soups, or pressed for their edible oil. Leaves are used as a vegetable. Tropical Africa. DALZIEL, KUNKEL, TANAKA, ZEVEN; N84, S28M

*Sesamum capense* - *Aprilbaadjie* {S}. The small light brown seeds are eaten with boiled maize. Also the source of an edible oil. Cultivated locally by the Lovedu people. Southern Africa. FCK, F.; N84, S28M

*Sesamum indicum* - *Sesame, Simsim* {S}. Seeds are eaten dry, toasted, sprinkled on breads, cakes, and cookies, fermented into *tempeh*, made into nut milks and *seed yogurt*, or used for *halava* and other confections. They yield an oil, sometimes called *bene oil*, used in salads, margarine, and shortenings, or when made from roasted seeds employed as a flavoring, especially in oriental cuisine. In West Africa and the Southern United States, sesame seed meal is used for thickening soups and stews. *Gomashio* or sesame salt is a seasoning made of the roasted, ground seeds mixed with salt. Crushed seeds, hulled or unhulled, form sesame paste, sesame butter, and *tahini*. *Benne Wafers*, crisp cookies sprinkled with sesame seeds, have been popular in the Lowcountry of South Carolina since Colonial times. Sprouted seeds are eaten in salads. Leaves are eaten raw in salads, as a potherb, or in beverages and soups. Sesame seed presscake is made into confections or fermented into *dageh* and *sigda*. In the Sudan, a filtrate of the ashes from burnt stalks is added to stews. Tropical Africa, cultivated. BEDIGIAN, COLE, C. 1990 [Re], DIRAR 1993, HARRINGTON, H. [Cu, Cul], MEYEROWITZ 1994b [Re], MILLER, X, OCHSE, PAINTER [Re], ROSENGARTEN, SHURTLEFF 1975, SHURTLEFF 1979, TANAKA; C22{ED}, D92M, E7M, F80, F88{PD}, G68, K22, N84, 053M. (see also Sprouting Seeds, page 524)

CULTIVARS

**Afghani:** 110 days. Very early maturing, dependable strain that likes hot weather. Grows to 3 feet tall; produces an abundance of seed-filled pods. Tan seeds. Has strikingly beautiful, candelabra-like tillers. I99M, K49T

**Black Seeded:** {DF} Plants tall and lanky, branching, susceptible to lodging and shattering. Seeds are jet black, not as bitter as tan types, popular in oriental cooking. Often toasted and ground to a powder, mixed with sugar, and used for coating certain Chinese sweets. In Korea, they are made into a gruel called *hugimjajuk*. COST 1988 [Cul], NOH [Cul, Re]; A7, A49D, C27G, C34G, E56, F85{S}, F88, G47B, H91, H91{£D}, I19M, K2, L17, M15M

**Black Thai:** 120 days. Very tasty black seeds, sweet and rich, esteemed in oriental cooking. Drought tolerant plant, 5 to 6 feet tall, with much candelabra-like tillering. Attractive, pinkish-white flowers. Landrace from Thailand. C95, F73D, L3J, N84

**Brown Turkey:** 115 days. Dark brown seeds. Drought tolerant plant, 5 to 6 feet tall. Harvest when 5 to 10% of seed capsules are beginning to open. Landrace from Turkey. C95, L3J, L77D

**Tan Anatolian:** 118 days. Light-colored seeds similar to commercial sesame. Very good flavor. Drought tolerant plant, 5 to 6 feet tall. Landrace from the central plateau of Asia Minor. F73D, L3J

*Sesamum orientale* - *Sesamum indicum*

*Sesamum radiatum* - *Black beniseed, Bcuku* {S}. Young leaves and shoots are finely cut, cooked and eaten with cereals or added to soups. They have a mucilaginous texture and unpleasant smell. Seeds are eaten and also yield an edible oil. Tropical Africa, cultivated. DALZIEL, VAN EPENHUSEN, ZEVEN; U37M

PEPEROMIACEAE

*Peperomia maculosa* - *Culantro peperomia* {S}. The coriander-flavored leaves are used for seasoning beans and meats. Sold in local markets. Tropical America. ALCORN; 053M, Q32

*Peperomia pellucida* - *Greenhouse tea plant, Suna-kdsho* {S}. A small, weedy plant with succulent leaves and shoots that can be eaten in salads or used as a potherb. In the West Indies, the leaves are also brewed into tea. Tropical America. JACQUAT, MARTIN 1975, ZEVEN; N84

## PERIPLACACEAE

*Hemidesmus indicus* - *Indian sarsaparilla* {DF}. Roots are the source of a syrup used as a flavoring agent in foods, instead of true *sarsaparilla* (*Smilax* spp.). Southern Asia. TANAKA; E14T, F85{S}, F86G, GO, K18M, L36M, M15M, N7D

*Raphionacme hirsuta* - *Ghali* {S}. The large underground tuber is mixed with sugar and brewed into an intoxicating beer. Yeasts or molds that grow on the roots apparently contribute to the fermentation. Southern Africa. FOX, E; N84, S28M

## PHILESIACEAE

*Lapageria rosea* - *Chilean bellflower, Copihue* {S}. The fruits are yellow, the size of an egg, and have sweet, white, juicy pulp that is eaten fresh or processed. National flower of Chile. Chile, cultivated. HEDRICK 1919, VALENZUELA; C95, F80, K63G, K71, L91M, M46, N84, 053M, R77{PL}

## PHYTELEPHASIACEAE

*Phytelephas macrocarpa* - *Ivory nut palm* {S}. Young shoots are eaten as a vegetable. Fruits are consumed when young or used as a coffee substitute. The sweet liquid of the unripe seed has been used to quench the thirst. Tropical America, cultivated. HEDRICK 1919, KUNKEL, MENNINGER; A41M, A79M, K47G, I84M{PL}, N84

## PHYTOLACCACEAE

*Phytolacca acinosa* - *Indian pokeberry* {S}. The leaves are boiled and eaten like spinach or used in curries. Young shoots are used as a substitute for asparagus. Tropical Asia. BURKILL, HEDRICK 1919, TANAKA, WATT; F73D, F80, F85, 174, I81M, N9M, N9M{PL}, N84, 053M, Q24

*Phytolacca acinosa* var. *esculenta* - *Yama-gobo* {S}. Young leaves are cooked and eaten like spinach, oil-roasted, or put in soups. Roots are also edible. Tropical Asia. BROWN, W, BURR, TANAKA; N84

*Phytolacca americana* - *Pokeweed, Pokeberry, Poke salad* {S}. Unfolding leaves are cooked and served life spinach. Young shoots are excellent when prepared like asparagus, or they can be made into pickles. The tender, clear, inner portion may be rolled in white corn meal and fried. They are sometimes blanched before using, and also forced in dark cellars for winter use. Ripe berries are used for coloring wine, frostings, and candies. Seeds and roots are poisonous. North America. ANGIER [Re], BURR [Cu], FERNALD, GIBBONS 1962 [Pre, Re], MEDSGER, MORTON 1977, UPHOF; D92M, E61{PL}, F37T{PL}, F68T, F80, G68, J82, M34M, N84, 053M, Q24, S55

*Phytolacca decandra* - \* *Phytolacca americana*

*Phytolacca dioica* - *Bella sombm* {S}. Young leaves and shoots are cooked and eaten as vegetables. Fruits are made into jellies and jams or used to give red color to wines. Argentina, cultivated. FOX, F., TANAKA; G66, 133, N84, 053M, 093, P5, Q41, R88, T25M

*Phytolacca esculenta* - *Phytolacca acinosa* var. *esculenta*

*Phytolacca rivinoides* - *Venezuela pokeberry* {S}. Cooked leaves and shoots are eaten as a vegetable. Leaves are boiled and used for tea. Tropical America. ALTSCHUL, UPHOF, WILLIAMS, L.; F85

## PINACEAE

*Abies alba* - *Silver fir* {S}. Source of a greenish to brown honey-dew honey with a sweet, treacly or slightly resinous flavor. Popular

as a "tonic" honey in parts of Europe. The inner bark was made into a cake-like bread by the Lapps and Eskimos. Eurasia. CRANE 1984, TANAKA; A51M{PL}, D95{PL}, G66, K38, K63G, N71M, N84, 093, P5, P17M, P49, Q32

*Abies amabilis* - *Amabilis fir* {S}. Young branch tips are used as a substitute for tea. Northwestern North America. TURNER 1978; A2, B94, D95{PL}, D96, G66, K38, K63G, K75, \*75{PL}, N71M, N84, P49, R78

*Abies balsamea* - *Balsam fir* {S}. The aromatic, resinous pitch that exudes from the trunk, called *Canada balsam* or *spruce gum*, is molded into short sticks and used for chewing. It yields an oleoresin used to flavor candy, baked goods, ice cream and beverages. Inner bark can be ground into flour and used as an emergency food. Tips of twigs are used for tea. Eastern North America. MEDSGER, MORTON 1976, PETERSON, L., TURNER 1978; B94, C33{PL}, D45{PL}, G66, H49{PL}, I4{PL}, K38, K63G, K75, X75{PL}, N84, 053M, 093, R78

*Abies excelsior* - *Great silver fir, Grand fir* {S}. Young shoots are used as a tea substitute. The inner bark, or cambium, is used as an emergency food. Northwestern North America. TURNER 1978, YANOVSKY; A2, C9M, C33{PL}, C95, D95{PL}, E47, H49{PL}, 147, J26{PL}, K38, K63G, K75, AT75{PL}, M51M, 053M, etc.

*Abies grandis* - *Abies excelsior*

*Larix occidentalis* - *Western larch* {S}. *Larch gum*, exuded from the trunk and branches, is sometimes used for chewing. In the food industry it has become a substitute for gum arabic and serves as a thickener, stabilizer, emulsifier, and binder. The sap is made into a sweet syrup. Also the source of an edible manna. Western North America. BROUK, DONKIN, HART, YANOVSKY; A2, B94, G66, 147, J26{PL}, K38, K63G, K75, M35M{PL}, M74M, N84, 053M, P49

*Picea abies* - *Norway spruce* {PL}. The leafy branch or young shoot is used in the preparation of *spruce beer*. In France and Switzerland, *Vacherin d'Abondance* and *Vacherin Mont d'Or* cheeses are bound with bands of spruce, which permeate the cheese with a distinct and pleasant flavor of spruce resin. Eurasia. HEDRICK 1919, MASUI; C11M, D45, F85J{£D}, H49, 14, J16, K38{S}, K63G{S}, K75{S}, M51M, N84{S}, 053M{S}

*Picea excelsa* - \* *Picea abies*

*Picea glauca* - *White spruce* {PL}. *Spruce oil*, distilled from the leaves and twigs, is used in the food industry to flavor chewing gum, ice cream, soft drinks, and candy. Young cones are eaten roasted, fried, or pickled. The inner bark is used as an emergency food. The trunk yields a gum used for chewing. North America. FERNALD, KUNKEL, MORTON 1976; C11M, D45, H49, 14, J16, K38{S}, K63G{S}, K75{S}, M74M{S}, 053M{S}, Q32{S}

*Picea mariana* - *Black spruce* {S}. The sap and young twigs are boiled with honey, molasses, or maple sugar and fermented with yeast to produce the famous beverage known as *Danzig spruce beer*. A resinous exudation, *spruce gum*, is collected from the branches and used as a masticatory. Also a source of *spruce oil*, used commercially for flavoring. North America. FORGET, GIBBONS 1962 [Re], MORTON 1976, UPHOF; B94, D95{PL}, E87{PL}, G66, K38, K63G, K75, M74M, N71M, N84, P49, R78

*Picea nigra* - \* *Picea mariana*

*Picea pungens* 'Glauc' - *Colorado blue spruce* {S}. The needle tips are used for making a jelly which can be served with lamb, venison or breakfast muffins. Occasionally available at specialty markets. Western North America. SCHOFIELD; B94, C9M, C33{PL}, C38{PL}, D96, G66, G66{PL}, H92{PD}, J16{PL}, K38, K63G, K75, AT75{PL}, M74M, P49, etc.

*Pinus armandii* - *Chinese white pine, Yu-sung* {S}. The seeds are eaten and are esteemed as a great delicacy. China. TANAKA; B94,

B96{PL}, C9M, D95{PL}, F85, G66, K38, K63G, M92{PL}, N37M{PL}, N84, P5

*Pinus ayacahuite - Mexican white pine* {S}. The Tepehuan of Chihuahua eat the seeds in the western Sierra Madre. Mexico. LANNER; B94, C9M, F85, 128{PL}, K63G

*Pinus cembra - Swiss stone pine* {S}. Seeds are eaten in certain pastries and dairy foods. They also yield an edible oil. Eurasia. HEDRICK 1919, JAYNES, UPHOF; B94, C9M, D37{PL}, E47, E87{PL}, E91M{GR}, F80, G66, K38, K63G, M35M{PL}, N71M, P17M, Q32

*Pinus cembroides - Mexican pinyon* {S}. The oily seed kernels are eaten raw, roasted, ground into flour for baking into cakes, or made into a nut butter. Of all the pinons, they are richest in protein and the lowest in starch. Southwestern America. JAYNES, LANNER, MENNINGER; B94, C95, D95{PL}, F80, G66, I74{PL}, I83M{PL}, N84, 093

*Pinus cembroides van edulis - \*Pinus edulis*

*Pinus cembroides van maximartinezii - Pinus maximartinezii*

*Pinus cembroides van monophylla - Pinus monophylla*

*Pinus cembroides van parryana - \*Pinus x quadrifolia*

*Pinus coulteri - Coulter's pine, Big-cone pine* {S}. The large seeds are eaten in California. Southwestern North America. MENNINGER, UPHOF; B94, C9M, D95{PL}, D96, F80, G60{PL}, G66, I98M{PL}, K38, K63G, N84, 093, P5, Q32

*Pinus densiflora - Japanese red pine; Sonamu* {S}. Young green cones and mature needles are used in the production of Korean wines. The needles are also used to give a distinct resinous flavor to Korean autumn festival *half-moon rice cakes* and other sweets, which are steamed over beds of the needles. The pollen is added to provincial cookies sold in Korean markets. Seeds and inner bark have also been recorded as being edible. Japan, Korea. MILLON, PEMBERTON, TANAKA; B9M{PL}, C9M, D95{PL}, E47, F80, G66, I77M{PL}, I83M{PL}, K38, K63G, N0{PL}, N71M, 053M, P5, Q32, etc.

*Pinus edulis - Colorado pihon, Rocky Mountain nut pine* {S}. The oily, protein-rich seeds are eaten raw or roasted, or used in breads, cookies, confectionery, nut butters, ice cream, sauces, stuffings, pilafs, etc. Or they can be ground into a meal and used in gruels, soups, and puddings, or mixed with cornmeal or sunflower seed meal. Roasted seeds are also added to gourmet coffees, cocoa and herbal teas. The needles are brewed into a tea. Soft centers of green cones, when roasted, form a syrupy food. The sweet cambium is cut into thin strips and cooked like spaghetti. Southwestern North America. ANGIER [Re], COX [Re], HARRINGTON, H., LANNER [Nu, Re], MEDSGER; B94, C9M, D95{PL}, E47, F80, H1M{DF}, H49{PL}, I34{PD}, 147, I83M{PL}, J25M, K38, K63G, L75, N24M{PL}, P17M, etc.

*Pinus excelsa - \*Pinus wallichiana*

*Pinus gerardiana - Chilgozapine* {S}. The seeds are eaten raw or roasted as a dessert in the same way as pistachio nuts. They are greatly appreciated in areas of the world where they grew, and are gathered and sold in native markets. Large quantities are imported into India from Afghanistan. Himalayan region. MENNINGER; B94, D95{PL}, F9iZ{PL}, G66, H4{PL}, K38, K63G, N79M, N84, P17M, Q12, Q18, Q40, Q46

*Pinus griffithii - Pinus wallichiana*

*Pinus halepensis - Aleppo pine* {S}. The thin-shelled seeds are eaten, being of excellent flavor and quality. In Northern Africa, they are frequently added to cakes made for celebrations, and they are an ingredient (with sorghum) of a luxury beverage which is highly appreciated during the month of Ramadan. Also coarsely ground and sprinkled over *acida*, a famous Tunisian pastry. In Greece, the resin

which exudes from the trunk is used in modern day production of *retsina* and *kokkineli* wines. Seeds are sold in local markets. Mediterranean region. BOUQUET, CLARKE, LAMBERT-G6CS, ROBINSON, J. 1994; A7M{PD}, A41M, B94, C9M, D96, F53M{PL}, G66, I68{PL}, I83M{PL}, JO, K38, K46{PL}, K63G, N84, 053M, 093, P5, Q32, etc.

*Pinus koraiensis - Korean nut pine, Chinese nut pine* {S}. Seeds are eaten raw or roasted, used as an ingredient of candies, sweet cakes, glutinous rice desserts, *congee*, fancy kimchi, a kind of steak tartare, or fried as a garnish for drinks and savory dishes. Large quantities are exported by China. In Korea, the pollen is gathered and used in making cookies. Koreans also use the green cones for making wine, and they grind or finely chop the seeds into *pine nut powder* which is sprinkled on foods or used for coating sweet rice cakes and other delicacies. Eastern Asia. COST 1988 [Cul, Re], MILLON [Cul], NOH [Re], PEMBERTON, ROSENGARTEN; B94, C9M, D95{PL}, E47, E47M{DF}, E87{PL}, E91M{GR}, F80, G66, K38, K63G, N24M, N37M{PL}, N71M, P5, etc.

*Pinus lambertiana - Sugar pine* {S}. When cut into or wounded, the heartwood exudes a sap that forms lumps of a sugary substance that is sometimes used for sweetening food. When used in quantity it is cathartic. The seeds have a sweet kernel that is eaten raw, roasted, or pounded into cakes. Pacific Coast of North America. DONKIN, HEDRICK 1919, MEDSGER; A2, B94, C9M, D95{PL}, D96, G66, I98M{PL}, K38, K63G, K75, N24M{PL}, N71M, 093, P5

*Pinus maximartinezii - Martinez pihon* {S}. The edible seeds are very large, up to an inch long and as tasty as those of other species of pinon pine. Sold in the marketplace of Juchipila, Zacatecas. Mexico. LANNER; B94, D95{PL}, G66, I83M{PL}, 093

*Pinus monophylla - Single leaf pihon* {S}. Seeds are eaten raw or roasted, or ground and made into pancakes. They are the starchiest of the pinons and have the lowest protein value. Southwestern North America. GIBBONS 1979, LANNER; A18{PL}, B94, C9M, C43V, D95{PL}, D96, F85, G60{PL}, G66, I83M{PL}, I98M, I98M{PL}, K38, K63G, 093, etc.

*Pinus mugo* var. *pumilio - Mugo pine* {PL}. The leaves and twigs yield *pine needle oil*, and essential oil that flavors commercial baked goods, ice cream, candy, beverages and gelatin. Europe, cultivated. BURDOCK, LEUNG; A18, A50, A93M, C58, E87, G66{S}, H49, 14, K22, K38{S}, K63G{S}, M51M, NO, P5{S}, Q32{S}, etc.

*Pinus parryana - Pinus x quadrifolia*

*Pinus pinea - Italian stone pine; Pignolia nut* {S}. The seeds are eaten raw, roasted and salted, or used in sweetmeats, cakes, puddings, stuffings, *pesto* and *picada* sauces, pilafs, *macaroon* cookies, soups, *dolmas* (stuffed grape leaves), nut milks, etc. Romanian cooks grind entire young pinecones and use them to flavor game sauces. Also the source of an expensive, gourmet oil produced mostly in France. Mediterranean region, cultivated. ANDREWS, C. 1988 [Re], ANGIER, BIANCHINI, BISSELL [Cul], COLE, C. 1990 [Re], CUSUMANO [Cul, Re], GRAY, P. [Cul], ORTIZ 1992, ROOT 1980b; C9M, D37{PL}, D95{PL}, D96, E23M{DF}, F85, H73{PD}, I83M{PL}, K38, K63G, L91M, L99{DF}, N71M, N84, 053M, P17M, R47, etc.

*Pinus x quadrifolia - Parry pihon* {PL}. Apparently a natural hybrid. The oily seeds are an important food among the Indians of Baja California. They contain 11% protein, 37% fat, and 44% carbohydrate. Southwestern North America. LANNER, UPHOF; B94{S}, I83M, I98M

*Pinus remota - Remote pinyon, Texas pinyon* {S}. Recently discovered species whose seeds are eaten like those of other pines. Considered to be the thinnest-shelled of all the pinyons. First described in 1966, as a variety of the Mexican pinyon. Southwestern North America. LANNER; B94, K38

*Pinus roxburghii* - *Chirpine* {S}. The seeds are sometimes eaten. A sweet manna that exudes from the bark and twigs is used as food. Himalayan region. DONKIN, TANAKA; C9M, D96, F80, G66, H71, I65{PL}, I83M{PL}, K38, K46{PL}, K63G, 093, P17M, Q12, Q18, Q46, P38, etc.

*Pinus sabiniana* - *Digger pine* {S}. Large, oily seeds are eaten raw or roasted. The soft center of green cones can be roasted and eaten. Leaves are used as a tea substitute. Southwestern North America. CLARKE, JAYNES; A2, B94, C9M, D96, G60{PL}, G66, I83M{PL}, I98M, I98M{PL}, K38, K63G, N71M, 093, P5, P17M, R47, etc.

*Pinus sibirica* - *Siberian cedar pine* {S}. The highly nutritious seeds are eaten. They contain up to sixty four percent fat and are pressed commercially for the production of a cooking oil. The needles are brewed into a vitamin rich tea. Gathered from the wild on a large scale in Russia, and cultivated in plantations near the Ural Mountains. Eurasia. BURMISTROV [Nu], LANNER; B94, G66, K38, N61, N84

*Pinus strobus* - *White pine* {PL}. The fresh needles are brewed into an aromatic tea rich in vitamins A and C. An acceptable candy is made by boiling the tender new shoots in syrup. The firm, unexpanded male cones can be boiled, or stewed with meat. North America. FERNALD, GIBBONS 1966b, PETERSON, L.; B9M, B32, C11M, D45, D95, E33M, E47, H49,14, J16, K38{S}, N7T, 053M{S}, Q32{S}

*Pinus sylvestris* - *Scotch pine* {PL}. The leaves and twigs yield an essential oil, called *Scotch pine needle oil*, used by the food industry for flavoring beverages, frozen dairy foods, baked goods, etc. The cones have been used to flavor beer and wine. Inner bark can be used for making an emergency bread-like food. Also the source of a heavy bodied, strong flavored honeydew honey. Eurasia. BREMNESS, BURDOCK, CRANE 1975, FERNALD, LEUNG; A18, C9M{S}, C11M, C38, D45, E87, G66, G66{S}, H49,14,147{S}, J26, K38, K63G{S}, M35M, P5{S}, Q32{S}, etc.

*Pinus torreyana* - *Torrey pine* {S}. The large seeds are eaten raw or roasted. Southwestern North America. MENNINGER, UPHOF; A41M, B94, C9M, G66, 7777, I68{PL}, I83M{PL}, I98M, I98M{PL}, K38, K46{PL}, K63G, 093

*Pinus wallichiana* - *Indian blue pine* {S}. A manna-like substance that exudes from the leaves and twigs is eaten or employed in adulterating honey. The seeds are sometimes eaten. Himalayan region. DONKIN, TANAKA; B94, E87{PL}, F85, G66, H49{PL}, I83M{PL}, K38, K63G, M51M{PL}, N71M, 046, 093, P17M, Q12, Q18, etc.

*Pseudotsuga menziesii* - *Douglas fir* {PL}. A refreshing tea, high in vitamin C, is made from the young leaves and twigs. Young, tender tips impart a subtle, woody flavor to foods in which they are cooked. They can be used for dipping into marinades, basting barbecued meats or fowl, or infusing broths. The trunks exude a sweet manna-like substance. Western North America. BRYAN [Re], CLARKE, DONKIN, KIRK; B9M, C9M{S}, C11M, D45, E47, H49,14, K38{S}, K75, K75{S}, L75{S}, M51M

*Pseudotsuga taxifolia* - *Pseudotsuga menziesii*

*Tsuga canadensis* - *Eastern hemlock* {PL}. The young tips are used to make a tea and are also ingredients of *root beer* and *spruce beer*. The leaves and twigs yield *spruce oil*, used commercially to flavor chewing gum, ice cream, soft drinks, and candy. Inner bark is used as an emergency food. Eastern North America. FERNALD, HEDRICK 1919, MORTON 1976; B9M, C9M{S}, D45, D95, E33M, E47, H49,14, J16, K38, K63G{S}, K75{S}, N7T

*Tsuga heterophylla* - *Western hemlock* {S}. Young twigs are boiled with honey or molasses to produce *spruce beer*. Also a source of *spruce oil*, used as a flavoring in the food industry. The inner bark is made into cakes or bread. Western North America. MORTON

1976, YANOVSKY; A2, B94, C9M, C95, D95{PL}, F88M, 147, K38, K63G, K75, K75{PL}, M74M, NO{PL}, N71M

*Tsuga mertensiana* - *Mountain hemlock* {S}. The fresh needles are used as a tea substitute. Inner bark is used as an emergency food. Western North America. HELLER, KIRK; D95{PL}, D96, E63{PL}, E87{PL}, G66,147, K38, K63G, K75, M74M, N71M

PIPERACEAE

*Heckeria peltata* - *Pothomorphe peltata*

*Macropiper excelsum* - *Piper excelsum*

*Piper aduncum* - *Wild pepper*, *Higuillo* {PL}. The peppery fruits are used to season food. When black and ripe, they are said to be very sweet. Leaves are sometimes eaten as a potherb. Tropical America. DUKE, VON REIS; 112

*Piper auritum* - *Hoja de Santa Maria*, *Acuyo*, *Makulan* {PL}. The leaves, having the flavor and aroma of sarsaparilla, are used for seasoning soups, wild game such as armadillo, freshwater snails, and many other dishes. They are wrapped around tamale dough before it is packaged in corn leaves and steamed. In Honduras, young leaves are sometimes cooked and eaten as greens. The natives of Panama trap a river fish using the leaves as bait. After feeding on it regularly, the flesh of the fish takes on the flavor of the leaf. Recommended for aquaculture applications. Central America. ALTSCHUL, DUKE, HUTSON 1987 [Cul], JOLY, MORTON 1976, QUINTANA 1986 [Re], QUINTANA 1994, WILLIAMS, L., ZASLAVSKY [Re]; B73T{PR}, C43M, F93G, G73,181M, I83M, K22, L90J, M82

*Piper betle* - *Betel leaf* {PL}. Aromatic leaves are chewed with betel-nuts (*Areca catechu*). For this purpose, they are smeared with lime and cutch and used as a wrapping for slices of the nuts. Various spices, such as cinnamon, cloves, cardamom, nutmeg, and tamarind may be added to the mixture which is used as a stimulant. Malaysia to Micronesia. BROUK, MACMILLAN, MENNINGER, UPHOF; A26, C43M, E29, E48, F73D, G2M, G73, G96,112,181M, L90J, M82, N84{S}, P38

*Piper cubeba* - *Cubeb*, *Tailed pepper* {DF}. Dried unripe fruits, called *cubeb berries*, are used as a seasoning, having a strong, spicy odor and an aromatic, bitter, sharp flavor. Forms one of the ingredients of *ras el hanout*, legendary spice mixture of Morocco. Source of an oleoresin that enters into pickles, meat sauces, bitters and tobacco. Malaya, cultivated. BOUQUET, MORTON 1976, ROOT 1980b, UPHOF, WOLFERT 1973; A7, E14T, F37T, F85{S}, GO, G73, J58, K2, K18M, L34, M15M, N7D

*Piper excelsum* - *Kawakawa*, *New Zealand pepper-tree* {S}. In Polynesia the flower-clusters are eaten raw. Fruits are good to eat when fully ripe. New Zealand and Oceania. COLENSO, LOVE-LOCK; N84, 093, S43M

*Piper guineense* - *Ashanti pepper*, *Benin pepper* {S}. The fresh or dried fruit, milder than that of *P. nigrum*, is used for flavoring soups, rice and other foods. Leaves are also added to soups. Ash from the plants forms a substitute for salt. West Tropical Africa, cultivated. DALZIEL, KUNKEL, MORTON 1976, UPHOF; N84

*Piper longum* - *Indian long pepper*, *Jaborandi pepper*, *Pippali* {S}. Dried, unripe berries are used as a condiment in curries and pickles, or to adulterate black pepper. One of the ingredients of the Moroccan spice mixtures *ras el hanout* and *majfelja harra*. Also a principal ingredient of various Ayurvedic tonic formulas including *Trikatu*, *Chyavanprash*, and *Amrit Kalash*. India to the Philippines, cultivated. FRAWLEY, HEDRICK 1919, MORTON 1976, SIVARAJAN, TIERRA, WOLFERT 1973; F85, H14{m}, N7D{DF}, N7D{ED}

CULTIVARS {DF}

Timiz: (Ethiopian Long Pepper) Dark, grayish black fruits; 1 to 1 1/4 inch long and 1/8 to 1/4 inch in diameter; distinctive, peppery flavor. Much darker and narrower than the typical long peppers seen

at Indian markets. Popular in Ethiopian cooking, especially *zigni*—spiced ground beef dishes. H51

*Piper methysticum* - *Kava*pepper {PL}. Roots and stems are the source of a stimulating alkaloidal beverage called *kava* or *ava*, widely consumed in some Polynesian Islands. They are also used as a masticatory. Pacific Islands, cultivated. HEDRICK 1919, MACMILLAN, MASSAL, TANAKA, UPHOF; A49D{DF}, E14TIDF, E21D, E29, F37T{DF}, G73, 112, 174, I81M, I81M{DF}, K18M{DF}, L54{DF}\ L90J, M82, N84

#### CULTIVARS

**Black:** (Black Kava) Stems and veins are deep purple to black in color. Has several times the potency of commoner forms. Leaves of this strain appear to be as potent as the roots of other types. A pre-conquest Hawaiian cultivar, still secretly cultivated in some areas. A26, N84

*Piper nigrum* - *Black pepper* {S}. The pungent fruits, called *peppercorns*, are dried, ground and widely used as a seasoning. Milder-flavored *white pepper* is obtained from fruits whose outer coverings have been removed. *Mignonette pepper* or *shot pepper* is a mixture of white and black pepper widely used in France. *Poivre gris* is finely ground mignonette. Unripe, green peppercorns are pickled in vinegar and used as a relish. *Tellicherry* and *Muntok* are famous grades of black and white pepper, respectively. The seeds are the source of an oil used to flavor sausages, pickles, canned foods, and beverages. *Pepato* is a sheep's milk cheese from Sicily flavored with whole black peppercorns. Tropical Asia, cultivated. BOWN, CAMPBELL-PLATT, MACMILLAN, MORTON 1976, OCHSE, ORTIZ 1992, SCHERY, UPHOF; A79M, A94M{PD}, C34G{DF}, C43M{PL}, E29{PL}, E38M{PD}, F37T{PL}, F85, F85J{PD}, H90G{PD}, I12{PL}, I81M, K2{DF}, L16{DF}, M53{PL}, M82{PL}, N84, 042, 093, etc

*Piper sanctum* - *Hierba santa*, *Acueyo* {PL}. The cooks in Vera Cruz wrap their fish in the large, cordate, saffras-flavored leaves. In other parts of Mexico they are used for flavoring soups. Central America. UPHOF; F73D

*Piper sarmentosum* - *Cha phlo* {PL}. The young leaves are consumed raw, added to curries, blanched and eaten as a potherb, or put into *khaao yam*—a mixture of rice, raw vegetables and fermented fish sauce. Also used as a wrapping for *miang kam*, a kind of snack made of ginger, peanuts, roasted coconut meat, chiles, shallots, dried shrimp, sweet coconut meat sauce, and lime. Southeast Asia. JACQUAT, KONGPAN, LOHA-UNCHIT [Re], PONG-PANGAN; C43M, N84{S}

*Piper umbellatum* - *Pothomorphe umbellata* Ua

*Pothomorphe peltata* - *Lizard's tail pepper*, *Gedebong* {PL}. Young leaves are boiled or steamed and eaten with rice. They are also used as a wrapping for fish that are seasoned and roasted in hot ashes. The sweetish, ripe fruits are considered a delicacy by children. Brazil. OCHSE; N84

*Pothomorphe subpeltata* - *Pothomorphe umbellata*

*Pothomorphe umbellata* - *Segumbar urat*, *Boombo* {S}. Young leaves are eaten raw or steamed and served as a side-dish with rice. They are also used for wrapping other foods. In the Philippines, the leaves and young inflorescences are cooked with fish. The sweetish ripe fruits are eaten as a delicacy. Bark is also used as a condiment. Paleotropics. BURKILL, DALZIEL, KUNKEL, OCHSE; F85

#### PISTACIACEAE

*Pistacia atlantica* - *Mt. Atlas pistache*, *Betoum* {S}. The turpentine-flavored fruits, called *gadum*, are eaten raw. Dried fruits are added to parched wheat. An excellent edible oil is produced in the Middle East from the very small, crushed nuts. Various pastries are made from it. Seeds are pounded and mixed with pounded dates. Source of a resin, called *alk el anebat*, used in the same manner as mastic. Also used as a rootstock and as a pollen source for *P. vera*. Canary Islands, North Africa. BAILEY, G, BOUQUET, ROSEN-

GARTEN, UPHOF, WHITEHOUSE; A79M, C9M, G66, H40M{PL}, 174{PL}, J7M{PL}, N84, 093, P5, Q15G

*Pistacia chinensis* - *Chinese pistache*, *Huang-lien-mu* {S}. Young shoots and leaves are eaten as a vegetable. The nuts are roasted and eaten or employed in confectionery. China, cultivated. TANAKA; A79M, C9M, G66, H4{PL}, I28{PL}, K38, K63G, N33{PL}, N37M{PL}, N84, 053M, P5, Q32

*Pistacia lentiscus* - *Lentisk*, *Lentisk pistache* {PL}. A sweet, licorice-flavored resin, *mastic*, derived from the bark of the trunk, is chewed as a breath sweetener. It is also used to flavor *masticha* liqueur, *rahat lokum* (*Turkish delight*), puddings, almond paste, cookies, *Nabulsi* cheese, cakes, and candies. The Romans used the fruits as an aromatic seasoning. Seed kernels are the source of an edible oil, known as *shina oil of Cyprus*. In Sardinia, wild boar and other meats are roasted over mastic wood, the smoke contributing a distinctive aroma and flavor. Canary Islands, Mediterranean region. BOUQUET, DAGHER, GRAY, P. [Cul], HEDRICK 1919, MALLOS [Re], ROBINSON, R. 1991, UPHOF, VON WELANETZ, WALDRON, WHITEHOUSE; A7{DF}, G5M{PD}, H78, L50M{DF}, N7D{DF}, N84, G75G{S}, R59M

*Pistacia mutica* - *Turk terebinth pistache* {S}. The trunk is the source of a resin, known as *Bombay mastic*, used for chewing in some parts of Iran and Iraq. Seeds are sometimes eaten or pressed for their edible oil. Southwest Asia. JAYNES, UPHOF; G66

*Pistacia terebinthus* - *Terebinth pistache*, *Cyprus turpentine tree* {S}. The sweet, greenish seed kernels are eaten or pressed for their edible oil. Immature fruits, along with their stems, are preserved in vinegar and salt. Known as *atsjaar*, they are used as a relish to accompany wines served during dinner. Young leaves are cooked and used as a vegetable. The fresh flowers are eaten. Resin from the trunk is used in Iran as a chewing gum. Mediterranean region. HEDRICK 1919, KUNKEL, OZTURK, ROSENGARTEN, TANAKA, WHITEHOUSE; A79M, H71, N37M{PL}, N84, 093

*Pistacia vera* - *Pistachio* {S}. Nuts are eaten raw, roasted and salted, or used in confectionery, ice creams, cakes, cookies, pies, soups, etc. They also yield a delicious, gourmet-quality edible oil but due to the high price of the nuts it is not usually produced commercially. Also used for seasoning sausages such as *zampone*, *saucisson de langue*, and *mortadella*. In Iran, the fruits are made into a flavorful marmalade. Eastern Mediterranean to Southwest Asia, cultivated. GRAY, P. [Cul], JAYNES [Cu, Pro], KINSMAN, MENNINGER, ROSENGARTEN [Cul, Re], UPHOF, WHITEHOUSE; A52M{PD}, B71G{PD}, D75{DF}, D75{PD}, D95{PL}, G66, H4{PL}, H15T{PD}, H73{ED}, I58P{ED}, I66{PD}, K63G, L17{PD}, N84, P5, etc.

#### CULTIVARS {GR}

**Kerman:** Female. Nut above average in size; shells split well, are easily opened by hand; kernel size above average, of high quality; readily shaken or knocked from tree when ripe. Tree vigorous, upright-spreading; blooms late, produces heavily but biennially. Leading commercial cultivar in the United States. Originated in Chico, California from seeds imported from Iran. BROOKS 1972; B93M, H40M, 174, 183M, N20

**Male No. 3:** Used in Australia for pollinating *Sirora*. A ratio of one male tree for every ten female trees is recommended. S59

**Peters:** Male. Good producer of pollen; its blossoming coincides with early blossoming cultivars, as well as the later blossoming Kerman. In some years it may be slightly early for full coverage of Kerman. Has a tendency to be a lopy, week grower, especially when propagated on *P. vera* roots. Originated in Fresno, California by A.B. Peters. BROOKS 1972, JAYNES; B93M, H40M, 174, 183M, N20

**Sfax:** Female. Small nuts of very good quality; percentage of split nuts high; produced in dense clusters like grapes, easily harvested. Ripens very early, late August to early September at Chico, California. Relatively low chilling requirement, about half that of Kerman.

Pollinated by Peters. Originated in Sfax, Tunisia. JAYNES; U7G{S}

**Sirora:** Seedling of the Syrian cultivar Red Aleppo. More vigorous than Kerman. Also a precocious bearer. Introduced into Australia from California by the CSIRO, Merbein, Victoria. GLOWINSKI; S59

#### PISTIACEAE

*Pistia stratiotes* - *Water lettuce* {PL}. The leaves are sometimes added to soups but should be parboiled first to remove the acrid calcium oxalate crystals. Ash of the burned plants is used as a substitute for salt. Tropics. BURKILL, DUKE, TANAKA, WATT; C74, E48, H30, 190M, K34, M7M, M15, M73, M73M, N3M, N84

#### PITTOSPORACEAE

*Billardiera cymosa* - *Sweet appleberry* {S}. The reddish fruits were eaten by the Aborigines, both fresh and roasted. Currently being tested by the bushfoods industry as a tasty, dessert berry with an apple and aniseed aftertaste. Can also be used to make sauces for pork, veal and chicken. Australia. CHERIKOFF, CRIBB, ROBINS [Cui, Re]; N79{PL}, N84, R15M

*Billardiera longiflora* - *Purple appleberry* {S}. The oblong, violet-blue berries of this evergreen, climbing shrub have an agreeable taste and may be eaten out of hand, pureed, or added to fruit salads. Australia. HENDRICKSON, JOHNS, ROBINS, SIMMONS 1972 [Cu]; N84, 053M, 093, Q41, R15M, R33M, R88

#### CULTIVARS {PL}

**White:** (Fructo Albo) A form that produces white fruit. SIMMONS 1972; S69

*Billardiera scandens* - *Appleberry* {S}. The fruits are eaten, having sweet, juicy flesh and a flavor reminiscent of stewed apples with a hint of kiwifruit and grapefruit. For fresh eating, fruits should be completely ripe-translucent and very soft. Holds its shape, color and texture very well when cooked. Very good in baked desserts such as pies, tarts, muffins and scones. Australia. CHERIKOFF, CRIBB, ROBINS [Cui, Re]; N79{PL}, P38

#### PLANTAGINACEAE

*Plantago coronopus* - *Buck's-hornplantain*, *Minutina*, *Capuchin's beard*, *Herba Stella* {S}. Young leaves may be used in tossed salads. Blanch in boiling water for a few seconds to make them more tender before use. In Italy, they are one of the ingredients of *misticanze*, a mixture of wild and cultivated salad greens that originated in the Marche region. Eurasia. BIANCHINI, LARKCOM 1984, VILMORIN [Cu]; C53, F80, G6, 177, L77D, N84, Q11M, S17

*Plantago lanceolata* - *Rib-grass*, *Ribwort*, *Lamb's tongue* {S}. The young leaves are occasionally eaten. However, they are rather bitter and tedious to prepare as their fibrous strands must be removed before use. Seeds are said to be used like sago. Eurasia, naturalized in North America. FCX, F., LAUNERT, UPHOF; A2, C92, D26G, F37T{PL}, F68T, F88M, G6, J82, K57{PL}, L55J, L94M, N71M, N84, Q24, S55

*Plantago major* - *Common plantain*, *Greater plantain* {S}. Although fibrous, the leaves are sometimes pureed, used in salads, or as a potherb. It is best to select the leaf blades only, discarding the leaf stalks. Dipped in batter and fried over low heat for about half an hour they are said to resemble potato chips. For use in salads, blanched leaves are recommended. Dried leaves make an acceptable tea. The seeds are eaten parched or ground into meal. Roots are also edible. Northern temperate region. ANGIER, CLARKE [Re], FERNALD, FOX, F., GIBBONS 1979, HARRINGTON, H., KIRK, ZENNIE [Nu]; A2, C95, E61{PL}, F85, F88M, L94M, N71M, N84, 053M

*Plantago maritima* - *Seaside plantain*, *Sea plantain* {S}. Leaves are occasionally eaten in salads, cooked like spinach, boiled in broths, or pickled like samphire. In Alaska, they are canned for

winter use. Northern temperate region. HEDRICK 1919, HELLER, UPHOF; F88M, 048

*Plantago ovata* - *Blond psyllium* {DF}. The mucilage contained in the seed coat is used as a stabilizer in ice cream and chocolate manufacture. Sprouted seeds are eaten in salads, soups, stews, etc. Mediterranean region, North Africa, Southwest Asia. TANAKA; E14T, GO, J82{S}, K2, L94M, N84. (see also Sprouting Seeds, page 524)

*Plantago psyllium* - *Psyllium seed*, *Fleeseed*, *Fleawort* {S}. Sprouted seeds are eaten raw in salads. Due to their mucilaginous qualities they are grown on clay or other porous materials. The seeds also yield an oil recommended as a nutritional oil due to its high content of linoleic and alpha-linolenic acids. The seed husk mucilage is used commercially as a thickener or stabilizer in frozen dairy desserts. Eurasia. ERASMUS, LEUNG; C95, D26G, D56M, F37T{DF}, F37T{PL}, F68T, F85, F86G{DF}, G6, G68, I16{DF}, J82, K18M{DF}, L34{DF}, M63M{DF}, N84, etc. (see also Sprouting Seeds, page 524)

#### PLATANACEAE

*Platanus occidentalis* - *American sycamore*, *Plane tree* {S}. The sweet sap has been used in the preparation of syrup and sugar. North America. FERNALD, GIBBONS 1962; A80M{PL}, C9M, G66, H4{PL}, H49{PL}, K38, K63G, M69M{PL}, N71M, N84

#### POACEAE (GRAMINAE)

*Agropyron intermedium* - *Thinopyron intermedium*

*Agropyron trichophorum* - \* *Thinopyron intermedium* var. *trichophorum*

X *Agrotriticum* sp. (*Agropyron elongatum* x *Triticum durum*) - *Perennial grain* {S}. Seeds are ground into flour and used in baking. Food researchers at the Rodale Press Food Center, in a scientific comparison of the grains, found that perennial grain muffins and yeast rolls were preferred over the same products made with wheat flour. Protein, carbohydrate, and fiber levels were found to be similar to those of conventional wheat flour. ZAHRADNIK.

#### CULTIVARS

**W-21:** A warm-climate perennial; winter-kills in northern climates; persists for about 3 years under ideal conditions. Grows to a height of 2 to 4 feet and produces a very stiff, study, spring-like stalk. Seed does not shatter, but is held firmly in its erect seed head, which has the disadvantage of being tight. Susceptible to ergot and smut. One of the highest-yielding perennial grains, producing as much as 25 bushels per acre. The kernels resemble a small winter wheat. Planted like winter wheat in northern regions; can be spring planted and will produce grain the first year in Texas, Florida and some Pacific Coast regions. ZAHRADNIK; U8D

*Anthoxanthum odoratum* - *Sweet vernal-grass*, *Grass tea* {PL}. When crushed or when drying, the leaves give off a sweet, pleasant fragrance and can be used as a substitute for tea. Northern temperate region. CRIBB, FERNALD, GIBBONS 1979; C43M, C67M, D92M{S}, E61, E81M{S}, J66, J82, K22, K85, M82, N71M{S}, 053M{S}, Q24{S}, S55{S}

*Avena abyssinica* - *Abyssinian oat* {S}. The grain is edible. Occasionally it is roasted and eaten as a snack. In Ethiopia, it is harvested and threshed together with barley. The two grains are then mixed and used for making *injera*, *tala* and other foods. East African highlands. NATIONAL RESEARCH COUNCIL 1996, TANAKA, ZEVEN; U8M, Z91

*Avena nuda* - *Naked oat*, *Hulless oat* {S}. Occasionally cultivated as a cereal. Also excellent for sprouting. The hull is incompletely attached to the grain, yielding a naked seed easily upon threshing. Nevertheless, this species is not much cultivated, primarily because of its inferior yield. It is ideal for small-scale farmers and backyard growers. Cultivated. SCHERY, UPHOF, ZEVEN; B49, D92M,

F73D, G47, K46T, K49T, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Bandicoot:** Local Australian cultivar that can be used for milling, grinding or sprouting. PIG, PIG{DF}

**James:** 100 days. Prolific producer of naked-seeded oats that thresh free of glumes like wheat. Harvested in late July from a spring planting. Grows approximately 3 1/2 to 5 feet tall. K17M, L3J, N24M

**Pennuda:** This is a medium height cultivar for early spring planting and late summer harvest. When harvested and threshed, the oat kernels are essentially free of the tough, inedible hulls of common oats. After winnowing the grain is ready for use as oatmeal or oat flour. Seeding rate: 96 pounds per acre or 2 to 3 pounds per thousand square feet. D68, G6, L7M, N84

**Spokane:** Medium-sized grain with good flavor. Especially good for making porridge. Grows to four feet tall when mature. L3J

**Terra:** 90 days. Long grain type. Relatively short straw. Should be planted in spring. Very productive for a hullless oat. Considered to be the best of the naked oats in home-garden trials in Maine. Apparently still grown commercially on the Canadian prairies. J39, N24M

**Torch River:** 100 days. Attractive, loose hulled plant with tall straw. Useful for human consumption by simple threshing and winnowing. An old cultivar of Canadian origin. G47

**Vicar:** The first licensed hullless oat cultivar in Canada. A mid-season to late type. Can be cooked whole and used like rice. Developed in Winnipeg in the 1940's. Named after George MacVicar of Portage la Prairie. J39

*Avena sativa* - *Oat* {PD}. Seeds are made into flour, oatmeal, rolled oats, bran, *groats*, breakfast foods, *sourdough bread*, *temppeh*, etc. In Belgium, they are used for *white beer*. Darbyshire oat cakes and *barley bannocks*, popular in Scotland, are made from oat or barley flour. A relatively new product—*amazake* made from oats rather than rice, is thicker and gives a sweet flavor and chewy texture to cakes, cookies and other pastries. *Oat milk*, a low fat lactose-free milk substitute, has recently been introduced to the natural foods market. The ancient Greeks had a dessert called *plakous*, a cake of oat flour, cheese and honey. *Oatmeal stout* is a dryish, full-bodied ale locally produced in Britain by adding *flaked oats* to the mash. Roasted seeds can be used in mock coffees, and in France are employed as a substitute for vanilla. *Sowans* are the soured fermented inner shellings of the grain. *Oat rim*, a totally flavorless and odorless fat-replacer product used in baked goods, is composed of soluble oat starch and fiber rich in beta glucans. Sprouted seeds are used in salads, dressings, and baked goods or dried and made into *sun granola*. Young seedlings are juiced or dried and used as a food supplement. Commercial date pieces are often rolled in oat flour. Cultivated. FINNEGAN, IRWIN [Re], JACKSON, M., LOGSDON 1977 [Cu, Re], MCNEILL, RITTER [Re], ROOT 1980a, SCHERY, SHURTLEFF 1979, UPHOF; A25G, A99, B8P, B31, C73P, D47M{S}, E56, E66M{S}, E68M, F68T{S}, G29, G47M{S}, G71{S}, J19M, M63M, N17, N84{S}. (see also Sprouting Seeds, page 524)

#### CULTIVARS {S}

**Cavuse:** 85 days. Fine-stemmed, yellow-kemeled spring oat of above average height. Will produce a good grain crop or may be used for hay. Sown in early spring as soon as the soil is workable, 4 pounds per 1,000 square feet. Grows 34 inches tall. E53, I99M, K5M

**Hercules:** Thll, stiff-strawed medium maturity cultivar. High yield potential and excellent test weight. Also excellent lodging resistance. A top choice of many farmers. Sow 3 bushels per acre. J97M, M95M

**Pale:** High-yielding, medium maturity cultivar with medium height straw. Resistant to lodging and Barl<sup>^</sup> Yellow Dwarf Virus. Good test weight. Used as a cover crop and/or grain crop in the North. Use

as a quick growing spring-summer green manure crop, or to some extent, as a winter cover crop. Introduced by the University of Illinois. D68, G6, I93M, J97M, K95M, M95M, N84

**Svaloff's Crown:** Medium tall cultivar that originated in Sweden. Fairly loose heads with a very heavy set of large seeds. F73D

*Bromus breviaristatus* - *Narrow-leaved brome* {S}. Seeds have been used for *pinole*. Has potential as a perennial grain crop, yielding two to three crops a year, as long as plants are kept fertilized and watered. Western North America. L77D, N84

*Bromus carinatus* - *California brome* {S}. Seeds are eaten by the Indians of California. Potential perennial grain crop able to survive summer droughts without irrigation. Western North America. YANOVSKY; C6M, C43V, C95, E15, E66M, G19T, G59M, N7G, N84

*Bromus mango* - *Mango* {S}. Was grown as a biennial cereal by the Araucano Indians of Chile until at least the middle of the 19th century. The grains were toasted and ground into flour and used to make an unleavened bread called *cougue* or a *chicha* drink. Grows on infertile acid soils. Thought to be extinct, this species was recently rediscovered. Southern Chile and Argentina. ZEVEN; U63

*Coix lacryma-jobi* - *Job's tears, Adlay* {S}. The hulled grains can be parched, boiled like rice, or milled into flour for making a type of bread. They are also utilized in soups, porridges, drinks, or pastries and other desserts. In India, the Nagas use the grain for the brewing of a beer called *zhu* or *dzu*. Parched seeds are used as a tea in Japan. Southeastern Asia, cultivated. ARORA, R., JACQUAT, MACMILLAN, SCHERY, TANAKA; A2, C92, F80, I39, K22{PL}, K53, K85{PL}, L42, N84, O53M, O93

*Coix lacryma-jobi* 'Ma-Yuen' - *Hato-mugi, Japanese barley, Tear grass* {DF}. Seeds are used as a cereal or brewed into an alcoholic beverage. Roasted seeds are made into a tea or coffee-like beverage. Widely used in macrobiotic cuisine and diets. A commercial product is produced in Japan by mixing an aqueous extract of tear grass with milk, whey or other liquid milk products to form an acidic beverage. Also made into malt syrup or *mizuname*. Unlike Job's tears, the fruits are soft-shelled and easily threshed. It is said that this form was introduced into China from Vietnam by the famous Chinese general Ma Yuen (A.D. 49), hence the name. ARORA, R., BELLEME, BELLEME 1993, GELLES [Re], KURMANN, SASS [Re], TANAKA, VAN DUONG; E31, E56, F88, F88{PD}, G20M{PD}, G47B, G47B{E£}, H91, H91{ED}, I19M, I19M{ED}, N84{S}

*Cymbopogon citratus* - *Lemongrass* {PL}. Basal portions of the leafy shoot are chopped and used for flavoring fish, soups, sauces and curries. Outer leaves may be tied in a loop and cooked with food to impart flavor, but are removed before serving. The heart of the young shoots is eaten as a vegetable with rice. A refreshing tea can be brewed from the leaves and served either hot or cold. Lemon grass is substituted for yogurt in the preparation of *nistisemos trahanas* (fasting trahanas), a fermented milk and cereal food. This type of trahanas is used during religious holidays in Greece and Turkey, when it would be sacrilegious to consume animal milks. Cultivated. HERKLOTS, MORTON 1976, OCHSE, ROUTHIER 1989 [Cul, Re], SCHNEIDER 1986 [Cul, Re], SHURTLEFF 1979, STEINKRAUS; B28, C9, C34G{ED}, C43M, C81M, G96, J66, K22, K85, L90G{DF}, L90G{PR}, M53, N19M

*Cymbopogon flexuosus* - *East Indian lemon grass* {S}. Source of a strongly aromatic, lemon-like essential oil used by food manufacturers for flavoring baked goods, fats and oils, ice cream, candy, beverages, chewing gum, etc. Dried leaves are commonly used in herbal teas. Tropical Asia, cultivated. BURDOCK, LEUNG, MORTON 1976; D92M, E61{PL}, F35M{PL}, F68T, J57{PL}, J82, K57{PL}, L89, N84, S55

*Cymbopogon martinii* - *Rosha grass, Geranium grass* {S}. Source of *palmarosa oil*, an essential oil obtained by steam distillation and used to flavor ice cream, gelatin desserts, chewing gum,

and bakery products. Tropical Asia. TANAKA; N84, Q46

*Cymbopogon martinii* 'Motia' - *Palmarosa grass* {PL}. Leaves, stems and flowering tops are the source of an essential oil called *palmarosa oil*, used in commercial baked goods, ice cream, beverages, candy, etc. Asia, cultivated. BURDOCK, ZEVEN; C43M, D92M{S}, E14T{PD}, E61, F37T, H94M, J76, J82, K57, M82, R53M, R47{S}

*Cymbopogon nardus* - *Citronella grass* {PL}. Leaves are used for flavoring soups, in cooking fish, and in preparing curries. They are also employed as a tea. Source of *geraniol*, *citral*, and *dronellal*, essential oils utilized as flavorings for food and drinks. Among them, citral is used to imitate strawberry, lemon, apple, and vanilla flavor. Tropical Asia. TANAKA, UPHOF; C43M, D92M{S}, E29, F35M, F37T, F85{S}, H94M, J76, J82, J82{S}, L90J, L94M{S}, M82, N84{S}, R53M, etc.

*Digitaria erilis* - *Fonio*, *Fundi*, *Acha* {S}. The grain is used as a cereal in parts of Africa, especially by the Hausas of central Nigeria. It is ground to a semolina-like flour and made into breads and a couscous-like product called *gwete*, popped, or eaten as a porridge with melted butter. Yields are poor but the seed is highly nutritious and palatable and is considered a delicacy. The tiny seeds are often contaminated with sand, however a precooked and cleaned product is becoming more available. Some strains produce a crop in as little as forty days. Has been cultivated for thousands of years. Tropical Africa. DALZIEL, HARLAN, NATIONAL RESEARCH COUNCIL 1996, SCHERY, UPHOF, ZEVEN; U37M

*Digitaria iburua* - *Black fonio*, *Iburu* {S}. Cultivated as a cereal by the Hausas of Nigeria and the Lambas of Togo. Used in the preparation of a couscous known locally as *wusu-wusu*, and a famous beer called *tchapalo*. Also prepared with beans in a dish served on special occasions. Often grown between rows of sorghum or pearl millet, and frequently as a mixture with *D. exilis*. West Tropical Africa. DALZIEL, HARLAN, NATIONAL RESEARCH COUNCIL 1996, UPHOF, ZEVEN; U37M

*Distichlis palmeri* - *Wild-wheat*, *Palmer's saltgrass*, *Trigo gentil*, *Nyipa* {S}. The grain may be cooked as a cereal, roasted, or used in muffins and stuffings. When sauteed, it has a nut-like flavor akin to sunflower seeds or pistachios and goes well on ice cream or in salads. It is high in bran and fiber, the fiber content being three times that of wheat. At one time thought extinct, the cultivated form was rediscovered and developed by Dr. Nicholas Yensen of Tucson, Arizona. The plant grows in saline soils but remarkably, grain grown even in full-strength sea water is not salty. Presently wild-wheat is mostly sold locally in Arizona through gourmet outlets and at special events. North America. NATIONAL RESEARCH COUNCIL 1990; NIETHAMMER [Re], YENSEN 1987, YENSEN 1988; I53Z{OR}

*Echinochloa colonum* - *Sawa millet*, *Jungle rice* {S}. Young plants and shoots are eaten raw with rice. The seeds are eaten as a cereal. In the Central African Republic, they are fermented to make beer. Tropics, cultivated. BURKILL, DALZIEL, DE WET, OCHSE, WATT; N84

*Echinochloa crusgalli* - *Barnyard grass*, *Cockspur grass* {S}. Dried or parched seeds are ground into flour for use in cakes, porridge, and puddings. They can also be popped like corn. In Japan, they are used for making macaroni and dumplings. The young plants, stem tips, and the heart of the young culms are eaten raw or steamed. Roasted seeds are used as a substitute for coffee. Northern temperate region. BURKILL, FERNALD, HARRINGTON, H., KIRK, KUNKEL, MALLESHI, OCHSE, UPHOF, WATT; A2, B49, D47M, G26, G47M, L91M, M34M, N11, N71M, N84

*Echinochloa crusgalli* var. *frumentacea* - *Echinochloa frumentacea*

*Echinochloa frumentacea* - *Japanese millet*, *Sanwa millet*, *Hie* {S}. The grain is boiled like rice, made into gruel or porridge, or, in India, boiled in milk. In Japan, it is sometimes used for making

*mochi*. The chief merit of the grain is its rapid yield, a crop sometimes being matured within six weeks of sowing. Eastern Asia, cultivated. BROWN, W., HOMMA, MACMILLAN, TANAKA, WATT; B13, D47M, D68, E66M, E66T{DF}, F73D, G19T, H85M, K46T, K95M, M25, M34M, P83M

#### CULTIVARS

**Chiwaoa:** 110 days. Rare improved type selected in India. Sweet, oleaginous seeds. Grows approximately 3 1/2 to four feet tall. L3J

*Echinochloa stagnina* - *Burgu*, *Dul* {S}. A sugar is extracted from the stems and utilized for making sweetmeats and confectionery, liqueurs, and non-alcoholic beverages. The Mohammedans in West Africa prepare a liquor from it. Tropical Africa. DALZIEL, MOLLISON, NATIONAL RESEARCH COUNCIL 1996, TANAKA, UPHOF; U14

*Echinochloa turneriana* - *Channel millet* {S}. Recommended as a cereal grain for severe arid regions, as only a single watering is required to produce a crop. After flooding, which is required to induce germination, the plant completes its development without further watering. Australia. NATIONAL RESEARCH COUNCIL 1975a; T69, U14

*Eleusine coracana* - *Ragi*, *Finger millet* {S}. Grains are boiled and eaten as a cereal or porridge, popped, malted, ground into flour for use in cakes, breads, and puddings, or made into a beer-like alcoholic beverage called *marwa*. Other fermented foods made from the grain include *ambali*, *kaffir beer*, *busaa*, *merissa*, *chang*, and *munkoyo*. In India, the flour is boiled in diluted buttermilk and kept overnight for use the next morning. Ragi malt is mixed with milk to form a refreshing beverage. The leaves are also edible. Tropical Asia, cultivated. BHANDARI, DIRAR 1993, FOX, E, HEDRICK 1919, MACMILLAN, MALLESHI, MARTIN 1975, NATIONAL RESEARCH COUNCIL 1996, STEINKRAUS, UPHOF, WILKES; E7M, F80, L3J, L7M, N84

#### CULTIVARS

**Candlestick:** (Candlestick Millet) Heads are borne on tall stalks and are shaped like candlesticks. Plants tiller heavily. This millet is grown on 50 million acres in India and Africa, where an almost unlimited number of delicious recipes have been developed. G47, L77D

**Dragon's Claw:** (Dragon's Claw Millet) 130 days. Grows to 3 feet tall. Curved, ornamental seed heads. Seeds smaller than common millet. Stalks stiff, resistant to lodging. Difficult to thresh. Trouble free; good yields. Seeds highly resistant to storage pests. Important crop for natural agriculture enthusiasts. B49, C95, F73D, G47, K46T, L77D

*Eleusine indica* - *Wire grass*, *Goose grass* {S}. In Indonesia, the young, tender plants are often gathered and eaten, raw or steamed, as a side-dish with rice. The seeds can be parched and ground into a meal for use in cakes and gruels. Also used for porridge and alcoholic beverages. Tropics, naturalized in North America. DUKE, GIBBONS 1979, KIRK, OCHSE, TANAKA; L3J, N84

*Elymus arenarius* -> *Leymus arenarius*

*Elymus canadensis* - *Canada wild-rye* {S}. Seeds were an important source of food for the Paiute Indians of the Southwestern United States. North America. DOEBLEY, YANOVSKY; B29, D47M, E66M, F96, G47M, 111, 147, J39M, J39M{PL}, J41M, J41M{PL}, J42, J43, K62, L41, Q24, etc.

*Elymus triticoides* - *Wild rye*, *Squaw grass* {S}. Seeds were parched and ground into a fine meal, called *pinole*, and consumed by the Indians as porridge or in cakes and drinks. The hairs on the grain must be singed off before it is used as food. Southwestern North America. KIRK, MEDSGER, YANOVSKY; C43V, E66M, F96

*Eragrostis abyssinica* - \* *Eragrostis tef*

*Eragrostis tef* - *Teff* {S}. Seeds are used in the preparation of *enjera*, a fermented, pancake-like bread that is consumed as a staple in Ethiopia. The prepared bread is spongy, soft, thin, and sour-

tasting. It generally accompanies a meat, vegetable, or legume stew known as *wot*. Other forms of enjera used in Ethiopian cuisine are fried enjera, dried and powdered enjera (*derkosh*), and *fifit* (stew with pieces of broken enjera). Teff is also combined with barley and other grains in the making of *talla*, an Ethiopian home-processed beer with a smoky flavor and a tan to dark brown color. In natural foods cooking it is often made into baked goods, vegiburgers, porridges and patties. Ethiopia, cultivated. COLE, C. 1991 [Cu, Re], DIRAR 1993, GELLES [Re], MESFIN [Pre, Re], NATIONAL RESEARCH COUNCIL 1996, SASS, STEINKRAUS, STEWART; A25G{DF}, B31{DF}, B31{PD}, C95, E31{DF}, H91{DF}, K46T, N84, O1, 053M

#### CULTIVARS {DF}

**Brown Seeded:** 120 days Very small, highly nutritious seeds, about 13% protein. Somewhat richer and more heartier-tasting than White Seeded. Makes a chocolate-brown *enjera*. Also has a slightly higher calcium content. Short plant with very small heads. Heavy yielding. Less demanding than White Seeded. A2{S}, A90M, E56, H51{PD}, J11M, J11M{ED}, J73{S}, L87G, L87G{PD}

**Red Seeded:** (Sirganya) Small, reddish brown seeds. Intermediate between Brown Seeded and White Seeded in both color and flavor. Preferred by some because of its more robust taste. Hardier, faster maturing and easier to grow than White Seeded. Sirganya is the Amheric name for mixed. NATIONAL RESEARCH COUNCIL 1996; A90M, J11M{PD}, L3J{S}, L87G, L87G{PD}

**White Seeded:** (Ivory, Thaf Hagaiz) 120 days Very small seeds, about 13% protein. Slightly lighter in flavor than Brown Seeded. Heavy yielding, slow maturing form that is usually grown in the cold season. Can only be grown below 2,500 meters altitude. The most common and desirable cultivar grown. NATIONAL RESEARCH COUNCIL 1996; A2{S}, A90M, E56, F73D(S), H51{PD}, J9M{S}, J11M, J11M{PD}, L3J{S}, L87G, L87G{P2}

#### *Euchlaena mexicana* - *Zea mexicana*

*Glyceria fluitans* - *Polish manna*, *Floating manna-grass* {S}. The seeds were considered a delicacy in certain parts of Europe and were an article of commerce there veil into this century. Flour from the seeds is said to make a bread little inferior to wheat bread. It is also used for thickening soups, gruels and puddings, imparting a slightly sweet, delicate flavor. The sweetish-tasting seeds are also used as a masticatory. Northern temperate region. CROWHURST 1972, DONKIN, FERNALD, HEDRICK 1919; N71M, R49{PL}

*Hierochloe odorata* - *Vanilla grass*, *Sweet grass*, *Russian buffalo-grass*, *Zubrovka* {PL}. The leaves have a strong, vanilla-like fragrance and yield an essential oil esteemed in France for flavoring candy, soft drinks, and tobacco. In Poland, one or more blades are put in a bottle of vodka for flavoring. Also said to be used as a coloring agent. Northern temperate region. BROWN, G., MORTON 1976, TANAKA; C43M, F35M, F80{S}, G47M{S}, G89, J39M, J42, J42{S}, J73, K2, K2{DF}, M15T, M15T{DF}, M82, N29{DF}, etc.

*Hordeum bulbosum* - *Abu suwaif* {S}. Grains are used for food. Bulbous roots are chewed or occasionally eaten. Currently being tested as a perennial grain crop in the United States. Mediterranean region to Southwest Asia. TANAKA; U8M, V73M, V85M, W3M, W59M, W88M, X33, X54, Y89M

*Hordeum jubatum* - *Foxtail barley*, *Squirrel-tail grass* {S}. Seeds are eaten as a cereal or parched and made into a coffee-like beverage. North America. KUNKEL, YANOVSKY; C9M, D56M, E61{PL}, F96, G47M, N84, 053M, 093, S55

*Hordeum vulgare* - *Barley* {S}. The grain is manufactured into bread flour, pearled barley for soup, breakfast cereals, and is the principal grain used for brewing beer. *Flaked barley* is sometimes added to beer, especially stout, for added body and head retention. In Bavaria, beer is sometimes converted into a gourmet vinegar. Also fermented into *temp eh*, *miso* and *enjera*. Roasted seeds are an ingredient of grain coffees such as *Cafix*, *Yannoh* and *Kaffree*, and a staple beverage of Korea called *poricha* or *barley tea*, which is

served hot, lukewarm, or cold with sugar or honey. The pressed juice of young seedlings is used as a beverage by natural foods enthusiasts. In powdered form it is marketed as *greenmagma* or *barleygreen*. Protein extracted from the leaves has been recommended as a food supplement. Sprouted seeds are eaten in salads and breads. In Morocco, the immature grains are used for preparing a special type of couscous known as *azenbu*, and on the island of Gavdos south of Crete a uniquely flavored bread called *pakhouda* is made from them. Source of a natural sweetener called *bakugato* in Japan and sold in the West as *malt sugar*, *barley jelly sugar*, or *maltose*. *Gefito* is an ancient food of the Guanchos of the Canary Islands prepared from parched grains that are ground into flour and kneaded with water into a paste. *Tsampa*, a similar food from Tibet, is a staple of that area. Malted barley flour, known as *diastolic malt*, is added by bakers to bread dough to feed the yeast in the sweetening and rising stages, and to improve crust color and flavor. Cultivated. COLE, C. 1990, DORJE [Re], FAIRCHILD 1930, HANNEMAN, LAMBERT-G6CS, LOGSDON 1977 [Cu, R<sub>c</sub>], MILLON [Re], PIRIE, RITTER [Re], SEIBOLD [Nu], SHURTLEFF 1975, SHURTLEFF 1976, STEINKRAUS, TANAKA, UPHOF, WOLFERT 1973; A52M{PD}, B31{PD}, F88{ED}, G47B{m}, G47CIED}, G71, E60P{PD}, E61, E66M, I43T{PD}, J19M{DE}, L54D{ED}, K95M, N17{PD}. N54{PD}. etc. (see also Sprouting Seeds, page 524)

*Hordeum vulgare* Cerinus-Coeleste Group - *Waxy hullless barley* {DF}. The grains are eaten as a hot cereal, cooked like rice, coarse ground into grits, rolled into flakes or ground into flour for bread making. Rolled grains can be mixed with or substituted for oatmeal. The grits are suitable for adding to soups and stews. Flour made from waxy hullless barley has greater water retention capabilities due to the high content of soluble fiber. Waxy hullless barley starch approaches 100% amylopectin which converts to sugar faster in syrup production. Consistently higher in beta-glucan soluble fiber, lysine and total dietary fiber than non-waxy types. Foods rich in beta glucans are thought to lower serum cholesterol. NEWMAN; 120

#### CULTIVARS

**Merlin:** Waxy-hullless barley with a light tan color and a mild, distinctive flavor. Can be cooked whole and used as an ingredient in soups, stews and salads. One of the cultivars marketed as Treasure State NuBarley. A90M, M89M, M89M{PD}

*Hordeum vulgare* Coeleste Group - *Hullless barley*, *Hadakamugi* {S}. One of the most popular varieties in the Far East where the grain is eaten with rice or parched and made into a cooling drink. The grain is often pressed to make it boil more readily. Also an essential ingredient in *miso* manufacture. Much easier to sprout than regular barley. GELLES [Re], TANAKA, ZEVEN; B31{DF}, B49, E31 {DF}, G47, PIG, PIG{DF}, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Arabian Blue:** Very attractive, bluish seeds, blushed with purple; hullless; long awns; threshes easily by hand. Attractive plants, about 3 feet tall. Sown in early spring. F73D, K17M, K46T, N24M

**Black:** {DF} Small to medium-sized grain; attractive pure black color. Has a delicious, nutty flavor and a chewy texture. Keeps its glossy coloring even after cooking. Does not become sticky. Excellent in stuffings or combined with brown rice. Originally from Ethiopia, where it has been prized for generations. E56, F86T

**Black Buffalo:** {DF} Unique attractive deep purplish-black grains. Has a distinctive flavor, somewhat sweeter than other types. Maintains its color through cooking in all recipes. Produces a purplish flour that can be used in a wide range of baked products. The baked products will have a purplish color even if only 1/4 of the flour is from Black Buffalo. A very low yielder. A90M, J11M, M89M{PD}

**Bronze Nugget:** {DF} Hooded, six-rowed barley that resembles golden wheat in color, though more translucent. Has a rich, somewhat nutty flavor. Produces a whole grain flour that makes golden brown, nutty sourdough bread. The grits make a tasty hot cereal. Requires a slightly longer cooking time than Treasure State. Germin-

nates quickly, making it a good choice for sprouting. A90M, J11M, M89M, M89M{PD}

**Dolma:** Selected six-rowed type from the Kinnauri Himalayas, Himachal Pradesh, northern India. Prized locally for making *tsampa*, flour made from toasted grain. Grown at 9500 to 10,000 feet elevation. L3J

**Easv-Thresh Hulless:** 100 days. Very productive, awned, two-rowed type. Long heads of large, plump grains. Very easy to thresh. Makes excellent malt. Has succeeded in home-garden trials in Texas. Grows 24 to 36 inches tall. Planted in spring. K17M

**Ethiopian:** A two-rowed, naked seeded grain which easily threshes free from the grain. Translucent brownish hull. Midseason in maturity. Threshes clean like wheat and rye, yielding a ready to use whole grain. More heat resistant than other types. Yields well even when sown later in spring. Originally from the Abyssinian plateau. F73D, J39, L3J, K17M, N24M

**Excelsior:** Large, attractive purplish seedhead; long, rough awn; six-rowed. Purple seeds. Hard to thresh. Makes superior pilaf. Vigorous grower, 36 to 40 inches tall. Somewhat susceptible to lodging. Has done well in home-garden trials in Maine. F73D, J39, K17M

**Popping:** Light brown seeds. Will pop over medium heat in a skillet. Grows about 3 feet tall. Somewhat susceptible to lodging. K17M

**Purple Hulless:** 80 days. Rough awned, four-rowed barley with a 3 inch head. Very attractive, purple tinged seeds. Plants grow to 30 inches tall with good yields. Hard to thresh. Usually sown in spring. F73D, K17M

**Sanaatsuaa:** Small-seeded, hullless, six-rowed barley. Kernels are finer-grained or more "ricey" than other cultivars. Nutty flavor. Excellent fall growth habit, should be tried as a fall-planted over-winter crop in warm winter areas. Inconsistent when planted in spring. Originally from Japan. F73D, K17M

**Sheba:** 78 days. Very attractive golden awns at maturity. Dark seeds that thresh out cleanly; six-rowed. Very upright, relatively short plant. Moderate to heavy yields. Has resisted lodging better than other cultivars in home garden trials. F73D, K17M, K46T

**Tibetan Hulless:** 100 days. Awned, six-rowed, spring barley with small dark grains. Three foot tall plant with strong straw, does not lodge easily. Moderate, dependable yields. Hard to thresh by hand. May be somewhat variable in seed color, size and shape. Originally from Tibet, where it is traditionally used for making *tsampa*, a toasted grain flour. L3J, L77D

**Tibetan Purple:** A rare six-rowed awned variety from high in the Himalayas. Striking, iridescent violet ears. Deep flavored. High in energy. L3J

#### *Imperata arundinacea* -> *Imperata cylindrica*

*Imperata cylindrica* - *Pai-mao* {S}. Immature flower spikes are sucked or eaten. They are sometimes cooked as a potherb, fried, or put into soups. The slightly sweet rhizomes are chewed or eaten, and also yield a starch used in making beer. They are often mixed with a purple variety of sugar cane called *mia lau* to form a cooling, thirst-quenching, digestive beverage which is occasionally available at Oriental markets. Also the source of an edible manna. Tropical Asia. DONKIN, FOX, F., TANAKA, UPHOF, VAN DUONG; J82{PL}, N84, P17M

*Leymus arenarius* - *Sea lyme-grass*, *Strand wheat* {PL}. The whole grain, when cooked like rice, is delicious with wild game or other meats, and is very good served with sugar and cream as a breakfast cereal. Strand wheat flour, mixed half-and-half with wheat flour, adds a rich flavor to pancakes, biscuits and muffins. The protein content of the grain rivals that of red beans and salmon. Viking settlers of Iceland cultivated the grain until the turn of this

century. Northern temperate region. FERNALD, GIBBONS 1964, GRIFFIN; B28, C9M{S}, C92{S}, D95, E30, F35M, H29M, J24, L22, N84{S}, Q24{S}

*Leymus racemosus* - *Mammoth wild-rye* {S}. Grains are used for food in some parts of the former Soviet Union, especially in times of drought. The young underground shoots are sweet and tender and can be eaten raw. Currently being evaluated as a perennial grain crop in the United States. Southeastern Europe. BURRITT, KOMAROV; B28{PL}, E66M

#### CULTIVARS

**Volga:** (Volga Wild-Rye) A tall, creeping variety which is coarse and essentially non-palatable to livestock. Provides a vigorous, permanent cover for sand dunes. Released in 1949. Introduced from the Volga region of the former Soviet Union. E66M

*Milium effusum* - *English millet-grass* {S}. Seeds are used for making bread. The aromatic leaves have been employed for flavoring tobacco. Northern temperate region. KUNKEL, VON REIS; B28{PL}, N71M, N84, 048

*Oryza barthii* - *African perennial rice* {S}. The grain is eaten in some parts of Africa where it is considered to have a good flavor. Occasionally collected and sold in local markets. Grows in water, often as a weed in rice fields. Tropical Africa. DALZIEL, UPHOF, ZEVEN; U8M

*Oryza glaberrima* - *African rice* {S}. An indigenous cultivated rice of West Africa grown in flood plains of savanna regions, from Senegal to Lake Chad. Cultivated there for at least 1,500 years. Historically reserved for religious rituals and as a luxury food for chiefs. Preferred locally for its aroma and sweeter flavor. Used like Asian rice or for specialized local preparations such as *hetso* or *buca-k* beer made from rice and honey—and a festive sweet-tasting bread of the Mandingo and Susu people, made from rice flour and honey. Most types are red-skinned. Tropical Africa. NATIONAL RESEARCH COUNCIL 1996, UPHOF, ZEVEN; U8M

*Oryza sativa* - *Rice* {PD}. The grain is eaten boiled or steamed. It is also made into flour, pasta, breads, cakes, pastries, puddings, starch, *pilaf risotto*, *fiiju*, etc. *Poha* is flattened grains of rice that puff up when fried; used in India for making *cheewra* or *chiwra*, a granola-like product. Rice bran, when mixed with flour, is suitable for cookies, cakes, muffins, and pancakes. In Japan, it is called *nuka* and is widely used for pickling vegetables, along with sake lees. *Rice bran oil* is a light oil popular with gourmets and natural foods enthusiasts. Sprouted seeds are eaten in salads. Some fermented foods made from the grain include *apem*, *hopper*, *idli*, *dhokla*, *dosa*, *miso*, *sake* and other rice wines, *red rice* and *puto*. *Amazake* and *Rice Dream* are milk-like beverages produced from rice. *Flaked rice* and *rice extract* often added to popular American and Japanese beers. Food wrappers made from rice flour include rice paper or *bank trang*. Young seedlings can be used as a vegetable. *Genmai-cha* is *bancha* tea mixed with roasted and popped brown rice. *Brown rice malt syrup* or *mizumame* is a popular natural sweetener. *Tsuto-dofu*, a tofu dish popular on the island of Kyushu, is wrapped in rice straw, the straw imparting a distinctive aroma and flavor. Tropical Asia, cultivated. BELLEME [Re], COTTERELL, CUSUMANO [Cul, Re], DUKE, FINNEGAN [Nu, Re], IAFFREY, LOGSDON 1977 [Cu, Re], ROUTHIER 1989 [Cul, Re], ROUTHIER 1993 [Re], SHURTLEFF 1975, SHURTLEFF 1979, STEINKRAU S, SUGANO, TANAKA, UPHOF; A7, A25G, A52M, B8P, B31, C27G, C34G, D4, D43G, E56, E68M, F17, F74, F88, F97M, G47B, G47C, H7G, H91, I19M, I76T, K18M, L34, M34M{S}, N17, N84{S}, etc. (for cultivars see Rice, page 508, see also Sprouting Seeds, page 524)

*Oryza sativa* Glutinosa Group - *Glutinous rice*, *Sweet rice*, *Mochi-gome*, *No mi* {PD}. A distinct class of rice with glutinous kernels that bind together when cooked, imparting a unique chewy consistency. The grain is usually steamed, pounded and made into *mochi* cakes, pastries and sweetmeats. It is also ground to flour (*shiratamako*) and processed into dumplings called *dango*, or used for puffed rice. The flour is also an ingredient of *kochujang* and

Korean rice cakes (*ttok*), and is added to fried dishes. Glutinous rice is the preferred rice for manufacturing the fermented products *mirin*, *tapuy*, *lao chao*, *tapeh ketan* and *tapai*. Chinese black vinegar or *Chinkiang vinegar* is a very dark-colored, distinctly fragrant and flavorful vinegar made from glutinous rice. Fermented glutinous rice flavors meat and fish dishes and is used in preserving foods such as *fermented glutinous rice eggs*. *Shaohsing*, a famous Chinese rice wine made from glutinous rice, is often used in marinades and in cooking. Also mixed with brown rice in some forms of *amazake*. In Korea, glutinous rice is combined with adzuki beans, black soybeans, sorghum and millet to form *five-grain rice* (*ogokpap*). COST 1988, COTTERELL, CUSUMANO [Cul, Re], FINNEGAN, HAWKES [Re], MILLON, NOH [Cul, Re], PORTERFIELD, ROUTHIER 1989 [Cul, Re], SHURTLEFF 1975, SHURTLEFF 1979, SO, STEINKRAUS, TANAKA; C27G, C73P, F88, H7G. (for cultivars see Rice, page 508)

*Oryzopsis hymenoides* - *Indian rice-grass*, *Indian millet* {S}. The rather large, nutritious seeds have a pleasing taste and are used as a source of meal for making gruel and cakes, or to thicken soups. Sometimes the ground seeds were mixed with commeal and made into dumplings. When ripe, the seeds fall readily from the plant and are easily harvested. Presently being tested as a perennial grain for sandy soils in arid regions Western North America. CULLY, DOBLEY, HARRINGTON, H., KINDSCHER, MEDSGER; C4, C9M, D82, E66M, F44, F63M, G59M, 147, I98M, I98M{PL}, J25M, J25M{PL}, K62, M34M, N84, etc.

*Panicum colonum*-*Echinochloa colonum*

*Panicum crusgalU*-*Echinochloa crusgalU*

*Panicum miliaceum* - *Proso millet* {S}. Seeds are eaten boiled like rice, popped, flaked, pearled, or ground into flour for use in breads, pasta and dumplings or fermented into *tempeh* and *miso*. To enhance their nutty flavor they are commonly browned in a skillet before being used in casseroles, stews, souffles, and stuffings. Popular with those who follow a natural foods diet because its high alkaline content counteracts acids and makes it more easily digested. Sprouted seeds are eaten in salads, soups, and breads. Southern Asia, cultivated. LOGSDON 1977 [Cu, Re], MALLESHI, SCHERY, SHURTLEFF 1979, TANAKA; A15Z, B49, E66M, E97, G26, G47, H91{PD}, I19M{PD}, K5M, K71, L14G{PD}, M25, M34M, N84. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Red:** (Red Proso) Loose heads of red seeds. Planted in June and harvested mid to late August. E53, K49M

**White:** (White Proso) Looser heads than Red. Grows 30 inches tall. Planted 6 inches apart. C4, E53, K49M

*Panicum obtusum* - *Vine mesquite* {S}. Seeds were ground with cornmeal and consumed as food by the Hopi Indians. Southwestern North America. UPHOF; E66M

*Panicum palmifolium* - \**Setaria palmifolia*

*Panicum sonorum* - *Sonoran panic-grass*, *Sauwi* {S}. The grain is ground and used by the Guarijio Indians of northwestern Mexico in basic cereal foods such as *torillas*, *tamales*, and *at ole*. The flour is seasoned with salt and sugar, and mixed with milk to make a nourishing drink. Cultivated on a small scale. Southwestern North America. NABHAN 1984b.

#### CULTIVARS

**Guarijio Indian:** Small, golden-seeded millet type. High in lysine. Plant by broadcasting during warm rainy season. Attractive plant. Fast growing and heat tolerant. Rediscovered in 1976 in a very remote area of Sonora's eastern border with Chihuahua. Thought to have been extinct until then. 116, N84

*Paspalum scrobiculatum* - *Kodo millet* {S}. The grain is cooked and used like rice. It can also be popped like corn. In India, it is substituted for rice in the preparation of *dhokla*, *dosa* and /~/-acid-leavened fermented cakes. Tropical Asia, cultivated. FCK, F., MACMILLAN, MALLESHI, STEINKRAUS; U37M

*Pennisetum americanum* - *Pearl millet*, *Bulrush millet*, *Spiked millet*, *Bajra* {S}. The seeds are eaten like rice, ground into flour which is used in breads and cakes, or employed in the manufacture of numerous alcoholic beverages. They are also mixed with other grains and seeds in making the fermented products *dosa*, *enjera*, *khemiss-tweira*, and *uji*. In the Sudan, bulrush millet is preferred for making *aceda-jirya*, a fermented porridge often reserved for celebrities and dignitaries. In Ghana, the flour is made into a stiff porridge called *to* and a thin, fermented porridge or paste, locally known as *koko*. A deep-fried pancake, *mars a*, is also prepared there from the leavened batter of pearl millet flour. Ghanaian children often eat the sweet raw grains after threshing. In parts of India the immature ears are roasted and eaten like sweet corn. The popped grains, called *akohi*, *bhunja*, *lahi* or *phula* in India, are eaten with powdered sugar or jaggery. Sweet-stalk types have been found in Tamil Nadu. Cultivated. BALLENTINE [Re], DIRAR 1993, FCK, F., LOGSDON 1977, MACMILLAN, MENNINGER, NATIONAL RESEARCH COUNCIL 1996, RAO, STEINKRAUS, TANAKA; A25G{DF}, A25G{ED}, E7M, E61, F73D, L3J, M34M, N84, P17M

*Pennisetum glaucum* - *Pennisetum americanum*

*Pennisetum typhoides* - *Pennisetum americanum*

*Phragmites australis* - *Common reed-grass*, *Wild broomcorn* {S}. The young shoots are eaten like bamboo sprouts or pickled. Dried stems were made into a marshmallow-like confection by North American Indians. In Japan, the young leaves are dried, ground, and mixed with cereal flour to make dumplings. The partly unfolded leaves can be eaten as a potherb. A sugary gum that exudes from the stem is rolled into balls and eaten as a sweet. The rhizomes are sometimes cooked like potatoes. Although difficult to remove from its hull, the grain is said to be very nutritious. Cosmopolitan. FERNALD, KIRK, MEDSGER, TANAKA; A26, B28{PL}, D47M, F96, G26{PL}, J43, M16{PL}, Nil {PL}, M34M{PL}, N84, Q24

*Phragmites communis*-*Phragmites australis*

*Saccharum edule* - *Sugar cane inflorescence*, *Lowland pitpit* {PL}. The inflorescences, which are abnormal and remain enclosed within the leaf-sheaths, are eaten raw, steamed, roasted, fried, added to soups or cut into pieces and cooked with meat and stuffed fowl. When properly prepared, it might be used as a substitute for cauliflower. Tropical Asia. HERKLOTS, MASSAL, MAY, R. [Nu, Re], OCHSE; U7T

*Saccharum officinarum* - *Sugar cane* {PL}. Stems are the source of cane sugar, cane syrup, *molasses*, *rum*, etc. Sugar cane juice is consumed raw as a beverage or fermented into various alcoholic beverages and spirits. The core of fresh stems is often chewed for refreshment, and in Vietnam is used as a tasty skewer for grilling seasoned pastes of fresh shrimp. Unrefined or natural sugar is available in Japan as dark brown cakes known as *kuro-zato*, and in Mexico in the form of cone-shaped loaves called *piloncillo*. In the United States, products such as *brown sugar* are merely mixtures of white sugar and molasses. *Aguardiente* is raw sugar-alcohol, sweetened and usually strongly flavored with anise or other herbs. In the Philippines, a popular and expensive vinegar called *iloco* is prepared from sugar-cane wine. Caramel and caramel color are produced by boiling sugar with milk and ammonia respectively. Caramel is used for flavoring; caramel color is a ubiquitous commercial food colorant. Cultivated. COST 1988 [Cul], LEUNG, MACMILLAN, ORTIZ 1967, ORTIZ 1973 [Re], ROUTHIER 1989 [Cul, Re], SCHERY, SHURTLEFF 1977, STEINKRAUS, UPHOF; A28, B23P{PR}, E13G{PR}, E13G{PD}, E29, G13T{PD}, I76T{PD}, L35M{PD}, L55J{S}, L90J, N84{S}, P38

#### CULTIVARS

**Black:** Vigorous, productive plants, 6 to 8 feet tall. Stems are thick, firm, purple-black in color, and very sweet. Good for chewing and juicing. Can be grown in a large container in a greenhouse or sun room. M82, N84

**Rainbow:** Ornamental type with attractive variegations of yellow, green, purple and mauve. Suitable for eating fresh or juicing. Has slightly thinner stems than the commercial yellow sugar cane of Mexico and South America. Also not as tall growing, to 10 feet or so. Originated in Hana, Maui, Hawaii. D57

*Saccharum sinense* - *Chinese sugar cane* {PL}. The stems are chewed for their sweet juice. On the island of Shikoku in Japan, the juice is manufactured into a very rare sugar known as *wa sanbon to*. It is made by hand using a unique, two-hundred-year-old, traditional process. *Wa sanbon to* is extremely soft and fine and of the highest quality. It is essential for making top quality *higashi*, a rice flour confection used in the tea ceremony. Eastern Asia. TANAKA, WALKER; U7T

*Saccharum spontaneum* - *Wild sugar-cane, Thatch grass* {S}. The heart of the young shoot is eaten, either raw or cooked, as a side-dish with rice. Very young inflorescences, still enclosed within the leaf-sheaths, can be eaten raw, steamed, or roasted, having a sweet taste. Children chew the peeled rhizomes as a substitute for sugar-cane. Ash from burned plants is used as a substitute for salt. Tropics. OCHSE, ZEVEN; N84, Q46

*Secale cereale* - *Rye* {S}. Seeds are an important source of flour used in various breads, including *pumpernickel*, *knackerbrod*, *spisbrod*, *hiivaleipa*, and *limpa*. Rye flour is an essential substrate of the leaven used in making *sourdough bread*. Rye pasta has a rich earthy flavor. A unique beverage called *sahli* is produced by the home-brewers of Finland. It is made with a mix of barley and rye malts to which hops and juniper berries are added. *Kwass* is an alcoholic drink of Russia prepared from rye malt and rye flour. Roasted grains are used as a substitute for coffee. Sprouted seeds are used in salads and breads. Young seedlings are juiced or dried and used like those of wheat, barley and oats. The flower pollen is extracted by a special process and used as a food supplement, called *Cemilton*. Cultivated. HESSELTINE, JACKSON, M., LINSKENS, LOGSDON 1977 [Cu, Re], LONDON [Re], RITTER [Re], SCHERY, STEINKRAUS, TANTTU, UPHOF; A25G{PD}, B49, C19{PD}, D47M, E66M, G71, J19M{DF}, L3J, M34M, N84, R47. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**PRG:** First true perennial rye grain offered for sale in the United States. Large, plump grains comparable to those of annual grain ryes. Only half the yields. Threshes easily and can be used like wheat for bread making. Excellent for naturalized grain crops. Has tested well in hot, dry areas of Oregon and the warm humid Southern states. J9M

**Tetra-Petkus:** A tetraploid rye developed from the German cultivar Petkus, which was selected from Pirnaer and Probststeier in the 1880's. Long, bright straw; bearded. Very vigorous; tall growing, height 6 feet. Large kernels with good bread-making quality. Ready to combine in the middle of August in Ontario. Good yields, up to 60 bushels per acre. D68, N84

#### *Secale kuprijanovi*-*Secale montanum*

*Secale montanum* - *Mountain rye* {S}. The grain is eaten as a cereal or ground into flour for making bread and other baked goods. One of the principal ancestors of modern rye. Mediterranean region to Southwest Asia. TANAKA, ZEVEN; F96, R49{PL}

*Setaria italica* - *Foxtail millet, German millet, Italian millet, Awa* {S}. The seeds are cooked like rice, parched, popped, added to soups and sauces, or made into porridge, cakes, puddings, *mochi*, or dumplings. In Korea, they are used in the preparation of *yakju* and *takju*, traditional alcoholic beverages. Also made into a syrup. Eurasia, cultivated. FERNALD, GOLDSTEIN, HOMMA, LOGSDON 1977, MACMILLAN, MALLESHI, SCHERY, STEINKRAUS, TANAKA; C4, C95, D47M, D92M, E61, E66M, E66T{DF}, G26, G47, K5M, K49M, M25, M34M, M95M, N84, etc.

#### CULTIVARS

**Golden German:** 95 days. Bright yellow, pendant ears, 10 to 12 inches long, densely packed with seeds. Excellent flavor. Grows to about 2 1/2 feet tall. Bears prolifically. Originally from central Europe. L3J

**Goldilocks:** 120 days. Large, thick ears may reach 14 inches in length. Attractive, spiralled braid-like appearance reminiscent of golden tresses. Grows to about 3 feet tall; yields abundantly. Originally from China. L3J

**Len Thian:** 115 days. Glutinous or sticky-starch type originating in China. A prolific bearer of ropelike heads. Grows 3 1/2 to 4 feet tall when mature. For upland culture. L3J, L77D

**Suei Gu:** 110 days. Glutinous type originally from China. Heavy bearer of long, thick-fingered, well-seeded ears. Golden grains. Grows 3 1/2 to 4 feet tall when mature. L3J, L77D

**White French:** 45-90 days. Very fast growing with a low water requirement. Adapts to a wide range of soils. Grows to 3 feet tall. FIG, R47

**White Wonder:** 85-90 days. Grows 4 feet tall. Lengthy, robust, 6 to 8 inch heads. White grain. Heavy yielding, easy to thresh. Superior to all non-white grains. Does well under poor, dry conditions but takes longer to mature. North American cultivar. A2, F73D, K49T, L3J, L77D, N84

*Setaria palmifolia* - *Palm grass, Highland pitpit, Luluwan kebo* {S}. Seeds are boiled or roasted and used as a substitute for rice. The heart of the young shoots, called *hombboot* in Indonesia, is eaten raw, steamed, or cooked with rice. Very young plants are eaten whole, usually raw, as a side-dish with rice. In New Guinea, improved horticultural forms are grown. Southeast Asia. BROWN, W, MASSAL, MAY, R. [Nu, Re], OCHSE, TANAKA; C9M, F85, H71, N84, 093

*Setaria viridis* - *Green foxtail* {S}. Seeds are used like millet, either boiled, roasted, or ground into flour. Also said to be used as a substitute for coffee. Widespread, weedy. KUNKEL, TANAKA; D92M, M34M, N84

*Sorghum bicolor* - *Sorghum, Indian millet, Guinea corn, Milo* {S}. The seeds are eaten as a cereal, ground into flour, made into dumplings, porridges and fried cakes, or used for the preparation of various fermented foods and beverages, including *maasa*, *aceda*, *kissra*, *kaffir beer*, *pito*, *urwaga*, *hulu-mur*, *merissa*, and *ogi baba*. In West Africa they are manufactured into *couscous*. Some types are grown for their bitter grains that are used for flavoring sorghum beer. *Kaoliang*, *Maotai*, and *Sanshu* are Chinese spirits produced from sorghum. *Mei-kuei-lu*, *Kaoliang* spirit flavored with rose petals, is used in Chinese cooking to add fragrance to marinades and in the master sauce for flavor-potting. Also used in the production of *Shanxi vinegar*, a rare black vinegar from northern China. Sorghum malt can be toasted and then extracted with water, yielding an attractive unfermented beverage with a malted, chocolate-type flavor. A ready-to-eat breakfast cereal made from sorghum has been developed in the United States and given the name *Captain Milo*. In Guatemala, the popped grains are made into a confection called *alborotos*. In India, a nutty flour made from popped sorghum is traditionally eaten after being mixed with milk and sugar, salt, buttermilk or chiles. The immature seedheads of certain strains found in Maharashtra make a very pleasant vegetable when roasted and eaten like sweet corn. Sprouted seeds are eaten. Tropical Africa. COST 1988, DAGHER, DIRAR 1993, FCX, F., LU, NATIONAL RESEARCH COUNCIL 1996, SAUER, SO, STEINKRAUS, WEINZWEIG 1996, WILSON, E.G. [Re], ZEVEN; A25G{DF}, A25G{PD}, C27G{PD}, E66M, F74{PD}, I16{PD}, L14G{DF}, L14G{PD}, M34M, N54{PD}, N84

#### CULTIVARS

**Black African:** 120 days. White grained cultivar used for porridge, gruel and *chapatis*. Sweet and light flavor, good for summertime eating. Drought tolerant plant, 8 1/2 feet tall, bears seeds in a

loose panicle. Grains are easily freed from enclosing glumes. May need protection from birds. C95, K49T, N84

**Black Kaffir:** 120 days. A seed and feed flour grain. Light colored seed with black hulls. Grows 6 1/2 to 8 feet tall. Tolerates drought and disease. Similar to Black African but with a tighter panicle. C95, H49, I64

**Dabar:** White-floured, high yielding sorghum from the Sudan. Popular in some areas for making white *kissra*. Also used for other fermented foods such as *nasha* and *abreh*. Very high in soluble carbohydrates, but lower in protein than Feterita; low in tannin. Developed at the Tozi sorghum research station in the Blue Nile province. Released in 1977. DIRAR; U37M

**Feterita:** Traditionally the most widespread sorghum of the Sudan. Although white sorghums are preferred in cities, rural Sudanese strongly believe the brown-seeded Feterita is nutritionally superior. Stores better and is easier to mill than other sorghums. Used for most of the numerous fermented foods of the Sudan, such as *kissra* and *merissa*. Introduced into the United States in 1906. DIRAR; U37M

**Gooseneck Brown Durra:** 120 days. Reddish-brown grain of a kind used for feed or brewed into native beers. Drought tolerant plant, 6 1/2 feet tall. Stout, conical seedheads held on recurved necks, like geese, hence the name. Not molested by birds. C95, N84

**Hazera 610:** 120 days. Medium-sized, reddish grain; semi vitreous, with good malting quality. Medium early, consistently high yielder; large, somewhat compact panicles; slight tendency to tiller. Adapted to medium and heavy soils. One of the cultivars used in Israel for adding to the popular non-alcoholic malt beverages. P75M

**Hazera 6060:** 125 days. Large, white grain of floury texture. Suitable for use in baking. Yields are good even under moisture stress and high temperatures during the last stages of growth. Recommended for light soils and dryland farming conditions. P75M

**Lesotho:** A staple food in its homeland of southern Africa. Traditionally cooked with beans to form a complete protein. Can also be used as a cereal by grinding to a coarse meal and adding raisins, apples, dried fruits, cinnamon, yogurt and brown sugar. Stalks grow 7 to 12 feet tall with numerous side tillers. L7M

**Mavo:** White-floured sorghum from the Sudan. Popular in some regions for making white *kissra*. Also used for other fermented foods such as *abreh*. Higher in calcium content than Feterita, but lower in protein and phosphorus. May be the Sudanese ancestor of the American milo type. DIRAR; U37M

**Popping:** Grown primarily for the small, pearly-white grain which is popped and eaten like popcorn. The grain may also be used as standard types are. N84, R47

**Teoehuan Popping:** 110 days. Slender plant with many tillers, to 7 feet tall. White seeds in arched panicles. May be popped and used like popcorn. Has an excellent nutty flavor. Plant in early July in low desert areas. Not drought resistant. Collected from Nabogame, an isolated northern Tepehuan village in southern Chihuahua, Mexico. F73D, J20, L3J

**Texicoa:** 115 days. Large, white-seeded type. Pleasant flavor, sweet and mild. Very good cooked whole like rice, or made into porridge or chapatis. Dense obovate seed heads. Grows to about 3 1/2 feet tall. C95, L3J, L77D

**Wad-Fahal:** White-floured sorghum widely used in the Sudan for making white *kissra*. *Kissra*, a staple flatbread, consists of paper-thin sheets of baked fermented batter. Also the preferred variety for making *abreh*, a similar bread, and *kissrat -kerr*, an enjera-like bread made from five different grains. DIRAR; U37M

**White Pearl:** 130 days. A rare cultivar with plump, pure white seeds. This is the type of grain sorghum preferred for human food. No bitter, toxic tannins like the grain sorghums grown in the United

States for feed purposes. Grown in nearly every state in India, where the grain is made into unlimited delicious foods. G47

**White Popping:** 100-110 days. Small, cream-colored seeds that can be used for popping. Grows 8 to 10 feet tall. The seed heads may also be harvested and used in dried arrangements. D76, G13M, H49, J20

Sorghum bicolor Saccharatum Group - *Sweet sorghum, Cane sorghum, Sorgo, Imphee* {S}. The stems are chewed for their sweet juice which is also made into *sorghum syrup, sorghum molasses*, and sugar. The grain is ground into flour for use in breads and pancakes. Stems are also said to be used as a culinary vegetable. HEMMERLY, LOGSDON 1977 [Cu, Pie], MACMILLAN, TANAKA; F64{PE}, J9M, K10, K49M{PD}, R47

#### CULTIVARS

**Amber:** 120 days. Drought tolerant plant, 8 1/2 to 10 feet tall. Gently drooping panicle with amber colored grains. Juicy stalks are used for manufacturing *sorghum syrup*. C95, F73D, N84

**Apache Red:** 120 days. Drought tolerant plant, 8 feet tall. Drooping red seedheads that attract birds. The stalk is chewed like candy when seeds have ripened (turned red). Also used for *sorghum molasses*. From the San Carlos Reservation in western Arizona. Adapted to grassland/scrub areas. C95, I16, L3J, L77D, N84

**Ho-K:** Stems are sweet and juicy and can be chewed like candy. The juice may also be extracted and boiled down to a syrup that is delicious on pancakes or waffles. Easy to grow. Tops of stalks are used in dried arrangements. L7M

**Iowa Sweet:** 125 days. Very sweet sugar cane type. Thick, juicy stalks. Grows to about 9 feet tall when mature. K20M

**Mennonite:** 90-100 days Very thick stalks, grow 7 to 8 feet tall and resist lodging. Large heads of grain; tight, orange-hulled seed heads. Does not produce too many suckers. Makes a light-colored syrup of good flavor. Seeds may be ground to make flour, especially for pancakes. An old heirloom from a Mennonite who used to have a sorghum mill near Jamesport, Missouri. F73D, K46T, K49M, L7M

**O'odham:** (Papago) (*S. bicolor* x *S. halepense*) 120 days. Once commonly grown for *sorghum molasses*. The sweet stalks can also be peeled and chewed. Grows 7 to 8 feet tall, producing many tillers. Red-tinted stalks. Perennial in some areas. Adapted to the low hot desert, where it is planted in spring or with the summer rains. C95, I16, K46T

**Onavas Red:** Very sweet and juicy. Burgundy-red seeds. Stalks produce numerous tillers. Planted during the summer rains in the low desert. Originally from the Pima Bajo village in Arizona. I16, N84

**Rox Orange:** 100 days. Produces a mid-stout stalk that is sweet, juicy and leafy and grows 6 to 8 feet tall with few tillers. Rounded, yellow-brown seeds with bright red hulls. Light-colored syrup type; makes very flavorful syrup. Yields well. An old heirloom, developed at the Wisconsin Agricultural Experiment Station. F73D, G26, K20M, K71

**Sweet Tooth:** The juice may be extracted from the canes and boiled down to make sorghum molasses, which can be poured on pancakes and waffles. H49

**Texas Black Amber:** (Black Amber) 110 days. An Heirloom first introduced to American agriculture by way of France. Produces plump amber seeds with shiry, black hulls. Molasses type. Also used for silage and as an ornamental. Grows 6 to 12 feet tall. Adapted to grassland/scrub areas where it is planted in early July under irrigated conditions. D92M, F63, G13M, I16, I64, J20, K10, L7M, M65, N84

**Waconia Orange:** Tall growing type used for silage as well as sorghum molasses. Reddish-orange hulls. Planting rate should be about 12 pounds per acre. A15Z

**White African:** 118 days. Very vigorous plant; grows 10 to 12 feet tall. Large-sized, thick stalks; long-jointed; very sweet, medium juicy to juicy. White seed with a black hull. Very old heirloom cultivar. Makes excellent dark-colored syrup. K46T

*Sorghum saccharatum*-*Sorghum bicolor*

*Sorghum vulgare*-*Sorghum bicolor*

*Sporobolus airoides* - *Alkali sacaton* {S}. The seeds are parched, ground, and eaten dry or made into mush. Recommended for saline agriculture. Southwestern North America. DOEBLEY, NATIONAL RESEARCH COUNCIL 1990; YANOVSKY; C4, C43V, E66M, F96, G60{PL}, 147,198M{PL}, K62, L89G, M25

*Sporobolus cryptandrus* - *Sand dropseed* {S}. Seeds are parched, ground, mixed with water or milk, and made into mush or biscuits. They can also be added to breads, muffins, and cereals. The tiny seeds have the advantage of being easily freed from their husks. North America. CROWHURST 1972, FERNALD, KINDSCHER, KIRK, YANOVSKY; A15Z, C4, C43V, D47M, E53, E66M, F63M, F96, G47M, 147, J39M, J43, K62, L3J, L41, M25, etc.

*Thinopyron intermedium* - *Intermediate wheatgrass* {S}. The seeds are eaten as a cereal, or ground into flour and used to make crepes, muffins, rolls, etc. Tests at the Rodale Research Center indicate that intermediate wheatgrass, along with pubescent wheatgrass are the best candidates among the perennial grasses tested for development into perennial grains, based on culinary evaluations. Adapted to areas with 15 inches or more of annual rainfall. Western North America. WAGONER; A15Z, C4, C92, D47M, E66M, F96

#### CULTIVARS

**Oahe:** Produces seeds that thresh free when the appropriate seed cleaning equipment is used. Better adapted to areas of higher rainfall than Luna and other cultivars of pubescent wheatgrass. Has an endosperm recovery rate of 50%. Oahe whole grain flour does not compare as favorably to wheat flour as does flour made from Luna pubescent wheatgrass. Developed by James Ross at the Brookings South Dakota Agricultural Experiment Station. C4, C43V, E53, E66M, F96, G19T, 199M, K62

*Thinopyron intermedium* var. *trichophorum* - *Pubescent wheatgrass* {S}. Seeds are eaten as a cereal or porridge, and are also ground into flour for making breads, cakes, pancakes, etc. In culinary tests at the Rodale Press Food Center, muffins made with 100% pubescent wheatgrass flour had a pleasant, sweet and nutty flavor. More drought tolerant than intermediate wheatgrass, growing in areas with 8 to 15 inches of annual precipitation. Western North America. WAGONER; E66M, F96, L41

#### CULTIVARS

**Luna:** Produces 160 pounds, or about 3 bushels of seed per acre. In milling, the endosperm recovery rate is 65% as compared to 70% for wheat, indicating that Luna should be used for whole grain flour rather than fractionated into endosperm flour, germ and bran. Luna whole grain flour compares favorably to that of a high quality dough forming wheat. Developed by the Los Lunas Soil Conservation Service Plant Material Center in New Mexico C4, C43V, E53, E66M, F96, G19T, 199M, K62

*Tripsacum dactyloides* - *Eastern gama grass*, *Buffalo grass* {S}. Grains are used for food. Popped kernels are almost indistinguishable from those of Strawberry popcorn. The seed of gama grass consists of 27 % protein and it is nearly twice as high in the amino acid methionine as corn. This high protein percentage, three times higher than corn and twice as high as wheat, allows breeders, who are working to develop gama grass as a perennial grain crop, to sacrifice protein content in their effort to achieve greater yields. North America. HEDRICK 1919, JACKSON, W., KINDSCHER; B29, B29{PL}, D47M, F73{PL}, G47M, H14M{PL}, H70M{PL}, 111, J39M, L41, M16{PL}

X *Triticosecale* sp. (*Triticum* spp. x *Secale cereale*) - *Triticale* {S}. Artificial hybrid, the first man-made grain. The grains are eaten in soups and salads or ground into flour for bread, pancakes,

cookies, muffins, etc. Being low in gluten, it is usually mixed with that of wheat for bread-making. Sprouted seeds can be used like those of wheat and rye. Generally, the hybrids have a higher protein and amino acid content than wheat and the plants are more winter-hardy. But yields have been low in some areas and lodging has been a fairly serious fault. Triticale grain is larger than wheat, but less abundant on the spike. GELLES [Re], LOGSDON 1977, SASS, SCHERY, TRITIRICH [Re]; B31{DF}, B49, E7M, E31{DF}, E53, E55{DF}, E66M, G29{ED}, I20{DF}, 120 {ED}, K5M, N84. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Juan:** An attractive cereal plant, not a dwarf. Has tall straw of about 40 inches and stands well without lodging. B49

**Oac Wintri:** Plants grow to 50 inches and are resistant to powdery mildew and leaf rust. Large kernels. Susceptible to preharvest sprouting and lodging. Good winter survival. Originally from the University of Guelph, Ontario, Canada. G50, M95M

*Triticum x aestivum* - *Wheat*, *Bread wheat* {ED}. Grains are ground into flour for use in bread, pasta, cakes, biscuits, pies, crackers, dumplings and numerous other fermented and unfermented products. Coarsely ground whole wheat flour is usually sold as *graham flour*. *Chapati flour*, also called *at a*, is generally made from low-gluten wheat and is used for making many kinds of Indian breads. The grain is sometimes eaten as a cereal like rice, or made into bran flakes, shredded wheat, puffed wheat and other breakfast foods. Food wrappers made from the flour include *phyllo*, *strudel*, *crepes*, *wonton*, *gyoza* and *lumpia*. The popped kernels are sometimes marketed as *wheat nuts*. *Bulgur* wheat, popular in the Middle East for *tabouli*, is wheat that has been parboiled, dried, and then cracked. *Kishk* is made from a fermented bulgur and yogurt mixture. *Jalebi* is a fermented wheat/yogurt product from India. *Lambic beer* and *weisse beer* are made from wheat. *Faro* and *gueuze* are types of lambic beer. *Amydoun*, wheat flour that has been steeped, drained, and dried in the sun, is used in the preparation of sweet pottages made with violets and other flowers. The sprouted seeds are used for making *essene bread*, and *fermec* or *rejuvelac* (*Poor Man's Beer*)—\* fermented, non-alcoholic beverage which is drunk or used as the basis for *seed cheese* or *seed yogurt*. Young seedlings, known as *wheatgrass*, are juiced and consumed as a chlorophyll-rich beverage. *Wheat germ* and *wheat germ oil* are popular natural foods products. Roasted grains are used as coffee. *Panocha*, sprouted wheat flour, is considered nutritionally superior. Wheat gluten, known as *minchin ox fit*, is a high-protein food widely eaten in Far Eastern countries. *Seitan* is wheat gluten that has been marinated in soy sauce and seasoned. Cultivated. BAKER [Re], GUINARD, JACOBS [Pre, Re], JAFFREY, JACKSON, M., MULLER [Re], ROUTHIER 1993 [Re], SEIBOLD [Nu], SHURTLEFF 1975, STEINKRAUS, TANAKA, UPHOF, VON WELANETZ; A7M, B31, B49{S}, C11G, C34G, D4, D47M{S}, E56, E66T, G29, G47B, G71{S}, H14I, H19M, H25M, H86, H91,120, J19M, L34, L50M, L97G, L99, M96, N84{S}, R47{S}, etc. (for cultivars see Wheat, page 574, see also Sprouting Seeds, page 524)

*Triticum boeoticum* - *Wild einkorn*, *Thaoudar wheat* {S}. Seeds are occasionally eaten. In prehistoric times they were most likely parched and eaten as whole kernels, or made into porridge and unleavened bread. Southeastern Europe to Iran. BROUK, KUNK-EL, PADULOSI, ZEVEN; U8M, V84T, X54, Y14M, Z91

*Triticum carthlicum* - *Persian wheat* {S}. Cultivated as a grain crop in the Turkish-Caucasian region up to 2100 meters elevation. Southwestern Asia, cultivated. UPHOF, ZEVEN; U8M, X54, Z91

*Triticum compactum* - *Club wheat* {S}. The grain is made into flour for use in bread, crackers, starchy breakfast food, etc. Grown in parts of North America to produce a pastry flour which is considered the softest of all wheat flours. Contains as little as four percent protein. Southwest Asia, cultivated. ALFORD, SCHERY, UPHOF, ZEVEN; U8M, V84, Z91

## CULTIVARS

**Pima:** A beardless soft white wheat grown by the Pima Indians at least as early as 1920. Unusual short, fat compact head; golden-brown seeds. Excellent for flour *tortillas* and chapatis. Grows to about 3 feet tall. F73D, L3J, K46T, N84

*Triticum dicoccoides* - *Wild emmer* {S}. The grain is edible. One of the parents of several cultivated species including *T. dicoccon*, *T. carthlicum*, and *T. turgidum*. Southwest Asia. SCHERY, TANAKA, ZEVEN; U8M, V85M, X54, Y14M, Z91

## CULTIVARS

**Mondor:** Semi-hard, spring wheat. Pale golden seeds with sufficient gluten; medium protein content of 12 to 14%. The grain remains solidly fixed to the ear until harvest. High yielding; resistant to lodging, foot rot, and scalding. G50

*Triticum dicoccon* - *Emmer, Farro, German wheat* {S}. The grain is ground into flour, made into pasta, bread, breakfast foods, pastries, *polenta*, added to soups, stews, salads, tortas, etc. Has a hearty, nutty flavor and holds up better than spelt when cooked. The crushed grains or *farricello* are used in a risotto-like dish known as *farrotto*. Emmer is one of the oldest cultivated wheats. Its culture has been declining, however it is still cultivated in some mountainous areas such as Germany, Ethiopia, Italy and Spain. In Italy, it is currently featured on the menus of the best restaurants. Popular in Ethiopia for making *genfo*, a porridge, and a special bread called *kit a*. Eurasia, cultivated. BUGIALLI [Re], DE VITA [Re], FIELD [Re], KASPER, NATIONAL RESEARCH COUNCIL 1996, PADULOSI, SCHERY, ZEVEN; B49, H25M{DF}, I94{DF}, I94{PD}, J39, K17M, L99{PD}, M56M{DF}, M56M{ED}

*Triticum durum* - *Durum wheat, Macaroni wheat* {PD}. The grain is hard, semi-translucent, and especially rich in gluten. Source of *semolina*, used for making pasta, spaghetti, noodles, cakes, puddings, *gnocchi* and other dumplings, certain breads, and *couscous* a staple food of North Africa. *Pane carasau* and *Carta da musica* are famous parchment-like flatbreads of Sardinia made from semolina. In Iran and Iraq, the grain is eaten in the form of a local porridge. Durum wheat is preferred for making *trahanas*, a fermented food made from crushed wheat and fermented sheep milk. It is also favored for *fireek* or *frekeh*, immature green wheat that has been parched, dried and cracked. The *fireek* has a distinct, smokey flavor and is used in pilaf or as a stuffing for poultry. The shelled or peeled grain, called *kamh makshour* or *grano*, is used in Middle Eastern and Italian cuisines, grano for the famous Easter pie called *pastiera di grano*. *Beghrir* is a pale yellow yeast-semolina pancake from Morocco that is cooked only on one side. It is reminiscent of a honey-comb with numerous small holes. Mediterranean region, Eurasia, cultivated. ALFORD [Re], CUSUMANO [Cul, Re], DAGHER, SCHERY, STEINKRAUS, TANAKA, UPHOF, WOLFERT 1973 [Pre, Re], WOLFERT 1994a [Cul, Re]; A7, A7M, B71G, C60D{PD}, C73P, C73P{DF}, H19M, H78M, H78M{DF}, I20,I20{DF}, L50M, M67{DF}, O53M{S}

## CULTIVARS

**Arnautka:** (Wild Goose) Heirloom durum wheat from southern Russia. Awneled, spring wheat. Resistant to leaf rust. Brought to the United States in 1864 by Russian immigrants who settled in North Dakota. SMITH, C; U8M

**Kubanka:** Heirloom durum wheat from southern Russia. Awneled, tall straw type; high yielding. Introduced into the United States in 1898 by M.A. Carleton of the USDA. At one time grown commercially in North Dakota. SMITH, G; F73D

*Triticum macha* - *Madia wheat, Makha wheat* {S}. Cultivated for its grain in the Republic of Georgia and parts of southern Russia. Western Asia. UPHOF, ZEVEN; U8M, X54

*Triticum monococcum* - *Einkorn, Stone Age wheat, One-grained wheat, Farro* {S}. The grain is ground into flour for making bread, biscuits, cookies, pasta, ice cream cones, etc. Yields flour with a strong, yellowish tinge. Reportedly the most primitive of all domesticated wheats. Occasionally grown in Germany, Switzerland, France and Italy. In France it is used in the preparation of a special

porridge, and is becoming popular in the natural foods trade. Much higher in carotene than modern wheats. One of three species of hulled wheats known as farro in Italy, along with *T. dicoccon* and *T. spelta*. Europe, cultivated. HEDRICK 1919, NATIONAL RESEARCH COUNCIL 1996, PADULOSI [Nu], UPHOF, ZEVEN; B49, G47, J39, K17M, L77D

## CULTIVARS

**Alaska Spelt:** Two-rowed heads with fine, short awns; about 3 inches long; 32 kernels per head. Rich lime-green, turning an attractive orange-brown when dry. Matures in mid-July, 7 to 10 days after *Triticum spelta* 'Khapli'. Grows slightly taller than 3 feet. Apparently misidentified as a spelt, hence the name. J39, K17M

**Black:** Two-rowed, flat black heads, not very long. Superb flavor. Grows about 3 1/2 feet tall. Ripens in mid-Aily. Still grown in northern Spain and southern France despite low yields compared to modern wheat. Reportedly 10,000 years old. J39, K17M

**Blonde:** Very similar to Black einkorn, except the heads are blond and somewhat shorter. The plants are also slightly shorter. J39

**Provenge:** Antique grain originally from Provence, France. Smaller grains than common wheat or spelt but prized by those who have tasted its unique, rich flavor. Graceful, slender ears with tightly adhering glumes; awneled. Grows 3 to 4 feet tall. Usually sown in September for harvest the following August. L3J

*Triticum persicum - Triticum carthlicum*

*Triticum polonicum* - *Polish wheat, Astrakan wheat* {S}. The grains are ground into flour which is suitable for making macaroni. Has one of the largest grains of all the wheats, closely resembling Kamut wheat. Not suitable for bread making. Can be grown very successfully under garden conditions. Eurasia, cultivated. SCHERY, UPHOF, ZEVEN; G47, J39

## CULTIVARS

**Kamut:** (QK-77) {DF} Very large kernels, 2 to 3 times the size of modern wheats. Contains significantly higher levels of protein and slightly higher levels of lipids, amino acids and minerals. Reportedly less allergenic but this has not been substantiated by controlled studies. Produces whole wheat pasta, flour, sprout bread and puffed wheat of superior flavor. Also makes excellent wheatgrass and wheatgrass juice (Green Kamut). Thought to have originated in the Fertile Crescent. Introduced into Montana around 1950. ALFORD, MEYEROWITZ 1994a; A25G, A25G{PD}, E7M{S}, E31{PD}, E56, E56{PD}, F86T, F97M, F97M{PD}, G47C{PD}, H78M, H78M{PD}, I39T{PD}, I43T{m}, JUM, J73{S}, K17M{S}, L24G{SP}, L24{SP}, etc.

*Triticum spelta* - *Spelt, Speltz, Dinkel wheat, Farro* {S}. The reddish grains are used for flour, cereal, bread, muffins, cookies, flakes, boiled like rice, or roasted and consumed as a coffee substitute. Reportedly less allergenic than common bread wheat. Highly valued for making gingerbread and pretzels. Still grown in some areas of Germany where the naked grains are often harvested prematurely. They are then smoked and added to soups as *gruenkern*. This product is available at specialty stores in New York and other large cities. Spelt pasta, recently introduced to the natural foods trade, has a delicious nutty flavor. Europe, cultivated. ALFORD, HUGHES, H. [Re], LOGSDON 1977, LOVELOCK, PADULOSI, STREHLOW [Nu, Re], UPHOF, WEAVER 1993 [Re], ZEVEN; A90M{DF}, B31{DF}, E7M, E31{PD}, E56{DF}, E56{PD}, F85, F97M{PD}, G47, I39T{PD}, I19M{DF}, I97{ED}, J51T{PD}, K17M, L77D, M67{SP}, N34{DF}, N84, 093, etc.

## CULTIVARS

**Altgold:** (Altgold Rotkorn) An awneled type originally from Belgium. Distinctive, deep earthy flavor. Reportedly does not contain gluten. Stiff-strawed plant, grows 3 1/2 to 4 feet tall. Usually sown in the fall for a mid-July harvest. L3J

**Ardenne:** Heirloom originally from Belgium. Deep, rich flavor preferred by many. Excellent for porridge lightly toasted and ground with flaxseed. Yields very well. Usually sown in the fall for a mid-July harvest. L3J

**Champ:** An awnless, brown chaffed cultivar that outyields common spelt by an average of 23.2%. Also contains 1% to 1.57% higher protein. Slightly taller and has considerably improved straw strength. Has very good resistance to leaf rust but is only moderately resistant to powdery mildew. Developed by Howard N. Lafever at the Ohio Agricultural Research and Development Center. The first public cultivar released in recent decades. J80

**Khapli:** Very early maturing, usually the first week in July from a spring planting. Length of heads, including awns, approximately 2 1/2 inches. Grows about 3 feet tall; prone to lodging. Can also be sown in the fall. K17M

Triticum sphaerococcum - *Shot wheat*» *Indian dwarf wheat* {S}. Grown as a grain crop in Punjab and the Central Provinces of India. Southern Asia, cultivated. UPHOF, ZEVEN; L77D

Triticum timopheevi - *Sanduri*, *Tschalta sanduri* {S}. An ancient grain crop cultivated in the Republic of Georgia. Western Asia, cultivated. UPHOF, ZEVEN; U8M, X54, Y14M, Y29, Z91

Triticum turgidum - *Rivet wheat*, *Poulard wheat*, *English wheat* {S}. The grain is made into flour which is used in making macaroni, spaghetti, vermicelli, etc. Cultivated. SCHERY, UPHOF, ZEVEN; C53, D92M, F85

Triticum vavilovii - *Vavilov wheat* {S}. Grains are used for food in Armenia. They are somewhat difficult to thresh. Characterized by its distinctive, branching spikelet. Western Asia. BROUK, ZEVEN; F73D, J39, K17M

Triticum zhukovskiy - *Zanduri wheat* {S}. Cultivated as a grain crop in western Republic of Georgia. Southwest Asia. ZEVEN; U8M, X54, Z91

Uniola paniculata - *Sea oats*, *Beach grass* {PL}. The seeds may be cooked and eaten as a cereal. Said to be of very good flavor. North America. MORTON 1977; B32, F73, F80{S}, M7M

Vetiveria zizanioides - *Vetiver*, *Khus-khus*, *Botha grass* {PL}. Roots are the source of khus essence and khus water, used in India for flavoring sherbets, syrup sweets, and fruit drinks. In the food industry, vetiver extracts are added to canned asparagus to enhance the flavor. Tropical Asia, cultivated. BURDOCK, DEVI [Re], MORTON 1976, UPHOF; A49D{DF}, B28, C81M, E14T{DF}, F37T, F85{S}, F93G, J82, K18M{DF}, K22, K85, L34{D£}, M82, N19M, Q46{S}, etc.

Zea diploperennis - *Diploid perennial teosinte* {S}. The seeds are sometimes eaten. A wild relative of maize discovered near El Durazno, Jalisco, Mexico. Crosses with maize to produce fertile hybrids. Mexico. ZEVEN; U14

Zea mays - *Corn*, *Maize*, *Indian corn* {PD}. The immature seeds are eaten raw, boiled, roasted, dried, in *succotash*, etc. *Chicos*, a traditional food of the Pueblo Indians of the Upper Rio Grande, is unripe corn that has been roasted, steamed and dried then stored for use in soups, stews and chili. Dried seeds are ground into meal for breads, cakes and *polenta*, or treated with lye and made into *hominy* and *masa* for use in *tortillas*, *tacos*, *tamales*, *enchiladas*, *atole* and *pinole*. Also made into numerous fermented foods and beverages, including *chicha*, *pozol*, *kenkey*, *banku*, *koko* and *tesguino*. Seeds that are high in lysine are known as *Quality-Protein Maize*. *Flaked corn* is added to many commercial beers. Corn oil is used in salads and cooking. The husks and fresh leaves are widely used for wrapping tamale fillings. Roasted seeds are used for coffee. *Corn nuts*, roasted and salted seeds, are eaten as a snack. Corn starch is used in confectionery and noodles. Corn bran, of excellent flavor, can be used instead of wheat bran in recipes. Young immature ears are boiled as a vegetable or made into tortillas. The pollen is used as an ingredient of soups. Fresh, succulent silks are chopped fine and mixed with masa in making tortillas. Young tassels are boiled and eaten. The pith of the stems is chewed like sugar cane or is sometimes made into syrup. Sprouted seeds are used in uncooked breads and cereals. Hypertrophies, produced by the corn smut fungus, are

consumed. *Corn cob jelly* is made from the juice of dried red corn-cobs. In New England, corncobs are favored for smoking fish, hams, poultry and other meats. The juice from succulent green corn is added to *Sage cheese* for coloring. Southern America, cultivated. DUKE, MULLER, NATIONAL RESEARCH COUNCIL 1988, OLIVER, PAGE, STEINKRAUS, TANAKA, UPHOF, WALTER, WEATHERWAX, WILL, WILSON, E.G. [Re], ZASLAVSKY; A52M, B31, C11G, C56G, C57, C64, D4, D7, D97, E13G, E60P, E68M, F42M, F68P, G13T, I8M, I16, I42G, I63T, J3, K19, L16, M63M, N17, N40, etc., (for cultivars see Corn, page 339, see also Sprouting Seeds, page 524)

*Zea mays ssp. mexicana* - *Zea mexicana*

Zea mays 'Ceratina' - *Waxy corn* {S}. Low plants with erect leaves. Grains with waxy endosperm. Probably originated as a mutation in Eastern Asia. Cultivated in China, Manchuria, Burma, and the Philippine Islands. UPHOF; X54, Z91

Zea mexicana - *Teosinte*, *Annual teosinte*, *Maiz cafe* {S}. Young shoots are boiled and eaten. Whole mature seeds can be eaten by first soaking them in water until soft enough to chew. Dried kernels can be popped like popcorn. The young spikes can be eaten before the seeds have matured. In Honduras, the seeds are roasted and mixed with coffee or used as a substitute for coffee. The wild ancestor of maize. Mexico. ALTSCHUL, BEADLE, TANAKA, WILLIAMS, L., ZEVEN; C95, J73, N84

#### CULTIVARS

**Day Neutral:** A strain that is not sensitive to day length and will flower and mature seed in northern areas. Developed by George Beadle and Walton Galinat. C7M

**Northern Teoehuan Maizillo:** 120 days. Nabogame race. The most distinctive annual teosinte. Green stems are chewed for the sweet juices. Grows to 6 feet tall. Prolific. Probably will not flower until after the autumn equinox so may require a greenhouse or frost protection. Produces a good crop in Tucson and the California central valley with minimum protection. From southern Chihuahua. F80, I16, K46T

Zizania aquatica - *Wild rice*, *Indian rice*, *Manoomin* {PL}. The long, brownish-black, delicious grain is eaten as an expensive, gourmet cereal. It is commonly cooked with mushrooms and served with game or fowl. Wild rice can also be ground into meal and used for baking in breads, muffins, cakes, pasta, and in thickening soups. Popped wild rice was traditionally eaten plain or with maple syrup. *Manzaan*, fine bits of rice left after winnowing, was somewhat of a delicacy to the Indians of the Upper Midwest and was often cooked together with wild rice or added to soups and stews. Often used as food for wildfowl, which become tender, rich, juicy and flavorful. With recent plantings in California coming into production it is now more readily available and at a lower price. However, some still prefer the flavor of grains harvested from wild stands and hand parched. North America, cultivated. ANGIER [Re], CREASY 1982 [Cu], FERNALDt GIBBONS 1962, HAWKES [Re], LOGSDON 1977 [Re], TURNER 1979 [Pre, Re], VENNUM; A25G{ED}, E56{DF}, E89G{PD}, F73, F88{PD}, G26{S}, G47M{S}, H7G{PD}, H41{DF}, H68M{P£}, I39T{ED}, I66{DE}, K34, M15, M34M{S}, Nil, N11{DF}, N11{S}, etc.

#### CULTIVARS (DF)

**Arrowhead Country:** Long, narrow grain, up to 3/4 inch long and about 1/16 inch in diameter. Somewhat larger than Father of Rivers or Mahnomen. Light golden brown, mottled with grayish-black. Sweet, light, delicate flavor. Premium wild rice hand harvested in Minnesota. C60G

**Father of Rivers:** Medium-sized grain, about 1/2 inch long and 1/16 inch in diameter. Light tan, mottled with grayish-black. Sweet, nutty flavor; excellent chewy texture. Both light and medium versions are available, the medium version having more of a rich robust flavor and a darker color. C60G

**Mahnomen:** Very rare, desirable strain. True hand parched wild rice. Plump, medium-sized grain, about 1/2 inch long and 1/8 inch

in diameter; medium to dark, brownish-gray color; very strong, smoky aroma; rich, distinctive, nutty flavor. Can be popped like popcorn. Named after the Native American word for wild rice. C60G

*Zizania latifolia* - *Manchurian wild rice*, *Water grass* {PL}. The swollen, infected base of the culms, parasitized by the smut fungus *Ustilago esculenta*, is eaten by the Chinese as a vegetable, known as *gau sun*, *cane shoots*, *wild-rice stem* and *sticky shoot*. It is parboiled, then sauteed with meats and other vegetables and has a nutty flavor reminiscent of corn and mushrooms. Seeds are used like rice. The very young inflorescence is cooked and eaten as a vegetable. Eastern Asia, cultivated. DAHLEN [Pre, Cul], FERNALD, HERKLOTS, TANAKA, TERRELL; B28, H30

#### CULTIVARS {S}

*Su Zhou*: An early cultivar with tender flesh. 054

*Zizaniopsis miliacea* - *Water millet*, *Southern wild rice* {PL}. The vigorous new tips of the white rhizomes are cut in short pieces, cooked until tender, and served with butter. Southern North America. FERNALD, GIBBONS 1979; C36

#### PODOCARPACEAE

*Dacrycarpus dacrydioides* - *Kahikatea* {S}. The sweet fruits are eaten or used as a masticatory. New Zealand. COLENZO, FULLER, HEDRICK 1919, UPHOF; D95{PL}, N73{PL}, N84, 093

*Dacrydium cupressinum* - *Rimu*, *Red pine* {S}. A resinous substance from the young branches was used by Captain Cook to make an alcoholic beverage resembling spruce-beer. Fleshy fruits are eaten. New Zealand. COLENZO, FULLER [Re], HEDRICK 1919, TANAKA; N84, 093

*Dacrydium franklinii*-*Lagarostrobus franklinii*

*Lagarostrobus franklinii* - *Huon pine* {S}. Source of an essential oil recommended for the manufacture of vanillin, which is used as a flavoring in ice cream, confectionery, beverages, etc Tasmania. TANAKA, UPHOF; B94, D95 {PL}, N84

*Podocarpus dacrydioides*-*Dacrycarpus dacrydioides*

*Podocarpus elatus* - *Brown pine*, *Illawarra plum* {S}. The large, fleshy fruit-stalk, resembling a purple-black grape with a waxy bloom, is mucilaginous and resinous in flavor. It is eaten raw, pickled, made into jam, jelly, chutneys and sauces, or added to muffins, cakes, puddings and pastries. A very popular bushfoods crop. Australia. CHERIKOFF [Re], CRIBB, ROBINS [Cul, Re]; M7M{PL}, N79{PL}, N79{PR} \ N79M, N84, 032M{PD}, 094, PIG, P5, P17M, P38, Q32, R33M

*Podocarpus macrophyllus* - *Japanese yew* {S}. Fruits are eaten by children in Japan. In Florida, where this tree has been introduced as a hedge plant, they are eaten out of hand or in pies and cakes. Japan, China. TANAKA; A41M, B41{PL}, C9M, D95{PL}, F53M{PL}, G66, H4{PL}, 765{PL}, K46{PL}, K63G, L47{PL}, N84, 053M

*Podocarpus spicatus* - *Matai*, *Black pine* {S}. The watery sap was drunk or used in the preparation of a beer-like beverage. Other authors report the young shoots being made into a beverage resembling spruce-beer. Fruits are sweet and edible. New Zealand. COLENZO, FULLER, HEDRICK 1919; N73{PL}, N84, 093

*Prumnopitys taxifolia*-*Podocarpus spicatus*

#### PODOPHYLLACEAE

*Achlys triphylla* - *Vanilla leaf*, *Sweet after death* {S}. A non-commercial volume of a vanilla substitute has been extracted from the leaves. Pacific Coast of North America. E15{PL}, E63M{PL}, F88M, 131, N84

*Podophyllum emodi* - *Himalayan may-apple* {S}. The fruits are eaten. Roots and leaves are considered poisonous, although some

authors report the young leaves as being edible. Himalayan region. HEDRICK 1919, TANAKA, WATT; A61, A61{PL}, L91M, P10, R53M, R53M{PL}

*Podophyllum peltatum* - *May apple*, *American mandrake*, *Wild lemon* {PL}. Ripe fruits have a peculiar, agreeable flavor and are eaten raw, cooked, or made into jams, jellies, marmalades, pies, and refreshing beverages. In the South, the juice of the fruit is mixed with Madeira and sugar. Unripe fruits are cathartic. Eastern North America. ANGIER [Re], BURR [Cu, Pro], FERNALD, GIBBONS 1962 [Re], MEDSGER, TURNER 1979 [Re]; BO, C9, C43M, C81M, D75M, E33M, J48, L88M, N9M, N9M{S}, N84{S}

#### POLYGONACEAE

*Antigonon leptopus* - *Coralvine*, *Mountain rose*, *Bellissima* {S}. Tubers are cooked and eaten. They are said to have a nut-like flavor. In Thailand the leaves and flowers are often cooked and served with vermicelli, while the flowers are added to omelettes. Tropical America. DUKE, JACQUAT, PONGPANGAN, UPHOF, WIL-LIAMS, L.; A79M, C9M, E7M, F80, F85, G96{PL}, H4{PL}, J27{PL}, N84, 053M, Q12, R33M

*Atraphaxis spinosa* - *Shir-khecht shrub* {S}. Source of a yellowish-white manna-like substance eaten as food or used in making sweetmeats. Southwest Asia. DONKIN; W3M, W88M

*Bistorta bistortoides* - \**Polygonum bistortoides*

*Bistorta vivipara*-*Polygonum viviparum*

*Coccoloba diversifolia* - *Pigeon plum*, *Dove plum* {PL}. Fruits are dark-purple, juicy, acid to subacid, and are eaten raw or made into jelly or wine. If held for a few days, they do not spoil readily but lose their astringency and dehydrate somewhat. Sold in local markets of Nassau, Bahamas. Florida, Caribbean region. KENNARD, MORTON 1977; D87G, E29, N84

*Coccoloba floridana* - *Coccoloba diversifolia*

*Coccoloba uvifera* - *Sea grape* {S}. The fruits are reddish-purple or occasionally off-white, juicy and subacid. They may be eaten out of hand or used for juice, jams, jellies, drinks, soups and syrup. Sea grape jelly has an attractive musky flavor and a distinctive, light lavender color. A potent wine of good flavor can also be made from the fruits. Florida, Caribbean region, cultivated. CREASY 1982, KENNARD, MORTON 1977, POLVAY [Re], RICHARDSON, M. [Pre, Re], STURROCK; A79M, D87G{PL}, E29{PL}, F85, G5M{PD}, G73, G73{PL}, I12{PL}, L91M, N40M, N84, 053M, 093

*Echinocaulos perfoliatus* - *Gambet* {S}. The young leaves and stem tips, sometimes including the young fruits, are cooked with other greens and eaten as a side dish with rice. Also used as a sour flavoring for soups, stews and fish dishes. Eastern Asia. OCHSE; 174, N84

*Emex spinosa* - *Hameedh* {S}. Young leaves are consumed like spinach. The fleshy leaf petioles are also edible. Roots are eaten raw or cooked. Mediterranean region. GHAZANFAR, KUNKEL, MARTIN 1975; F85

*Eriogonum fasciculatum* - *California buckwheat*, *Wild buckwheat* {S}. The flowers are the source of a deep light amber, heavy bodied honey of good flavor and rapid granulation. Often marketed as *California sage honey*. They are also brewed into tea or added to breads. Southwestern North America. CRANE 1975, FARNSWORTH [Re], PELLETT; B54M{PD}, C9M, C43V, C95, E66M, F63M, G60{PL}, H71, 147, 198M{PL}, JO, K15, 053M, 093, Q24, etc.

*Fagopyrum cymosum* - *Perennial buckwheat*, *Shakuchiri-soba* {S}. The leaves are boiled or steamed and served like spinach. Seeds are also eaten or ground into flour. Central Asia. HEDRICK 1919, TANAKA, UDESKY, WATT; Q40

*Fagopyrum esculentum* - *Buckwheat, Soba* {S}. Hulled kernels, or *groats*, are used in breakfast cereals, *kasha*, miso, sausage, and *polenta taragna*. Buckwheat flour is made into pancakes, noodles, and breads or used for thickening soups and gravies. The most expensive and revered buckwheat flour is the pure white *sarashina* flour of Jhpan. Young seedlings, called *buckwheat lettuce*, are eaten in salads and are widely available in natural foods stores. Beer may be brewed from the grain, and by distillation it yields an excellent spirit. Source of a very dark brown honey with a strong, distinctive flavor. Buckwheat honey is used in France to make a gingerbread *pain d'epices*, in Northern Europe for making honey cakes, and by Jews for their honey wine. Leaves can be eaten in salads or used like spinach. Southwest Asia. BIANCHINI, BROUK, CRANE 1975, DORJE [Re], GRIEVE, KINSMAN, KULVINSKAS, LOGSDON 1977 [Cu, Pie], PELLETT, UDESKY [Nu, Re], UPHOF; A25, B49, C85M, D65, E60PIPD}, Fil, G6, G58{PD}, H34M{PD}, H54,18M{PD}, I66M{PD}, I94{PD}, J20, J25M, J97M, K71, L89, M84{PD}, R47, etc. (see also Sprouting Seeds, page 524)

#### CULTIVARS

**Japanese:** Large-seeded type from Japan. Can be used as either a grain crop or green manure crop. Will grow on any soil but prefers light, well-drained soils. For green manure, cut and incorporate into soil when plant is newly in flower. D68

**Kaneko:** 95 days. Japanese heirloom buckwheat esteemed for grinding into flour to make soba noodles. High yielding plant that grows to 3 feet tall. Should be planted after the last frost. L3J, L77D

**Mancan:** An improved type that yields a nutritious grain in 80 days. Medium-tall plant with medium-sized, dark green leaves and white flowers. Approximately 1 plant per 1,000 bears pink flowers. Blooms in 30 days. Yields average to above average crops. Developed by the Agriculture Canada Research Station in Morden, Manitoba. A2, A15Z, E24, G50

**Manor:** A relatively new, high-yielding cultivar developed in North Dakota. Yields approximately 1,000 pounds per acre. Recommended as a quick, vigorous crop after peas. Sow at the rate of 50 pounds per acre. A15Z, G50

**New Type:** A heavy cropper and less liable to blight than other sorts. The kernels are larger and the straw is stouter and heavier. G71

**Soankv:** An improved type that makes excellent flapjacks. Planted late to mature in the fall, less than one pound per 1,000 square feet. Ripens in 2 to 3 months. K49M

*Fagopyrum tataricum* - *Tatarian buckwheat, Duck wheat, Dattan-soba* {S}. Seeds are eaten or ground into a flour used in various foods. They also yield an edible oil. The leaves are used as a vegetable. Central Asia. FERNALD, HEDRICK 1919, KUNKEL, TANAKA, UDESKY, WATT; G26, G50, M34M, Nil, N84

#### CULTIVARS

**Madawaska Native:** (Madawaska Buckwheat) 30-45 days. More cold hardy and drought resistant than regular buckwheat but with smaller kernels. Shorter top growth. Local cultivar from the upper St. John Valley, Maine. A2, C95, F73D, L77D

**Oala:** Folk-race buckwheat from 9500 feet in the Kinnauri Himalayas, adjacent to Tibet. Strong, hardy flavor. Traditionally toasted and ground for porridge or thick chapatis. In Kinnaur, the grain is broadcast in small stone-walled terraces then flood irrigated. More cold and drought tolerant than common buckwheat. L3J

**Sarasin a Ploves:** Small-seeded buckwheat used for making traditional French Acadian pancakes or crepes, called *ployes de boquuite*. When ground, yields a very light, almost white flour instead of the normal gray, known as Acadian Light buckwheat flour or *boquuite*. At one time the ployes were raised with a type of sourdough starter, called *le vien*, now apparently extinct. B46M{OR}, B46M{PD}, I34M{PD}

*Gymnopodium antigonoides* - *Dzidzilche* {PD}. The flowers are the most important source of *Yucatan honey*, a light amber honey with a delicious flavor. Considered one of the world's most aromatic honeys. When used in baking, it permeates the air with an appealing aroma reminiscent of a summer garden full of flowers at dusk. Often used for *pain d'epices* in France and *torrone* in Italy. Mexico. CRANE 1975; I66M, M63M

*Oxyria digyna* - *Mountain sorrel* {S}. The fleshy, succulent leaves have a pleasing acid taste, and may be used raw in sandwiches and mixed salads, as a potherb with peppery cresses, or in thick soups and purees. Eskimos allow it to ferment into a "sauerkraut" that is stored for winter use. Northern and Alpine regions. ANGIER [Re], CLARKE [Cul], FERNALD, HARRINGTON, H., HEDRICK 1919, HELLER, MEDSGER; J93T, N61, N84

*Persicaria hydropiper* - *Smartweed, Water pepper, Yanagi-tade* {S}. Young leaves and stems are roasted and eaten as a vegetable, or made into an acid, peppery condiment. In Japan, the young seedlings are a common market product and are used to garnish many dishes. *Tade-su* is a mixture of the leaves, boiled rice, and vinegar. Eurasia. CREBB, TANAKA, YASHIRODA; D56M, F73D, M34M, N40M, N84

*Persicaria hydropiper* 'Fastigiatum' - *Hosoba-tade, Beni-tade, Water pepper* {S}. The small, wine-red cotyledons have a sharp, acrid flavor and are used as a condiment or as a garnish for traditional Japanese raw fish (*sashimi*), tempura and sushi. A slender-leaved, gourmet cultivar. LARKCOM 1991, TANAKA, TSUJI [Re], UPHOF, YASHIRODA; J82, N84, S70

*Persicaria vulgaris* - *Lady's thumb, Heartweed, Redleg, Haru-tade* {S}. Young shoots and leaves are eaten in salads, stir-fried, or cooked briefly in boiling water and served with butter or vinegar. Eurasia, naturalized in North America. CROWHURST 1972, LARKCOM 1984, MEDSGER, TANAKA; D47M, M34M, N71M, N84

*Polygonum aviculare* - *Knotgrass, Michi-yanagi* {S}. The seeds are eaten or ground into flour for use in pancakes, cookies, and *pinole*. Young leaves and plants are eaten as potherbs. Leaves are also used as a substitute for tea. Eurasia, naturalized in North America. FERNALD, KIRK, KUNKEL, TANAKA; F37T{PL}, J82, N71M, N84

*Polygonum bistorta* - *Bistort, Snakeweed, Pink plumes, Easter ledges* {S}. Young leaves and shoots are an excellent substitute for spinach. In Northern England, they are used in the preparation of a Lenten pudding called *Easter ledger* pudding or *Easter herb* pudding. Rhizomes are roasted, boiled, mixed with seal oil or added to stews. Northern temperate region. GRIEVE [Re], HEDRICK 1919, HELLER, LAUNERT, MABEY [Re]; A61, D92M, F68T, F80, J82, N71M, N84, O53M, Q24, R47, R53M{PL}, S55

*Polygonum bistortoides* - *American bistort* {S}. The young leaves have a pleasantly tart taste and can be used as a potherb. Starchy roots are eaten raw, boiled or baked, or added to soups and stews. North America. HARRINGTON, H., YANOVSKY; E67T{PL}, F88M

*Polygonum cuspidatum* - *Reynoutria japonica*

*Polygonum hydropiper* - *Persicaria hydropiper*

*Polygonum maximowiczii* - *Persicaria hydropiper*

*Polygonum multiflorum* - *Fo-ti, Ho shou wu* {PL}. The roots are used in Chinese tonic soups, wines and porridges. Also very popular with natural foods enthusiasts. Available in both raw and cured forms, the latter considered the most nourishing. Cured roots are prepared by cooking in black soybean broth for up to thirty two hours. Along with *Angelica sinensis*, one of the main ingredients of a popular and potent tonic known as *Shou Wu Chi*. Eastern Asia. BENSKY, FLAWS 1994, FLAWS 1995, LEUNG, TEE-GUARDEN; B21P{DF}, D40G, E14T{DF}, F37T, F37T{DF},

F68T, F86G{DF}, H94M, I39{DF}, I49M, 174, J82, K18M{DF}, L34{DF}, L90J, M82, N84{S}, etc.

*Polygonum odoratum* - *Rau ram*, *Vietnamese coriander*, *Dam kesom*{PL}. Young leaves have an aroma somewhat reminiscent of coriander and a hot, peppery, but refreshing flavor. They may be used in raw or cooked fish, meat, rice, or vegetable dishes. One of the ingredients of *du 'a can*, a pickled dish resembling sauerkraut. Only the young, green leaves are used as the older, redder leaves have too hot a flavor. Southeast Asia. BOND [Cul, Re], HEDRICK 1919, HUTSON 1987 [Cul], JACQUAT, KUEBEL [Cu], PAINTER [Re], ROUTHIER 1989, UPHOF; C43M, E7, E61, F35M, F93G, H94M, 757, J66, J82, K22, L90J, L94M, M15T, M82

*Polygonum perfoliatum* - *Echinocaulos perfoliatius*

*Polygonum persicaria* - \**Persicaria vulgaris*

*Polygonum sachalinense* - *Reynoutria sachalinensis*

*Polygonum viviparum* - *Alpine bistort*, *Serpent grass* {S}. The tuber-like rootstocks are sweet, nutty, and wholesome. They may be eaten raw or boiled, but are best roasted. Young leaves are eaten as a potherb. Circumpolar. FERNALD, HARRINGTON, H., KIRK; D92M, J93T, N84, O53M, Q24

*Reynoutria japonica* - *Japanese knotted* {S}. Young shoots are boiled or steamed and eaten like asparagus with butter or sauce, or chilled and served with salad dressing. They have a somewhat acid flavor and can be used like rhubarb in pies, fruit soups, aspic salads, Isweet sauces, jams, puddings, chutneys, or wines. Rhizomes are sometimes eaten. Eastern Asia, naturalized in North America. ANGIER, CROWHURST 1972 [Re], FERNALD, GIBBONS 1962 [Pre, Re]; B28 {PL}, F85, N84

*Reynoutria sachalinensis* - *Giant knotweed*, *Sachaline* {S}. Young shoots and tips are eaten raw in salads, parboiled and served like asparagus, or used in soups. "Rhubarb" sauce, made from the peeled young stems, is <f superior quality, with a hint of lemon-flavor. The fruit is eaten, or stored in fish oil for later use. Eastern Asia, naturalized in North America. FERNALD, KIRK, TANAKA; C95, H4{PL}, K38, M16{PL}, N84

*Rheum australe* - *Himalayan rhubarb* {S}. Leafstalks are eaten raw, cooked, preserved in salt, made into preserves, or dried and stored for future use. They are said to have an apple-like flavor. Young shoots that have been blanched as they emerge from the soil are white, crisp, and free from fiber. Himalayan region. HEDRICK 1919, TANAKA, WATT; A61, A61{PL}, C95, D92M, D95{PL}, E87{PL}, M7M{PL}, N84, Q24

*Rheum emodi* - *Rheum australe*

*Rheum officinale* - *Chinese rhubarb* {PL}. In Italy and China, the dried rhizomes are used for making tonic wines and other alcoholic beverages. Extracts of the roots are valued by the flavor industry in formulations for bitter tonics, carbonated beverages, syrups, liqueurs, candies, baked goods, etc. One of the ingredients of the famous Italian bitter marketed as *Fernet-Branca*. Eastern Asia. BREMNESS, BROWN, G., BURDOCK, LEUNG; M7M, L34{DF}

*Rheum palmatum* - *Chinese rhubarb* {S}. The leafstalks are sometimes eaten or made into wine and preserves. Mongolia. HEDRICK 1919, TANAKA; D56M, D92M, F68T, G6, J82, L66{PL}, L91M, M7M{PL}, N84

#### CULTIVARS

**Bowles Crimson:** Large, palmately lobed leaves, dark red when young. Flowers large, panicles deep red. N84

*Rheum rhabarbarum* - *Rhubarb* {S}. Leafstalks are pleasantly acid and are stewed or baked in the manner of a fruit and used in pies, cakes, tarts, puddings, sauces, jellies, jams, ice cream, etc. The juice strained from stewed rhubarb can add color and flavor to a fruit punch. Some connoisseurs claim that the juice pressed from

hardened old stalks yields a delicious wine rivalled only by champagne. The young inflorescences resemble cauliflower and may be deep fried, or boiled and served "au gratin" with cream sauce. Rhubarb juice powder is added to "green food" supplements for flavor and nutrition. Cultivated. BRYAN [Pre, Re], CARCIONE, GRIEVE, HALPIN [Cul], HILL, JOHNS [Re], VILMORIN [Cu]; C56G{PD} C95, D97{PD}, J19M{ED}, N84, Q24. (for cultivars see Rhubarb, page 507)

*Rheum ribes* - *Currant-fruited rhubarb*, *Ribes* {S}. The leafstalks and fresh stems are eaten raw or cooked. Larger petioles are made into pies and preserves and are said to have the flavor of currants. In eastern Turkey they have been considered a delicacy since the thirteenth century. Sold at local roadside markets during spring. Southwest Asia. HEDRICK 1919, OZTURK, PHILLIPS, ROOT 1980a; U63

*Rumex acetosa* - *Garden sorrel*, *Broad-leaved sorrel* {PL}. The pleasantly acid leaves are eaten raw in salads, as a potherb, pureed, or used in soups, omelettes, sauces, *pease porridge*, etc. In France, sorrel is put into ragouts and fricasees, and is the chief constituent of *soupe aux herbes*. They also stuff shad with puree of sorrel, whose oxalic acid softens, and somewhat dissolves the numerous bones. Flowers are eaten as a vegetable or used for garnishing. The juice of the leaves is used to curdle milk. Seeds can be ground and made into bread. Eurasia, cultivated. BRYAN [Cul, Re], CUSUMANO [Cul, Re], GRIEVE, GUNDA, HALPIN, LARKCOM 1984, LEGGATT [Re], MABEY, MORTON 1976, ROOT 1980a, SCHNEIDER 1986 [Cul, Re], VILMORIN [Cu]; C3{S}, C9, C43M, D3M{PR}, F44{S}, G6{S}, H15T{PD}, J85T{PR}, K22, K66{S}, L7M{S}, M46, N19M, N40{PR}

#### CULTIVARS {S}

**Belleville:** (De Belleville) Large, pale green leaves, 3 inches long, slightly blistered; petioles lightly tinged with red. A small French cultivar that is hardy, fast growing, and well-proven to be productive under almost any conditions. C53, E63D, G68, J37M{PL}

**Blonde de Lvon:** (Mammoth Lyon) Large, thick, broad leaves, much rounder than other types; somewhat blistered. Pale green color. Tender and mild flavor. More resistant to bolting than Belleville; often grown in warmer climates. Named after the city of Lyon, France. E7M, E63D, E81M, J82, J82{PL}, K49M, N84

**Larghe Foglie Bionde:** Large, pale green leaves. Delicious in salads, sauces or soups. Will last for 3 to 4 years before requiring division. May also be grown as an annual. Usually harvested by stripping off the outer leaves every 15 to 20 days. Q11M

**Low Oxalic Acid:** Large, thick medium-green leaves that easily snap off their succulent stems. A highly refined Dutch selection, bred for low oxalic acid content. The flavor is only slightly sour. L89

**Nobel:** A new improved cultivar of sorrel. Leaves are larger, broader and more succulent than other cultivars. Grows about 12 inches tall. J82, K57{PL}, N84

**Profusion:** Distinct type that does not go to seed. Produces large quantities of tender, fleshy leaves all season, long after standard cultivars turn tough and bitter. Introduced by Richters. J82

*Rumex acetosella* - *Sheep sorrel* {S}. The sour leaves are commonly chewed to quench the thirst. Small amounts of the tender leaves may also be used in purees, soups, mixed salads, drinks, sandwiches, pies, or as an unusual garnish and seasoning for seafood, rice, and potatoes. In the Carpathian Mountains, they have been employed for curdling ewe's milk in cheese manufacture. The roots are also said to be edible. Northern temperate region. CLARKE [Re], FERNALD, GIBBONS 1966a [Re], GUNDA, HARRINGTON, H., TANAKA; A2, A7{DF}, B49, C43M{PL}, E14T{DF}, F37T{PL}, F68T, F80, F85, F86G, F88M, J5M{PL}, J82, K22{PL}, M34M, N71M, N84, etc.

*Rumex alpinus* - *Alpine dock*, *Monk's rhubarb*, *Pyrenean sorrel* {PL}. Young heart-shaped leaves are eaten raw in salads or cooked

as a potherb. Also employed as a preservative of unsalted butter during summer months. Eurasia. BURR, MABEY, UPHOF, VILMORIN; R49

*Rumex arifolius* - *Maiden sorrel* {S}. The young leaves are eaten raw in salads, cooked as a potherb, or added to soups and omelettes. In Norway, they are eaten with milk or mixed with meal and baked. Europe. HEDRICK 1919, ROOT 1980a, VILMORIN; Y14M

*Rumex crispus* - *Curled dock*, *Yellow dock* {S}. The young, tender leaves, rich in vitamins A and C, are eaten raw in salads, cooked as a potherb, or added to soups. When cooked in a cream sauce, the protein in milk combines with the tannin in dock and removes the astringency that some people find objectionable. In Belarus, the leaves are often preserved by dry salting. The seeds are ground into a meal or flour that can be used in pancakes. It is said that meat cooks more quickly if boiled or cooked with dock. Eurasia, naturalized in North America. ANGIER, BOLOTNIKOVA, GIBBONS 1966b, HARRINGTON, H., LEYEL 1987b, MEDSGER; A2, C43M{PL}, C95, D40G, D47M, E5T, F37T{PL}, F68T, F85, F86G, J82, L3J, M34M, N84

*Rumex hymenosepalus* - *Canaigre* {S}. The crisp, tart leafstalks are excellent eaten in pies like rhubarb. The leaves are eaten, but are cooked in several changes of water to remove the bitter tannin. Seeds are sometimes used in mush. Southwestern North America. CLARKE [Re], KIRK, MEDSGER, UPHOF; F80, F85, 198M, L55J, N84

*Rumex montanus* -> *Rumex arifolius*

*Rumex obtusifolius* - *Broad-leaved dock*, *Bitter dock* {S}. The young leaves can be eaten as a potherb, pureed, or used in soups. When boiling the leaves, the water should be changed once or twice to take away the strong taste. Older leaves usually become bitter. Northern temperate region. FERNALD, MEDSGER; J82, N84

*Rumex patientia* - *Patience dock*, *Monk's rhubarb*, *Spinach dock* {S}. Leaves are boiled or steamed and eaten like spinach, added to soups, or made into a delicious puree. Their flavor is milder than that of garden sorrel. They should be harvested when young and tender and a fourth part of common sorrel mixed with them. It has the advantage of producing leaves earlier in the season than any other kind. Southern Europe, naturalized in North America. BURR [Cu], FERNALD, GRAY, P. [Re], LARKCOM 1984, MEDSGER, VILMORIN; C95, E63D, N84, 048

*Rumex sagittatus* - *Surengan*, *Soorengan* {S}. The sour leaves are cooked and eaten as a spinach. In Java, they are used as a substitute for tamarind in the preparation of savory stews. Indonesia. FOX, R, OCHSE; F85, N84, S28M

*Rumex sanguineus* - *Bloodwort*, *Red-veined dock* {S}. Young leaves are used as a substitute for spinach. Ornamental in appearance but with coarse-textured leaves. For use in salads, soften by blanching in boiling water for a few seconds. Northern temperate region. HEDRICK 1919, LARKCOM 1984; D92M, E48{PL}, E87{PL}, F35M{PL}» N84, 048, 053M

*Rumex scutatus* - *French sorrel*, *Buckler-leaved sorrel* {PL}. The leaves are extremely acid and are used primarily as a flavoring. They are preferred by many gourmets because they add more zest to mixed salads, sauces, and the much-esteemed cream of sorrel soup. Eurasia. GRAY, P. [Cu], GRIEVE, HALPIN, MORTON 1976, VILMORIN; E61, F37T, F35M, J82, L56, M82, N84{S}, }, P92, R32{S}, R49, R53M, R53M{S}, S55{S}

#### CULTXVARS

Silver Shield: Similar to regular French sorrel in growth and flavor, but the leaves are variegated with silver. E61, F35M

*Rumex vesicarius* - *Bladder dock*, *Chooka*, *Katta palak* {S}. The acid leaves are eaten raw or cooked. They are occasionally used for curdling milk. Cultivated as a vegetable in parts of Indonesia and occasionally sold in local markets. Macaronesia to Southwest Asia. BURKILL, GHAZANFAR, OCHSE, UPHOF; E83T

#### PONTERIACEAE

*Pontederia cordata* - *Pickrel-weed* {PL}. The seeds are eaten raw, boiled like rice, or dried and ground into flour for making bread. Raw seeds have a very acceptable nutty flavor and texture. When slightly parched in an oven they are said to be excellent. Young leaves are cooked as a potherb or chopped and added to tossed green salads, soups, and stews. North America, Tropical America. CROWHURST 1972, DUKE, FERNALD, GIBBONS 1979, MORTON 1977; C74, D75M, G26, G85, H4, J37M, M72, M73, M73M, N3M, Nil

#### PORTULACACEAE

*Anacampseros albissima* - {S}. Used in the preparation of a beer like beverage. Southern Africa. FOX, F.; G91M{PL}, 133, N84, 053M, Q41, R88

*Claytonia caroliniana* - *Broad-leaved spring beauty* {PL}. The tender leaves and stems, when steamed for a short time, make an excellent potherb. They are mild in flavor and are best mixed with stronger tasting greens like sheep sorrel or violets. Corms can be cooked and eaten like potatoes. Eastern North America. FERNALD, GIBBONS 1979, MEDSGER; C81M, N7T, N84

*Claytonia megarrhiza* - *Alpine spring beauty* {S}. Young leaves and flowering tops are eaten raw in salads or cooked as a potherb. They are succulent, juicy and mild in flavor. The long, thick, fleshy roots are peeled and then boiled or baked. Western North America. GIBBONS 1973, HARRINGTON, H.; H98{PL}, J93T, L13, N84

*Claytonia perfoliata*-*Montia perfoUata*

*Claytonia sibirica*-*Montia sibirica*

*Claytonia virginica* - *Spring beauty*, *Fairy spuds* {PL}. Starchy bulbs are eaten boiled, fried, mashed, in salads, soups, and stews, or cooked with peas like new potatoes. They are said to have somewhat the flavor of chestnuts. Young leaves and stems are eaten raw in salads or steamed and served as greens. Eastern North America. ANGIER, CROWHURST 1972, FERNALD, GIBBONS 1962, KINDSCHER, MEDSGER; BO, D75M, E33M, F51, H4, H49, J41M, K41, L55, L59P, M69M, N9M, N9M{S}

*Lewisia rediviva* - *Bitter-root* {PL}. The roots are peeled to remove the bitter rind, cut into pieces, boiled for about twenty minutes, and served with butter. During the cooking process the roots become soft and swollen and exude a pink, mucilaginous substance. Dried roots were sometimes stored for a year or two before eating, when they became less bitter. Flathead Indians mixed them with berries, added them to meat or bone marrow, used them to thicken gravies, or in more modern times, ate them with milk or cream and sugar. Western North America. GIBBONS 1979, HARRINGTON, H. [Pie], HART, KIRK, MEDSGER; A61, A61{S}, E24{S}, E67T, H98, I47{S}, 174, K47M{S}, K79, L13{S}, M35M, Q24{S}

*Montia perfoliata* - *Miner's lettuce*, *Winter purslane*, *Cuban spinach* {S}. The young, succulent leaves, stems, and flowers are excellent eaten in a tossed green salad or added to mesclun and other salad mixtures. Older leaves can be used as a potherb. For salads, they are often grown as seedling crops using the cut-and-come-again technique. North America, cultivated. ANGIER [Re], CLARKE, HARRINGTON, H., KIRK, LARKCOM 1984 [Cu], NIETHAMMER, VILMORIN; A2, B49, C53, F88M, G6, G59M, H73{PR}, 139,198M, J73, K49M, N84, 053M, R32, R47, R53M, S55, etc.

#### CULTIVARS

Emerald Green: Very bright dark-green leaves. Good, mild flavor. Very high leaf count per plant. One of the best types for specialty market gardeners because of its resistance to bruising. Grows somewhat prostrate like spinach. Developed by Tim Peters of Peters Seed & Research. 177, J9M

**Lanceleaf:** Long, narrow leaves with a golden-reddish tinge. Flowers have purplish markings. Selected from a native Willamette Valley Prairie stand by Frank Morton of Shoulder to Shoulder Farm. N7G

**Miner's Pick:** Large, fast-growing strain with a distinctive upright growth habit. Most flavorful during cool weather. Usually sown in early fall or very early in the spring. If sown at warmer times of the year the quality will be better cooked than raw. Developed by Tim Peters of Peters Seed & Research. J9M

*Montia sibirica* - *Siberian purslane* {S}. Leaves can be added raw to mixed salads or they can be cooked for a short time in a small amount of water and served as a green vegetable. North America to Eastern Asia. HEDRICK 1919, HELLER; A61, A61{PL}, F85, F88M, J6, L59P{PL}, 053M, Q24, R49{PL}

*Portulaca oleracea* - *Purslane, Pusley, Verdolaga* {S}. Succulent leaves and stems are eaten raw in salads, pickled, stir-fried, sauteed, added to capers or olives, or used in casseroles, stews, omelettes, sandwiches, fritters, etc. Their mucilaginous texture makes them a good substitute for okra in gumbo and other creole dishes. They are also notably rich in omega-3 fatty acids. In Middle Eastern countries, purslane is commonly added to the famous bread salad called *fattoush*. To preserve the plant for winter use put it into salt and dry white wine. The seeds are ground for use in gruels, cakes, breads, and pancakes. Sprouted seeds are eaten in salads. Ash of the burnt plant is used as a substitute for salt. Eurasia, cultivated. ANGIER [Re], CRIBB, FERNALD, FCK, F., GIBBONS 1962 [Re], HALPIN [Cu], HAMADY [Re], LAUNERT, MORTON 1977, VILMORIN [Cu]; B49, C85M, C95, F80, H73{PR}, L89, N40{PR}, N71M, 053M, Q41, R32, R47

#### CULTIVARS

**Golden:** (Goldgelber, Pourpier Dore) Large leaves and stalks with a pale green or yellowish cast that contrasts well with the red stems. Much more upright than regular green cultivated purslane. Milder in flavor, therefore more suitable for use in salads. When cooked, the leaves do not differ very much in color from those of the green purslane. VILMORIN; C53, D68, E63D, F80, G6, G68, 139, J9M, J20, J82, K49M, L89, N7G, N84, 053M, S55, etc.

**Golden Tall:** Improved type. Selected for the golden color of the stems and the greenish-gold color of the leaves. C95

**Green Garden:** Leaf shape and color similar to the wild form, but much larger. Very upright growing stems. Selected by Frank Morton of Shoulder to Shoulder Farm. N7G

**Jade Green:** 60 days. Improved type with an upright branching growth habit, said to resemble a jade plant, hence the name. J9M

*Portulacaria afra* - *Elephant grass* {PL}. The pleasantly acid leaves are sometimes used to give a tart flavor to a mixed salad. Southern Africa. FCK, F., TATE; AOM, B84, E48, G18, 157, L26, L90J

*Talinum crassifolium* - *Talinum triangulare*

*Talinum cuneifolium* - *Talinum portulacifolium*

*Talinum paniculatum* - *Caruru, Flameflower* {S}. The leaves and stems are blanched and used in green salads, cooked in soups, or eaten like purslane. Tropical America. HEDRICK 1919, VON REIS; D40G, D92M, E7M, F35M{PL}, F85, H4{PL}, N84, 053M, Q41, R88

*Talinum patens* -> *Talinum paniculatum*

*Talinum portulacifolium* - *Aby, Ndele, Muiki* {S}. Leaves are cultivated in some parts of Africa as a spinach. Tropical Africa, Tropical Asia. UPHOF; R88

*Talinum triangulare* - *Surinam purslane, Surinam spinach, Water leaf* {S}. Young leaves and tender stems, having a slightly sour taste, are chopped and added to salads, parboiled, steamed, sauteed, or used in egusi soup. When cooked they can be excessively soft and

mucilaginous, so overcooking should be avoided. Tropical America, naturalized in Florida. HAWKES [Cu], HERKLOTS, MARTIN 1975 [Cu], MORTON 1977, OOMEN, VAN EPENHUSEN; F85

#### PRIMULACEAE

*Lysimachia clethroides* - *Gooseneck loosestrife, Oka-tora-no-o* {PL}. Leaves are eaten as a vegetable or used as a condiment. Fruits and flowers are also said to be edible. Eastern Asia. KUNKEL, TANAKA, UPHOF; B9M, B28, B30, C2, C9, D95, E63M, H63, 177M, M98, N84{S}

*Lysimachia nummularia* - *Moneywort* {PL}. Leaves and flowers are occasionally used as a tea. Europe. UPHOF; C43M, E63M, G89M, 190M, M16, M65M, M73M, N84{S}

*Primula veris* - *Cowslip* {S}. Flowers are used in salads, preserves, pickles, as a garnish, or fermented into the liquor called cowslip wine. They were also made into a vinegar that was drunk with soda water rather than being used as a condiment. Leaves are eaten raw in salads or used as a substitute for tea. Northern temperate region. GRIEVE, LARKCOM 1984, LEGGATT [Re], MABEY, MACNICOL [Re], MICHAEL, UPHOF; B55M{DF}, E33, F80, G0{DF}, K53, L66{PL}, L91M, M77M{PL}, N7D{DF}, N71M, N84, 053M, R47

*Primula vulgaris* - *English primrose* {S}. The flowers are eaten raw in salads, as a cooked vegetable, or used in preserves, custards, tarts, or confections. Leaves are added to salads, eaten as a potherb, or mixed with other herbs as a stuffing for meat and poultry. Both leaves and flowers can be made into syrup or tea. Europe, cultivated. BRYAN [Re], GRIEVE, HEDRICK 1919, LEGGATT [Re], MACNICOL [Re]; E7M, E33, L66{PL}, L91M, N71M, N84, 053M, Q24

#### PROTEACEAE

*Banksia marginata* - *Australian honeysuckle* {S}. The flower is filled with a sweet nectar, which may be sucked directly or washed out with water to form a refreshing beverage. Australia. CRIBB, TANAKA; M7M{PL}, N79M, N84, 093, P5, P17M, Q32, R15M, R33M, R60, S92

*Banksia menziesii* - *Firewood banksia* {S}. Source of an extra light amber honey of mild flavor and excellent quality. May contain 10 to 12% sucrose, occasionally more. Western Australia. CRANE 1975; N79M, N84, 033, 093, P5, P17M, Q32, R15M, R33M, R60, S92

*Banksia prionotes* - *Orange banksia* {S}. The flowers yield an extra light amber honey of mild flavor and excellent quality. Western Australia. CRANE 1975; N79M, N84, 033, 093, P5, P17M, Q32, R15M, R33M, R60, S92

*Brabejum stellatifolium* - *Hottentot's almond* {S}. Seeds are steeped in water to remove the bitter, mildly poisonous principles, then boiled, roasted and used as a substitute for coffee. South Africa. FOX, E, HEDRICK 1919, MENNINGER; N84, S28M

*Dryandra sessilis* - *Parrotbush* {S}. The flowers yield a light to extra light amber honey with a characteristic flavor much appreciated by some. An important honey source in Western Australia. Australia. CRANE 1975; N79M, N84, 033, P5, Q32, R15M, R33M, S92

*Gevuina avellana* - *Chilean hazel, Avellam* {S}. The pleasant tasting nuts are eaten raw, having a flavor similar to the European hazelnut. In Chile, they are roasted and sold in small paper bags like peanuts. As a natural food, they contain 12.5% proteins, 49.5% oil, and 24.1% carbohydrates. Chile. MENNINGER, ROSEN-GARTEN, VALENZUELA; D95{PL}, N84

*Grevillea excelsior* - *Tall grevillea* {S}. The Aborigines of the Nullarbor Desert region of Western Australia prepare an alcoholic drink from the flowers by shaking the nectar into bowls of water,

and then letting the resulting liquid ferment for twenty four hours. Australia. CRANE 1975; 033, R33M

*Grevillea juncifolia* - *Tarrakirra* {S}. The blossoms may contain appreciable quantities of nectar which can be sipped directly, washed with water to make a sweet drink, or mixed with wattle gum to form a jelly-like dessert. Australia. CHERIKOFF, O'CONNELL; N84, R15M, R33M, S92

*Grevillea robusta* - *Silky oak* {S}. One of the richest sources of nectar, it produces masses of golden flowers, each one containing a drop of nectar in its deep throat. This can be sucked directly, shaken into a bowl, or washed out in a small quantity of water. Australia. In Northern Africa, the flowers are used as an adulterant of saffron. BOUQUET, CHERJKOFF, CRIBB; A79M, C9M, C92, F85, K38, L91M, N84, 053M, 094, P5, R15M, R33M

*Hakea eyreana* - *Untjiya* {S}. The flowers are rich in nectar, which may be sipped directly or washed out with water and made into a sweet drink. Australia. O'CONNELL; N84

*Hakea suberea* - *Untjiya* {S}. The flowers may yield considerable amounts of sweet nectar that can be sipped with a straw, or mixed with water to form a sweet beverage. Australia. O'CONNELL; N84, R15M, R33M, S92

*Hicksbeachia pinnatifida* - *Australian rosenut, Red bopple nut* {S}. Nuts are eaten, the flavor being rather agreeable, especially after roasting. The bright red husk of the nut resembles a rose hip, hence the name rosenut. In addition to bearing an edible nut, the tree has considerable ornamental value, with its large unusual leaves and bright fruit. Australia. CHERIKOFF, CRIBB, MENNINGER, THIES; N84, P17M, P38

*Knightia excelsa* - *Rewa-rewa, New Zealand honeysuckle* {S}. Source of a medium dark amber, heavy bodied honey with a rich, distinctive flavor and slow, coarse granulation. New Zealand. CRANE 1975, CRANE 1984; N84, 093

*Lambertia formosa* - *Honeyflower, Mountain devil* {S}. The flowers yield copious amounts of sweet nectar, however eating too much can cause headaches and other allergic reactions. Australia. CHERIKOFF, DONKIN; N79M, N84, P5, P17M, R15M, R33M

*Macadamia integrifolia* - *Macadamia nut* {S}. The sweet, delicious nuts are eaten raw, roasted, fried, coated with chocolate or carob, used in fancy pastries, candies, ice cream, nut butters, cookies, cakes, and pies. Macadamia nut oil, containing 80% monounsaturated fats and only 8% omega-6 fatty acids, can be used to add a subtle nutty flavor to salads and stir-fried or sauteed dishes. Sometimes called the smooth-shelled macadamia. Australia, cultivated. CRIBB, CUSUMANO [Cul, Re], JAYNES [Cu], MENNINGER, ROBINS [Cul, Re], ROSENGARTEN [Re]; A7{m}, A25G{PD}, A86{DF}, C9M, D56M, E29{PL}, F85, H7I, I60M{PD}, J65{PD}, L14G{ED}, L17{PD}, N84, 093, P17M, P38, etc. (for cultivars see Macadamia, page 417)

*Macadamia tetraphylla* - *Macadamia nut* {S}. Nuts are eaten raw, roasted and salted, fried in coconut oil, used in ice cream, nut butters, confectionery, bread, salads, sauces, cakes, biscuits, soups, and milk shakes. Kernels are generally higher in sugar content and lower in oil than those of *M. integrifolia*, and therefore sweeter. Sometimes called the rough-shelled macadamia, although there are intermediate forms. Australia, cultivated. HASTINGS [Re], JAYNES; F85, H12{DF}, N79M, N84, P17M, P38, Q32, Q49M, R33M. (for cultivars see Macadamia, page 417)

*Macadamia* x sp. (*M. integrifolia* x *M. tetraphylla*) - *Macadamia nut*. Natural and artificial hybrids. The nuts are eaten. In subtropical areas, these hybrids appear to be better producers of quality nutmeats than either of the two parent species, (for cultivars see Macadamia, page 417)

*Protea angolensis* - *Sugar bush* {S}. In Zimbabwe, the sweet tips of the young shoots are chewed by children. A traditional syrup is prepared from the nectar-rich flowers by simmering them in water

until the liquid is reduced and thickened. Southern Africa. TREDGOLD; N84, S28M

*Protea cynaroides* - *Boer honey-pot, King protea* {S}. The sweet nectar of the flowers is consumed directly. South Africa. SCHERY; A79M, E53M, F85, N84, 053M, 093, P5, Q32, R60, R88, S28M

#### *Protea mellifera* - *Protea repens*

*Protea repens* - *Honey flower, Sugar bush* {S}. The nectar of the flowers is consumed directly or made into a delicious syrup, known as *sukerbos stroop*. South Africa. FCK, F., UPHOF; A79M, E53M, N84, 053M, 093, P5, Q32, R60, S28M

*Telopea speciosissima* - *Waratah* {S}. The flowers produce copious quantities of nectar that may be sipped directly or used for making a sweet beverage. Australia. CRIBB, DONKIN; N79M, N84, 033, 053M, 093, P5, P17M, Q32, R15M, R33M, R60, S28M, S92

#### PSILOACEAE

##### *Psilotum nudum* - \* *Psilotum triquetrum*

*Psilotum triquetrum* - *Whiskfern, Moa* {PL}. The whole plant is made into a tea. Tropics. TANAKA; C7M, E48, M69

#### PTERIDACEAE

*Pteris ensiformis* - *Sword brake, Hoko-shida* {S}. In Indonesia, the young uncurling fronds are steamed and eaten as a side-dish with rice, mixed with other vegetables, or put in stews. Tropical Asia. OCHSE; M42{PL}, N84, 093

#### PUNICACEAE

*Punica granatum* - *Pomegranate* {S}. The refreshing, subacid fruits are eaten out of hand, or used in fruit salads, tossed salads, desserts, *muhammara*, etc. Pomegranate juice can be used in soups, sauces, jellies, ices, or made into a sweet syrup called *grenadine* that flavors drinks, ice cream, cakes, baked apples, *daiquiris*, etc. Pomegranate molasses or *dibs rumman* is widely used in Middle Eastern cuisine. The dried seeds, *anardana*, are used as a seasoning in dal, *chat masala*, *samosa* (fried pastries), stuffings, and chutneys. Boiled leaves are said to be eaten. Dried, soaked flowers are cooked with fish to reduce the odor. Eastern Mediterranean to Southwest Asia. BOWN, GHAZANFAR, JOHNS [Cul], MORTON 1987a, NORMAN, POPENOE, W. 1920 [Cu, Pro], SALLOUM, SCHNEIDER 1986 [Cul, Pe], TANAKA, UPHOF, VON WELANETZ, WOLFERT 1994a [Re]; A7{DF}, A7{PD}, D77M{PL}, E29{PL}, F80, K29M{ffi}, L15M{m}, L16{ED}, L50M{ED}, N84, 053M, P5, P17M, Q12, Q32, etc. (for cultivars see Pomegranate, page 492)

*Punica granatum* 'Nana' - *Dwarf pomegranate* {S}. Fruits are edible. The plant is a dense shrub to three feet tall, nearly evergreen in mild winters. Blooms when a foot tall or less. Flowers are orange-red, single, and are followed by small, red fruits. Excellent garden or container plant. Also good for bonsai. TANAKA; A79M, F85, G96{PL}, H4{PL}, I49M{PL}, J82{PL}, K22{PL}, N37M{PL}, 053M, P5, P17M, Q32

#### PYROLACEAE

*Chimaphila maculata* - *Spotted wintergreen* {PL}. Leaves are nibbled for their refreshing qualities. In Mexico, they are used as a catalyst in the manufacture of *tesguino*, an alcoholic beverage prepared by fermentation of germinated maize. North America, Mexico. FERNALD, STEINKRAUS; BO, F5I, K4I, L59P, M69M, N7T

*Chimaphila umbellata* - *Pipsissewa, Prince's pine* {S}. Leaves are nibbled, brewed into a tea, or used as an ingredient of *root beer*. An extract of the leaves is used to flavor candy and soft drinks. In Mexico, the Tepehuano use the herb in the preparation of *navaitai*, an alcoholic beverage made from sprouted maize. North America, Eastern Asia. CROWHURST 1972, FERNALD, GIBBONS 1979,

HALL [Re], KIRK, MORTON 1976, STEINKRAUS; D75M{PL}, F85,144,147, L55J, N84, 053M

#### RANUNCULACEAE

##### *Cimicifuga foetida*-*Cimicifuga simplex*

*Cimicifuga simplex* - *Samshina-shdma* {S}. Young leaves are boiled and eaten. The fragrant root is used as a spice. Eastern Asia. TANAKA, VON REIS; M92{PL}, N84

*Clematis apiifolia* - *Botinzuru* {S}. Young leaves are boiled and used as a vegetable. Roasted ones are used as a substitute for tea. Eastern Asia. TANAKA; N84

*Clematis maximowicziana* - *Sweet autumn clematis*, *Senin-sd* {PL}. Young leaves, after parboiling, are eaten boiled or stir-fried. Young buds are similarly used or pickled in vinegar. Flowers are also edible. Eastern Asia. TANAKA; B28, C9, D92M{S}, G89M, 191, K63G{S}, M77, N84{S}, Q24{S}, R78{S}

##### *Clematis paniculata* - \**Clematis maximowicziana*

*Clematis vitalba* - *Traveller's joy*, *Old man's beard* {S}. The young sprouts are eaten in parts of Europe. In the Val Colvera region of Friuli, Italy, they are added to *pistic*—a ritualistic spring dish containing up to fifty six different wild greens. Sometimes combined with hop shoots in frittatas. Eurasia. DE VITA [Re], PAOLETTI, UPHOF; A2, A61, A61{PL}, D92M, G66, K63G, N61, N71M, N84, 053M, 093, P5, P49, Q24, R78, S55, etc.

##### *Coptis groenlandica*-*Coptis trifolia*

*Coptis trifolia* - *Goldthread*, *Canker-root*, *Mitsuba-dren* {PL}. The plant is said to be eaten, or it can be mixed with sassafras-root bark and Irish moss, and brewed into a kind of herbal root beer. The goldthread contributes a bitter flavor and yellow color to the beverage. Northern Asia, North America. GIBBONS 1966b [Re], TANAKA; A51M, D75M, 144, J75

*Ranunculus bulbosus* - *Bulbous crowfoot* {S}. The young flowers are pickled. Bulbs are eaten after thorough boiling or drying. Caution is recommended as this plant has a strongly acrid juice that can cause blistering. Northern temperate region. FERNALD, GIBBONS 1979, KIRK; N71M, N84, 048

*Ranunculus ficaria* - *Pilewort Lesser celandine* {PL}. Young leaves are eaten raw in salads and sandwiches or cooked as a potherb. The bleached stems are cooked and eaten. Both the bulbils which form in the leaf axils and the roots can be cooked and served with meat. Flower buds make a good substitute for capers. Eurasia. LAUNERT [Re], UPHOF; J75, M77M, N84{S}

*Ranunculus polyanthemos* - *Diügingigegi* {PL}. In Turkey the aboveground parts are added to *herbal cheese*, a specialty of Van, Siirt and other East Anatolian provinces. They are first pickled in salt water to remove any toxins. Eurasia. OZQELIK, OZTURK; A61

*Ranunculus sceleratus* - *Cursed crowfoot* {S}. The leaves are occasionally boiled and eaten as a potherb, the cooking water being poured off beforehand. In Nepal, they are used for making *gundruk*, a fermented and dried green vegetable. Northern temperate region. FERNALD, HEDRICK 1919, LEYEL 1987b, MANANDHAR; N84

#### REHMANNIACEAE

*Rehmannia glutinosa* - *Di huang*, *Lo sok tei*, *Chinese foxglove* {DF}. Leaves and roots are occasionally eaten as vegetables. The roots are also used in Chinese tonic soups, often with chicken and pork, or dilute rice porridges known as *congee* or *jook*. Sometimes soaked in rice wine with cardamom and other spices. Available raw, dried, wine-cured, or steam-cured. One of the ingredients of *Emperor's Secret* classic herbal tea, *Mu #16* tea, and *Four Things Soup*. Eastern Asia. BENSKY, FLAWS 1995, LEUNG, TAN [Re], TANAKA, TEEGUARDEN, TIERRA; E2M, E14T, E60P{PD},

E66T{PD}, F37T, GO, G19P, G47B{PD}, G73, H36{PD}, K18M, K53{S}, K79{PL}, L21T, L34, M15M, M15M{ED}, N7D, etc.

#### RESEDACEAE

*Reseda odorata* - *Mignonette* {S}. The flowers are occasionally floated into a bowl of wine or added to ice cream. Mignonette flavored salt is used frequently in Turkish cooking, especially with veal and lamb dishes. North Africa, cultivated. BURKILL, MACNICOL, TOOMRE [Re]; C3, C43M, C43M{PL}, E7M, 139, J76, J76{PL}, K53, 053M, 089, S55

#### RHAMNACEAE

*Berchemia discolor* - *Munye*, *Brown ivory* {S}. Ripe fruits are sweetish and are eaten fresh, dried, as a jam or sweetmeat, or fermented into an alcoholic drink. The pulp is sometimes mixed with millet meal to form a cake which is baked or steamed. Tropical Africa to Arabia. FOX, E, TREDGOLD, UPHOF; N84, S28M

*Ceanothus americanus* - *New Jersey tea*, *Red root* {S}. The leaves are gathered while the plant is in full bloom, dried in the shade, and used as a tea substitute. It has an agreeable taste, somewhat resembling that of *Bohea tea*. Does not contain caffeine. North America. ANGIER, FERNALD, GIBBONS 1962, KINDSCHER, MARCIN; D95{PL}, E14T{DF}, GO{DF}, G47M, J40, J40{PL}, J41M{PL}, J42, J82, K18M{DF}, L34{DF}, M82{PL}, N84

*Ceanothus cuneatus* - *Wild lilac*, *Snowbrush* {S}. The leaves and flowers make excellent tea when steeped in boiling water for about five minutes. Western North America. KIRK; B94, D95{PL}, C9M, C43V, D95{PL}, G60{PL}, G66, 147, I98M, I98M{PL}, K15, N84, Q32

*Ceanothus ovatus* - *Smaller red-root* {S}. Young leaves and flowers are steeped in boiling water for about five minutes. The resulting liquid is yellowish in color and tastes similar to Oriental tea, but is considered milder and sweeter. North America. FERNALD, HARRINGTON, H.; J39M, J39M{PL}, J42, N84

*Ceanothus velutinus* - *Sticky laurel*, *Tobacco brush* {S}. The leaves can be used as a substitute for tea. Western North America. HARRINGTON, H.; B94, C43V, D95{PL}, D96, E15, E66M, F68T, G66, G66{PL}, 147, J26{PL}, N84

*Colubrina arborescens* - *Coffee colubrina* {PL}. Second in importance to the bark of *C. elliptica* in the preparation of the tonic beverage known as *mauby* or *mauf*. Florida, West Indies. D87G

*Colubrina elliptica* - *Mauby*, *Smooth snakebark*, *Nakedwood* {PL}. In Puerto Rico and the Virgin Islands, the bark is steeped in water to make a cooling, fermented drink called *mabi champan*, considered a good tonic. Sold by street vendors and at soft drink counters. The bark, a concentrate, and the bottled beverage are sold in West Indian neighborhoods of New York and other large cities. Florida, Caribbean region. CARIAS [Re], DEWITT 1993, MORTON 1977, ORTIZ 1973 [Re]; C4M{PD}, D87G

##### *Colubrina reclinata*-*Colubrina elliptica*

*Colubrina texensis* - *Hog plum*, *Coma* {PL}. Tart fruits are crushed in a mortar and steeped in water to make a cooling drink. Southwestern North America. LATORRE 1977b; H4

##### *Gouania domingensis* - \**Gouania lupuloides*

*Gouania lupuloides* - *Chewstick*, *Toothbrush tree* {S}. In Jamaica, the aromatic, bitter stems are chopped to produce a foam which is added to *ginger beer*, root beers, root tonics, and sodas to add flavor and body. Bundles of the sticks are available in local markets. Caribbean region. BENGHIAT [Re], MORION 1977, WALSH; Z25M

*Hovenia dulcis* - *Japanese raisin-tree*, *Kenpo-nashi*, *Kuai-tsao* {S}. The fleshy, thickened fruit-stalks, when dried, have the sweet flavor and texture of raisins and can be used similarly. In China, they are eaten to annul the effects of wine. A sweet extract of the seeds,

boughs, and young leaves was used as a substitute for honey. Eastern Asia. CHANG, K., UPHOF, WILSON, E.H.; D95{PL}, E7M, G17{PL}, G66,149M{PL}, 183M{PL}, J61M{PL}, K38, K67{PL}, M16{PL}, 053M, P38, R47

*Krugiodendron ferreum* - *Leadwood, Black ironwood* {PL}. Ripe fruits are black, juicy, and have a sweet, agreeable flavor. They are usually eaten raw. Florida, West Indies. MORTON 1977; D87G

*Paliurus spina-christii*-*Ziziphus spina-christii*

*Phyllogeiton discolor*-*Berberchia discolor*

*Reynosia latifolia* - \**Reynosia septentrionalis*

*Reynosia septentrionalis* - *Darling plum, Red ironwood* {PL}. Fruits are dark purple, thin-skinned, with very sweet, agreeable flesh said to resemble blueberries. They are eaten raw or cooked. Florida, West Indies. MEDSGER, MORTON 1977; D87G

*Rhamnus crocea* - *Red berry* {PL}. The fruits are eaten raw and are excellent mixed with meat. They impart a red color to the mixture, and it has been reported that they will temporarily tinge one's skin red, if eaten in quantity. Southwestern North America. HEDRICK 1919, KIRK; D95, G60,198M, 198M{S}

*Rhamnus prinoides* - *Mqppi buckthorn, Gesho, Woody hops* {S}. In Ethiopia, the stems are used as a substitute for hops in the preparation of *talla*, a home-processed beer with a smoky flavor and a tan to dark brown color, and *tej*, a yellow, sweet, effervescent honey wine or *mead*. The fermentation containers used for producing these beverages are smoke-seasoned by inverting them over smoldering gesho stems and olive wood. Roots and stems are used in tonic soups. Fruits are sometimes eaten. Drier Tropical Africa. FOX, E, GACHATHI, MESFIN [Re], STEINKRAUS, VON REIS; F85, H51{DF}, H51{ED}, N84, S28M

*Rhamnus purshianus* - *Cascara buckthorn* {S}. The fruits are sometimes eaten. An extract of the bark, with the bitterness removed, is a common flavoring for soft drinks, baked goods, and ice cream. North America. MORTON 1976; A2, B74{PL}, B94, D95{PL}, D96, F85, F88M, 147, N0{PL}, N84

*Sageretia theezans* - *Sweet plum, Kuro-ige* {PL}. The fruit is edible. Leaves are used as a tea substitute in Tonkin. They are often mixed with the leaves of *Cleistocalyx operculatus*. Tropical Asia. UPHOF; K22, N7J, N37M

*Ziziphus joazeiro* - *Joazeiro* {S}. Fruits are sometimes consumed by the natives. May have potential as a rootstock for other species because of its non-suckering habit. Brazil. UPHOF; X88M

*Ziziphus jujuba* - *Jujube, Chinese date, Tsao* {S}. The ripe fruits are eaten fresh, dried like dates, boiled with millet and rice, stewed, baked, pickled, glaceed, or used as a coffee substitute. They are also used in puddings, cakes, breads, jellies, soups, sweetmeats, etc. A popular Chinese confection known as *ma tsao* is made by scoring the fruits, then soaking them in honey or sugar syrup. In Korea, jujube flour is used in the preparation of *kochujang*, a fermented hot pepper-soybean paste that resembles miso. Cultivated. CHANG, W. [Re], COST 1988 [Cu], JOHNS, POPENOE, W. 1920 [Cu, Pro], STEINKRAUS, TANAKA; C9M, C27G{DF}, C27G{PD}, E29{PL}, G19M{PD}, G66, G92{DF}, H4{PL}, K63G, N84, 053M, P17M, Q32, Q46, R47, etc.

#### CULTIVARS {GR}

**Admiral WHkes:** Elongated fruit, about 2 inches in length. The very last cultivar to ripen in late fall. Not particularly sweet, but still much appreciated due to its availability so late in the season. One of the progeny plants from the plant collecting expedition of Admiral Wilkes to the South Seas around 1840. The original plant still exists on the Capitol grounds in Washington, D.C. H53M, H53M{SC}, I66T

**Ant Admire:** Medium-sized, narrow, elongated fruit with a very sweet flavor. Ripens in mid-season. Obtained from the Nanjing

Botanical Gardens in China where it seemed to attract ants, hence the name. Introduced into the United States by Roger Meyer. H53M, H53M{SC}

**Chico:** (GI 7-62) Medium-sized, round fruit with a somewhat flattened blossom end; resembles a crabapple in appearance; most smaller fruits are seedless. Flesh very crisp, with a slightly acid flavor that gives it a character all its own. Tree is more thorny than other cultivars; does not do well in cool, coastal areas. STEBBINS; H53M, H53M{SC}

**GA 866:** Elongated fruit, about 2 inches in length; ripens in mid-season. One of the seedling selections from the field trials at the Chico, California Research Station. Thousands of seeds were planted as a research project to popularize the jujube in the 1950's. GA 866 has turned out to be the sweetest cultivar from that project and can have a soluble sugar reading of 45% brix. H53M, H53M{SC}

**Honey Jar:** Marvelous, uniquely flavored jujube. Tiny, round fruit, only about 3/8 inch to 1 inch in size; smaller than all named cultivars. Extremely sweet both fresh and dried. Honey Jar is a well deserved name for this cultivar which originated in China. Introduced into the United States by Roger Meyer. H53M, H53M{SC}

**Lin:** Very uniform, elongated fruit, 2 inches or more in length; very small seeds. Excellent fresh or dried. Dried fruits are very chewy and more reminiscent of a true date than other varieties. Ripens early in the season. Hangs on the tree a long time after turning mahogany. H53M, H53M{SC}

**Lang:** (Meltiq) Very large, oblong to pear-shaped fruit; skin mahogany red; begins to ripen near the end of the ripening period for Li; must fully ripen to the mahogany red color before picking. Quality only good fresh, but excellent for drying. Tree very large, more upright than Li; bears profusely at an early age. Discovered in China by Frank N. Meyer. Introduced in 1924. BROOKS 1972; A63, A88M, C54, D37, G49, H4, H53M, H53M{SC}, I49M, I53M, I68,174,183M, J61M, N20, etc.

**Li:** Very large, round to ovoid fruit, up to 2 inches long; skin mahogany brown. Primarily for eating fresh, having excellent flavor and texture. Ripens in late August, and unlike the Lang, will ripen if picked at the yellow-green stage. Tree more branched and spreading than Lang; reaches a height of 15 to 20 feet after 20 years. Discovered in China by Frank N. Meyer. Introduced in 1924. BROOKS 1972; A41G, A63, A88M, B74, C54, D37, G49, H53M, H53M{SC}, I49M, I53M, I68,174,183M, J61M, N20, etc.

**Redlands 4:** Large, round fruit, somewhat similar to Li but fruit size, on average, tends to be much greater; excellent sweet flavor and crisp texture; ripens several weeks after Li. One of several selections obtained from the Chico collection, and planted at a homestead in Redlands, California. The original name has been lost. H53M, H53M{SC}

**Sherwood:** Large to very large fruit, 1 1/2 to 2 inches long or more; flesh of excellent quality, notably dense in texture; ripens extremely late. Will keep under refrigeration longer than any cultivar yet tested, up to 6 weeks. Tree with relatively small thorns, extremely productive. Originated near Shreveport, Louisiana. Introduced by J.S. Akin. H4, H53M, H53M{SC}, K67

**Shui Men:** Medium-sized, elongated fruit with a delicious flavor, a perfect balance of sweet and tart. Quality excellent, either fresh or dried. Ripens in midseason. Bears good crops. Originated in China. Brought into the United States in 1914 by Frank N. Meyer. Introduced in 1924. BROOKS 1972; H53M, H53M{SC}

**Silverhill:** (Silverhill Long, Tigertooth) Long, narrow fruit, 1 1/2 to 2 inches in length; skin reddish-brown; flesh dense and sweet, of very good flavor; ripens in midseason. Quality excellent either fresh or dried. Similar to Silverhill Round. Originated in Silverhill, Alabama. H53M, H53M{SC}

**Silverhill Round:** Plum shaped fruit, about 1 1/2 inches in diameter. When ripe it is a light mahogany color with a sweet, date-like white flesh. Very high sugar content in the hard-ripe stage; has the flavor of a prune when soft-ripe or shriveled. Ripens in September. G17

**So:** Round, medium-sized fruit; brownish-red skin; moderately sweet flesh. Tree very gnarled with a zigzag type growth habit; apparently a genetic dwarf. Originated in China. Introduced into the United States in 1914 by Frank N. Meyer. Never released, but has been used in research studies. BROOKS 1972; G17, H53M, H53M{SC}, K67

**Sugar Cane:** Small to medium-sized, oval fruit, about 1 inch long; very sweet and crunchy, unusually dense for a jujube; small seeds. Very thorny tree. Originated as a seedling on the property of Roger Meyer in Valley Center, California, near some sugar cane plants. H53M, H53M{SC}

**Yu:** Large, narrow, elongated fruit; tapered toward the blossom end; skin reddish-brown; flesh sweet, firm; keeping quality rather good. Tree tall; main branches with few side branches; leaves large. Originated in China. Introduced into the United States in 1913 by Frank N. Meyer. G17, H53M, H53M{SC}

*Ziziphus lotus* - *Lotus fruit* {S}. The small mealy fruits are occasionally eaten or made into bread and wine. Thought to be one of the trees that produced the lotus of the ancient *Lotus Eaters* or *Lotophagi* mentioned in Greek mythology. Northern Africa to Southwest Asia. BROUK, DARBY, HEDRICK 1919, UPHOF; Q15G

*Ziziphus mauritiana* - *Indian jujube*, *Ber*, *Dunks* {S}. The fruits are eaten fresh, dried like raisins, boiled with rice, pickled, or used in jellies, preserves, chutney, sauces, *murabba*, and beverages. In Venezuela, a jujube liqueur is made and sold as *crema de ponsigne*. Dried fruits are pounded and pressed into cakes, used as a floury meal, or mixed with salt and tamarind pulp to make a condiment. Young leaves are cooked and eaten in Indonesia. In Africa they are used in soups and couscous. Drier Africa to Southern Asia. DUKE, MARTIN 1975, MORTON 1987a [Cu, Pd], OMAWALE, PAREEK, SINGH, S., STURROCK, VON MAYDELL; A79M, E29{PL}, F85,174{PL}, M17{PL}, N84, P17M, Q12, Q18

*Ziziphus mucronata* - *Buffalo thorn*, *Cape thorn* {S}. The fruit is sweetish and mealy when ripe and is eaten fresh, dried, or made into bread, porridge, or a refreshing beverage. Roasted seeds are used as substitute for coffee. Drier Tropical Africa. FOX, F., HEDRICK 1919, TREGOLD; G66, K63G, M17{PL}, N84, 053M, 093, P17M, S28M

*Ziziphus sativa* *Ziziphus jujuba*

*Ziziphus spina-christii* - *Christ's thorn* {S}. Mealy fruits have a pleasant, subacid taste, somewhat resembling dried apples. They are eaten both fresh and dried. Northern Africa to Southwest Asia. HEDRICK 1919, UPHOF; A79M, D95{PL}, G66, H4{PL}, JO, K63G, N79M, N84, 053M, P17M, Q15G

*Ziziphus vulgaris* *Ziziphus jujuba*

#### RHIZOPHORACEAE

*Rhizophora mangle* - *American red mangrove* {PL}. Dried leaves make a most agreeable substitute for tea. Moderation is recommended due to its tannin content, or milk should be added to bind the tannin. The roots, starchy fruits, and the inner portion of the green sprout, or hypocotyl, have been used as emergency foods. Tropical American coasts, West Africa. DUKE, MORTON 1977, TANAKA; A79M{S}, D87G, F73, F85{S}, M69, N84{S}

#### ROSACEAE

*Acaena anserinifolia* - \**Acaena sanguisorbae*

*Acaena sanguisorbae* - *New Zealand bur*, *Bidi-bidi* {S}. The leaves are used as a substitute for tea. Australia, New Zealand. HEDRICK 1919; F85, N84, S43M

*Agrimonia eupatoria* - *Agrimony* {S}. Flowers, leaves, and stems are harvested when the plant is in bloom and brewed into a refreshing tea. Both the fresh and dried herb are used, and the tea can be consumed either hot or cold. Europe. GRIEVE, MACNICOL, MARCIN, PAINTER; C67M{PL}, E61, E61{PL}, F80, 139, K85{PL}, M82{PL}, N71M, 053M, R47, S55

#### CULTIVARS

**Sweet-Scented:** Hardy perennial to 3 feet with narrow pinnate leaves. Bright yellow five-petaled flowers in slender, dense spikes. The whole plant is sweet-scented and the flowers have a spicy, apricot-like fragrance. For this reason it is popular in France for making tea. E7M, N71M

**To pas:** Improved type from Bulgaria that has larger plants and flowers for a higher yield. Sturdy, upright plant, slow growing. Produces yellow flowers from June to August the second year after planting. G6, J82, N84

*Agrimonia odorata* - \**Agrimonia eupatoria*

*Agrimonia procera* - \**Agrimonia eupatoria*

*Alchemilla vulgaris* - \**Alchemilla xanthochlora*

*Alchemilla xanthochlora* - *Lady's mantle* {PL}. In Northern England, the leaves are mixed with those of *Polygonum bistorta* and *Persicaria vulgaris* in the preparation of a Lenten pudding called *Easter ledger* pudding or *Easter herb* pudding. Europe. MABEY; C67M, C81M, E30, E61, F35M, G96, J76, J82, K22, K85, N71M{S}, N84{S}

*Amelanchier alnifolia* - *Saskatoon*, *Western service berry* {PL}. The sweet, blueberry-like fruits are eaten fresh, dried like raisins, stewed, or used in jams, puddings, jellies, pancakes, muffins and pies. American Indians pounded the fruits into cakes which were dried for future use, and also employed the fruit in making *penmican*. Western North America. HARRINGTON, H., KINDSCHER, MEDSGER, SIMMONS 1972, TURNER 1979 [Re]; A16, A50, A91, C33, D45, D95, G5M{PD}, I47{S}, J25M, J25M{S}, K63G{S}, M35M, N84{S}

#### CULTIVARS {GR}

**Forestbura:** Large fruit, about 1/2 inch in diameter, produced on very tight clusters. Mild flavor. Originated in Forestburg, Alberta, Canada by the Beaverlodge Research Station. Introduced in 1963. BROOKS 1972; L27M

**Honeywood:** Large, dark-purple fruit with an excellent pleasant flavor; abundantly produced in heavy clusters, up to 15 berries in a cluster. Bushes grow to about 6 1/2 feet in height and will eventually develop into many-stemmed clumps. Bears at an early age. Selected from wild seedlings by A.J. Porter. Introduced by Honeywood Nursery in 1973. Very popular cultivar in Canada. RONALD; A65, B47, D95, F67, G54, H42, J89M, K64, L27M, N24M

**Martin:** Large-fruited selection developed by Dieter Martin of Langham, Saskatchewan. Excellent flavor. More uniform ripening of berries. Seedling of Thiessen, which it otherwise resembles. Currently being evaluated in a comprehensive cultivar trial. Introduced in 1990. BROOKS 1997; B47, H42, 146, N24M

**Northline:** Large, sweet, good quality fruits. Shrub to 5 feet high. Suckers rather freely. Selected near Beaverlodge, Alberta, Canada. Introduced in 1960 by J.A. Wallace. A65, G54, 174, K64

**Pembina:** Fruit is large, sweet, full-flavored; borne on long clusters. Bush upright, slightly spreading, grows 8 to 10 feet high; very vigorous and productive. Does not sucker freely. Developed by Beaverlodge Research Station, Beaverlodge, Alberta, Canada. Introduced in 1952. BROOKS 1972, RONALD; A65, B47, 174

**Regent:** Semi-dwarf shrub; height 4 to 6 feet, 4 foot spread. White flowers in late April followed by an abundant crop of purple-black fruits which ripen in early summer. Excellent for jams and jellies. Autumn foliage in shades of yellow and red. Selected both for berry production and ornament by J. Candrian, Regent, North Dakota. A74, B4, C9, D37, D65, D69, F43M, G4, H29M, I49M, 160, I77M, K64, L27M, L70, etc.

**Smoky:** Fruit large, round; flesh very sweet and juicy, full-flavored; fruit size 1/2 to 5/8 inch. Bush spreading, reaching 6 to 8 feet; reliable and very heavy bearing, single bushes have yielded 88 pounds of fruit in government research trials. Produces suckers freely. Leading commercial cultivar in Canada. Originated in Beaverlodge, Alberta, by W.T. Macoun, Canada Department of Agriculture. Introduced in 1956. BROOKS 1972; A65, B47, B74, F67, G54, G87, H85, K64, L79, N24M

**Success:** Fruits are up to 1/2 inch in diameter and are very good for eating out of hand. Bushy-shrub growing 6 1/2 to 8 feet high; suckers freely. Grown primarily in the eastern Great Plains states. Introduced by H.E. Van Deman of Kansas about 1878, and said to have been grown in Illinois from seeds obtained in Pennsylvania. A91{PL}, N24M

**Thiessen:** Very productive, with fruits up to 1/2 inch in diameter. Similar to Honeywood in most respects. Tree roundish in form. It differs in its mature height, and may reach 16 feet with age. Selected from wild seedlings and introduced in 1976 by George Krahn, Lakeshore Nurseries, Saskatoon, Saskatchewan. A65, B47, F16, F67, G54, I46, I74, K64, L27M, L79, N24M

**Timm:** Large, blueberry-shaped fruit; very sweet and flavorsome; ripens early. Medium-sized tree, produces fruit in its second year. Large showy clusters of white flowers. Ornamental fall colors of yellow, red and maroon. Introduced by the Plant Material Center, Bismark, North Dakota. A91{PL}

*Amelanchier arborea* - *Downy serviceberry* {PL}. The sweet fruits are eaten. North America. TURNER 1979; E33M, G6<5{S}, H4, K38{S}, K63G{S}, M77M, N84

*Amelanchier asiatica* - *Korean juneberry* {S}. The bluish-black berries are eaten, being of good quality. Eastern Asia. SIMMONS 1972, TANAKA; G66

*Amelanchier bartramiana* - *Bartram shadblow* {PL}. Fruits are oval or pear-shaped rather than round like most juneberries. They are sweet and juicy and can be added to muffin and pancake mixes and to fruit sauces. Also dried and stored for future use. North America. CROWHURST 1972, MEDSGER; 160

*Amelanchier canadensis* - *Juneberry, Serviceberry* {PL}. The sweet fruits are eaten out of hand and are also stewed, dried, preserved, added to pancakes and muffins, or made into pies, sauces, jams, jellies and cakes. Dried fruits are used like raisins or currants in puddings and muffins. When thoroughly cooked in puddings or pies, the seeds impart an almond-like flavor to the finished product. North America. ANGIER [Re], FERNALD, FREITUS [Re], GIBBONS 1962 [Re], MEDSGER, SIMMONS 1972; A50, B9M, B32, C9, C47, D65, G23, G66{S}, 14, I49G, K38{S}, K63G{S}, M69M, M92, 053M{S}, etc.

#### CULTIVARS {GR}

**Prince William:** Large, multi-stemmed shrub; height 10 feet, spreads to 6 feet; large white flowers; orange to red fall foliage color; fruits heavily. Fruit 3/8 inch to 1/2 inch in diameter; purplish-blue; of high quality. Selected at Madison, Wisconsin. Introduced by Tom Watson. K37M, L27M

*Amelanchier denticulata* - *Membrillo* {S}. The ripe fruits are eaten fresh and also make excellent jelly. Southwestern North America to Central America. WILLIAMS, L.; F85, H4{PL}

*Amelanchier x grandiflora* (A. canadensis x A. laevis) - *Apple serviceberry* {PL}. Natural hybrid. The sweet fruits are eaten fresh, dried, in pies and other desserts, canned, frozen, or made into wine.

North America. LOGSDON 1981; A74, A50, B32, C9, D37, G21M, G66{S}, H45M, 174, J61M, K38{S}, K63G{S}, K89

#### CULTIVARS {GR}

**Ballerina:** Large shrub or small trees, will reach 15 feet in height. Covered with large white flowers in spring, followed by a crop of red fruits which are very tasty. Named and described by H. J. van de Laar of Holland. H4, H49

**Cole's Select:** Large shrub or small tree with multiple stems; upright, spreading; height 20 to 25 feet; thicker, glossier foliage than others; pink buds and long, drooping clusters of large white flowers; brilliant orange-red fall color. Small, reddish-purple fruits. C9, H4, H44, I77M, K37M, K60, N37M

**Princess Diana:** Small, gracefully spreading tree; yellowish flower buds, opening to white; outstanding, brilliant red fall foliage, colors early and lasts until late in the season. Fruit 3/8 inch in diameter; purplish-blue; sweet. Selected at Elm Grove, Wisconsin. Introduced by Tom Watson. K37M, K77, L27M

*Amelanchier laevis* - *Allegheny shadblow* {PL}. The sweet, purplish-black fruits are eaten fresh, dried, or made into jams, sauces, and pies. Eastern North America. HENDRICKSON, LOGSDON 1981, YANOVSKY; A50, A74, C9, C47, D69, D95, G66{S}, 14, I60, I91, J39M, K37M, K38{S}, K63G{S}, K89, M92, N84{S}, etc.

#### *Amelanchier lamarkii* - \**Amelanchier x grandiflora*

*Amelanchier obovalis* - *Southern juneberry* {S}. The reddish-purple fruit is very good eaten out of hand or in pies, jellies, or blender drinks. Southeastern North America. BULLARD.

#### CULTIVARS {GR}

**Jennybelle:** (A.J.) Fruit reddish-purple when ripe, up to 1/2 inch in diameter; ripens from late May to mid-June; flavor sweet, even when fruit is red and not fully ripe. Small bush, seldom over 10 to 12 feet tall. Produces few suckers, making it easy to manage. Blooms late; comes into bearing at an early age; vigorous and productive. Resistant to drought, frost, and hot temperatures. D37, F43M, K67

*Amelanchier ovalis* - *European juneberry, Snowy mespilus* {S}. Berries are red at first, turn black with a purplish bloom when ripe, and are about the size of a black currant. Not particularly palatable but can be used for jam or wine making. Europe. SIMMONS 1972; G66, H4{PL}, N71M, N73{PL}, P49

*Amelanchier stolonifera* - *Quebec berry, Dwarf juneberry* {PL}. The sweet, juicy, purplish-black fruit is often used to make jelly. Eastern North America. HENDRICKSON, SIMMONS 1972; A50, D95, G89M, H90, J39M, K63G{S}, N37M

*Amelanchier utahensis* - *Utah serviceberry* {S}. Fruits are eaten raw, stewed, dried or used in pancakes, jams, jellies, and wine. Dried fruits are added to soups and stews. Western North America. KIRK; C43V, D95{PL}, E66M, G66, G89M{PL}, L55J, N84

#### *Amelanchier vulgaris* - *Amelanchier ovalis*

*Amygdalus besseriana* - *Dwarf almond, Russian almond* {PL}. Seeds are the source of an oil being similar but inferior to bitter almond oil. Also produces a bitter almond water. The fruit is eaten in Siberia. Used as a frost-resistant rootstock for A. communis. Eurasia. UPHOF, ZEVEN; A91, B15M, C33, D95, F67, G66, G66{S}, K38{S}, K63G{S}, K64, K89, M35M, NO, N84{S}

*Amygdalus bucharica* - *Bukhara almond* {S}. In breeding, this almond relative may form a source of sweet pits, of high oil content and of good kernel to shell ratio. Central Asia. ZEVEN; U7G

*Amygdalus communis* - *Almond* {S}. Seeds are eaten raw, salted, roasted, sprouted, or used in cakes, confectionery and pastry. They can also be blended with water to form almond milk, made into almond butter or pressed for their edible oil. Almond oil is mildly sweet and nutty, very low in saturated fats and goes well with salads

and vegetable dishes. The tender kernels of young almonds, picked before they mature, are a traditional delicacy in the Middle East. Almond paste is used in *macaroons*, *marzipan*, *amaretti*, etc. *Picada* is a mixture of almonds, chopped parsley, garlic and olive oil, essential in Catalan cuisine. On La Palma, in the Canary Islands, a local goat cheese is smoked over a fire of almond shells. Source of a smooth, caramel-colored honey with an excellent nutty flavor. Southwest Asia, cultivated. ANDREWS, C. 1988 [Re], CANUT, COLE, C. 1990 [He], CUSUMANO [Cu], GRAY, P. [Cu, Re], GRIEVE, JAYNES [Cu, Pro], MENNINGER, ROSENGARTEN [Re], UPHOF; A7{PD}, A25G{PD}, A52M{PD}, D81{PO}, D87D{PD}, E31{PD}, F32D{PD}, G29{PD}, G92{PD}, I19M{PD}, I66M{PD}, K63G, M15M{PD}, M63M{PD}, N54{PD}, N84, Q12, etc., (for cultivars see Almond, page 264)

*Amygdalus communis* 'Amara' - *Bitter almond* {S}. Kernels are the source of *bitter almond oil*, which is detoxified and used as a flavoring for *maraschino cherries*, ice cream, baked goods, extracts, *amaretto* liqueurs, and *orgeat*, a syrup used in beverages. Blanched, crushed kernels are added to peach, cherry, or apricot preserves. GRIEVE, MORTON 1976, VON WELANETZ; G66

*Amygdalus davidiana* - *David peach*, *Chinese wild peach* {S}. The kernels are used in China to flavor confectionery and some special dishes, but they contain prussic acid. Fruits are also edible. Used as a disease resistant, low-chill rootstock. China. BROOKS 1972, GESSERT, TANAKA; F91T{SC}, G66, K38, K63G, N73{PL}, N84, O53M, P38. (for cultivars see Peach, page 455 and Rootstocks, page 510)

#### *Amygdalus nana* -> *Amygdalus besseriana*

*Amygdalus persica* - *Peach*, *Tao* {S}. The fruit is eaten fresh, dried, canned, stuffed, candied, processed into jam and juice, in cakes, ice cream and pies, pickled, as peach butter, preserved in brandy, etc. Unripe, green fruits can be used for making jam. The kernels are one of the sources of *Chinese almonds*, and of *bitter almond oil* which is used as a commercial flavoring. *Noql-e-khastahi* is an Afghan snack made of sugar coated peach or apricot kernels. Flowers are eaten in salads, used as a garnish, or brewed into tea. When distilled, they furnish a white liquor, which imparts a flavor resembling the kernels of the fruit. An infusion of the leaves in white brandy, sweetened with barley sugar, is said to make a fine cordial, similar to *noyau*. *Southern Comfort* is Bourbon whiskey flavored with peaches. Peach wood has a sweet, fruity flavor and is used as a smoking wood, however it can lose its flavor shortly after being cut. Peaches are sometimes fed to pigs, to give a special flavor to ham. The leaves are used for making a yeast starter in bread baking. Eastern Asia, cultivated. BJORKMAN, BROWN, G, GRAY, P. [Cu], GRIEVE, LEUNG, LEYEL 1987a, MACNICOL [Re], RAY, C., SABERI, TANAKA, UPHOF, WEAVER 1993; B94M{PD}, E63K{PD}, G66, I23M{PD}, J3{PC}, K38, L55J, N71M, O53M, Q12. (for cultivars see Peach, page 455 and Rootstocks, page 510)

*Amygdalus persica* Compressa Group - *Flat peach*, *Ping-tzu-t'ao*. Fruits are eaten fresh or processed. TANAKA, UPHOF; (for cultivars see Peach, page 455)

*Amygdalus persica* Nucipersica Group - *Nectarine*, *Yu-Vao* {PD}. The fruits are eaten out of hand, dried, preserved, as a topping for ice cream and cake, canned, brandied, processed into jams, marmalades, pies, fruit leather, added to fruit salads, etc. The wood can be used like that of peach for smoking foods. CARCIONE, CREASY 1982, SIMMONS 1972 [Cu]; D81{PO}, I23M, J3, M63M{DF}. (for cultivars see Nectarine, page 433)

*Aphanes arvensis* - *Parsley piert* {S}. Young plants are pickled or eaten in salads. Europe. KUNKEL, MABEY; N84

*Armeniaca brigantina* - *Briangon apricot*, *Alpine plum* {S}. The kernels are the source of *huile des marmottes*, an oil used in France in lieu of olive oil. Fruits are occasionally eaten. Europe. HEDRICK 1919, TANAKA; Y89M

*Armeniaca x dasycarpa* - *Black apricot*, *Purple apricot*, *Susincocco* {GR}. The plum-like fruits are purple-black in color and have soft, juicy flesh that is subacid to acid. They are eaten fresh, and may also be used in marmalades. Probably a natural hybrid, *Armeniaca vulgaris* x *Prunus cerasifera*. Cultivated. SIMMONS 1972, ZEVEN.

#### CULTIVARS

**Tlor Tsiran:** Small, oval fruit; dark-purple; fuzzy, apricot-like skin; yellow-orange flesh, marbled with red, tender and juicy; flavor and quality very good. Self-fertile tree; very winter hardy; somewhat resistant to brown rot. Blooms slightly later than most apricots. Originated in the former Soviet Union. J61M

*Armeniaca mandshurica* - *Manchurian apricot* {PL}. The fruits are small, juicy, subacid to sweet, and can be eaten fresh, stewed, dried, or made into preserves. Northeastern Asia. TANAKA; A91, B15M, B73M, D76, E97, G66, G66{S}, H42, H85, I49G, 178, K63G{S}, K89, L27M, L70, N19, P49{S}, etc.

#### CULTIVARS {GR}

**Debbie's Gold:** Medium-sized, thin-skinned fruit; very firm, deep orange flesh; freestone. Excellent for canning. Ripens in early July. Excels as an early season apricot in staggered plantings. Self-fertile, but will produce better crops if used with a pollinator. Introduced by Aubin Nursery. A91

**Manchu:** Large, round-oblong fruit; skin burnt-orange with blush; flesh orange, slightly dry and acid; cooking quality good, only fair for dessert; ripens in early August. Tree large, vigorous, spreading; very hardy; self-fruitful, bears heavy crops regularly. Seedling of seed brought from northern Manchuria in 1924 by N.E. Hansen, South Dakota Agricultural Experiment Station. Introduced in 1936. ANDERSEN, BROOKS 1972; E97, F91T{SC}

**Scout:** Fruit medium to large; flat, oblong-cordate, pointed; skin golden bronze, slightly pubescent; flesh deep yellow, fine, tender; freestone; quality fair to good as dessert, good canned or for jam; season late July and early August. Tree tall, upright, rounded; moderately vigorous; hardy; productive. Originated in Morden, Manitoba, Canada. ANDERSEN, BROOKS 1972; A74, A91, B15M, H85, I49G{SC}, K64, L70, M35M{PL}

*Armeniaca mume* - *Ume*, *Japanese apricot*, *Mei-tze* {PL}. Fruits are eaten raw, candied, boiled, preserved in sugar, pickled in salt and dried, or made into a liqueur and *Chinese plum sauce*. The pulp is also used in the preparation of *ume-bishio*, a sour jam. Fruits preserved in salt and flavored with red Perilla are known as *umeboshi* or *salt plums* and are popular with those who follow a macrobiotic diet. They are placed in the center of rice balls to give a slightly sour and salty flavor. The fragrant vinegar obtained from the fruit is used for pickling ginger and in salad dressings. In China, the blossoms are used for scented tea. Young budlings are edible. Japan, cultivated. CUSUMANO [Cu, Re], HEDRICK 1919, LEE, G., SHURTLEFF 1975 [Re], TANAKA, UPHOF, USHIO [Nu, Re]; B96, C54, D95, E56{ED}, E66T{ffi}, E87, G66{S}, H91{PJ2}, K38{S}, K63G{S}, N37M, N84{S}, P49{S}

*Armeniaca mume* 'Microcarpa' - *Ko-ume* {PD}. The relatively small fruit is pickled like that of the type. It has its own special flavor, texture and effect. Pickled fruits, known as *ko-umeboshi* or *tiny salt plums*, are sprinkled with sugar and eaten as dessert. Cultivated. TANAKA; E56, H91

*Armeniaca vulgaris* - *Apricot* {S}. Fruits are eaten fresh, dried, stewed, candied, made into paste, juice and fruit leather, used in pastries, pies, cakes, jams, confectionery, preserved in brandy, pickled, etc. Unripe fruits can be used in compotes or bottled in syrup. Sour green apricots are used in pilafs in Uzbekistan. Sweet-kernel types, called *alpricots* or *apricot almonds*, are eaten raw, added to salads, or ground and made into jams, preserves, and other sweet dishes. In Central Asia, they are available both shelled and roasted in the shell after the pits have been soaked in brine, which causes the kernel's shell seam to split slightly in the manner of a pistachio. Blanched kernels, sometimes called *Chinese almonds*, are eaten raw, roasted, or made into the agar-agar based white *almond*

*jelly*, often served as *dim sum* or with fruit cocktail. Bitter apricot kernels are used in Saronno, Italy to produce *Amaretti di Saronno*, a macaroon cookie, and *Amaretto di Saronno*, a liqueur. Also the source of an edible oil. Apricot wood can be used as a fruity smoking wood, however it requires a greater level of expertise than some other types. Cultivated. BJORKMAN, COST 1988 [Cul], HERBST, S., JOHNS [Cul, Re], MARIANI 1991, PERRY 1993, TANAKA, UPHOF; D81{PO}, E47M{DF}, F32D{PD}, G40{PD}, G66, H19M{PD}, I23M{PD}, J66M{PD}, L34{PE}, L99{PD}, M15M{PD}, N84, Q12, Q46. (for cultivars see Apricot, page 287 and Rootstocks, page 510)

*Armeniaca vulgaris* 'Ansu' -*Anzu*, *Ansu apricot* {S}. The fruit is eaten like that of the type. Seed kernel oil is used as a substitute for olive oil. The leaves and buds can be eaten. TANAKA; E7M, G66, K38

*Armeniaca vulgaris* x *Amygdalus persica* - *Peachcot* {PL}. Artificial hybrid. Apricot x peach. Occasionally cultivated for its edible fruit. Large, yellow-skinned fruits; moderately firm flesh; good flavor which resembles a peach. Tree has the characteristics of the apricot parent. Ripens early to late June. A63, A88M, C54, L47  
CULTIVARS {GR}

**Bill's:** Medium-sized, juicy fruits; delicious peach-like flavor with the secondary sweetness of the apricot; ripens in June, 2 weeks earlier than either parent. Excellent for canning, drying or storing. Hardy to Zone 5. Developed by William Schildgen. A91

**Bill's Nectar:** Medium to large fruit, resembles a peach; sweet melting white flesh, blood red near the pit, very aromatic. Quality very good for canning, the skin not needing scalding to peel off. Hardy to about 16° F. Hybrid of a honey peach, Elberta peach, Belle of Georgia peach, apricot and nectarine. Developed by William Schildgen. A91

**Ora A:** (84-12) The earliest non-melting fleshed cultivar. Firm-fleshed fruit with good eating quality. Resembles an apricot. Lacks acid content and red color. Requires 350 hours of chilling. Potential export item. Developed in Australia. Q93

*Armeniaca vulgaris* x *Prunus besseyi* - *Cherry cot* {GR}. Artificial hybrids. Apricot x western sand cherry. Combines the late flowering habit and cold-hardiness of sand cherry with the fruit qualities of the apricot.

#### CULTIVARS

**Yuksa:** Western sand cherry x New Large apricot of Europe. Produces an abundance of flowers. Originated in Brookings, South Dakota by N.E. Hansen. Introduced in 1908. HANSEN; F91T{SC}, N24M

*Armeniaca vulgaris* x *Prunus* spp. - *Plumcot* {PL}. Artificial hybrids. Apricot x various plums. Occasionally cultivated for their edible fruit. UPHOF; A63, C54, I68, L47, Q93

#### CULTIVARS {GR}

**Apex:** Apricot x Japanese plum. Large, globular fruit; skin attractive deep pink or light crimson; flesh honey-yellow, firm, rich, aromatic, apricot-like; freestone; ripens about the middle of June. Tree stout, compact, upright growing. Originated in Santa Rosa, California by Luther Burbank. Introduced in 1911. T49M{SC}

**Bill's:** Attractive, pinkish-orange fruit with a thin skin. Flesh has a rich hue of gold and a unique sweet flavor. Ripens in early August. Self-fertile. Developed by William Schildgen. A91, A91{SC}

**Burbank:** Delicious fruit that resembles a plum more than an apricot. Burgundy-purple skin; golden yellow flesh; very small pit. Rescued from Luther Burbank's Garden in Santa Rosa, California. LI

**Dapple Dandv:** (Dapple Dandy Pluot) Medium-sized fruit; skin greenish yellow, dotted with red, turning maroon with yellow dapple when ripe; flesh red and creamy white, sweet and juicy, flavor very good; freestone; ripens in August, between Flavor Queen and Flavor King. Requires 400 to 500 hours of chilling. Pollinate with Flavor

Queen, Flavor Supreme or Santa Rosa plum. Developed by Floyd Zaiger. Sometimes marketed as *dinosaur egg*. A88M, J61M, N20

**Flavor Delight:** (Flavor Delight Aprium) Attractive, 2 inch fruit, resembles an apricot more than Parfait; distinctive flavor and texture, pleasant lingering aftertaste; ripens in early June. Vigorous, upright tree; partly self-fruitful but heaviest crops are produced if cross-pollinated by Royal or Tilton apricots. Requires 600 hours of chilling. Developed by Floyd Zaiger. A88M, C34, I49M, I83M, L33, N20

**Flavor King:** (Flavor King Pluot) Reddish-purple skin and crimson flesh; very rich, spicy sweet flavor and aroma with little or no acidity; ripens in mid-August. Naturally small tree. Requires 500 to 600 hours of chilling. Pollinate with Flavor Supreme or Santa Rosa and Late Santa Rosa plums. A88M, C34, J61M, LI, N20

**Flavor Queen:** (Flavor Queen Pluot) Plum-like yellow fruit with excellent eating qualities; sweet, juicy flesh with an apricot-like aftertaste; ripens in mid-July and can be harvested over a period of several weeks. Needs 500 to 600 hours of chilling. Pollinizer required. Developed by Floyd Zaiger. A88M, C34, E87, I49M, I68, I83M, LI, N20

**Flavor Rich:** (Flavor Rich Pluot) Large, dark-purple fruit; firm, yellow-orange flesh, very sweet; ripens in late August and early September, 2 to 3 weeks after Flavor King. Vigorous, upright tree; pollinate with Dapple Dandy and Flavor King, or Santa Rosa plum. Requires 800 hours of chilling. Developed by Floyd Zaiger. A88M, N20

**Flavor Supreme:** (Flavor Supreme Pluot) Small to medium-sized fruit, 2 1/2 inches in diameter, resembles Satsuma plum; sweet, flavorful red flesh, firm but juicy, resembles Elephant Heart plum; superior to any early plum; ripens in early June in central California. Vigorous, productive tree; needs 500 to 600 hours of chilling. Pollinizer required; pollinate with Flavor Delight or any Japanese plum. Developed by Floyd Zaiger. A88M, B74, E87, I49M, I68, I83M, J61M, LI, L33, N20

**Mesch Mesch Amrah:** Very dark red fruit with yellow flesh. Flavor raspberry-like, sweet to tart, variable from season to season. Thought to be a hybrid of the Japanese plum (*P. salicina*) and the Mesch Mesch or Musk apricot. Introduced into the United States from Tripoli, Libya. J61M

**Parfait:** (Plum Parfait) Medium-sized fruit, similar to an apricot with red-blushed skin over dark yellow. Flesh is dark yellow marbled with red near the pit, firm, similar to apricot. Very good to excellent flavor, slightly tart. Tree is semi-dwarf, height 10 to 12 feet, spreading; resembles a plum tree in form and is very ornamental. Bears lightly when young. A88M, D76, E97, N20

**Rutland:** Fruit the size of an ordinary apricot with a deep-purple velvety skin. Brilliant red flesh with a strong sub-acid flavor making it suitable for cooking, jellies, and jams. When fully ripe it is an excellent dessert fruit possessing an apricot-plum flavor. Developed by Luther Burbank. Introduced by George C. Roeding in 1907. WICKSON; T49M{SC}

**Spring Rubv:** Distinctive, purple-leaved plumcot. Furry, red-skinned fruit with orange flesh, of fair quality. Possibly a hybrid of apricot and *Prunus cerasifera* f. *purpurascens*. T49M{SC}

*Aronia arbutifolia* - *Red chokeberry* {PL}. Fruits are eaten raw, stewed, or made into jelly. The Indians used them for making *penmican*, a mixture of fresh fruit, dried meat and melted fat. North America. HEDRICK 1919, PETERSON, L., YANOVSKY; B9M, C38, D95, H8, I11M, K63G{S}, K89, M92, N71M{S}, N84{S}, P49{S}, R78{S}

*Aronia melanocarpa* - *Black chokeberry* {PL}. The raw berries have a good flavor but are very astringent, much like choke-cherries. Stewed with sugar or honey they make an acceptable fruit sauce, and are also processed into a very dark, thick, good-flavored jelly. They contain an abundance of pectin and can be added to pectin-deficient

fruits to make them jell. Improved types are used in Europe to produce a delicious tart-sweet juice comparable to cranberry juice. This is available in ethnic stores that carry Polish or Russian foods. North America. FERNALD, GIBBONS 1979; A61M{PD}, A91, D69, D95, G66, G66{S}, G89, G89M, H49, I49G, K38{S}, K63G{S}, K89, M69M, N71M{S}, N84{S}, R78{S}, etc.

## CULTIVARS {GR}

**Nero:** Shiny black fruit; weight about 1.2 grams, whereas fruit of wild specimens usually weigh about 0.6 grams; vitamin C content ranges from 15 to 30 mg. Bears fruit in clusters of 15, the yield per tree being twice that of wild specimens. Also selected for more flavorful fruit. The first commercially available cultivar. Developed in the former Soviet Union. F43M, 160,166T, J61M, L27M

**Viking:** Improved type with attractive; bluish-black fruit. Very good flavor makes it suitable for eating out of hand. Grows to 3 feet in height. Highly adaptable to soil conditions and exposure. Hardy to -40° F. Has attractive, intense crimson red fall foliage. E63, F43M, I49M, I49?, 160,166T, M92

*Aruncus dioicus* - *Goat's beard* {PL}. Young buds, leaves and stems are eaten as a potherb. Near the town of Pordenone in Western Friuli, Italy, the young shoots form an ingredient of *pistic*—a mixture of fifty six wild greens eaten as an early spring ritualistic dish. Eurasia, naturalized in North America. PAOLETTI, TANAKA; B28, B30, B51{S}, C9, C92, D24, E7M{S}, E33M, E91G{S}, H63, H70M, I11M, K63G{S}, M37M, M77, M98, etc.

*Cercocarpus ledifolius* - *Mountain mahogany* {S}. The scraped bark makes a flavorfull additive to a brew of mormon tea (*Ephedra* 'Spp.). In the Bishop area of California, three hundred year old logs of the dense, heavy wood are used for smoking hams, bacon and other meats, the mahogany wood contributing a unique, rich flavor and aroma. Western North America. KIRK; B94, C4, D95{PL}, E66M, F44M, G60{PL}, G66, G66{PL}, G89M{PL}, H45{PD}, I47, J25M, J25M{PL}, J26{PL}, L55J, N84, etc.

*Chaenomeles cathayensis* - *Cathay quince* {S}. The large, dull-green fruits are not as attractive as those of some *Chaenomeles* species but make an excellent jelly. They can also be stewed or preserved. China. JOHNS, TANAKA; D95{PL}, 053M

*Chaenomeles japonica* - *Dwarf Japanese quince*, *Maule's quince* {S}. Fruits are eaten raw, stewed, preserved in brine, baked, or made into jelly. The rich, aromatic juice, as tart as a lemon, is squeezed and used for culinary purposes. Japan, cultivated. HEDRICK 1919, TANAKA; B32{PL}, C9M, G66, H49{PL}, K38, K63G, L47{PL}, L91M, N71M, N84, 053M, R78

## CULTIVARS {GR}

**Blood Red:** Very small, fragrant, pear-shaped yellow fruits stained with red. Flavorful when eaten raw; very good for making jams and jellies. Tiiy, deep blood red flowers. Grows to 4 feet tall or more, spreading to 3 or 4 feet. E87

**Victory:** Large, attractive yellow fruit; highly aromatic; hangs on the plant until late October. Makes delicious syrup or preserves. Abundant scarlet-red flowers produced in spring, and also often in summer and fall. Ornamental as well as usefull. I66T

*Chaenomeles sinensis* - *Pseudocydonia sinensis*

*Chaenomeles speciosa* - *Japanese quince*, *Flowering quince* {S}. The fruits are cooked or parboiled, mashed after having the seeds removed, and then mixed with honey and ginger and made into a beverage. They can also be used for jellies, conserves, or for flavoring apple or other fruit pies. China. SIMMONS 1972 [Cu], TANAKA; G66, H4{PL}, K63G, N71M, N84, P49

## CULTIVARS {GR}

**Cameo:** Low, compact growth; height 3 to 5 feet; very few thorns. Attractive semi-double flowers of soft apricot-pink. Bears edible greenish-yellow fruits with an appealing lemon-like fragrance. Makes fine jelly, jam and preserves. Haidy to -20° F. A74, B9M, C9, C45M, D95, E87, H4, H29M, H78,174, J61M, L49, M92

**Jet Trail:** Yellow lemon-scented fruits that make g>od jelly. Low growing, compact shrub, only growing to about 3 feet tall. Covered with large fluffy white flowers in the spring. A74, B9M, D95, H4, H29M, H45M, 174, L47, M92

**Texas Scarlet:** Produces fragrant fruits, 3 inches in diameter, which are excellent for canning or making jellies. Small bush, 4 feet tall and 4 or more feet wide, covered with showy orange-red flowers in the spring. Haidy in USDA Zones 5 to 8. A74, B9M, C45M, D95, E87, F53M, H4, H29M, H44, H45M, H49, H78, H89M, H90, 174, J61M, L49, M92, etc.

**Tovo Nishiki:** Large fruits, sometimes as large as apples, with a very appealing aroma; ripen in late summer. Suitable for use as jelly. Produces attractive pink, red and white flowers, often on the same branch. Bushes can reach 6 feet in height and width. Hardy in USDA Zones 5 to 8. B96, D95, F43M, H4, H49,174, J61M, M92

*Chaenomeles speciosa* var. *cathayensis* -\* *Chaenomeles cathayensis*

*Cotoneaster nummularia* -\* *Cotoneaster racemiflora*

*Cotoneaster racemiflora* - *Black-wood* {S}. Source of *shir-kist* or *shir-khecht*, a whitish, sweet, manna-like substance used as food in India and Iran. It contains 13% saccharine and 37.5% dextrose. North Africa to Southern Asia. DONKIN, UPHOF; D95{PL}, F85, K38, N84, 093, Q40

*Cowania mexicana* - *Cliffrose*, *Quinine bush* {S}. A refreshing tea can be made by steeping the leaves in hot water for a few minutes. Western North America. KIRK; B94, C4, C43V, D95{PL}, E66M, F63M, G66, G89M{PL}, 147, J25M, J25M{PL}, L13, L55J, P5

*Cowania stansburiana* - *Cowania mexicana*

*X Crataegosorbus miczurinii* (*Crataegus sanguinea* x *Sorbus aucuparia*) - {S}. Artificial hybrid. Hawthorn x mountain ash. Fruits are occasionally eaten, containing up to 300% vitamin P. Developed in 1925 by I.V. Michurin. X33, Y29

## CULTIVARS {GR}

**Ivan's Belle:** Wine-red fruit, about the size of a pie cherry; pleasant sweet-tart flavor. High in Vitamins A and C. Good fresh or in preserves, pastry, juice and wine. Small spreading tree, 10 to 15 feet tall when mature; very attractive, glossy dark-green foliage and white flowers tinged with pink; very haidy. Ideal for edible landscaping. Developed by I.V. Michurin. E87, H49,146,149?, I66T, 174

*Crataegus aestivalis* - *Mayhaw* {PL}. Fruits are eaten raw, pickled, stewed or made into jellies, jams, marmalades, tarts, and preserves. Mayhaw jelly is much prized in some areas of the Southern United States. It has been reported that the juice will keep in the refrigerator for months and still be good for making jelly. Southeastern North America. FREITUS [Re], HEDRICK 1919, LOGSDON 1981, MEDSGER; A80M, D81P{PD}, D95, H4, H14M, H35{PB}, J61M{PD}, L56M{m}, N37M, P38{S}

## CULTIVARS {GR}

**Big Red:** Fruits are bright shiny-red, crabapple-shaped; the largest of any cultivar, with some up to 1 inch in diameter. Tree is a rank grower and it takes a couple of years before it begins to bear regularly. Discovered deep in the Pearl River swamps of southern Mississippi by T.O. Warren, Hattiesburg, Mississippi. A88M, C54, F43M, G17,174, K67

**Big Sandv #4:** Very large, dark-red fruit, about 3/4 inch in diameter. Makes an excellent jelly. Very disease resistant tree, growing to 20 feet tall; a very heavy producer. H4

**Big "V":** (No. 1 Big) Red fruits, about 3/4 inch in diameter. Tree bears heavily; grows with an attractive branching habit. Selected from seedlings growing in the Pearl River swamps of southern Mississippi, by T.O. Warren. Named after the shape of the tree. F43M

**Golden Farris:** Golden yellow fruits, average about 5/8 inch in diameter. Excellent for making a golden yellow jelly. A precocious and prolific bearer. G17,174

**Heavy:** Fruits are red in color, 1/2 to 3/4 inch in diameter. The heaviest-bearing of any cultivar. Young growth is willowy and twiggy, but matures nicely and stiffens with age. Originated in the Pearl River swamp. Discovered by T.O. Warren. C54, F43M, H4, J61M

**Royalty:** Large, bright red fruit, 7/8 inch to 1 inch in diameter; tough skin. Showy white flowers, 1 to 1 1/2 inches in diameter. Leaves turn red in the fall. Late blooming tendency makes it ideal for areas with warm spells in winter. Selected by Billy Craft of Louisiana. D37, F43M

**Super Berry:** (Texas Super Berry) Large fruits, as large as Big Red; attractive shellac-red in color. Ripe fruits hang on the tree for a very long time. Earliest blooming of any cultivar. Tree is ornamental both in bloom and with ripe fruit. Selected from seedlings growing in Buna, Texas, by T.O. Warren. A88M, C54, G17, H4,174, K67

**Super Sour:** Red fruit, about 3/4 inch in diameter. Spur-type tree has a large, thick, bearing top; has borne 86 commercial gallons of fruit (approximately 3.5 pounds per gallon). Selected from the wild by J.S. Akin of Sibley, Louisiana. A88M, B74, C54, G17, H4,174, K67

**Texas Star:** One of the best of the newer cultivars. Intense red berries, 7/8 inch to 1 inch in diameter. A late blooming type that produces fruit clusters with seven or more berries. Showy white blossoms and good fall leaf color. D37, F43M

**The Gem:** Large fruit with dark red flesh, ripens in the spring. Very late bloomer. Consistent producer of fruits that ripen uniformly for faster harvest. Selected by Billy Craft of Louisiana. D37

**Turkey Apple:** Very large reddish fruits, up to 1 inch in diameter. Unusual in that the fruits mature in the fall instead of spring. Very ornamental plant, grows into a large, upright bushy shrub or small tree. D37

**Warren's C. Qpaca:** Bears both orange and red fruits on the same tree. Excellent flavor. Attractive, shapely tree. Selected by T.O. Warren of Hattiesburg, Mississippi. Has performed well in trials at Hidden Springs Nursery. F43M, G17,174

*Crataegus azarolus* - *Azarole, Mediterranean medlar* {S}. The small, apple-like fruits are eaten raw, preserved, or used in jellies, jams, butters, and compotes. In warmer climates the ripe fruit has a fragrant and sugary pulp with a slightly acid flavor, and can be eaten out of hand. When grown in more northerly areas, it is more suited for processing into confectionery and jelly as it needs a fairly long after-ripening period. Yellow, red, and white-fruited forms are known. Mediterranean region, Southwest Asia. HEDRICK 1919, JOHNS, SIMMONS 1972 [Cu], UPHOF; C27T{SC}, F43M{PL}, G66, 174{PL}, J61M, K63G, N61, N84, 053M, 071M{PL}, Q15G, R78

*Crataegus crenulata* - \**Pyracantha crenulata*

*Crataegus douglasii* - *Black hawthorn* {PL}. The sweet, juicy fruits can be eaten fresh, used for jams, sauces, drinks and jellies, or dried and stored for future use. Western North America. KIRK, TURNER 1979 [He], YANOVSKY; A2{S}, B74, B94{S}, C5J, D95, E15{S}, G66{S}, I47{S}, J26, K75M, N84{S}

*Crataegus flava* - *Summer haw* {PL}. The yellowish, somewhat pear-shaped fruits are esteemed for making jellies. Southern North America. UPHOF; H14M, N37M

*Crataegus laevigata* - \**Crataegus oxyacantha*

*Crataegus marshalli* - *Parsley haw* {PL}. The fruits are eaten. Also used as a dwarfing rootstock for *C. aestivalis*. Southern North America. A80M, H4, H14M

*Crataegus mexicana* - *Crataegus pubescens*

*Crataegus monogyna* - *Maytree, One-seeded hawthorn* {S}. Young, tender leaves have a pleasant nutty taste, and are a good addition to a tossed salad. The young buds are used in *spring puddings*. The flowers are mixed with sugar and brandy and made into a liqueur, and are also used in syrups and sweet puddings. Fruits are eaten fresh or used for jellies and wines. Dried leaves are brewed into a tea. Europe, cultivated. LEGGATT, MABEY [Re], MACLENNAN, MICHAEL [Re]; G66, G66{PL}, I4{PL}, K38, K63G, N71M, N84, 093, P49, R78

*Crataegus opaca* - *Crataegus aestivalis*

*Crataegus oxyacantha* - *English hawthorn* {S}. The fruits are eaten raw or fermented into a kind of wine. Young leaves are used as a substitute for tea. The dried fruit pulp can be added to flour. Seeds are used as a coffee substitute. A liqueur is made by mixing the berries with brandy. Southern Europe, cultivated. GRIEVE, HEDRICK 1919, UPHOF; E7M, G66, H8{PL}, K38, K63G, N61, N71M, N84, 093, R78

*Crataegus pentagyna* -+ *Crataegus pinnatifida*

*Crataegus pinnatifida* - *Chinese haw, Shan-cha, Hung-kuo* {PL}. The tasty fruits are eaten raw, dried, stewed, candied, preserved or made into drinks, sweetmeats and a jelly known as *Shanch'akao*. Candied fruits are often strung on sticks and sold in local markets. Also available at Oriental markets in the West. Eastern Asia. LEE, G., SIMMONS 1972, TANAKA, UPHOF; D95, F43M, G66{S}, H36{DF}, H36{PD}, 160,174, N73

#### CULTIVARS {GR}

**Autumn Golden Star:** Large, bright reddish fruits, 1 1/4 to 1 1/2 inches in diameter. Golden Star refers to the golden, star-like lenticels on the surface of the fruit. Grows about 20 feet tall; hardy to Zone 5. Recently introduced into the United States from China. F43M

**Big Ball:** Large, bright reddish fruits, 1 1/4 to 1 1/2 inches in diameter. Grows about 20 feet tall; hardy to Zone 5. Recently introduced into the United States from China. F43M, H4

**Golden Star:** Large, bright reddish fruits, 1 1/4 to 1 1/2 inches in diameter. Golden Star refers to the golden, star-like lenticels on the surface of the fruit. Grows about 20 feet tall; hardy to Zone 5. Recently introduced into the United States from China. C27T{SC}

**Little Golden Star:** Large bright reddish fruits, 1 1/4 to 1 1/2 inches or more in diameter. Little Golden Star refers to the small, star-like lenticels on the surface of the fruit. Grows about 20 feet tall; hardy to Zone 5. Recently introduced into the United States from China. C27T{SC}, F43M

**Purple Jian:** Large bright reddish fruits, 1 1/4 to 1 1/2 inches in diameter. Grows about 20 feet tall; hardy to Zone 5. Recently introduced into the United States from China. F43M

*Crataegus pubescens* - *Manzanilla, Tejocote* {S}. The mealy fruits are eaten in the form of jellies, jams and preserves. For stewing, they are first boiled with wood-ashes to remove the skin, then boiled in hot syrup with red coloring for a short time and hung on nails stuck into poles, much like candied apples. Sometimes added to *ponche de posada*, a tequila-and-tropical-fruit-laced punch served during holiday fiestas. Also used for flavoring rum or carbonated drinks. Mexico. HUTSON 1995 [Re], LATORRE 1977a, POPENOE, W. 1920, QUINTANA 1994 [Re], SIMMONS 1972, WILLIAMS, L.; G66, N84, 093, P5, S97M{PL}

*Crataegus succulenta* - *Succulent hawthorn* {S}. The small, bright scarlet fruits have sweet, juicy flesh and are excellent for making jelly. Western Indians pressed the berries into cakes and

dried them for winter use. North America. TANAKA, TURNER 1979 [Re]; G66, K63G, N84

*Crataegus tanacetifolia* - *Syrian hawberry* {S}. The fruit is pale-green to yellow touched with red, and has an apple-like aroma and taste that is relished by the Armenians. Asia Minor. HEDRICK 1919, SIMMONS 1972; 053M

*Crataegus* sp. - *Blue hawthorn* {GR}. The dark-red, crabapple-like fruits are the size and color of a Bigg cherry. They can be pushed through a sieve to produce a fragrant puree resembling apple butter. Self-fertile tree. Discovered in the Willamette Valley of Oregon. J61M

*Cydonia japonica* -> *Chaenomeles japonica*

*Cydonia oblonga* - *Quince* {S}. Occasionally used fresh, the aromatic fruits are primarily eaten stewed, preserved with pears, stuffed, or made into pies, marmalades, jams, jellies, fruit leather, candy, and conserves. *Cotognata* and *codonyat* are famous quince pastes from Lecce, Italy and Catalonia, respectively. In Iraq, a drink is made by adding crushed dried seeds to water, simmering for five minutes, and then sweetening to taste. In Azerbaijan, the leaves serve as wrapping for *dolmas*. The flowers are edible. The seeds yield a gum used as a stabilizer for ice cream. Eurasia, cultivated. AKHMEDOV, BIANCHINI, BRYAN [Cu, Cul], GRAY, P. [Cul], HANNEMAN, JOHNS [Cul], MACNICOL, SCHNEIDER 1986 [Pre, Re], SIMMONS 1972, UPHOF, VON WELANETZ; B71G{PD}. G47J{PD}, G66, P49. (for cultivars see Quince, page 498 and Rootstocks, page 510)

*Cydonia sinensis* -> *Pseudocydonia sinensis*

*Dasiphora fruticosa* - \* *Potentilla fruticosa*

*Docynia delavayi* - *Tao-yi, King haw* {PL}. When ripe, the apple-like fruit is eaten. The fresh fruit is also used in ripening persimmons. Fruits of each are arranged in alternate layers in large jars and covered with rice husks, and in ten hours the persimmons are bleeted and fit for eating. China. ALTSCHUL, WILSON, E.H.; 174

*Docynia indica* - *Indian crab apple, Mehul* {PL}. The fruits are eaten raw or cooked. In Burma, the tree is used as a rootstock for apples. Himalayan region. TANAKA, WATT; 174

*Dryas octopetala* - *Mountain avens* {S}. Leaves are used as a substitute for tea, called *schweizertee* or *kaisertee* in the European Alps. Alpine and Arctic regions. UPHOF; E67T{PL}, K79{PL}, N84, 053M, PIO, Q24

*Eriobotrya japonica* - *Loquat, Japanese medlar* {PL}. The juicy, subacid, refreshing fruits are eaten raw, preserved, stewed, in compotes and fruit salads, dried, made into jelly, pies, sauces, drinks, etc. Loquat pie, if made from fruit which is not fully ripe, is said to have the flavor of cherry pie. Roasted seeds are used as a substitute for coffee. China, cultivated. JOHNS [Cul], MORTON 1987a[Cu], POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], SCHNEIDER 1986 [Cul, Re], TANAKA, UPHOF; A41G, A79M{S}, C9M{S}, E13G{PR}, E29, H4, I77G, N40{PR}, N84{S}, 053M{S}. (for cultivars see Loquat, page 417)

*Filipendula hexapetala* - *Filipendula vulgaris*

*Filipendula ulmaria* - *Meadowsweet, Queen-of-the-meadow* {S}. The fragrant flowers and leaves are used as a flavoring for herb beers, mead, claret wine, liqueurs, and stewed fruit. Flowers are also made into a syrup which can be used in cooling drinks and fruit salads, or as a topping for ice cream. Young leaves, flowers, and roots are brewed into tea, while the leaves are added to other herb teas as a sweetener. One of over thirty different herbs and spices included in *Norfolk Punch*, a non-alcoholic herbal beverage formulated by Monks of Norfolk, England. Eurasia. MABEY, MACNICOL [Re], MARCIN, MICHAEL [Re], MORTON 1976, PAINTER [Re]; D92M, F80, K2{£D}, K85{PL}, M77M{PL}, N71M, N84, 053M, S55

*Filipendula vulgaris* - *Dropwort* {PL}. Young leaves are used in soups and salads. The tubers have been roasted and eaten in times of food shortage. Eurasia. MABEY, MORTON 1976, UPHOF; B77, D92M{S}, D95, J37M, L22, M65M, N71M{S}, N84{S}, 053M{S}

*Fragaria americana* - *Fragaria vesca van americana*

*Fragaria ananassa* (E *chiloensis* x F. *virginiana*) - *Garden strawberry, Pineapple strawberry* {DF}. Artificial hybrid, much cultivated. Fruits are eaten out of hand, with cream and sugar, stewed, preserved, used in cakes, pies, ice cream, pastries, made into jam and jelly, fermented into wine, etc. *Stemberries*, large strawberries on long stems, are often dipped in chocolate and eaten. CARCIONE, JOHNS [Cul, Re], TANAKA, UPHOF, VILMORIN [Cu]; C29, E97P, H73. (for cultivars see Strawberry, page 544)

*Fragaria californica* - *California strawberry* {PL}. The sweet, aromatic fruits are eaten fresh, dried or preserved. Fresh or dried leaves are used to brew an excellent tea. Western North America. CLARKE, GIBBONS 1962, MEDSGER, YANOVSKY; B92, D95, I98M

*Fragaria chiloensis* - *Beach strawberry* {PL}. The large, delicately flavored fruits are eaten raw, stewed, or used in cakes and jams. Leaves can be used for tea. Coastal North and South America. GIBBONS 1979, HEDRICK 1919, HELLER, POPENOE, W. 1924, WICKSON; E63M, G60, I8, I98M, L90M, N84

*Fragaria collina* - \* *Fragaria viridis*

*Fragaria moschata* - *Musk strawberry, Hautbois strawberry* {PL}. The fruit is eaten fresh as a dessert. It is deep violet-red or wine-colored, with white or faintly yellow, or occasionally, somewhat greenish flesh, and with a very strong musky flavor which is something like that of raspberries, or of black currants. Eurasia, cultivated. HEDRICK 1919, SIMMONS 1978, UPHOF, VILMORIN [Cu]; J29, R49

#### CULTIVARS

**Caoron:** Small, deep red fruit; flavor very good, aromatic, distinctively musky. Medium-sized, moderately vigorous plant; somewhat unproductive due to pollination difficulties. Probably the Le Chapiro cultivar, first named in 1576 and the Capron mentioned by Louis XIV's gardener, Quintyne. REICH; J61M

**Profumata di Tortona:** Small, deep red fruit, larger than Capron; flavor very good, aromatic, distinctively musky. More vigorous and productive than Capron. Plant with Capron for better pollination. Cultivated commercially near Tortona, Italy as recently as the middle of this century. REICH; J61M

*Fragaria ovalis* - *Rocky Mountain strawberry* {S}. The fruit is eaten fresh, dried, in shortcakes, made into preserves and jams, or used as a flavoring for other preparations. Dried leaves are used for tea. In breeding, it is hybridized with F. x *ananassa* to convey winter-hardiness, and also for producing everbearing or day-neutral cultivars. Western North America. BROOKS 1972, HARRINGTON, H., ZEVEN; X33. (for cultivars see Strawberry, page 544)

*Fragaria vesca* - *Wood strawberry, Fraise des bois* {S}. Fruits are eaten fresh with cream, coated with chocolate, as a filling for tarts or made into jam. Young leaves are eaten in salads, and are also parboiled and added to soups. Fresh or dried leaves are used for tea. Northern temperate region, cultivated. KRAFT [Cul, Re], MABEY, MARCIN, MICHAEL [Re], TANAKA; E9{PD}, E61{PL}, F88M, G68{PL}, G89M, I83M{PL}, J82, N71M, N84, 053M, Q24, R53M, R53M{PL}, S55

#### CULTIVARS {PL}

**Alba:** (White) A form with white berries. N9M, N84{S}, Q24{S}

**Variegated:** (Sow-Teat Strawberry) Deep green leaves, margined with white; white flowers; small, sweet pale-red fruit. D95, G96, H4, H51M, M82, N84

*Fragaria vesca* var. *americana* - *American wood strawberry* {PL}. The small, light red or pink fruit is eaten fresh, dried or

preserved. Leaves are used as a substitute for tea. North America. TANAKA, YANOVSKY; *G89M*

#### CULTIVARS

**Frost King:** Small, spoggy, white fruit, mostly bland in flavor. Plant small in size, moderately vigorous; susceptible to leaf spot; suffers from excessive runner production and low yields. U13

**Snow Kina:** Medium-sized, nearly round fruit; skin and flesh white; flesh very sweet with a wild strawberry flavor. Not attractive to birds due to the color. Mostly a novelty. Originated in Allegan County, Michigan by Burgess Seed & Plant Co. Introduced in 1922. BROOKS 1972; U13

*Fragaria vesca* <sup>4</sup> *Semper florens* - *Alpine strawberry* {PL}. The fruits are eaten fresh, dried, with sugar and cream, made into jam, mixed with cream for cake fillings, or served with cream cheese. They are also floated in wines and herb punches, such as *Maibowle*. FELL 1982b, HENDRICKSON, PAINTER [Re], SIMMONS 1972 [Cu], VILMORIN [Cu]; B92, J76, K2, K2{S}, K22, L56, N19M, N84{S}. (for cultivars see Strawberry, page 544)

*Fragaria virginiana* - *Scarlet strawberry*, *Virginia strawberry* {PL}. Fruits are eaten fresh, preserved, rolled in crepes and pancakes, dried, as a filling for open-faced French tarts, or made into jams and jellies. The leaves make a very pleasant tea. North America. CROWHURST 1972, FERNALD, MEDSGER, TURNER 1979 [Re]; C81M, D37, E33M, F88M{S}, G89, J39M, J42, J43{S}, M16, N9M, N9M{S}, N37M

#### CULTIVARS

**Christina White:** Unique white-fruited form with fruits that are larger and sweeter than the common Virginia strawberry. Plants run freely. Discovered by Bill Russell of College Park, Pennsylvania. D37

*Fragaria viridis* - *Green strawberry*, *Hill strawberry* {PL}. The edible fruits are greenish tinged with red, and have a rich, musky, pineapple-like flavor. They more closely resemble the hautbois strawberry than any other kind. Europe. HEDRICK 1919, TANAKA, VILMORIN; R49

*Geum canadense* - *White avens* {S}. Boiled roots are used as a substitute for chocolate. North America. MORTON 1963; B61M, D47M, N84

*Geum ciliatum* - \* *Geum triflorum*

*Geum rivale* - *Purple avens*, *Water avens*, *Chocolate root* {S}. The fresh or dried reddish-purple rootstock can be used to make a chocolate-like beverage. It is also employed as a flavoring for ale, wine and other liquors. North America. FERNALD, GIBBONS 1979, HARRINGTON, H., HEDRICK 1919, MEDSGER; A51M{PL}, B77{PL}, E61{PL}, F85, H21, M16{PL}, N71M, N84, 053M, Q24, S55

*Geum triflorum* - *Prairie smoke* {S}. A decoction of the roots can be used as tea. Western North America. KIRK, YANOVSKY; D95{PL}, G89{PL}, 147, J39M, J39M{PL}, J40, J41M{PL}, J42, J42{PL}, J43, Q24

*Geum urbanum* - *Clove root*, *Herb bennet* {S}. The rhizome has the scent of cloves, with a trace of cinnamon and is used as a spice in soups and broths, sauces, mulled cider, apple pie, and stewed fruit. It is combined with orange peel and put into wine. *Augsburg ale* is said to owe its peculiar flavor to the addition of a small bag of clove root in each cask. Northern temperate region. GRIEVE, HEDRICK 1919, MABEY, MICHAEL [Re], PAINTER [Pre, Re], ROOT 1980b [Cu, Cul], UPHOF; A2, E61{PL}, F85, J82, N71M, N84, 053M, Q24, R53M, S55

*Heteromeles arbutifolia* - \* *Photinia arbutifolia*

*Holodiscus discolor* - *Ocean spray* {S}. The small, dry fruits are eaten raw or cooked. Western North America. KIRK; A2, D95{PL}, E15, G59M, G60{PL}, G66, 147, J26{PL}, K75, N71M, N84, P49, R78

*Laurocerasus ilicifolia* - *Islay*, *Holly-leaved cherry* {S}. The reddish-yellow fruit is eaten fresh, dried, made into a beverage, or mixed with lemon and sugar to form a sauce. Seed kernels are ground into meal, and after leaching are used in breads, soups and *atole*. Southwestern North America. CLARKE, KIRK [Pre], MEDSGER, YANOVSKY; B94, C9M, D95{PL}, G60{PL}, H71, I8, 174{PL}, I98M{PL}

*Laurocerasus lyonii* - *Catalina Island cherry* {S}. Fruits are maroon to black in color, with tough, leathery skin and a very large stone. They can be eaten fresh and are usually of finer flavor than those of *L. ilicifolia*, some types being comparable to a good sweet cherry cultivar. Southwestern North America. THOMSON 1977; A41G{PL}, B94, C9M, D95{PL}, G60{PL}, G66, H4{PL}, H71, I8, 174{PL}, I98M{PL}

*Laurocerasus officinalis* - *Cherry laurel* {S}. Small amounts of the almond-flavored water distilled from the leaves have been used for flavoring puddings, creams, sweetmeats, and custards. Poisonous in large quantities. Eastern Mediterranean region. GRIEVE, HEDRICK 1919, UPHOF; B94, C9{PL}, D95{PL}, G66, K63G, N37M{PL}, N84, 053M, P49, R78

*Malus angustifolia* - *Southern crab* {PL}. The hard, sour fruits are often used for preserves, pickles, cider, sauces, and jellies. Eastern North America. HEDRICK 1919, MEDSGER, UPHOF; B32, G66, H4, H14M, M77M, N37M

*Malus baccata* - *Siberian crab* {PL}. The brilliant red cherry-like fruit makes excellent jelly, and can also be eaten fresh, dried, stewed or preserved. *Verjuice*, a very tart vinegar made from crab apples, is used widely in European cooking. Also used as a cold-hardy rootstock for *M. pumila*. Eastern Asia, cultivated. MASEFIELD, PROULX, TANAKA, UPHOF, ZEVEN; B32, B53, D95, G66, G66{S}, I47{S}, J26, K38{S}, K63G{S}, N84{S}, P49{S}. (for cultivars see Apple, page 267)

*Malus communis* - \* *Malus sylvestris*

*Malus coronaria* - *Garland crab* {S}. Fruits are hard and sour but are frequently used for making pickles, marmalades, and vinegar. The early settlers collected the crab apples in autumn and buried them until spring when they had lost much of their acidity, and were then made into cider, jelly, or preserves. Eastern North America, cultivated. FERNALD, HEDRICK 1919, MEDSGER, UPHOF; D95{PL}, G66, 159J{PL}, I60{PL}, J43, K63G, N84

*Malus domestica* - *Malus pumila*

*Malus fusca* - *Oregon crab*, *Western crab* {S}. The fruit is eaten raw or made into jelly, pies, preserves, and applesauce. The residual pulp that remains after making jelly can be sieved, pureed and fermented into cider or it can be added to breads, cakes, and cookies. Also a good source of pectin for jellymaking. Western North America. HELLER, KIRK, TANAKA, TURNER 1979 [Re]; A2, B74{PL}, B94, D95{PL}, F88M

*Malus hupehensis* - *Tea crab*, *Chinese crab* {S}. In China, the leaves are used for making a palatable, thirst-quenching tea. Much is exported from Shasi. The sour fruit is eaten. Central to Eastern Asia. ALTSCHUL, TANAKA, UPHOF; B9M{PL}, C9M, D95{PL}, G66, H8{PL}, I61M{SC}, K38, K63G, N84, P5

*Malus ioensis* - *Prairie crab*, *Iowa crab* {S}. The fruit is eaten raw or made into jelly, preserves, and pickles. American Indians used them for preparing fried crabapples and hot coal-roasted crabapples. North America. FREITUS [Rj], YANOVSKY; G66, G66{PL}, H44{PL}, K89

*Malus x micromalus* (*M. baccata* x *M. spectabilis*) - *Kaido crab* {S}. Probably a garden hybrid. The fruit is eaten. Also used as a rootstock for *M. pumila*, reportedly being the best dwarfing understock from seed. TANAKA; D95{PL}, G66, G66{PL}, K38, N84, P5

*Malus niedzwetzkyana* - \* *Malus pumila*

*Malus prunifolia* - *Plum-leaf crab*, *Chinese apple* {S}. Fruits are eaten when fresh, and are also preserved in sugar. The tree is highly resistant to frost and drought. Used by I. V. Michurin to breed hybrid cultivars such as *Kandil Kitaika*, *Bellefleur Kitaika*, *Saffran Peppin*, and *Saffran Kitaika*. Eastern Asia, cultivated. MICHURIN, TANAKA, UPHOF, ZEVEN; *G66*, *G66{PL}*, *I49G{PL}*, *K63G*, *093*, *P5*, *P49*

*Malus pumila* - *Apple* {S}. The fruits are eaten fresh, dried, baked, made into apple butter and apple sauce, candied, in pies and cakes, as juice and cider, fermented into *applejack*, *cidre*, *calvados*, etc. Apple butter and apple sauce are excellent fat substitutes in cakes and muffins. *Appenzeller*, a popular cheese of Switzerland, develops one of its distinctive flavors by being immersed in cider. The flowers can be dipped in batter, deep fried and served sprinkled with sugar, or added to fritter batter. They also yield a light amber honey with a fine aroma and an excellent delicate flavor. A tisane made from apple peels is very popular in Turkey. Applewood is the most popular fruitwood used for smoking foods. It adds a natural sweet, fruity flavor to any meat, fish or vegetable grilled or barbecued. Some connoisseurs claim that woods from different apple varieties have their own distinctive flavor. *Applewood* is also the name of a British Cheddar cheese smoked over apple wood. Eurasia, cultivated. BJORKMAN, BRYAN, CAMPBELL-PLATT, CRANE 1975, KREMEZI 1994, MACNICOL, PEDERSON, PELLETT, PROULX, ROBINSON, R. 1995, TANAKA, UPHOF, WOODRUFF [Re]; *C21M{PD}*, *C37M{PD}*, *D81{PO}*, *D81M{PO}*, *E63KIPD*, *F85J{PD}*, *G58{PD}*, *G66*, *H3{PD}*, *H45M{PL}*, *H49*, *I23M{PD}*, *I42G{PD}*, *J3{PD}*, *J21H{PD}*, *K38*, *K63G*, *L15G{PD}*, *M85{PD}*, *N19{PL}*, *N84*, *093*, *P5*, *R78*, etc. (for cultivars see Apple, page 267 and Rootstocks, page 510)

*Malus pumila* 'Niedzweckzyana' - *Redvein crab* {PL}. The edible fruit is purple-red inside and out, sour and astringent, and mostly suitable for cooking. Also useful in breeding red-fleshed apples. Originated in the Tien Shan mountains of Turkestan. FISHMAN, TANAKA; *G66{S}*, LI. (for cultivars see Apple, page 267)

*Malus x robusta* (*M. baccata* x *M. prunifolia*) - *Siberian crab* {PL}. Probably an artificial hybrid. Fruits are edible. Also a vigorous winter-hardy rootstock for *M. pumila*. Somewhat resistant to fireblight but slightly susceptible to crown rot. REHDER; *G66*, *G66{S}*, LI

#### CULTIVARS {GR}

**Red Siberian:** Small, roundish oblate to somewhat oblong fruit; skin smooth, pale yellow striped and blushed with lively red and overspread with blue bloom; flesh subacid, astringent; season September and October. Good for culinary uses. Originated in France. BEACH; 081

*Malus sylvestris* - *European crab apple*, *French crab apple*, *Wild apple* {S}. The fruits are mostly tart or sour and are used for making syrup, jelly, apple butter, spiced apples, and wine. They are also roasted and added to *wassail bowl*, a traditional Christmas Eve beverage. *Verjuice* is a very sour vinegar made from crab apples or unripe grapes, which is used in cooking, much like lemon juice. The flowers can be crystallized. Eurasia. MICHAEL [Re], ZEVEN; *C9M*, *D81P{PD}*, *E13G{PR}*, *F74M{PD}*, *G66*, *K38*, *K63G*, *N84*, *093*, *P49*

*Malus theifera* - *Malus hupehensis*

*Margyricarpus pinnatus* - *Pearl berry*, *Perilla*, *Romerillo* {S}. The fruits are pearl-like, somewhat reminiscent of the mistletoe, and have an agreeable acid flavor. Temperate South America. HEDRICK 1919, VALENZUELA; *D95{PL}*, *L55J*, *N84*

*Margyricarpus setosus* -+ *Margyricarpus pinnatus*

*Mespilus germanica* - *Medlar* {S}. Fruits are eaten, especially after having been exposed to frost and then stored until overripe or "Wetted", when they become soft and mellow, and have an agreeable acid flavor somewhat reminiscent of unsweetened apple butter. Fruits that have just begun to ripen make an excellent jelly, orange in

color and of a distinctive flavor. Ripe fruits can also be baked or made into jams and jellies. Occasionally used for cider. Eurasia, cultivated. BIANCHINI, JOHNS [Pre, Cul], MABEY, SIMMONS 1972 [Cu], UPHOF; *D95{PL}*, *G5M{PD}*, *G66,160{PL}*, *K38*, *K63G*, *N84*, *053M*, *093*, *P49*, *R47*, *R78*

#### CULTIVARS {GR}

**Breda Giant:** (*Bredasa Reus*) A medium to large fruited cultivar from Holland. Self-fertile shrub, grows 4 to 6 feet tall; very productive. Suitable for eating raw or it can be made into a delicious jelly. *C34*, *F43M*, *I49M*, *I49P*, *I66T*, *174*, *J61M*

**Dutch:** (Large Dutch) Large, roundish fruits, 2 1/2 inches in diameter with short sepals. Grayish green until ripe, and then russet brown. Ripens in October and is ready by Christmas. Makes a small, spreading, pendulous tree suitable for general cultivation. Heavy cropping. A very old cultivar. SIMMONS 1978; 081, *Q30{SC}*

**Larae Russian:** One of the largest fruited cultivars. An attractive small tree with very fine foliage. Winner of the Royal Horticultural Society Award of Merit. *F43M*, *174*, *R77*

**Nottingham:** Medium-sized, pear-shaped fruit, 1 inch in diameter with long sepals. Yellow-brown in color, touched with russet; considered the best-flavored medlar. The tree is less vigorous than Dutch, and is suitable for growing as a bush or pyramid. Cropping is very heavy and will produce a good crop when three years old. SIMMONS 1972, SIMMONS 1978; *D37*, *F43M*, *I49P*, *I66T*, *174*, *L12*, *081*, *Q30{SC}*, *R77*

**Royal:** Medium-sized, round fruits, 1 inch in diameter. They have a good flavor and are pleasantly acid. The tree is a good bearer, very shapely, and makes a good small standard tree. A newer cultivar. SIMMONS 1972, SIMMONS 1978; *H49*, *I49M*, *I49P*, *I66T*, *174*

**San Noyan:** (Stoneless) Small fruit with rather poor flavor; seedless. May have potential in breeding programs. SIMMONS 1978; *I66T*

**Supermol:** Developed in Italy where it is the current planting choice over all other medlars. Recently introduced into the United States. *F43M*

**Westerveld:** Improved type from Holland with flavorful fruit. Very productive tree. Recently introduced into the United States. *I49M*, *I49P*, *I66T*, *174*

*Oemleria cerasiformis* -\* *Osmaronia cerasiformis*

*Osmaronia cerasiformis* - *Osoberry*, *Indian peach* {S}. The fruit is eaten, either raw or cooled. Western North America. KIRK, YANOVSKY; *A2*, *B94*, *D95{PL}*, *E15*, *F85*, *F88M*, *N84*, *053M*, *093*

*Padus maximowiczii* - *Prunus maximowiem*

*Peraphyllum ramosissimum* - *Squaw apple* {S}. The fruits are sour when unripe, slightly bitter as they ripen, and when fully ripe are sweetish but with a bitter aftertaste. Fruits that dry on the plants are the sweetest and most desirable. Ripe fruits can be used for jelly or prepared like spiced crab apple. Western North America. GIBBONS 1979, HARRINGTON, H.; *B94*, *D35G*, *D95{PL}*, *E66M*, *G66*

*Persica davidiana* - *Amygdalus davidiana*

*Photinia arbutifolia* - *Tollon*, *Christmas berry*, *California holly* {S}. The bright red fruits are eaten raw, roasted, steamed or boiled, and are best with a little sugar added. Indians used them dried, ground, and made into mush. They can also be made into cider, in much the same way that manzanita cider is made. Southwestern North America. KIRK, MEDSGER, UPHOF, YANOVSKY; *B94*, *C9M*, *D95{PL}*, *G59M*, *G60{PL}*, *H71*, *I83M{PL}*, *I98M*, *I98M{PL}*, *K15*, *N84*, *053M*, *093*

*Potentilla anserina* - *Silverweed*, *Argentine*, *Tibetan sweet potato*, *Toma*, *Droma*, *Gro-ma* {S}. The long, crisp roots have a nut-like, somewhat sweet starchy flavor and can be eaten raw, candied, fried, roasted or boiled, and are also added to soups and stews. In Tibet and other areas of the Himalayas they are added to *dresil*, a sweet rice dish eaten at New Year's festivals, weddings and other special occasions. Natives of the Yakut region of Siberia sometimes mix the roots and leaves into *tar*, a concentrated sour milk product used as a reserve food for the winter months. Leaves are used for tea. Northern temperate region. ANGIER [Re], CROWHURST 1972, DORJE [Re], FERNALD, GIBBONS 1979, HARRINGTON, H., KIRK, KUNKEL, KURMANN, MABEY, POHLE; G27{DF}, L3J, N84

*Potentilla erecta* - *Tormentil* {S}. Rhizomes are used as a tea. Also one of the ingredients of a Russian vodka known as *Okhotnichya*. Eurasia. BROWN, G., UPHOF; A2, A61, D92M, F37TIPL}, F68T, F86G, J82, N7D{DF}, N71M, N84, Q24, R53M{PL}, R53M, S55

*Potentilla fruticosa* - *Bush cinquefoil* {PL}. Dried leaves are used as a substitute for tea, called *Kurile tea*. Northern temperate region. FERNALD, HEDRICK 1919, UPHOF; B9M, E61, G23, J25M, J25M{S}, R78/S}

*Potentilla rupestris* - *Rock cinquefoil* {S}. The leaves are used as a tea in some parts of Russia and Siberia, called *Siberian tea* or *prairie tea*, Eurasia. HEDRICK 1919, UPHOF; A61, A61{PL}, M77M{PL}, N84, Q24

*Potentilla tormentilla* - *Potentilla erecta*

*Poterium sanguisorba* - *Sanguisorba minor*

*Prinsepia sinensis* - *Cherry prinsepia* {PL}. Bright red fruits are edible, having a good flavor. They can be eaten out of hand or made into jellies. Manchuria. TANAKA; D95, E7M{S}, F67, G66, G66{S}, 174, K38{S}, K63G{S}, K81, K89, M35M, N84{S}, 053M{S}

*Prinsepia utilis* - *Bekar* {S}. Fruits are eaten. Seed kernels yield an oil used for cooking. Himalayan region, China. ALTSCHUL, POHLE, TANAKA, WATT; M7M, Q40, Q46

*Prunus alleghaniensis* - *Allegheny plum*, *Porter's plum*, *American sloe* {S}. Ripe fruits are purplish-black, pleasantly acid, and can be eaten fresh or made into jams, jellies, pies, and preserves. North America. CROWHURST 1972, MEDSGER, WAUGH; T41M

*Prunus americana* - *American wild plum* {PL}. The pulpy, pleasant-tasting fruits are eaten raw, dried, stewed or processed into preserves, jams, sauces and jellies. Seed kernels can be eaten raw. North America, cultivated. FERNALD, HARRINGTON, H. [Re], KINDSCHER, MEDSGER, UPHOF; A91, D45, D95, G66, H14M, H49, I47{S}, I49G, J25M, J26, K38{S}, K63G{S}, K89, M16. (for cultivars see Plum, page 484)

*Prunus amygdalus* - *Amygdalus communis*

*Prunus angustifolia* - *Chickasaw plum* {PL}. Fruits are large, thin-skinned, and have a soft, juicy, sweet pulp that is very good eaten out of hand and also makes excellent jellies and preserves. North America, cultivated. CROWHURST 1972, FERNALD, KAVASCH [Re], MEDSGER, UPHOF; D95, F91T{SC}, H4, H14M, 160, K63G{S}, L55J{S}. (for cultivars see Plum, page 484)

*Prunus angustifolia* var. *watsonii* - *Sand plum*, *Sand Chickasaw plum*, *Sandhill plum* {S}. The acid fruits are often used for making pies, sauces, puddings, preserves, and jellies. Western North America. KINDSCHER, MEDSGER, WAUGH; F85

*Prunus armeniaca* - *Armeniaca vulgaris*

*Prunus armeniaca* var. *mandshurica* - *Armeniaca mandshurica*

*Prunus avium* - *Sweet cherry*, *Wild sweet cherry*, *Mazzard cherry* {S}. Fruits are consumed fresh, dried, candied, stewed, in pies,

cakes, ice cream, and pastries, made into preserves and jellies, etc. Dried fruits are sometimes known as *cherry raisins* or *cherry prunes*. In Belarus, the leaves are added to pickled cucumbers, apples and tomatoes for flavoring. A gum that exudes from the trunk and branches can also be eaten. Cherry wood is one of the popular fruitwoods used for smoking foods. It adds a sweet, smoky flavor and is especially good with beef and pork. However, it has a tendency to turn meat a rich mahogany color. Barrels made from the wood age *balsamic vinegar*. The flowers yield a light-colored honey with a fine aroma and excellent flavor. Eurasia, cultivated. BJORKMAN, BOLOTNIKOVA, CRANE 1975, HEDRICK 1919, KASPER, TANAKA; B54M{PD}, C21M{PD}, C27T{SC}, D81{PO}, D81M{PO}, E68M{PD}, G66{PL}, I23M{PD}, I3{PD}, J21H{PD}, K63G, M85{PD}, N51M{PD}, N71M, N84, 053M, P49, R78, etc., (for cultivars see Cherry, page 327, and Rootstocks, page 510)

*Prunus besseyi* - *Western sand cherry*, *Rocky Mountain cherry* {PL}. The sweetish fruits are eaten raw, dried, or cooled. Western North America. MEDSGER, UPHOF, WAUGH, YANOVSKY; A16, C33, D65, D95, G54, G66, I49G, J25M, J25M{S}, J26, K38{S}, K63G{S}, L27M, L75{S}. (see also Rootstocks, page 510)

CULTIVARS {GR}

**Black Beauty:** Small, roundish fruit, 3/4 inch in diameter; skin thin, shiny black; flesh firm, juicy, sweet, quality fair to good. Good for canning and eating fresh. Ripens in early August. Bush upright, productive, hardy; height 3 to 4 feet. Originated in Charleswood, Manitoba, Canada by G.F. Chipman. Introduced in 1938. BROOKS 1972; F91T{SC}

**Hansen's:** Large, reddish-black to purple fruits; very good flavor. Can be used fresh, canned, or preserved. Compact shrub grows 4 to 5 feet tall; ornamental silvery-green leaves; white flowers in the spring. Two or more trees recommended for cross-pollination. Plant 2 to 4 feet apart. Hardy to Zone 3. A91, B15M, D76, E97, F89, G23, G65M, H44, H65, 178, L70

**Sioux:** A large sand cherry selected from many thousand seedlings. Not as large as some of the later cultivars but noteworthy for its mild flavor. Originated in Brookings, South Dakota by N.E. Hansen. Introduced in 1902. HANSEN; F91T{SC}

*Prunus bokhariensis* - *Bokhara plum* {PL}. Fruits are eaten dried, pickled, stewed, made into preserves, or used as stuffing for *koftes*. The dried product, called *sour plums* or *aloo bokhara*, is sometimes available in Indian and Middle Eastern stores. Cultivated in the Punjab and Kabul, Afghanistan. Himalayan region. JAFFREY, KUNKEL, MACMILLAN, MAJUPURIA [Re], MATTOO [Re], SABERI [Re]; F74{DF}, R50

*Prunus brigantina* - *Armeniaca brigantina*

*Prunus cerasifera* - *Myrobalan plum*, *Cherry plum* {S}. The fruits are cherry-like but somewhat larger, thin-skinned, and with flesh that is soft, very juicy, sweet to subacid and pleasantly flavored. They may be eaten fresh or used for pies, tarts and jam. Southwest Asia, cultivated. HEDRICK 1919, SIMMONS 1972 [Cu]; K38, K63G, M83{PL}, N71M, N84, 053M, P49, R78, (see also Rootstocks, page 510)

CULTIVARS {GR}

**1ER:** Large fruits, weighing 3/4 ounce to 1 1/2 ounces. Ripens very early, in late June. Hardy to Zone 6. Developed by Professor Gennadiy Eremin of Krymsk, Russia. Selected for size, flavor, and disease resistance. Recently introduced into the United States. F43M

**2P:** Large fruits, weight 3/4 ounce to slightly more than 1 ounce. Hardy to Zone 6. Developed by Professor Gennadiy Eremin of Krymsk, Russia. Selected for size, flavor, and disease resistance. Recently introduced into the United States. F43M

**3KC:** Large fruits, weighing 3/4 ounce to 1 1/2 ounces; ripens early. Appears to be more disease resistant than 1ER, 2P, and 4L. Hardy to Zone 5. Developed by Professor Gennadiy Eremin of

Krymsk, Russia. Selected for size, flavor, and disease resistance. Recently introduced into the United States. F43M

**Belciana:** Medium-sized, round fruit; skin papery, amber-yellow with a rose tint on the side exposed to the sun; flesh amber-yellow, melting, sweet; stone slightly clinging; ripens early. A wild plum resembling Myrobalan; selected by the Arabs and introduced into France from Algeria in 1878. HEDRICK 1911; Y83{SC}

**De Caradec:** Medium-sized, globular fruit; skin deep purplish-red with a slight bloom, thin; flesh yellow, soft, juicy, quality only fair; stone clinging; ripens early. Tree a rather large and erect grower; foliage very attractive. Originated near Aiken, South Carolina, between 1850 and 1854. WAUGH; T49M{SC}

**Red:** Very small, roundish fruit, about 1 inch in diameter; skin smooth, red; flesh firm, red; flavor good, distinctive; ripens the end of August. Suitable for either dessert or cooking. Tree moderately vigorous; round-headed with slender, upright branches; flowers very early; a poor bearer. SIMMONS 1978; U7G{SC}

**Yellow:** Very small, round fruit; cherry-like but larger; skin yellow, smooth; flesh yellow, firm, flavor distinctive; quality good for dessert or cooking; ripens the end of August. Tree moderately vigorous, round-headed; productive. Flowers later and is a more regular bearer than Red. SIMMONS 1978; U7G, Y83{SC}

*Prunus cerasifera* ssp. *divaricata* - *Wild cherry plum, Sour plum* {S}. The sour, yellow or reddish-violet fruits are eaten, fresh, dried or preserved. Widely used as a sour flavoring in the cuisines of the Middle East, Mediterranean and Central Asia. In Georgia, they are made into a famous sauce called *tkemali*, which seasons soups, stews, vegetable dishes and grilled meats. Often pureed and dried into a sour fruit leather, known as *tkalapi* in Georgia and *lavashana* in Azerbaijan, also employed as a flavoring material. Dried fruits are occasionally available in Middle Eastern stores. Southwest Asia. AKHMEDOV [Re], GOLDSTEIN [Cul, Re], HEDRICK 1919, MARGVELASHVILI [Re], OZTURK, WOLFERT 1994a [Re]; G66

*Prunus cerasifera* f. *purpurascens* - *Red-leaf plum, Purple-leaf plum* {S}. The fruits are eaten. Attractive ornamental trees with reddish-purple leaves. TANAKA; B32{PL}, F85

#### CULTIVARS {GR}

4Li(P. *cerasifera* f. *purpurascens* x *P. salicina*) Large fruits, weight 3/4 ounce to 1 1/2 ounces; ripens in midseason. Hardy to Zone 6. Developed by Professor Gennadiy Eremin of Krymsk, Russia. Selected for size, flavor, and disease resistance. Recently introduced into the United States. F43M

**Allred:** Fruit small, up to 1 1/4 inches in diameter; skin and flesh red, quality good, but very high in acidity; makes a delicious jelly. Tree with red leaves and bark; produces well; adapted over a wide area. A colorful ornamental. Originated in Amity, Arkansas by Ross Wolfe of Wolfe Nursery Inc., Stephenville, Texas. Introduced in 1941. BROOKS 1972; A19, B74, C54, D37{DW}, H4, L90, M83, N33

**Cochecho:** Small to medium-sized, red-blushed fruit; flesh yellow, of high quality for a red leaf plum; resembles Methley. Good fresh or for canning. Tree very disease resistant and hardy; self-sterile, requires a pollinator for fruit production, any Japanese plum being satisfactory. Originated in New Hampshire by Professor E.M. Meader. D37{DW}, H90M{SC}

**Elsie:** Medium to large fruit; skin dark purplish-red; flesh deep dark red, quality excellent, one of the best red leaf plums; resembles Santa Rosa. Tree self-sterile, somewhat of a shy beaier, should be planted with Gerth as a pollinator. Originated in Duarte, California. D57{OR}

**Gerth:** Medium to large fruit, 1 1/2 inches in diameter; skin dark deep purple; quality very good; resembles Santa Rosa but somewhat smaller; ripens 7 to 14 days before Santa Rosa. Tree self-fertile, has

a relatively low chilling requirement. Originated in Vista, California by Otto Gerth. D57{OR}

**Hollywood:** (*P. cerasifera* f. *purpurascens* x *P. salicina*) Small, red fruit with red flesh; dessert quality good, excellent for jelly and canning; ripens early, with Beauty; hangs well on the tree; resembles Satsuma. Tree very ornamental with early pink blossoms, and red leaves all season. BROOKS 1972; D28J, D37, H8, H90M{SC}, I8, I68, J61M, J93

**Purple Princess:** Relatively new cultivar with dessert quality fruit. Small to medium-sized fruit; wine red skin and dark red flesh; ripens in mid-June. Tall, upright tree, blooms very early and prolifically, flowers white. New foliage reddish-purple, turning greenish-purple as the season progresses. Developed by John D Young of Modesto, California. C54

**Shalom:** Small to medium, roundish, deep red fruits; flesh juicy, sweet, dessert quality excellent; resembles Santa Rosa. Ornamental, dwarfish tree with attractive reddish leaves. D57{OR}

**Thundercloud:** Dark coppery leaves. Flowers light-pink to white. Occasionally sets a good crop of red fruit. Tree grows 20 feet tall by 20 feet wide; somewhat rounded form. A74, B9M, B53, C54, D95, E47, E87, G23, H90, I9M, I68, HIM, M69M

*Prunus cerasoides* - *Padam, Wild Himalayan cherry* {S}. Fruits are acid and astringent and are only occasionally eaten raw, but are employed for making a well-flavored cherry brandy. The stem is the source of a gum used for adulterating *gum tragacanth*. Himalayan region. HEDRICK 1919, TANAKA, UPHOF, WATT; G66, Q40, Q46

*Prunus cerasus* - *Sour cherry, Pie cherry* {S}. The fruits are pleasantly acid and can be eaten out of hand or dried. They are widely used for making pies, preserves, cherry cider, puddings, syrups, jellies, glace fruits, and are also canned or preserved in brandy. Also used in the preparation of liqueurs and brandies, including *Kirsch*, *Maraschino* and *Ratafia*, and *kriek lambic* beers. Seeds are the source of *cherry kernel oil*, which is used as a salad oil when refined. In Italy, the seeds are put in a muslin bag, crushed and added to *Morello cherry* jam as flavoring. Leaves are used as a substitute for tea. Eurasia, cultivated. BIANCHINI, GRAY, P. [Cul], GUINARD, SCHNEIDER 1986 [Cul, Re], UPHOF; C60D{P£}, G40{PD}, G66, K63G, L50M{PD}, Q46. (for cultivars see Cherry, page 327)

*Prunus davidiana* - \**Amygdalus davidiana*

*Prunus dawycensis* - *Dawyc cherry* {SC}. The sweet fruits are eaten. China. KRUSMANN; F91T. (for cultivars see Rootstocks, page 510)

*Prunus divaricata* - \**Prunus cerasifera* ssp. *divaricata*

*Prunus domestica* - *European plum* {S}. Fruits are consumed fresh, dried into *prunes*, preserved, canned, or made into jam, juice, plum butter, pies, cakes, alcoholic beverages, liqueurs, etc. *Prunella* is a liqueur derived from the fruits, while a distilled product is known as *zwetschenwasser*, *slovovitz* or *slivovica*. Prunes have excellent moisture-holding capacity which makes them the most popular fat substitute in baking muffins, cookies, quick breads, cakes and brownies. *Wonderslim* is a commercial fat and egg substitute product used in baking that contains prunes and lecithin. The flowers are eaten, used as a garnish for salads and ice cream, or brewed into tea. Plum wood is sometimes used as a smoking wood, however it requires a certain level of expertise and can lose its flavor shortly after being cut. Eurasia, cultivated. BJORKMAN, MACNICOL, UPHOF, WOODRUFF [Cul, Re]; C67{PD}, D81{PO}, D81M{PO}, F17{PD}, G29{PD}, G66, I23M{PD}, J3{ED}, K63G, M63M{PD}, N71M, P49. (for cultivars see Plum, page 484 and Rootstocks, page 510)

*Prunus dulcis* - *Amygdalus communis*

*Prunus effusa* - *Prunus x gondouinii*

*Prunus fruticosa* - *Dwarf cherry, Mongolian cherry* {PL}. The tart fruits are eaten raw or dried, and also make excellent jelly, jams, and pies. Trees have withstood temperatures of -52° C. Eurasia. TANAKA, ZEVEN; A65, A91, D95, F67, G54, G66, G66{S}, 160, J89M, K63G{S}, K64, L27M, M35M, N24M, N84{S}, etc.

*Prunus glandulosa* - *Korean cherry* {S}. Fruits are eaten preserved or pickled. Eastern Asia. TANAKA; C47{PL}, E47{PL}, F85, F91T{SC}, G23{PL}, G66, K63G, N84

*Prunus x gondouinii* (*P. arium* x *P. cerasus*) - *Duke cherry, Royal cherry*. Garden hybrid. Sweet cherry x sour cherry. The fruits are eaten raw, stewed, preserved, dried, etc. TANAKA; (for cultivars see Cherry, page 327)

*Prunus grayana* - *Gray's chokecherry* {PL}. Salted flower buds and young fruits, having a pungent taste, are consumed in Japan. Eastern Asia. TANAKA, UPHOF; T41M

*Prunus hortulana* - *Hortulan plum, Hog plum* {S}. The fruits are bright red or yellowish-red, juicy, of an agreeable flavor, and are eaten raw or processed into pies, jellies, jams, and preserves. North America, cultivated. FERNALD, MEDSGER, UPHOF, WAUGH; F91TJSC}, G66. (for cultivars see Plum, page 484)

*Prunus ilicifolia* - \**Laurocerasus ilicifolia*

*Prunus insititia* - *Bullace plum, Damson plum* {S}. Fruits are eaten raw or made into preserves and conserves. Eurasia, cultivated. JOHNS [Cu], TANAKA; G66, N84. (for cultivars see Plum, page 484 and Rootstocks, page 510)

*Prunus jamasakuia* - *Yama-zakura* {S}. Flowers are pickled in salt and consumed in tea or with rice gruel. Also used as a garnish for bakery goods. The fruit is edible. Eastern Asia. TANAKA; F85

*Prunus japonica* - *Korean cherry* {S}. The red cherry-like fruits have a sweet, agreeable flavor. They are eaten out of hand and also make good pies. Eastern Asia. HEDRICK 1919, TANAKA; D95{PL}, F85, 160{PL}, K22{PL}, K63G, N84, 053M, P49

*Prunus laurocerasus* -> *Laurocerasus officinalis*

*Prunus lyonii* - *Laurocerasus lyonii*

*Prunus mahaleb* - *Mahaleb cherry, St. Lucie cherry* {S}. The leaves, or a decoction obtained therefrom, can be used for flavoring milk. Dried seed kernels, known as *mahlep*, are used in Middle Eastern and Mediterranean cooking to give an intriguing fruit flavor to *Tsoureki* and *Vassilopita* breads, cookies, confectionery, sweet pastries and *Nabulsi* cheese. Eurasia, cultivated. DAGHER, KREMEZI 1993 [Re], MALLOS [Re], ROBINSON, R. 1991, TANAKA, VON WELANETZ; A7{DF}, A49D{DF}, C9M, E47, J66M{DF}, K38, L16{DF}, L50M{DF}, N71M, 053M, P49, R78. (see also Rootstocks, page 510)

*Prunus mandshurica* -> *Armeniaca mandshurica*

*Prunus maritima* - *Beach plum* {PL}. The fruits are dull-purple, subacid to sweet, and are eaten raw, dried, preserved or used in jams, jellies, pies, sauces, soups, cakes, puddings, etc. They can also be mixed with cider vinegar, cloves, and sugar and made into "beach plum shrub". Eastern North America. ANGIER [Re], GIBBONS 1964 [Re], MEDSGER, MIREL [Cu, Re]; A74, B9M, C37M{PD}, D95, G66{S}, H8, J61M, K38{S}, K63G{S}, L12, M16, M92, N84{S}

CULTIVARS {SC}

**Eastham:** Large fruit of good flavor. Tree a heavy producer. Seedling discovered in Eastham, Massachusetts by J.M. Batchelor. Introduced in the 1940's. BROOKS 1972; T41M

**Hancock:** Blue-skinned fruit; flesh golden, sweet with little acidity, juicy, flavor excellent for eating fresh; pit small; ripens early. Originated in Fort Hancock, New Jersey by J.M. Batchelor. Introduced in the 1940's. BROOKS 1972; T41M

**Jersey:** Reddish fruits of good flavor; ripens in late summer and early fall. Vigorous, productive tree, taller and more upright growing than *Raribank* often reaching 13 feet in height. J61M

**Raribank:** Purplish-red fruit of good quality; freestone; ripens during early September at place of origin. Good for jelly or canning. Tree large, vigorous, very resistant to brown rot and Japanese beetle. Originated in New Brunswick, New Jersey by J.H. Clark. Introduced in 1949. BROOKS 1972; T41M

*Prunus maximowiczii* - *Miyama-zakura* {S}. Flowers are preserved in salt and stored for future use. The fruit is also edible. Central to Eastern Asia. TANAKA; G66

*Prunus melanocarpa* - \**Prunus virgifiuana van melanocarpa*

*Prunus mume* - *Armeniaca mume*

*Prunus munsoniana* - *Wild goose plum* {SC}. Bright red fruits are eaten, having thin skin and light or dark yellow, juicy, aromatic flesh, often of good dessert quality. Also used in jellies, jams and preserves. North America, cultivated. UPHOF, WAUGH; F91T. (for culti-vars see Plum, page 484 and Rootstocks, page 510)

*Prunus nigra* - *Canada plum, Canada black plum* {PL}. The fruits are eaten raw or stewed, and are also used for making jelly, preserves, pies, sauces, fruit juices, marmalades and plum butter. They can also be dried and used like raisins, or pureed, poured out on wax paper, and dried as fruit leather. North America. MEDSGER, TANAKA, TURNER 1979 [Re], YANOVSKY; D95, K63G{S}, N84{S}. (for cultivars see Plum, page 484)

*Prunus padus* - *European bird cherry, May day tree* {S}. The fruits are occasionally eaten raw but are primarily used for making jam and in the preparation of alcoholic beverages. In Korea, the young leaves are eaten as a boiled vegetable and the flowers are chewed. The bark is used for tea. Eurasia, cultivated. HEDRICK 1919, TANAKA, UPHOF; A65{PL}, C33{PL}, G66, G66{PL}, G89M{PL}, I60{PL}, K38, M35M{PL}, N71M, N84, 053M, P49, Q12, R78

*Prunus pensylvanica* - *Pin cherry, Bird cherry, Fire cherry* {S}. The fruits are usually too sour for eating fresh, but are often made into jellies, syrup, sauces, wines and pies. A gum that exudes from the trunk can be used as a chewing-gum. Eastern North America. ANGIER [Re], FERNALD, GIBBONS 1962, MEDSGER, TURNER 1979 [Re]; A74{PL}, C27T{SC}, D95{PL}, F85, G66, G66{PL}, H68M{PD}, J39M{PL}, K38, K63G, K89{PL}

CULTIVARS {GR}

**Jumping Pound:** Bright red fruit, about 1/2 inch in diameter. Grows about 13 feet tall, with a weeping habit. Excellent for jelly, juice, syrup and sauces. Also very ornamental. 146

**Marv Liss:** Bright red fruits, larger than those of Jumping Pound. Small, very hardy tree; has more of an upright growth habit. Hardy in the prairie regions of Canada. 146

**Mr. Lee #4:** Has the largest fruit size of any selection. Grows 5 or 6 feet tall. Produces clusters of fruit about 12 inches long. Bears fruit on the outside of the bush, making for easier harvesting. 146

*Prunus persica* - *Amygdalus persica*

*Prunus pissardii* - *Prunus cerasifera*

*Prunus pseudocerasus* - *Chinese sour cherry, Bastard cherry* {S}. Fruits are eaten fresh or preserved, and are also brewed into wine. The flowers are salted and used as a tea. Eastern Asia. TANAKA; U7G. (for cultivars see Rootstocks, page 510)

*Prunus puddum* - *Prunus cerasoides*

*Prunus pumila* - *Sand cherry* {PL}. The ripe fruits have a rich, pleasantly acid, sometimes slightly bitter but palatable flavor and are eaten fresh, dried or preserved. They can also be mixed with sour apple-juice to make a rich jelly. North America. FERNALD,

GIBBONS 1979, MEDSGER, TURNER 1979; D95, F91T{SC}, 160, J39M, J43{S}, J75, K81, N84{S}

*Prunus pumila* var. *susquehanae* - *Appalachian cherry* {S}. The small, purple-black fruits can be quite sweet and juicy and may be eaten fresh or used for pies, jams and fruit sauces. Eastern North America. CROWHURST 1972, GIBBONS 1979; F85

*Prunus salicifolia* - *Capulin cherry*, *Capuli* {PL}. Ripe fruits are deep purplish-maroon, thin-skinned, and have greenish flesh that is juicy, subacid to sweet, and with a somewhat astringent aftertaste. They are eaten fresh, stewed or made into jams and preserves. In Mexico, they are used as filling for special *tamales*. Very low chilling requirement, adapted to warm winter areas where true cherries are unable to produce. Mexico to Peru. FRIED [Re], MORTON 1987a, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, STEBBINS; A41G, D57, G66{S}, I83M, J29M{S}, L55J{S}, N84{S}, P38{S}, Q49M

CULTIVARS {GR}

**Ecuadorian:** Very large, round fruit, up to 1 1/2 inches in diameter; light green, sweetish flesh, free of astringency when ripe. Drooping tree, outbears many other cultivars. Originated in Ambato, Ecuador. D57{OR}

**Fausto:** Fruit large, 3/4 to 1 inch in diameter; flesh green, flavor rich and sweet; ripens late, August to September in Vista, California. Tree upright but drooping, a reliable annual bearer. Has excellent commercial potential. Originated in Ambato, Ecuador by Fausto Perez. D57{OR}, 174

**Harriet:** Large, flattened globe-shaped fruit, 3/4 to 1 inch in diameter; skin deep purple-black; flesh green, more or less free of astringency, flavor good; seed relatively small. Tree a genetic dwarf, somewhat of a shy bearer which appears to be related to rootstock selection. Seedling of Lomeli. D57{OR}

**Huachi Grande:** Large to very large, roundish fruits, 1 inch or more in diameter; very mild flavor, lacks the astringency of other capulins; ripens early to midseason. Appears to require high temperatures to develop good flavor. Tree a very heavy producer, tends to over produce in heavy clusters. Originated in Ecuador. D57{OR}, 174

**Werner:** Small fruit with very good flavor. Tree a light producer, appears to bear better on certain rootstocks; extremely vigorous, can grow 15 feet or more in one year. Originated from seed collected by Wilson Fopenoe in Ecuador. Named after Andrew Werner of Santa Cruz, California. 174

*Prunus salicina* - *Japanese plum* {S}. The sweet, juicy fruits are eaten fresh, dried, canned, stewed, made into jams, jellies, fruit leather, puddings, cakes and sauces, or brewed into wine. Eastern Asia, cultivated. CARCIONE, CREASY 1982 [Cu], TANAKA; D81{PO}, D81M{PO}, F91T{SC}, G66, K38, K63G, N84. (for cultivars see Plum, page)

*Prunus salicina* 'Mandshurica' - *Manchurian plum*, *Ussurian plum* {PL}. The fruits are sweet and juicy and can be eaten fresh. They also make excellent jams, preserves, and plum sauce. Also used as a rootstock for European and Japanese plums and their hybrids, being the most cold-hardy understock for this purpose. In breeding, it is a source of good fruit flavor and cold resistance. ZEVEN; A91, G66, G66{PL}, H42, K63G{S}, L27M, M35M, N84

*Prunus serotina* - *Wild black cherry*, *Rum cherry* {PL}. Fruits have a slightly bitter but rich, wine-like flavor and are eaten fresh, stewed or made into pies, jellies, sherbet, and *cherry bounce*. Also used for flavoring cider, bandy, rum and liqueurs. The bark is the source of an extract employed by the food industry for flavoring soft drinks, candy, syrups, and baked goods. The wood is used for making cooking planks, which impart a pleasant woody flavor to foods cooked on them. Also a very desirable smoking wood which is especially good for smoking thick cuts of meat or large fish, the wood imparting a mildly tart, fruity flavor. North America.

ANGIER [Re], FERNALD, GIBBONS 1962 [Re], LOGSDON 1981, MEDSGER, MESSINA, MORTON 1976, UPHOF; A80M, A91, C11M, C27T{SC}, D45, D65, D95, H4, 14, I23M{PD}, J3{PD}, K38{S}, K63G{S}, L15G{EQ}, M16, M35M, M82M{DF}, 053M{S}, R47{S}, etc.

*Prunus serotina* var. *salicifolia* - *Prunus saUcifolia*

*Prunus simonii* - *Apricot plum*, *Simon plum* {SC}. The edible fruits are variable in quality, some having an agreeable flavor while others are bitter with an almond-like astringency. Widely used in hybridizing, especially in crosses with *P. salicina*. China, cultivated. UPHOF, WAUGH, ZEVEN; F91T

*Prunus spinosa* - *Sloe*, *Blackthorn* {S}. Ripe fruits are sometimes eaten raw, especially after having been mellowed by frost. They are also made into jellies, syrup, conserves, and *kissel* or used as a flavoring for *sloe gin* and other liqueurs such as *Prune lie*, *Crème de Prune lie*, and *Pacharan*. In France, the unripe fruit is pickled like olives, and in Azerbaijan the ripe fruits are pickled with onions or garlic. Leaves are used as an adulterant of tea. The dried fruits can be added to herbal teas. The flowers are edible and may be crystallized or sugared. In Transylvania, the juice and seeds have been added to stomach-remnet in curdling milk. Eurasia. AKHMEDOV [Re], CAMPBELL-PLATT, DOMINGO, GUNDA, HEDRICK 1919, LAUNERT, MABEY [Re], MICHAEL [Re], MORTON 1976, RAY, G, TANAKA; D95{PL}, E14T{DF}, F85, G66, G73{DF}, K54{PD}, K63G, M35M{PL}, N71M, N84, 053M, P49, R78

CULTIVARS {SC}

**Godshill Bia:** An exceptionally large-fruited type. Highly recommended for home winemakers. Originated at Deacons Nuisery, Godshill, Isle of Wight. 081

*Prunus subcordata* - *Sierra plum*, *Pacific plum*, *Klamath plum* {PL}. The fruits are pleasantly acid and are eaten fresh, dried, or made into delicious preserves, sauces, wines, syrups and jellies. The best types have a slight astringency which imparts a distinctive flavor to culinary products made from the fruit. Considered one of the best native fruits of the Pacific Coast region. Western North America, cultivated. HEDRICK 1919, KIRK, MEDSGER, ROBERTS [Cu, Pro], UPHOF, WICKSON; B94{S}, C60D{PD}, D95, K63G{S}, L47M{PD}

CULTIVARS {SC}

**G.M. Clark:** An improved type apparently selected in northern California or Oregon for its superior fruit qualities. U7G

**Kelley's Sierra #2:** An improved type apparently selected in northern California or Oregon for its superior fruit qualities. U7G

*Prunus subhirtella* - *Rosebud cherry* {S}. Flowers are preserved in salt and added to tea. The fruit is eaten. Japan. TANAKA; C54{PL}, D95{PL}, /65{PL}, K38, K63G, N84, P49

*Prunus susquehanae* - *Prunus pumila* var. *susquehanae*

*Prunus tenella* - *Amygdalus besseriana*

*Prunus tomentosa* - *Nanking cherry*, *Manchu cherry* {PL}. Ripe fruits are juicy, subacid to sweet, and are eaten raw or preserved. Unripe fruits are pickled or boiled in honey and served as a delicacy. The buds are cooked and eaten. Eastern Asia, cultivated. HEDRICK 1919, TANAKA, UPHOF; A16, C9M{S}, D65, G16, G66, H42, 14, 147{S}, I49G, I83M, K38{S}, K63G{S}, K64, L79

CULTIVARS {GR}

**Drilea:** Round fruit, up to 5/8 inch in diameter; skin bright scarlet, thin, tender; flesh red, firm to melting, tender, sweet, pleasant, quality very good; pit small; season last half of July. Good for dessert, canning, jelly and jam. Bush upright, large, vigorous, dense, spreading; a very heavy annual bearer; tolerant to dry conditions. ANDERSEN, BROOKS 1972; F91T{SC}

**Orient:** Fruit about 1/2 inch in diameter, flat, depressed; skin bright medium dark-red, attractive, moderately tough; flesh light red, meaty, juicy, pleasantly subacid; stone small, free; quality very

good for dessert and jelly; ripens in mid-July. Tree bushy, vigorous; productive, self-fertile, bears second year after planting; ornamental. ANDERSEN, BROOKS 1972; F91T{SC}

**Red Marble:** Improved type with superior fruit. Begins bearing in one year. Selected by Windmill Point Farm and Nursery. N24M

**White:** One of the sweetest and best flavored of all the Nanking cherries. Creamy-white fruit, above average in size Very haidy, bush-type plant, grows only 6 to 8 feet tall. Best in full sun as a foundation plant or as a fruitful hedge. Can also be grown as a container plant. D37

**White Rubv:** Improved type with superior fruit. Begins bearing in one year. Selected by Windmill Point Farm and Nursery. N24M

*Prunus umbellata* - *Black sloe*, *Flatwoods plum*, *Southern sloe* {PL}. The fruit is pleasantly acid and is frequently employed for making preserves, jams, and jellies. Southeastern North America. HEDRICK 1919, UPHOF; H14M, N37M

*Prunus ussuriensis* - \**Prunus salicina*

*Prunus virginiana* - *Common chokecherry* {S}. The astringent fruits are eaten raw, dried, or processed into jams, jellies, juice, syrup, wine, and pies. Green twigs are stripped of their bark and inserted into roasting meat for flavoring. Nutritious kernels were added to *pemmican*. The bark and twigs are used as a substitute for tea. North America. ANGIER [Re], FERNALD, HEDRICK 1919, KINDSCHER, MEDSGER, TURNER 1979 [Re], YANOVSKY; A16{PL}, C55{PL}, D96, H68M{PD}, H92{PD}, 147, J25M, J25M{PL}, J26{PL}, K63G, K89{PL}, L75, P49

CULTIVARS {GR}

**Bouahen Sweet:** Selected for its large, mild fruit, so much milder in flavor than normal that it might be called a sweet or "chokeless" chokecherry. Excellent for jams, jellies and wines. Originated in Valley River, Manitoba by W.J. Boughen, prior to 1923. HANSEN; B47

**Bouahen's Golden:** Attractive ornamental with distinctive yellow fruit. Quite haidy. Flavor of the fruit is similar to the black native chokecherry, but lacks the normal astringency. Originated in Valley River, Manitoba by W.J. Boughen. B47

**Garrinaton:** Selected for its large fruits. Grows about 8 feet tall. A consistent and heavy bearer. Bears fruit on the outside of the bush, making for easier harvesting. 146

**Mission Red:** Identical to the common chokecherry in all traits except for the color of the fruit which is quite unusual and has good ornamental value. It is excellent for winemaking, producing a rich, red-colored wine. F67,146

**Robert:** Very heavy producer of purple-black, grape-size fruits. Excellent for wine, jams, jellies, or eating out of hand. Attractive shrub to 10 feet; rich, reddish-purple foliage. Originated in Barrhead, Alberta, Canada by Lloyd Lee. 146, L79

**Yellow:** Identical to the common chokecherry in all traits except for the color of the fruit which is quite unusual and has good ornamental value. It is excellent for winemaking, producing a beautiful, amber-colored wine. F67,146

*Prunus virginiana* var. *demissa* - *Western chokecherry* {S}. Fruits are eaten fresh, dried, or made into syrup, jams, jellies, soups, and wine. Indians and early settlers ground the fruits (stones and all) and dried them into cakes which were later soaked in water, mixed with flour and sugar, and used as a sauce. Western North America. CLARKE [Re], KIRK, YANOVSKY; B94, D95{PL}, G60{PL}, I98M{PL}, L55J

*Prunus virginiana* var. *melanocarpa* - *Rocky Mountain cherry* {S}. The fruits are purplish-black when ripe, and are generally larger and less astringent than those of the common or western chokecherries. They can be eaten raw, dried, or processed into jams, jellies, and preserves. Western North America. GIBBONS 1962,

MEDSGER, UPHOF, YANOVSKY; A74{PL}, B94, G66, G89M{PL}, K38, N40M

CULTIVARS {GR}

**Schubert:** (Red Canadian Cherry, Canada Red Chokecherry) Large, purplish-black fruit; produced in abundance; make excellent jams, jellies or wines. Leaves turn a deep reddish-purple color in late spring and early summer. Mature summer foliage is reddish-purple, fringed with lime-green. Selected from the wild, and introduced by Oscar Will of North Dakota. A65, B9M, B15M, B74, C33, D65, D95, F67, G54, G66, K38{S}, K64, K89

*Prunus watsonii* - *Prunus angustifo* *Ua van watsonii*

*Prunus* x sp. (*P. besseyi* x *P. spp.*) - *Prairie cherry-plum*. Artificial hybrids. Sand cherry x various plums. Fruits are eaten fresh or canned, and are also good for sauces, pies, and preserves. Many people use the juice for wine. Grown primarily in the dry prairie states and provinces of the United States and Canada. CREASY 1982, LOGSDON 1981; (for cultivars see Cherry Plum, page 331)

*Prunus* x sp (*P. cerasifera* x *P. salicina*) - *Cherry-plum* {GR}. Artificial hybrid. Myrobalan plum x Japanese plum. The hybrids are characterized by low-chilling requirements and a later blooming period than Japanese plums. STEBBINS, ZEVEN.

CULTIVARS

**Delight:** Small, round fruit. Blackish skin with thick, blue-gray bloom. Amber, clingstone flesh. Flavor intermediate between a plum and a cherry - mild, tangy, tart at skin. Midseason harvest. Fruit holds well on tree without loss of quality. Pollinate with Sprite. Low chilling requirement, 300 to 400 hours. Originated by Floyd Zaiger, Modesto, California. STEBBINS; A88M, I49M, I83M, J61M, N20

**Sprite:** Small, round fruit. Blackish skin with thick, blue-gray bloom. Juicy, yellow flesh with a sweet, rich flavor. Midseason harvest. Fruit holds well on tree without loss of quality. Semi-dwarf tree; upright; vigorous. Pollinate with Delight. Low chilling requirement, yet cold-haidy. Originated by Floyd Zaiger, Modesto, California. STEBBINS; A88M, I49M, I83M, J61M, N20

*Prunus* x sp (*P. jacquemontii* x *P. japonica*) - *Fall-fruiting bush cherry* {GR}. Artificial hybrid. Fruits are eaten fresh, cooked or dried. The hybrids are small bushes, highly disease resistant, and not susceptible to insect problems. The fruits ripen late and are therefore not bothered by birds. They are easily harvested.

CULTIVARS

**Jan:** Large fruit, similar to a Montmorency sour cherry. Ripe fruits hang on the tree well and if left to become overripe will begin to dry naturally like raisins, enhancing their fresh-eating quality. Ripens mid August to early September. Bush-like growth habit, 3 to 4 feet high; hardy; productive. Flowers profusely in the spring; ornamental. Pollinate with Jcy. Developed by Professor E.M. Meader of New Hampshire. D37, F16, J61M

**Joel:** The latest cultivar in the series developed by Professor E.M. Meader of New Hampshire. Bright red fruit; ripens late in the season. Delicious fresh, also makes excellent jam and pies. Ornamental shrub, covered with white flowers in the spring; often bears the first season. May be planted 3 feet apart to create a fruitful hedge. The best variety if planting only one bush. D37, F16

**Joy:** Large fruit, similar to Jan; ripens in late summer and fall. Suitable for fresh use and pies. Ripens mid to late September. Vigorous, ornamental bush, 3 to 4 feet tall; cross-pollinates with Jan; haidy to -30° F. Highly resistant to powdery mildew, Japanese beetles and cherry worms. Developed over a period of 25 years by Professor E.M. Meader. D37, F16, J61M, L27M

*Pseudococcydonia sinensis* - *Chinese quince*, *Oriental quince* {PL}. The fruit is eaten as a sweetmeat, candied, preserved in syrup, or made into a liqueur. Its juice is mixed with ginger and used as a beverage. China, cultivated. SIMMONS 1972, TANAKA; D95, F85{S}, G66{S}, H4, K63G{S}, N37M, N51

*Pyracantha coccinea* - *Firethorn* {S}. Berries are used for making jellies, sauces, and marmalades. Eurasia, cultivated. BRYAN [Cul, Re], CLARKE [Re], ZEVEN; C9M, D95{PL}, G66, K38, K63G, N84, 053M, 093, P5, P49, R78

*Pyracantha crenulata* - *Cha-kou-tzu* {S}. Leaves are manufactured into a tea-like beverage. Eurasia. TANAKA; 174, N84, 093, Q32, Q40, Q46

*Pyrus angustifolia* -+ *Malus angustifoUa*

*Pyrus arbutifotta* - *Aronia arbutifolia*

*Pyrus betulifolia* - *Birch-leaved pear*; *Yeh-li*, *Manshu-mame-nashi* {S}. The flowers, leaves, and fruits are all edible. Also used as a rootstock. China. HEDRICK 1919, ZEVEN; G66, G66{PL}, K38, K63G, N71M, N84, 093, P49

*Pyrus calleryana* - *Cattery pear*; *Mame-nashi* {S}. Fruits are eaten after having been exposed to frost. Also widely used as a rootstock. China. ALTSCHEUL, TANAKA, ZEVEN; £52{PL}, C9M, F5i{PL}, G66, G66{PL}, H4{PL}, H45M{PL}, K38, K63G, M69M{PL}, N71M, N84, 093

*Pyrus communis* - *Pear* {S}. Fruits are eaten fresh, dried, preserved in brandy, baked, served with cheese, spiced, made into sweet pickles, marmalades and pies, canned, etc. Some types are used for making pear cider or *perry*. *Pear wafers* are a delicious gourmet dried pear product produced by thinly slicing fruits lengthwise to maintain the pyriform shape, and then very slowly drying them without sulphur dioxide to preserve the rich pear flavor. Williams or Bartlett pears are used in the production of a very fragrant brandy called *Poire Williams* or *Williamine*. Pear wood is used as a smoking wood, but requires a certain level of expertise. The core is processed into vinegar. Cultivated. BJORKMAN, CARCIONE, JOHNS [Cul], RAY, C, TANAKA, UPHOF; C9M, C17{PD}, C60D{PD}, D81{P0}, D81M{P0}, E63K{PD}, G66, H45M{PL}, I23M{PD}, I58P{PD}, J3{PD}, J66M{PD}, K63G, M89G{PD}, N71M, 093, P49, R78, etc. (for cultivars see Pear, page 463 and Rootstocks, page 510)

*Pyrus coronaria* - *Malus coronaria*

*Pyrus fusca* - \* *Malus fusca*

*Pyrus ioensis* - *Malus ioensis*

*Pyrus Japonica* *Chaenomeles Japonica*

*Pyrus x lecontei* (*P. communis* x *P. pyrifolia*) - *Southern-cross pear* {PL}. Artificial hybrid. Common pear x Asian pear. The fruit is occasionally eaten fresh, but is primarily cooked. Hybrids generally have greater resistance to fireblight than either parent, but the quality of the fruit is poorer. REHDER; 160. (for cultivars see Pear, page 463)

*Pyrus pashia* - *Indian wild pear*, *Himalayan pear* {S}. Fruits are eaten when in an overripe state, much like the medlar (*Mespilus germanica*), or after drying. They are sweet or somewhat astringent. Can also be used as a rootstock for the common pear. Temperate Southern Asia. ALTSCHEUL, HEDRICK 1919, PARMAR, C., TANAKA, WATT; D95{PL}, F85, G66, N73{PL}, Q40, Q46

*Pyrus pyrifolia* - *Asian pear*, *Nashi*, *Apple pear*, *Salad pear*, *Pae* {S}. The fruits are firm, crisp and juicy when ripe and are eaten out of hand, in fruit and vegetable salads, poached, baked, coated with honey, or sauteed. In Asia, where they are thought to be a digestive aid, they are canned, or processed into fruit nectar and preserves. Southeastern Asia. CUSUMANO [Cul, Re], GRIGGS, NOH [Cul, Re], SCHNEIDER 1986 [Re], TANAKA; C9M, E13G{PR}, G5M{PD}, G66, G66{PL}, I49M{PD}, J61M{PD}, K38, K63G, N84, 093, P49, R47. (for cultivars see Asian Pear, page 289)

*Pyrus ussuriensis* - *Chinese pear*, *Chinese white pear*, *Harbin pear* {PL}. Fruits are eaten fresh. Also used as a rootstock. Eastern Asia. TANAKA; C27T{SC}, C58, G66, G66{PL}, H45M, H85, 149G,

K38{S}, K63G{S}, M35M, N84{S}, 093{S}, P49{S}. (for cultivars see Pear, page 463 and Asian Pear, page 289)

*Quillaja saponaria* - *Soapbark*, *Bois de Panama*, *Halava wood* {DF}. An extract of the bark is used as a foaming and heading agent in beer, root beer and cocktail mixes. It is also employed for flavoring commercial ice cream, baked goods, candy, beverages, etc. In the Middle East, the dried bark is mixed with citrus-flavored sugar syrup and made into a curious, frothy marshmallow-like confection known as *natife cream* or *natif mousse*. It has a delicious, aromatic bittersweet flavor that is much appreciated. Often served with Middle Eastern pastries such as *mamool* or *karabij*. Chile, Peru. BURDOCK, DWIDSON 1994, DER HAROUTUNIAN 1989 [Re], HELOU [Re], LEUNG; A20M{PD}, D95{PL}, F37T, GO, J82{S}, K18M, K63G{S}, N7D, N84{S}

*Rosa acicularis* - *Prickly rose* {PL}. The vitamin-rich fruits are eaten raw in salads, sandwich fillings and desserts, made into purees and syrups, or dried and used in soups and teas. Seeds contain high concentrations of vitamin E, and can be ground and used in baking or cooking as a vitamin supplement. Subarctic regions. HELLER, TURNER 1979 [Pre, Re]; D95, E84, G66{S}, 160, K49Q{S}, N84{S}

*Rosa arkansana* - *Low prairie rose* {S}. Fruits are rich in vitamin C and are eaten raw, stewed, dried, or used for jellies and syrups. The young shoots can be peeled and eaten. Flowers, roots, fruits, stems, bark and petals are all used for tea. North America. KINDSCHER, TURNER 1979 [Pre, Re]; D82, D95{PL}, E7M, G66, H61M, J39M, J39M{PL}, J41M{PL}, K38, K63G, M34M, N84

*Rosa blanda* - *Labrador rose*, *Meadow rose* {S}. Fruits are eaten raw, cooked, or dried and used for tea. The flowers can be processed into *rose water*, cakes, candies, desserts and *rose-petal nectar*, vinegar and honey. Eastern North America. TURNER 1979 [Pre, Re]; D95{PL}, F85, G66, H6{PL}, H61M, I60{PL}, J39M, J39M{PL}, J40, K63G, N84

*Rosa canina* - *Dog rose*, *Brier rose* {S}. The fruits, or *rose hips*, are made into jams, syrup, soups, wine, tea, liqueurs and jellies. Leaves are used as a substitute for tea. The flowers are eaten in salads, and are also candied, preserved, crystallized, added to vinegar, honey, brandy, etc. One of the principal commercial sources of seedless rosehips and rosehips powder. Eurasia. HEDRICK 1919, LAUNERT, LEUNG, MABEY; A49D{DF}, E14T{DF}, F80, G66, 160{PL}, I41G{PD}, J82, K18M{DE}, K38, K63G, L36M{DF}, N71M, 053M, 093, R78, S55, etc.

*Rosa Carolina* - *Pasture rose* {S}. The fruits are processed into syrup and jam. Flower petals can be eaten in tossed green salads, or made into jelly and wine. Eastern North America. CROWHURST 1972 [Re]; D95{PL}, F45{PL}, G66, H6{PL}, H61M, J40, J43, K63G, N71M, N84, P49

#### CULTIVARS {GR}

**Walters:** One of the best shrub roses for the quantity of hips. Excellent compact shrub to 3 feet. Pink flowers followed by half-inch red hips. Origin unknown but thought to be a natural hybrid of pasture rose and another native species. Discovered by Cliff Walters. 160

*Rosa centifolia* - *Cabbage rose* {PL}. Flowers are used for flavoring and scenting tea, wine, vinegar, and honey. The buds can be pickled in white vinegar and sugar, or ground up with sugar to make a conserve. Petals are preserved in syrup, or placed under the crust of cherry pies before baking. One of the principal sources for the *red rose buds* and *pink rose buds* of commerce. Eurasia, cultivated. HEDRICK 1919, MORTON 1976, TANAKA; A7{DF}, E14T{DF}, E84, F54, F86G{DF}, G0{DF}, G73{DF}, H6, K18M{DF}, L34{DF}

*Rosa chinensis* - *China lose* {S}. Young shoot tips, flower-buds, and opened flowers are parboiled and eaten as potherbs, stir-fried, added to soups, or preserved. China. TANAKA; E84{PL}, G66, H4{PL}, H14{PD}, K63G, N84, 093

## CULTIVARS {GR}

**Cecile Brunner:** (Sweetheart Rose) Exquisite, warm pink buds open to small pale-pink double blooms. Delicate fragrance that carries on the air. Vigorous, bushy growth, to 4 feet in mild areas. Rated one of the best-tasting rose cultivars by Mudd's restaurant of San Ramon, California who use the flowers for flavoring honey, confections and sorbets. CREASY 1990; A47, A88M, C9, C54, D95, E84, F97, G96, H4, H78, M77, N78, N84, R83

Rosa x damascena - *Damask rose* {PL}. Petals are the source of *attar of roses*, *rose absolute*, and *rose water*; used as a flavoring for beverages, candy, ice cream, bakery goods, etc. Dried young flowers are the source of *rosebuds*, an ingredient of *ras el hanout*. Rosebuds are also used for flavoring sausages such as *merguez* and *bastirma*. The young shoots, while still red-colored, are eaten raw or steamed, as a side-dish with rice. Leaves are used as a seasoning. DAGHER, MORTON 1976, OCHSE, TANAKA, UPHOF, WOLFERT 1973 [Cul]; E84, F54, N84{S}

## CULTIVARS {GR}

**Kazanlik:** (Kazanlyk) Most important source of commercial Bulgarian attar of roses. In Azerbaijan, the petals are considered superior for making jam. Produces rose-pink, very fragrant, semi-double flowers in June and July. Grows about 5 feet tall. Originated prior to 1700. AKHMEDOV [Re]; A47, E84, H6, J82, N78

*Rosa eglanteria* *Rosa rubiginosa*

Rosa gallica - *French rose*, *Apothecary rose*, *Rose de Provence* {PL}. Flower petals are crystallized or preserved in syrup, and are also dried and used to impart flavor and fragrance to teas, beverages, cakes, honey and liqueurs. Retains its fragrance even when dried and powdered. Europe, cultivated. FOX, H., MORTON 1976, TANAKA; E14T{DF}, E61, E84, F54, G73{DF}, H6, H29M, J82, L90J, M77, N84, R53M

Rosa gigantea - *Manipur wild tea-rose*, *Giant rose of the Himalayas* {PL}. The large yellow fruit, as large as a small apple, is eaten and sometimes sold in the markets of India. Himalayan region. TANAKA; 174

## CULTIVARS {GR}

**Belle Portuaaise:** (Belle of Portu<sup>al</sup>) Hybrid. Very long, pointed buds open to flesh-pink blossoms, 4 or 5 inches in diameter with long petals. Nicely fragrant, with long cutting stems. Rated one of the best-tasting rose cultivars by Mudd's restaurant of San Ramon, California who use the flowers for flavoring honey, confections and sorbets. Originated in 1903 by Monsieur Cayeux in the Botanic Garden of Lisbon. CREASY 1990, FAIRCHILD 1930; A47, A57, N78

Rosa laevigata - *Cherokee rose*, *Jinyingzi* {PL}. A major source of commercial rosehips. Available either whole or sliced, the latter form being of higher quality. Widely used in various herbal preparations including drinks and soups. Eastern Asia, naturalized in North America. LEUNG; A47, C36, D95, G19P{DF}, G66{S}, H4, H36{DF}, I74{S}, L21T{DF}, N37M, N78, P5{S}

Rosa macrophylla - *Bhaunra kujoi* {S}. The fruit is eaten, and is said to become very sweet when black and overripe. Himalayan region. TANAKA, WATT; D95{PL}, N78{PL}, 046, Q40, Q46

Rosa moschata - *Musk rose* {S}. Young shoots are eaten, either raw or cooked, as a side-dish with rice. Flowers are consumed fresh or cooked. Cultivated. OCHSE; E84{PL}, F85, G66, K63G, N78, 053M, Q40, Q46

## CULTIVARS {GR}

**Belinda:** Lightly fragrant, bright pink, semi-double flowers; 1 inch in diameter. Has little or no fragrance in filtered light, a light, sweet odor when grown in full sun. Rated one of the best-tasting rose cultivars by Mudd's restaurant of San Ramon, California who use the flowers for flavoring honey, confections and sorbets. CREASY 1990; A47

Rosa moyesii - *Moyes rose* {S}. The fruits are eaten fresh, preserved, pureed, made into jams, syrups, soups, etc. Dried fruits can

be ground to a powder and added to drinks, waffles, and pancakes. Fruits are very rich in vitamin C, having 1058-1130 milligrams per 100 grams and may be used as a food supplement. Western China. KUNKEL, NOBBS; D95{PL}, E7M, E84{PL}, G66, H6{PL}, 174{PL}, K63G, N71M, N78{PL}, N84, 093, P49, R78

Rosa multiflora - *Multiflora rose* {S}. Young leaves and budlings are parboiled and eaten. The fruits are eaten raw, or processed into syrup, jam, jelly, and wine. Eastern Asia, naturalized in North America. CROWHURST 1972 [Re], TANAKA; C9M, F45{PL}, G66, G66{PL}, K38, K63G, M69M{PL}, M74M, N71M, N84, 053M, 093, R78

Rosa nutkana - *Nutka rose* {PL}. The fruit is juicy, pleasantly acid and is a good source of vitamin C. It is dried, powdered and added to tea. The juicy, young shoots can be peeled and eaten in the spring, when still tender. Northwestern North America. HEDRICK 1919, NORTON, TURNER 1979; A2{S}, C33, F85{S}, G66, I47{S}, 160, 174, J26, K47M{S}, K49Q{S}, K63G{S}, N78, N84{S}

*Rosa odorata* - *Rosa gigantea*

Rosa pimpinellifolia - *Burnet rose*, *Scotch rose* {S}. The small, purple-black fruits are eaten fresh, being unusually sweet and pleasant-tasting. Eurasia, cultivated. GESSERT, HEDRICK 1919; A74{PL}, B9M{PL}, D95{PL}, E7M, G66, I74{PL}, K63G, M98{PL}, N78{PL}, N84, 053M, P49, R78

*Rosa pomifera* - *Rosa villosa*

Rosa rubiginosa - *Eglantine*, *Sweet briar* {PL}. The hips are used for making jelly. In the Middle East, a mixture of the flower petals and honey, called *gulangabin*, is used in confectionery. Sprigs were added to Queen Elizabeth's recipe for mead—along with rosemary, bay leaves, and thyme. Eurasia, naturalized in North America. GAYRE, JOHNSTON, J., MEDSGER, UPHOF; B9M, E7M{S}, E84, F45, F54, G66, H6, 174, K38{S}, K63G{S}, N71M{S}, 053M{S}, S55{S}

Rosa rugosa - *Rugose rose*, *Tomato rose*, *Mei gui* {PL}. Fruits are eaten fresh, stewed, pureed, or made into jelly, jam, soup, tea and wine. The flowers are nibbled, prepared as a salad, candied or used for jam, tea and syrup. In China the petals are added to *mei-kuei-lu*, a kaoliang spirit that flavors cakes, confectionery, marinades, and the master sauce for flavor-potting, and *meigui hongcha* or *rose congou tea*. Unripe fruits can be peeled, cooked and eaten. The young shoots are boiled or steamed and served as a potherb. Eastern Asia, cultivated. CHOW, COTTERELL, FERNALD, GIBBONS 1966b [Re], HARRINGTON, H., SO; B9M, C9M{S}, C47, D92M{S}, F45, F51, F80{S}, G23, I49G, J16, J61M{PD}, K38{S}, K63G{S}, N78, 053M{S}, etc.

## CULTIVARS {GR}

**Alba:** (White) Very large, deep red hips. Good for all culinary purposes. Large, pure white sweetly scented flowers reminiscent of Gallica and Damask roses. Attractive, rugose or wrinkled foliage. One of the hardiest of all roses. A74, B9M, C45M, D37, E7M{S}, F35M, H6, H8, H29M, 160, K38{S}, M92, N78, N84{S}, P49{S}, R83, etc.

**Fru Daamar Hastruo:** Very large, round deep crimson fruits that have good flavor. Sprawling bush, 4 to 5 feet tall, very productive of hips. Disease resistant. Pale satin pink single flowers with soft yellow stamens, produced until autumn when the fruits are ripening. Originated in Denmark, in 1914. A47, C9, C58, E84, 191, J61M, M77, M98, N78, 053M{S}, R83

**Hansa:** Large, tomato-shaped fruits, about 1 inch long; brick red skin and creamy orange pulp with a pleasing flavor. Excellent for making jams, marmalades and teas. Double purplish-red flowers. Originated in Holland, in 1905. A47, A65, A74, C58, D37, D65, E84, FI, G89M, H6, H8, H29D, H44, H90, 174, K89, L70, M77, M92, etc.

**Scabrosa:** Grown primarily for the large red hips, somewhat reminiscent of cherry tomatoes. Produces large pink flowers, about 5 inches in diameter, that bloom for months. Spreading bush, about 5 feet tall, disease resistant and very productive of hips. Introduced in 1960. C58, E84, J61M, N78

**Yellow Daamar Hastruo:** Similar to Fru Dagmar Hastrup in habit and fruit size but with tightly pointed buds and yellow flowers that are produced all season. J61M, N78

*Rosa spinosissima* -> *Rosa pimpinellifolia*

*Rosa villosa* - *Apple rose* {PL}. The leaves are used as a substitute for tea, called *Deutscher tee*. Fruits are large, up to an inch in diameter, have a pleasant, acid pulp and are eaten fresh or processed into preserves, wines, puddings, sauces, sweetmeats, and beverages. Eurasia. HEDRICK 1919, JOHNS [Cul, Re], SIMMONS 1972 [Cu], UPHOF; A74, C95{S}, D37, D95, E61, E84, G66{S}, 174, K63G{S}, N78, N84{S}

CULTIVARS {GR}

**Wollev Pod's:** (Double Apple Rose, Duplex) Fruit crimson-colored, ranging in size from 3/4 inch to 1 1/4 inches in diameter, sometimes larger; flavor good. Can be used fresh, dried or candied. Semi-double, clear rosy-purple flowers; heavily-scented, sweetly-fragrant. N78

*Rosa virginiana* - *Virginia rose* {S}. The buds are eaten by the Chippewa Indians Eastern North America. YANOVSKY; B9M{PL}, D95{PL}, G66, H4{PL}, H6{PL}, K63G, N71M, N78{PL}, N84, 053M, P49, R78

*Rosa woods*» - *Wood's rose* {S}. Fruits are eaten raw, pureed, made into §rup and jelly, or dried for use in soups and teas. North America. TURNER 1979 [Re]; B74{PL}, C53{PL}, D92M, D95{PL}, E15, G66{PL}, 147, J25M, J25M{PL}, J26{PL}, K38, K63G, N84

*Rosa* 'Blaze' - *Blaze rose* {GR}. Recommended for candying by candied flower expert Jill Ann Williams. Small, bright scarlet, semi-double, cupped blossoms; recurrent. The buds and sturdy, full blossoms are excellent for candying, especially when a rich red color is wanted—such as for Christmas, school colors, etc Works well with gel-based candying kits. Popular climber. WILLIAMS, J.; A88M, B9M, F45, F89, H29D, H44, J83

*Rosa* 'Buchi' - *Carefree beauty rose* {GR}. Recommended for candying by candied flower expert Jill Ann Williams. Semi-double, coral pink blossoms, 2 inches in diameter; everblooming. Elegant, tapered, medium-pink buds. Candied buds are good for wedding cakes. Works well with gel-based candying kits. Tall shrub. WILLIAMS, J.; A74, H29D

*Rosa* 'Rhonda' - *Rhonda rose* {GR}. Recommended for candying by candied flower expert Jill Ann Williams. Double, lightly perfumed blossoms; mid-pink with shades of coral. Petals are of good substance and size for candying. Works well with gel-based candying kits. Large-flowered climber. WILLIAMS, J.; H29D, Mil

*Rosa* 'Sea Foam' - *Sea foam rose* {GR}. Recommended for candying by candied flower expert Jill Ann Williams. Medium-sized, double, slightly fragrant, creamy-white flowers with a hint of pink; blush-pink buds; recurrent. Suitable for candying when in bud or full bloom. Good for white on white wedding cakes. Works well with gel-based candying kits. Excellent ground cover. WILLIAMS, J.; A74, B9M, F45, H29D, M77

*Rosa* 'The Fairy' - *The Fairy rose* {GR}. Recommended for candying by candied flower expert Jill Ann Williams. Tiny, double, light pink blossoms produced in clusters; 3/4 inch to 1 1/2 inches in diameter; everblooming. The candied blossoms or buds combine well with pansies or candied sprigs of Artemisia 'Silver King'. Works well with gel-based candying kits. Good container plant. WILLIAMS, J.; A74, B4, B9M, E84, F45, F89, H29D, M77, N78

*Rubus albescens* - *Rubus niveus*

*Rubus allegheniensis* - *Allegheny blackberry* {S}. Berries have a pleasant, somewhat spicy flavor and are eaten fresh, or made into jams, preserves and compote. The young shoots can be used in salads. Eastern North America. BRACKETT, CROWHURST 1972, MEDSGER, UPHOF; D47M, D95{PL}, K63G, L55J, N84

*Rubus arcticus* - *Arctic bramble*, *Arctic raspberry*, *Alaska berry*, *Plumbo*, *Nagoonberry*, *Fieldberry* {PL}. The fruit is reddish to dark-purple, very sweet, juicy, highly flavored, and has a pineapple-like aroma. It is delicious when eaten out of hand, and can also be employed for making cakes, jams, sherbet and a liqueur known as *Mesimarja*. Leaves are used as a tea in some parts of Norw<sup>^</sup>. Circumpolar. CAMPBELL-PLATT, HEDRICK 1919, HELLER, TANTTU [Re], TURNER 1979 [Re], UPHOF; P68M, R53M, S30, S69. (for cultivars see Raspberry, page 504)

*Rubus arcticus* ssp. *stellatus* -> *Rubus stellatus*

*Rubus argutus* - *Tall blackberry*, *Highbush blackberry* {S}. The fruits vary in si§ and quality, but generally have rather large and juicy drupelets. They are eaten fresh or cooked. North America. CROWHURST 1972, MEDSGER; U7D

*Rubus caesius* - *European dewberry* {S}. Fruits are consumed raw, used for making jellies and preserves, or brewed into wine. Leaves are used as a substitute for tea. Eurasia, cultivated. HEDRICK 1919, MABEY, TANAKA, UPHOF; U7D

*Rubus calycinoides* - *Creeping raspberry*; *Hime-fuyu-ichigo* {PL}. The fruit is edible. Taiwan. TANAKA; B28, D95, F85{S}, H14M, I37M, J37M, K22, K85, L55, M75

CULTIVARS {GR}

**Emerald Carpet:** Orange berries resembling small raspberries that ripen in July. Ornamental, evergreen groundcover grows only a few inches tall in sun or partial shade, and somewhat taller in full shade. Leaves turn an attractive coppery color in the autumn. Evergreen in British Columbia, in colder climates it may lose its leaves. Thornless. Developed at the University of British Columbia. B74, D95, E87, 174, J61M, N51

*Rubus canadensis* - *American dewberry*, *Canadian blackberry* {S}. Fruits are sweet, juicy, richly-flavored and may be eaten raw, served with cream or made into pies, jams, wine and preserves. North America. CROWHURST 1972, HEDRICK 1919, HENDRICKSON; U7D. (for cultivars see Blackberry, page 304)

*Rubus chamaemorus* - *Cloudberry*, *Baked-apple berry* {PL}. The berries are consumed raw, stewed, preserved, served with cream and sugar or processed into tarts, confections, jellies, vinegar, wine, and liqueurs such as *Lakka*. In Lapland, the berries are preserved by burying them in the snow. Fresh-frozen berries are sometimes available in Nov York and other large cities. Northern temperate region. CAMPBELL-PLATT, FERNALD, HEDRICK 1919, HELLER, HENDRICKSON, MEDSGER, RAY, C., SIMMONS 1972 [Cu], TANTTU [Re], TURNER 1979 [Re]; H15T{PD}, I41G{m}, N84{S}, R53M, R53M{S}

*Rubus crataegifolius* - *Kuma-ichigo* {S}. Fruits are large, transparent, scarlet, and have a sweet agreeable flavor. They are eaten fresh or brewed into wine. China. HEDRICK 1919, TANAKA, UPHOF; U7D, Z25M

CULTIVARS {SC}

**Jinfu Jenaal:** A cultivar selected in Korea after a study of wild material collected from farms and hilly areas. Notable for its high yield and relatively large (2 grams) firm fruit. JENNINGS; U7D

*Rubus deliciosus* - *Rocky Mountain flowering raspberry*, *Boulder raspberry* {PL}. The fruit is eaten, but in spite of its specific epithet, is not highly valued. Western North America. HARRINGTON,^; D95, G89M

*Rubus ellipticus* - *Yellow Himalayan raspberry*, *Golden evergreen raspberry* {S}. The fruit has a very good raspberry-like flavor, and is eaten fresh or used for making jams and preserves. Yields an attractive and rich-flavored juice that can be used for making squash.

India, Himalayan region. PARMAR, C., SIMMONS 1972, UPHOF, WATT; I74{PL}, Q40

*Rubus flagellaris* - *Northern dewberry*; *Field dewberry* {S}. Fruits are eaten raw, and are also used in pies, jams, jellies, sauces, fruit juices and wines. Dried leaves make a fine tea. The young shoots are peeled and eaten raw. Eastern North America, cultivated. CROWHURST 1972, HENDRICKSON, KINDSCHER, MEDSGER, SIMMONS 1972, UPHOF; U7D. (for cultivars see Blackberry, page 304)

*Rubus fraxinifolius* - *Palawan* {S}. The fruits are large, red, juicy, sweetish and can be consumed fresh or mixed with ice or milk. New Guinea to the Philippines. RIFAI, TANAKA; F85

*Rubus fruticosus* - *European blackberry*, *Bramble* {S}. Fruits are consumed fresh, brewed into wine, made into jam, fruit juice, pies, vinegar, syrup, blackberry liqueur, junket, used for coloring wine, etc. Young leaves are used as a substitute for tea. Eurasia, cultivated. The young, purple shoots can be eaten in omelettes or with olive oil and lemon juice. Produces a light-colored honey with a medium flavor reminiscent of clover honey. CRANE 1975, GRAY, P. [Cul], HEDRICK 1919, MABEY, MICHAEL [Re], UPHOF; B54M{PD}, C67{PD}, G66, N71M, N84, P49, R78

*Rubus glaucus* - *Andes black raspberry*, *Mora de castilla* {PL}. The fruit is light-red to dark-purple, and when fully ripe has a rich, aromatic, pleasantly subacid raspberry-like flavor. It is excellent when eaten with sugar and cream, and is also used to prepare a sweet conserve or syrup, called *jarope de mora*, from which a *refresco* is made. Central America to Ecuador. KENNARD, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, WILLIAMS, L.; 174

#### *Rubus hillii* - \**Rubus moluccanus*

*Rubus idaeus* - *European red raspberry* {S}. The fruit is eaten raw, dried, or preserved, and is also processed into jam, pastries, compote, syrup, raspberry liqueur, vinegar, wine, brandy, etc. In Belgium, *framboise lambic* is one of the most popular of the fruit-flavored lambic beers. Raspberry juice is traditionally added to the red-colored version of *Berliner weisse*, the wheat beer of Germany. Dried leaves are used as a substitute for tea. When raspberry leaves are used in brewing *kombucha*, the resulting beverage is said to have the flavor of apple juice. *Raspberry shrub*, a colonial era beverage, is made from raspberries, water, vinegar and sugar. Produces a light, mild honey with a very fine flavor and aroma. Yellow-fruited forms are available. Northern temperate region. BROWN, J., CRANE 1975, FORGET, FRANK, GUINARD, JACKSON, M., JOHNS [Cul], MABEY, MICHAEL [Re], TANAKA, TIETZE, UPHOF; B54M{PD}, C94M{PD}, C95, D74M{PD}, E56{DF}, H47IPD}, 147, I66M{PD}, K63G, L79J{PD}, M97M{PD}, N40{DF}, N84. (for cultivars see Raspberry, page 504)

*Rubus illecebrosus* - *Strawberry-raspberry*, *Baloon berry* {S}. The bright-red berries are sour, bitter and unpalatable if eaten out of hand. When cooked, they have a pleasant flavor, reminiscent of a mixture of strawberries and raspberries, and can be used for syrup, pies or jam. Eastern Asia. HENDRICKSON, SIMMONS 1972 [Cu]; U7D

*Rubus laciniatus* - *Oregon evergreen blackberry*, *Cut-leaved blackberry* {S}. Fruits are large, sweet, juicy, jet-black when ripe, and are eaten out of hand or used for jellies, jams and pies. Naturalized in Western North America. HEDRICK 1919, HENDRICKSON, SIMMONS 1972; 147

#### CULTIVARS

**Oregon Thornless:** Large, roundish, juicy, jet black fruit; quality and flavor good. Ripens in September and October. Very productive, vining plant, 14 feet long; entirely thornless. Very attractive, parsley-leaved foliage. One of the most popular blackberries in England. Discovered in Oregon in 1927. SIMMONS 1978; 081, P68M

**Parsley-Leaved:** Large, roundish to oval, juicy, dark reddish-black fruit with very good flavor. Ripens in August and September. Strong growing, very productive plant. Highly ornamental, parsley-leaved foliage. Excellent for growing on pergolas. An old heirloom that is popular in England. SIMMONS 1978; 081, R83

#### *Rubus lasiocarpus* - *Rubus niveus*

*Rubus leucodermis* - *White-bark raspberry*, *Western raspberry* {S}. The pleasant-flavored fruit is eaten fresh, dried or made into jams and sauces. A refreshing tea can be made from the leaves, which are high in vitamin C. Young, tender shoots are eaten. Western North America. CLARKE [Re], HEDRICK 1919, MEDSGER, YANOVSKY; A2, F88M, 147, J26{PL}

*Rubus moluccanus* - *Ceylon blackberry* {S}. The fruit is eaten fresh or made into jams. Southeast Asia to Australia. BROWN, W., BURKILL, TANAKA, WATT; P38

#### CULTIVARS {GR}

**Keri:** (Keriberry) Large black fruit; flavor mild, blackberry-like but lacks the distinctive flavor of the wild blackberry. Plant evergreen; strongly armed, thick-stemmed; very vigorous, plant 5 feet apart with 12 to 15 feet between rows. Leaves bright green, rough, ivy-shaped. Fruiting stems are grey-green, darkening with age to almost black. H4,174, J61M, K67

#### *Rubus morifolius* - \**Rubus crataegifolius*

*Rubus x neglectus* (*R. occidentalis* x *R. strigosus*) - *Purple raspberry* {PD}. Natural and artificial hybrids. Black raspberry x red raspberry. Fruits are eaten fresh, preserved, made into jams and jellies, etc. MEDSGER, UPHOF, ZEVEN; F42M, M97M. (for cultivars see Raspberry, page 504)

*Rubus niveus* - *Ceylon raspberry*, *Hill raspberry*, *Piled* {GR}. The fruit is purple-black when ripe, juicy, and of a sweet, rich black-raspberry flavor. It is eaten raw, served with sugar and cream or ice cream, and is also made into juice, tarts, pies, jellies and jams. Southern Asia. HEDRICK 1919, KENNARD, MACMILLAN, MORTON 1987a [Cu], PARMAR, C, STURROCK; N84

#### CULTIVARS

**Mysore:** (Mysore Raspberry) Black fruit, covered with soft hairs; flavor mild, slightly sweet, good; seeds small; similar to western native black raspberry; main crop ripens March to May in Florida. Bush evergreen; canes vigorous, growing 10 to 15 feet per season; adapted only in subtropical regions. Very suitable for home gardens. Originated in India as a seedling selection. Introduced into the U.S. in 1948. BROOKS 1972; E29, G2M, L55J{S}, 053M{S}, S97M

*Rubus occidentalis* - *Black raspberry*, *Blackcap* {ED}. Fruits are eaten fresh, dried, in jams, jellies, pies, sherbet and ice cream, canned, served with sugar and cream, preserved, made into vinegar, etc. Young shoots are eaten like rhubarb. The leaves and the bark of the root are used for making a tea-like beverage. North America. MEDSGER, TANAKA, YANOVSKY; A38M, C67, E63K, F42M, K63G{S}. (see also Raspberry, page 504)

#### CULTIVARS {GR}

**Thornless:** Thornless form of the common wild black raspberry. K89

*Rubus odoratus* - *Rose-flowering raspberry* {PL}. The somewhat tart and dry fruits are consumed raw, and are also made into pies, jams, and jellies. North America. CROWHURST 1972, GIBBONS 1979, MEDSGER; A74, D95, E33M, J48, L59P, M16, N7T, N24M

*Rubus parviflorus* - *Thimble berry* {PL}. Berries are eaten fresh, or dried and stored for later use. Tender, young shoots are peeled, and consumed raw or boiled. Both the berries and shoots are good sources of vitamin C. North America. CLARKE, FERNALD, HELLER, MEDSGER, NORTON, YANOVSKY; A2{S}, A91, B74, B92, D95, E15{S}, F88M{S}, G60,147{S}, 160,198M, J26, J61M, N84{S}

*Rubus parvifolius* - *Japanese raspberry* {PL}. The juicy fruits are eaten raw, made into jam, and brewed into wine. Eastern Asia, Australia, cultivated. CRIBB, HEDRICK 1919, TANAKA; N79. (for cultivars see Raspberry, page 504)

*Rubus phoenicolasius* - *Japanese wine berry*, *Wine raspberry* {PL}. The fruit is cherry-red, soft, very juicy, mildly sweet and can be eaten fresh, made into jams and jellies or brewed into wine. Japan, naturalized in North America. GIBBONS 1962, HENDRICKSON, JOHNS, SIMMONS 1972 [Cu], TANAKA, UPHOF; B19, C61, C95{S}, D37, D95,174, J61M, M16, M92, N84{S}, P68M

*Rubus procerus* - *Himalaya berry* {S}. Large, black, thimble-shaped fruits that are eaten raw, dried, or used for cakes, pies, drinks, etc. Temperate Asia, naturalized in North America. CLARKE, HENDRICKSON, ZEVEN; F74M{PD}, N84

*Rubus procumbens* - \**Rubus flagellaris*

*Rubus rosaefolius* - *Mauritius raspberry*, *Bramble of the Cape* {S}. Fruits are eaten raw, stewed with sugar, served with coconut cream, or made into jam. The leaves are also edible. Tropical Asia, cultivated. CRIBB, GIBBONS 1967, KENNARD, MARTIN 1975, TANAKA; F85, N79{PL}, N84

*Rubus roseus* - *Mora de Rocoto* {PL}. The juicy, raspberry-like fruits are eaten raw or made into jams, jellies, preserves, wines, aguardiente and refreshing drinks. Sold in local markets of Bolivia, Peru and Ecuador. Andean region. NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1920, UPHOF; 174

*Rubus rubrisetus* - Fruits are eaten. North America. TANAKA; (for cultivars see Blackberry, page 304)

*Rubus rugosus* - *Rubus moluccanus*

*Rubus saxatilis* - *Roebuck berry*, *Stone bramble* {S}. Acid fruits are eaten raw, with sugar, or fermented into an alcoholic beverage. Arctic and temperate regions. HEDRICK 1919; N84, 053M

*Rubus shankii* - *Shank's blackberry* {S}. The large fruits are eaten, being of excellent quality with small, soft seeds. Central America. KENNARD; U7D

*Rubus spectabilis* - *Salmon berry* {S}. Fruits are consumed raw, dried or made into tarts and jelly. They are juicy and of very good flavor. Indians often ate the berries with half-dried salmon eggs, hence the common name. Young shoots are peeled and eaten raw, roasted, or cooked like asparagus and served with hollandaise sauce. The leaves are used as a tea substitute. Northwestern North America. CLARKE, GIBBONS 1979, HEDRICK 1919, HELLER, TURNER 1979, YANOVSKY; A2, A15M{PD}, B74{PL}, D95{PL}, E15, F88M, 147, J61M{PL}, K63G, N84

*Rubus stellatus* - *Arctic raspberry* {PL}. The raspberry-like fruits are eaten or used for making cakes, jams, jellies, etc. They are juicy, fragrant and very sweet. North America. TURNER 1979 [Re]; N84

*Rubus strigosus* - *American red raspberry* {PD}. The fruit is eaten raw, preserved, made into jams, pies, and syrups, used in sherbets, ice cream, compote, pastries, confectionery, fermented into wine, etc. Young shoots are peeled and eaten raw, or cooked like asparagus. A substitute for tea can be made from the leaves or twigs. Also produces a light honey of superior quality. Yellow-fruited forms are available. North America, cultivated. GIBBONS 1962 [Re], HARRINGTON, H., MEDSGER, PELLETT, TANAKA, TURNER 1979 [Re], UPHOF, YANOVSKY; F42M, L68, M97M. (for cultivars see Raspberry, page 504)

*Rubus trivialis* - *Southern dewberry* {S}. The berries are large, black and well-flavored and are eaten raw, or used for jams and preserves. Southern North America. HEDRICK 1919, MEDSGER, SIMMONS 1972, UPHOF; U7D. (for cultivars see Blackberry, page 304)

*Rubus ursinus* - *Pacific dewberry*, *California dewberry* {S}. Fruits are consumed fresh or dried, and are also made into pies, sauces, jellies and cakes. The half-ripe berries can be soaked in water to make a pleasant drink. Fresh or dried leaves are used for tea. Young shoots are boiled and eaten. Western North America. CLARKE [Re], TURNER 1979 [Re]; A2, E15, F88M, G60{PL}, 147,198M{PL}, J26{PL}, N84. (for cultivars see Blackberry, page 304)

*Rubus vitifolius* - *Pacific blackberry* {PL}. The sweet, black fruits have a pleasant flavor and are eaten fresh or used for jellies and preserves. Indians dried them for future use, and pounded the fresh fruit to form cakes and *penmican*. One of the parents of the Loganberry and Luther Burbank's Primus berry. Western North America. CLARKE [Re], SIMMONS 1972, WICKSON; F85

*Rubus* x sp. (*R. arcticus* x *R. stellatus*) - *All fieldberry* {PL}. Artificial hybrid of the Nordic fieldberry and Arctic raspberry. The delicious, aromatic bright red fruits are eaten, both raw and cooked. Somewhat larger and more productive than the fieldberry. Developed in Sweden by noted horticulturist Gunny Larsson. J61M

CULTIVARS {GR}

Linda: Dark red fruit of very good quality; ripens over a 6 week period in Ally. Vigorous, hardy plant, forms an attractive groundcover only 12 inches high. Self-sterile, must be planted with another cultivar such as Sophia. One of the first cultivars to be introduced. Developed by Gunny Larsson. J61M, P68M

Sophia: Relatively new improved cultivar. Juicy, reddish fruits with very good flavor. Hardy and vigorous plant, forms an ornamental mat-like groundcover; fragrant pink flowers. Self-sterile, must be planted with another cultivar such as Linda. Developed by Gunny Larsson. J61M, P68M

*Sanguisorba canadensis* - *American great burnet* {S}. The leaves are boiled, washed with water to remove the bitterness, and eaten with salt and miso. North America. ALTSCHEUL; B77{PL}, C9{PL}, F85, G47M, J39M{PL}, M77M{PL}, N84

*Sanguisorba minor* - *Salad burnet* {PL}. The leaves, having the taste of cucumber, are eaten in salads, used as a garnish, or added to soups, cooling drinks, vinegar, and *claret cups*. Chopped leaves are often mixed with butter, cottage cheese and cream cheese. Dried leaves can be steeped for tea. Young seedlings are boiled and eaten. Eurasia, naturalized in North America. FERNALD, HALPIN [Cu, Cul], MARCIN, MEDSGER, MICHAEL [Re], MORTON 1976, REILLY, TANAKA, VILMORIN [Cu]; C3{S}, C16{S}, C67M, F80{S}, I47{S}, I77M, K22, K85, L90J, M53, M82, N19M, N84{S}, R47{S}

*Sanguisorba officinalis* - *Garden burnet*, *Great burnet* {S}. Young leaves and flower-buds are consumed in salads, and are also parboiled and eaten fried, oil-roasted, added to soups, or preserved in salt. Leaves are also used as a tea substitute and are added to herb beers. The seeds are used in the preparation of vinegar. Young shoots are mixed with other greens and used as a potherb. Northern temperate region. GRIEVE, MACNICOL, MORTON 1976, TANAKA; D92M, F80, L66{PL}, M82{PL}, N71M, N84, 053M, Q24

X *Sorbaronia* sp. (*Sorbus aucuparia* x *Aronia melanocarpa*) - {GR}. Artificial hybrid. Chokeberry x Mountain ash. The fruit is eaten.

CULTIVARS

Ivan's Beauty: Small, dark purple fruit, about 1/2 inch in diameter; intense tart-sweet flavor. Excellent for jams, wine, jelly or sauces. Very high in Vitamin C. Can be stored under refrigeration until spring. Small spreading tree, 8 to 12 feet tall; striking, large, glossy dark-green leaves and large clusters of pinkish flowers. Ideal for edible landscaping. Developed by I.V. Michurin. C34, 146, I49P, I66T, 174, J61M

X *Sorbopyrus auricularis* (*Sorbus aria* x *Pyrus communis*) - *Bollwillerpear*, *Bolwyller pear* {S}. Artificial hybrid. White-chance x pear. Fruits are eaten. BEAN, W., REHDER, TANAKA.

## CULTIVARS

**Shipova:** Roundish to slightly pear-shaped fruit, about the size of a large apricot; skin deep yellow; delicious flavor and delicate rose-like aroma; seedless. Excellent for eating out of hand. Blooms in mid-April and ripens in August. Small to medium-sized tree with a pyramidal shape and dark silver-gray foliage; productive, hardy and scab resistant. Ornamental as well as useful. Originally from the former Yugoslavia. B74, E87, F43M, H49, I46, I49M, I49P, I66T, I74, J61M

*Sorbus americana* - *American mountain ash* {S}. Fruits are processed into jams, jellies, beverages, wines and marmalades. When mellowed by frost, they become palatable and may be eaten raw. Eastern North America. FERNALD, GIBBONS 1979, MEDSGER, TURNER 1979; C55{PL}, D45{PL}, E33M{PL}, G66, I4{PL}, J39M{PL}, K38, K63G, L91M, N84, O93

*Sorbus aria* - *Whitebeam*, *Chess apple* {S}. The fruit is made into brandy, jellies, preserves and vinegar. When ripe, it is brown and speckled with red spots, and can be eaten raw after being "Wetted", like the medlar. Eumsia. MABEY, SIMMONS 1972, UPHOF; D95{PL}, G66, K38, K63G, L91M, N71M, N84, O53M, P49, R78

*Sorbus aucuparia* - *European mountain ash*, *Rowan tree* {PL}. Fruits are processed into preserves, jellies, compotes, wine, bitters, liqueurs, *perry*, brandy, syrups, added to soups, etc. In Poland, they flavor a vodka known as *Jarzebiak*. Also used as a substitute for coffee. Leaves and flowers are used to adulterate tea. Eurasia, cultivated. BROWN, G., CAMPBELL-PLATT, GRIEVE, LAUNERT [Pie], MABEY, MICHAEL [Re], TANAKA, TANTTU [Re], UPHOF; A65, A74, C33, C58, D95, E47{S}, G16, G23, I47{S}, K38{S}, K63G{S}, L49, M35M, O53M{S}

## CULTIVARS {GR}

**Rabina:** Russian cultivar with very large, reddish-orange fruit selected for its excellent flavor. Good for fresh eating, juice and preserves. Also a fine ornamental with large clusters of attractive white flowers produced in abundance. Hardy to -40° F. Has good resistance to pests and diseases. B74, I49P, I66T, I74

**Rosina:** Very ornamental selection of mountain ash. Long, slender foliage complements the abundant harvest of bright orange, tasty fruit. Developed in the former East Germany. I66T

*Sorbus aucuparia* 'Edulis' - *Rowanberry* {PL}. The fruits are preserved, and can also be used for jams, jellies, ketchups, sweetmeats, liqueurs, or wine making. JOHNS [Re], SIMMONS 1972 [Cu], TANAKA; NO

## CULTIVARS {GR}

**Navezhenskava:** Attractive tree growing to about 25 feet tall. Hardy to USDA Zone 3. Produces a profusion of red fruits that are used for making jellies and sauces. Introduced to the United States from St. Petersburg, Russia. J61M

*Sorbus aucuparia* 'Moravica' - *Mährische eberesche* {PL}. The fruits are high in vitamin C and make delicious jellies and preserves. They are larger and sweeter than the type. An improved strain, discovered in the former Czechoslovakia in 1810. ZEVEN; P68M

*Sorbus aucuparia* 'Rossica' - *Russian mountain ash* {PL}. The large orange fruits are eaten, being sweeter than the type and an important source of vitamin C. Trees are immune to fire blight. Cultivated in the former U.S.S.R. since before 1810. TANAKA, ZEVEN; A65, B47, G54, G89M, J61M, K37M

*Sorbus domestica* - *Service tree*, *Sorb apple* {S}. The fruit is eaten fresh after it has been exposed to frost, or when overripe and "bled", like the medlar (*Mespilus germanica*). Also fermented into wine. In France, it is used for making *perry* or is dried like prunes. Apple-shaped and pear-shaped forms are known. Eurasia, cultivated. BIANCHINI, SIMMONS 1972, UPHOF; G66, I60{PL}, K38, K63G, N71M, N84, O53M, O93, P49, R78

## CULTIVARS {GR}

**Apple:** (Malifera) Roundish, apple-shaped fruits, about 1 1/4 inch in diameter; reddish-brown in color with much spotting. Selected at the Nikita Botanical Gardens in Yalta, Crimea. I66T

**Pear:** (Pyrifera) Small, pear-shaped fruits, normally much smaller than the apple-shaped form; reddish-brown in color with much spotting. Selected at the Nikita Botanical Gardens in Yalta, Crimea. I66T

*Sorbus edulis* - \**Sorbus aucuparia*

*Sorbus latifolia* - *French hales*, *Fontainbleu service tree* {S}. The fruit is russet-yellow with conspicuous black dots, and has been sold and eaten in Devon, England. Also used for making jelly that is rich in pectin. Europe MABEY, SIMMONS 1972; D95{PL}, G66, I60{PL}, J61M{PL}, K63G, N71M, N84, P49, R78, S69

## CULTIVARS {GR}

**Devoniensis:** Was grown for its fruits 50 years ago in Devon, but had been lost since then until recently. Fruits were sold as *sweets* in the "old days". Attractive copper-colored foliage. Tree grows to about 40 feet. J61M

*Sorbus scopulina* - *Western mountain ash* {S}. Fruits are eaten raw, cooked, or dried and are also made into pies, jams, jellies, marmalades and a bitter-sweet wine Western North America. KIRK, MEDSGER; A2, D95{PL}, G66, I47, J26{PL}, K38, K63G, K81{PL}, M35M{PL}, N84, O93

*Sorbus sitchensis* - *Sitka mountain ash* {S}. The fruits are primarily used in the preparation of jellies, marmalades, jams, wines and liquors. They can also be placed in the top of the jar, as a flavoring, when canning blueberries. Western North America. TURNER 1979 [Re]; D96, F88M, G66, I47

*Sorbus torminalis* - *Checker tree*, *Chequers* {S}. When ripe, the fruit is brown, checkered or speckled with lighter-colored spots, and has soft, fairly sweet flesh that is rich in vitamin C. It can be eaten like the medlar, and is also processed into jellies, preserves, wine, brandy and vinegar. Eurasia. GRAY, P. [Cu], MABEY, SIMMONS 1972 [Cu], UPHOF; D95{PL}, G66, K38, K63G, N71M, N84, O53M, O93, P49, R78, S69{PL}

*Spiraea chinensis* - {S}. Leaves are processed into a tea, called *tsui-lan-cha*. China. TANAKA; T41M, W3M

*Spiraea x pyramidata* - *Pyramid spiraea* {S}. A tea-like beverage can be made by boiling the stems, leaves, and flowers. Western North America. YANOVSKY; C82

## RUBIACEAE

*Asperula odorata* - \**Galium odoratum*

*Borojoa patinoi* - *Borojo* {S}. The sweet, delicious fruit is eaten out of hand or used for *refrescos*, *licuados*, jellies, preserves, cocktails, sauces, ice cream and sherbets. Prized in parts of Colombia and Panama, where it brings high prices when sold in local markets and larger cities. Northwestern South America. DUKE, PEREZ-ARBELAEZ, RICKER, SCHERY; N84, R78M

*Burchellia bubalina* - *Wild pomegranate* {S}. The flowers are sucked for their rich nectar. Southern Africa. PALMER; N84, O53M, P5, S28M

*Casasia clusiifolia* - *Seven-year apple* {PL}. When fully ripe the fruit is soft, wrinkled, and prune-like, with black, jelly-like pulp somewhat licorice flavored. It is eaten by making a hole in one end of the fruit and sucking the pulp out. Florida, West Indies. MOR-TON 1977; D87G

*Catunaregam spinosa* - \**Randia dumetorum*

*Cinchona succirubra* - *Red cinchona* {S}. One of the sources of *cinchona bark*, an extract which is used to flavor bitters, liqueurs such as *Campari* and *Dubonnet*, soft drinks, condiments, baked

goods, candy, relishes and ice cream. *Tonic water* or *quinine water* is a popular mixer for cocktails, such as *gin and tonic*. Contains quinine and other compounds which have astringent and bitter tonic properties. Ecuador. CAMPBELL-PLATT, DOMINE, HERBST, S., LEUNG, MORTON 1976; L55J, N7D{DF}, N84

*Coffea arabica* - *Coffee, Arabian coffee* {S}. Roasted seeds, often called coffee beans, are the source of a stimulating beverage. It is served hot, cold, fortified, spiced, with milk or cream, etc. *Peaberry* or *caracol* coffee occurs when one small round seed forms inside the fruit instead of the usual two flat seeds. It is preferred by some connoisseurs for its flavor and because it roasts more uniformly. Another unique grade of coffee, *Maragogipe*, has very large, rather porous beans. Coffee extract is used for flavoring ice cream, candies, pastries, soft drinks, yogurt, and liqueurs such as *Kahlua* and *Tia Maria*. Dried, roasted green seeds are mixed with spiced butter and salt and eaten as an appetizer in Ethiopia. Chocolate-covered roasted seeds are eaten as a gourmet snack. The red fruits and leaves are chewed for their stimulating properties. Coffee juice, expressed from the ripe fruits, is a popular beverage in Central Africa where the juice is also brewed into wine. The leaves, which contain more caffeine than the fruits, are used as a tea substitute, called *qut'i* in Ethiopia. Eastern Africa, cultivated. DWIDS [Re], GRIEVE, HEDRICK 1919, MESFIN [Re], RAY, C., SMITH, N., TANAKA, UPHOF, WRIGLEY; A79M, C9M, C17{PD}, C29{PD}, E29{PL}, E38M{PD}, E53M, G96{PL}, H44M{PD}, H72{PD}, I34{PD}, I34J{PD}, I81M, I83M{PL}, N84, 093, P5, P17M, P38,

**Caturra:** More compact, with larger dark-green leaves, and more cold hardy than the species. A precocious bearer and high yielder, thus of great economic importance. Easy to harvest. Tends to overbear. Used as a parent in many current breeding programs. A mutant that probably originated in Minas Gerais, Brazil. WRIGLEY; A79M, D56M, D57{PL}, D92M, F73D, G73, J22{PL}, N40M, N84

**Kona:** Leaves shiry, 3 to 6 inches long; flowers white, fragrant, when in bloom they make a fine display massed in clusters along the branches. Makes a good houseplant and is a good candidate for bonsai. The berries make a very richly flavored, fairly acid, and overwhelmingly aromatic beverage. Originated in Kona, Hawaii. A28{PL}, A79M, C94M{DF}, D57{PL}, D92M, F73D, G73, H44M{DF}, I81M, J58{DF}, J86M{PD}, N84, 093

**Nana:** (Dwarf) Leaves dark, glossy green, wavy-edged; flowers white, fragrant, borne in clusters. Makes a good house plant. This is a dwarf form, particularly useful for pot culture. C9M, L55J, N81, N84, O1, O53M

**Yellow:** A yellow-fruited form. Collected in Hawaii. D57{PL}, F85

*Coffea canephora* - *Robusta coffee, Quillow coffee* {S}. Roasted seeds are brewed into an alkaloidal beverage. Mostly used in inexpensive blends and instant coffees. Has the highest caffeine content of the *Coffea* species. The fully formed but unripe berries are boiled whole with herbs, dried in the sun, and used as a masticatory. Tropical Africa, cultivated. TANAKA, WRIGLEY, ZEVEN; A79M, F73D, F85, G73, N84

*Coffea liberica* - *Liberian coffee* {S}. Roasted seeds are the source of Liberian or *Liberica coffee*, considered inferior to Arabian, Robusta and Sierra Leone coffees. Adapted to warmer and moister climates than *C. arabica*. West Tropical Africa, cultivated. MACMILLAN, UPHOF, ZEVEN; F85

*Coffea racemosa* - *Inhambane coffee* {S}. The roasted seeds are ground and used as coffee. Sometimes a bit of salt is sprinkled over them while roasting. Southern Africa. TREGOLD, UPHOF; A79M, F73D, G73, N84

*Coffea robusta* - *Coffea canephora*

*Coffea stenophylla* - *Sierra Leone coffee, Highland coffee* {S}. The roasted beans produce coffee of superior quality, claimed to be equal to that of Mocha. Occasionally cultivated in preference to Liberian coffee. West Tropical Africa. DALZIEL, MACMILLAN, TANAKA; P38

*Galium aparine* - *Cleavers, Goose-gnss* {S}. Young leaves and stems are steamed and eaten as a vegetable or used in soups, stews, and *Lenten pottage*. Seeds are dried, roasted slightly, and used as a very good substitute for coffee. Dried leaves are used as a tea. Eurasia, naturalized in North America. FERNALD, GIBBONS 1966b, MABEY, MICHAEL; A2, J82, N84, 048

*Galium mollugo* - *White bedstraw, Revala* {PL}. In Friuli, Italy, the leaves are added to *pistic*—a mixture of fifty six wild greens eaten as an early spring ritualistic dish. This tradition may be derived from pre-Roman Celtic cultures who once populated the Friuli region. Eurasia, naturalized in North Eurasia. PAOLETTI; D92M{S}, E61, J5M, N71M, N84{S}, Q24{S}

*Galium odoratum* - *Sweet woodruff Waldmeister* {PL}. The coumarin-scented herb is used for flavoring fruit cups, cooling drinks, liqueurs and spiced wines, especially the *Maibowle* or *Maywine* of Germany. Also in Germaiy, it is traditionally used in the green-colored version of *Berliner Weisse* (wheat beer). Dried leaves are used as a tea substitute. The sweet-scented flowers are eaten or used for garnishing. Eurasia, cultivated. FORGET, JACKSON, M., LEGGATT [Re], MACNICOL, MARCIN, MORTON 1976, PAINTER [Re], UPHOF, VILMORIN [Cu]; B77, C9, C25P{DF}, C67{PD}, C67M, F64{DF}, F80, G40{DF}, H46{DF}, K22, K54{DF}, K85, L36M{DF}, M65M, N19M, N84{S}, etc.

*Galium verum* - *Yellow bedstraw, Lady's bedstraw, Cheese rennet* {PL}. Leaves and flowers contain an enzyme used to curdle milk for cheese and junket. Stems and leaves yield a yellow dye that was used to color *Cheshire* cheese and butter. The flowering tops are used in the preparation of a refreshing, acid beverage. Eurasia, naturalized in North America. FERNALD, GRIEVE, GUNDA, HEDRICK 1919, MABEY, MORTON 1976; C43M, C67M, D92M{S}, F15M, F80{S}, J5M, J76, K22, K85, N19M, N84{S}, O53M{S}

*Gardenia augusta* - \**Gardenia jasminoides*

*Gardenia jasminoides* - *Cape jasmine* {PL}. The fragrant flowers are used to scent *jasmine tea*. They are also eaten raw as a delicacy, pickled, or preserved in honey, when they are called *mi-ts'ai*. Fruits are eaten or used as a yellow coloring for other foods, such as candied chestnuts. Southern China, cultivated. ALTSCHUL, CHOW, BROUK, TANAKA, TSUJI [Re]; B32, D95, E14T{DF}, F85{S}, G96, H4, 174, I83M, K18M{DF}, O93{S}, P17M{S}, Q32{S}

*Genipa americana* - *Genipa, Marmalade box* {S}. The fruits, like the medlar, sorb, and Indian wild pear, are edible only when soft and overripe, when the flavor then resembles dried apples or quinces. They are mostly used in lemonade-like drinks, jellies, sherbets, ice cream, preserves, syrups, soft drinks, liqueurs, or are pickled with vinegar and onions. Tropical America. DUKE, MORTON 1987a, POPENOE, W. 1920 [Cu]; N84, R88

*Heinsia benguelensis* -> *Leptactina benguelensis*

*Ixora coccinea* - *Pitkuli* {S}. Ripe fruits are edible. The flowers are used as a condiment. Tropical Asia, cultivated. ALTSCHUL, BURKILL; F85, J27{PL}, N84, 093, Q32

*Ixora javanica* - *Khem* {PL}. The young flowers and the young fruit are both ingredients of the Thai mixed vegetable soup known as *kaeng Hang*. Southeast Asia. JACQUAT; G96, N84

*Leptactina benguelensis* - *Mulangu, Ngobole ngoshai* {S}. Fruits are edible, having a very strong sweet scent. The flowers are sucked for their sweet nectar. Southern Africa. ALTSCHUL, VON REIS; F85

*Mitchella repens* - *Partridge berry*, *Squaw vine* {PL}. The pleasant, slightly aromatic fruits are sometimes eaten out of hand. North America. FERNALD, GIBBONS 1979, MEDSGER, SIMMONS 1972 [Cu]; C9, C76, D75M, E33M, F51,144, M77M, N7T, Nil  
CULTIYARS

**White:** (*Leucocarpa*) Similar to the above in most respects, except the fruits are white instead of red. C76

*Morinda citrifolia* - *Indian mulberry*, *Noni*, *Cheesefruit* {S}. Unripe fruits are used in sambals and curries. In Thailand, they are used as a digestant and substitute for papaya in making *som tam* (papaya salad). Ripe fruits are made into a beverage with sugar or syrup. In Australia, the juice of the fruit is a popular bushfoods ingredient of dressings, sauces and marinades. Young leaves and blanched shoots—containing 4.5 to 6% protein—are eaten raw, steamed, in curries, or used as a wrapping in fish dishes. The seeds of some forms are toasted and eaten. Tropical Asia, cultivated. DUKE, JACQUAT, OCHSE, ROBINS, TANAKA; A79M, C95, F85, K8{PL}, N84, 032M{PD}, 093, R15M

*Paederia foetida* - *Kasembukan* {S}. Leaves are eaten raw as a side-dish with rice, grated coconut and chili peppers. Minced leaves are steamed and eaten, added to soups, or mixed with various vegetables and spices, wrapped in a banana leaf, and cooked over a fire. The offensive smell disappears when the vegetable is cooked. Tropical Asia. HEDRICK 1919, OCHSE; F85

*Posoqueria latifolia* - *Monkey apple*, *Fruta de mono* {S}. The juicy, yellow fruits are edible. Tropical South America. ALTSCHUL, DUKE; F85, N84

*Psychotria nervosa* - *Wild coffee* {PL}. The seeds are used as a substitute for coffee. Pulp of the fruit is edible. Florida. D87G, G73, G73{S}, 112,181M, 181M{S}, N84

*Randia dumetorum* - *Maindal* {S}. Ripe fruits are eaten after cooking or roasting. An important honey plant in India, yielding a golden yellow honey with medium granulation. Tropical Asia. CRANE 1984, HEDRICK 1919, UPHOF, WATT; Q46

*Randia echinocarpa* - *Kakwara*, *Papache* {S}. The chopped, ground, and boiled bark is used as a catalyst in the preparation of *tesguino*, an indigenous alcoholic beverage. Edible fruits are much appreciated by the natives. Mexico. ALTSCHUL, STEINKRAUS; F85

*Randia formosa* - *Raspberry bush*, *Blackberry-jam fruit*, *Genipapo do campo* {PL}. The sweet fruits are yellow outside, black inside, and are said to taste like molasses or blackberry jam. They are eaten fresh or used in beverages. Tropical America. MARTIN 1987, TANAKA, VON REIS; E29, F85{S}, N84

*Tapiphyllum parvifolium* - *Mountain medlar* {S}. The dark brown fruit splits easily into segments like those of an orange and has the flavor of *Vangueria* spp. It is eaten raw or dried for future use. Southern Africa. FOX, R, TANAKA; F85

*Tocoyena formosa* - *Randia formosa*

*Vangueria edulis* - *Vangueria madagascariensis*

*Vangueria infausta* - *False medlar* {S}. The fruits are eaten raw, dried for later use, made into a drink, or used to flavor puddings and porridges. They have an acid, somewhat sweetish-sour flavor. Often used as a substitute for applesauce. In Transvaal a brandy is distilled from the fruits. Seed kernels are eaten fresh or made into a relish. Tropical Africa. FOX, F, TREGOLD; N84, S28M

*Vangueria madagascariensis* - *Voavanga of Madagascar*, *Spanish tamarind* {S}. The fruits are sweet, subacid, yellowish-green when ripe, with the taste of unripe apples. They may be eaten raw or stewed. If eaten when overripe, like the medlar, the flavor is suggestive of the tamarind. Tropical Africa, Madagascar. KENNARD, MACMILLAN; N84, P5

*Vangueriopsis lanciflora* - *Wild medlar* {S}. The yellow fruits are eaten fresh. They are sweetest when very ripe, and are usually left in the sun for a few days to soften. Central to Southern Africa. FOX, R, TREGOLD, UPHOF; F85

#### RUSCACEAE

*Ruscus aculeatus* - *Butcher's broom*, *Sicilian asparagus* {S}. The pungent, somewhat bitter, young shoots are cooked and eaten like asparagus. In Sicily, they are often dressed with olive oil and lemon juice. Seeds are used as a substitute for coffee. Eurasia, cultivated. BIANCHINI, LANZA 1993 [Re], NIEBUHR, TANAKA; G66, N84, 048, 053M, R53M{PL}

#### RUTACEAE

*Acronychia acidula* - *Lemon aspen* {PD}. The refreshing, acidulous fruits are eaten raw, cooked with seafood or poultry, or made into syrup, jam, cakes, sauces, juice, preserves, and salad dressings. They have a delicious, aromatic lemon-like flavor with overtones of eucalyptus and honey. One of the more popular fruits of the emergent bushfoods industry. Australia. CHERIKOFF, CRIBB, ROBINS [Re]; N79, N79{PL}, N79{PR}, 032M, P38{S}

*Acronychia oblongifolia* - *Southern lemon aspen*, *Yellow wood* {PL}. The fleshy, rather acid fruits are eaten raw or made into jams, preserves, syrups, sauces, salad dressings, etc. Similar to *A. acidula*, but grows in cooler climates. Australia. CHERIKOFF, ROBINS [Re]; N79

*Aegle marmelos* - *Bael fruit*, *Bengal quince* {S}. Ripe fruits are orange, hard-shelled, with an aromatic, pleasant-flavored pulp. They are eaten out of hand, pickled, or used in marmalades, jams, jellies, confectionery, and drinks. The young leaves and shoots are eaten as a vegetable or used as a condiment. An infusion of the flowers forms a refreshing beverage. Twigs serve as chewsticks. Southeast Asia. BURKILL, MORTON 1987a, REUTHER, SIMMONS 1972, STURROCK, UPHOF, WATT; E29{PL}, F68T, F85, G73, I12{PL}, M17{PL}, N84, P5, Q12, Q18, Q45M, Q46, R50{PL}, S36

*Agathosma betulina* -> *Barosma betulina*

*Agathosma crenulata* - *Barosma crenulata*

*Atalantia buxifolia* - *Severinia buxifolia*

*Barosma betulina* - *Round-leaf buchu* {DF}. The strongly aromatic leaves are used in the preparation of a brandy that forms the base of highly popular cocktails in Tunisia. An extract of the leaves is one of the ingredients of a South African herbal wine. Also the source of an essential oil with a camphor-peppermint odor, used by American food manufacturers to flavor candy, ice cream, baked goods, and condiments. Southern Africa. MORION 1976; B21P, E14T, L34, N84{S}, S28M{S}

*Barosma crenulata* - *Oval buchu* {S}. Aromatic leaves are used like those of *A. betulina* for flavoring Tunisian brandy, South African herbal wine, American processed foods, and to enhance the black currant aroma of *cassis*. Often combined with *Artemisia afra*. Southern Africa. BOWN, MORTON 1976; J82, N84, P5, R60, S28M

*Boronia megastigma* - *Brown boronia* {S}. The fragrant flowers are the source of an essential oil having an aroma of cinnamon and tobacco. Sold as *boronia absolute*, it is employed in food manufacturing to create a black currant flavor and to enrich other fruit flavors in beverages, ice creams, candy, and baked goods. Australia. MORTON 1976; D95{PL}, N79M, N84, 033, 053M, 093, P5, P17M, Q32, R33M, R47, S92

*Casimiroa edulis* - *White sapote*, *Matasano* {S}. The fruits are yellow or green when ripe, soft, usually thin-skinned, and have a melting, custard-like pulp with a very sweet flavor. They are best eaten out of hand but can also be dried, frozen, served with cream and sugar, or used in ice cream, milk shakes, and salads. The seeds

are reported to be toxic if eaten raw. Other authors state that they may be roasted and eaten like nuts. Central America, cultivated. MORTON 1987a, POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], SCHNEIDER 1986 [Cul, Re], SIMMONS 1972, STURROCK, THOMSON 1973; A41G{PL}, B60M{PR}, D3M{PR}, E13G{PR}, E29{PL}, F15{PR}, F85, I12{PL}, N40{PR}, N84, P38, Q46. (for cultivars see White Sapote, page 575)

*Casimiroa tetramera* - *Woolly-leaf white sapote, Yellow sapote* {S}. The ripe fruits have a firm, golden-yellow pulp with a sweet, spicy flavor. They can be eaten out of hand, baked in pies, chilled and served in fruit salads, or made into a butter similar to apple butter. When dried, the fruit retains its color and flavor very well and has a nice chewy texture. Mexico. KENNARD, MOWRY, RAMSAY, STURROCK, UPHOF; E29{PL}, I77G{PL}, N84, P38 CULTIVARS {SC}

**Mac's Golden:** (Max Golden) Large round fruit, weight 6 to 7 ounces; flesh dark yellow. Excellent, aromatic, mango-like flavor. Tends to have few seeds. Superior to fruits of other cultivars of this species. Originated in Carlsbad, California, by Charles W. Ramsay. Named after Charles McBride. Introduced about 1932. BROOKS 1972; T49M

X *Citremocitrus* sp. (*Citrus* x *limon* x *Eremocitrus glauca*) - *Eremolemon* {GR}. Natural hybrids. Australian desert kumquat x Meyer lemon. The fruits are occasionally eaten.

## CULTIVARS

**Razzlequat:** Small, round fruits that have pleasant sweet-tart, lemon-lime flavored pulp. They can be eaten fresh, sweet skin and all. Or they can be used to make an excellent jam. Very cold hardy and drought resistant. 174, K67

X *Citrofortunella mitis* (*Citrus reticulata* x *Fortunella* sp.) - *Calamondin, Kalamansi, Panama orange, Golden lime* {S}. Natural hybrid. Very acid fruits are pickled, preserved, or used in drinks, tea, marmalades, sauces, chutneys, jellies and for flavoring the Philippine soy sauce known as *toyo mansi*. Whole fruits, fried in coconut oil with various seasonings, are eaten with curry. The preserved peel is used for flavoring other foods. Philippines, cultivated. COST 1988, GELLE [Re], JOHNS [Cul], MORTON 1987a [Cu], ORTIZ 1992, REUTHER, RICHARDSON, M. [Pre, Re], UPHOF; A79M, D23M, E3M{DW}, F43M{PL}, F85, G17{PL}, G49{PL}, G96{DW}, H55{PD}, I83M{PL}, J61M{DW}, N18{SC}, N84

## CULTIVARS {GR}

**Variiegated:** Small, spherical fruit; rind striped when immature, orange to orange-red when ripe, thin, smooth, edible; flesh orange, tender, juicy, very acid; seeds few, small; holds on the tree nearly year-round. Tree moderately vigorous, upright, slightly smaller than the standard calamondin; highly productive; very cold-hardy. Foliage variegated with green and creamy white, attractive. A63, G49, G96{DW}, H4, I83M, N18{SC}, N84, Q93, R77, S59, S97M

X *Citrofortunella* sp. (*Citrus* x *aurantifolia* x *Fortunella* spp.) - *Limequat* {S}. Artificial hybrids. The pleasantly acid fruits are used as a substitute for limes in ades and for flavoring. Limequat hybrids are much more cold hardy than their lime parent. Grown on a small scale in California for the specialty foods market. RAY, R., REUTHER, STURROCK, UPHOF; F16{PL}, G2M, G17, N40{PR}

## CULTIVARS {GR}

**Eustis:** (*C.* x *aurantifolia* x *F. japonica*) Mexican lime x round kumquat. Medium-sized, nearly oval fruit; rind light yellow, very sweet, smooth, thin; flesh light greenish, tender, juicy, in 6 to 9 segments, of fine quality; nearly everbearing but main crop borne in late fall and winter. Tree prolific, haidy, with numerous small thorns; resistant to withertip. BROOKS 1972; A63, E3M{DW}, G49, I83M, N18{SC}, N84, R77, S97M

**Lakeland:** (*C.* x *aurantifolia* x *F. japonica*) Mexican lime x round kumquat. Fruit similar in shape to Eustis, but larger; rind deep yellow, smooth, thin; flesh juicy, of fine quality, with few seeds.

Tree nearly thornless, haidy, resistant to withertip. Originated in Eustis, Florida by Walter T. Swingle. BROOKS 1972; K67, N84, R77

**Tavares:** (*C.* x *aurantifolia* x *F. margarita*) Mexican lime x oval kumquat. Medium-sized, obovate to oval fruit; rind pale orange-yellow, smooth, thin, tender, edible; flesh buff-yellow, in 7 to 8 segments, juicy, acid. Tree vigorous with short spines and pink flower buds. MORTON 1987a; G49, N84, R77, S97M

X *Citrofortunella* sp. (*Citrus* x *junos* x *Poncirus trifoliata*) - *Yusvange* {SC}. Artificial hybrid. Yuzu x trifoliolate orange. Cold hardy citrus with fruits that are considered more palatable than either parent, and also other hybrids with one-half trifoliolate orange in their parentage. The pulp is mildly sour with a lemon-like flavor and can be used in lemonade, lemon pies, marmalade, on fish or eaten out of hand. Hybridized in 1964 by J.R. Brown. CHAPMAN; U13

X *Citrofortunella* sp. (*Citrus reticulata* x *Fortunella* x *crassifolia*) - *Orangequat* {GR}. Artificial hybrid. The fruits may be eaten like a kumquat or used in marmalades. RAY, R.; Q93

## CULTIVARS

**Nippon:** Satsuma mandarin x Meiwa kumquat. Fruit red-orange, small (but larger than the kumquat), broadly oval to obovate; rind sweet, relatively thick and spongy; pulp juicy, slightly acid. Matures early but holds well on tree for several months. Tree slow growing, medium-small, spreading. RAY, R., REUTHER; G17, H4, I53M, N37M, S97M

X *Citrofortunella* sp. (*Citrus reticulata* x *Fortunella margarita*) - *Mandarinquat* {GR}. Nagami kumquat x mandarin. The fruits are eaten out of hand. Combines the hardness of the kumquat with the eating qualities of the mandarin.

## CULTIVARS

**Indio:** Nagami kumquat x Dancy mandarin. Large, pyriform fruit; bright reddish-orange, medium-thick skin. The whole fruit is edible, including the skin. Ripens December through April in southern California. Attractive, ornamental tree. A63, C29M{SC}, D23M, G49, N18{SC}

X *Citrofortunella* sp. (*Citrus aurantifolia* x *Fortunella* spp.) - *Procimequat* {GR}. Artificial hybrid. Eustis limequat x Honk Kong wild kumquat (*Fortunella hindsii*). The fruits are occasionally eaten. Similar to Hong Kong wild kumquat, but somewhat larger and much paler orange when ripe. REUTHER; N37M

X *Citroncirus webberi* (*Poncirus trifoliata* x *Citrus* x *sinensis*) - *Citrang* {GR}. Artificial hybrid. Trifoliolate orange x sweet orange. The acid fruits can be used for drinks and marmalades. Generally the hybrids combine the cold hardness and bitterness of the trifoliolate orange with the larger, more orange-like fruits of the sweet orange. Most cultivars are used as rootstocks. REUTHER, UPHOF; (see also Rootstocks, page 510)

## CULTIVARS

**Morton:** Medium-sized fruit, 3 to 3 1/2 inches in diameter; fragrant, very juicy flesh, nearly seedless. Said to be the best of the citranges for culinary use. Valued for ade and mixed drinks. Also good for pies, jams and marmalade. Ornamental tree; particularly adapted to Texas soils and climate. Much harder than Satsuma; observed in Texas at 12° F. with 90% defoliation. Also used as a rootstock, although it has limited commercial value. H4, I74, K67

**Rusk:** Trifoliolate orange x Ruby blood orange. Fruit rather small, oblate to spherical, color deep orange with reddish flush. Rind thin; segments about 10. Flesh orange-yellow, very juicy; flavor sprightly acid and only slightly bitter. Tree vigorous, tall-growing, productive, and haidy. An attractive ornamental whose juicy fruit approaches edibility more closely than most citranges. MORTON 1987a, REUTHER; H4, N18{OR}, N37M

**Snow Sweet:** Citrange and grapefruit hybrid. Large fruit, the size of a Valencia orange; sweet and juicy, with the quality of a first class sweet orange. Ripens in late October, but green fruit picked earlier may still be sweet. Vigorous, fast growing tree; adapted to

mild northerly climates. Has produced good crops even after being exposed to temperatures of 10° F. Developed by the USDA. 174

**Soaneet:** Small fruit, similar to Rusk except deeply furrowed at the stem end, deep orange in color; very juicy and nearly seedless. Tall, vigorous tree; hardy and productive. 174

X Citroncirus sp. (Poncirus trifoliata x Citrus x limon) - *Citremom* {PL}. Artificial hybrid. Trifoliolate orange x lemon. The fruits are edible. Primarily used as a rootstock. D95, N37M. (see also Rootstocks, page 510)

X Citroncirus sp. (Poncirus trifoliata x Citrus x paradisi) - *Citrumelo*. Artificial hybrid. Trifoliolate orange x grapefruit. Fruits are occasionally eaten. Mostly used as a rootstock. 174. (for cultivars see Rootstocks, page 510)

Citrus x amblycarpa - *Djeruk limau* {S}. In Indonesia, the extremely fragrant juice of the young or half-ripe fruits is used as a condiment. It is also added to rice flour in the preparation of *ragi* yeast cakes. The leaves are mixed with meat dishes to give them a pleasant taste. Also used as a rootstock. Cultivated. HESSELTINE, OCHSE, ROM; N18

Citrus x aurantifolia - *Lime* {S}. The acid fruits are cut in half and used as a garnish, pickled, preserved in syrup, made into jam, jelly, and marmalade, or juiced. Lime juice is used in ades, alcoholic drinks, sauces, made into syrup, or employed for flavoring fish, meats, beverages, confectionery, etc. In India, it is used as a coagulant in the manufacture of fresh cheeses such as *paneer* and *chhana*. Dried limes, called *limu omani*, are widely used in Persian cuisine. In the Philippines, the chopped peel is made into a sweetmeat with milk and coconut. The minced leaves are sometimes eaten together with roasted meat in Indonesia, and in Kenya they are added to soups. Tropical Asia, cultivated. GACHATHI, JOHNS [Cul], MORTON 1987a [Cu], OCHSE, REUTHER, ROBINSON, R. 1991, SIMMONS 1972, STURROCK, UPHOF; A7{DF}, F85, K60D{DF}, L50M{DF}, L55J, N84, Q12, Q18

#### CULTIVARS {GR}

**Bearss:** Fruit size similar to a small lemon. Rind thin, shiyy, pale yellow at maturity. Flesh pale, greenish yellow, very juicy; mild, acid lime flavor. Does not require much heat to reach ripeness. Tree vigorous, roundheaded; some thorns but less than Mexican lime. The most valuable lime for Western gardeners. Similar if not identical to Tahiti lime. RAY, R.; A63, A71, B93M{DW}, D23M, D23M{ES}, E3M{DW}, E8M, F53M, G49, I49M{DW}, I83M, J61M{DW}, N18{SC}

**La Valette:** Compact growing lemon x lime hybrid with medium-sized fruit of good acidity. A prolific cropper and easy to grow. N84, R77

**Mexican:** (Mexican Lime, Key Lime, West Indian Lime) Fruit very small, round, obovate, or short-elliptical. Rind very thin; surface smooth, leathery, tightly adherent; color greenish-yellow at maturity. Flesh color greenish yellow; fine grained, tender, juicy; highly acid with a distinctive aroma. Moderately seedy. Tree medium in vigor and size, spreading and bushy, densely armed with spines. Sometimes called the *bartender's lime*. REUTHER; A63, B60M{PR}, C34G{PD}, D23M, D23M{ES}, E3M{DW}, G29{PD}, G49, G96{DW}, H4, H35{PD}, H55{PD}, I49M{PD}, I83M, L54{PD}, M82, N18{S}, N18{SC}, Q93, etc.

**Tahiti:** (Persian Lime, Tahitian Lime) Medium-small fruit; oval, oblong, or short-elliptical. Seeds rare or lacking. Rind thin; surface smooth, tightly adherent; color pale lemon-yellow at maturity. Flesh pale greenish-yellow; tender, juicy, very acid and with true lime flavor. Tree vigorous, broad-spreading, drooping, medium to medium-large. C89M, D37, D76{DW}, G2M, G96{DW}, H4, I77G, 777, J22, L33M{PR}, M82, Q93, S59

**Thornless Key:** (Newell's Thornless Key) Small to medium-sized fruit; skin smooth; flesh seedless, flavor similar to Mexican; resembles Mexican or Key lime. Tree more frost resistant than Mexican,

thornless, everbearing. Originated in Orlando, Florida. Introduced in 1945. BROOKS 1972; D37, E29, I77G

**Thornless Mexican:** Medium to small, thin-skinned fruit; seedless. Tree thornless and everbearing. Bud mutation of a Mexican thorny lime. Originated in Weslaco, Texas. Introduced in 1930. BROOKS 1972; C29M{SC}, I83M

Citrus x aurantium - *Sour orange, Bitter orange, Seville orange, Bigarade, Daidai* {S}. In Mexico the fresh fruits are cut in half and served with salt and hot chili paste. The juice is used in ades, sauces, for flavoring fish, or fermented to make wine. Considered the best orange for making *marmalade*. The dried peel, sometimes called *Curagao orange peel*, is used in *bouquet garni* and for flavoring certain Belgian white beers, such as *Orange Muscat*. An essential oil derived from the dried peel of immature fruits flavors *Grand Mamier, Cointreau, Shrob Shrub, Triple Sec*, and *Curagao liqueurs*. Immature fruits are pickled in salt or vinegar or fried in coconut oil. The flowers are used for scented tea. Southeast Asia, cultivated. GRAY, P. [Cul], MORTON 1987a [Cu, Cul], ORTIZ 1973 [Cul, Re], RAY, G, REUTHER, TANAKA, UPHOF, VON WELANETZ; A20M{DF}, C17{PD}, C60D{PD}, E3M{DW}, E13G{PR}, G66, I83M{PL}, J66M{PD}, J73M, K54{ffi}, L34{DF}, L36M{PD}, N18, L55J, N40{PR}, N84, Q12, Q93, etc. (see also Rootstocks, page 510)

#### CULTIVARS {GR}

**Bouquet:** (Bouquet de Fleurs) Small, somewhat flattened fruit; rind deep-orange, moderately pebbled and well colored, medium-thick, loosely adherent; flesh juicy, sour, seeds few. Small tree with a spreading top consisting of thornless branchlets. A heavy flowering, ornamental cultivar especially suited for use as a hedge plant. I83M, N84, R77

**Bouquetier de Nice:** Unusual variety that produces both double flowers and fruits. Double flowers with a very large pistil. Flat, medium-sized fruit, deeply embedded with a well-developed secondary fruit. Vigorous, upright growing tree with very large, broad leaves. Used in France for essential oil production. REUTHER; N84, R77

**Chinotto:** Small, oblate to round fruit, with more or less rough rind surface, and an orange to deep orange color. Small tree with thornless branchlets. Growth habit more or less dense and compact. Grown primarily as an ornamental, although the fruits are also prized and used for candying, preserving, pickling, or crystallizing whole. RAY, R., REUTHER, TANAKA, UPHOF; A63, D37, G17, G96{DW}, I83M, N84, Q93, R77, S59, S97M

**Nansho-daidai:** Medium-large, obovate fruit; broadly necked and narrowly collated; seedy. Rind medium-thick but easily peeled; somewhat pebbled; color lemon-yellow. Flesh color dull yellow; juicy, acid flavor with bitter aftertaste. Tree vigorous, upright-spreading, and very thorny. Cold hardy. Nansho is the name of a town in Taiwan, where this fruit was discovered. REUTHER, TANAKA; B58M{SC}, 174, K67, N18{S}, N37M

Citrus x bergamia - *Bergamot* {GR}. The peel is the source of a strongly pungent and agreeably aromatic essential oil used as a flavoring for hard candy, baked goods, chewing gum, desserts, and *Earl Grey* tea. In America, Earl Grey tea is occasionally known as *Governor Gray* tea. The highly acid fruit juice is occasionally used as a vinegar or lime juice substitute. In Morocco, the flowers are preferred for making *orange flower water*. Cultivated. MORTON 1976, REUTHER, TANAKA, UPHOF, WOLFERT 1973. A63, C22{PE}, H44M{PD}, I83M, L34{PD}, L88D{PD}, N18{SC}, N84

#### CULTIVARS

**Castanaro:** Round to obovate fruit, frequently with a short neck, sometimes slightly ribbed. Rind surface commonly rougher and the oil somewhat less aromatic than Femminello. The tree is more vigorous and upright and attains larger size than Femminello, but is somewhat less fruitful. REUTHER; 04

**Femminello:** Nearly spherical fruit with smooth rind. Oil somewhat more aromatic than that of Castagnaro, and hence preferred. Apparently a superior selection of Castagnaro, Femminello is considered to be the best bergamot cultivar. The tree is somewhat less vigorous and smaller than Castagnaro, but earlier and more regular in bearing. REUTHER; 04, R77

*Citrus x depressa* - *Shikwasha*, *Hirami lemon*. The pulp of the fruit is sweetish, high in pectin, and rather poor-flavored. Mostly used as a rootstock. Cultivated. REUTHER, TANAKA; (for sources see Rootstocks, page 510)

*Citrus grandis* - *Pummelo*, *Shaddock*, *Pamplemousse* {S}. Fruits are large, thick-skinned, resembling a grapefruit but with firmer, non-bitter flesh and less juice. Excellent to eat out of hand, the pummelo can also be added to fruit salads, preserved, or made into juice, jams, and marmalades. The candied peel is similar to that made from citron and is called *consève de chadec* in Martinique. *Forbidden fruit*, a liqueur, is partly derived from pummelo which is infused in fine brandy. Source of an aromatic flower water used for flavoring pastry and other foods. The flowers are used for scenting tea. Southeast Asia, cultivated. CHOW, CUSUMANO [Cul, Re], MARTIN 1977 [Cu, Pro], MORTON 1987a, REUTHER, ROUTHIER 1989 [Re], SCHNEIDER 1986 [Pre; Cul], UPHOF, VAN DUONG; B60M{PR}, E13G{PR}, F85, N40{PR}, N84, 093, Q12

#### CULTIVARS {GR}

**Carters Red:** Red-fleshed type. Excellent quality, shape, flavor and skin thickness. Vigorous, upright tree. Selected by John Brady from the Egan's Property at Carters Ridge, Queensland, Australia. Q93

**Chandler:** Fruit similar to a large grapefruit, globose to oblate; rind medium-thick, light yellow, mostly smooth; core solid, segments 14 to 16; membranes medium thick, seedy. Flesh pink, firm but tender, moderately juicy; juice pleasing but weakly aromatic, medium in soluble solids and acids. Ripe fruit is first harvested in December but lasts until March. Tree vigorous, spreading, with few thorns. A41G, A63, A71, B58M{SC}, E8M, D23M, G49, H78, I83M, J22, N18{SC}

**Chov:** (Choy Pamplemousse) Round fruit, somewhat flattened on the stem end; skin yellow, thin; flesh pale yellow, melting, juicy, subacid with a sweet grapefruit-like flavor; dessert quality excellent; seedless; ripens in winter-spring. Spreading tree with large, glossy, dark green foliage; large, very fragrant blossoms; grows and bears best in hot climates. Brought to Hawaii from Tahiti. J22

**Flicks Yellow:** Does not have the appearance of a true pummelo. May be a hybrid. Thick, puffy skin. Has somewhat the flavor of the Lemonade Fruit. Q93

**Hirado:** (Hirado Buntan) Large, oblate fruit, slightly depressed at both ends; seedy; color bright yellow when mature; rind medium-thick, tightly adherent; flesh light greenish-yellow, tender and moderately juicy; flavor a pleasant blend of sugar and acid with a trace of bitterness. Ripens medium-early, keeps well. Tree unusually cold tolerant. Originated in Nagasaki Prefecture, Japan. Introduced in 1910. MORTON 1987a, REUTHER; G17, I77G

**Red Shaddock:** Large round fruit, slightly pointed at the stem end; smooth, glossy yellow rind, somewhat thick; deep red flesh reminiscent of Star Ruby grapefruit, smooth-textured, very tender and juicy. Excellent flavor, with a high sugar content and low acidity. Developed by S. Burdette and O. Skaarup at Tambuti Estate, Swaziland. SAUNT; I83M, N18{SC}

**Reinkina:** Large fruit; rind smooth, yellow, moderately adherent for a pummelo. Flesh pale yellow, firm but tender, moderately juicy, seedy; good sugar-acid flavor. Fruit tends to fall after maturity. Tree vigorous, with denser foliage than Chandler. Originated in Indio, California. A63, G49, I83M, N18{SC}

**Siamese Sweet:** Non-acid type. Oblate to broadly obovate fruit; large, crisp segments, lacking in juice; insipidly sweet, with a trace

of bitterness. Dwarf, drooping tree. The seed parent of the Chandler cultivar. Introduced into the United States in 1930. REUTHER; I77G

**Tahitian:** (Moanalua, Sarawak) Roundish, yellow, thin-rinded fruit of excellent quality. Very juicy, greenish to faintly amber flesh. Unique, agreeable, spicy-sweet flavor with lime-like overtones. Of unknown origin, but probably developed in Tahiti from seed obtained in Borneo. Of local importance in Tahiti and Hawaii. REUTHER; A63, C29M{SC}, G49, N18{SC}

**Webber:** The fruit is large, pink-fleshed, of good quality, and early maturing. This cultivar was collected as a cutting in 1925 by H.J. Webber in Java and introduced to the United States. Grown at David Fairchild's home, the Kampong, in Coconut Grove, Florida, the cultivar was named in honor of Webber by Fairchild. U7P{SC}

*Citrus hystrix* - *Kaffir lime*, *Ichang lime*, *Makrut*, *Djeruk purut* {PL}. The fresh or dried leaves impart a pleasant citrus flavor when added to soups and curries. In Indonesia, fresh leaves are often pounded into a jelly and mixed with hot chili pastes. They also flavor an Indonesian soy sauce known as *kecap*. The rind is candied, or dried and used in curry pastes. The lemon-scented fruits are eaten with fish or made into drinks. Philippines COOK, CRAWFORD [Re], OCHSE, SHURTLEFF 1979, STEINKRAUS, TANAKA, UPHOF; A7{DF}, A45{DF}, D23M, D37, E3M{DW}, E48, F93G, G49, 174, I77G, I83M, L90G{DF}, M82, N18{SC}, P38{S}, etc.

*Citrus ichangensis* - *Ichang papeda* {GR}. The juicy, acid fruits are sometimes eaten. China. TANAKA; 174

#### CULTIVARS

**Ichana Lemon:** (Hsiang-Yuan, Shangyuan) Large, broadly obovate fruit; peel thick, lemon yellow when ripe, very fragrant. Pulp very acid, but with a strong, aromatic aftertaste. Tree erect, much branched with lower branches short. Very resistant to winter cold. The fruit has been used to make lemon pie; some who have made pies from the juice prefer them to regular lemon pies. Probably *C. ichangensis* x *C. grandis*. REUTHER, TANAKA; H4, I74

**Sudachi:** Small, orange fruit; flesh light orange, seedy, with a tart mandarin-like flavor. Ripens early and should be picked soon after, as it tends to dehydrate in warm climates. The juice of the fruit is used in Japan to add a pleasantly sour taste and aroma to Japanese-style dishes, as lemons are in Western cookery. It is also an ingredient of *Ponzu* sauce. Possibly an *ichandarin*, *C. ichangensis* x *C. reticulata*. REUTHER, TANAKA, TSUJI [Re]; E56{PD}, 174, N49M{PD}

**Yuko:** Large, well-shaped fruit; skin orange; flesh mild, with a mandarin-like flavor. Membrane sections tougher than those of mandarins, but easily peeled. Ripens with Yuzu, holds well on the tree. Used as a substitute for Yuzu. Said to be the least hardy of the *C. ichangensis* hybrids. Possibly an *ichandarin*, *C. ichangensis* x *C. reticulata*. TANAKA; U7Z{SC}

*Citrus x jambhiri* - *Rough lemon*, *Jambhiri orange*, *Mazoe lemon*, *Citronelle*. Natural hybrid. Perhaps *C. x limon* x *C. medica*. The fruit is occasionally used as a substitute for lemon, for which purpose it is not very suitable due to its scant pulp and moderate flavor and aroma. In the Middle East, the rind is used in the production of a special preserve. DAGHER, MORTON 1987a, REUTHER, TANAKA; (for cultivars see Rootstocks, page 510)

*Citrus x junos* - *Yuzu* {PL}. Possibly an *ichandarin*, *C. ichangensis* x *C. reticulata*. The grated or slivered rind and the juice are used for their distinctive, refreshing fragrance and flavor in Japanese-style dishes, among which soy sauces, miso toppings, *Ponzu* sauce, soups, *chiri-nabe*, and *kawari soba*. Occasionally added to *kinugoshi* *tofu* before solidification. Juice of the fruit is also processed into a distinctive citrus-flavored vinegar. The young, dark-green fruit is comparable to citron or lime, the mature yellow fruit to a lemon. A fairly expensive citrus fruit in Japan. Also used as a cold-hardy rootstock. REUTHER, SHURTLEFF 1975 [Re],

SHURTLEFF 1976 [Re], TANAKA, TSUJI [Re], UDESKY; E8M, E56{PD}, G20M{PD}, H91{PD}, 174, N37M, N49M{PD}

*Citrus latifolia* - \**Citrus x aurantifolia*

*Citrus x latipes* - *Khasi papeda*, *Hampur arong* {GR}. A large, grapefruit-like fruit having seedy white flesh with a very acid, spicy flavor. It is eaten fresh or processed. May be picked while still green, but after reaching full size and juice content, and held two to three months in cold storages Very cold-hardy tree. REUTHER, TANAKA; 174

*Citrus x limetta* - *Limetta*, *Lumia* {S}. The fruit has acid to acidless flesh, the acid cultivars being used as a substitute for lemon. REUTHER, TANAKA; F85, N84

#### CULTIVARS {GR}

**Mediterranean Sweet:** (Limetta Romana, Limoncello) Medium-sized, flattened fruit with a prominent nipple; rind thin, light yellowish-orange, adherent; flesh pale yellow, juicy, acidless, insipidly sweet; segments about 11. Tree large, vigorous, upright-spreading; highly productive. Blooms somewhat throughout the year but mainly in spring. REUTHER; 04

*Citrus x limettioides* - *Sweet lime*, *Lima* {S}. The fruit is eaten raw, cooked or preserved. It is very much appreciated in Central America, where it is made into a popular soft drink called *Lim-Jay*. MORTON 1987a, REUTHER, TANAKA, WILLIAMS, L.; L55J, N84, P38. (see also Rootstocks, page 510)

#### CULTIVARS {GR}

**Gloria Gold:** Large fruit; acidless flesh with a distinctive sweet flavor; very pleasing, lime-like aroma. Small to medium-sized tree; a heavy producer throughout the year. Originated in Mexico. Introduced by Atkins Nursery. A63, 183M

**Palestine:** (Indian) Fruit medium in size, subglobose to oblong or short-elliptic, sometimes faintly ribbed. Seeds few. Rind thin to very thin; surface smooth to very smooth; tightly adherent; color greenish to orange yellow at maturity. Flesh straw-yellow, tender, very juicy; flavor insipid because of lack of acid, and with a slightly bitter aftertaste. REUTHER; A71, D23M, G49{DW}, I83M, J73M{S}, N18{S}, N18{SC}

*Citrus x limon* - *Lemon* {S}. The acid fruits and their juice are commonly used in ades, tea, ice cream, sauces, salad dressings, marinades, etc. The peel or *zest* is grated and used as a seasoning, covered with chocolate, or candied in syrup. Inner parts of the peel and the pulp are used for manufacturing low-methoxyl pectins such as *L.M. Pectin* or *Pomona's Universal Pectin*, popular among natural foods enthusiasts for making sugarless fruit jams and jellies. Also the source of an essential oil, *cedro oil*, used commercially in beverages, pastries, candies, and *liqueur d'or*. Dried leaves are sometimes mixed with tea leaves for flavoring. Preserved lemons are one of the indispensable ingredients of Moroccan cooking. The flowers are eaten in ice cream, fritters, jams and *lemon flower butter*. Lemon juice is used as a coagulant in the manufacture of directly acidified cheeses such as *paneer* and *chhana*. In Italy, lemons are pressed together with olives to produce a lemon-flavored olive oil called *Limonato*. Tropical Asia, cultivated. JOHNS [Cul], LEYEL 1987b, MACNICOL [Re], MORTON 1987a [Cu], REUTHER, ROBINSON, R. 1991, TANAKA, UPHOF, WEINZWEIG 1995, WOLFERT 1973 [Pre, Re]; A7{PD}, F85, L55J, M63M{PD}, N39{PD}, N54{PD}, N84. (for cultivars see Lemon, page 408)

*Citrus x limonia* - *Mandarin lime*, *Lemandarin* {S}. Natural hybrids. Probably *C. x limon* x *C. reticulata*. The juice of the fruit is used to add a sour taste to foods. MORTON 1987a, REUTHER, TANAKA; (see also Rootstocks, page 510)

#### CULTIVARS {GR}

**Otaheite:** (Otaheite Orange, Otaheite Rangpur) Fruit oblate to spherical, furrowed and rounded or slightly necked at the base. Peel orange with small oil glands; thin; pulp orange, juicy, slightly lime-like in aroma and flavor but bland with scarcely any acidity; seedless, or with 3 to 6 small, abortive seeds. Tree dwarf, spreading,

thornless. Considered to be a non-acid form of Rangpur. MORTON 1987a; C89M, E97{DW}, G96{DW}, I78{DW}

**Rangpur:** (Rangpur Lime, Canton Lemon) Small to medium-sized fruit, resembles a mandarin orange. Rind yellowish to reddish-orange, thin and moderately loose. Flesh orange, tender, juicy, strongly acid. Seeds fairly numerous. Fruits hold on tree for a long period. Makes excellent marmalade. Also said to be good for pink limeade. Tree usually vigorous and productive; comparatively few and small thorns; cold hardy. REUTHER, STURROCK; E3M{DW}, G5M{PD}, G17, G49, G66{S}, I77G, I83M, J73M{S}, R77

*Citrus x macrophylla* - *Alemow*, *Colo*. Possibly *C. x limon* x *C. grandis*. The strongly acid fruits are sometimes eaten. Cultivated. REUTHER, TANAKA; (for sources see Rootstocks, page 510)

*Citrus madurensis* - *X Citrofortunella mitis*

*Citrus maxima* - \**Citrus grandis*

*Citrus medica* - *Citron* {S}. Cultivated primarily for the thick rind of the fruit which is sliced and added to salads, or candied and used in fruit-cakes (*Panettone*), cannoli, puddings, confectionery, sweet rolls, etc. It is also made into the liqueurs *kitrinos* and *cedratine*. Candied citron can be mixed with nuts to form a stuffing for dates and figs. The juice of some improved cultivars can be utilized in beverages and desserts. Tropical Asia, cultivated. BIANCHINI, HESSELTINE, JOHNS [Cul], MORTON 1987a [Cu], RAY, R., REUTHER, VON WELANETZ; F85, 194{PD}, L55J, N18, N84, Q46

#### CULTIVARS {GR}

**Corsican:** Large, ellipsoid fruit; rind very thick and fleshy, lemon-yellow, rather rough and bumpy; flesh crisp and solid, lacking in juice, seedy; flavor sweet, without acid. Tree small, open and spreading, moderately thorny. Said to be the best and most important citron in Corsica. REUTHER; T73M{SC}

**Diamante:** Large, long-oval to ellipsoid fruit, broadly nipped at the apex; rind smooth, very thick and fleshy, lemon-yellow at maturity; flesh crisp, lacking in juice, but acid, like lemon; seedy. Tree small, open and spreading, moderately thorny. The principal cultivar of Italy. REUTHER; 04

**Earle:** Large, ellipsoid to oblong fruit; rind smooth, very thick and fleshy, light orange-yellow; flesh white or very light yellow, sour; seeds numerous, 60 to 70; season more or less throughout the year; closely resembles Diamante. Tree small, spreading, open, thorny. Originated in Herradura, Cuba by F.S. Earle. Introduced into California in 1914. REUTHER; I83M

**Etroa:** Fruit medium-small, ellipsoid or lemon shaped; seedy. Lemon yellow at maturity. Rind thick and fleshy; surface slightly ribbed, somewhat rough and bumpy. Flesh crisp and firm, low in juice content; flavor acid. Tree smaller and less vigorous than most citrons. The official citron used in the Jewish Feast of the Tabernacles ritual. The entire fruit is eaten. MORTON 1987a, REUTHER; A63, D23M, E3M{DW}, E29, 183M, J17, N84, R77, S97M

**Fingered:** (Buddha's Hand, Buddha's Fingers, Bushukan) The fruit is corrugated, wholly or partly split into a number of finger-like sections. Usually pulp is lacking, or if present is very scanty; seedless or with loose seeds. It is highly fragrant and is used in China and Japan for perfuming rooms and clothing and as an offering on temple altars. Also candied or made into sweetmeats. MORTON 1987a, REUTHER, TANAKA; A63, A71, D23M, D37, E3M{DW}, G2M, G17, G49, H78, 153M, 174, 183M, M17, M82, N18{SC}, etc.

*Citrus meyeri* - *Citrus x limon*

*Citrus mitis* -+ *X Citrofortunella mitis*

*Citrus myrtifolia* - *Citrus x aurantium*

*Citrus x natsudaidai* - *Natsu-mikan*, *Japanese summer-graftfruit* {SC}. Natural hybrid. Possibly *C. grandis* x *C. reticulata*. The fruit

is eaten fresh or in salads. In Japan, its juice is mixed with that of mandarin, diluted with sweetened and flavored water, and made into ades. Also canned or bottled. The pulp is sometimes canned in syrup or made into candies. Peel is made into marmalade, jam, or candies. REUTHER, TANAKA; U7Z

*Citrus x nobilis* (*C. reticulata* x *C. x sinensis*) - *Tangor* {S}. Natural and artificial hybrids. Mandarin x sweet orange. The fruit is usually eaten out of hand. MORTON 1987a; F85

CULTIVARS {GR}

**Dweet:** Artificial hybrid. Mediterranean Sweet orange x Dancy mandarin. Medium-large, reddish-orange fruit; rind peels poorly and tends to puff; very juicy, of rich flavor, but seedy. Does not hold well on the tree, therefore more suitable for home garden use. Originated in Riverside, California by H.B. Frost. REUTHER; A63, C29M{SC}, J22, N84, R77

**King:** (King Mandarin, King of Siam) Fruit large, oblate to depressed globose. Rind thick, moderately adherent but peelable. Deep yellowish-orange to orange at maturity. Segments 12 to 14, readily separable. Flesh deep orange, tender, moderately juicy; flavor rich, of very fine quality. Seeds few to many. Late to very late in maturity and stores well on the tree. Tree moderately vigorous, upright and open in growth habit. E8M

**Kivomi:** Miyagawa satsuma x Trovita orange. Medium-large, flattish, orange-like fruit; smooth, extremely thin rind, easily peeled; deep orange flesh, tender, juicy and sweet; ripens from February to early April; stores well. Moderately productive tree; similar to a satsuma in cold-hardiness. Much appreciated in Japan. Originated at the Okitsu Fruit Tree Research Station. SAUNT; C29M{SC}

**Mencv:** Medium-small, slightly oblate, necked fruit; rind reddish-orange, peels readily; flesh sprightly, acid, seedy; ripens early. Sensitive to sunburn and does not hold well on the tree, but good for home use. Mediterranean Sweet orange x Dancy tangerine. Originated by H.B. Frost. REUTHER; N18{OR}

**Murcott:** (Honey Murcott) Medium-sized, oblate to subglobose fruit. Rind thin, rather tightly adherent and not readily peelable; color yellowish-orange at maturity. Segments 11 to 12, moderately adherent. Flesh orange, tender, very juicy; flavor very rich and sprightly. Seeds small, few to numerous\* Medium-late in maturity. Tree medium in vigor and size, upright growing. REUTHER; A71, D23M, D23M{ES}, E3M{DW}, E8M, E99G{PR}, G2M, G49, I77G, I83M, L33M{PR}, L60M{PR}, Q93

**Ortaniaue:** Large, very broadly obovoid to slightly oblate fruit. Rind thin, leathery, rather tightly adherent but peelable; color bright yellowish-orange at maturity. Segments 10 to 12. Flesh orange, juicy; distinctive rich, acid-sweet flavor. Late midseason in maturity and holds well on the tree. Tree moderately vigorous, medium-large, spreading and drooping, almost thornless WALSH [Re]; I83M, N84, 097, R77

**Temple:** (Temple Orange, Royal Mandarin) Medium-large, very broadly obovate to slightly subglobose fruit. Rind deep reddish-orange, medium-thick, moderately adherent but readily peelable. Segments 10 to 12. Flesh orange, tender, juicy; flavor rich and spicy. Medium-late in maturity. Tree of medium vigor, spreading and bushy, somewhat thorny. More cold-sensitive than any of the mandarins or oranges. A63, B23P{PR}, D3M{PR}, E63J{PR}, E99G{PR}, E99G{PD}, G2M, G49, I77G, I83M, J17, J22, K68{PR}, L56M{PR}, L60M{PR}, etc.

**Umatilla:** Medium-large, broadly ovate fruit; rind medium-thick, reddish-orange, moderately adherent; flesh orange, tender, very juicy, flavor rich but acid, of fine quality; ripens medium-late. Tree slow growing, spreading, productive; resembles Satsuma. Ruby orange x Satsuma mandarin. Grown as a specialty fruit for gift-boxes in Florida. MORTON 1987a, REUTHER; T73M{SC}

*Citrus x paradisi* (*C. x sinensis* x *C. grandis*) - *Grapefruit* {PD}. Natural hybrid. Sweet orange x pummelo. Fruits are widely eaten out of hand as a breakfast fruit, used in fruit salads, or made

into juice and marmalade. An elegant dessert can be prepared by adding honey or brown sugar, butter, and some sherry or rum to grapefruit halves and broiling until browned. Grapefruit juice can be made into excellent vinegar or fermented into wine. The peel is candied and its essential oil is employed in soft-drink flavoring. In Vietnam, grapefruit flower water is often used for flavoring sweet drinks and desserts. Grapefruit seed oil, when bleached and refined is used as a culinary oil. CARCIONE, JOHNS [Cu], MORTON 1987a [Cu], REUTHER, ROUTHIER 1989, UPHOF; C4M, F85{S}, H90G. (for cultivars see Grapefruit, page 384)

*Citrus x pennivesiculata* - *Gajanimma, Carabao lime* {S}. The pleasantly acid juice can be used as a condiment. Also used as a tristeza resistant rootstock. ROM, TANAKA; N18{OR}

*Citrus pyriformis* - *Citrus x limon*

*Citrus reticulata* - *Mandarin, Tangerine, Satsuma* {S}. The fruits are eaten out of hand, juiced, preserved in syrup, added to salads, or used in confectionery, gelatins, puddings, cakes, liqueurs, etc. When dried, the peel has a sweet, spicy flavor and is used as a condiment and to cut die odors of certain dishes. In China it is known as antique tangerine peel or *kuo pei* and often flavors *tea-smoked duck* and *Chinese five-spice powder*. Mandarin peel oil is employed commercially in flavoring haid candy, ice cream, chewing gum, and bakery goods. Southeast Asia, cultivated. CHANG, W. [Re], JOHNS, MORTON 1987a, REUTHER, SO, UPHOF, WALDRON [Re]; B71G{PD}, C27G{DE}, F85, G66, L55J, N37M{PL}. (for cultivars see Mandarin, page 418, and Rootstocks, page 510)

*Citrus x sinensis* - *Sweet orange* {S}. Fruits are eaten fresh, juiced, added to fruit salads, or made into wine. Orange juice is canned or bottled, or used in sherbets, ice cream, jellies, confectioneries, cocktails, etc. The peel is candied, used for flavoring, covered with chocolate, or processed into marmalade. In Kenya, the roots are used for flavoring soup. Flowers are eaten as a vegetable or made into tea. Also one of the sources of *orange blossom honey*, an aromatic, heavy-bodied, light-colored honey of excellent quality and delicious flavor. In Italy, oranges are pressed together with olives to produce orange-flavored olive oil. Authentic Spanish *paella* is smoked over a fire of grape vines or orange twigs. Cultivated. DOMINI, GACHATHI, JOHNS [Cu], MACNICOL [Re], MORTON 1987a [Cu, Pro], PELLETT, REUTHER, TANAKA, UPHOF; A20M{DE}, B70{PQ}, F85, G58D{ED}, H34M{ffi}, H80M{PD}, I66M{ffi}, J73M, K37P{ED}, K54{ED}, L36M{EQ}, N7D{DF}, N18, N54{PD}. N84, 093. (for cultivars see Orange, page 445 and Rootstocks, page 510)

*Citrus sudachi* - *Citrus ichangensis*

*Citrus x sunki* - *Sunki, Suenkat*. The fruit has a strong, spicy rind with a distinctive aroma, and acid flesh. Mostly used as a rootstock. REUTHER, TANAKA; (for sources see Rootstocks, page 510)

*Citrus taiwanica* - *Citrus x aurantium*

*Citrus trifoliata* - *Poncirus trifoliata*

*Citrus yuko* - *Citrus ichangensis*

*Citrus x sp.* (*C. x paradisi* x *C. grandis*) - *Pummelit* {GR}. Artificial hybrid. Grapefruit x pummelo. Fruits are eaten as a breakfast or salad fruit. Most cultivars are the result of a breeding program at the University of California, Riverside in which an essentially acidless pummelo, which imparts low acidity to its progeny, was crossed with a seedy, white tetraploid grapefruit. SOOST 1980.

CULTIVARS

**Melogold:** (Melogold Grapefruit) Fruit resembles white-fleshed grapefruit cultivars but is more pummelo-like than Oroblanco; larger than Marsh grapefruit and Oroblanco. Exterior rind color is slow to develop but is comparable to Marsh late in the season; thickness is equal to Marsh, thinner than Oroblanco. Flesh tender and juicy, separating well from the membranes; juicier than Oroblanco; flavor

more like a pummelo. SOOST 1986; A63, A71, G49, H78, H78{DW}, I83M, N18{SC}

**Oroblanco:** (Oroblanco Grapefruit) Fruit size and shape similar to Marsh grapefruit. Peel color is paler than Marsh; peel thickness is greater. Exterior color is not well developed in fruit harvested in November at Lindcove, California. Flesh is slightly paler with a larger hollow core; tender and juicy, separating well from segment membranes. Lacks the bitterness of grapefruit, particularly grapefruits grown in cooler areas. Recommended for indoor citrus growers. SOOST 1980; A63, A71, B58M{SC}, D23M, D23M{ES}, E3M{DW}, E13G{PR}, G49, H78,, I83M, J22, N18{SC}, N40{PR}

**Puma:** (Puma Grapefruit) Sweet and juicy grapefruit-like fruit completely free of the bitterness characteristic of true grapefruits. Developed by the University of Hawaii Department of Horticulture by crossing a Tahitian grapefruit, a juicy pummelo, and the Marsh Seedless grapefruit. E8M

Citrus x sp. (C. x paradisi x C. x sinensis) - *Orangelo* {GR}. Natural hybrid. Grapefruit x sweet orange. The fruit is cut in half and eaten with a spoon like a grapefruit, peeled and the sections eaten individually, or they can be squeezed for their juice. Sections can be canned in syrup and the rind can be candied successfully. MORTON 1987a, REUTHER.

#### CULTIVARS

**Chironja:** Fruit round to pear-shaped, necked, equal to grapefruit in size; peel a brilliant yellow, slightly adherent, easy to remove; the inner peel non-bitter. Pulp yellow-orange, with 9 to 13 segments having tender walls and much juice; the mild flavor reminiscent of both orange and grapefruit, hardly bitter or acid even when immature. Seed count averages 11, with some fruits having as few as 2. Tree productive. Discovered in Puerto Rico in 1956. MORTON 1987a, REUTHER; A63, I83M, M17

Citrus x sp. (C. x paradisi x C. reticulata) - *Tangelo* {PD}. Natural and artificial hybrids. Grapefruit or pummelo x mandarin. The fruits are generally highly colored, aromatic, distinctively and richly flavored, with thin, smooth, and only moderately loose rinds. Most of them are eaten out of hand. On the whole, they comprise the most important group of interspecific hybrids in the genus Citrus. REUTHER; H3, E99G

#### CULTIVARS {GR}

**Allspice:** Fruit medium-small, slightly oblate to globose; color orange-yellow; seedy. Rind thin, slightly pebbled, and rather adherent. Flesh tender and juicy; rich, tart, spicy flavor and aroma. Mid-season in maturity and loses quality if left on the tree much past maturity. Tree and foliage mandarin-like in appearance. I83M

**Cocktail:** (Cocktail Grapefruit) Tangelo x sweet orange. Medium-sized, rather seedy fruit; very juicy, deep yellow-orange flesh; very sweet flavor, similar to a grapefruit but with orange, lime and mandarin overtones. Easy to peel. Produces good-sized fruit even along coastal areas of southern California. Bears 2 to 3 crops a year in Hawaii. A63, D23M, D23M{ES}, H78, I83M

**Minneola:** (Honeybell) Large, oblate to obovate fruit; neck usually fairly prominent; seeds comparatively few. Rind deep reddish-orange, medium-thin, smooth, moderately adherent. Segments 10 to 12. Flesh orange, tender, juicy, aromatic; flavor rich and sweet when fully ripe. Medium late in maturity. Tree vigorous and productive. Cross-pollination recommended. REUTHER; A63, A71, B23P{PR}, D2JM, D23M{ES}, E3M{DW}, E99G{PR}, G49, I77G, I83M, J21M{PR}, J22, L33M{PR}, L56M{PR}, N18{SC}, etc.

**Orlando:** Fruit medium-large, broadly oblate to subglobose; without neck; seedy. Rind orange, thin, slightly pebbled, fairly adherent. Segments numerous, 12 to 14. Flesh orange, tender, very juicy; flavor mildly sweet. Season of maturity late. Tree somewhat more cold resistant than Minneola. Cross-pollination recommended. REUTHER; D13, E63J{PR}, G17, H4, I77G, I83M, J22

**Pearl:** Medium-small, slightly oblate fruit. Rind yellow, comparatively smooth, thin and tightly adherent. Flesh firm but tender, juicy,

sweet, aroma unique; flavor pleasantly sweet; seedy. Medium-early in maturity and loses quality if left on the tree past maturity. Resembles the grapefruit parent more than the mandarin. Tree vigorous, spreading, drooping; somewhat alternate bearing. C29M{SC}, N18{OR}

**Sampson:** Fruit medium-sized, globose to slightly obovate; often somewhat necked; color orange-yellow; seedy. Rind smooth, thin, relatively adherent. Flesh dull-orange, juicy, somewhat acid; flavor with distinctive bitterish tang. More like the grapefruit parent than the mandarin. Late-midseason maturity. Tree vigorous, spreading. U7Z{SC}

**Seminole:** Medium-large, broadly-oblate fruit; color deep reddish-orange; seedy. Rind somewhat pebbled, thin, moderately adherent, though peelable. Flesh rich orange, tender, juicy; flavor sprightly and acid. Resembles Minneola in appearance, but peels easier and matures later. Tree vigorous and productive; self-fruitful. N84, 097, Q93, R77

**Ugli:** (Ugly Fruit, Uniq Fruit) Fruit broadly obovoid, usually with a short, strongly furrowed neck; seeds few. Rind dull yellowish-orange, medium-thick, leathery, moderately rough and bumpy, loosely adherent. Segments about 12. Flesh orange, tender, very juicy; flavor rich and subacid. Maturity season late. Originated as a chance seedling in Jamaica around 1917. The grated rind makes a particularly pungent flavoring. CUSUMANO [Cul, Re], MORTON 1987a, REUTHER, RICHARDSON, J., SCHNEIDER 1986 [Cul, Re], VAN AKEN; B60M{PR}, E13G{PR}, N40{PR}, N84, 097, R77

**Wekiwa:** (Lavender Gem) Fruit medium-small, spherical to obovate or pear-shaped; rind medium-thick, fairly adherent, pale yellow; flesh tender, juicy, flavor sweet and mildly acid; ripens early. Under favorable conditions the rind is blushed with pink and the flesh is amber pink. Very popular specialty market fruit. Considered the finest flavored citrus fruit by maiy. Duncan grapefruit x Sampson tangelo. REUTHER; A63, E13G{PR}, G44M{PR}, I77G, I83M, N40{PR}, Q93

Citrus x sp. (Citrus x junos x Citrus reticulata) - *Clemiyuzu* {GR}. Artificial hybrida Clementine mandarin x Yuzu. The fruits are occasionally eaten or their juice is mixed with gin. Combines the hardness and edible rind of the Yuzu with the eating quality of the Clementine. NAGLE; K67

#### CULTIVARS

**2- 2:** Large, irregular, oblate fruit; rind blotchy yellow, coarse-textured and bumpy, easily peeled and edible; moderately juicy, straw orange flesh, sweetish with a mild tangerine flavor or a trace of bitterness; segments 8 to 10. Quality varies from year to year. Upright, spreading tree; hardy to 5-10° F. NAGLE; K67

**3- 3:** (Ten Degree Tangerine) Medium-sized, symmetrical, oblate fruit; smooth orange rind; medium orange flesh, sweet-tart and sprightly with no undesirable flavors; ripens late, around Christmas, stores exceptionally well. Unripe fruits may be picked if threatened by frost, having an excellent lime-like flavor. Upright tree, more so than 2-2; haidy to 5-10° F.; produces good fruit every year. NAGLE; K67

*Clausena domesticum* -> *Clausena lansium*

*Clausena excavata* - *Pink lime-berry* {S}. The sweetish, ripe fruit is edible Young leaves and flowers are aromatic and are added to curries, or used for flavoring other foods. Indonesia. BURKILL, PONGPANGAN, TANAKA; F85, P38, R88

*Clausena lansium* - *Wampee, Wampi* {PL}. The aromatic, grape-like fruits are eaten fresh, preserved, dried, or made into jams, pies, and refreshing drinks. Flavor varies from sweet, subacid, to sour. The more acid forms are used in making jelly when fully grown but unripe, and fruit drinks when fully ripe. Leaves are put into curries. In Southeast Asia, a carbonated beverage resembling champagne is made by fermenting the fruit with sugar and straining off the juice. China, cultivated. MORTON 1987a, RAY, R., REUTHER, STUR-

ROCK, TANAKA; E8M{GR}, E29,177G, I83M, M17, N84{S}, P5{S}, P38{S}, Q46{S}, Q93

CULTIVARS {GR}

**Guv Sahm:** Roundish to oval fruit; thin, yellow-brown skin, easily peeled; somewhat sour flavor; rather large seed and relatively little flesh. Ripens in the fall. Upright, evergreen, attractive tree; very productive. Q93{OR}

**Yeem Pav:** Roundish to oval fruit, somewhat reminiscent of a longan; thin, yellow-brown skin, easily peeled; translucent flesh with a pleasant, citrus-like flavor. Superior to Guy Sahm in fruit quality. Attractive, upright, evergreen tree; produces bunches of fruit in autumn. Q93{OR}

*Correa alba* - *Cape Barren tea* {PL}. The leaves were once used as a tea substitute, particularly by sealers on Islands in Bass Strait. Fresh or dried leaves can be used, and the tea has a mild, very pleasant flavor similar to green Chinese tea. Australia. CRIBB, ROBINS; M7M, N84, R77

*Cusparia fehrifuga* - \* *Galipea officinalis*

*Dictamnus albus* - *Fraxinella*, *Gas plant* {S}. An infusion of the dried leaves forms a refreshing, aromatic tea. Mediterranean region to Eastern Asia. MARCIN, MORTON 1976, UPHOF; E7M, 139, K49M, K63G, M98{PL}, N71M, 093

CULTIVARS

**Pink:** (Roseus) Deep pink flowers. Tea made from this form will be less lemony but has an added taste of almond and vanilla. MARCIN; C92, D95{PL}, F80, G4{PL}, H29M{PL}, H63{PL}, K38, K49M, K63G, K85{PL}, 053M, Q24

**White:** (Alba) Showy white flowers. Tea made from this form has a lemony fragrance and taste. MARCIN; E63M{PL}, G4{PL}, H29M{PL}, H63{PL}, J93T, K38, K85{PL}, L66{PL}, L91M, 053M, Q24

*Eremocitrus glauca* - *Australian desert lime*, *Wild lime* {PL}. The acid fruits, including the rind, are used for making refreshing drinks, marmalade, jams, sauces and dressings. The rind is soft, thin and relatively free of bitterness for a citrus-like fruit. A very popular fruit in the native bushfoods industry. Tolerant of extreme drought, heat and cold. Occasionally used as a rootstock for *Citrus* spp. Australia. CRIBB, REUTHER, ROBINS [Cul, Re], UPHOF; 174, K67, N79{PR}, N79{PD}, 032M{PD}

*Euodia daniellii* - *Chdsen-goshuyu* {S}. A cooking oil is extracted from the fruit. China-Korea. TANAKA; C95, D95, E7M, K38, K63G, N71M, 053M, 093

*Evodia daniellii* - *Euodia daniellii*

*Fagara rhetsa* - *Indian pepper* {S}. The bark has a lime-pepper flavor and is added to foods as seasoning or cooked in syrup with spices and made into a relish. In South Vietnam, the leaves are used like hops in making rice beer. The unripe fruit has the flavor of orange peel and is used as a spice. Ripe seeds taste like lemon, with a burning after-sensation, and are used as a substitute for pepper. Indonesia. MORTON 1976; Z25M

*Feronia elephantum* -+ *Feronia limonia*

*Feronia limonia* - *Elephant apple*, *Wood apple* {S}. The orange-sized, woody fruit has an aromatic, sour-sweet, somewhat mealy pulp that is eaten raw or made into jellies, preserves, chutneys, and sherbets. The jelly is purple and much like that made from black currants. In Sri Lanka, a popular drink is made by mixing wood apple pulp with coconut milk and jaggery. Young leaves can be eaten raw. Southern Asia, cultivated. BALASURIYA [Re], MACMILLAN [Re], MORTON 1987a, REUTHER, SINGH, S.; F85, M17{PL}

*Fortucitrocirus* sp. [*Fortunella* spp. x (*Citrus* x *sinensis* x *Poncirus trifoliata*)] - *Citrangequat* {GR}. Artificial hybrid. Kumquat x citrange. The hybrids combine the cold-hardiness of the

kumquat and trifoliolate orange, being generally more cold-resistant than the citrange, calamondin, and kumquat. REUTHER. N37M

CULTIVARS

**Macciaroli:** Similar to Sinton, but the fruit is more acid and the tree has a greater tendency towards trifoliation. It is probably the preferred ornamental because its showy flower clusters bloom almost year-round and have a gardenia-like fragrance. A cultivar most commonly grown in Arizona and Texas. RAY, R.; I83M

**Mr. Johns Longevity:** Changshou kumquat x citrange. Slightly larger fruits than its kumquat parent, but not so fine a peel. Similar to Nagami kumquat in taste. Survives 10° F. when shaded and protected from wind in an unheated greenhouse. 174

**Sinton:** Oval kumquat x Rusk citrange. Small, round to oval fruit, often necked; deep reddish orange; very acid; nearly seedless. Upright, moderately vigorous tree; nearly thornless; hardy. An attractive ornamental with beautifully colored fruit. First fruited at Sinton, Texas, and named in 1923. REUTHER; 174

**Thomasville:** Nagami kumquat x Willits citrange. Small, globose to oval fruit, averaging 1 1/2 inches in diameter; rind thin, yellow to orange-yellow. Pulp juicy, pleasantly acid when immature, sweetish at maturity; color light green to amber; segments 7 or 8; seeds 0 to 12, averaging 6, small. Good for eating out of hand when mature; also excellent for ade or marmalade. Season October to December but juicy and suitable for ade from July to October. Reliably cold tolerant to 10° F. BROOKS 1972, MORTON 1987a; H4,174, K67

*Fortunella x crassifolia* - *Meiwa kumquat*, *Large round kumquat* {GR}. The fruit is round, relatively large, with a tender, sweet rind and relatively sweet or subacid juice. It is considered the best of the kumquats for eating out of hand, rind and all. In China, a sweetmeat called *dun-chu-ping* is made by preserving the fruit in sugar. Japan-China, cultivated. MORION 1987a, RAY, R., REUTHER, SCHNEIDER 1986 [Cul, Re], STURROCK, TANAKA; A63, D23M, D23M{ES}, D37, E3M{DW}, E29, F85{S}, G17, G49, I53M, I77G, I83M, N18{SC}, N84{S}, Q93

*Fortunella hindsii* - *Hong Kong wild kumquat*, *Formosan kumquat* {GR}. The small, brilliantly colored fruits are used for making sweetmeats and candy. Although small, the Chinese are said to prize these fruits and to preserve them in honey for use as a spicy flavoring. In the western world, the very thorny shrub is grown only as an ornamental potted plant. Eastern Asia. MORTON 1987a, REUTHER; F85{S}, M82, N37M

*Fortunella japonica* - *Marumi kumquat*, *Round kumquat* {GR}. Fruits are made into jams, jellies, and preserves. The peel is golden-yellow, smooth, thinner and somewhat sweeter than that of the oval kumquat. The tree is less vigorous, somewhat thorny, and considerably more cold-tolerant. Japan, cultivated. MORTON 1987a, REUTHER, SIMMONS 1972; N18{SC}, N84{S}, P38{S}, Q93, S59

*Fortunella margarita* - *Nagami kumquat*, *Oval kumquat* {GR}. The fruits are eaten fresh, preserved in syrup, pickled in vinegar, used as a garnish, or made into marmalades, jams, sauces, and jellies. For eating out of hand rind and all, first squeeze and massage the fruit to combine the flavors. After ripening, the fruit gradually loses water content, becomes richer in flavor, and is then at its best for making preserves. Japan-China, cultivated. CARCIONE, JOHNS [Cul], REUTHER, RICHARDSON, M. [Re], SCHNEIDER 1986 [Cul, Re], SIMMONS 1972, STURROCK; A63, A71, D23M, D23M{ES}, E3M{DW}, F85{S}, G17, G49, I83M, J22, J61M{DW}, N18{SC}, N84{S}

*Fortunella obovata* - *Changshou kumquat*, *Long life kumquat* {GR}. The juicy, refreshing fruits are eaten in sweetmeats and candies. They are said to have the flavor and aroma of the round kumquat, *F. japonica*. The peel is soft, sweet and edible. Grown as a potted plant in parts of China and Japan. China. REUTHER, TANAKA; 174,183M

*Galipea officinalis* - *Angostura* {DF}. The bark is the source of an extract that flavors various foods including bitter tonics, baked goods, candy, ice cream, gelatins, etc. The original flavoring for *Angostura Bitters*, now made of bitter orange peel, gentian and other herbs and spices. Tropical America. BROUK, BURDOCK, LEUNG, MORTON 1976; F37T, GO, K18M, N7D

*Glycosmis pentaphylla* - *Jamaica mandarin orange* {S}. The sweet, fleshy ripe fruit is eaten. Tropical Asia. HEDRICK 1919, VAN DUONG, WATT; F85, N84, P38, Q46

*Glycosmis trifoliata* - *Chan-kiue* {S}. Leaves are dried and ground into a powder used in the preparation of a wine-like beverage called *Kiu-tsee*, made from rice and soybeans. It is said to be impossible to obtain a good fermentation without these leaves. Tropical Asia. PAILLIEUX; W59M

*Limonia acidissima* - *Feronia limonia*

X *Microcitronella* sp. (*Microcitrus australasica* x X *Citrofortunella mitis*) - *Faustimedon* {GR}. Artificial hybrid. Australian finger lime x calamondin. The fruits are eaten. They resemble the finger limes, but are somewhat shorter, nearly seedless, and pleasantly acid. About as hardy as the calamondin. REUTHER.

#### CULTIVARS

**Australian Sunrise Lime:** Attractive, pear-shaped fruits, 1 1/4 to 2 inches long and 3/4 inch to 1 1/2 inches wide; "sunrise" golden in color. Sharp, clean, bittersweet flavor and light, floral aroma. Highly suited for sweet and savory products including beverages, preserves, sauces, garnishes, confectionery, etc. Ripens in August and September in Australia. Has been budded successfully onto Troyer citrange. SYKES, S.; N79

*Microcitrus australasica* - *Australian finger lime* {PL}. Ripe fruits are said to be refreshingly sour when eaten out of hand. They can also be made into a pleasant-flavored marmalade which has a distinctive perfume and is also ornamental, the sliced rings of fruit looking like miniature cartwheels. Use a recipe for lemon marmalade but reduce the amount of water added by about a quarter as the finger limes have less pectin. Australia. CRIBB; G17,174,183M, M17

*Microcitrus australasica* f. *sanguinea* - *Red-pulp finger lime* {GR}. The fruits are used like those of the common finger lime, but die pulp at maturity varies from pink to red in color. Currently being used in breeding pigmented hybrids for the bushfoods industry. Australia. REUTHER, SYKES, S.

#### CULTIVARS

**Australian Blood Lime:** Natural hybrid. Red-pulp finger lime x Rangpur lime. Round to slightly oval fruits, 1 1/4 to 2 inches long and 3/4 inch to 1 1/4 inches wide. Skin, flesh and juice are a striking, blood-red color. Sharp, crisp flavor similar to the West Indian lime. Highly suited for beverages, preserves, marmalades, sauces, chutneys, etc. Ripens in winter. Glossy, dark-green foliage with red flushes of new growth; cream-colored flowers tinged with red. Can be budded to Troyer citrange. SYKES, S.; N79

*Murraya exotica* - \**Murraya paniculata*

*Murraya koenigii* - *Curry leaf*, *Meetha neem*, *Sweet neem* {S}. The pungent, aromatic leaves are a common ingredient in curries, chutneys, stews, etc. They are first fried in ghee or oil until crisp, at the start of preparing a curry. The leaves retain their characteristic flavor and aroma even after drying and are an ingredient of the Tamil Nadu spice blend called *curry powder*. After being powdered in a grinder or blender the dried leaves can also be used in marinades or sprinkled on vegetables or yogurt. Peppery fruits are edible. India. BURKILL, DEVI [Cul, Re], JOSEPH, MACMILLAN, MORTON 1976, REUTHER, SOLOMON, VON WELANETZ; A7{DF}, A79M, D57{PL}, F85, G96{PL}, I12{PL}, I83M{PL}, L16{DF}, M82{PL}, N84, P38, Q46

*Murraya paniculata* - *Jasmine orange*, *Orange jessamine* {S}. The leaves are used to flavor curries. Fragrant flowers are used for scented tea. The red fruit is also edible. Southern Asia. BROUK,

HEDRICK 1919, TANAKA; A79M, C9M, E7M, F85, G96{PL}, I83M{PL}, J27{PL}, N84, O53M, P5, Q32

*Poncirus trifoliata* - *Trifoliolate orange*. The rind of the fruit can be candied. In China, the bitter fruits are used for seasoning. When first picked the fruit gives very little juice when pressed but after being kept for two weeks they yield about twenty percent juice. A drink can be made from the diluted juice. Young leaves are occasionally boiled and eaten. China. SIMMONS 1972 [Cu], TANAKA; (for cultivars see Rootstocks, page 510)

*Ptelea trifoliata* - *Hop tree*, *Wafer-ash* {S}. The bitter fruits are sometimes used as a substitute for hops in making beer. A decoction of them added to yeast is said to make it rise more rapidly. Eastern North America. FERNALD, HEDRICK 1919; D95{PL}, J25M, K38, K63G, K89{PL}, L91M, N84, O53M, O93, P49, R78

*Ruta chalepensis* - *Egyptian rue* {PL}. The leaves are used as a condiment, and are highly esteemed by the Jews of North Africa. They are often added to the lamb and beef sausages known as *merguez*. In parts of Tunisia, they flavor an omelette called *hajja*. Mediterranean region. BOUQUET, ENGLER; E48, E61, F68T{S}, F86G{S}, I74, M82, N84{S}

*Ruta graveolens* - *Rue*, *Herb-of-Grace*, *Term Adam* {PL}. The strongly aromatic leaves are minced and used sparingly in salads, ragouts, vinegars, sandwiches, *grappa*, and vegetable juices. They can also be pickled, brewed into tea, or used for seasoning cheese and chicken. In North Africa, the seeds are employed in the preparation of a palm wine, known as *laqmi*. The ground seed capsules are ingredients in the Ethiopian spice mixtures *berbere*, *shiro*, and *awaze*. Mediterranean region, culthated. GRAY, P. [Cul], GRIEVE, HEDRICK 1919, LATHROP, MACNICOL, MESFIN [Re], MORTON 1976, POPENOE, R, ROOT 1980b [Cul], TANAKA; C3{S}, C67M, D92M{S}, F80{S}, H46{DF}, H51{DF}, H51{PD}, I8M{DF}, I77M, J66, K22, M82, N19M, N84{S}, O53M{S}, etc.

*Severinia buxifolia* - *Chinese box-orange* {S}. In China, the plant is esteemed for its leaves, which are used in the preparation of yeast cakes. For this reason it is called *tsau ping lak* in Cantonese, meaning *wine cake thorn*. Southeast Asia. REUTHER, TANAKA; F85, N84

*Skimmia laureola* - *Ner*, *Chamlani* {S}. The strongly aromatic leaves are eaten in curries or used for flavoring other foods. Himalayan region. ATAL, TANAKA, WATT; F85, Q40

*Triphasia aurantiola* - *Triphasia trifolia*

*Triphasia trifolia* - *Lime berry*, *Limon de China* {S}. The aromatic, juicy, somewhat mucilaginous fruits are eaten raw, stewed, pickled, or made into jams and preserves. Tropical Asia, cultivated. HEDRICK 1919, KENNARD, TANAKA; E29{PL}, F85, N84, O93, Q46

*Zanthoxylum alatum* - \**Zanthoxylum armatum*

*Zanthoxylum armatum* - *Winged prickly ash*, *Timur* {S}. Young leaves are used as a condiment. The seeds, known as *Chinese pepper*, are widely employed as a seasoning in China and India. In Nepal, they are often mixed with chilis and are considered essential for making achar (pickles and chutneys). Tropical Asia. ASSOCIATION [Re], BURKILL, MAJUPURIA [Re], MANANDHAR, MORTON 1976, POHLE, WATT; F85, G66,174{PL}, N61, O93, Q12, Q40

*Zanthoxylum piperitum* - *Sansho*, *Japanese pepper* {DF}. The dried fruit hulls are ground and used for flavoring soups, buckwheat noodles, rice dishes, and *kiri-sansho*—a type of cake. They are often heated to bring out their full aroma, and then combined with salt to make a table seasoning. They are also one of the seven spices that constitute the Japanese spice mixture *shichimi*. Discriminating chefs grind the hulls with a pestle made of sansho wood, which passes its flavor to the *kiri-sansho*. The whole seeds, called *sansho-no-mi*, are simmered with shoyu and mirin to make *tsukudani*. *Kinome*, the

young shoots, are used as a garnish for broiled fish, and lend flavor to soups, salads and miso. Flowers and immature fruits are pickled or preserved in soy sauce. Japan-China, cultivated. COOK, COST 1988 [Cul], MORTON 1976, SHURTLEFF 1975 [Re], SHURTLEFF 1976 [Re], TSUJI [Re], VON WELANETZ [Pie], YASHIRODA; A7, C34G, D95{PL}, E14T, G20M, G20M{PD}, L16, N49M, N49M{PD}, N61{S}, N84{S}

*Zanthoxylum rhetsa* - \*Fagara rhetsa

*Zanthoxylum simulans* - *Szechwan pepper*, *Chinese pepper*, *Huachiao* {DF}. The fruit is dried and toasted and used as a condiment, either whole or ground to a powder. It is stronger and more pungent than black pepper. Popular for making seasoned peanut oil, used for stir-fried dishes and for dressing Chinese salads. Also one of the ingredients of *Chinese five-spice powder*. Dried whole fruits, called *Szechwan peppercorns*, are available in Chinese and specialty stores. China. CHANG, W. [Re], COST 1988 [Cul, Re], CUSUMANO [Cul, Re], TANAKA; A7, A49D, C27G, C34G, D95{PL}, G66{S}, H4{PL}, H15T, I8M, J11M{PD}, K63G{S}, L17, M92{PL}, N37M{PL}, N84{S}, etc.

SALICACEAE

*Populus balsamifera* - *Balsam poplar* {PL}. The wood is a favorite of the Tanaina Indians for smoking fish because it produces a slow-burning fire and imparts a distinctive flavor. Source of an essential oil used by the food industry to flavor alcoholic beverages. North America. BURDOCK, KARI, LEUNG; D95

*Populus tremuloides* - *Quaking aspen* {PL}. The sap of the tree is potable. Inner bark is also used as food. The wood is sometimes used for smoking fish. North America. KARI, YANOVSKY; C33, C38, D95, E33M, E87, G66, G66{S}, G89M, H49, I47{S}, J26, K89

*Salix babylonica* - *Weeping willow* {PL}. Young leaves, shoots, and flower buds are parboiled and eaten. Older leaves are used to adulterate tea. Also the source of a manna-like substance. Cultivated. DONKIN, TANAKA; B32, D95, F51, H4, H14M, I53M, I68, K46, L47, M69M, M82

*Salix caprea* - *French pussy-willow* {PL}. Source of an edible manna. Europe, cultivated. DONKIN; A91, B9M, B32, B53, C9, C45M, C54, D95, G66, I77M, K22, K89, M69M, N84{S}, P38

*Salix daphnoides* - *Arctic willow* {PL}. The young, tender shoots and catkins are eaten fresh or in seal oil by the Eskimos of Alaska. Young leaves are especially rich in vitamin C. Growing tips of the underground rhizomes can be peeled and eaten, raw or cooked. The inner bark is eaten raw. Northern Europe. GIBBONS 1979, HELLER, UPHOF; K81, R49

*Salix fragilis* - *Crack willow* {PL}. The leaves and young branches yield a saccharine exudation used as food. Eurasia. DONKIN, HEDRICK 1919; A91, D95, N84{S}, R49

*Salix gracilistyla* - *Japanese pussy willow*, *Neko-yanagi* {PL}. Young leaves and flowers are parboiled and eaten as a vegetable. Leaves are used as a substitute for tea. Eurasia. TANAKA; I77M, K22

*Salix pulchra* - \**Salix daphnoides*

SALICORNIAEAE

*Salicornia europaea* - *Saltwort*, *Glasswort*, *Marsh samphire*, *Pickle weed*, *Sea bean*, *Perce-perie* {PR}. Young, salty stems and leaves are eaten raw in salads, cooked as a potherb, pickled, added to soups, or used as a garnish. For pickles, the tender stems and branches are first boiled in their own salted-water before being put in spiced oil or vinegar. The protein-rich seeds are eaten, and can be refined into a high-quality edible oil similar to safflower oil. Northern temperate region. ANGIER, FERNALD, GIBBONS 1964, LAUNERT, MABEY [Cul, Pie], MATIGNON [Re], MICHAEL [Re], NIETHAMMER, SCHNEIDER 1986 [Re], TANAKA; C11T, G5, H25M, H25M{PD}, H73, O48{S}

SALSOLACEAE

*Salsola kali* - *Russian thistle*, *Tumbleweed* {S}. Young shoots are eaten raw in salads, put in soups, or boiled and eaten like spinach. They make an excellent vegetable when served with butter, vinegar or lemon juice, bacon strips or hard-boiled egg slices, or a cream sauce. Because of their mild flavor they can be mixed with stronger flavored greens such as mustard. Northern temperate region. CLARKE [Re], GIBBONS 1979, HARRINGTON, H., NIETHAMMER [Re]; C4, N84, Q15G

*Salsola komarovi* - *Oka-hijiki* {S}. The young leaves are used as a potherb, put into soups, or eaten as *ae-mono*. In Japan, mixed foods served with a seasoned dressing are called *ae-mono*. Occasionally available in Japanese markets. Eastern Asia. LARKCOM 1991 [Cu], SHURTLEFF 1975, TANAKA; F85

*Salsola soda* - *Barilla plant*, *Agretti*, *Roseano*, *Riscolo* {S}. The succulent, tender, young shoots are boiled or steamed, then served with olive oil and lemon juice. They have a slightly sour flavor, much appreciated by some. Considered a delicacy in Umbria and other parts of central Italy. Sold in local markets during summer and autumn. Also grown in Japan. Mediterranean region to Southwest Asia, cultivated. HAMMER, LOVELOCK, PLOTKIN, UPHOF; S17

*Sarcobatus vermiculatus* - *Greasewood* {S}. The tender young twigs can be cut into short pieces, boiled until tender, then served with butter or cream sauce. Seeds are occasionally consumed. Southwestern North America. KIRK, MEDSGER, UPHOF, YANOVSKY; C43V, E66M, F85, G66

SALVADORACEAE

*Salvadora persica* - *Mustard tree*, *Fielu* {S}. Young shoots and leaves are eaten in salads or prepared into a sauce. The aromatic fruits are eaten fresh, dried like currants, made into a drink, or used as a substitute for mustard seeds. A vegetable salt, called *kegr*, is derived from the ash of the plant. A fat obtained from the seeds is used as a substitute for vegetable butters in chocolate manufacture. Resins and microfibers of the plant are used for producing a chewing gum. Tropical Africa and Asia. DALZIEL, HEDRICK 1919, MENNINGER, TANAKA, UPHOF, WATT; A79M, L34{YD}

SAMBUCACEAE

*Sambucus caerulea* *Sambucus glauca*

*Sambucus canadensis* - *American elder*, *Canadian elderberry* {PL}. Purple fruits are edible, being high in vitamin C. Usually used in pies, jellies, jams, preserves, drinks, sauces, chutneys, fruit soups, vinegar, pancakes, muffins, or fermented into wine. Unripe fruits and unexpanded flowers are pickled like capers. The flowers are dipped in batter and made into fritters, added to pancakes and muffins to lighten them and provide a distinct flavor, or made into *elder blow* wine. Dried flowers are used for tea. North America, cultivated. ANGIER, FERNALD, GIBBONS 1962 [Re], MEDSGER; A99{DF}, B9M, C94M{PD}, E61, F42M{PD}, F74M{PD}, G40{DF}, H49, I37M, K63G{S}, K89, M69M, N9M, N9M{S}, N84{S}, etc.

CULTIVARS {GR}

**Adams:** Since the distinctions between Adams #1 and Adams #2 are somewhat minor, they are not always propagated as such and are merely sold as Adams. For general descriptions see Adams #1 and Adams #2. A74, B19, B73M, C47, D37, D95, E3, H49, I49G, I74, I78, J2M, J89M, L27M, N24M

**Adams #1:** Fruit clusters and berries exceptionally large, berries somewhat larger than Adams #2. Plant vigorous, productive; only partially self-fruitful, cross-pollination required. Selected from wild bushes. Originated in Union Springs, Nov York by William W. Adams. Introduced in 1926. BROOKS 1972; C61, D69, G16, H65, J63M

**Adams #2:** Fruit cluster exceptionally large, berries somewhat smaller than Adams #1. Plant strong, vigorous; only partially self-fruitful, cross-pollination required; somewhat more productive than Adams #1. Originated in Union Springs, New York, by William W. Adams. Introduced in 1926. BROOKS 1972; *J63M*

**Hidden Springs:** Fruits ripen evenly in the cluster, making them much easier to sort. Hardy to Zone 5. A local selection by Hidden Springs Nursery. The original tree grew 14 feet tall by the site of an old log home. F43M

**Johns:** Fruit clusters and berries large; ripens earlier than Adams. Plant extremely vigorous; only partially self-fruitful, cross pollination is recommended. Originated by the Nova Scotia Experiment Station. B19, B73M, C61, D37, D76, D95, E3, H49, H65, 174, 178, J2M, J61M, *J63M*, L27M, NO, N24M, etc.

**Kent:** Fruit size and quality equal to Adams but ripens 7 to 10 days earlier. Plant vigorous, productive. Open pollinated seedling of Adams. Introduced in 1947 by E.L. Eaton, Canada Department of Agriculture. BROOKS 1972; C58, D76

**Nova:** Fruit large, matures early and uniformly in the cluster; sweeter than Victoria and Kent which it resembles. Plant suckers easily; readily propagated by dormant cuttings of one-year old canes. Open-pollinated seedling of Adams #2. Introduced in 1959 at Kentville, Nova Scotia. BROOKS 1972; A91, B19, C34, *C47*, C58, D37, G71, H49, I49M, 174, L33, *M81M*, N24M

**Scotia:** Fruit large, ripens early and uniformly in the cluster; sweeter than Kent and Victoria which it resembles. Plant suckers easily; readily propagated by dormant cuttings of one-year old canes. Open-pollinated seedling of Adams #2. Introduced in 1959 by the Canada Department of Agriculture, Kentville, Nova Scotia. C58

**Victoria:** Fruit size and quality equal to Adams but ripens 3 to 6 days earlier. Plant moderately vigorous, productive, readily propagated by dormant cuttings. Open-pollinated seedling of Adams #2. Introduced in 1957 by E.L. Eaton, Canada Department of Agriculture Research Station, Kentville, Nova Scotia. BROOKS 1972; C58, N24M

**York:** Fruit cluster heavy; berry large, larger than any named cultivar; in a four year test averaged only 9.9% soluble solids, about 3% less than Johns, Scotia and Victoria; ripens after Adams #1 and Adams #2. Plant very large, more productive than Adams #1 and Adams #2. Introduced in 1964 by the New York State Experiment Station, Geneva, New York. A91, C34, C58, D69, F43M, G16, I49G, I49M, J61M, *J63M*, L27M, L33, NO, N24M

#### *Sambucus chinensis*-*Sambucus javanica*

*Sambucus glauca* - *Blueberry elder*, *Blue elderberry* {S}. The fruits are sometimes eaten raw but they are usually dried before being used in jellies, juices, wines, pies, fruit sauces, sherbets, soups, relishes, etc. Flower clusters are made into fritters or pickles, while the individual flowers can be separated and used in pancakes, muffins, syrups, or vinegars. A tea is brewed from the dried flowers. Western North America. BRYAN [Cul, Re], GIBBONS 1979, HARRINGTON, H., KIRK; A2, A91{PL}, D95{PL}, E15, *E66M*, G59M{PL}, *G66*, 147, J26{PL}, K63G, M35M{PL}, N84

*Sambucus javanica* - *Chinese elderberry*, *Chieh-ku-ts'ao*, *Thudc moi* {S}. Fruits are preserved, used in confectionery, or made into a beverage. Stems, leaves and roots are parboiled and eaten. Tropical Asia. TANAKA, UPHOF; F85, N84

*Sambucus melanocarpa* - *Black elderberry* {PL}. The fruits are used in sauces, pies, muffins, wines, or made into juice. Elderberry juice can be used as a beverage, mixed with other fruit juices and sweetened to taste, or made into *syrup* and jelly. In making jelly, if the juice is mixed half and half with the juice of crabapples or unripe grapes, additional pectin is not needed. Western North America. TURNER 1979 [Re]; J26

*Sambucus mexicana* - *Mexican elder* {PL}. Dried fruits are used in pies, jellies, wines, syrups, etc. Flower clusters are dipped in batter, fried, and sprinkled with sugar. Individual flowers can be shaken from the stems to add flavor and vitamins to pancakes, muffins, and cakes. Southwestern North America. CLARKE [Re], UPHOF; G60, I98M, K15{S}

*Sambucus nigra* - *European elder*, *Black elder* {S}. The fruits are used in wines, chutneys, ketchups, preserves, jams, pies, juices, or made into *pontack sauce*. In Portugal, they are employed for coloring inexpensive port wine. The juice, mixed with equal parts of honey, is used as a spread. Dried flowers are brewed into a sweet tea. Flowers are made into sparkling wines, drinks, fritters, or are added to salads. Shake the blossoms over a salad at the last moment, without washing them, or the fragrance will be lost. Elderflower tea can be used for brewing *kombucha*, the resulting beverage having a delicious champagne-like character. Leaves are used to impart green color to oils and fats. Eurasia, cultivated. GRIEVE [Re], HEDRICK 1919, LARKCOM 1984, LAUNERT, MABEY [Re], MACNICOL, MARCIN, TANAKA, TIETZE; A61M{P£}, A91{PL}, C38{PL}, F35M{PD}, F80, G5{ED}, *G66*, K38, L36M{DE}, *N71M*, 093, P49, R53M, *R78*

*Sambucus pubens* - *American red elder* {S}. The bitter fruits are eaten raw or cooked. They were a common food of the coastal Indians of British Columbia. A tea-like beverage is prepared from the roots North America. TURNER 1979, YANOVSKY; A74{PL}, B74{PL}, F85, *G89M*{PL}, K63G, N84

*Sambucus pubens* f. *xanthocarpa* - *Golden elderberry* {PL}. The golden-yellow fruits are edible. North America. SIMMONS 1972; 174

*Sambucus racemosa* - *European red elder* {S}. Mature fruits, after the seeds have been removed, are a good source of vitamin C and can be used in beverages, wines, and jellies. Eurasia. HELLER, LAUNERT, TANAKA; E15, *E66M*, *G66*, G66{PL}, 147, K38, K63G, K64{PL}, N84, 053M, P49

*Sambucus racemosa* var. *melanocarpa* - *Sambucus melanocarpa*

*Sambucus racemosa* ssp. *sieboldiana* - *Sambucus sieboldiana*

*Sambucus sieboldiana* - *Niwatoko* {PL}. Young leaves and buds are boiled and eaten as a vegetable or used as a substitute for tea. Japan, Korea. TANAKA; D95

#### SANTALACEAE

*Eucarya acuminata* - *Quandong*, *Native peach* {S}. When fully ripe, the thin, acid flesh of the fruit is eaten raw, used as a pie filling, or made into prized jams, jellies, sauces, syrups and chutneys. It is very rich in vitamin C. The flavor is said to improve when the fruits are dried and stored. Seed kernels, having 60% oil content and 25% protein, are roasted and eaten. Australia. CHERIKOFF [Re], CRIBB, MENNINGER, ROBINS [Re], ROSENGARTEN; A79M, C95, N79{PL}, N79{PR}, N79{ED}, N79M, N84, 032M{ED}, 033, PIG, P5, P17M, P38, R15M, R33M, R47, S59{PL}, S92, etc.

#### CULTIVARS {GR}

**Frahn's Parinqa Gem:** Exceptionally high quality fruit with strong gourmet market acceptance. Rich, cherry-red skin; light-colored flesh; delicious flavor free of "meaty" aftertaste; small, free stone. Excellent size, shape, texture and flesh thickness. Vigorous, compact, non-suckering tree adapted to high density plantings. Bears regular, heavy crops, with production increasing even after 17 years of age; precocious; disease resistant. Selected by Dudley and Lyla Frahn. N79

*Eucarya spicata* - *Australian sandalwood* {S}. The edible seeds are somewhat larger than the quandong and are enclosed in a hard shell that is somewhat thinner. They are highly regarded both for flavor and ease of extraction. Australia. MENNINGER; N79M, N84, 033, P5, P17M, P38, R15M, R33M, S92

*Leptomeria acida* - *Currant bush* {S}. The acid fruits are sometimes eaten raw, otherwise they are said to make uncommonly fine jellies, preserves and salad dressings. Australia. CHERIKOFF [Re], CRIBB, UPHOF; F85

*Santalum acuminatum* - \**Eucarya acuminata*

*Santalum album* - *White sandalwood* {S}. The bark is sometimes chewed instead of betel nuts. In India, sandalwood essence adds a delicate fragrance to syrups, frappees and *burfi*, a traditional milk sweet. An essential oil, distilled from the heartwood and roots, is used as a flavoring in commercial chewing gum, bakery products, ice cream, and candy. Tropical Asia. DEVI [Re], MORTON 1976, SCHERY, TANAKA; A79M, E14T{DF}, E21D{PL}, F68T, F85, F86G{DF}, L34{DF}, N84, 093, P5, P17M, P38, Q12, Q18, Q45M, Q46, etc.

*Santalum lanceolatum* - *Lanceleaf sandalwood, Bush plum* {S}. The edible fruits are deep blue or blue-black when ripe, smaller than *Eucarya acuminata*, and with sweetish flesh that is of a very agreeable taste. Australia. CRIBB; N84, P17M

*Santalum spicatum* - *Eucarya spicata*

### SAPINDACEAE

*Blighia sapida* - *Akee, Vegetable brain* {PL}. Ripe, fleshy arils are eaten raw, fried in butter, curried, or used in filled pastries, soups, stews, souffles and omelettes. In Jamaica, they are traditionally boiled with salted codfish, onions, and tomatoes. The underripe or overripe aril and the seeds are toxic. Flowers are used in the preparation of an aromatic water. Tropical Africa, cultivated. BENGHIAT [Pre, Rs], HAWKES [Re], IRVINE 1952, JOHNS [Cul], MORTON 1987a, ORTIZ 1973 [He], POPENOE, W. 1920, RICHARDSON, M. [Re]; E29, F85{S}, I77G, J17, M17, N84, 019{S}

*Cubilia blancoi* - *Kubili* {S}. Nutritious seeds are eaten boiled or roasted, being of excellent quality. Contains 5.2% protein, 1.92% fat, 23.13% starch, and 18.83% other carbohydrates. The leaves are used as a vegetable. Indonesia-Philippines. CORONEL 1984, MENNINGER, UPHOF; X62

*Dimocarpus longan* - *Longan* {PL}. The aril of the fruit is whitish, translucent, somewhat sweet but not as aromatic or flavorsome as the lychee. It is eaten out of hand, dried, preserved in syrup, cooked in sweet and sour dishes, or made into a liqueur. The black, smoky dried fruits are used in slow-cooked soups, or are made into a refreshing beverage. China, cultivated. CHANG, W. [Cul], GROFF, MORTON 1987a, POPENOE, W. 1920 [Cu, Pro], SCHNEIDER 1986 [Cul, Re], STURROCK; A41G, B60M{PR}, C27G{DF}, E2M{DF}, E21D, E29, E47M{DF}, F85{S}, G0{DF}, G99M{PR}, H53M{S}, I77G, L21T{DF}, N84{S}, P38{S}, Q93, etc.

### CULTIVARS {GR}

**Bai Dum:** Recently introduced into Hawaii where it produces high quality fruits regularly and is recommended for general planting. Originated in Thailand, where the highest quality longan varieties have been developed. E8M

**Biew Kiew:** Large, crisp fruit, somewhat dry. Quality excellent. Hangs on the tree well without loss of flavor. Tree an irregular bearer; somewhat slow to come into production. Originated in Thailand. GLOWINSKI; E8M, 183M, J22, Q93

**Chompoo:** (Pink Flesh) Large, high quality fruit with a faint pink tinge in the flesh. It is not canned because of this coloration, pure white flesh being preferred. Relatively small seed. Matures mid July to early August. Originated in Thailand. E8M, J22, Q93

**Pang:** (Red Stem) Heavy bearing cultivar with fair quality fruit but is not particularly crisp. Matures mid July to early August. Originated in Thailand. Q93

**Fortune Eye:** Recently introduced into Hawaii where it produces high quality fruits regularly and is recommended for general planting. Originated in Taiwan. E8M

**Haew:** (Water Chestnut) Large fruit with firm flesh of excellent quality. A good canning cultivar, but it has a pronounced alternate bearing habit. Matures mid August to early September. Popular in the markets of Thailand where it originated. GLOWINSKI; Q93

**Isau:** Small, round fruit, about 1 inch in diameter; medium-green, thin, brittle shell covered with small protuberances, easily opened; translucent flesh, about 1/4 inch thick, very sweet and juicy with a musky or melon-like flavor reminiscent of a very sweet watermelon. Tolerates light frost and flooding; requires wind protection. TANKARD; N84{S}, 019

**Kakus:** Delicious longan-like fruit, similar in appearance to Isau but with a yellow or yellow-brown pebbly shell, sometimes slightly larger. The sweet, musky flesh is somewhat less juicy than Isau but has a more distinctive, smokey flavor, somewhat melon-like. Tolerates light frost and flooding. Large, attractive foliage TANKARD; 019

**Kohala:** Large to very large fruit; skin brownish; flesh aromatic, sweet and spicy, quality very good to excellent; seed small. Tree produces fairly good crops in mid-summer. The number one commercial cultivar in Florida and Australia. Introduced into Florida from Hawaii by William F. Whitman in 1954. MORTON 1987a, WHITMAN; D57, E8M, E29, G2M, H53M, 183M, J17, J22, M17, N53M, N84, Q93

*Diploglottis australis* + *Diploglottis cunninghamii*

*Diploglottis cunninghamii* - *Native tamarind* {S}. The orange-red arils of the fruits are juicy, sub-acid, pleasantly flavored, and are eaten out of hand, cooked with fish and chicken, or made into preserves, jams, jellies and sauces. Excellent when combined with quandong. Australia. CHERIKOFF, ROBINS [Cul, Re], UPHOF; N84, P38

*Dodonaea viscosa* - *Switch-sorrel, Native hops* {S}. The bitter fruits are used as a substitute for hops in making yeast and beer. Leaves are chewed as a stimulant. Seeds are also edible. Tropics, Subtropics. CRIBB, FCK, F., TANAKA; C9M, D87G{PL}, F63M, N84, 093, P5, Q15G, Q32, R15M, R33M, S92

*Euphoria didyma* - *Nephelium glabrum*

*Euphoria longan* - \**Dimocarpus longan*

*Lecaniodiscus cupanioides* - {S}. The sweet pulp of the fruit is eaten. Fragrant flowers are used in some parts of Africa for the preparation of an aromatic water. Tropical Africa. DALZIEL, INGLET, UPHOF; F85

*Litchi chinensis* - *Lychee, Litchi* {S}. Fleshy arils are sweet, juicy, sub-acid, and have a delicious flavor somewhat reminiscent of Muscat grapes. They are eaten fresh, dried, spiced, pickled, canned in syrup, used in jams, sauces, fruit salads, ice cream, sherbets, or made into wine. The dried fruits, called *lychee nuts*, have a distinctive smoky flavor and are widely eaten in China, especially at New Year celebrations. Dried tea leaves are soaked in lychee juice, dried again in the sun, then made into a fragrant tea which releases the lychee flavor. Lychee honey, of excellent flavor, is an important commercial honey in China and other parts of Asia. China, cultivated. CHANG, W. [Cul], CRANE 1975, GROFF, LEE, G., MORTON 1987a [Cu], POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], ROSENGARTEN, SCHNEIDER 1986 [Cul, Re]; A41G{PL}, B60M{PR}, C9M, C27G{ffi}, E13G{PR}, E29{PL}, E47M{DF}, F85, G99M{PR}, H44M{ED}, H53M, K18M{ED}, L54{PR}, L88D{ED}, N40{PR}, N84, P38, Q12, Q46, etc.

## CULTIVARS {GR}

**Bengal:** Large, round to heart-shaped fruit, borne in clusters of 8 to 30; skin deep pink; flesh firm, rose-scented, flavor excellent; does not leak juice when peeled; seed pointed, hilly developed in most fruits, smaller in proportion to flesh than those of Brewster; ripens in June. Tree large, very vigorous, more spreading than Brewster; adapted to alkaline soils. Introduced into Florida in 1929 from a seedling received from Calcutta, India. BROOKS 1972, MORTON 1987a; Q93

**Brewster:** Medium to large, conical or wedge-shaped fruit, borne in clusters of 6 to 20; skin bright red, spiny; flesh soft, more acid than Kwai Mi, seeds often fully formed and large; ripens in June and July. Tree large, vigorous with wide, strong, reinforced branch crotches; leaflets flat, tapering to a sharp point. Originated in Florida. MORTON 1987a; D57, E29, G2M, H53M, I77G, I83M, /77, N84, Q93

**Farwell Ranch:** Large fruit with excellent flavor. Resembles Brewster, but with larger leaf and fruit. Tree more compact than Brewster; a reliable bearer of moderate to heavy crops. Originated in Vista, California by Bill Farwell. I83M

**Groff:** Small, heart-shaped fruit, borne in clusters of 20 to 40; skin dull red; has a higher proportion of flesh to seed than other clones growing in Hawaii; ripens August to September. Tree upright; bears in Hawaii where other cultivars fail due to poor flower initiation. Probably a seedling of Haak Yip. Originated at the Poamoho Branch Station, Hawaii Agricultural Experiment Station, Honolulu. Introduced in 1952. BROOKS 1972; E8M, I83M, J22

**Haak Yip:** (Haak Ip, Black Leaf) Fruit broad-shouldered, small to medium in size, borne in clusters of 15 to 25; skin medium-red, sometimes with green tinges, soft and thin; flesh is occasionally pinkish, crisp and sweet; ripens in June and July. Tree slow growing, compact; branches fragile, spreading; leaves dark green, long, slightly curled, pointed. Considered one of the best of the Chinese "water" lychees. GROFF, MORTON 1987a; Q93

**Heuna Lai:** (Hsiang Li, Fragrant Lychee) Fruit small; skin deep red in color, very rough and with many prickles; flesh very fragrant and delicious and is said to be even better than Kwai Mi, seed very small; prone to splitting; ripens late. Tree upright, with leaves that tend to grow upward. Originated in China. GROFF; Q93

**Kaimana:** Large, nearly heart-shaped fruit; skin deep red, attractive; flesh whitish, translucent, juicy, sweet, of a delicious subacid flavor; round, medium-sized, glossy brown seed; ripens May to July; resembles Kwai Mi but twice as large. One of the best flavored lychees, with no musky aftertaste. Vigorous, spreading tree with long, drooping leaves and branches; bears heavy crops regularly. Released by the University of Hawaii in 1982. MORTON 1987a; E8M, J22

**Kwai Mi:** (Cinnamon Flavor) Small, somewhat heart-shaped fruit, borne in clusters of 15 to 30; skin very rough, red tinged with green on the shoulders; flavor very sweet and fragrant, seeds very small and dry; ripens May to June. The Chinese consider this fruit to be light, or like lean meat in comparison to the No Mai Chee, which is said to be heavy or iatty. For this reason they say Kwai Mi can be eaten in greater quantity. Large, spreading tree with brittle branches. Originated in China. GROFF; E8M, I83M, J22

**Nam Tao Sing:** (Roger's No Mai Chi) Large, rounded to ellipsoid fruit, borne in clusters of 10 to 25; skin bright red, brittle; flesh solid and crisp, sweet, fragrant, dry and clean, quality excellent; seeds often small and shriveled. Tree slow growing, spreading. One of the best cultivars for drying. This is a late maturing cultivar of No Mai Chi. Q93

**Salathiel:** Small, red to yellow fruit of good flavor. Clean, dry flesh with the majority of seeds being of the "chicken tongue" type. Low in vigor when young. Best suited to the southern reaches of lychee culture where it yields well and consistently. Ripens late. GLOWINSKI; Q93

**Seong Sue Wai:** (Gee Kee) Small, rounded fruit; skin slightly rough with many dark spots, red; flesh sweet, lacking in aroma, easily separated from the seed, seeds mostly small; quality medium to good. Leaflets small, long, oval in shape. Q93

**Tai Tso:** (Ta-Tsao, Large Crop, Mauritius) Medium-sized, somewhat egg-shaped fruit, borne in clusters of 15 to 30; skin rough, bright red with many small dots; flesh firm, crisp, sweet, faintly streaked with yellow near the large seed; ripens May to June. Some of the juice leaks when the fruit is opened. Tree vigorous, spreading; a consistent bearer; cold-sensitive; susceptible to limb breakage. Originated in China. GROFF; D57, E29, G2M, I83M, /77, N53M, N84, Q93

**Wai Chee:** (Wai Chi, Sweet Cliff) Small, round fruit, borne in clusters of 4 to 8; skin yellow overlaid with pinkish-red, medium smooth, with few dots or markings; flesh somewhat watery, seeds large, quality good; ripens very late. Tree compact, upright, slow growing; a regular bearer but susceptible to wind damage; recommended for Florida; needs a cooler climate than that of coastal north Queensland. Originated in China. MORTON 1987a; I83M, Q93

*Melicoccus bijugatus* - *Mamoncillo*, *Spanish lime*, *Genipa* {PL}. Pulp of fruits is juicy, aromatic, somewhat sweet, with a pleasant acid flavor. Usually eaten out of hand, or used in pies, jams, jellies, marmalades, and cooling drinks. The starchy seeds are roasted and eaten as a substitute for cassava. Fresh fruits are sometimes available at ethnic markets. Tropical America, cultivated. DUKE, HEDRICK 1919, MENNINGER, MORTON 1987a [Cu, Pro], POPENOE, W. 1920; E29, F85{S}, I77G, /77, N84{S}, S97M

## CULTIVARS {SC}

**Key West:** Large green fruit, 1 1/2 inches in diameter, 14 fruit to the pound; borne in bunches like grapes. Quality excellent with a delicious, slightly acid/sweet flavor. Introduced from Key West, Florida by William F. Whitman. WHITMAN; T73M

**Montgomery:** (No. 4) Large fruit with 51.5% pulp, of good flavor; sometimes 18% of fruit has 2 seeds. Tree bears heavily in most years. Originated in Coral Gables, Florida. First evaluated in 1976 by Dr. Carl Campbell of the University of Florida. MORTON 1987a; T73M

**Newcomb:** (No. 3) Good sized fruits with 48.2% pulp, of good flavor. Tree bears heavily in most years. Originated in Key West, Florida by R.G. Newcomb. First evaluated in 1976 by Dr. Carl Campbell of the University of Florida. MORTON 1987a; U27T

**Queen:** (No. 2) Large fruit with 55.6% pulp, only fair in flavor. Tree moderately vigorous. Originated in Key West, Florida by William F. Whitman. First evaluated in 1976 by Dr. Carl Campbell of the University of Florida. MORTON 1987a; T73M

*Nephelium glabrum* - *Philippine ruyuan*, *Mata kuching* {PL}. The aril of the fruit is sweet and edible. It is thin, juicy, and translucent. Tropical Asia. BURKILL, TINGGAL; E29, N84

*Nephelium lappaceum* - *Rambutan* {S}. The sweet, juicy, translucent flesh of the fruits is excellent eaten out of hand. Or it can be stewed, preserved, used in jams, jellies, and compotes, or canned in light syrup, either as whole fruits or stuffed with pineapple. The seeds are roasted and eaten. They also yield an edible oil. Malaysia, cultivated. ALMEYDA 1979, GARNER [Pro], KUNKEL, MORTON 1987a [Cu, Pro], POPENOE, W. 1920; E8M{GR}, F85, K8, K8{PL}, M17{PL}, N84, 019, 093, R78M

## CULTIVARS {GR}

**Jit Lee:** (Deli) Leading commercial cultivar in Singapore. Originally from Indonesia. Q93

**R 134:** Large fruit with firm flesh. Early season cultivar, coming into bearing earlier than others. Originated in Malaysia. J22, Q93

**R 156:** (Muar Gading) Unique yellow fruited cultivar. Originated in Malaysia. Q93

*Nephelium litchi* - *Litchi chinensis*

*Nephelium mutabile* - *Pulasan* {S}. The delicious flesh of the fruits is less juicy than that of the rambutan, sweeter, and of less sprightly flavor. It is eaten raw or used in jams and compotes. Boiled or roasted seeds are used in the preparation of a cocoa-like beverage. They also yield a cooking oil. Malaysia to the Philippines, cultivated. KUNKEL, MORTON 1987a, POPENOE, W. 1920; F85, J22{PL}, K8{PL}, N84, 019

#### CULTIVARS

**Meritam:** Fruit resembles a rambutan, but is hairless, being instead covered with small protuberances; softer, juicier and more subacid than a rambutan while remaining quite sweet and refreshing. More flavorsome than lychees, being somewhat reminiscent of sweet, purple grapes. The skin is either red or green. Vigorous tree, resembles a rambutan; produces fruit in clusters; requires a tropical environment. TANKARD, *Baccaurea motleyana*; 019

*Nephelium* sp. - *Sibau* {S}. Sibau is a small, dark red, rambutan-like fruit with a pleasant subacid flavor. The tree has large pinnate leaves, a more upright habit than the rambutan, and is ornamental. Grows well in North Queensland, Australia. Borneo. TANKARD; 019

*Pappea capensis* - *Jacket plum*, *Wild plum* {S}. The fruits have pleasant tasting red flesh and are eaten raw, made into beverages and jellies, or fermented into vinegar. Seeds are the source of an edible oil. Southern Africa. FOX, F., HEDRICK 1919, TREDGOLD; N84

*Paullinia cupana* - *Guarand* {DF}. Roasted, pounded seeds are pressed into a paste which is manufactured into carbonated beverages and a stimulating tea, containing 4.88% caffeine. The sweetened paste, called *Brazilian chocolate*, is used in soft drinks, candy, and for flavoring liqueurs. Guarana soda is sometimes available in specialty stores that sell Latin American foods. One of the ingredients—along with figs and chickpeas—of *Wake Up*, a coffee substitute. Tropical South America, cultivated. MENNINGER, MORTON 1976, SCHERY, UPHOF, VAN STRATEN; E14T, F37T, F86G, GO, G73, G84, 181M, K18M, L24G{PD}, L34, M15M, N7D

*Paullinia pinnata* - *Apgi*, *Barbasco* {S}. The aril and the sweet, powdery pulp of the fruit are sometimes eaten. Flowers are also edible. Leaves are consumed in the Congo. The roots are used as chewsticks. Tropical America. CORREA, DALZIEL, DUKE, IRVINE 1961, MARTIN 1975; F85

*Paullinia sorbi*Us - *Paullinia cupana*

*Pometia pinnata* - *Fijian longan* {S}. The pulp of the fruit is semi-transparent, white, juicy, and sweet. It is usually eaten out of hand. Oily seeds are eaten after roasting or boiling. Malaysia to Pacific Islands. MAY, R., MENNINGER, TANAKA, WESTER; F85, 019, N84

#### CULTIVARS

**Whitman:** Produces 2 1/2 inch diameter fruit hanging in clusters like grapes. Quality of fruit fair. Tree everbearing. WHITMAN; U27T

*Sapindus mukorossi* - *Chinese soapberry*, *Reetha* {S}. The seeds are crushed and boiled to make a liquid which is added to certain types of Indian milk sweets known as *rasgullas*, the reetha water providing a frothy quality to the dessert. In India they have also been employed for bleaching cardamom seeds, and are reported to improve the flavor as well as the color of the spice. Tropical Asia. PARMAR, P. [Re], WATT; D95{PL}, G66, 174, N73{PL}, N84, P38, Q12, Q18, Q45M, Q46, R50{PL}

*Schleichera oleosa* - *Malay lacttree*, *Koosambi* {S}. Young leaves and shoots are eaten raw, in soups, or steamed and served with rice or fish. Unripe fruits are pickled, ripe ones are eaten raw. The seeds are the source of *macassar oil*, sometimes used for culinary purposes. Southern Asia. OCHSE, TANAKA, UPHOF, WATT; F85, Q46

*Schleichera trijuga* - *Schleichera oleosa*

*Talisia olivaeformis* - *Yellow genip*, *Cotopriz*, *Tinalujo* {S}. The fruit is the size and shape of an olive, green or yellow on the outside, with orange-red pulp of somewhat acid but agreeable flavor. It is eaten out of hand or used for jellies. Tropical America. HEDRICK 1919, MARTIN 1987, WILLIAMS, L.; E29{PL}, F85, N84

*Xanthoceras sorbifolium* - *Shiny-leaf yellowhorn*, *Northern macadamia* {PL}. Flowers and leaves are used for food. The nut is enclosed in a shell similar to a chestnut, is the size of a pea, and is quite sweet. The flavor is thought by some to be reminiscent of a macadamia nut. Northern China. HEDRICK 1919; B74, C9, D95, E63, E87, F43M, F80{S}, G66{S}, H49, 174, J61M, K38{S}, K63G{S}, NO, N24M, N84{S}, etc.

#### SAPOTACEAE

*Achras sapota* - *Manilkara zapota*

*Argania sideroxyylon* - *Argania spinosa*

*Argania spinosa* - *Argan tree*, *Morocco iron-wood* {S}. Seed kernels are the source of a yellow oil served with bread, roasted barley (*sesometa*), or other foods, and also used in cooking like olive oil. It has an excellent toasted flavor somewhat reminiscent of walnut or hazelnut oil. In Morocco, argan oil is mixed with almond paste and honey to make a delicious almond butter known as *amalou*, or kneaded with grilled wheat germ and honey to form a breakfast gruel called *zematar*. Contains 80% unsaturated fatty acids. North Africa. MORTON 1987b [Nu, Pro], UPHOF, WOLFERT 1973 [Cui, Re]; F85

*Bassia latifolia* - *Madhuca indica*

*Bassia longifolia* - \**Madhuca longifolia*

*Butyrospermum paradoxum* ssp. *parkii* - *Shea butter tree* {m}. Seeds are the source of *shea butter* or *galam butter*, eaten by the natives. Also used as a cooking fat and oil, as a substitute for cacao butter, or for manufacturing margarine. Pulp of the fruit is sometimes eaten. Tropical Africa. DALZIEL, MENNINGER, UPHOF, WILSON, E.G.; GO

*Butyrospermum parkii* - *Butyrospermum paradoxum* ssp. *parkii*

*Calocarpum mammosum* - \**Pouteria sapota*

*Calocarpum sapota* - \**Pouteria sapota*

*Calocarpum viride* - *Pouteria viride*

*Chrysophyllum albidum* - *White star apple* {S}. The fruits have a pleasant, sweet-acid flavor and are often sold in local markets. Tropical Africa. DALZIEL, IRVINE 1961; F85

*Chrysophyllum cainito* - *Star apple*, *Caimito* {PL}. The sweet fruits are eaten fresh, parboiled, made into preserves, or eaten as a dessert called *matrimony*, which is prepared by scooping out the inside pulp and mixing it with orange juice, milk and spices. When cut transversely, the interior section of the fruit presents a star-like appearance, hence the common name. Both purple and green fruited types are known. An emulsion of the slightly bitter seed kernels is used to make imitation *milk-of-almonds*, or nougats and other confections. West Indies, cultivated. BENGHIAT [Cul, Re], GARNER [Pro], JOHNS [Pre], MORTON 1987a [Cu], POPENOE, W. 1920, RICHARDSON, M. [Re], STURROCK, WALSH [Re]; A41G, A79M{S}, D57, E29, F85{S}, I77G, J17, J22, N84{S}, 019{S}, Q93, R78M{S}

#### CULTIVARS {GR}

**Haitian:** Fruit purple, well-formed, of high quality; ripens from late January to the end of June. Tree heavy yielding. In Florida, grafted and air-layered trees have borne well even prior to reaching 10 feet in height; seedlings have performed poorly. Grown commercially in Australia. Discovered in Port-au-Prince, Haiti by William F. Whitman. Introduced in 1953. MORTON 1987a, WHITMAN; E8M, J22, Q93

**Philippine Gold:** (Manila Gold) Unique, rusty greenish-gold cultivar that is popular in the Philippines, where it originated. E8M, Q93

**Weeping:** Fruit tennis ball size, purple, of very good quality. Originated as a seedling of Haitian. Distinguished by its weeping or drooping habit. WHITMAN; Q93

*Chrysophyllum lacourianum* - *Bambu* {S}. The dark-red to light orange, apple-shaped fruit is highly esteemed by the natives who poke a hole in one end and suck out the juicy, sticky, sweet to subacid pulp. Sold in local markets. Tropical Africa. DANFORTH; Y40

*Chrysophyllum oliviforme* - *Satinleaf*, *Caimitillo*, *Olive plum* {S}. The lavender pulp of the small, dark-purple fruit is sweet, melting, has a good flavor, and can be used to make an excellent jelly. West Indies. KENNARD, MORTON 1977, STURROCK; D87G{PL}, F85, N84, P38

*Dumoria heckelii* - *Ueghemella heckelii*

*Lucuma nervosa* - *Pouteria campechiana*

*Lucuma obovata* -> *Pouteria lucuma*

*Madhuca indica* - *Butter tree*, *Mahwa*, *Mowra*, *Illipe nut* {S}. The fleshy flowers are rich in nectar and are dried and consumed, either raw or cooked. They are also used directly as a sweetener, as a source of sugar, and are fermented into an alcoholic beverage. Both the ripe and unripe fruit is eaten. An edible oil is expressed from the seed which is used as a substitute for *ghee*. India. BURKILL, HEDRICK 1919, MACMILLAN, MACNICOL, MENNINGER, TANAKA, WATT; Q46

*Madhuca latifolia* - *Madhuca indica*

*Madhuca longifolia* - *Indian butter tree*, *Mee* {S}. Seeds are the source of *illipe butter*, used in margarine and chocolate, and to adulterate *ghee*. The fleshy edible flowers are eaten dried, roasted, or made into jelly, sugar and wine. Leaves are also edible. Southern Asia. HEDRICK 1919, MACMILLAN, MARTIN 1975, TANAKA, UPHOF; F85

*Manilkara hexandra* - *Khirmi* {S}. The fruit is eaten fresh or dried, being sweet but somewhat astringent. Seed kernels yield a pale yellow edible oil known as *rayan oil*. The bark is added to palm sugar to inhibit fermentation. Also made into a wine known as *rajadane*. Often used in India as a rootstock for *Manilkara zapota*. Southern Asia. BURKILL, CAMPBELL-PLATT, GARNER, MOLLISON, SINGH, S., WATT; N84, P5, Q46

*Manilkara kauki* - *Sawo maneela*, *Sawo kecil* {S}. The small, reddish-brown fruits have creamy-white flesh, are quite sweet when ripe and are eaten raw, cooked or used for making syrup. Southeast Asia to Australia. CRIBB, EISEMAN, HEDRICK 1919, RIFAI; T71

*Manilkara zapota* - *Chico sapote*, *Sapodilla*, *Naseberry* {S}. When fully ripe, the flesh of the fruit is soft, sweet, and delicious with the flavor of pears, cinnamon, and brown sugar together. It is eaten fresh, preserved, dried, in custards, sherbets, ice cream, pies and muffins, or made into syrup, jams, and vinegar. The very young, leafy shoots are eaten raw or steamed. Stems are the source of a gummy latex, *chicle*, used as a base for chewing gum. Tropical America, cultivated. CUSUMANO [Cul, Re], GARNER [Pro], MORTON 1987a [Cu], OCHSE, POPENOE, W. 1920 [Cu, Pro], RICHARDSON, M. [Re], STURROCK, UPHOF; A41G{PL}, A79M, B60M{PR}, D57{PL}, E29{PL}, G99M{PR}, I12{PL}, I83M{PL}, J22{PL}, L54{PR}, N84, 019, 093

CULTIVARS {GR}

**Alano:** Very sweet, top-shaped fruit with excellent texture and flavor. Has a richer flavor than most other smooth-textured cultivars. Self-fertile, very productive trees with limber branches. Local Hawaiian selection. Originated as a seedling of the Philippine cultivar *Ponderosa*. E8M, N53M

**Cricket Ball:** (Calcutta Large) Very large, roundish fruit with crisp, gritty, granular flesh; fairly sweet but not distinctive in flavor. Tree somewhat of a shy bearer; does well in arid climates and elevations of up to 1,000 feet. Originated in India. BOSE 1990, MORTON 1987a; RO, R50

**Hasvf:** Very large, long, top-shaped fruit with slight pink hues in smooth areas of the skin; light brown and pink flesh, melting, aromatic, of delicate flavor. The standard of excellence to which all other Yucatec cultivars are compared. Very upright tree with moderate to good production. Number one commercial cultivar in the Mexican states of Yucatan and Campeche. N53M

**Kalipatti:** Small, oval-shaped fruits; sweet, mellow flesh of excellent quality; mild aroma; few seeds, only 1 to 4; ripens in winter. Spreading tree; bears fruits singly. One of the leading cultivars in the Indian states of Maharashtra, Gujarat, and north Karnataka. BOSE 1990; RO, R50

**Molix:** (Curly) Medium-sized, oblong fruits; good, pear-like texture; very good flavor. Ripening season is said to vary from that of *Hasya*. Heavily productive tree with brittle branches and very wavy mature leaves; plain, light green new growth. Originated in Yucatan, Mexico. N53M

**Morena:** Very similar to *Molix* but with less wavy leaves. Good to excellent flavor and texture. Newest selection from *Oxkutzcab*, Yucatan. Selected because it is thought to be less brittle than *Hasya*, which is susceptible to split branches. E29, N53M, N84

**Oxkutzcab:** Very distinct cultivar. Very large, roundish fruit; speckled, light-colored skin; flesh brown, moderately grainy, of excellent flavor. Heavily productive tree with relatively sturdy branches. New growth bronzy-brown underneath and pink above. Originally from the Conafruit Experiment Station near *Oxkutzcab*, Yucatan. N53M

**Ponderosa:** Large, oblong fruit; thin, light-brown skin with splashes of red on the exposed side; melting, smooth-textured flesh, very sweet and juicy. Does not soften uniformly. Upright, pyramidal tree; tends to be a shy bearer when isolated from other varieties. Originated in the Philippines from seed introduced from Buitenzorg, Java in 1912. CORONEL 1983; E8M, Q93

**Prolific:** Round-conical fruit, 2 1/2 to 3 1/2 inches long and broad; skin scurfy, brown, becoming nearly smooth at maturity; flesh light pinkish-tan, mildly fragrant, texture smooth, flavor sweet, quality good. Tree bears early, consistently, and heavily; only moderately susceptible to rust. Originated in Homestead, Florida. Introduced in 1951. BROOKS 1972, MORTON 1987a; Q93

**Russell:** Large, roundish fruit, 3 to 4 inches in diameter and length; skin scurfy brown with gray patches; flesh pinkish-tan, shading to greenish-tan under the skin, mildly fragrant, texture somewhat granular; flavor rich and sweet. Tree slower to bear and less productive than *Prolific*. Originated in Islamorada, Florida. Introduced in 1935. BROOKS 1972, MORION 1987a; T73M{SC}

**Sawo Manila:** (Sao Manila) Medium to large, egg-shaped fruit; very sweet and juicy, of fine texture. Fruits mature in 190 days, and ripen 3 to 5 days after picking. Spreading, very prolific tree. Originated in the Philippines. CORONEL 1983, MORTON 1987a; Q93

**Tikal:** Fruit elliptical to conical, much smaller than *Prolific*; skin light brown, smooth; light tan flesh, of smooth texture and excellent flavor; ripens very early, December to February or March. Bears regularly and well, about 350 pounds per year. Selected in Florida from seeds originating in Yucatan, Mexico. MORTON 1987a; N53M

*Mimusops caffra* - *Coast red-milkwood*, *Tinzol* {S}. When ripe, the fruits are red to purple and have sweet, starchy pulp and an agreeable flavor. They are eaten raw or made into a beverage. Southeastern Africa. FOX, E, VON REIS; F85

*Mimusops elengi* - *Spanish cherry* {S}. The fruits are yellow when ripe, somewhat sweet, and are eaten raw, preserved, or pickled. Seed kernels yield an edible oil. The bark is used in the distillation of *arrack*. Tropical Asia, cultivated. BREMNESS, BURKILL, HEDRICK 1919, TAN\KA, WATT; F85, G66, N84, P5, P17M, Q12, Q18, Q45M, Q46, R50{PL}

*Mimusops hecke* *Ui* - *Tieghemella hecke* *Ui*

*Mimusops hexandra* - *Manilkara hexandra*

*Mimusops kauki* - *Manilkara kauki*

*Mimusops obovata* - *Red milkwood*, *Beach sapote* {S}. The fruits are eaten. They are smooth, orange-red or yellow when ripe, and usually have one seed. Southern Africa. FOX, E; N84, P38

*Pouteria caimito* - *Abiu* {S}. A bright yellow fruit with flesh that is whitish, translucent, somewhat sweet, and of a jelly-like consistency. When fully ripe, it is eaten out of hand or used in sherbets and ice cream. It goes well in fruit salads, particularly those containing orange slices to provide acidity, which the abiu lacks. Fruit that is not completely ripe may contain a milky latex that sticks to the lips. Tropical South America, cultivated. MARTIN 1978a, MORTON 1987a, POPENOE, W. 1920; J22{PL}, K8{PL}, M17{PL}, N84, 019, P38, Q93{PL}, R78M

#### CULTIVARS {GR}

**Grav's No. 1:** Medium to large, round fruit of good flavor and quality; weight about one pound; contains one or more seeds. Tree prolific. Originated in Australia where it is grown commercially. WHITMAN; E8M, Q93

**Z1:** Fruit has the shape of a Lisbon lemon, is marginally better flavored but smaller than Z2 and Z3. Tree a very heavy bearer, 200 hundred fruit were picked from a tree 6 feet in height. Introduced by Joe Zappala, Queensland, Australia. Q93

**Z2:** Fruit elongated, approximately one pound in weight, with excellent flesh to fruit recovery; flavor and quality good. Tree a good producer. Introduced by Joe Zappala, Queensland, Australia. E8M, Q93

*Pouteria campechiana* - *Canistel*, *Egg fruit*, *Yellow sapote* {PL}. Pulp of the fruit is yellow to orange, soft and mealy in texture, and resembles in appearance the yolk of a hard-boiled egg. The flavor is very rich and sweet, somewhat like that of a baked sweet potato. Excellent to eat out of hand or it can be used in cakes, pies, custards, puddings, fruit cups, ice cream, and milkshakes (*eggfruit nog*). Tropical America, cultivated. JOHNS [Cu], MARTIN 1978a, MORTON 1987a [Cu, Pro], POPENOE, W. 1920, RICHARDSON, M. [Re], STURROCK; B60M{?R}, D57, E29, G2M, 112, 183M, K8, K8{S}, M17, N84{S}, 019{S}, P38{S}, S97M

#### CULTIVARS {GR}

**Ross:** Small to medium-sized fruit. Probably the best tasting of all canistels. May be a hybrid. Introduced into Florida from Costa Rica, by William F. Whitman. WHITMAN; I77G, 019{S}

**Saludo:** An improved type with large, round fruits and moist flesh. The trees appear to have good wind tolerance. E8M

*Pouteria hypoglauca* - *Cinnamon apple*, *Pan de la vida* {PL}. The sweet fruits are eaten. They are highly esteemed in El Salvador, where numerous valuable seedling forms occur. Central America. MARTIN 1978a; E29, N84

*Pouteria lucuma* - *Lucmo*, *Lucuma* {PL}. The fruits are similar to the canistel but are more rounded, are green to brownish-green in color, and the sweet pulp is firm even in fully ripened fruit. In Peru, besides being eaten fresh, the ripe fruit is made into a meal or flour that can be mixed with wheat flour, commeal, or starch and used in the preparation of many drinks and desserts. Lucmo meal adds a strong odor and color to ice creams, sherbets, puddings, punches and milkshakes. Andean South America. MARTIN 1978a [Cu], MORTON 1987a, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1920, UMANA+MURRAY [Re]; D57, 183M,

L55J{S}, N84{S}, P38{S}, Q49M, Q49M{S}, S97M

#### CULTIVARS {SC}

**Kona:** Large, roundish to top-shaped fruit, 4 inches long and 3 inches across; smooth, brownish skin; sweet, deep-yellow flesh, soft and moist, dessert quality excellent. Does well in southern California where it ripens from November to April. Originated in Kona, Hawaii. T49M

**Montero:** Large, round to broadly oval fruit; skin deep brownish-green, heavily marked or overspread with russet; flesh yellow, dry and mealy, very sweet, flavor good. Ripens early, approximately October through December in California. T49M

**Peruvian:** Large, roundish to oval fruit, 4 inches long and 3 inches across; skin smooth, yellowish when ripe; sweet, deep-yellow flesh, somewhat dry, flavor and aroma good. Does well in southern California where it ripens from November to April. Selected in California as a seedling originating from Peruvian seed. T49M

*Pouteria obovata* - \**Pouteria lucuma*

*Pouteria sapota* - *Mamey sapote*, *Mamey Colorado* {S}. When ripe, the pulp of the fruit is firm, rich and sweet, salmon-red to reddish brown in color, and finely granular in texture. It is eaten out of hand, dried, preserved, or used in sherbets, ice cream, drinks, etc. In Cuba, it is added to *guava cheese* and made into a thick jam called *crema de mamey Colorado*. Unripe fruits are used as a vegetable. Ground seeds are added to *texate*, made into a confection, or mixed with commeal, sugar and cinnamon and prepared as a nutritious beverage called *pozol*. Central America, cultivated. ALMEYDA 1976b [Cu, Pro], COE, DUKE, JOHNS, MORTON 1987a, POPENOE, W. 1920 [Cu], RICHARDSON, M. [Re], STURROCK, UPHOF, ZASLAVSKY; B60M{PR}, C9M, D57{PL}, E29{PL}, F85, G99M{PR}, H55{ED}, J17{PL}, K8{PL}, M17{PL}, 019, N84, P38, S97M

#### CULTIVARS {GR}

**Copan:** Medium-sized fruit; weight 15 to 32 ounces; flesh red, of excellent quality, contains 1 seed; ripens in July and August. Tree medium-sized, spreading. Leaves turn red in December, then become brown and are shed in spring. Originated in Florida from seed received from Cuba in 1938. MORTON 1987a; T73M{SC}

**Lorito:** Small to medium-sized fruits; creamy, very red flesh, without fiber, flavor excellent. Ripens very early and over a long season, December to February. Originated in the Mexican state of Yucatan. N53M

**Maaana:** Large to very large fruit; weight 26 to 85 ounces; flesh pink, of good to excellent quality, contains 1 seed; ripens in April and May. Tree small and slow-growing, evergreen; may fruit 1 year after planting. Bears very well in Florida, poorly in Puerto Rico. Introduced into Florida from El Salvador in 1961. MORTON 1987a; E8M, E29, I77G, N53M

**Mavapan:** Fruit slightly above medium in size; weight 18 to 40 ounces; skin very scurfy; flesh red, of good quality though slightly fibrous, contains 1 seed. Tree tall and erect, slow to come into bearing when grafted but then yields well. Originated in Florida from seeds obtained from Isle of Pines, Cuba in 1940. MORTON 1987a; T73M{SC}

**Pantin:** Medium-sized fruit; weight 14 to 40 ounces; flesh pink to red, fiberless, of excellent quality, contains 1 seed. Tree tall; slow growing at first, bears little or no fruit for 2 to 3 years, then becomes more vigorous and yields well. Leaves become brown in winter. Originated in Key West, Florida. MORTON 1987a; E8M, I77G, 183M, N53M

**Tazumal:** Medium-sized fruit; weight 14 to 30 ounces; flesh pink, of good quality, contains 1 or 2 seeds. Bears two crops; one in January and February, a second in July and August. Tree medium-sized, vigorous, bears regularly and heavily; usually evergreen. Originated in Homestead, Florida from a seedling tree received from El Salvador in 1949. MORTON 1987a; T73M{SC}

*Pouteria viride* - *Green sapote, Injerto* {S}. The pulp of the fruit is pale reddish-brown, melting, sweet, and somewhat juicy. The flavor is similar to that of *P. sapote*, but more delicate, and the flesh is finer and smoother in texture. It is eaten out of hand or used to make preserves. The latex is used as a base for chewing gum. Central America. KENNARD, MORION 1987a, POPENOE, W. 1920; E29{PL}, F85, N84, P38

#### CULTIVARS {SC}

**Makawau:** Originated in Makawau, Maui, Hawaii. Selected for large size and superior eating qualities. Large, softball-sized, top-shaped fruit; flesh reddish-orange, very smooth-textured, less stringy than other types; rich, sweet potato-like flavor. T49M

*Sideroxylon dulcificum* - \**Synsepalum dulcificum*

*Synsepalum dulcificum* - *Miracle fruit; Miraculous berry* {PL}. Although the ripe fruit is not sweet to the taste, it has the ability to cause sour foods to seem sweet when eaten or drunk immediately afterwards. This taste-modifying property will cause lemons, limes, grapefruits, rhubarb, and vinegar to taste very pleasantly sweet. Ice cream and other sweet foods become cloyingly sweet. The West African natives use the fruit to sweeten sour palm wine, *pito* (beer), and *kenkey* (fermented maize bread). West Tropical Africa. HEDRICK 1919, INGLET, KENNARD, UPHOF; A28, A79M{S}, E8M, E29, F16, F85{S}, G73, H49, H53M, I77G, I83M, J17, M17, N84{S}, P38{S}, R78M{S}, etc.

#### CULTIVARS

**Hirsutus:** A form with hairy leaves introduced into Florida from Africa some years ago. Small, oval, red fruits; larger than those of the common smooth-leaved type. WHITMAN; U27T

*Tieghemella heckelii* - *Baco nut* {S}. Seed kernels are the source of an edible fat called *baku butter* or *dumori butter*, used for cooking and in margarine. West Tropical Africa. DALZIEL, MENNINGER, UPHOF; F85

#### SAURURACEAE

*Houttuynia cordata* - *Giap cd* {PL}. The strongly aromatic leaves are eaten in salads, soups, fish stews, or with boiled, fertilized duck eggs—which are not eaten until three days before they hatch. Roots and fruits are also edible. Himalayas to Japan. ALTSCHUL, BOND, JACQUAT, KUEBEL, TANAKA, UPHOF; C43M, H30, J66, J82, K22, K85, L90J, M82, N84{S}, R49

#### SAXIFRAGACEAE

*Bergenia crassifolia* - *Badan* {PL}. The leaves are used as a substitute for tea, called *Tschager tea*. Northeast Asia. HEDRICK 1919, UPHOF; B28, B77, M92, N84{S}, Q24

*Chrysosplenium alternifolium* - *Golden saxifrage* {S}. Leaves are eaten in salads in some parts of Europe. Eurasia. HEDRICK 1919; A61, A61{PL}, N84, 053M, Q24

*Chrysosplenium oppositifolium* - *Cresson de roches, Golden saxifrage* {S}. In the Vosges mountains, the leaves are eaten in salads and soups. Eurasia. HEDRICK 1919, LARKCOM 1984, MABEY; F85

*Peltiphyllum peltatum* - *Indian rhubarb, Umbrella plant* {S}. The thick, fleshy leafstalks are peeled and eaten raw, cooked like asparagus, or added to salads and stews. Pacific Coast of North America. KIRK, MEDSGER; A61, B28{PL}, E33{PL}, E63M{PL}, H63{PL}, L91M, M98{PL}, 053M, Q24

*Saxifraga crassifolia* - *Bergenia crassifolia*

*Saxifraga pensylvanica* - *Swamp saxifrage* {S}. Young, tender, unrolling leaves can be used in salads, eaten as a potherb, or briefly cooked in bacon fat. Eastern North America. FERNALD, GIBBONS 1979, PETERSON, L.; B51, G47M, J39M, J39M{PL}, J41M{PL}, J43, M72{PL}, N84, Q41

*Saxifraga stolonifera* - *Strawberry saxifrage, Yuki-no-shiwa* {PL}. In Japan, the leaves are relished when fried or after being parboiled,

in salads. The flower scapes are said to be tasty when salted. China, Japan. TANAKA, YASHIRODA; A61, A61{PL}, C36, C43M, D95, G96, H4, H29M, K22, L55, M16, N42, N84{S}

#### SCHISANDRACEAE

*Schisandra chinensis* - *Chosen-gomishi, Magnolia vine, Five flavor fruit* {S}. Young leaves are boiled and eaten as a vegetable. The fruit is eaten fresh or dried. In the former Soviet Union, a paste made from the fruit is mixed with *Actinidia arguta* fruit to counteract the insufficient acidity of the latter, which is used for fillings in the confectionery industry. Eastern Asia. SHISKIN, TANAKA; A61{PL}, F68T, G0{DF}, G66, H4{PL}, I49M{PL}, I74, J61M{PL}, J82, K18M{DF}, M77M{PL}, N84, 053M, 093, P49, R47, etc.

#### CULTIVARS {GR}

**Eastern Prince:** Very produce type with large, tasty fruit. Appears to be self-fertile, having fragrant male and female flowers on the same plant. Some strains have only male or female flowers. Vigorous and pest resistant. B74, H49, I46, I49P, I66T

**Male:** Does not produce fruit. Used as a pollinator for female trees. D95

#### SCROPHULARIACEAE

*Antirrhinum majus* - *Snapdragon* {S}. The flowers are commonly sold as edible flowers due to the wide range of colors available, although they are not regarded highly for flavor. Cultivated. LENZ; A25, B75, C92, D74B, E97, F13, F80, F82, G6, G16, I91, J20, K66, L42, L91M, M49, OI, etc.

*Bacopa monniera* - *Water hyssop, Rau dang* {PL}. The herb is eaten in salads and soups, as a cooked vegetable, or pickled. Occasionally available in ethnic markets. Tropics. BOND, HEDRICK 1919; C74, F73, F85{S}, I90M, N3M

*Capraria biflora* - *West India tea, Jamaica tea, Te de Santa Maria* {S}. An infusion of the dried leaves and flowers is said to be a very agreeable substitute for tea. Central America, West Indies. ALTSCHUL, HEDRICK 1919, TANAKA; Y2

*Castilleja linariaefolia* - *Wyoming paintbrush* {S}. The flowers may be eaten raw, being the best tasting of the genus. Western North America. KIRK; E66M, F44, I98M, L75, N84

*Escobedia scabrifolia* - *Raiz de color, Palillo* {DF}. The dried ground roots are used as a turmeric-like colorant for commercial cheeses, butter and margarine. Also popular in Peruvian cuisine for giving gravies and other foods a yellow color. Occasionally available in Latin American markets. South America, cultivated. ALTSCHUL, HEDRICK 1919, ORTIZ 1979, PEREZ-ARBELAEZ; G47G

*Halleria lucida* - *Umbinza, Wildfuchsia* {S}. When ripe, the fruits are purple, extremely sweet although slightly astringent, and can be eaten out of hand or added to a fruit salad to give it an exotic look. The flowers are sucked for their sweet nectar. Southern Africa. FOX, F., SIMMONS 1972 [Cu]; M7M{PL}, N84, 093, P38, S28M

*Herpestis monniera* - *Bacopa monniera*

*Limnophila aromatica* - *Swamp leaf, Rau om, Ngo om, Rice-paddy herb, Keukeuhan* {PL}. The leafy stems are eaten raw or cooked, as a side-dish with rice. They have a distinct aroma and flavor and are an essential ingredient in several sweet and sour Vietnamese dishes, including a soup made with tamarind and cantaloupe. Occasionally found at ethnic markets in North America. Southern Asia to Australia. BOND, BURKILL, COST 1988, JACQUAT, KUEBEL, OCHSE, ROUTHIER 1989 [Re], TANAKA; C43M, F37T, J76, J82, L90J, M82, N84

*Mimulus guttatus* - *Yellow monkey-flower* {S}. Very young leaves and shoots have a slightly bitter flavor and are eaten raw in salads and sandwiches, steamed, boiled, stir-fried, or added to soups. The

bright yellow flowers make an attractive addition to gelatin salads. Western North America. FARNSWORTH [Re], KIRK, NIETHAMMER, SCHOFIELD [Re], YANOVSKY; A2, C43V, D95{PL}, E15, E63M{PL}, F88M, G59M, G89M{PL}, I98M, I98M{PL}, K49Q, L55J, Q24

*Mimulus langsdorfii* - \**Mimulus guttatus*

*Paulownia tomentosa* - *Empress tree, Kiri, Tung* {S}. The flowers are eaten with miso. Leaves are parboiled and used as an emergency food. China, cultivated. TANAKA; B61M, C9M, E7M, F35M{PL}, F80, H4{PL}, I4{PL}, K38, K63G, N84, 053M, R47

*Penstemon confertus* - *Yellowpenstemon* {S}. A tea-like beverage is made by boiling the dried leaves and stems. Western North America. YANOVSKY; A61, Q24

*Penstemon confertus* \nr. *caeruleo-purpureus* -> *Penstemon procerus*

*Penstemon procerus* - *Small-flowered penstemon* {S}. Dried leaves and stems are made into a tea-like beverage Western North America. YANOVSKY; A61, E67T{PL}, F44,147, J25M, N84, 053M, Q24

*Scoparia dulcis* - *Sweet broom* {S}. Used as a substitute for tea in the Philippines. In some parts of the West Indies branches are placed in drinking wells to give the water a cool taste. Tropical America. ALTSCHUL, HEDRICK 1919, UPHOF; F85

*Verbascum thapsus* - *Mullein* {S}. An aromatic, slightly bitter tea is made from the dried leaves by steeping them in boiling water for five to ten minutes. A sweeter tea can be brewed by using the fresh or dried flowers. The flowers are also used for flavoring liqueurs. Eurasia, naturalized in North America. BREMNESS, CROWHURST 1973, MARCIN, PETERSON, L.; C43M, C43M{PL}, D92M, F35M{PL}, F80, H61M, N9M, N9M{PL}, N71M, N84, 053M

*Veronica americana* - *American bioklime* {PL}. Young shoots are eaten raw in salads, in bread and butter sandwiches, or cooked as a potherb and seasoned with bacon fat or butter. They have a pungent, somewhat bitter flavor much appreciated in Europe and Japan. Also brewed into a popular tea with a flavor reminiscent of Chinese green tea, called *tea de l'euope*. North America. FERNALD, GIBBONS 1979, HARRINGTON, H., MEDSGER, SCHOFIELD; C74,198M

*Veronica beccabunga* - *European bioklime* {PL}. Young shoots and leaves are mixed with water cress or other strong flavored greens and eaten in tossed salads. When finely chopped they can be combined with chives and added to bread and butter sandwiches. Eurasia. LAUNERT, MICHAEL [Pre, Re]; C74, N3M, N84{S}, R53M

*Veronica chamaedrys* - *Bird's-eye speedwell* {S}. The leaves are used as a substitute for tea. Northern temperate region. FERNALD; J24{PL}, N71M, N84, 048, 053M, S55

*Veronica officinalis* - *Speedwell* {S}. A bitter, tangy tea is made from the fresh flowering herb or dried leaves. Europe. FERNALD, HEDRICK 1919, MARCIN; E61{PL}, J82, N71M, N84, 048, 053M, Q24

*Veronicastrum sibiricum* - *Siberia-kugii-sd* {S}. Young stems and leaves are eaten raw, oil-roasted, put in soups, or used as a potherb. Flower spikes are eaten as a potherb. Eastern Asia. TANAKA; M77M{PL}, N84

#### SIMAROUBACEAE

*Ailanthus altissima* - *Tree of Heaven* {S}. Source of an unusual greenish-brown honey that granulates only after several months. It has a poor flavor initially, but after a few months becomes very fine with an aroma reminiscent of Muscat wine. China. CRANE 1975;

A82{PL}, B68{PL}, C9M, D95{PL}, G66, K38, K63G, M25M, N40M, N61, 053M, P5, P17M, P49, Q15G, etc.

*Picrasma excelsa* - *Jamaica quassia* {DF}. The wood is the source of an extract used in bitter tonics and liqueurs. Also used commercially to add a bitter flavor to baked goods., candy, frozen dairy products, etc. Sometimes used by cooks to increase die bitterness of orange marmalade. Wood chips have been used by brewers as a substitute for hops. West Indies. BURDOCK, HEDRICK 1919, LEUNG, LEYEL 1987a, UPHOF; J82

*Picrasma quassioides* - *Nigaki* {S}. Small red fruits are eaten. Young buds are used to make a tea. A bitter element, *quassin*, is extracted from this tree and used as a hops substitute in brewing beer. Temperate Southern Asia. TANAKA; F85

*Quassia amara* - *Quassia, Bitterwood* {DF}. The bitter bark and wood are substituted for hops in manufacturing beer. An extract is used to flavor spirits, soft drinks, bitter tonics, baked goods, candy, etc. In Brazil, die bark is steeped in brandy which is then taken as a tonic. Tropical America. BURDOCK, LEUNG, LEYEL 1987a, MORTON 1976, WILLIAMS, L.; E14T, F85{S}, GO, G73, K18M, L34, N7D

*Quassia excelsa* - *Picrasma excelsa*

*Simarouba amara* -> *Quassia amara*

*Simarouba glauca* - *Paradise tree* {S}. Ripe fruits are eaten raw. The seed kernels yield an oil used in cooking or in the manufacture of margarine. Florida, Caribbean region. DUKE, MORTON 1977, WILLIAMS, L.; D87G{PL}, F85

#### SIMMONDSIACEAE

*Simmondsia californica* ->*Simmondsia chinensis*

*Simmondsia chinensis* - *Jojoba, Pignut, Goatnut* {S}. Seeds are eaten raw, parched, or roasted and served with melted butter and salt. The ground seeds are boiled and made into a coffee-like beverage. In Mexico, there is a variation of this which is said to taste like chocolate. They mix the roasted, ground nuts with the yolk of a hard-boiled egg and boil this in water with milk, sugar, and a vanilla bean. California. CLARKE [Re], KIRK, NIETHAMMER [Re], ROSENGARTEN; A2, A79M, C9M, F63M, G45, G45{PL}, I83M{PL}, I98M{PL}, J25M, N84, 053M, R47

#### SINOPTERIDACEAE

*Pellaea mucronata* - *Tea fern, Bird's foot fern* {S}. The dried fronds may be steeped in hot water for fifteen to twenty minutes to produce a fragrant and flavorful tea. Western North America. KIRK; F85

#### SMILACACEAE

*Smilax aristolochiifotta* -> *Smilax medica*

*Smilax aspera* - *Red-berried rough-bindweed* {S}. The young shoots and tendrils are gathered in the spring and eaten boiled or added to salads Very popular in Greece and Turkey where they are sold in local markets. Eurasia. NIEBUHR, PHILLIPS, TANAKA; N84, 053M

*Smilax china* - *China root, Ma-chia* {S}. Young shoots and leaves are eaten as a boiled vegetable or potherb. The fruit is eaten to quench the thirst. Leaves are used as a substitute for tea. Roots are also edible. Eastern Asia. TANAKA; F85

*Smilax herbacea* - *Carrion flower, Jacob's ladder* {S}. The young, tender shoots, when cooked and served like asparagus, make a delicate and palatable vegetable. When ripe, the blue-black fruits are eaten raw, pureed, or made into jellies and sauces. The fruit sauce is excellent for basting wild meats, adding zest and flavor. North America. FERNALD, FREITUS [Re], GIBBONS 1979, HARRINGTON, H.; F80, F85, J43, N84

*Smilax medica* - *Mexican sarsaparilla* {DF}. The bitter, licorice-like roots are one of the principal sources of sarsaparilla. Used extensively for flavoring commercial root beers, baked goods, ice cream, candy, tea, beverages, etc. Mexico. BROUK, BURDOCK, LEUNG, MORTON 1976; E14T, GO, L34, N7D

*Smilax officinalis* - *Honduran sarsaparilla* {DF}. The dried roots are a principal source of *sarsaparilla*, widely used for flavoring root beer soft drinks, ice cream, candy and baked goods. Due to their bitter taste, they are normally used as a mixture with other spices, very rarely alone. Central America. BROUK, LEUNG, TANAKA; K18M

*Smilax rotundifolia* - *Horse-brier*, *Greenbrier*, *Bayou asparagus* {S}. Tender, young shoots and unrolling leaves are eaten raw in salads, boiled and served cold with French dressing, steamed like asparagus, or pickled in vinegar. They are said to have a delicious, avocado-like flavor. The dried roots are the source of a reddish flour used in soups, breads, cakes, puddings, jellies, and sweet drinks. A beer resembling *root beer* or *sarsaparilla* can also be prepared from the roots. North America. FERNALD, GIBBONS 1966a, GIBBONS 1966b; D47M, F85, H73{PR}

## SOLANACEAE

*Atropa belladonna* - *Belladonna*, *Deadly nightshade*, *Zbib el laidour* {S}. Small quantities of the berries are added to the Moroccan spice mixture *ras el hanout*, and the kif candy known as *majoun*. They reportedly have a very good flavor. Also one of the ingredients of *Maa'ssel* and *Mrouziya*, dishes consumed during the feasts of *Aid Seghir*, and for certain weddings. Otherwise considered toxic. Eurasia, cultivated. BOUQUET, WOLFERT 1973; C43M, D56M, F37T{PL}, F68T, F80, F86G, I81M, I81M{PL}, J82, L90J{PL}, L94M, M82{PL}, N40M, O53M, R53M, R53M{PL}, etc.

*Capsicum annuum* - *Chili pepper*, *Bell pepper*, *Cayenne*, *Pimento*, *Paprika* {PD}. Fruits are eaten raw in salads, fried, stuffed (*chilis rellenos*), roasted, dried, preserved, cooked as a vegetable, pickled in vinegar, made into sauce, or used as a condiment. *La-chiao chiang* or *la-chiang* is fermented, salted red peppers used in China like tabasco sauce. The leaves, having 4 to 6% protein, are eaten steamed as a potherb, oil-roasted, or used in soups and stews. They are thrown into *locro*, a popular Andean soup prepared from potatoes, avocado, and various spices. In Thailand, the green leaves are sometimes added to green curry paste (*gkaeng kiow wahn*), to deepen the green color. Korean cuisine uses dried green pepper leaves, thin strips of pepper called *red pepper threads*, and *kochujang*—\* hot-pepper flavored soybean paste. The powder from the dried, ground fruits of some cultivars is added to food as a coloring. Tropical America, cultivated. ANDREWS, J. [Re], CARCIONE, DUKE, FELL 1982b, GELLE [Re], HARRINGTON, G. [Cul], HEISER 1969, HERKLOTS, LOHA-UNCHIT [Re], MILLON [Cul, Re], SHURTLEFF 1976, TANAKA, VILMORIN [Cu]; B31, B91T, G17M, I8M, L17. (for cultivars see Pfeffer, page 473)

*Capsicum annuum* \ar. *aviculare* - *Bird pepper*, *Bird's-eye pepper* {S}. The small, extremely pungent fruits are used as a condiment, both fresh and dried. They are popular for making jelly and sauce, to which they impart a very special flavor. Leaves can be used as a potherb. Southern North America, Tropical America. ALCORN, ANDREWS, J. [Re], D'ARCY, HEISER 1969, HERKLOTS; A21, A49D{DF}, I63T{DF}, G0{DF}, J4, J76{PL}, N7D{DF}

## CULTIVARS

**Besler's Cherry:** Small, round fruit, 1/2 to 3/4 inch in diameter; brilliant red, waxy; very hot; ripens late in the season. Sturdy, tree-like plant with distinctive arching stems; highly ornamental; ideal for growing in pots as a perennial. Illustrated by Basilius Besler in 1613. WEAVER 1997; D29P

**Firecracker Peaufn:** 70-75 days. Upright, pointed, glossy fruits, 1 inch long; quite hot; purple, turning orange and then brilliant red. Spicy, fruity flavor. Ea^ to dry. Multi-branching plants, to 3 feet

tall, do not require staking. Produces abundant crops over a long season. C26{PL}, C69D{PL}, D26G, K17J, K66, Q34

**Larae Black Peaufn:** Small fruits, about 1/2 inch long; purple-black, turning red when ripe; very hot. Excellent for pickling. Large, attractive plant, about 3 feet tall; purple stems and purple-tinged leaves. F73D

**McMahon's Texas:** Highly ornamental plant covered with tiry, edible, sparkling-red peppers. Ideally suited for flower pots or the sunny garden. Grows 8 to 12 inches tall. Native to Southwest Texas. Does best in zones 9 and 10. L90M

**NuMex Bailev Piaufn:** 120 days. The first machine-harvestable chile Peaufn. Fruits fall from the stem when ripe. Small, oblong red fruits, 3/4 inch long and 1/4 inch in diameter. Distinctive flavor. Very hot; 97,000 Scoville Units. Developed at New Mexico State University's Chile Pepper Breeding Program. D42M, I63T, M0

**Peaufn:** (Chili Piqufn, Chiltepiqufn) 150 days. Oval fruit, 1/2 inch long; green when immature turning purple where pods are exposed to the sun, red when ripe. Plant robust, upright, 4 feet tall and 3 feet wide. Fresh pods are hotter than the dried. Much used for seasoning in the Southwest, either fresh or dried. Can also be used for *ristras*, and is the base for *Cholula* hot sauce.. DREMANN, C., DREMANN, S. 1986 [Re]; A7{DF}, C34G{PD}, D92M, E13G{DF}, F80, G13T{DF}, H73{DF}, I63T{DF}, I63T{DE}, J4, J25M, J25M{PL}, J58{PD}, J73, J76{PL}, K17J{DF}, K17J{ED}, L17{PD}, M1P, etc.

**Sinaloa Chiltepfm:** Round, pea-sized fruits, 1/4 to 1/2 inch in diameter; red when ripe. Very hot, having an intense but brief burst of heat that quickly dissipates. Sold by Southern Mayos at the railroad crossing between San Bias and El Fuerte, Sinaloa. Ripe pods are dried and ground into powder, made into hot sauces and added to stews and bean dishes. B38

**South Texas Peaufn:** (Chiltepe) Collected along the Lower Rio Grande Valley near McAllen, Texas where plants have naturalized among the brush near cultivated fields. 116, N84

**Tarahumara:** Wild perennial collected from canyons near Basaseachi Falls in the Sierra Madre de Chihuahua, Mexico. Attractive container plant for cooler climates. Potentially resistant to one or more viruses. C26{PL}, 116, N84

**Teofn:** (Chili Tepfn, Chiltepfm) 150 days. Round fruit, 3/8 inch across; green when immature turning purple on the parts exposed to the sun, red when ripe. Plant small, spreading, frail-looking; 2 feet tall, 18 inches wide. Dried pods are hotter than the fresh. Available in stores that sell Mexican and Southwestern foods. Good in pots. DREMANN, C., DREMANN, S. 1986 [Re]; A7{DF}, B75, D42M, D92M, F37T{PL}, H73{DF}, I63T, I63T{DF}, J4, J25M, J25M{PL}, J73{DF}, J76{PL}, K17J{PD}, K49M, L17{DF}, M0, M1P, etc.

**Texas:** Fruit slightly elongated in shape. Collected at Wimberly, Texas on the Edwards Plateau, west of Austin. Attractive container plant for cooler climates. Perennial in warmer climates. C26{PL}, 116, N84

**Texas Bird:** Heirloom that dates to 1808. Very small fruits that grow on dwarf, bushy perennial plants. Can easily be grown in pots in colder climates and brought indoors. Originally from the collection of botanist Dr. George Thomas. F24D

**Tohono O'odham:** (Papago) Pointed fruit from the Baboquivari Mountains, the sacred peaks of the Tohono O'odham in southern Arizona. Slow growing plants that should be started indoors to improve the chance of getting fruit the first year. Freezes back in winter. Perennial in warm climates. C26{PL}, 116, N84

**Willina's Barbados:** (Barberry, Pipperridge) Tiry, barberry-like fruits. Green or ripe peppers were traditionally infused in Madeira to make *pepper wine* or *pepper sherry*. Small, 2 1/2 to 3 foot plants with down-covered leaves. Grown as an ornamental house plant

during the 18th and 19th Centuries. Reportedly collected by Sir John St. Claire of Trenton, New Jersey through John Bartram, who obtained it from Charles Willing of Barbados WEAVER 1997; EST{DF}

*Capsicum annuum* var. *glabriusculum* - *Capsicum annuum* var. *aviculare*

*Capsicum baccatum* - *Peruvian pepper*, *Aji*, *Uchu* {S}. The pungent fruits are used as a seasoning. Most commonly found in the dry state or *cusqueho*, the principal condiment for traditional Peruvian foods such as *cau cau*, *cuye chacatado* and *ceviche*. Andean South America, cultivated. ANDREWS, J. [Re], HEISER 1969, HERKLOTS; C95, D42M, F73D, J25M, J25M{PL}, MO, M81T

#### CULTIVARS

**Aif Amarillo:** (Kellu Uchu, Ajf Yellow) Slender fruits, 2 to 2 1/2 inches long, tapered on both ends; yellow when ripe; very hot but flavorful. Bushy plants, about 18 inches tall. A year round supply of hot peppers can be obtained by growing 1 or 2 plants in 5 gallon containers. A rare Peruvian cultivar for the gourmet pepper palate. C26{PL}, C69D{PL}, D42M, F73D, I16{DF}, I63T, I63T{DF}, I63T{PD}, J4, J4D, J20, J73, K17J{PD}, MO, M81T, N84, Q34, etc.

**Aif Colorado:** 80 days. Medium-sized, conical fruits, somewhat wrinkled and curved; 3 1/2 to 5 1/2 inches long. Brilliant, glossy orange-crimson skin. Unique, spicy pungent flavor. Short, sprawling shrub. C26{PL}, C69D{PL}, C95, K49T

**Aif Habanero:** South American chile that resembles the famed Habanero of the Yucatan. Not as hot, but has a similar spicy, smoky flavor. Conical, wrinkled orange to red fruits; 3 to 4 1/2 inches in length. Excellent dried into powder for use in spicy sauces. C26{PL}, C69D{PL}, K49T

**Christmas Bell:** Unusual, 4-lobed fruit, 1 3/4 inch long and 1 1/4 inch in diameter; green, turning yellow-orange or red when ripe; mildly pungent. Has somewhat the shape of a bell, hence the name. Grows 2 to 3 feet tall. DEWITT 1996; F73D, J4

**Kovinchu:** (Ajf Kovinchu) Slightly curved fruit, 4 inches long and 1/2 inch in diameter; green, turning red when ripe; thin-walled; moderately hot. Heavy yielding plants. Originally from Peru. DEWITT 1996; L7M

**Mirasol:** (Ajf Mirasol) Medium-sized, tapered fruits, 3 to 5 inches in length and about 1 inch in diameter; thick, shiny, yellow-orange skin; medium to very hot. Used fresh or dried in sauces. Popular throughout the southern Andes where it has been grown for nearly 4,000 years. The dried form is occasionally available in Latin American markets. ORTIZ 1979; C26{PL}, F80, N84

**Peru Yellow:** (Ajf Limon) Small, elongated fruit, 1 1/2 inches in length and 1/2 inch in diameter; green, turning yellow when ripe, somewhat translucent. Quite hot, with lemony flavor overtones. Variable growth habit, pods usually horizontal but occasionally erect. Does well when grown in containers. DEWITT 1996; A7{DF}, M81T

**Puca Uchu:** (Ajf Rojo, Chileno) Long, slender fruits, curved and tapering to a point; greenish-yellow turning red when ripe. Unique, spicy flavor. Grown commercially for yellow pickled peppers in the fertile valleys of the California and Nevada High Sierras. According to local legend, the seeds came to the Lone Pine area of California with Chilean workers brought to work the mines and railroad. B63M{PD}, C26{PL}, C69D{PL}, J73, K17J{PD}, N84, Q34

**Valentine:** Small, oblong fruits, about 1/2 inch in length and diameter; green, turning orange, then red when ripe; moderately hot. Prolific plant; yields both erect and pendant pods. DEWITT 1996; M81T

*Capsicum cardenasii* - *Ulupica* {PL}. The fruits are very small, aromatic, and in Bolivia, are said to be better tasting than locoto or ajf, though much hotter. There they are ground with tomato to make

a popular dish, called *jallpa huayka* in Aymara or *ucha llajfua* in Quechua. The *ulupica* is also used as a pickle, preserved in oil and vinegar. Although commonly sold in the markets of La Paz, the species was not known to science until 1958. Andean South America. CARDENAS, HEISER 1969, HERKLOTS; C26

*Capsicum chacoense* - *Chaco pepper* {S}. The pungent fruits are occasionally used as a condiment. A rare wild species thought to be one of the ancestors of several cultivated species. South America. ANDREWS, J., KUNKEL

#### CULTIVARS

**Red:** Small, upright, pointed fruits; about 1 inch long; red when mature; very hot. Multi-branched plant, about 5 feet tall. F73D

**Yellow:** Small, upright fruits, about 1 1/2 inches long; orange-yellow when mature; very hot. Multi-branched plant, about 6 feet tall. F73D

*Capsicum chinense* - *Bonnet pepper*, *Squash pepper*. The extremely pungent fruits are used as a condiment. Apparently this is the species that was used by the Carib Indians of the West Indies for torturing captives and for preparing their *pepper-pot*, a sort of camper's stew in which various ingredients are constantly added so that the pot is never empty. Tropical America, cultivated. ANDREWS, J. [Re], HEISER 1969, HERKLOTS; (for cultivars see Pepper, page 473)

*Capsicum frutescens* - *Tabasco pepper*, *Chili pepper*. The pungent fruits are pickled, used as a condiment, or made into hot-pepper sauce. The young leaves and tops of the stems are occasionally steamed and eaten as potherbs. In Thailand, juice from the leaves adds color and a hot, spicy flavor to curries. Tropical America, cultivated. ANDREWS, J., HEISER 1969, HERKLOTS, JACQUAT, OCHSE; (for cultivars see Pepper, page 473)

*Capsicum pubescens* - *Apple chili*, *Rocoto*, *Locoto* {S}. The distinctive thick-fleshed, pungent fruits are used as a vegetable, condiment, or made into sauce. In Peru, the seeds are removed and the pod is filled with cheese or sausage and then baked in the same manner as American stuffed peppers. Andean South America, cultivated. ANDREWS, J. [Re], HEISER 1969, HERKLOTS, WILLIAMS, L.; C26{PL}\C95, D42M, I63T, I74, J73, K17J{PD}, MO, Q34

#### CULTIVARS

**Cuzco:** Heavy, squat fruit; thick, sweet, flavorful flesh; extremely hot seed core. Busty, thick-trunked plant; prolific; perennial in warm climates; tolerant of light frost. An ancient strain from Cuzco, Peru. A26

**Manzano Amarillo:** (Yellow Rocoto, Canario) Fruits blocky, up to 5 inches long, canary yellow when ripe; seeds black. Similar to bell peppers when young; when they turn light green they are rather hot. When fully ripe they are sweet and crisp, except for the seeds and their attachments which stay hot. Sprawling sub-shrub, will bear for up to 15 years in mild climates. A21, C26{PL}, C69D{PL}, F73D, F80, J4, N84

**Manzano Roio:** (Red Rocoto) Medium-sized, blocky fruits ripen a deep, glossy red, and are milder and more like a bell pepper in flavor than the Amarillo when the core and inner membranes are removed. Though the flesh is sweeter, the core is hotter than Amarillo, giving quite a range of flavors. As an annual it reaches a height of 3 to 5 feet. A21, C26{PL}, C69D{PL}, F80, J4, J76{PL}, N84

**Peron:** Round, thick-skinned fruits; fuzzy stems; purple flowers. Both red and yellow forms are available. Attractive as well as useful. Originally from a chile farm in Mexico. C26{PL}

*Cestrum nocturnum* - *Night jessamine* {S}. The leaves are cooked in fat, with tortillas. Central America, cultivated. KUNKEL; C9M, C95, E7M, F80, F85, G20, G96{PL}, H4{PL}, J27{PL}, M82{PL}, N7J{PL}, O53M, O93

*Cyphomandra betacea* - *Tree tomato*, *Tamarillo* {S}. The subacid fruits are eaten out of hand, stewed, grilled, baked, pickled, added

to salads, or made into jams, jellies, chutneys, conserves, pies, salsas, preserves and sauces. South America, cultivated. CUSUMANO [Cul, Re], FLETCHER [Cu, Pro], FRIED [Re], HEISER 1969, KENNARD, MORTON 1987a, POPENOE, W. 1920, SCHNEIDER 1986 [Pre, Re], SIMMONS 1972; A79M, C9M, C95, E13G{PR}, H4{PL}, H53M{PL}, I83M{PL}, N40{PR}, O53M, O93, P5, P17M

#### CULTIVARS

**Ecuadorian Orange:** Fruit is medium orange in color, the size of a large hen's egg; pulp light orange, creamy in texture, less acid than the Ruby Red. Excellent for eating out of hand and also suited for culinary purposes. L55J, N7J{PL}, R47

**Goldmine:** A superior cultivar originating in New Zealand and recently introduced. Very large golden-yellow fruit with golden, highly flavored flesh, less bland than Solid Gold, but not acidic. Has superb eating qualities. O97{PL}, R77{PL}

**Inca Gold:** A yellow-fruited cultivar said to be less acid than the red types. When cooked the fruit is said to resemble the apricot in flavor. Q49M{PL}

**Gratia Red:** A large-fruited cultivar, oval to rounded in shape, and with a sharp acid flavor. Plum red fruits with red flesh. Good quality for eating out of hand, and excellent for jams and preserves. O97{PL}, Q49M{PL}, R77{PL}

**Rothamer:** Unusually large fruit, over 3 ounces; skin bright red; flesh golden-yellow, flavor sweet and exotic; seeds dark red; ripens from December to April. Delicious eaten out of hand. Vigorous and heavy bearing plant. Originated in San Rafael, California. T49M

**Ruby Red:** Large, brilliant red fruit; pulp dark red, tart and flavorful. Fair for eating out of hand, but very good for culinary use. If allowed to ripen for one to three weeks after picking, they will become less acid. The standard cultivar grown for export in New Zealand. R47, TIM

**Solid Gold:** Large, oval shaped fruit; skin golden-orange in color; pulp soft, less acidic in flavor than Oratia Red. Very good for eating out of hand, with acceptable culinary qualities. O97{PL}

**Yellow:** Fruits the size and shape of a large plum; skin yellowish-orange; flesh yellow, with a milder flavor than the red types. The yellow form is the oldest in cultivation in New Zealand. G73, P5

*Cyphomandra casana* - *Casana* {PL}. The fruit is smaller than a tamarillo, spindle-shaped, green at first becoming yellow-striped, then full golden-yellow when ripe. The pulp is fragrant, sweet, not unlike a blending of the flavors of a peach and a tomato. Others say the flavor is like passionfruit or a juicy Thompson Seedless grape. It is best eaten in a ripe, fresh state. Ecuador, cultivated. CHILD 1985b, RILEY 1983; O97, Q49M

*Cyphomandra crassifolia* - *Mountain tomato* {PL}. The fruit is green, the size of a hen's egg, and turns a greenish off-white when ripe. Rather bitter if eaten fresh, when cooked into jam or juice it has an unusual pleasant flavor. Closely related to *C. betacea*. Andean South America. Q49M

*Cyphomandra fragrans* - *Guava tamarillo* {S}. Small, orange fruits with pulp that is vaguely reminiscent of guava, though not very exciting when eaten out of hand. Dried fruits lose their leatheriness and have a pleasant sour taste similar to the dried tamarinds used in Indian cookery. Since its skin is tough, it is under assessment in New Zealand for breeding to improve the shelf life of the tamarillo. South America. CHILD 1985b, RILEY 1983; Q32

*Cyphomandra hartwegii* - *Tomate de monte* {S}. The tomato-like fruits are eaten raw, stewed, candied in syrup, or sweetened and made into juices and preserves. Harvested from the wild and sold in local markets of Columbia, Chile, Peru and Argentina. Occasionally cultivated. Central and South America. BOHS, HEDRICK 1919, UPHOF, ZEVEN; N84, P38

*Jaltomata procumbens* - *Jaltomate* {S}. Leaves are consumed raw, as a potherb, or cooked with eggs. The sweet black fruits are eagerly sought for food by the Tarahumaras of Mexico, either raw, cooked or dried. Roots are eaten raw, boiled, broiled or with radishes. Sold in local markets. Central America. ALTSCHUL, DAVIS, WILLIAMS, L.; F85

*Lycium barbarum* - *Duke of Argyle's tea tree*, *Gou qi zi* {PL}. The dried red fruits are eaten in rich tonic soups and stews made of poultry, meat or turtle, to which they impart a delicate sweet flavor. Leaves and fruits are used for making tea. The leaves are one of the ingredients of *Essential Harmony* classic herbal tea. Source of most of the lycium fruit imported into the United States. China. LEE, G., LEUNG [Nu], TAN [Re], TANAKA; E14T{DF}, F35M, F37T, GO{DF}, G73{DF}, H36{DF}, H36{ED}, J82, N7D{DF}, N84{S}, R83

*Lycium carolinianum* - *Carolina wolfberry*, *Boxthorn* {PL}. The bright red berries are reportedly pleasant eating, having a slightly salty taste. North America. MEDSGER; H4

*Lycium chinense* - *Chinese boxthorn*, *Chinese wolfberry*, *Gau gei choi* {S}. The young, soft leaves, having a peppermint-like flavor, are consumed raw in salads, as a potherb, cooked with rice or pork, or used in soups with duck's eggs. After roasting, the seeds are made into a coffee-like beverage. The fruits have a sweet, licorice-like flavor and are eaten raw, dried, added to soups and braised dishes, or used in the preparation of a liqueur. Dried leaves are used as a tea substitute, sometimes called *Lord Macartney's tea*. Eastern Asia, cultivated. COST 1988 [Cul], DAHLEN [Pre, Rj], HAWKES, HERKLOTS [Cu, Re], OCHSE, TANAKA, YASHIRODA; C95, D26G, D56M, D95{PL}, F68T, F80, F85, F86G, I60{PL}, 174{PL}, L90J{PL}, M82{PL}, N84

*Lycium pallidum* - *Pale wolfberry*, *Rabbit thorn* {S}. Fruits are eaten fresh, cooked, or dried for future use. The Indians of the Southwest cooked them into a syrup or sauce which was dried, stored, and later recooked into a soup or sauce. They keep well when dried and ground into a meal. Western North America. HARRINGTON, H., KAVENA [Re], KIRK; L55J, N84

#### *Lycopersicon esculentum* - *Lycopersicon lycopersicum*

*Lycopersicon lycopersicum* - *Tomato* {PD}. Ripe fruits are eaten raw, added to salads, stewed, pureed, stuffed, made into sauces, pastes, juice, catsup, or used in soups and stews. Unripe fruits are pickled, fried, roasted, dried or made into marmalade, pies, and relishes. In the Southern United States, green tomatoes are popular for making the pickled vegetable relishes known as *chowchow* and *piccalilli*. Small, green olive-shaped fruits, called *tomolives* when pickled, are popular for serving in a martini or Bloody Mary. The dried fruits, called *pumate*, are marinated in olive oil and used in gourmet cooking. Fermented tomato juice is marketed as *Biotta* or *Eden*. Flour, made from dried fruits, may be used to flavor and thicken soups, dips, sauces, breads, pancakes, muffins, puddings, and custards. Tomato seed oil is suitable for culinary purposes. South America, cultivated. EGERTON, FELL 1982b, HEISER 1969, HERKLOTS, HUNTER 1973a, KLEIN [Re], KRAFT [Re], LARKCOM 1984, MILIUS, TANAKA, UPHOF, VILMORIN [Cu]; B65, B91T, C95, D27M, D93M, E13G, E23M, E68M, F42M, F68P, G17M, G47F, H73, J49, K19, L97G, etc. (for cultivars see Tomato, page 554 and Rootstocks, page 510)

*Lycopersicon pimpinellifolium* - *Currant tomato*, *German raisin tomato* {S}. The small, grape-like fruits are eaten raw, dried, added to salads and soups, or used as a garnish. They also make excellent pickles. Andean South America. HEDRICK 1919, ORGAN, VILMORIN; A2, F80, F85, K49M, R47

#### CULTIVARS

**Broad Ripple Yellow:** 60 days. Fruits are bright yellow, cherry-sized, borne in clusters, and very tasty. Non-shattering, fruits hold on the vine until picked. Upright, determinate plants. Excellent keeper. A2, 089

**Cherriette of Fire:** Small red fruits. Matures very quickly. Prolific, compact plants, 14 to 18 inches wide. Possesses a semi-continuous growth habit, yet stays compact. Will naturalize along creeks and river banks. Developed by Peters Seeds & Research. J9M

**Cherry Babv:** 70 days. Early maturing strain. Very good flavor, with just the right balance of sweetness and acidity. Lacks the bitterness and toughness of most currant tomatoes. Excellent for eating out of hand. Also makes an attractive garnish for salads. Large, indeterminate plant, moderately productive. E24

**Chiapas:** Very small, yellow fruits, sweet and flavorful. Contains almost four times the Vitamin C of common tomatoes. Sprawling bushes, prolific throughout the summer; self-seeding. Originally from southern Mexico. I16

**Ciudad Victoria:** Small, perfectly round, bright orange-red fruits, about 1/2 inch in diameter; seedy. Very good, intense flavor. Small-leaved plant, produces fruits which hang in clusters. Weedy, semi-cultivated strain from Tamaulipas in northern Mexico WEAVER 1997; F24D

**Currant Fashions Mix:** A mixture of various strains maintained by Peters Seed & Research. Will produce small fruits in colors of pink, red, yellow and orange. Early maturing types. Vigorous vines. J9M

**Currant HF:** Very small red fruit, just over 1/2 inch in diameter. Excellent sweet-tart flavor and a pleasant, crisp texture. Consistently outstanding flavor due to resistance to flavor-destroying stresses. Vigorous, prolific, sprawling plants that are highly branching. Shows good disease resistance. J9M

**Lemon Drops:** Small, attractive yellow fruits that contrast nicely with red types, slightly smaller than 3/4 inch in diameter. Good sweetness and flavor, but environmental stresses can cause it to lose eating quality easier than Currant HF. Vigorous, indeterminate, disease-resistant vines. E5T, E24, J9M

**Maine Tomato Berry:** Small red fruit, about the size of a blueberry; very sweet. Excellent in quiches, stews, casseroles, shrimp scampi, omelettes, pizza, salads, sandwiches, etc. Does well in hanging baskets, producing hundreds of fruit. Developed by Marcia Christensen, from a volunteer currant tomato found in East Sebago, Maine. MIG, MIG{PL}

**Red:** 70 days. Very small, pea-sized fruit; grows in clusters; good flavor. Excellent in salads and for garnishing. Very prolific. Holds on the vine until picked. Resistant to frosts. Suitable for growing in hanging baskets or on indoor window sills. C53, C92, F13, G6, H73{PR}, I18M{PL}, 139, K10, K20M, K23{PL}, K49T, K57{PL}, L7M, MO, M1P, etc.

**Shattering Red:** 70 days. Very small, pea-sized fruit with excellent flavor; drops from the vine when ripe. Harvested by spreading a cloth under the vine and shaking. Good in salads and as a garnish. K20M

**Sugar Cherrv:** 76 days. Large, orange-red fruits, about 3/4 inch in diameter; sweet, intense flavor. Excellent in salads. Very productive, indeterminate vine, bears fruits in clusters of 12. Of particular interest to specialty growers and the restaurant trade. L7M

**Yellow:** (Gold) 68 days. Globe-shaped fruits, 1/2 inch wide, borne in clusters; golden-yellow skin and flesh; tasty. Prolific yielder; does not drop its fruits when ripe. Indeterminate plant that does not require trellising. Often reseeds itself. B49, C53, C92, F13, G6, H73{PR}, I18M{PL}, K10, K20M, K23{PL}, K49T, K57{PL}, L88J, MO, M1P, etc.

*Nicotiana tabacum* - *Tobacco* {S}. Tobacco leaf protein, an odorless, tasteless white powder can be added to cereal grains, vegetables, soft drinks, and other foods. It can be whipped like egg whites, liquified, or gelled, and it can take on the flavor and texture of a variety of foods. It is 99.5% protein and contains no salt, fat or

cholesterol. Currently being tested as a low calorie substitute for mayonnaise and whipped cream. South America, cultivated. The dried and cured leaves are used for chewing. PIRIE, SHEEN, UPHOF; A26, F68T, F86G, G73, J73, J82, Q41, R47

#### CULTIVARS

**Burley:** Common smoking tobacco grown in several southern states. Makes a good cigar filler and binder leaf. A striking specimen plant with 18 inch leaves and numerous clusters of rose-pink flowers. The plant is best grown at about 30° latitude for commercial production. C43M, C43M{PL}, D11M, D56M, D26G, E97, F70, F73D, I81M, N40M, N84, 053M

**Burley No. 21:** 120 days. All-purpose plug tobacco for chewing or wrapping cigars. This sun-cured white burley is also a favorite for pipes and cigarettes. Produces very large white blooms; grows 4 to 6 feet tall. Start seeds indoors 5 to 6 weeks before transplanting. D76, E7M

**Havana 608:** 65 days. Said to be the best Havana type tobacco for home gardeners. Produces good crops early. Does particularly well in cool northern areas. Good for cigars and chewing. Recommended for first time growers of tobacco. D56M, F80, N40M, N84

**Kentucky Burley:** A standard Burley tobacco grown in Kentucky for its high yield and high quality. Good for pipes, cigar fillers and binders, and cigarettes. Disease resistant. D26G

**Kentucky Park:** Makes a good filler for cigarettes, pipes and cigars. Also a good binder for cigars. To make a good cigar binder increase leaf size by leaving only 10 to 12 leaves after pruning. D26G

**Madole:** Fast growing, hardy commercial strain. Prized by specialty growers because it provides a great wrapper tobacco or a premium snuff tobacco when ripe. A good tobacco for beginners learning to roll their own cigars or for first time snuff makers. D26G, D56M, N40M

**Mont Calme Brun:** (Havana, Havana Large Leaf) A fine Cuban variety of smoking tobacco. Has a very fresh and smooth flavor. Normally grown for cigars but can also be used for pipes and cigarettes. More tolerant of rich soils. Produces ornamental, rose colored flowers. A2, D26G, F73D, N84

**Mont Calme Yellow:** Yellow, improved Virginia type. Has a rich flavor of high quality. Grows 8 feet tall, with leaves 3 feet long and 1 foot wide. Very productive. Slightly tolerant of frosts. F73D, N84

**Shirazi Iranian:** 85 days. Strong-flavored smoking tobacco of premium quality. Good for cigar fillers and pipes. Early maturing. Grows 4 to 5 feet tall with foot long leaves. Attractive pink to pale purplish flowers. Originally from Iran. A2, C95, D26G, D56M, F73D, K49T, L77D, N40M, N84

**Tennessee Burley:** A good burley type that is a favorite in Tennessee. Produces good quantities of high quality leaves that are favored for cigarettes and pipes. Vigorous, easy to grow plant with multiple disease resistance. D26G, D56M, N40M

**Virginia Smoking:** Dark leaved Virginian tobacco. One of the principal sources of commercial tobacco. Ideal pipe and cigarette tobacco. Grows to 6 feet tall. Best grown in light soils. Originated in pre-Columbian times. A2, A66, F73D, N84, S55

*Petunia x hybrida* - *Garden petunia* {S}. The mild tasting flowers are eaten in salads or used for garnishing other foods. Cultivated. LENZ; A25, B77M, C69, D68, E7M, F80, F82, G27M, G82, H57M, H61, H85M, H95, 191, J20, K49M, L42, M49, M95M, etc.

*Physalis angulata* - *Cutleaf ground-cherry* {S}. The juicy, subacid fruits are eaten raw, fried, stewed, or made into marmalade by cooking in palm syrup. In Costa Rica, they are sometimes used in the preparation of hot chili sauces. Young leaves are used as a potherb. Tropics. HEDRICK 1919, MORTON 1977, WILLIAMS, L.; F85

*Physalis edulis* -+ *Physalis peruviana*

*Physalis heterophylla* - *Clammy ground-cherry* {S}. Ripe fruits are eaten fresh, dried, or made into pies, jams, sauces, syrup, preserves and soups. Pectin must be added when making jam. Dried fruits are sometimes ground into meal or bread. North America. CROWHURST 1972, HARRINGTON, H., KINDSCHER, PETERSON, L., WEAVER 1993 [Re]; M34M, N84

*Physalis ixocarpa* - *Tomatillo, Mexican ground-cherry, Tomate verde* {S}. Unripe fruits are widely used in *salsa verde*, a mildly hot chili sauce often served with tacos, enchiladas, tostadas, chilis rellenos, and other Mexican dishes. They are also stewed, fried, baked, or used in dressings, purees, curries, soups, and other Mexican sauces such as *mole verde*. Ripe fruits are sweeter and can be eaten out of hand, added to salads and sandwiches, or used in pies and preserves. Often hung in garlands or *ristras* like chili peppers. Mexico, cultivated. CUSUMANO [Cu, Re], DREMANN, S. 1989, HALPIN [Cu, Cul], HEISER 1969, HERKLOTS, KENNEDY, D. [Cu], KIRK, MORTON 1987a [Cu], ORGAN, SCHNEIDER 1986 [Pre, Re], SIMMONS 1972; B75, B75{PL}, C43M{PL}, C82, C89{PR}, E13G{PR}, F71M, G47F{PR}, J20, J25M, M1P, N40{PR}, R47

**CULTIVARS**

**Indian:** 60 days. Medium-sized fruit, about 2 inches in diameter. Ripens early. Tart green fruits make good salsa. Golden-ripe fruits have very good flavor, just the right balance of sweetness and acidity with a hint of citrus. They are excellent for making preserves. Upright growing plant with dark green foliage. D82, F73D, H24, J9M, L89

**Larae Green:** 80-90 days. Large, round fruit; 2 to 3 inches across. Mild, slightly tart but pleasant flavor. Good for canning. The large fruit is easier to de-husk to make quantities of salsa but does not store as well as *P. philadelphica*. F73D, F80, H95, J73, N52

**Purple:** Medium-sized fruit, 2 inches in diameter. A smaller purple fruit that is preferred by some for its sharper flavor, otherwise about the same as the green tomatillo. A2, C26{PL}, G6, G68, 139, K49M

**Purple Husk:** Fruit somewhat smaller and harder to husk than the green types, should be used in cooking only when fully mature. The decorative purple husks are outstanding as a culinary garnish, particularly when the husk is separated along its ribs into a flower shape, with the fruit forming the flower center. Recommended for the restaurant trade. M1P

**Rendidora:** Fruits are large, yellow-green when ripe, sweet acidic in flavor, and easy to pick since they are about the size of a golf ball. Plants at first grow upright, but then branches become prostrate when loaded with fruits. Ripens 15 days earlier than others and gives 80% greater yield. Good to eat raw, served sliced along with tomatoes. MORTON 1987a; DIT, J82

**Toma Verde:** 60 days. Large, globe-shaped fruit, 2 to 3 inches in diameter; weight 2 to 3 ounces; non-pithy when ripe. Papery husk better encloses and protects the fruit than other types, yet is still easy to peel. Excellent either raw or cooked. Relatively new, widely adapted strain. B73M, C53, D56M, D68, G6, G16, G82, 191, J9M, J97M, K66, L42, M0, M29, M49, M65, N16, etc.

**Verde Puebla:** 75-85 days. Large-fruited, uniform strain; weight 1 to 2 ounces. The golf ball size fruits are harvested green for making salsa. Somewhat sweet and tangy if eaten raw after turning slightly yellow. Will split before becoming fully yellow. A87M, C20M, DIT, E24, E97, H33M, H61, K10, M0

*Physalis peruviana* - *Cape gooseberry, Poha, Peruvian ground-cherry* {S}. The subacid fruits are eaten out of hand, dried, preserved, stewed, pureed, added to salads, or made into pies, cakes, sauces, jellies, compote, and jams. Using the husk as a handle, the fruits can be dipped into icing, chocolate, or fondant. The fruits often dry naturally on the plant, making a palatable "raisin" that does not have much sugar but is pleasant to eat. Dried fruits are said

to be a substitute for yeast. Tropical America, cultivated. HEISER 1969, HERKLOTS [Cu, Nu], JOHNS [Cul], MORTON 1987a [Cu], RILEY 1983, SCHNEIDER 1986 [Pre, Re], SIMMONS 1972, WILDER; E13G{PR}, E33, F21M{£D}, I83M{PL}, J9M, M1P, N40{PR}, N84, 093, Q49M{PL}

**CULTIVARS**

**Giallo Grosso:** (Larga Golden Italian) Tall, erect, well-branched plant flowering at every node. The fruit is eaten raw or preserved after ripening to a golden-yellow color. In areas with mild winters the plant will last for several years. Q11M

**Giant:** Very large, golden-orange fruit, approximately 40% larger than Goldenberry; delicious flavor. Vigorous, spreading plants grow 3 to 5 feet tall. Requires a long growing season. Originated in Guatemala. Introduced into the United States by Gabriel Howarth. C95, D29P

**Golden Nugget:** Small, marble-sized, golden yellow fruits; sweet and juicy. Good fresh or in preserves. Very productive, spreading plants. A three year perennial in warmer climates, with production tapering off in the third year. PIG

**Goldenberry:** Fruits average 1 inch in diameter, with some reaching 2 inches; pulp is very flavorful and sweet. Dried fruits are used in fruit cakes in place of raisins. Said to be frost resistant; it has resisted light frosts which caused tomatoes and other *Physalis* species and cultivars to die. In cooler climates, it takes 1 1/2 years from seed to bear well. KRAFT, RILEY 1983; C95, G53M, L11, L91M, R49

*Physalis philadelphica* - *Wild tomatillo, Miltomate, Purple ground-cherry* {S}. Fruits are eaten raw, stewed, fried, or made into sauces. In Central America, it is perhaps the most commonly used of the fruits of *Physalis* in hot chili sauces, or used like tomatoes. Cultivated in Guatemala and perhaps elsewhere for its relatively large fruits. North America, Mexico. VON REIS, WILLIAMS, L.

**CULTIVARS**

**Purple de Milpa:** Small, purple-tinted fruits with high dry matter are considered the best-flavored tomatillo. They have a sharper flavor that is preferred by some cooks. The fruits can be stored for months by pulling back the husks and stringing them like garlic. Only found as a semi-domesticated weed in the milpas or slash-and-burn cornfields, and is much sought after. DREMANN, S. 1986 [Re]; C26{PL}, F73D, G6, I99M, J39, J97M, K23{PL}, K49T, L7M, L77D, L11, M32, N84

**Tepehuan:** Small, green, husked fruits. Collected in Nabogame, Chihuahua, Mexico, a remote mountainous region. Often served with beans as a breakfast food. Weedy in its native habitat. Adapted to both high and low desert areas. 116, N84

**Zuni:** Small, sweet fruit, excellent in salsas. Can also be roasted in an oven, then blended with garlic, onion, chile and cilantro and used as a hot sauce. Prolific plants; plant in spring in high, cool desert areas. Their culture, by the Zuni Indians, predates the tomato. From northern New Mexico. C26{PL}, D29P, F73D, 116, N84

*Physalis pruinosa* - \* *Physalis pubescens*

*Physalis pubescens* - *Ground cherry, Husk tomato, Strawberry tomato* {S}. The subacid to sweet fruits are eaten out of hand, dried, pickled, stewed, added to salads, or used for pies, preserves, sauces, jams, and ice cream toppings. When dried in sugar, ground cherries make an excellent fruit to use in fruit cakes, some cooks preferring them to citron, figs, or even raisins. North America, Tropical America. ANGIER [Re], GIBBONS 1962 [Re], HALPIN [Cu, Cul], MEDSGER, VILMORIN; A2, B73M, C82, C85M, D11M, D68, D82, F70, G13M, G16, G93M, 139, K49M, K71, L42, M0, etc.

**CULTIVARS**

**Aunt Molly's:** (Aent Moll) 65-70 days. Notable for its mild flavor, very sweet and fruity, somewhat reminiscent of tangerines. Excellent in fruit salads and jams. Turns a golden-orange color and

drops to the ground when ripe. Will store up to 3 months when kept in its papery husk. May be a variant form of Goldie WEAVER 1997; F24D, F73D, L89, N24M

**Cossack Pineapple:** 60 days. Small, yellow fruits, about 1/2 inch in diameter. Excellent flavor reminiscent of a sweet pineapple. Excellent for preserves, hot dessert toppings, salads or mock pineapple yogurt. Short, bushy, spreading plant; height 12 to 18 inches. Originally from Eastern Europe C95, D29P, F73D, L7M, L77D, L88J, R47

**Eden:** Small fruits, about half the size of a cherry tomato; yellow when ripe; sweet. Can be eaten raw, cooked or after having been dried. Low growing, tomato-like plants. Originally from the Netherlands. J39

**Goldie:** 75 days. A selected strain with apricot-colored fruits, and a clean, sweet flavor when ripe. Slightly larger than Cossack Pineapple, averaging 3/4 inch in diameter. Plants are profusely branching, prolific, and decorative; interesting in flower beds. Bears until frost. G6, L7M, L77D

**Huberschmidt:** Pennsylvania German heirloom. Often found as an escapee from old gardens. Distinctive, tomato-like flavor with a sweet aftertaste. Popular for making pies and preserves. Prolific grower. F24G, F73D

**New Hanover:** Small, yellow fruits, similar to Cossack Pineapple. Distinctive flavor, somewhat reminiscent of a yellow tomato. Winner of a tasting held by the American Institute of Wine and Food. Originated with the late Katie Hoffman Slonaker of New Hanover, Pennsylvania. WEAVER 1997; F73D

**Sweet Amber:** Small, cherry-size fruits, ripen to an amber or bright-orange color. Has a very pleasant fruity flavor when fully ripe. Greenish fruit will have an unpleasant taste. Ripe fruits are harvested from the dry papery husks that fall to the ground. J9M

*Saracha jaltomata - Jaltomata procumbens*

*Solanum aethiopicum - African scarlet eggplant, Mock tomato, Garden egg* {S}. The orange-red fruits are cooked and eaten like eggplant, pickled, or used for flavoring other foods. Young shoots are stripped of their numerous flowers and buds, and then finely cut for use in soups. They have a bitter taste. Sometimes known as the *tomato of the Jews of Constantinople*. These people are the Ladinos expelled to Constantinople from Spain about 1500 AD, and whose ancestors possibly carried this crop with them to Spain when they were expelled from Timbuktu about 1400 AD. Tropical Africa, Tropical Asia. DALZIEL, LESTER, VAN EPENHUSEN [Cu], WILSON, E.G.; F73D, F80, N84. (for cultivars see Eggplant, page 359)

*Solanum alibile -+ Solanum sessiliflorum van alibile*

*Solanum anomalum - Children's tomato* {S}. Fruits are eaten as a condiment in soups and sauces. They are also dried, preserved, or fermented into *dawadawa*, which can be used as a flavoring. West Tropical Africa. DALZIEL, UPHOF; F85

*Solanum aviculare - Kangaroo apple, Poro-poro* {S}. Fully ripe fruits are eaten raw, boiled, baked, stewed with sugar, or made into jam. They should be harvested after having fallen from the branches, when they lose their unpleasant acidity. Also used as an ornamental and a rootstock. Australia, New Zealand. COLENSO, CRIBB, HEDRICK 1919, UPHOF; F80, F85, N79{PL}, N79M, N84, 093, R15M, R47, R77{PL}

*Solanum x burbankii - Wonderberry, Sunberry, Msoba* {S}. The small, deep-blue fruits are eaten. Often confused with *S. scabrum*, which has larger, purple-black fruits. Once sold by Gleckler's Seedsmen of Metamora, Ohio who described it as "an annual domesticated blueberry from South Africa...quite similar to the California Sunberry grown by the great Luther Burbank 50 years ago. In colonial days of Africa farm women used Gsoba for tarts, jams, etc...It appears Gsoba would be adapted also for making fermented

beverages". Tropical Africa. HEISER 1969, ZEVEN; D29P, F73D, F80, H24, N84

CULTIVARS

**Fruity:** 130 days. Large fruits, 2 to 3 times the size of Mrs. B's Non-Bitter. When fully ripe, they are sweet and suitable for eating out of hand. Much firmer than Mrs. B's Non-Bitter, although not as sweet. Can be frozen. Fruit caps turn yellow-brown when ripe. Grows 3 1/2 to 4 1/2 feet tall. Developed by Tim Peters. J9M

**Mrs. B's Non-Bitter:** 55-60 days. Small, bluish-purple fruits, smaller than Garden Huckleberry (*S. scabrum*). More intense in flavor but also notable for being non-bitter, almost sweet. Can be eaten raw, but is better cooked or used in jams, sauces, jellies and pies. Plants grow to 3 feet tall; bears fruit in clusters. C95, J9M

*Solanum caripense - Tzimbaló, Pepino lloron* {S}. The fruits, hardly larger than cherries, are eagerly eaten by the South American people. Their sweetish juice makes them palatable although they have little flesh and numerous seeds. In Colombia, they are made into preserves. Closely related to, and hybridizes with *S. muricatum*. Andean South America. CORRELL, HEISER 1964, HEISER 1969, PEREZ-ARBELAEZ; U37M

*Solanum centrale - Bush tomato, Akudjura, Desert raisin* {S}. Small quantities of the fruit can be eaten fresh. Dried, shriveled fruits have a rich, spicy, aromatic flavor—and after rubbing in the native red sand are said to taste more like raisins. One of the most delicious and popular bushfoods. Usually ground to a powder or preserved in oil. Excellent in sauces, chutneys, relishes, jams and salsas or as a topping for focaccia. High in Vitamin C. Australia. CHERIKOFF, O'CONNELL, ROBINS [Re]; B76M{DF}, C95, N79{DF}, N79{PD}, 032M{DF}, 032M{P£}, N79{PL}, N84, R15M

*Solanum x curtlobum - Choque pitu, Bitter potato* {PD}. Natural hybrid. The tubers are eaten. One of the principal species used in the production of *chuho*, a freeze-dried potato product indigenous to cold altiplano regions. White chuno—locally called *moraya* or *tunta*—is made by freezing, peeling, soaking and sun drying the potatoes. Black chuno or *chuho negro* is processed in a similar manner, however the potatoes are not soaked. Most often used in soups and stews, combined with barley and herbs. Can be stored for three or four years. Andean South America. CAMPBELL-PLATT, NATIONAL RESEARCH COUNCIL 1989, UMANA-MURRAY [Re], WERGE; G47G

*Solanum demissum - Papa cimarrina, Papa del monte* {S}. Tubers are cooked and eaten. They are frequently added to soups and stews as much for flavoring as for their food value. In Mexico, the fruits are cooked and eaten as a sweet, without the addition of sugar. Fully ripened fruits are said to have the odor of mango, papaya, or wild strawberry. Central America. CORRELL; U24, Z91

*Solanum fendleri - Fendler potato, Wild potato* {S}. The small tubers are eaten raw, boiled, baked, or roasted. They are said to be pleasant tasting, somewhat like a boiled chestnut. Southwestern North America. GIBBONS 1979, HEDRICK 1919, KIRK, MEDSGER, YANOVSKY; U24

*Solanum ferox - Terong asam, Ma uk muak* {S}. The fuzzy, orange fruits are cooked and eaten. They are made into a sour-relish, or used in curries. Southeast Asia. BURKILL, HERKLOTS, UPHOF, WATT; F85, N84

*Solanum georgicum - Solanum sessiliflorum van georgicum*

*Solanum gilo - Solanum aethiopicum*

*Solanum hirsutissimum -> Solanum pectinatum*

*Solanum incanum - Palestine nightshade, Meringam, Ikon* {S}. The green, unripe fruits are eaten raw or cut into pieces and added to soups, or the pieces may be dried for later use. In Nigeria, both sweet and bitter types are cultivated. Seeds are used in the Sudan for curdling milk. Leaves are also edible. Tropical Africa, Tropical

Asia. DALZIEL, MARTIN 1975, UPHOF, VAN EPENHUSEN; F85

*Solanum indicum* - *Terong pipit puteh* {S}. Ripe fruits are eaten in soups and sauces. Unripe fruits are used in curries. Leaves are also edible. Tropical Asia. BURKILL, MACMILLAN, TANAKA, UPHOF; F85, Q46

*Solanum integrifolium* - *Solanum aethiopicum*

*Solanum intrusum* *Solanum scabrum*

*Solanum jamesii* - *Colorado wild potato* {S}. Tubers are eaten raw, baked, or boiled. They can be stored for several months, or they can be sliced, dried, and ground into a flour. The Hopi Indians cook the tubers with a saline clay and also reportedly use them in making yeast. Southwestern North America. CORRELL, HARRINGTON, H. [Pre, Re], YANOVSKY; U24, Z91

*Solanum x juzepczukii* - *Luqui, Bitter potato* {PD}. Natural hybrid. The tubers are eaten. One of the principal potato species used in the production of *chuno*, a freeze-dried product known since pre-historic times. Both white *chuno* and black *chuno* are produced, the white being much less bitter. *Chuno* is added to soups and stews, steam heated with cheese, or mixed with fruit and molasses and made into a sweet dessert known as *manmorra*. *Tongosh* or *tokosh* is also prepared from the tubers. It is a strongly aromatic product made by soaking the tubers in running water until they ferment. Andean South America. CAMPBELL-PLATT, NATIONAL RESEARCH COUNCIL 1989, UMANAMURRAY [Re], WERGE; G47G

*Solanum macrocarpon* - *Gboma eggplant, Terong engkol* {S}. Fruits are eaten as a cooked vegetable or used in soups and sauces. The leaves are boiled or steamed and served as a side dish with rice. Tropical Africa, cultivated. LESTER, OCHSE, OOMEN, TANAKA. C95, F80. (for cultivars see Eggplant, page 359)

*Solanum melanocerasum* - *Solanum scabrum*

*Solanum melongena* - *Eggplant, Aubergine, Brinjal, Melanzane* {PD}. Fruits are eaten raw, fried, baked, stewed, pickled, grilled, marinated, stuffed, added to soups, stews and curries, or used in *caponata*, *ratatouille*, *Imam bayeldi*, *baba ghanoush*, *moussaka*, etc. Paper-thin slices of the fruits are popular wrappings for other foods. Dried eggplant skins, made from small cylindrical fruits that have been hollowed out and the shells dried, are popular in Middle Eastern cuisine where they are reconstituted and used as casings for various stuffings. In Morocco, the peeled stems of small eggplants, said to have a mushroom-like flavor, are added to lamb stews. The leaves are mixed with the rice bran and salt in which daikon roots are pickled. Tropical Asia, cultivated. BIANCHINI, HALPIN [Cu, Cul], HAMADY [Re], HEISER 1969, HERKLOTS, OCHSE, ROUTHIER 1993, SCHNEIDER 1986 [Pre, Re], TANAKA, VILMORIN [Cu], WOLFERT 1973 [Cul, Re]; E23M, H19M, L50M, L99. (for cultivars see Eggplant, page 359)

*Solanum muricatum* - *Pepino dulce, Melon pear* {S}. The sweet, aromatic, refreshing fruits are very good eaten out of hand, having the flavor of a ripe muskmelon with a hint of pear or pineapple. They can also be used in fruit salads, as a garnish, served with prosciutto, or made into sauces, jams, and preserves. Occasionally available in specialty markets. Andean South America, cultivated. CUSUMANO [Cul, Re], FRIED, HEISER 1969, HERKLOTS, NATIONAL RESEARCH COUNCIL 1989, POPENOE, W. 1924, SCHNEIDER 1986 [Cul]; A28{PL}, A79M, C89{PR}, D56M, E13G{PR}, F73D{PL}, H53M{SC}, N40{PR}, N40M, N84, P38, R78M. (for cultivars see Pepino Dulce, page 472)

*Solanum nigrum* - *Black nightshade, Morelle* {S}. Young shoots and leaves are eaten as potherbs or added to soups. Ripe fruits are eaten stewed or made into pies, jams, preserves, puddings, sauces, pastry, or a spicy relish. They are usually cooked with sugar and lemon juice to make them palatable. The unripe fruits contain solanine and should not be eaten. Cosmopolitan. CRIBB, FERN-

ALD, FOX, E, GIBBONS 1979, HARRINGTON, H. [Re], HEDRICK 1919, MACMILLAN, NIEBUHR, OCHSE, UPHOF, VAN EPENHUSEN [Cu, Pio]; A79M, C43M, D29P, F85, G73, N71M, N84

*Solanum nigrum* var. *guineense* - *Solanum scabrum*

*Solanum nigrum* var. *nodiflorum* - *Solanum nodiflorum*

*Solanum nodiflorum* - *Popolo* {S}. The leaves are boiled and used like spinach. In Hawaii, they were cooked in underground ovens and eaten with fish as a substitute for poi. Ripe fruits are eaten, and have a peculiar flavor that is agreeable to some. Fresh or dried leaves were made into a tea. Tropics. ALTSCHUL, CRIBB, DALZIEL, DEGENER, MAY, R., UPHOF; X54, Y2

*Solanum pectinatum* - *Lulita* {S}. The juicy fruits may be eaten raw but are best cooked with sugar after their fizz has been brushed off and perhaps after thin peeling. Pulp is acid but the sugar content is relatively high and the flavor is somewhat aromatic. The fruit has extremely fine juice, almost equal to that of the naranjilla, and is used in the preparation of refreshing beverages. Tropical America. HEISER 1985, HERKLOTS; N84, P38, R78M

*Solanum pseudolulo* - *Lulo comun, Lulo de perro* {S}. Fruits are used in the preparation of refreshing drinks. The pulp is pale yellow and the quality of the juice is generally inferior to that of the naranjilla. Produces fertile hybrids when crossed with the naranjilla. Colombia. HEISER 1969, HEISER 1985, MORTON 1987a; X54

*Solanum quitoense* - *Naranjilla, Golden fruit of the Andes* {S}. The fruits are bright orange, thick-skinned, and have greenish pulp of a very refreshing, subacid flavor that has been likened to a combination of orange, pineapple and tomato. In Ecuador and Colombia, freshly squeezed naranjilla juice is used to make *sorbete*, a green, foamy drink with an appealing sweet-sour flavor of pineapple and strawberry. The juice is also used for flavoring ice cream and sherbets, or made into jam and jelly. In Panama, it is mixed with sugar cane juice to make an unfermented *chicha*. Andean South America, cultivated. DUKE, FRIED [Re], HEISER 1985, HERKLOTS, MORTON 1987a [Cu, Pro], NATIONAL RESEARCH COUNCIL 1975a, POPENOE, W. 1924, SCHULTES, STURROCK; A79M, C95, D92M, E29 {PL}, E48{PL}, F85, G73, I12{PL}, I83M{PL}, L55J, N84, Q49M{PL}, R32, R47

*Solanum scabrum* - *Garden huckleberry* {S}. The purplish-black fruits, when thoroughly ripe, are eaten raw, stewed, or used in jams, jellies, sauces, pies and preserves. They are usually cooked in baking soda first to remove the bitterness, and then prepared with sugar and lemon juice. In West Africa, the leaves are used as a potherb. Cultivated. CHILD 1985a, FELL 1982b [Cu, Pre], FERNALD, HEISER 1969, MARTIN 1975, MASEFIELD, SIMMONS 1978, TANAKA; B73M, C82, D11M, D65, F70, F73D, G68, H33M, H85M, J9M, K20M, K49M, K71, L3J, L42, M1P, N84, etc.

#### CULTIVARS

**Schwartzbeeren:** (Loneberry) 60-75 days. Plant grows to 2 feet tall, self-seeds. Fruits dark-purple, round, 1/4 inch in diameter, borne in clusters. Heirloom cultivar brought by Volga German immigrants to Kansas and Nebraska in the 1880 to 1920 period. U33

*Solanum sessiliflorum* - *Cocona, Cubiu, Orinoco apple* {S}. The ovoid fruits, suggestive of large red or yellow apples, have an acid, pale-cream flesh that is distinctly acid. Although the flavor is agreeable, they are not recommended for eating out of hand. When peeled and used whole for making jams, preserves, pies, and sauces, the product might be compared with that of apricot, pineapple, or gooseberry. An acidulous, thirst-quenching drink can also be prepared from the fruits. In Brazil, the leaves are cooked and eaten. Tropical America, cultivated. HEDRICK 1919, HERKLOTS, MORTON 1987a [Cu, Pro], RILEY 1983, SCHULTES; A79M, G73, N84, R78M

*Solanum sessiliflorum* w. *alibile* - *Cocona willa* {S}. Cultivated as a dessert fruit and source of a refreshing beverage. The

fruits are globose, orange-red, more than twice as large as those of other forms of *cocona*, and are also less acidulous. Colombia. SCHULTES, ZEVEN; F85

*Solanum sessiliflorum* var. *georgicum* - *Cocona* {PL}. The dark red fruits are eaten out of hand or employed in the preparation of a refreshing, acidulous beverage. Similar to *S. sessiliflorum* but with smaller, globose fruits and spiny stems. Usually occurs as a weed or in semi-cultivation. South America. SCHULTES, ZEVEN; 112, N84{S}

#### *Solanum topiro* - *Solanum sessiliflorum*

*Solanum torvum* - *Pea eggplant*, *Susumber*, *Plate brush*, *Pokak* {S}. Young shoots are eaten raw or cooked. In the West Indies, especially Jamaica, the half grown, firm berries are boiled and eaten with salted fish, yams, akees, or in soups and stews. They have a distinctive, bitter flavor. In tropical Asia, they are eaten raw, cooked and served with rice, or used in stews, curries, and chili sauces such as Thailand's *ndm prik*. An extract of the plant is occasionally used as a rennet in the manufacture of *domiati*, the most popular white brined cheese in Egypt. Tropics. BENGHIAT [Cul, Re], COST 1988 [Cul], GRIGSON, J. 1986, HAWKES [Re], HERKLOTS, OCHSE, ROBINSON, R. 1991, TANAKA, UPHOF, WALSH [Re]; F85, N84, P38

#### CULTIVARS

**Snake Eve:** (Lao Green Grape) 135 days. Tiry, round fruit, no more than 1/2 inch in diameter; light yellow-green at harvest stage; seedy flesh. Used in traditional Laotian cuisine. May be used in any stir-fry dish calling for eggplant. Very tall, thorny plant, height 6 feet; bears fruit in grape-like clusters; resistant to nematodes, flea beetles and cold. C95

*Solanum tuberosum* - *Potato* {S}. Tubers are eaten boiled, baked, fried, roasted, mashed, or used in soups, stews, dumplings, pancakes, potato salad, etc. Paper-thin slices can be used as wrapping for other foods. The skins are eaten separately, for example in Bengal they are cooked with chickpea flour and poppy seeds. Also used for the manufacture of starch and alcoholic beverages, especially *vodka*. In Scandinavia, the national beverage is *aquavit*—made from potato alcohol and flavored with caraway, orange or lemon peel, cardamon, and other spices. *Papa seca*, potatoes that have been boiled and sun-dried, are popular in South America for adding to soup or *carapulcra*—2i famous pork and vegetable dish. *Vegeicious* and *Vance's DariFree* are unique milk substitutes derived from potatoes. The water from cooked potatoes is sometimes employed in the preparation of leavens used in *sourdough bread* manufacture. Andean South America, cultivated. CAMPBELL-PLATT, CARCIONE, FELL 1982b, HEISER 1969, HERKLOTS, KIRCHNER [Re], ORTIZ 1979 [Re], ROUTHIER 1993, TANAKA, UPHOF, VILMORIN [Cu], WERGE; E14T{DF}, D43G{PD}, F17{PD}, G47G{DE}, L17{DF}, R47. (for cultivars see Potato, page 493)

*Solanum uporo* - *Cannibal's tomato* {S}. Red fruits are used like tomatoes in the preparation of sauces. The leaves are eaten as a potherb. Polynesia. HEDRICK 1919, UPHOF; F80

*Solanum verrucosum* - *Papa morda* {S}. Tubers are eaten. A plant considered to be this species was once cultivated by the peasants in the neighborhood of Geneva, Switzerland. The tubers produced were smaller and later in development than *S. tuberosum*, of excellent flavor, and had yellow flesh. Mexico. CORRELL, ZEVEN; U24, Z91

*Solanum vestissimum* - *Lulo de la tierra fria*, *Toranja*, *Tumo* {S}. The juice of the fruits is used in the preparation of refreshing beverages. It has an excellent flavor, but the hairs of the fruit are rather bristly, and so the juice is difficult to extract. Colombia. HEISER 1985; F85

*Solanum xanthocarpum* - *Yellow-berried nightshade*, *Thorny nightshade*, *Makeuwa praw* {S}. The slightly bitter fruits are eaten raw, steamed with dips, or cooked in curries. Eaten green (immature), before the seeds mature and become tough. Leaves are used as

a potherb. Widely used in Thai cuisine. Southern Asia to Polynesia. COOK, HEDRICK 1919, MACMILLAN WATT; A26, F68T, F85, J82, N84

*Solanum* sp. - *Vishate*, *Hierba mora* {S}. Leaves and young shoots are steamed and eaten. They have a somewhat bitter flavor but an intensely sweet aftertaste. Said to be absolutely delicious. Plants grown in moist, shady areas are preferred for table use. Oaxaca, Mexico. THEODOROPOULOS; F80

*Withania somnifera* - *Kuthmithi*, *Ashwagandha*, *Indian ginseng*, *Winter cherry* {S}. The principal food tonic used in Ayurvedic herbalism. Powdered roots are often added to ghee, or made into a decoction with warm milk, raw sugar, honey, long pepper, and Basmati rice. Also an ingredient of various herbal formulas and concentrates such as *Chyavanprash*, *Amrit Kalash*, *Asvagantharistam*, and *Raja's Cup* coffee substitute. In India and the Sudan, the seeds are used to coagulate milk. Southern Eurasia, North Africa. FRAWLEY, SIVARAJAN TIERRA, UPHOF, WATT; A2, B49, C43M{PL}, C95, D92M, E14T{DF}, F15M{PD}, F68T, F80, G0{DF}, H14{ffi}, J82, K18M{DF}, K49T, L90J{PL}, N42{PL}, N84, R47, etc.

#### SONNERATIACEAE

##### *Duabanga grandiflora* - *Duabanga sonneratioides*

*Duabanga sonneratioides* - *Nepal-lampetis*, *Bandorhulla* {S}. The very acid fruit is eaten fresh or made into a refreshing drink. Indomalaya. TANAKA; P38

*Sonneratiaceolaris* - *Perepat*, *Berembang* {S}. Ripe fruits are eaten raw or cooked, having a cheese-like flavor. Young ones are used for flavoring chutney and curries. Also employed for making vinegar. Southeast Asia. BURKILL, TANAKA, UPHOF, WATT; F85, N84

#### SPHENOCLEACEAE

*Sphenoclea zeylanica* - *Goonda*, *Phak pot* {S}. The leaves and young leafy tops of the stems are steamed and eaten as a potherb, mixed with grated coconut, or served as a side-dish with rice. They have a slightly bitter but pleasant flavor. Often sold in local markets in Java. Tropical Africa, Tropical Asia. BURKILL, JACQUAT, OCHSE, UPHOF; F85

#### STAPHYLEACEAE

*Staphylea colchica* - *Colchis bladdemut*, *Dzhondzholi*, *Jonjoli* {S}. The young, leafy shoots are eaten, having somewhat the flavor of garlic. The flower buds are pickled in brine and used as a caper-like condiment, or mixed with red onion rings, olive oil, and red wine vinegar and served as an appetizer. Sold in local markets of Georgia. Suitable for edible landscaping. Caucasus, Black Sea region. GOLDSTEIN, MARGVELASHVILI; N84, R78

*Staphylea pinnata* - *European bladder-nut*, *False pistachio*, *Nezcoupe* {S}. The kernels of the fruit are said to taste like pistachios and are eaten in Germany by children. Southern Europe. HEDRICK 1919, ROOT 1980a; D95{PL}, F85, G66, K63G, N61, N84, P49, R78

*Staphylea trifolia* - *American bladder-nut* {S}. The seeds are eaten raw or they can be used in place of walnuts in chocolate chip cookies. A cooking oil has been extracted from the seeds. North America. GIBBONS 1979, KROCHMAL; B68{PL}, D47M, D95{PL}, F85, G66, J39M{PL}, K38, K63G, M77M{PL}, N37M{PL}, N61, N84

#### STERCULIACEAE

*Brachychiton diversifolium* - *Australian flame*, *Kurrajong* {S}. Seeds are eaten raw, roasted, used as a substitute for coffee, or made into breads, pancakes, muffins, and other baked goods. They have a rich, nutty, earthy flavor. The yam-like, tuberous roots were a popular item of food with the Aborigines, as was the honey-colored

sap. Australia. CHERIKOFF [Re], CRIBB, ROBINS [Cul, Re]; A79M, I83M{PL}, N84, 033, 094, P5, R15M, R33M, R47, S92

*Brachychiton populneum*-*Brachychilon diversifolium*

*Cola acuminata* - *Abata cola-nut*, *Kola nut* {DF}. When chewed, the caffeine-rich seeds act as a stimulant, retard hunger and fatigue, aid digestion, and increase one's stamina. At first bitter, they modify the sensation of taste so that any food or drink, consumed immediately thereafter, seems sweet. Traditionally, they were an ingredient of a stimulating beverage, usually served hot. An extract, prepared from the dried kernels, is used to flavor carbonated beverages, ice cream, candy, baked goods, and liqueurs. The kernels are white, pink or red. Red ones can be used as a natural food colorant. West Tropical Africa, cultivated. MENNINGER, MORTON 1976, ROSENGARTEN, SCHERY, WILSON, E.G. [Re]; F85{S}, F86G, GO, K18M, L34, N7D

*Cola nitida* - *Gbanja cola-nut* {DF}. The bitter, caffeine-rich seeds are chewed as a fatigue and hunger retarding stimulant. They also have a taste modifying effect, causing foods eaten afterwards to have a sweetish flavor. Seeds are dried, ground into a powder, and made into a hot beverage served with milk and sugar—called *drinking kola* in Jamaica. An extract of the seeds is used as a flavor ingredient in cola drinks and other food products. Fresh seeds are occasionally available at African markets. West Tropical Africa, cultivated. BROUK, LEUNG, MENNINGER, MORTON 1976; E14T, F73D, G73, L181M

*Dombeya rotundifolia* - *Wild pear* {S}. The fruits are edible. Flowers are cooked and eaten as a side-dish to which pumpkin leaves are sometimes added. Tropical Africa. FOX, F., KUNKEL; F85, N84, P17M, S28M

*Guazuma ulmifolia* - *West Indian elm*, *Guasimo* {S}. Green fruits are eaten raw, cooked, crushed in water to make a beverage, or used to flavor other foods. The sap is employed to clarify syrup in the manufacture of sugar. Tropical America. DUKE, GRIME, UPHOF; F85, N84

*Heritiera littoralis* - *Lookingglass tree* {S}. Seeds are eaten with fish. The leaves are used in the preparation of *Onge tea*. Old World Tropics. BHARGAVA, TANAKA; F85

*Hildegardia barteri* - *Bronyadua* {S}. Seeds are eaten raw or roasted, and are said to resemble peanuts in flavor. Also the source of and edible oil. West Tropical Africa. IRVINE 1961, KUNKEL; F85

*Sterculia apetala* - *Panama tree* {S}. The almond-flavored seeds are eaten raw, roasted, or fried. Roasted and ground seeds are mixed with water to form a beverage or sweetmeat. Fruits are also edible. Tropical America. DUKE, KENNARD, TANAKA, VON REIS, WILLIAMS, L.; F85

*Sterculia chicha* - *Maranhao nut*, *Castanha do Para* {S}. Seeds are roasted and eaten or used in lieu of cola nuts. They are said to have the flavor of chocolate or of peanuts. Tropical America. MENNINGER, TANAKA; X88M

*Sterculia foetida* - *Java olive* {S}. Seeds are eaten raw, roasted, or fried. They are oily and have a pleasant, cacao-like flavor. If eaten in too large a quantity, they have a purgative effect. The rootstock of the young plant is rich in starch, has a flavor similar to jicama (*Pachyrhizus erosus*), and can be eaten raw. Leaves are also used for food. Tropics. KENNARD, KUNKEL, MENNINGER, PONG-PANGAN; E29{PL}, F85, N84, 093

*Sterculia lychnophora* - *Poontalai*, *Lu uoi*, *Pang da hai* {DF}. When soaked in water, the seeds swell up to eight times their original volume to yield a transparent edible gel. A cooling beverage, called *Sam-rong* in Cambodia, is made by soaking the seeds overnight, adding sugar and a flavoring such as jasmine or banana water, then blending the contents so the gel is suspended in the liquid. Often combined with basil seeds. Southeast Asia. UPHOF, VAN DUONG; L90G

*Sterculia quadrifida* - *Peanut tree*, *Calool* {S}. The seeds are satin-black and about the size of peanut seeds. They have a nutty flavor, and are good to eat either raw or cooked. Australia. CRIBB; P38

*Sterculia scaphigera* - *Pong tai hai*, *Tai hau lam*, *Bakudai* {DF}. The tegmen of the fruit, when soaked in water, swells considerably to yield a gelatinous mass similar to that of *S. lychnophora*. It is dressed with buckwheat flour, made into soups and refreshing beverages, or used as a garnish for *sashimi*. Southeast Asia. HEDRICK 1919, HSU, TAN [Pre, Re], TANAKA, TSUJI, VAN DUONG; H36, L21T

*Sterculia tragacantha* - *African tragacanth* {S}. Source of a tragacanth-like gum that exudes from the stem, used as an adulterant of *gum arabic* in confectionery. The young leaves are cooked and eaten as a potherb. In Ghana, the leaves are used as wrapping for *dokon*—an acidic, fermented corn dumpling. Tropical Africa. CAMPBELL-PLATT, DALZIEL, UPHOF; F85

*Sterculia urens* - *Gular* {S}. Stems are the source of *karaya gum*, used like gum tragacanth in the preparation of sweetmeats and other foods. Seeds are roasted and eaten or used as a substitute for coffee. Tropical Asia. HEDRICK 1919, SCHERY, TANAKA; F85

*Sterculia villosa* - *Udal*, *Vakenar* {S}. Seeds are eaten after roasting or baking. The bark exudes a gum used as a substitute for gum tragacanth. Roots are also edible. Tropical Asia. BURKILL, TANAKA, WATT; F85

*Theobroma bicolor* - *Peru cacao* {S}. The pulp of the fruit is eaten out of hand. It has a sweet, agreeable flavor, superior to that of *T. cacao*. Seeds are toasted and eaten or used like cacao, yielding an inferior chocolate called *Nicaragua chocolate*, but good *cocoa butter*. Tropical America. DUKE, PESCE, UPHOF, WILLAN, WILLIAMS, L.; R78M

*Theobroma cacao* - *Cacao* {S}. Fermented seeds, called cacao beans, are the source of *cocoa*, *chocolate*, and *cocoa butter*, widely used in confectionery, milk chocolate, pastries, cakes, ice cream, chocolate milk, etc. Cocoa extract is added to candies, baked goods, frozen dairy desserts and liqueurs such as *Crime de cacao* and *Bailey's Irish Cream*. Mexican chocolate and the Spanish *xocolata a lapedra* are flavored with cinnamon. Cocoa is used as a coating for California's famed *Dry Monterey Jack* cheese. Traditionally, cacao was mixed with corn meal and made into various beverages. In Tabasco, ground cacao beans are added to the dough in the preparation of *pozol*, a fermented maize dough. The resulting product is called *chorote*. Pulp of the fruit is sucked as a sweet snack, preserved, crystallized, or made into alcoholic beverages and vinegar. Toasted cacao beans are mixed with mamey seeds in making *texate*, a refreshing beverage. The husk is toasted until black and made into *atole negro*. It also contains a pigment that is said to be useful as a food colorant. Tropical America, cultivated. DUKE, GRIGSON, S. [Re], HUTSON 1995, KENNARD, KRAIG [Re], LEUNQ RAY, C, SCHERY, STEINKRAUS, UPHOF, ZASLAVSKY; A79M, C17{£E}, C34G{£D}, D7{PD}, E8M{PL}, E29{PL}, F85, GO{PD}, G73, G73{PL}, H53M{PL}, I83M{PL}, L55J, M45P{PD}, N84, 093, R78M, etc.

CULTIVARS

**Hawaiian:** Cultivar group developed by Jim Walsh of Hawaiian Vintage Chocolate Company from crosses and selections of Trinitario, Criollo and Forastero types. Selected for trunk and first branch bearing, large seeds, disease resistance and adaptation to weather and elevation. Used for producing Kea'au Estates and Hodge's Estate vintage couverture chocolates. Kea'au Estates, grown near the Kilauea and Hilo areas, has a smooth, silky texture and a rich, earthy berry-like flavor. The Hodge's Estate chocolate is a single estate vintage grown near Kona which has more the flavor of hazelnuts and coffee with overtones of tropical fruit. F21P{PD}

*Theobroma grandiflorum* - *Capu-assu*, *Cupuagu* {S}. The fleshy pulp of the fruit has a pleasant, subacid, aromatic flavor and is eaten fresh or made into jams, tarts, marmalade, sherbets, *refrescos* and

*doces*. Highly prized in the Amazon and Upper Orinoco River regions. Small quantities of the pulp are exported to the United States and Europe where it is mostly used in juice and ice cream. The kernels yield a fat suitable for chocolate manufacture. Brazil. IDONE, MARTIN 1987, PESCE, SCHERY, SMITH, N., UPHOF, WILLAN; 019

## STILAGINACEAE

*Antidesma bunius* - *Bignay, Chinese laurel* {S}. When fully ripe the fruits are slightly sweet and may be eaten raw. Otherwise they are cooked with fish, used in jellies, preserves, fruit punches, syrup and sauces, or made into wine and brandy. Young leaves are eaten raw or steamed and served with rice. They are also mixed with other foods to give a sour flavor. Southeast Asia. KENNARD, MORTON 1987a [Cu, Pro], OCHSE, RICHARDSON, M. [Pre, Re], UPHOF; E29{PL}, F85, N84, 094, P5, R78M

*Antidesma dallachyanum* - *Herbert River cherry, Currant tree* {S}. The fruits, which have a very high vitamin C content, are reddish-purple when ripe, larger and with more flesh than *A. bunius*, and very acid. They are not usually eaten out of hand, but are said to make a deep-red jelly that is equal to that made from the European red currant. Australia. CRIBB, JOHNS, MORTON 1987a, STURROCK; N84, P38

*Antidesma ghaesembilla* - *Black currant tree* {S}. When fully ripe, the reddish-purple fruits are subacid to somewhat sweet. They are eaten raw, used in jams and jellies, or made into *roodjak* with chilis, fish paste, salt, and sugar. Young shoots are eaten as a vegetable or used like tamarind for giving other foods a sour taste. Malaysia to the Philippines. MORTON 1987a, OCHSE; F85, Q46

## STRYCHNACEAE

*Strychnos cocculoides* - *Monkey orange* {S}. Pulp of the fruit is juicy and pleasant to eat, sweeter than *S. spinosa* and hence more popular. Its juice is used fresh, fermented, or made into a refreshing sour-sweet drink. Occasionally the fruit is picked green and ripened by burying it in sand, where it will keep for several months. Seeds may be poisonous if chewed or swallowed. Tropical Southern Africa. FOX, R; N84, S28M

*Strychnos madagascariensis* - *Spineless monkey orange* {S}. The refreshing, acidulous fruits are eaten when ripe or made into drinks. Dried fruits, having the flavor of apricots, are mixed with honey and eaten as a favorite food. They are also ground into a fine meal used for making porridge. Southern Africa. FCX, F., TREGOLD; N84, S28M

*Strychnos potatorum* - *Clearing nut, Neimal* {PD}. The young fruits are occasionally eaten or made into preserves. They are also one of the ingredients of *Raja's Cup*, an Ayurvedic coffee substitute. Tropical Africa, Tropical Asia. FOX, F., HEDRICK 1919, UPHOF; F15M, H14, N84{S}

*Strychnos spinosa* - *Kaffir orange, Natal orange* {S}. Ripe fruits have an agreeable, aromatic, sweet-sour flavor reminiscent of stewed peaches. They can be eaten raw, dried, added to maize porridge, or used to make a refreshing beverage. The leaves are eaten with couscous. Seeds are somewhat poisonous. Drier Tropical Africa. EALZIEL, FAIRCHILD 1930, FCX, F., IRVINE 1961, TREGOLD, VON MAYDELL; E29{PL}, N84, S28M

## STYRACACEAE

*Halesia Carolina* - *Silver-bell tree, Wild olive* {PL}. The ripe fruits are chewed for their acidity. Unripe ones are sometimes made into pickles. Southeastern North America. FERNALD, HEDRICK 1919; A93M, E7M{S}, E87, H4, K38{S}, M77, N37M, N84{S}, R7S{S}

*Halesia tetraptera* - \* *Halesia Carolina*

*Styrax benzoin* - *Sumatra benzoin* {DF}. The bark is the source of a resin, called *benzoin* or *ansokuk*, used to flavor chewing gum,

baked goods, frozen dairy desserts, puddings, soft drinks, candies and chocolates. Malaya. LEUNG, MORTON 1976, TANAKA; E14T, F32D, F85{S}, F86G, GO, J82, K18M, L34, N7D

*Styrax officinalis* - *Storax tree* {S}. Stems and branches yield a highly perfumed, balsamic gum occasionally used as a condiment. Southwest Asia. KUNKEL; G66, 198M{PL}, K63G

*Styrax tonkinense* - *Stam benzoin* {S}. The trunk yields a balsamic resin used by the food industry for flavoring ice cream, baked goods, chocolate glaze, alcoholic and non-alcoholic beverages, chewing gum, etc. Also Southeast Asia. BURDOCK, LEUNG, UPHOF; E14T{PD}, N84

## SYMPLOCACEAE

*Palura chinensis* - \* *Symplocos chinensis*

*Symplocos chinensis* - *Sapphire-berry, Sawa-futagi* {S}. The small, sapphire-blue berries are used in jams, jellies, and sauce. Japan, Korea, cultivated. FREITUS [Re], TANAKA; B68{PL}, C9{PL}, D95{PL}, E7M, I60{PL}, K63G, N84, R88

*Symplocos paniculata* - *Symplocos chinensis*

*Symplocos tinctoria* - *Sweet leaf, Horse-sugar* {PL}. On hot summer days, the leaves are chewed for their pleasantly sweet, slightly acid flavor that is refreshing and relieves one's thirst. North America. FERNALD, GIBBONS 1979; H4, H14M, K63G{S}, N37M, N84{S}

## TACCACEAE

*Tacca leontopetaloides* - *Polynesian arrowroot* {S}. Tubers are sometimes eaten boiled or roasted. A starch extracted from them, called *Tahiti arrowroot* or *Fiji arrowroot*, is used in breads and soups, or it is mixed with papayas, bananas, and pumpkins, flavored with vanilla and lemon and cooked into *poi*. Pacific Islands, cultivated. HERKLOTS, MASSAL, UPHOF; F69{PL}, F85

*Tacca pinnatifida* - \* *Tacca leontopetaloides*

## TAMARICACEAE

*Tamarix aphylla* - *Athel tamarisk, Khora-gaz* {S}. A sweet, manna-like substance that forms on the twigs is used to adulterate cane sugar. The Tuareg eat it with porridge or mix it with water to form a refreshing beverage. North Africa to Southern Asia. DONKIN, HEDRICK 1919; JO

*Tamarix articulata* - *Tamarix aphylla*

*Tamarix canariensis* - *Tamarisk, Manna plant* {S}. The sweet, manna-like substance that exudes from the stems is collected and mixed with flour, sugar or honey, and sweet almonds, formed into cakes, and baked into a kind of sweetmeat. Macaronesia, Mediterranean region. DONKIN, HEDRICK 1919; F85, K38, N84, 053M, 093, P49, Q32, R83{PL}

*Tamarix gallica* - *Tamarix canariensis*

## TAXACEAE

*Taxus baccata* - *English yew* {S}. The bark is used as a substitute for tea. Fruits are sometimes eaten, however the seeds are considered poisonous. Eurasia, cultivated. HEDRICK 1919, KUNKEL, TANAKA; A79M, C9M, G66, K38, K63G, N71M, N84, 053M, 093, P49, Q46, R78

*Taxus cuspidata* - *Japanese yew* {S}. The sweet aril, or fruit pulp, is eaten raw, made into jam, or brewed into wine. Caution is recommended, as the seeds of many species are poisonous. Japan. TANAKA; A79M, B9M{PL}, E97{PL}, G66, 14{PL}, K38, K63G, N84, 093, P5, P49, R78

*Torreya californica* - *California nutmeg* {S}. Kernels are eaten. They also yield an edible oil. Western North America. TANAKA; B94, D95{PL}, D96, G59M, G66, K63G, N84

*Torreya nucifera* - *Kaya, Japanese torrey* {S}. Seeds are eaten raw, roasted, or used in confectionery. They have an agreeable, somewhat resinous taste. Also the source of an edible oil used in cooking. Sometimes found in Oriental markets. Japan, cultivated. MENNINGER, UPHOF; B94, B96{PL}, K63G, N37M{PL}, N84, P49, R78

## TAXODIACEAE

*Cryptomeria japonica* - *Japanese cedar, Sugi* {S}. In Japan, the seasoned wood is used for making casks, vats and kegs in which various foods are aged including miso, soy sauce, sake, vinegar, mirin, umeboshi and pickles. The wood adds a pleasant fragrance to the foods. At one time, the Japanese fish paste known as *kamaboko* was steamed and grilled on fragrant cedar boards. Eastern Asia. BELLEME, SHURTLEFF 1976, TANAKA, TSUJI [Re]; A79M, B32{PL}, B94, B96{PL}, C9M, HS{PL}, H14M{PL}, I83M{PL}, K22{PL}, K38, K63G, N37M{PL}, 053M, 093, P5, Q18, etc.

## TETRAGONIACEAE

*Tetragonia decumbens* - *Sea spinach* {S}. The leaves may be used as a substitute for spinach. Southern Africa. MARTIN 1975; N84, R15M, S92

*Tetragonia expansa* - *Tetragonia tetragonoides*

*Tetragonia tetragonoides* - *New Zealand spinach, Warrigal greens* {S}. The young, succulent leaves and stem tips are an excellent hot weather substitute for spinach. They may be eaten raw, steamed, boiled, stir-fried, creamed, served with mushrooms, made into a quiche, prepared au gratin, etc. Australia, New Zealand, cultivated. CLARKE [Re], HALPIN, ROBINS [Cul, Re], VILMORIN [Cu]; B78, C44, D11M, E24, F70, F82, G16, G68, J73, K22, L7M, N79{PR}, N79{PD}, N84, 032M{PR}, R47, TIM, etc.

## CULTIVARS

Maori: Heirloom strain from the Maoris of New Zealand. K49M

## THEACEAE

*Adinandra bockiana* - *Wong-pan-ch'a-shue* {PL}. The black fruit is edible. Also used as a substitute for tea, although Altschul does not indicate which part of the plant is used. Southern China. ALTSCHUL, VON REIS; N37M

*Adinandra milletii* - \* *Adinandra bockiana*

## TILIACEAE

*Corchorus acutangulus* - \* *Corchorus aestuans*

*Corchorus aestuans* - *Rumput bayam rusa* {S}. The leaves are eaten in salads, as a potherb, or used for vegetable bouillon. Old World Tropics. BURKILL, DALZIEL, HEDRICK 1919, TANAKA; F85

*Corchorus capsularis* - *Jute* {S}. Young leaves and shoots are steamed or boiled and eaten with rice. Leaves are also used as a substitute for tea. Tropics, Subtropics. BURKILL, JACQUAT, TANAKA, WATT; F85, N84, N91

*Corchorus olitorius* - *Jew's mallow, Bush okra, Melokheya, Saluyot* {S}. Very young leaves are used in salads. Older leaves and shoot tips are an excellent hot weather spinach substitute, being high in protein. A popular soup in Egypt and the Near East is made from finely hashed melokheya spiced with fried garlic and coriander, and cooked with broth of rabbit, chicken, mutton, or goose. The dried leaves, which are available in Middle Eastern stores, are commonly used to thicken soups and stews, or they can be made into tea. In the Sudan, fresh or dried leaves are mixed with salt, spices, oil, meat and powdered okra to form *mulah*, a sauce or relish served with staple porridges. Immature fruits are used in salads or as a potherb. Reportedly dates back to the Pharaohs. Tropics, Subtropics. DARBY, DIRAR 1993, DUKE, GELLE, KHALIL [Re], MALLOS [Re], MARTIN 1975, TANAKA, VAN EPENHUHSEN, VILMORIN [Cu]; F80, F85, G33, L50M{DF}, L77D, N84, PIG,

R47, S70

*Corchorus trilocularis* - *Al moulinouquia* {S}. Leaves are used as a potherb. In Malawi they are cooked with native potashes, the resulting product being mucilaginous and well liked. Cultivated in some parts of Africa and Arabia. Tropics. FOX, F., HEDRICK 1919, UPHOF, ZEVEN; F85

*Grewia asiatica* - *Phllsa, Dhamin* {S}. The subacid fruits are eaten raw, preserved, as a flavoring for sherbets, made into refreshing drinks, or fermented into an alcoholic beverage. A mucilaginous extract of the bark is commonly used for clarifying sugarcane juice in the manufacture of *gur*. Tropical Asia. HEDRICK 1919, KENNARD, MORTON 1987a [Cu, Pro], SINGH, S., TANAKA; F85, N84, P38, Q12, R50{PL}

*Grewia betulifolia* *Grewia tenax*

*Grewia caffra* - *Wild raisin* {PL}. The small yellow fruits, about the size of a pea, are eaten after ripening when they are sweet to chew, even when dry. Southern Africa. FOX, E; C9M{S}, F53M, I8, M7M, N84{S}

*Grewia occidentalis* - *Cross berry* {S}. Ripe fruits are purplish and quite pleasant to eat raw. The juice is eaten fresh or fermented into an alcoholic beverage. Southern Africa. FOX, F.; N84, 053M, 093, Q41, S28M

*Grewia subinaequa*Us - \* *Grewia asiatica*

*Grewia tenax* - *Chari, Tarakat* {S}. The orange-red, acid fruits are eaten, having somewhat the flavor of hazelnuts. In the Sudan, they are added to the dough in the preparation of *medida*, a thin fermented porridge made from various grains. North Africa to Arabia. DIRAR 1993, TANAKA, UPHOF, WATT; F85

*Tilia americana* - *American basswood* {PL}. The fragrant flowers are used as a salad vegetable or brewed into a sweet, well-flavored tea. A paste of the ground fruits and flowers is said to resemble chocolate in texture and taste. Young leaves are chewed or added to salads and sandwiches. The sweet sap can be boiled down to sugar and syrup. Flowers are the source of a light-colored, good quality honey with a strong, distinctive flavor. North America. CRANE 1975, FERNALD, GIBBONS 1966b, GIBBONS 1979, PELLETT; B9M, C9M{S}, C61G{PD}, D17{PD}, D45, D95, G58{PD}, G66{S}, H4, H49, I66M{PD}, K38{S}, K54{PD}, K64, K89, M69M, 093{S}, etc.

*Tilia argentea* -> *Tilia tomentosa*

*Tilia x europaea* (T. cordata x T. platyphyllos) - *Common linden, Lime tree* {S}. The cooling, glutinous leaves are eaten raw in salads and sandwiches. Flowers have a honey-like fragrance and make an excellent tea that is popular in France, where it is sold under the name of *tilleul*. They are also used as a vegetable or brewed into wine. Linden honey, light in color and of pronounced flavor, was used in Russia to make a mead-like beverage called *Lipez*. The sweet sap is a source of sugar. Also the source of an edible manna. Natural hybrid. Europe. CRANE 1975, DONKIN, GAYRE, LEGGATT, MABEY, MACNICOL [Re], MARCIN, MICHAEL [Re], TANAKA; A49D{DF}, D95{PL}, H15T{PD}, 093, Q32

*Tilia tomentosa* - *Linden, Lime tree* {S}. Dried leaves are sometimes used as an adulterant of marjoram. Eurasia. BROUK; B9M{PL}, D95{PL}, G66, G66{PL}, K38, N84, 053M, 093, P49, Q32, R78

## TRAPACEAE

*Trapa natans* - *Water caltrop, Jesuit nut, Water chestnut, Ling-chio* {PL}. The sweet seed kernels are eaten raw, roasted, boiled, fried like a vegetable, preserved in honey and sugar, candied, or ground into flour for making bread and sweet puddings. They have a very agreeable and delicate flavor, very similar to that of boiled chestnuts. In Italy, they are the main ingredient of a famous *risotto*.

Available at Chinatown markets for the mid-autumn moon festival. Usually eaten cooked because of the risk of intestinal parasites from contaminated water. Eurasia, naturalized in North America. BIANCHINI [Re], COST 1988 [Pie], DAHLEN [Pre, Cul], DEVI [Re], FERNALD, HEDRICK 1919, PASSMORE, ROSEN-GARTEN, ROSS [Re], SIMMONS 1972 [Cu], TANAKA; C74, 174, P59M

#### CULTIVARS {S}

**Su Zhou:** An improved cultivar with red-colored fruit. 054

### TRILLIACEAE

*Medeola virginiana* - *Indian cucumber-root* {PL}. The white rhizomes are crisp and tender, with the aroma and taste of cucumbers. They are eaten raw as a nibble, boiled and served with butter, mixed into tossed salads dressed with oil and vinegar, or made into dill pickles. Eastern North America. FERNALD, GIBBONS 1966b, MEDSGER; 144, K22, L59P, M77M, N7T, N84{S}

*Trillium erectum* - *Bed trillium* {PL}. Young, unfolding leaves are an excellent addition to salads, tasting somewhat like raw sunflower seeds. They can also be used as a potherb served with butter or vinegar. Eastern North America. PETERSON, L.; BO, C9, D75M, E33M, H49, 144, L88M, M77M, N7T, N9M, N9M{S}, N84{S}

*Trillium grandiflorum* - *White trillium* {PL}. Tender young leaves are recommended as a cooked green vegetable. Eastern North America. UPHOF; A61, BO, C9, D75M, E33M, H49, I31{S}, K57, K63G{S}, L88M, N7T, N9M, N9M{S}, N84{S}

*Trillium sessile* - *Toadshade, Sessile trillium* {PL}. Before unfolding, the leaves may be added to salads, often tasting vaguely like raw sunflower seeds. Or they can be boiled for ten minutes and served with butter or vinegar. Eastern North America. PETERSON, L.; A61, A61{S}, BO, C9, E33M, N7T, N9M, N9M{S}, N84{S}, R52

*Trillium undulatum* - *Painted trillium* {PL}. Young, unfolding leaves make a good potherb. Boil in salted water for ten minutes and serve with butter and vinegar. Or they can be added to vegetable soups. Eastern North America. CROWHURST 1972; BO, E33M, H29M, H49, L59P, M82, N7T

### TROPAEOLACEAE

*Tropaeolum majus* - *Nasturtium, Indian cress* {S}. The leaves have a tangy, watercress-like flavor and are used in salads, sandwich spreads, vegetable dishes, or are stuffed like grape leaves. Flowers have a similar flavor and use and also make an attractive garnish, or can be added to vinegars. Both the flower buds and young fruits may be used as substitutes for capers. Mature seeds are eaten roasted or make a good pepper substitute. Andean South America, cultivated. HALPIN [Cul], LARKCOM 1984, LEGGATT [Re], MACNICOL, TANAKA, VILMORIN [Cu]; C9M, E7M, F44, G80{PL}, H49, J73, K53, M46

#### CULTIVARS

**Empress of India:** A non-trailing, single cultivar with brilliant vermilion-red flowers and small, neat red leaves which are especially attractive in salads. Grows in cascading clumps, making it an excellent cover-up for bare areas, walkways or borders, as well as containers. B75, C53, D68, D92M, E7M, E33, 139, 191, J5M, K23{PL}, K49M, K66, L42, L91M, N84, Q34, etc.

**Whirlvbird:** Free-flowering dwarf cultivar, includes seven different colors: cream, tangerine, soft salmon, bright gold, deep mahogany, bright scarlet, and cherry-rose. Two and one-half inch, semi-double blooms, borne well above the compact foliage; spurless, making them easier to clean for culinary purposes. Perfect for baskets or in beds. A16, C44, C92, DI 1M, D68, E33, E63D, F13, F70, G87, 191, K66, L42, L89, N84, etc.

*Tropaeolum minus* - *Dwarf nasturtium* {S}. Leaves and flowers are eaten in salads or used for garnishing. Unripe fruits and flower-buds are pickled in vinegar and used for seasoning, like capers. For pickling, this species is preferred, as it flowers more abundantly than

*T. majus*. Peru. HALPIN, HEDRICK 1919, VILMORIN [Cu]; D92M, G80{PL}, J82, S55

*Tropaeolum tuberosum* - *Anu, Ysahu, Mashua* {PL}. Tubers may be boiled for ten minutes and eaten as a vegetable or added to stews. When boiled they are watery, rather peppery, and have a pleasant vanilla-like odor. They are also frozen after being boiled, and are then considered a delicacy. Or they are eaten in a half-dried state, after having been exposed to the air for some time. The tender young leaves and flowers are also eaten. Peru, cultivated. HERKLOTS, HODGE 1951, NATIONAL RESEARCH COUNCIL 1989, ORGAN, VILMORIN [Cu]; A61, E13G{PR}, E33, E61, F35M, L55J{S}, M37M, N84, Q49M, R53M

#### CULTIVARS

**Ken Aslet:** Large-tubered cultivated clone that appears to be day-neutral. Yellowish tubers, attractively mottled with crimson. Orange-red flowers. Grows to 10 feet in length. Named after the former superintendent of the Wisley rock garden in England. PHILLIPS; N84, R77

**Muru:** White tubers splashed with purple. In Peru, "muru anu" is a local descriptive name for tubers with spotted skin. 174

**Puca:** Red or purplish-red tubers. In Peru, "puca anu" is a local descriptive name for tubers with reddish skin. 174

**Saoullu:** Yellow tubers. In Peru, "sapullu anu" is a local descriptive name for tubers with yellowish skin. 174

**Yurac:** White tubers. In Peru, "yurac anu" is a local descriptive name for tubers with whitish skin. NATIONAL RESEARCH COUNCIL 1989; 174

### TURNERACEAE

*Turnera diffusa* - *Damiana* {DF}. The herb is used in the production of a sweet, yellow liqueur called *Damiana*, which Mexicans drink in hot, cinnamon-flavored tea or on the rocks with a twist of lime. It is also commonly used instead of, or in combination with, Cointreau in *margaritas*, especially in Baja California. Dried leaves are used as a substitute for Chinese tea. Tropical America. HUTSON 1995 [Re], UPHOF; E14T, F73D, F73D{PL}, F86G, I81M, I81M{S}, J58, J82, K18M, L34, M82{PL}, N42{PL}

*Turnera ulmifolia* - *Damiana* {PL}. Dried leaves are used as a substitute for tea or for flavoring. Tropical America. KUNKEL, PEREZ-ARBELAEZ; M82, N84{S}

### TYPHACEAE

*Typha angustata* - \**Typha domingensis*

*Typha angustifolia* - *Narrow-leaf cattail* {PL}. The rootstock is boiled and eaten like potatoes, or macerated and boiled to yield a sweet syrup. It also yields a high-protein flour used to make cattail cookies. The pith near the sprouting new stem is roasted or boiled. Young shoots are boiled and eaten raw. The young flower spikes are eaten raw, cooked, or made into soup. Pollen of male spikes can be used to make bread or porridge. Seeds have been roasted and eaten. Widespread. MORTON 1977; C43M, C74, G26, G85, J7M, M39, M72, M73, M73M, N3M, N9M, N9M{S}, N84{S}

*Typha domingensis* - *Cumbungi, Tabua* {S}. Young shoots are eaten raw or cooked, having a delicate flavor reminiscent of artichokes or hearts of palm. The stems have more of a leek-like taste and are excellent in soups and salads. Rhizomes are baked and eaten and also yield a starch. The pollen can be added to breads, cakes and biscuits. Widespread. CHERIKOFF, ROBINS [Cul, Re], TANAKA; C74{PL}, N84

*Typha elephantina* - *Elephant grass, Hagla, Pun* {S}. In Sind, India, a kind of bread called *boor, booree* or *booratoos* is made from the pollen, commonly eaten by the natives. Leaves are also edible. Tropical Asia. HEDRICK 1919, MARTIN 1975, UPHOF; F85

*Typha latifolia* - *Common cattail* {PL}. Young, green flower spikes are boiled and eaten like corn on the cob with plenty of butter, or they may be scraped from the cob and baked in a casserole. The pollen can be mixed with wheat flour in pancake and muffin recipes. The rootstocks yield a flour that can be substituted for half the wheat flour in breads, cookies, biscuits, and muffins. Young, bulb-like sprouts are eaten boiled or made into pickles. Tender, inner heart of the stem, called *Cossack asparagus*, is eaten raw or cooked. Widespread. ANGIER [Re], FERNALD, GIBBONS 1962, HARRINGTON, H. [Re]; C43M, E33M, G26, G85, H73{PR}, J7M, J41M, M39, M72, M73, M73M, N3M, N9M, N9M{S}, Nil, N71M{S}, 053M{S}, etc.

*Typha laxmannii* - *Scented flag* {PL}. Rhizomes are the source of a meal which is made into cakes. They are also used as a vegetable. Eurasia. HEDRICK 1919; C74, G85, H4, H30, K85M, M15, M72, N3M, N84{S}, Q24{S}, R49

#### UAPACACEAE

*Uapaca guineensis* - *Sugar plum* {S}. The fruit is edible, having a flavor reminiscent of the medlar with a hint of apple. Tropical Africa. DALZIEL, DANFORTH, UPHOF; Y40

*Uapaca kirkiana* - *Wild loquat, Mohobo-hobo* {PL}. Pulp of the fruit is juicy, honey-like, wry tasty, and somewhat reminiscent of pears. It is eaten fresh, brewed into a very pleasant wine, or used for making cakes which are fried and eaten. Juice of the fruit is mixed with sorghum meal to form a thin, orange-flavored porridge called *mutundavaira*. Dried fruits have a toffee-like flavor. One of the most popular wild fruits of Zimbabwe, Zambia, Malawi and Mozambique. Sold in local markets. Recommended for cultivation. Tropical Africa. FOX, E, TREDGOLD; M17

#### ULMACEAE

*Ulmus pumila* - *Siberian elm, No-nire* {PL}. Fruits are made into sauce and wine. Young leaves and budlings are eaten. The bark is processed into noodles. Eastern Asia. TANAKA; C9M{S}, F51, G66, G66{S}, H49, 153M, 178, K38{S}, K63G{S}, M69M

*Ulmus fulva* - \* *Ulmus rubra*

*Ulmus rubra* - *Slippery elm, Red elm* {DF}. The sweet, mucilaginous inner bark is occasionally chewed for its pleasant flavor. Indians of the Missouri River Valley region once cooked it with buffalo fat, to give the rendered tallow a pleasing flavor and prevent rancidity. Kiowa Indians brewed it into a tea. The powdered bark is popular with natural foods enthusiasts for fortifying smoothies and nut milks. It adds demulcent and nutritive properties. Can also be used as a breading for fried fish. Eastern North America. ANGIER, COLE, C. 1990 [Re], COLE, C. 1993 [Re], FERNALD, GIBBONS 1966, HEDRICK 1919, MEDSGER; A49D, B21P, D26G{S}, D56M{S}, E14T, F37T, F86G, J82, K18M, K22{PL}, K63G{S}, K89, L34, M15M, M82M, N40M{S}, etc.

#### URTICACEAE

*Debregeasia edulis* - *Yanagi-ichigo* {S}. The yellow, globose fruits are pleasantly sweet and are said to resemble strawberries. Harvesting is difficult because the fruit is tender and breaks apart easily. The fruit remains on the bush for several weeks, providing a beautiful contrast to the silvery, ornamental foliage. Japan. RILEY 1982, TANAKA, UPHOF; F85

*Parietaria officinalis* - *Pellitory* {PL}. The young plants, before blooming, are occasionally cooked and eaten as a spinach-like vegetable. They make a green cooking water which is an excellent stock for risotto. Europe. CRETTE, HEDRICK 1919; M82

*Pipturus argenteus* - *Native mulberry* {PL}. The true fruits of this coastal tree are small brown structures partly embedded in a soft, translucent white body. This fleshy part is sweet and juicy, and makes excellent eating. Bark and leaves are also used. Australia, New Guinea. CRIBB, POWELL; N79

*Urtica dioica* - *Stinging nettle* {S}. Young leaves make a very palatable and nutritious potherb. They are also pureed, creamed, used in soups and pasta dishes, made into a beer, or mixed with leeks, broccoli, and rice to form nettle pudding. In England, nettle leaves are used for wrapping a mold-ripened cheese called *Cornish Yarg*, the leaves giving a distinctive herbal flavor to the cheese. The juice of the leaves, or a decoction of the herb, is used as a rennet in preparing cheeses or junkets. Nettles may be blanched and eaten like seakale. Dried leaves are brewed into an herbal tea. Eurasia, naturalized in North America. FERNALD, GIBBONS 1966b [Pre, Re], GRAY, P. [Cul, Re], GRIEVE [Re], HALPIN [Cu, Cul], MARGIN, SEKERS; A2, C43M{PL}, E61{PL}, F80, G27{PD}, H46{DF}, H73{PR}, J82, J82{PL}, K22, L3J{DF}, M16{PL}, N71M, N84

*Urtica urens* - *Dog nettle* {S}. Young shoots, leaves, and stem tops are eaten as potherbs or mixed with meal as a relish. Cosmopolitan. CRIBB, FCK, E, MARTIN 1975, UPHOF; D56M, F68T, F80, F86G, N40M, N71M, N84

#### VALERIANACEAE

*Centranthus macrosiphon* - *Long-spurred valerian* {S}. The leaves are similar to corn salad and are used in salads in some countries, especially France. They have a slight bitterness which gives them a more distinct and agreeable flavor. Southern Europe. HEDRICK 1919; N84

*Centranthus ruber* - *Red valerian, Jupiter's beard* {PL}. Young leaves are eaten raw in salads and sandwiches, though they are somewhat bitter used in this way. Otherwise they may be boiled and served with butter as greens. Mediterranean region, cultivated. KUNKEL, MABEY; B49, C9, D92M{S}, D95, F80{S}, H63, J37M, K53{S}, L66, N84{S}, R53M{S}

*Fedia cornucopiae* - *African valerian* {S}. The leaves are eaten raw in salads or used as a potherb. Will quickly form rosettes of leaves in hot weather when corn salad is not available. Mediterranean region. HEDRICK 1919, UPHOF, VILMORIN [Cu]; D92M, N84, 053M

*Patrinia scabiosaefolia* - *Ominaeshi* {PL}. Young plants, stem tips, and flower buds are eaten steamed, fried, oil-roasted, preserved, in soups, or parboiled and dried for later use. Eastern Asia. TANAKA; B28, B77, H63, I37M, K22, M77M, M82, N37M, N84{S}, Q24{S}

*Patrinia villosa* - *Otokoeshi* {PL}. Young plants and flower buds are eaten as a vegetable, either fried, preserved, or as a potherb. Eastern Asia. TANAKA; D95, E48, I37M, M77M, N37M, N84{S}

*Plectritis congesta* - *Pink plectritis, Oregon corn salad* {S}. The small, basal leaves are eaten raw in salads like corn salad, *Valerianella locusta*. Pacific Coast of North America. N7G

*Valeriana ciliata* - *Tobacco root* {S}. The odoriferous roots are prepared for eating by baking in underground ovens for two days. They are then eaten as a vegetable, used in soups, or made into a bread. North America. FERNALD; J43

*Valeriana officinalis* - *Garden heliotrope* {PL}. The root extract and essential oil are used to flavor ice cream, baked goods, condiments, soft drinks, beer, and liqueurs. Also used, in moderation, as an herbal tea. Eurasia, cultivated. MARCIN, MORTON 1976; A97, C9, C67M, D92M{S}, F80{S}, K22, K53{S}, M53, N9M, N9M{S}, N19M, N42, 053M{S}

*Valerianella eriocarpa* - *Italian corn salad* {S}. The young leaves are used in salads. When grown in rich soil, larger leaves are produced that may be used as a potherb. Does not run to seed as readily as the common corn salad, but is less hairy. Mediterranean region. HEDRICK 1919, VILMORIN [Cu]; E83T

## CULTIVARS

**Piedmont:** (Di Piemonte, Seme Grosso di Olanda) Forms small rosettes with long, bright deep-green, spoon-shaped leaves. Resembles tender young lettuce in flavor, but crunchier in texture. Can be harvested at the four leaf stage onward. Good heat resistance, but tender to frost. Sown from July to October. B8, C53, Q11M

*Valerianella locusta* - *Corn salad, Fetticus, Mache, Nut lettuce* {S}. The leaves are very mild in flavor, with a delicate quality that makes them seem to melt in the mouth. Widely used in salads where they compliment strongly flavored greens like cress and dandelion, nut oils, and crisp root vegetables like carrots and radishes. Also used in potato salad, soups, vegetable purees, omelettes, etc. The flowers and flower-stalks are also eaten. Eurasia, cultivated. CUSUMANO [Cul, Re], HALPIN, LARKCOM 1984, LAUNERT, SCHNEIDER 1986 [Re], VILMORIN [Cu]; B49, E5T, F80, F82, H25M{PR}, K22, N40{PR}, R47. (for cultivars see Com Salad, page 349)

*Valerianella olitoria* - *Valerianella locusta*

## VERBENACEAE

*Aloysia triphylla* - *Lemon verbena* {PL}. Young leaves are occasionally eaten as a spinach. Otherwise they are used to impart a lemon flavor to fruit cups, jellies, cold drinks, salads, omelettes, salad dressings, vegetable dishes, etc. The leaves or flowers can be brewed into a refreshing herbal tea, that made from the flowers having a sweeter flavor. Temperate South America, cultivated. HUTSON 1987 [Re], KUNKEL, LATHROP [Cu], MARCIN, MORTON 1976, ROOT 1980b; A7{DF}, C43M, C67M, E14T{DF}, G84{DF}, G96, J66, J76, K18M{DF}, K22, K85, M53, N19M

*Clerodendrum serratum* - *Senggunngu* {S}. Young, bitter stem tops and inflorescences are eaten raw as a side-dish with rice. Or they are roasted briefly and served with hot pepper sauce. Southeast Asia, Malaysia. OCHSE, TANAKA; F85

*Gmelina arborea* - *Malay bushbeech* {S}. The Dai people of Xishuangbanna, China collect the flowers and mix them with glutinous rice to make a delicious cake-like festive dish eaten on the traditional New Year. The yellow fruits are also edible. Tropical Asia. HEDRICK 1919, ZAIFU; G66, N84, 053M, 093, P5, P17M, P38, Q12, Q18, Q46

*Lippia alba* - *Licorice verbena, Anise verbena* {PL}. The fresh leaves have an intense anise aroma and are prized for flavoring soup, meats, fish, and for making a pleasant tea. In India, they are used as a vegetable. Tropical America. MORTON 1976, TANAKA; F85{S}, H4, J82, M15T, M82

*Lippia citriodora* -> *Aloysia triphylla*

*Lippia dulcis* - *Phyla scaberrima*

*Lippia geminata* - *Lippia alba*

*Lippia graveolens* - *Mexican oregano, Te de pais* {S}. The leaves have an intense aroma of oregano and are preferred by many over European oregano. They are used for flavoring fish, sausages, *pozole*, tomato sauces\* and many other dishes that require a strong oregano flavor. Dried leaves may be brewed into an herbal tea. Sold in specialty stores that carry Mexican and Southwestern foods. Tropical America. MORTON 1976, UPHOF; A7{DF}, C43M{PL}, E91G, I16{DF}, J66{PL}, K18M{DF}, K49M, L34{DF}, N19M{PL}

*Lippia micromera* - *Dominican oregano, False thyme* {PL}. The small, thyme-scented leaves and young stems are used for flavoring soups, salads, meats and other foods. Cultivated locally in Hawaii, Guyana and Trinidad. South America. MORTON 1976, OMAWALE, TANAKA; M82

*Nashia inaguensis* - *Moujean tea, Pineapple verbena* {PL}. Fresh or dried leaves, with a very fruity scent reminiscent of pineapple, are

brewed into a pleasant flavored tea. Or they are brewed with other teas to add a vanilla-like flavor. Bahamas, cultivated. BUCHANAN; C43M, E48, F93G, G96, H94M, K57, L90J, N84

*Nyctanthes arbor-tristis* - *Tree of sadness* {S}. Flowers are the source of a saffron-yellow dye used as a colorant for food. Southern Asia. CORREA, UPHOF; A79M, D56M, F85, N84, 093, P5, Q12, Q18, Q46

*Phyla alba* - *Lippia alba*

*Phyla scaberrima* - *Aztec sweet-herb, Orozuz, Sweet lippia* {PL}. The aromatic leaves are occasionally eaten in salads, or used as a condiment. More often they are chewed for their intensely sweet flavor or used to sweeten teas and other beverages. The licorice-flavored roots are chewed. Central America, Caribbean. KUNKEL, WILLIAMS, L.; C43M, C43M{S}, E48, F37T, F93G, G96, H94M, 112, 174, J76, J82, L90J, L94M, M82, R47{S}, etc.

*Stachytarpheta indica* - *Stachytarpheta jamaicensis*

*Stachytarpheta jamaicensis* - *Bastard vervain, Blue porterweed* {S}. Dried leaves are used as a tea or to adulterate China tea, and have been exported to Europe as *Brazilian tea*. Stem tops are used in Java as a flavoring. In Central America, a foaming, porter-like brew is made from the leaves. Caribbean region. BURKILL, MORTON 1977, TANAKA, UPHOF; N84, 053M

*Tectona grandis* - *Teak, Djati* {S}. The leaves are added to the water in which unripe jackfruit is boiled prior to being used in the famous Javanese dish *Gudeg*—chicken with jackfruit. The leaves give the fruit a fresh, reddish color. In Germai, boiled teak-wood shavings yield a red dye used for coloring Easter eggs. *Arrack* is often matured in teak wood to develop a distinctive flavor. The leaves act as a host for *Rhizopus* spores in *tempeh* manufacture. Tropical Asia. CAMPBELL-PLATT, MOLLISON NEWALL, OWEN [Pre, Re]; F85, N84, 053M, Q46

*Verbena hastata* - *Blue vervain* {S}. Leaves are used as a tea substitute. The pleasantly bitter seeds are roasted, ground into a meal, and used for fried cakes and *pinole*. This meal can be leached to remove some of the bitterness. North America. FERNALD, GIBBONS 1979, KIRK; C43M, C43M{PL}, D92M, E61{PL}, F37T{PL}, F80, G47M, H61M, J39M, J39M{PL}, J41M, J41M{PL}, J82{PL}, 053M

*Verbena officinalis* - *Vervain, Kuma-tsuzum* {PL}. Young leaves are parboiled, seasoned and eaten. Also used as a tea substitute. The flowers are fermented into wine or used as a garnish. An extract of the plant flavors the French liqueur *Verveine du Velay*, which comes in both green and yellow versions. In Turkey, salt flavored with vervain flowers is popular. Eurasia. KUNKEL, MACNICOL [Re], RAY, G, TANAKA; A2{S}, A97, C43M, D92M{S}, F35M, G40{PD}, I39{S}, J76, J82, J82{S}, K54{PD}, K85, 053M{S}

*Vitex agnus-castus* - *Chaste tree, Monk's pepper* {S}. The seeds are used as a substitute for pepper. Leaves are also employed as a spice. Forms one of the ingredients of the legendary Moroccan spice mixture *ras el hanout*. Mediterranean region, cultivated. KUNKEL, UPHOF, WOLFERT 1973; A49D{DF}, B21P{DF}, C9{PL}, C9M, C43M{PL}, F80, F85, H4{PL}, K38, N37M{PL}, N84, 053M, P17M, R47

*Vitex cannabifolia* - *Vitex negundo van cannabifolia*

*Vitex cienkowskii* -> *Vitex doniana*

*Vitex doniana* - *Black plum, Prune noire* {S}. The sweet fruit pulp, having somewhat the flavor of prunes, is eaten fresh, mixed with other fruits or made into sweetmeats and beverages. Young leafy shoots are eaten as a potherb or used for sauces. The leaves also furnish a substitute for tea. Tropical Africa. DALZIEL, MARTIN 1987, UPHOF, VON MAYDELL; F85

*Vitex negundo* - *Wu-chih-kan* {S}. Both the roots and the leaves are made into a tea-like beverage. The seeds are occasionally used as

a condiment. China. KUNKEL, TANAKA; A93M{PL}, C36IPL}, C43M, C43M{PL}, F80, F85, G66, J82, K38, M69M{PL}, M82{PL}, N40M, N84, 093, Q12, Q46, etc.

*Vitex negundo* var. *cannabifolia* - *Ninjin-boku* {PL}. The dried seeds are ground into a flour which is mixed with wheat flour and made into noodles. Eastern Asia. TANAKA; H4,174

#### VIOLACEAE

*Viola canadensis* - *Canada violet* {PL}. Young leaves and flower buds are eaten raw in tossed salads. When boiled as potherbs, the leaves and flowers are mild-flavored and are best mixed with other greens of more pronounced taste. The flowers can be candied like rose petals and have been used to give flavor to vinegar. Leaves make a good substitute for tea. North America. HARRINGTON, H.; D75M, E33M, E63M, H49, 144, J39M, K22, K85, M82, N9M, N9M{S}, N37M, N84{S}

#### *Viola cucullata* - \**Viola sororia*

*Viola odorata* - *Sweet violet* {S}. Young leaves are eaten in salads and soups, or dipped in batter and fried. Flowers are candied, used as garnishes, made into syrup, jellies, and marmalade, or added to gelatins, ices, vinegar, honey, wines, and salad dressings. Leaves and flowers can be used to make a soothing tea. The leaf extract is employed to flavor ice cream, candy, and baked goods. Macaronesia and Eumsia. BRYAN [Cul, Re], LATHROP, LEGGATT [Re], MACNICOL [Re], MORTON 1976; D92M, E7M, E63M{PL}, F80, H25M{PD}, J66M{PD}, K85{PL}, M98{PL}, N9M, N9M{PL}, N19M{PL}, N71M, N84, 053M

*Viola papilionacea* - *Blue violet* {PL}. The leaves, rich in vitamins A and C, are gathered when young and cooked and served like spinach. They are especially good when mixed with watercress, peppergrass, *Barbarea*, shepherd's purse, or other members of the mustard family. Flowers are made into jams, jellies, sweetmeats, syrup, and aspic salads. North America. CROWHURST 1972, GIBBONS 1966b [Pre, Re], KINDSCHER, ZENNIE [Nu]; E33M, F51, H61M{S}, J39M, J42, M77M, M82, N7T, N9M, N9M{S}

*Viola pedata* - *Birdfoot violet*, *Wild okia* {PL}. Young leaves can be added to salads, boiled or steamed to make a palatable cooked green, or added to soups as an okra-like thickener. Dried leaves are made into tea. The flowers can be candied. North America. PETERSON, L.; BO, C9, D75M, E33M, E63M, H49, J39M, J40, J43{S}, M82, N7T, N9M, N9M{S}, N84{S}

*Viola sororia* - *Marsh blue violet*, *Wild okra* {PL}. Tender young leaves, stems and flowers can be added to salads or cooked as potherbs. Because of their mucilaginous qualities, the leaves are occasionally used as a thickener for soup. North America. CROWHURST 1972, FERNALD, PETERSON, L.; D75M, E33M, E63M, H63, K22, K63G{S}, L91M{S}, M82, N84{S}, Q24{S}

*Viola tricolor* - *Johnny-jump-up*, *Heartsease* {S}. The small, fragrant flowers are eaten in salads, tossed into mesclun mixtures, or used as an attractive garnish. They can be frozen in ice cube trays and then added to punch bowls. Eurasia, cultivated. LEGGATT [Re], MORSE [Re]; A53M, E63D, I63Z, K66, M82{PL}, N71M, N84

*Viola x wittrockiana* - *Pansy* {S}. The flowers and leaves, stronger in flavor than other violets, are eaten in salads, desserts, soups, iced drinks, candied, or used as a garnish. Fresh or dried flowers can be used for tea. BRYAN [Cul, Re], LARKCOM 1984, LEGGATT [Re], MACNICOL [Re], REILLY; A25, B77M, C69, D68, F35M{PD}, G27M, G82, H57M, H61, H85M, H95, 191, J20, K49M, L42, M49, M95M, etc.

#### CULTIVARS

**Gourmet Brand Salad Mixture:** Large flowered, early-blooming pansy mixture selected to provide a large number of flowers over the longest harvest season. E91G

#### VITACEAE

#### *Cissus capensis* - *Rhoicissus capensis*

*Cissus discolor* - *Trailing begonia*, *Banerg* {PL}. Young stem tips and leaves are used for giving dishes an agreeable, sour taste. The leaves can also be eaten raw. Tropical Asia. BURKILL, OCHSE; F85{S}, E48, G96,157, N84

*Cissus quadrangularis* - *Edible-stemmed vine* {S}. Leaves and shoots are used in the preparation of *papadums* and curries. The fruits are edible. Tropical Asia. BURKILL, HEDRICK 1919, TANAKA, WATT; AOM{PL}, E48{PL}, F85, N84, P5, S28M

*Rhoicissus capensis* - *Cape wild grape* {S}. The purplish-black fruits are used for making jellies, said to be of brilliant color and excellent flavor. Young leaves and shoots are cooked and eaten. Southern Africa. FCK, F., HEDRICK 1919, TANAKA, UPHOF; N84, S28M

#### *Rhoicissus tomentosa* - *Rhoicissus capensis*

*Tetragium harmandii* - *Ayo* {PL}. The sour leaves and fruits are used to color foods. Fruits are cooked with other foods to add flavor or they are made into jellies. Southeast Asia to the Philippines. BROWN, W., TANAKA, UPHOF; E48

*Vitis aestivalis* - *Summer grape*, *Pigeon grape* {PL}. Fruits are eaten raw or used to make juice, jellies, jams, conserves, pies, and wines. Dried fruits are eaten as snacks or in baked goods. The stems yield a sweet, watery sap that is potable. North America, cultivated. TURNER 1979 [Re]; E29, K63G{S}, N84

*Vitis amurensis* - *Amur River grape* {S}. The fruits are eaten raw or are manufactured into juice and wine. Leaves are eaten as a boiled vegetable. Withstands temperatures of -40°C., making it a possible source of winter-hardiness for *V. vinifera*. Eastern Asia, cultivated. TANAKA, UPHOF, ZEVEN; D95{PL}, E7M, G66, K63G, P49

*Vitis berlandieri* - *Spanish grape* {S}. Fruits are eaten raw or made into wine, being of a rich, pleasant flavor. Also used in breeding and as a rootstock. Southwestern North America. HEDRICK 1919, TANAKA, ZEVEN; Z25M. (for cultivars see Rootstocks, page 510)

*Vitis californica* - *California grape* {PL}. The juicy fruits are eaten raw, dried, or made into jelly, pies, and wine. Tendrils are eaten raw as a pleasantly sour snack. The boiled leaves are used to wrap other foods. Southwestern North America. CLARKE, HEDRICK 1919, KIRK; B92, D95, G59M{S}, G60,198M, N84{S}

*Vitis candicans* - *Mustang grape* {PD}. Fruits are dark purple or wine colored and have a tough skin. They are mostly used for pies and jellies or brewed into wine. Southwestern North America. MEDSGER. D81P

#### CULTIVARS {GR}

**Schrank:** Trouble free native grape. Produces a deep bluish-black fruit. Makes an excellent low maintenance grape arbor. Will grow in highly alkaline soils. N33

#### *Vitis capensis* - \**Rhoicissus capensis*

*Vitis x champini* - {S}. Natural hybrid. The very large fruits are edible. Southwestern North America. REHDER, TANAKA; T41M, U7G. (for cultivars see Grape, page 374 and Rootstocks, page 510)

*Vitis cinerea* - *Sweet winter grape* {S}. Fruits are eaten fresh, dried for later use, or made into jams and jellies. Sap of the vine is used as a beverage. North America. MEDSGER, UPHOF, YANOVSKY; U7G, U7J

*Vitis coignetiae* - *Crimson glory vine*, *Yama-budo* {PL}. The fruits are eaten raw or brewed into wine. Young stems and leaf stalks are boiled and eaten. Japan. TANAKA; D95, E87, H4, K38{S}, K63G{S}, N84{S}, R77, R83

*Vitis coriacea* - *Vitis shuttleworthii*

*Vitis labrusca* - *Fox grape* {S}. The fruits have a distinct musky odor and taste. They are eaten raw, dried, preserved, made into juice, jellies, jams, pies, preserves, and syrup, used in beverages, candies, and ice cream, or fermented into wine and vinegar. A jelly is also made from the skins. Leaves have a pleasant acid flavor and are eaten cooked, stuffed, used to wrap other foods, or preserved in salt. Eastern North America. ANGIER [Re], GIBBONS 1962 [Pre, Re], MEDSGER, UPHOF; H4{PL}, L55J. (for cultivars see Grape, page 374)

*Vitis monticola* - *Sweet mountain grape* {S}. The large, thin-skinned fruits are white or amber-colored and have tender, juicy, sweet pulp. Southwestern North America. HEDRICK 1919; U7G, U7J, W3M

*Vitis munsoniana* - *Bird grape*, *Bullace grape* {S}. Fruits are round, nearly black, thin-skinned, acid in flavor, and are eaten fresh when fully ripe. Young leaves and stems may be cooked as greens. The old stems will yield sap for drinking. Southern North America. MEDSGER, MORTON 1977; F85

*Vitis quadrangularis* - \* *Cissus quadrangularis*

*Vitis riparia* - *River bank grape*, *Frost grape* {PL}. The juicy, somewhat acid fruits are eaten raw or dried. Sap of the vine is used as a beverage. In hybridizing, it can be crossed with *V. vinifera* to introduce resistance to phylloxera. Also used as a rootstock. Eastern North America. HEDRICK 1919, MEDSGER, YANOVSKY, ZEVEN; B47, B61M{S}, D95, F67, G66{S}, 147{S}, J39M{S}, K64, K89, K89{S}, M35M, N84{S}. (for cultivars see Rootstocks, page 510)

*Vitis rotundifolia* - *Muscadine*, *Scuppermon* {S}. The fruits, which grow in loose clusters, are pleasant to eat raw and are excellent for jellies and pies. They are also made into juice, sauces, syrup, wine, and fruit leathers. The cultivars with black or purple-colored fruits have a flavor that is very much like that of the jaboticaba. Southeastern North America, cultivated. FERNALD, GIBBONS 1979, MEDSGER; A82{PL}, B94M{PD}, E29{PL}, F80, F85, F93{PR}, H35{PD}, N84. (for cultivars see Muscadine, page 429)

*Vitis rupestris* - *Sand grape*, *Sugar grape*, *Bush grape* {S}. Fruits are bluish-black, very sweet, and are eaten out of hand. Can be crossed with *V. vinifera* to introduce resistance to phylloxera. Also used as a rootstock. Eastern North America. CROWHURST 1972, HEDRICK 1919, ZEVEN; U7G, U7J. (for cultivars see Rootstocks, page 510)

*Vitis shuttleworthii* - *Calloosa grape*, *Leatherleaf* {S}. Ripe fruits are eaten raw or used for jelly making. Young leaves and stems may be cooked as greens. Old stems will yield sap for drinking. Eastern North America. MORTON 1977, STURROCK; T73M, U7G

*Vitis simpsonii* - *Currant grape*. Fruits are edible. Used in breeding resistant varieties for Florida and other hot areas. Southern North America. STURROCK, TANAKA; (for cultivars see Grape, page 374)

*Vitis smaltiana* - *Vitis simpsonii*

*Vitis solonis* - The fruits are edible. Also used as a rootstock and in hybridizing. North America, (for cultivars see Rootstocks, page 510)

*Vitis vinifera* - *European grape* {PD}. The fruits are eaten raw, dried into raisins, preserved in syrup, made into wine, juice, jellies, liqueurs, vinegar, pies, etc. Fortified wines include *port*, *sherry*, *angelica*, *madeira*, *marsala*, *vermouth*, and *muscatel*. *Champagne*, *Asti Spumante*, and *Cava* are examples of sparkling wines. In parts of Italy, pasta cooked in grape wine instead of water, called *pasta alia defigeira*, is eaten to celebrate the first pressing of olive oil. *Zibebes* are berries that have dried on the vine. *Dibs* or *pekmez*, evaporated grape juice or grape molasses, is used to sweeten tea. Grape pomace is made into *grappa*, *marc* and other spirits. Seeds are

used to garnish cheeses or are pressed for their oil. Grape seed oil is the favored oil for cooking meat in *fondue bourguignonne*. *Verjuice* or *verjus*, the juice of unripe grapes, is used to lend tartness to sauces and other foods. *Dolmas* and *sarmas* are grape leaves wrapped around rice, Zante currants, pignolias and other fillings. Champagne, Sherry, Balsamic, and Cava vinegars are popular gourmet items. In Germany, low-acid drinking vinegars called *essig*—made from rare white wines such as *Trockenbeerenauslese* and *Eiswein*—are often flavored with honey and flowers and taken as an aperitif. *Fromage de Vignerons* and *Ubrico* are cheeses that have been aged and cured with wine or grape must. The flowering shoots, having an agreeable, tart, fruity berry-like flavor, are a popular seasonal vegetable in Greece. Or they can be pickled. In the Mediterranean region, grapevine cuttings are widely used for smoking food. *Enocianina* or *grape skin extract*, derived from certain wine grapes, is employed commercially for coloring alcoholic and non-alcoholic beverages, and in its powdered form is used in drink mixes. *Cream of tartar*, derived from the insides of wine barrels, is added to candies and frosting for a creamier consistency, to egg whites to improve stability, and to baking powder mixtures as an acid ingredient. Eurasia, cultivated. ANDREWS, C. 1996 [Re], BROWN, G, BRYAN [Re], GRAY, P. [Cul], HAWKES [Re], HERBST, S., JAFFREY, JEFFORD, KREMEZI 1994 [Re], LEUNG, MACNICOL, ROOT 1980a, ROBINSON, J. 1994, UPHOF, \ON WELANETZ, WALDRON [Re], WEINZWEIG 1996; A7, A7M, C94M, D81P, F85{S}, F85J, G47J, H15T, H34M, H90G, I23M, I64M, J3, K43, L13P, L99, N54. (for cultivars see Grape, page 374 and Rootstocks, page 510)

*Vitis vinifera* Monopyrena Group - *Corinthian grape*, *Currant grape* {PD}. The fresh fruits, no larger than peas, have a sweet, juicy agreeable flavor, and are eaten fresh or dried. When dried, they are known as *passonilla* and furnish the dried currants of commerce. Also used in the preparation of sweet and aromatic *passito* wines, Italian dessert wines made from dried grapes. In Kalamata, Greece they are used for the production of vinegar. C94M. BIANCHINI, FAIRCHILD 1938, HEDRICK 1919.

## CULTIVARS {GR}

**Black Corinth:** (Staphis, Zante Currant, Champagne Grape) Very small, spherical fruits; skin very thin and tender, reddish-black; flesh very juicy, neutral to spicy in flavor, mostly seedless; ripens early. Vine vigorous, productive if girdled or treated with a growth regulator. Cluster small to medium, well filled to compact. Marketed as Champagne grapes when fresh, as Zante currants after drying. Probably originated in Greece. RICHARDSON, J. [Cul], WINKLER; B31{DF}, C60{PR}, C60{DF}, E1{SC}, E13G{PR}, E39, E39{SC}, E47M{DF}, J98{SC}, J98{OR}, K96M{PR}, LIM, LIM{SC}, N40{PR}, N84, R77, S59, etc.

**Carina:** Small black fruit that matures early. Not as inclined to break-down as is Black Corinth. Dries readily into very small raisins of soft texture with a pleasing tart taste. Should be spur pruned. Black Corinth type developed by A.J. Antcliff in Australia in the 1960's. ROBINSON, J. 1994; S59

**Hannaman:** A sport of Black Corinth that is heavier bearing and later maturing. Small black fruit that matures early. Dries readily into soft, pleasantly tart raisins. Should be spur pruned. S59

**White Corinth:** Small, round fruit, similar to Black Corinth; skin greenish-white to golden yellow when fully matured; flesh sweet and juicy with a sugar content of 20 to 22%. Good fresh or dried. Vine much more productive than Black Corinth. Cluster size similar to Black Corinth. C60{PR}, C60{DF}

*Vitis vulpina* - *Vitis riparia*

## WINTERACEAE

*Drimys aromatica* - \* *Drimys lanceolata*

*Drimys lanceolata* - *Native pepper*, *Mountain pepper* {PL}. The black, pungent fruits and seeds are used as a substitute for pepper and allspice. Fresh or dried leaves are similarly employed. The flower buds are added to salads or pickled like capers. A pleasant

herbal tea can be brewed from the bark. Also the source of an essential oil that flavors confectionery. Becoming highly sought after by gourmet bushfoods restaurants. Australia. HEDRICK 1919, ROBINS [Cul, Re], UPHOF; *B41*, *B76MIDF*}, *D95*, *E63*, *N61*{S}, *N79*, *N79*{PR}, *N79*{DF}, *N84*{S}, *032M*{DF}, *053M*{S}, *R49*

*Drimys winteri* - *Winter's bark*, *Chachaca*, *Palo de mambo* {S}. The aromatic, pungent bark is powdered and used as a condiment in parts of Mexico and Brazil. Chile-Argentina. HEDRICK 1919, UPHOF; *E63*{PL}, *F80*, *K63G*, *N61*, *N84*

*Tasmannia lanceolata* - *Drimys lanceolata*

## ZAMIAACEAE

*Dioon edule* - *Chamal* {S}. Seeds are eaten boiled or roasted. They also yield a starch or flour, called *Mexican arrowroot*, used in *tortillas*. Mexico. BROUK, GRIEVE, HEDRICK 1919, UPHOF; *A79M*, *C9M*, *C78*{PL}, *D43*{PL}, *F69*{PL}, *F80*, *G91M*{PL}, *K47G*, *N43M*{PL}, *N51*{PL}, *N84*, *P17M*, *R33M*

*Encephalartos caffer* - *Caffir bread* {PL}. The trunk and the female cones are the source of a starch used to make a type of bread. Southern Africa. HEDRICK 1919, UPHOF; *K47G*{S}, *N43M*

*Encephalartos hildebrandtii* - *Hottentot bread* {PL}. Husks of the seeds are dried and ground to a flour used in the preparation of a porridge, called *ugali* or *chapatii*. Southern Africa. MENNINGER; *C78*, *D43*, *F85*{S}, *I84M*, *K47G*{S}, *N43M*, *N84*

*Lepidozamia peroffskyana* → *Macrozamia denisonii*

*Macrozamia communis* - *Burrawang* {S}. The seed kernels are eaten after proper processing. The Aborigines used several methods including leaching and ageing. Aged seeds have a distinctive flavor reminiscent of mild cheese, and were ground into flour for making cakes. Leached kernels are eaten raw, wrapped in paperbark and baked, or made into bread. Makes a light, fluffy bread with a yeasty cheese-like flavor that goes well with soups and savory dishes. Australia. CHERIKOFF [Pre]; *A41GJPL*}, *A79M*, *C9M*, *C78*{PL}, *D87E*{PL}, *I28*{PL}, *I84M*{PL}, *K47G*, *N43M*{PL}, *N79M*, *N84*, *093*, *P17M*, *R33M*

*Macrozamia denisonii* - *Burrawang* {S}. Stems are the source of an edible starch. The fleshy outer layer of the seeds is eaten after proper preparation. Australia. CRIBB, TANAKA; *C78*{PL}, *D43*{PL}, *D87E*{PL}, *F85*, *I28*{PL}, *K47G*, *N43M*{PL}, *N84*, *093*, *094*, *P5*, *Q32*, *R33M*

*Zamia floridana* - *Coontie* {PL}. The roots, when properly prepared, were the source of *Florida arrowroot*, used for bread and a milky gruel known as *sofkee*. Seminole Indians, in making their *sofkee stew*, cooked it with the meat of various wild game and vegetables such as corn, tomatoes, and beans. Southeastern North America. MEDSGER, MORTON 1977, POLVAY; *C78*, *D43*, *F69*, *G91M*, *H4*, *093*{S}, *Q41*{S}

## ZINGIBERACEAE

*Aframomum angustifolium* - *Madagascar cardamom*, *Wild cardamom* {PL}. The fruits contain an agreeable acid pulp and are eaten fresh. Dried seeds are used like pepper for seasoning. In the Near East they are added to coffee. Eastern Africa, Madagascar. MORTON 1976, TREGOLD, UPHOF; *J73*

*Aframomum korarima* - *Kewrerima*, *Ethiopian cardamom* {DF}. Fruits are used as a seasoning for tea, cakes, sausage, stews, and breads and are ingredients in the Ethiopian spice mixtures *awaze* and *shiro*, and Ethiopian steak tartar (*kitfo*). East Tropical Africa, cultivated. KUNKEL, MESFIN [Re], ZEVEN; *H51*, *H51* {PD}

*Aframomum melegueta* - *Grains of Paradise*, *Melegueta pepper*, *Guinea grains* {DF}. The aromatic, pungent seeds are used for flavoring wine, beer, cordials, liqueurs, meats, and breads. Mixed with ginger and cinnamon, they flavored the wine known as

*hippocras*. Also an ingredient of *ras el hanout*. American food manufacturers use them in ice cream, candy, and soft drinks. They were an important article of trade in Europe as early as the 13th century. The fruit pulp around the seeds is eaten or chewed as a stimulant. West Tropical Africa, cultivated. LOVELOCK, MENNINGER, MORTON 1976, ORTIZ 1973 [Re], ROOT 1980b, VONWELANETZ, WOLFERT 1973; *A7*, *A20M*, *E14T*, *F37T*, *F65*, *F85*{S}, *G73*, *K2*, *L36M*, *N7D*

*Alpinia caerulea* - *Native ginger* {S}. Tender, young tips of the rhizome have a distinct ginger-like flavor and may be eaten. The pleasantly acid pulp that surrounds the seeds is also edible. Australia. CRIBB; *A28*{PL}, *C95*, *L43*{PL}, *N79*{PL}, *N84*, *P5*, *P38*

*Alpinia galanga* - *Greater galangal*, *Laos* {PL}. The slightly pungent rhizomes are employed as a flavoring in *masaman* and other curries, soups, meat and fish dishes, or are mixed with other seasonings. Source of an essential oil used to flavor liqueurs such as *Chartreuse*, *Angostura* and other bitters, and soft drinks Young shoots are eaten raw or steamed. The flowers and flower-buds are eaten raw, steamed, pickled, added to soups, or mixed with chili paste. Red fruits are edible. Tropical Asia, cultivated. COST 1988 [Cul, Re], CRAWFORD [Re], JACQUAT, MORTON 1976, OCHSE, ROUTHIER 1989 [Cul, Re], SHURTLEFF 1979, VON REIS; *A7*{DF}, *A45*{DF}, *A49D*{DF}, *C43M*, *E13G*{PR}, *E14T*{DF}, *F37T*, *H4*, *I8M*{DF}, *I77G*, *K17J*{DF}, *L90G*{DF}, *L90G*{PR}, *N84*{S}, *P38*, etc.

*Alpinia officinarum* - *Lesser galangal* {S}. The reddish-brown rhizomes have a spicy aroma and a pungent taste somewhere between pepper and ginger. They have been used to flavor vinegar and the liqueur called *nastotka*. Leaves are also edible. Southeast Asia. BROUK, BURKILL, GRIEVE, LEYEL 1987b, MARTIN 1975, UPHOF; *F85*

*Alpinia speciosa* - *Shell ginger* {S}. The stems, leaves, and flowers are boiled and eaten. In Tonga, the leaves are wrapped around fish before cooking. Tropical Asia, cultivated. ALT-SCHUL, BURKILL, TANAKA, WHISTLER, W.; *A41G*{PL}, *F85*, *H4*{PL}, *I77G*{PL}, *J27*{PL}, *K8*{PL}, *N84*, *093*, *P5*, *P38*, *Q32*

*Alpinia zerumbet* - *Alpinia speciosa*

*Amomum cardamomum* - *Amomum compactum*

*Amomum cardamon* - *Elettaria cardamomum*

*Amomum compactum* - *Round cardamom*, *Kepulaga* {PL}. Young, pungent shoots are eaten raw, roasted, or cooked and served with rice. The fruits have a sweet, turpentine aroma and flavor and are used as a spice or chewed to sweeten the breath. Seeds are used in cakes. Malaysia. BURKILL, MORTON 1976, UPHOF; *C36*, *H4*, *I53M*, *L56*, *N84*

*Amomum kepulaga* - *Amomum compactum*

*Amomum subulatum* - *Greater cardamom*, *Nepal cardamom*, *Brown cardamom*, *Black cardamom* {DF}. Seeds are used as an inexpensive substitute for true cardamom, having a distinctly camphorous or eucalyptus-like flavor. One of the ingredients of *char marsala*, a spice mixture widely used in Afghan cuisine. The whole, dark brown pods are crushed and added to rice pilafs. Tropical Asia. DEVI, MATTOO [Re], MORTON 1976, NORMAN [Re], SABERI [Re]; *A7*, *A7*{PD}, *C34G*, *F74*, *GO*, *I74*{PL}, *LI6*, *K18M*

*Amomum xanthioides* - *Bastard cardamom*, *Wild Siamese cardamom* {S}. Seeds are used in China to flavor liqueurs. They have been exported to India and England as substitutes for true cardamom, although their strong camphor flavor is not as pleasant. Malaya. GRIEVE, MORTON 1976; *F85*

*Boesenbergia pandurata* - *Temoo kuntji*, *Chinese keys*, *Krachai* {PL}. The strong, spicy, swollen rhizomes are consumed in soups, stews and sambals or made into pickles. Both the rhizomes and the hearts of the stems are eaten raw as a side-dish with rice Young

leaves and shoots, along with the rhizomes, are cut finely, mixed with coconut and spices, wrapped in a banana leaf and steamed. Malaysia, Indonesia. GRIGSON, J. 1986 [Re], JACQUAT, LOH-UNCHIT [Re], OCHSE, TANAKA, UPHOF; A45{DF}, C34G, E8M, P38

*Curcuma alismatifolia* - *Siam tulip* {PL}. The flowers are consumed as a vegetable in Cambodia. Southeast Asia. UPHOF; H4, J27, I77G, L43, N84

*Curcuma angustifolia* - *East Indian arrowroot*, *Tikhur* {PL}. Rhizomes are the source of a starch, called *Travancore starch*, which forms a good substitute for West Indian arrowroot. Southern Asia. HEDRICK 1919, UPHOF; H4

*Curcuma aromatica* - *Yellow zedoary*, *Wild turmeric* {PL}. The rhizome is pounded and used in curries as a substitute for turmeric. Southeast Asia. BURKILL, TANAKA; R22

#### *Curcuma domestica* - *Curcuma longa*

*Curcuma longa* - *Turmeric*, *Indian saffron* {PL}. The powdered rhizomes are used as a yellow coloring agent and condiment in curries, prepared mustards, cheeses, butter, gravies, sauces, rice, pickles, etc. They are also an ingredient of *kra ry* powder from Thailand. Leaves wrapped around fish flavor it during cooking. They are also an ingredient of *Rendang*, a traditional buffalo meat dish of West Sumatra. The young shoots and rhizome tips are eaten raw. India, cultivated. BOND [Re], COST 1988 [Cul], JACQUAT, MORTON 1976, OCHSE, OWEN [Re], SHURTLEFF 1979, UPHOF, YOONG [Re]; A28, C43M, E13G{PR}, F37T, H4, I74, I77G, I81T{PR}, I81T{DF}, J82, L43, L62M, L90J, M82, P38, etc.

*Curcuma mangga* - *Temu manggi* {S}. Young shoots and the tender, white tips of the rhizomes are eaten raw or boiled. Slices of the young rhizomes are cooked with coconut milk and chili paste. Flower clusters are steamed and eaten with rice or used in stews. Southeast Asia. MORTON 1976, OCHSE; Z25M

*Curcuma parviflora* - *Krachiao khao* {PL}. In Thailand, the young leaves are blanched and served with *nam phrik* (chili sauce). The flowers are boiled and eaten with *nam phrik kapi*—a shrimp paste and chili sauce. Southeast Asia. JACQUAT; A28, L43, N84

*Curcuma xanthorrhiza* - *Tern lawak* {PL}. Rhizomes are the source of a starch that is made into porridge or pudding-like delicacies. A sweet drink is made by cooking the dried rhizomes in water and adding sugar. The heart of the stems and the rhizome tips are eaten raw. Inflorescences are cooked and served with rice. Southeast Asia. BURKILL, OCHSE; P38

*Curcuma zedoaria* - *Zedoary* {PL}. The leaves, which resemble lemongrass in flavor, are cooked with fish as seasoning. Dried rhizomes are used as a condiment in liqueurs and bitters, including the Italian brand *Ramazzotti* and *Swedish bitters*. Also the source of a starch that is used like arrowroot. The heart of the young shoots is eaten raw or cooked. Slices of the young rhizomes are added to salads. India, cultivated. BOND [Re], BROWN, G., MORTON 1976, NORMAN, OCHSE, TANAKA, TREBEN; H4, I77G, J27, L43, N7D{DF}, N84, P38

*Elettaria cardamomum* - *Cardamom*, *Small cardamom* {PL}. Aromatic seeds are used to flavor curry powder, cakes, sausages, drinks, cordials, bitters, gingerbread, pickles, *Qahwah* coffee, candies, etc. One of the principal ingredients of the Ethiopian hot pepper mixture known as *mit'mit'a*. In India, the seeds are chewed after meals to sweeten the breath. For the traditional *Massaman* curry, originating with the Muslims of southern Thailand, cardamoms are roasted in their shell and added whole to the curry as a garnish. The young shoots are eaten raw, steamed, or roasted. Leaves are used for wrapping foods before cooking. Tropical Asia, cultivated. CUSUMANO [Cul], DAGHER, GRIEVE, LOH-UNCHIT, MESFIN [Re], MORTON 1976, OCHSE, PASSMORE, ROOT 1980b, UPHOF; C43M, C81M, E48, F37T, G96,

H51{PD}, I53M, J27, J82, K17J{PD}, K22, L36M{DF}, L90K{ED}, M53, M82, etc.

#### *Gastrochilus panduratum* -> *Boesenbergia pandurata*

*Globba marantina* - *Yellow dancing girl ginger* {PL}. The small bulbils are used as a flavoring material. Tropical Asia. BURKILL, TANAKA; F85{S}, H4, J27, N84, O53M{S}, R22

*Hedychium coronarium* - *Garland flower*, *Butterfly ginger* {PL}. Young buds and flowers are steamed or blanched and served with chili sauce. They are also used for flavoring. Tropical Asia. JACQUAT, KUNKEL, TANAKA; A28, A41G, A79M{S}, C36, E48, H4, H49, I28, I53M, I77G, J27, M16M, N84{S}, P38{S}

*Kaempferia galanga* - *Galanga*, *Kenchur*, *Proh hom* {PL}. Young leaves and tender rhizomes are eaten raw, steamed, in curries, or cooked with chili paste into a savory side dish. The rhizomes are also used as a condiment, pickled, or used in the preparation of *beras*, a sweet, spicy beverage. Dried rhizomes are used as a substitute for turmeric in curry powder. Tropical Asia, cultivated. COST 1988 [Cul], JACQUAT, MORTON 1976, OCHSE, OWEN [Re], SHURTLEFF 1979; A7{DF}, A45{DF}, C34G{DF}, F73D, F73D{DF}, G73, H4, I77G, I81M, I81M{DF}, J27, L43, N84, R22

#### *Kaempferia pandurata* - \* *Boesenbergia pandurata*

*Kaempferia rotunda* - *Kunji puti* {PL}. The young leaves are eaten raw, steamed, or used in stews. Tubers, which have a hot taste, are also eaten. Also one of the ingredients of the famous Ayurvedic tonic *Chyavanprash*. Tropical Asia. BURKILL, MORTON 1976, OCHSE, SIVARAJAN, UPHOF; H4, I53M, I77G, J27, L43, N84

*Nicolaia elatior* - *Ondje*, *Torch ginger* {S}. Inflorescences are eaten raw, steamed, roasted, or used in curries. The heart of the stems is cooked and served with rice. Half-ripe fruits are eaten in soups and stews. Ripe fruits are eaten as delicacies or made into sweetmeats. Mature seeds are eaten raw. Malaya, cultivated. BURKILL, OCHSE; A79M, F85, K8{PL}, O93

#### *Phaeomeria magnifica* - \* *Nicolaia elatior*

#### *Phaeomeria speciosa* - \* *Nicolaia elatior*

*Zingiber amaricans* - *Lampuyang pahit* {S}. The young flower spikes, deprived of the bracts, can be eaten raw, cooked, or added to stews. Rhizome tips, both the old bitter ones and the non-bitter younger ones, are eaten raw with rice. Malaysia, Indonesia. OCHSE; Z25M

*Zingiber mioga* - *Mioga ginger*, *Japanese gingpr* {PL}. Young shoots are blanched and used in soups, tempura and tofu dishes, adding a pleasant spicy aroma and flavor. They are also pickled or chopped finely and used as a garnish for sashimi. The aromatic pale yellow flowers, having a sharp flavor, are added to soups, fried foods, and vinegared dishes, and are also pickled with salt, vinegar or sake lees. Occasionally available fresh in Japanese markets. Eastern Asia, cultivated. COST 1988, MORTON 1976, SHURTLEFF 1975, YASHIRODA; A28, C95, H4, I77G, L43, N84

*Zingiber officinale* - *Ginger*, *Shdga* {PL}. Rhizomes are widely used to flavor cakes, chutneys, curries, stir-fried dishes, beverages, pastry, candies, pickles, etc. The juice of the rhizomes is similarly employed. They are sold dry, powdered, or preserved in syrup. Also used in *ginger ale*, *ginger beer*, wine, brandy, and herbal teas. Very young rhizomes—known as *stem ginger*, *young ginger*, or *green ginger*—are peeled and eaten raw in salads, pickled, or cooked in syrup and made into sweetmeats. In Australia, the young rhizomes are preferred for making crystallized ginger. Pickled ginger—known as *omazu-shdga*, *beni-shoga* or *gari*—is commonly eaten with *sushi* dishes. Young, slightly spicy shoots are eaten as a potherb or pureed and used in sauces and dips. When pickled and dyed red they are known as *hajikami-shogi*. Young inflorescences are eaten raw in *khaao yam*. The leaves are used to wrap food for grilling. Culti-

vated. BENGHIAT [Re], COST 1984 [Re], COST 1988, CUDE, DAHLEN [Cul, Re], HARRINGTON, G. [Cu, Cul], JACQUAT, JAFFREY, MARTIN 1975, MORTON 1976, OCHSE, ORTIZ 1973 [Re], TANAKA, TSUJI, UPHOF; C43M, E97, F37T, G20M{PD}, H4, H49, I81T{PR}, I81T{DF}, J82, L36M{DF}, L43, L97G{PD}, P38

#### CULTIYARS

Chinese Yellow: Dwarf, bushy plant, only reaching 3 feet in height. Small, narrow rhizomes. Mild, distinctive, light yellow flesh. More flavorful and more potent medicinally than the standard white type of Hawaii, Florida and Fiji. D57, G17

Zingiber spectabile - *Golden-shampoo ginger* {PL}. Rhizomes are used for flavoring. Malaysia, Indonesia. BURKILL, TANAKA; A79M, C36, F85{S}, H4, I77G, L43, N84{S}, P38

Zingiber zerumbet - *Zerumbet, Wild ginger, Pinecone ginger* {PL}. In Malaysia, the young leaves and shoots are cooked as vegetables. The ancient Hawaiians used the leaves as a steam flavoring for meats that were cooked in underground ovens. In Tonga, they are wrapped around fish before cooking. Young rhizome tips and inflorescences are eaten raw with rice or chili sauce. Tropical Asia, cultivated. DEGENER, JACQUAT, MORTON 1976, OCHSE, WHISTLER, W.; A28, A79M, H4, H49, I74, I77G, J27, K8, L43, N84, P38

#### ZYGOPHYLLACEAE

Guaiacum officinale - *Lignum sanctum, Guajacan negro* {S}. Source of a resin used for flavoring cakes and chicle. It is also added to edible oils to prevent acidification. Caribbean region. KUNKEL, TANAKA; A79M, D56M, F80, F85, N84

*Larrea divaricata* - *Larrea tridentata*

*Larrea mexicana* - \**Larrea tridentata*

*Larrea tridentata* - *Creosote bush* {S}. Flower buds are pickled in vinegar and used like capers. The stems and leaves are used as a

substitute for tea. Twigs are chewed to alleviate thirst. A resin, obtained from the leaves and twigs, delays or prevents butter, oils, and fats from becoming rancid. Southwestern North America. CLARKE, KUNKEL, UPHOF; C43V, C98, E66M, F63M, F80, F85, I98M, JO, J25M, J25M{PL}, K15, N84

*Nitraria schoberi* - *Nitre bush, Dillon bush* {S}. The edible fruits are olive-like, red or purple, and slightly salty but with a very pleasant flavor. They may be eaten raw or cooked. In Tibet they are added to *aker*, a traditional milk brandy made from yak's milk, to improve the taste and enhance the sugar and alcohol contents. Eastern Mediterranean region to Australia. CRIBB, HEDRICK 1919, KURMANN, ROBINS, UPHOF; F80, N79M, N84, O33, P17M, R15M, R47, S92

*Peganum harmala* - *Syrian rue, Uzerlik* {S}. Seeds are used as a condiment in Turkey. Mediterranean region. OZTURK, TANAKA; A26, A61{PL}, C43M{PL}, D92M, E81M, F68T, F85, I74{PL}, J73, J82, J82{PL}, L90J{PL}, O53M

*Tribulus terrestris* - *Puncture vine, Land caltrops, Goat's head, Gokshura*{DF}. Young leaves and shoots are boiled and eaten. In Uganda, they are cooked and eaten with *Gynandropsis gynandra* or with sour milk. The seeds are occasionally ground into flour and made into bread or mixed with other flours in making pastries. The fruits are brewed into an herbal tea. Widespread. BHANDARI, GOODE, MARTIN 1975, MORNINGSIAR, SIVARAJAN, TANAKA; H36, J82{S}, L21T, N7D, N84{S}

*Zygophyllum fabago* - *Bean caper* {S}. The flower buds are pickled and used as a substitute for capers. Mediterranean region to Southwest Asia. HEDRICK 1919, TANAKA; V84M, W3M, Y89M, Z19

### ALPHABETICAL LISTING OF FUNGI FAMILIES

#### AGARICACEAE

*Agaricus arvensis* - *Horse mushroom* {SR}. Fruitbodies are edible, choice. The flesh is thick, firm, white, with a scent reminiscent of almonds or aniseed, and a delicious flavor. Some are up to one foot across when mature. They may be eaten raw in salads, broiled, sauteed, stuffed, in soups, fritters, sauces, casseroles, etc. CRIBB, FERNALD, GIBBONS 1962 [Re], LAUNERT, MABEY [Cul], MILLER, O., STEINECK [Cu], UPHOF; D87M

*Agaricus augustus* - *The prince* {CU}. The fruitbodies are edible. Flesh is thick, meaty, white, with the odor of anise. The caps are large, up to a foot wide. A choice edible that can be eaten raw and is also excellent stuffed with crabmeat, creamed on toast, or in scrambled eggs or soups. MILLER, O., STEINECK [Cu]; D87M{SR}, E21, I11M, I49{SN}, M87, M87{SN}

*Agaricus bisporus* - *Button mushroom, Champignon* {SN}. Fruitbodies are edible. The common mushroom found in food stores. Widely eaten raw in salads, sauteed, stuffed, marinated, fried, or used in soups, sauces, stews, gravies, etc. Recommended for growing outdoors in garden beds. CARCIONE [Pre], CZARNECKI 1986 [Cul, Re], GRIGSON, J. 1975 [Cul, Re], KERRIGAN, STAMETS 1983 [Cu], STEINECK [Cu], VILMORIN [Cu]; D87M{SR}, D93M{PD}, E21{CU}, E21B{KT}, I49, I49{CU}, M87, M87{CU}. (for strains see Button Mushroom, page 315)

*Agaricus bitorquis* - *Spring agaric, Rodman's agaric* {SR}. Fruitbodies are edible, choice. Closely related to the common button mushroom, but is larger, meatier, much firmer, better flavored, and has a longer shelf life. Can also be grown under warmer weather conditions. Cultivated commercially in Europe because of its resis-

tance to the virus that plagues *A. bisporus*. ARORA, D., STAMETS 1983, STEINECK [Cu]; D87M

*Agaricus brunnescens* - *Agaricus bisporus*

*Agaricus campestris* - *Meadow mushroom, Field mushroom* {SR}. Fruitbodies are edible, choice. This is the common, delicious *Agaricus* found on lawns throughout North America. They have thick, firm flesh, either white or tinted reddish brown. Raw, they make a tasty savory if the stalk is removed and the cap filled with cream cheese. Otherwise they may be used to flavor casseroles and rice dishes, or fried in butter and thickened with a little flour and milk. CRIBB, FERNALD, GRIGSON, J. 1975 [Cul, Re], MABEY, MICHAEL [Re], MILLER, O., STEINECK [Cu]; D87M

*Agaricus silvaticus* - *Sylvan mushroom, Scaly wood mushroom* {SR}. Fruitbodies are edible. The flesh is thick, firm, white, slowly bruising reddish brown when young or remaining unchanged. It has a pleasant odor and a mild flavor. Can be served raw, grilled, in sauces, or fried with eggs. To keep the food it is cooked with from turning brown, the dark gills are cut off. FARLEY, MILLER, O., STEINECK [Cu], TANAKA; D87M

*Agaricus rodmanii* - *Agaricus bitorquis*

*Agaricus subrufescens* - *Almond mushroom* {SN}. The fruitbodies are edible, choice. They are said to have the flavor of sweet almonds. Grows during warmer weather than the button mushroom and is less demanding of growing conditions and substrates. Recommended for growing in vegetable gardens. This variety was popular at the turn of the century and was cultivated commercially on the

East Coast. KERRIGAN, TANAKA; D87M{SR}, I74{KT}, J60, M87, M87{CU}, M87{KT}

STRAINS {CU}

**State:** Originally from an old university collection. Characteristics of the mycelium on agar suggest that it is an eastern form of the species. IIM

*Lepiota rachodes* - *Shaggy parasol*, *Scaly lepiota* {CU}. Fruitbodies are edible. The flesh is soft and white. Very flavorful when young, especially fried, but somewhat tough when old. The tough stalks are not useable. Faintly aromatic with a mild taste. In gardens it can be cultivated in composting areas. ANONYMOUS 1986 [Re], MABEY, MILLER, O., STEINECK [Cu], TANAKA; E21

*Schizophyllum commune* - *Sepa*, *Hed teen tukkae* {CU}. The fruitbodies are eaten, although they are somewhat tough. In Tropical Africa, they are boiled for one or two hours in water to which vegetable salt has been added, then mixed with peanuts, salt and oil. This preparation is eaten with *bukari*, a staple starchy food. In Thailand, they are eaten with meat in curries or fried with egg. JACQUAT, PARENT; C7M, M69

AMANITACEAE

*Amanita caesarea* - *Caesar's mushroom*, *Royal agaric* {SR}. Fruitbodies are edible. The flesh is firm, white, with a pleasant odor and taste. When in the button or egg stage it is sliced and eaten raw with olive oil, lemon juice, salt and pepper. The older caps can be grilled, fried, stewed, or broiled. Considered a delicacy by the ancient Greeks and Romans. BIANCHINI [Cu], GRAY, P. [Cu], UPHOF; D87M

ASPERGILLACEAE

*Aspergillus niger* - *Tempeh mold* {CU}. A common bread mold that is occasionally found in tropical tempeh and tempeh inocula. Also found in *ogi*, *yakju* and *kicap* fermentations. Grown on sugar residues, it converts the sugars into commercial citric acid, a food additive. A food supplement known as *NutraFlora* is produced by fermenting sucrose and water with a pure strain of the mold. It is a mildly sweet, concentrated form of *fructooligosaccharides* valued for its ability to feed indigenous friendly intestinal flora, low calorie count, and high fiber content. Available in powdered form that can be sprinkled on cereal and fruit or stirred into beverages. SCHERY, STEINKRAUS; C7M, D81T, E13, E94{ED}, G37P, K26M, M69

*Aspergillus oryzae* - *Koji mold*, *Hama-natto mold*, *Hishio mold* {PD}. This mold is also involved in the fermentation of *misu*, *amazake*, *shayu*, *tamari*, *mirin*, *taosi*, *nuruk*, *chiang-yiu*, *meju*, *inyu*, *yukiwari-natto*, *sake*, *kecap*, *brem*, *yakju*, *ragi tapeh*, *kicap*, *tauco*, *doenjang*, and *kochujang*. In Japan, koji pickles are very popular. Koji is used for removing the odor from garlic, which is then mixed with ginseng and honey to form a nutritional supplement known as *garlic balls*. HESSELTINE, STEINKRAUS, UPHOF, YAMAGUCHI [Re]; E60P. (see also Starter Cultures, page 537)

*Penicillium camembertii* - *Camembert cheese mold*, *White mold* {CU}. A mold that takes part in the fermentation of Camembert as well as Brie, Neufchatel, Gournay fleuri, Pennsylvania Dutch cup, Pont l'Evêque, and St. Maure cheeses. BROUK, KOSIKOWSKI, PEDERSON, UPHOF, WALTER; C7M. (see also Starter Cultures, page 537)

*Penicillium candidum* - \**Penicillium camembertii*

*Penicillium caseicola* - *Penicillium camembertii*

*Penicillium chrysogenum* - *Stilton cheese mold* {CU}. One of the organisms reported to have a role in the formation of Stilton cheese. UPHOF; E13, K26M, M69

*Penicillium roqueforti* - *Roquefort cheese mold*, *Blue mold* {CU}. The conidia of this mold form the dark green veins in Roquefort as well as Gorgonzola, Stilton, and blue cheeses. Also essential in the curing of *Iberian ham*, the mold forming a generous coating on the outside surface which fixes the surrounding microorganisms respon-

sible for stabilizing fat and rounding off the final curing process. BROUK, CAPEL, DOMINE, KOSIKOWSKI, PEDERSON, SCHERY, UPHOF, WALTER; C7M. (see also Starter Cultures, page 537)

AURICULARIACEAE

*Auricularia auricula* - *Kikurage*, *Wood ear*, *Jew's ear* {DF}. The fruitbodies are thick, gelatinous, and virtually stemless. In China and the Far East they are grown commercially, dried, and used in stews, Japanese-style fish sausages, and soups, especially miso and hot and sour soups, often combined with dried lily buds (*Hemerocallis* sp.). Although bland and tasteless, they readily absorb the flavors of other foods. COST 1988 [Cu, Re], MABEY, MILLER, O., OCHSE, SHURTLEFF 1975, TANAKA; A7, C34G, D87M{SR}, E13G, E13G{PR}, E20M{SN}, E21B, F17, H73{PR}, IIM{CU}, 18M, J11, L17, M87{CU}, M87{SN}, N40{PR}, N40, etc.

*Auricularia polytricha* - *Arage-kikurage*, *Cloud ears* {CU}. Fruitbodies are consumed as food. They are usually sold dried and are reconstituted for use in cooking. After soaking, they are chewy, gelatinous, slippery, and have little taste although they take on the flavors of other ingredients. Used in soups, casseroles, stir-fried dishes, and as an ingredient of the Chinese dishes *bahmi* and *kimlo*. CHANG, W. [Re], CRIBB, CZARNECKI 1986 [Cu, Re], OCHSE, SCHNEIDER 1986 [Re], SOLOMON, STAMETS 1993 [Cu], UPHOF; A7{DF}, C43M{SN}, E21, E21{DF}

BOLBITIACEAE

*Agrocybe aegerita* - *Brown swordbelt* {CU}. Fruitbodies are consumed as food. Small to medium-sized, with a yellowish-brown cap. Occasionally cultivated and sold in the markets of the Mediterranean area. In southern Italy, it is cultured on poplar wood. In the ornamental garden it can be cultivated on logs, like other wood-inhabiting species. STAMETS 1993 [Cu], STEINECK [Cu], UPHOF; E21, 149, 149{SN}, M87, M87{SN}

BOLETACEAE

*Boletus bicolor* - *Two-colored boletus* {SR}. Fruitbodies are edible, good to excellent. Very attractive, with vividly contrasting rosy to red caps and yellow pores. Thick, pale yellow flesh. ARORA, D., MILLER; D87M

*Boletus edulis* - *Cepe*, *Porcini*, *Steinpilz* {DF}. The fruitbodies are edible, choice. One of the most highly prized of all mushrooms. Thick, meaty and richly flavored—they are delicious in many kinds of dishes such as risotto, pasta, omelettes, soups, sauces, stews, *vol-au-vent*, etc. Very young specimens are particularly good preserved in oil. The caps are excellent broiled, grilled, sauteed or baked. Readily available dried in gourmet stores, occasionally fresh. The dried mushrooms retain their strong flavor exceptionally well. BIANCHINI, GRIGSON, J. 1975 [Cu, Re]; C94M, D87M{SR}, D93M{PD}, E14T, E56, H19M, H25M{PR}, H25M{PD}, H73{PR}, H73, 13, 18M, J11, L15G, L15G{PR}, L17, L99, N40, etc.

*Boletus mirabilis* - *Admirable boletus* {SR}. Fruitbodies are edible, choice. The flesh is firm, lemon-yellow, sometimes reddish when bruised. Some strains may have a distinctive lemon-like flavor. ARORA, D., MILLER, O.; D87M

*Suillus grevillei* - *Pine-tree bolete*, *Larch bolete* {SR}. Fruitbodies are edible, good. The flesh is lemon-yellow and becomes spongy in older specimens. The odor is pleasant, the flavor mild. The surface of the cap is easily peeled away. The stalk should be thoroughly cleaned before cooking. MILLER, O., STEINECK [Cu], TANAKA; D87M

*Suillus luteus* - *Slippery jack*, *Chilean porcini*, *Callampas* {DF}. The fruitbodies are edible, good to choice. They are covered with a viscid or slimy skin which readily peels off. The tube layers should also be removed before cooking. Tender and flavorful, especially good in sauces, marinades and gravies. Can be dried or pickled. Large quantities of the dried mushrooms are exported from Chile.

ARORA, D., CZARNECKI 1995, FARLEY, FISCHER, UMAMURRAY [Re], UPHOF; A7, E14T, F37T, G5, H25M, H73, J58

#### CANTHARELLACEAE

*Cantharellus cibarius* - *Chanterelle, Golden chanterelle, Girolle* {DF}. The fruitbodies are cooked and eaten, preserved in oil, or dried for later use. The flesh is firm, light yellowish, and has a truly delicious flavor. One of the most famous and highly valued mushrooms, they are used in stews, soups, omelettes, grain dishes, sauces, or sauteed in butter or oil. The dried powder, known as *gold dust*, is sprinkled on omelettes, salads, pastas, soups, etc. CUSUMANO [Cul, Re], CZARNECKI 1986 [Cul, Re], FERNALD, GIBBONS 1962, GRIGSON, J. 1975 [Cul, Re], LAUNERT, MICHAEL [Pie], MILLER, O., QUAINANCE, SCHNEIDER 1986 [Pre, Re], STEINECK [Cu], UPHOF; A7, CIITIPR], C11T{DF}, C94M, C96, D87M{SR}, E56, H25M{PR}, H73{PR}, J11, L15G, L15G{PR}, L99, M34{PR}, M41M{DF}, N40, N40{PR}, etc.

*Cantharellus cinnabarinus* - *Red chanterelle* {SR}. The fruitbodies are edible, good to very good. Striking bright-red to reddish orange or flamingo pink caps and stems with a distinctive, peppery flavor. Best used in salads, or they can be added to casseroles, omelettes, and sauteed dishes. Colorful in combination with golden or yellow chantarelles. ARORA, D., CZARNECKI 1986 [Cul, Re]; D87M

#### *Cantharellus clavatus* - \**Gomphus clavatus*

*Cantharellus infundibuliformis* - *Yellowfoot chanterelle* {DF}. Fruitbodies are edible, good. Usually considered somewhat thin-fleshed and lacking a strong flavor compared to other chantarelles. When cooked, the caps disintegrate rapidly, while the stems retain most of their shape. Not suitable for canning, but they dry and freeze well. Harvested commercially in the Pacific Northwest and in Finland. ARORA, D., CZARNECKI 1995 [Cul], FISCHER; A7, E56, D87M{SR}, H25M{PR}, M34{PR}

*Cantharellus subalbidus* - *White chanterelle* {SR}. The fruitbodies are edible, choice. Dull white or whitish cap. Firm, meaty, dense white flesh, of very rich flavor. Makes a good substitute for the golden chanterelle. Ideal for marinating or prolonged refrigeration. ARORA, D., CZARNECKI 1995; D87M

#### *Cantharellus tubaeformis* - \**Cantharellus infundibuliformis*

*Craterellus cornucopioides* - *Black chanterelle, Horn of plenty* {DF}. The funnel-shaped fruitbodies are eaten, and are universally considered choice. They have a strong, delicious earthy flavor, especially when dried, powdered or preserved in oil. Excellent in soups and stews, and they make one of the few mushroom sauces that goes exceptionally well with fish. ARORA, D., BIANCHINI, CZARNECKI 1986 [Re]; A7, C96, M41M

*Craterellus fallax* - *Black trumpet-of-death, Horn of plenty* {DF}. The trumpet-shaped fruitbodies are edible, choice. Thin, fairly brittle flesh, very aromatic and intensely flavored. Excellent sauteed as a side dish or added to omelettes. Often dried and ground into a powder used for seasoning soups, sauces and other foods. Also suitable for pickling. CZARNECKI 1995 [Cul, Re], FISCHER; D87M{SR}, E21B, E56, E63G{PR}, E63G, G5, H25M, H25M{PR}, H73, I1M, J11, L17, M34{PR}

*Gomphus clavatus* - *Pig's Ears* {SR}. The fruitbodies are eaten, and are generally considered very good to choice, although their flavor is not distinct. An unusual looking mushroom resembling a sawed-off, lopsided, purplish club. Notable for its firm texture which is usually retained during cooking. Makes an excellent addition to a casserole. ARORA, D., CZARNECKI 1995 [Re]; D87M

#### CLAVARIACEAE

*Sparassis radicata* - *Cauliflower mushroom* {DF}. The fruitbodies are edible, choice. An unusual and elegant mushroom, somewhat reminiscent of a cauliflower head. Specimens of thirty to fifty

pounds are known, but young, smaller ones are preferred because they are fleshier. Slew, thorough cooking is necessary to tenderize it. Sauteing or parboiling, followed by baking or stewing is recommended. Excellent in soups, stews and other dishes that require long cooking. ARORA, D., CZARNECKI 1995 [Cul], FISCHER, MILLER, O.; A7, E56, H25M{PR}, H73{PR}

#### CLAVICIPITACEAE

*Cordyceps sinensis* - *Dong chong xia cao, Caterpillar fungus* {DF}. A Chinese tonic mushroom harvested with the carcass of the larval insect from which it grows, hence the name. Traditionally cooked with duck, chicken, pork and fish in soups and stews, the cordyceps enhancing the flavor. Sometimes used in rice congee dishes (porridges). Also an ingredient of ginseng essence and other herbal mixtures. Harvested by trained experts reminiscent of truffle hunters. BENSKEY, BOWK FLAWS 1995 [Re], TAN [Re], TEEGUARDEN; E2M, E21, G19P, H36, L21T

#### COPRINACEAE

*Coprinus cinereus* - *Ne-naga-no-hitoyo-take* {CU}. Fruitbodies are much esteemed as a delicious food by the natives of different parts of the Malayan Archipelago. TANAKA, UPHOF; C7M

*Coprinus comatus* - *Shaggy mane* {SN}. Fruitbodies are edible, choice. The firm caps have a distinct taste and are excellent baked, cooked with eggs, made into ketchup, or simmered in butter with a rich sauce made of the flavorful, black juice that cooks out of them. They should be prepared for the table as quickly as possible or they will dissolve into a black inky mass. CRIBB, CZARNECKI 1986 [Cul, Re], FERNALD, GIBBONS 1962, GRIGSON, J. 1975 [Cul, Re], MABEY, MICHAEL [Re], MILLER, O., STAMETS 1983 [Cu], STEINECK [Cu], UPHOF; E21{CU}, E21{KT}, I1M{CU}, 149, 149{CU}, J60, M87, M87{CU}, M87{KT}, N44, N44{KT}

#### *Coprinus macrorrhizus* - \**Coprinus cinereus*

*Coprinus micaceus* - *Small inky-cap* {CU}. Fruitbodies are consumed as food, having a delicate flavor. It is best to harvest them when young, while the gills are still white to very light gray. When the caps are simmered in butter, a great deal of black, watery juice forms which may be thickened with flour to make a rich creamy sauce. Or they can be baked with milk, a beaten egg, seasonings, and dry bread crumbs to absorb the liquid. FERNALD, MILLER, Q, UPHOF; D87M

#### CRYPTOCOCCACEAE

*Brettanomyces bruxellensis* - *Lambic beer yeast* {CU}. A yeast involved in the fermentation of the *lambic beers* of Belgium, lightly hopped beers made from a mixture of barley malt and unmalted wheat. It mostly occurs in breweries located near cities. GUINARD, STEINKRAUS; U7. (see also Starter Cultures, page 537)

*Brettanomyces lambicus* - *Lambic beer yeast* {CU}. One of the microorganisms that takes part in the *lambic beer* fermentations. Produces acid and alcohol and also contributes to the special flavor of the beer. It is the main yeast of breweries located in the Belgian countryside. GUINARD, PEDERSON, STEINKRAUS; A99, B55M. (see also Starter Cultures, page 537)

#### *Candida holmii* - \**Torulopsis holmii*

*Candida kefir* - *Kefir yeast* {CU}. One of the principal yeasts involved in the fermentation of kefir. It converts lactose to ethanol and carbon dioxide during the cooler ripening period. CAMPBELL-PLATT; C7M

*Mycoderma* sp. - *Lactic mycoderma*. Microorganism that grows on the surface of certain cheeses while they cure, especially Neufchatel cheese. PEDERSON; (for sources see Starter Cultures, page 537)

*Torulopsis holmii* - *Kefir yeast, Sourdough bread yeast* {CU}. A lactose-negative yeast that is involved in the production of *kefir*

grains, and also *sourdough bread*. STEINKRAUS; T34. (see also Starter Cultures, page 537)

#### DEUTEROMYCETES

*Geotrichum candidum* - *Lactic oidia* {CU}. Intermediate between yeasts and molds, these microorganisms are used in the manufacture of several varieties of cheeses. They are also involved in the fermentations of *kanji*, *gari*, *pito*, *torani*, *pozol* and *toddy*. HESSELTINE, STEINKRAUS; C7M. (see also Starter Cultures, page 537)

*Monilia sitophila* -> *Neurospora sitophila*

*Neurospora sitophila* - *Onchom mold*. The essential mold involved with the fermentation of *onchom*. Different strains are known to produce different pigmentation, with orange, yellow, pink, and white colors all appearing on the same *onchom* cake. SHURTLEFF 1979, STEINKRAUS, UPHOF; (for sources see Starter Cultures, page 537)

*Oidium lactis* - *Lactic oidia*. Intermediate between yeasts and molds, this microorganism is used in the manufacture of several varieties of cheese. It also takes part in the fermentation of *poi* and *chicha*. HESSELTINE, STEINKRAUS; (for sources see Starter Cultures, page 537)

*Oospora lactis* - *Lactic oidia*. Intermediate between yeasts and molds. Used along with *Oidium lactis* and *Geotrichum candidum* in the manufacture of various cheeses. It is also involved in the fermentation of *piima*. (for sources see Starter Cultures, page 537)

#### HYDNACEAE

*Herichium coralloides* - *Bear's head tooth*, *Fungus icicles* {PR}. The fruitbodies are consumed. They have a very distinct, branching form with delicate, long white teeth and a subtle, nut-like flavor. These beautiful mushrooms are best prepared by slowly sauteing in butter and serving with vegetables. Or they can be chopped and added to sauces and gravies. MABEY, MILLER, O., UPHOF; C11T, C11T{DF}

*Herichium erinaceus* - *Medusa's head*, *Lion's mane*, *Pom pom blanc* {KT}. Fruitbodies are eaten. They are very attractive, with coarse tooth-like spines hanging from the body. Tasty when young, but reportedly turns sour with age. After first being parboiled, they are excellent seasoned with garlic butter. ARORA, D., STAMETS 1993 [Cu], TANAKA; C27, C43M{SN}, D75T, D87M{SN}, E21, E21{CU}\ E21{SN}, E63G, E63G{PR}, H25M{PR}, H73{PR}, I1M, I3{SN}, I49{CU}, I49{SN}, 174, M87, M87{CU}, M87{SN}, N40{PR}, etc.

#### STRAINS {CU}

**Gerhard:** A much-sought-after delicacy from the forests of northern Switzerland. Can be grown in backyards on fresh cut oak or maple logs. I1M

*Hydnum repandum* - *Hedgehog mushroom*, *Pied de mouton* {DF}. The fruitbodies are edible, choice. Very distinct, with spines or "teeth" instead of gills. Excellent texture and flavor, well suited for long, slow-cooked dishes such as casseroles. Young specimens are preferred, as older ones may be acrid or bitter. However, any peppery or bitter flavor can be dissipated by cooking. Suitable for pickling, drying or canning. ARORA, D., LAUNERT, MABEY [Cu], STEINECK [Cu], TANAKA; A7, E56, E63G{PR}, H25M{PR}, H73{PR}, M34{PR}, M34 {PD}

#### HYPOCREACEAE

*Hypomyces lactiflorum* - *Lobster mushroom* {DF}. Fruitbodies are edible, choice. Striking, bright fluorescent-orange mold-like fungi that parasitize various species of *Russula* and *Lactarius*, covering them with a pimpled or powdery surface layer of tissue. Both the parasite and host are eaten, the texture and flavor of the host being completely transformed. Very rich and meaty, excellent sauteed or added to omelettes. Sold in local markets in Mexico. ARORA, D., CZARNECKI 1995, FERNALD, FISCHER, GIBBONS 1962, MILLER, O.; A7, E14T, E21B, E56, G5,

H25M{PR}, H73, H73{PR}, J11, M41M, N40, N40{PR}

#### LYCOPERDACEAE

*Calvatia gigantea* - *Giant puffball* {SN}. The fruitbodies are edible, choice. They often grow to the size of a football, and occasionally to five feet across. Best eaten when young, white, and firm-fleshed. Somewhat bland, but very adaptable in the kitchen. May be braised, fried, grilled, broiled, sauteed, etc. Excellent sliced and fried like pancakes or cubed like tofu and added to clear soups or salads. Suitable for drying. ARORA, D., CZARNECKI 1986 [Cul, Re], FERNALD, MASEFIELD; N44, N44{KT}

*Lycoperdon pyriforme* - *Pear-shaped puffball* {CU}. The fruitbodies are edible, of good quality especially when young and the inside is firm and pure white. The sterile bases, when cooked separately, are said to have a flavor similar to morels. Considered one of the better puffballs. ARORA, D., FISCHER; I1M

#### MONASCACEAE

*Monascus purpureus* - *Chinese red rice mold*. The essential organism for production of *Chinese red rice*, used as a food coloring and also for flavoring. The best strains produce a dark red, water-soluble pigment that readily mixes with other natural pigments and with food. Red rice is made into a liquor called *red-dew wine* or *hung-lu-chiu*. HESSELTINE, HSU, STEINKRAUS, UPHOF; (for sources see Starter Cultures, page 537)

#### MORCHELLACEAE

*Morchella angusticeps* - *Black morel* {CU}. Fruitbodies are edible, choice. The caps have black ridges, hence the name. Usually considered to have a stronger, smokier flavor than the yellow morel. They should not be eaten raw or undercooked or with copious amounts of alcohol. ARORA, D., FISCHER, MILLER, O., STAMETS 1993 [Cu], TANAKA, WEBER; A38M{DF}, C11T{PR}, C11T{DF}, E14T{DF}, E21, E21{KT}, E2HSN, G0{DF}, H73{PR}, I3{SN}, 149,149{SN}, I49M{KT}, J60{SN}, M87, M87{SN}

*Morchella crassipes* - *Thick-footed morel* {PR}. The fruitbodies are edible, choice. Distinguished by its massive stalk and enlarged base. In eastern North America, many connoisseurs prefer it over all other morels. Sometimes considered to be a late form of the yellow morel. ARORA, D., FISCHER; H73

*Morchella esculenta* - *Morel*, *Yellow morel* {SN}. The fruitbodies are cooked and eaten or dried and stored. The meaty texture and rich flavor of the morel makes it one of the best of all edible fungi. It can be stuffed and baked, sauteed in butter, slow simmered in cream or stock, or combined with light meats, fowl, pasta, rice, potatoes, sauces, etc. Dried morels are said to improve in flavor as they age. BURR, CZARNECKI 1986 [Cul, Re], FERNALD, MABEY, MILLER, O., SCHNEIDER 1986 [Pre, Re], STEINECK [Cu], UPHOF, WEBER [Re]; A38M{DF}, C11T{PR}, C11T{DF}, C27, C94M{DF}, D93M{ED}, E21{SN}, E63G{KT}, H73{PR}, 149, I49{CU}, L99{DF}, M41M{DF}, M87, M87{CU}, M87{KT}, N40 {PR}, N40{DF}, etc.

*Morchella esculenta van crassipes* -> *Morchella crassipes*

#### MUCORACEAE

*Actinomucor elegans* - *Sufu mold* {CU}. The mold generally used in the commercial manufacture of *sufu*. It is one of the best for the production of *pehtze*, the fresh soybean curd inoculated with the grayish hairlike mycelium of the mold. HESSELTINE, STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Mucor hiemalis* - *Sufu mold*, *Pehtze mold* {CU}. A mold that has a contributory role in the production of *sufu* and *pehtze*. HESSELTINE, STEINKRAUS; C7M, E13, M69

*Mucor miehei* - *Rennet mold* {PD}. Source of a microbial enzyme widely used as a coagulant in commercial cheese making. Often sold

as *vegetable rennet*, or occasionally as *Marzyme Supreme*. ROBINSON, R. 1991, ROBINSON, R. 1995; H28

*Rhizopus oligosporus* - *Tempeh mold* {CU}. Pure cultures of this mold are the best so far discovered for the production of *tempeh* from soybeans and other substrates. It also takes part in the fermentation of *shiro-koji*, *ragi tap eh*, *onchom*, *kecap*, and *tauco*. HESSELTINE, SHURTLEFF 1979, STEINKRAUS; M69, M87. (see also Starter Cultures, page 537)

*Rhizopus oryzae* - *Tempeh mold* {CU}. A mold that takes part in the fermentation of *tempeh* made from velvet bean (*Mucuna pruriens*), called *tempeh benguk*. In the production of *tempeh* from soybeans, it is valued for its long hyphae, which form a highly cohesive mycelium and firm cakes. It is also involved in the production of *onchom*, *ragi tapeh*, *lao-chao*, *brem*, and *tauco*. HESSELTINE, SHURTLEFF 1979, STEINKRAUS; T34

*Rhizopus stolonifer* - *Tempeh mold*, *Pozol mold* {CU}. One of the molds suitable for the production of *tempeh*, although it has lower protease activity than other species which limits its ability to digest proteins. Also involved in the production of *pozol*, a fermented corn product of southeastern Mexico. HESSELTINE, SHURTLEFF 1979, STEINKRAUS; C7M, D81T, E13, K26M, M69

#### PARMELIACEAE

*Cetraria islandica* - *Icelandic moss* {DF}. After boiling to remove its bitter principle, this lichen yields an edible jelly resembling *blancmange*, which is considered highly nutritious and digestible. In Iceland and other northern areas, it has been used in the preparation of puddings and soups, and when powdered, in the making of a type of bread. The powdered form can also be mixed with cocoa or chocolate. It has aromatic, bitter tonic properties which are used commercially in the formulation of various liqueurs and bitters. BURDOCK, FERNALD, GRIEVE, LAUNERT; F37T, GO, H46, K18M, N7D

#### PHALLACEAE

*Dictyophora indusiata* - *Bamboo mushroom* {DF}. A rare and exotic tropical mushroom enclosed in a lacy white, netlike "veil". It has a crunchy texture and a unique musty, earthy flavor. The dried fungus is reconstituted in water, then simmered until tender. Usually reserved for banquet dishes and fine vegetarian cuisine. Available dried at Chinese markets in different grades, some being extremely expensive. ARORA, D., PASSMORE; G19M

#### PLUTEACEAE

*Volvariella volvacea* - *Paddy-straw mushroom*, *Chinese mushroom* {SN}. The fruitbodies are cooked and eaten or dried for later use. Considered a delicacy, they are used in soups, sauces, stews, casseroles, omelettes, or steamed or stir-fried dishes. Commonly harvested in the early button stage, when they are most flavorful. Dried and canned products are available in Chinatown markets. CHANG, S. [Cu, Nu], CZARNECKI 1986 [Cul, Re], GRIGSON, J. 1975 [Cul, Re], HERKLOTS, STAMETS 1983 [Cu], STEINKRAUS [Pre], UPHOF; A7{DF}, C27G{DF}, E13G{DF}, E21, E21{CU}, I8M{DF}, 149, I49{CU}, J11{DF}, J60, M87, M87{CU}, N40{DF}

#### POLYPORACEAE

*Ganoderma lucidum* - *Ling chih*, *Reishi*, *Mannen-take* {SN}. Fruitbodies are edible. In Chinatown markets, a commercial mushroom confection is available—a pale, translucent, semi-soft candy made from the boiled extract of liqg chih. LINCOFF, STAMETS 1993 [Cu]; C27, C27G{PD}, C43M, D87M, E20MIKT}, E21{CU}, E21{DF}, E21{KT}, E21B{KT}, I1M, I1M{CU}, 13, 149, I49{CU}, 174, J60, J82{KT}, M87, etc.

*Grifola frondosa* - *Hen-of-the-woods*, *Mai-take* {SN}. Fruitbodies are edible, choice. They are large, fleshy, up to two feet broad with many smaller overlapping caps. One of the truly delicious mushrooms, they are cooked in soups and stews or prepared as tempura

(dipped in batter and deep fried). Also excellent when pickled. ARORA, D., CZARNECKI 1986 [Cul, Re], KAYE, LEIBENSTEIN [Re], MILLER, O., STAMETS 1993 [Cu], TANAKA; C27, D87M, E21{CU}, E21{DF}, E21{KT}, F10{DF}, H25M{PR}, H73{PR}, 13, I19M{DF}, 149, I49{CU}, 174 {KT}, J11{PR}, J60, J82{KT}, L89{KT}, M87, etc.

*Grifola umbellata* - *Zhu ling*, *Umbrella polypore*, *Chorei-mai-take* {CU}. The fruitbodies are edible, choice. They are reportedly of gourmet quality on a par with *G. frondosa*, but much more tender and not requiring long, slow cooking. ARORA, D., FISCHER, MILLER, O., STAMETS 1993 [Cu], TANAKA; I1M, M87, M87{SN}

*Laetiporus sulphureus* - *Sulphur-shelf*, *Chicken-of-the-woods* {SN}. Fruitbodies are eaten when fresh or dried, the edible portion being the trimmed margin of the young caps. The fresh mushroom is bright sulphur-yellow to orange and tends to be tough. It should be cut into very thin slices crosswise and stewed for a half-hour or more, or it can be parboiled, chopped finely and mixed with bread crumbs and a white sauce. FERNALD, GIBBONS 1962, MILLER, O., STEINECK [Cu], UPHOF; C11T{PR}, C11T{DF}, C43M, D87M, E21, H25M{PR}, H73{PR}, I1M, 149, I49{CU}, M87, M87{CU}, N44, N44{KT}

#### *Lentinula edodes* - *Lentinus edodes*

*Lentinus edodes* - *Shii-take* {KT}. Fruitbodies are eaten raw in salads, cooked, added to soups, fried, broiled, or oil-roasted. Dried ones are similarly used after soaking in warm water, or shredded and used in soup stocks. An essential ingredient of *sushi* in western Japan, and also Kwangtung-style Chinese dishes. Also used in omelettes, sauces, gravies, pasta dishes, etc. A tea is brewed from them. There are three grades of shiitake mushrooms—*donko*, *koko* and *koshin*, the thick-fleshed *donko* being the most desirable and expensive. CZARNECKI 1986 [Cul, Re], MORI [Nu, Re], SCHNEIDER 1986 [Pre, Re], SHURTLEFF 1976, SNYDER [Re], STAMETS 1983 [Cu], TANAKA, UPHOF; C11T{PR}, C11T{DF}, C27, C94M{DF}, C96{PR}, D75T, E21, E21{SN}, E32{KT}, E63G{PR}, F10, F10{DF}, G47B{DF}, H73{ER}, I19M{DF}, J60{SN}, M87, M87{CU}, etc. (for strains see Shiitake, page 520)

#### *Polyporus frondosus* - *Grifola frondosa*

#### *Polyporus sulphureus* - *Laetiporus sulphureus*

#### *Polyporus umbellatus* - *Grifola umbellata*

*Poria cocos* - *Tuckahoe*, *Indian bread*, *Fu ling*, *Hoelen* {DF}. The fruitbodies, growing wild on the roots of pine trees, are edible. They were consumed as food by the American Indians. In China, they are employed for making a gel-like food known as *Guilinggao*, often combined with rock sugar and water chestnut and eaten as a dessert. Also used in Chinese tonic soups, wines, breads, cakes and porridges. One of the ingredients of *Mu #16* tea. Cultivated forms are available. BENSKEY, FLAWS 1994, FLAWS 1995, HSU, LEUNG, TANAKA, TIERRA, UPHOF; E2M, E14T, E21, E60P{PD}, E66T{PD}, F37T, GO, G19M{PD}, G19P, G47B{PD}, G73, H36, H36{PD}, K18M, E2M, L34, M15M/PE}, N7D, etc.

#### RUSSULACEAE

*Russula aeruginea* - *Green russula* {SR}. The fruitbodies are edible, good. Dull green to dark green caps. Brittle, white flesh with a mild flavor. One of the best green russulas for culinary use Very good in casseroles and other dishes. ARORA, D., CZARNECKI 1995 [Cul]; D87M

*Russula mariae* - *Velvet russula* {SR}. Fruitbodies are edible, good. Striking, dark crimson or maroon caps. Thin, brittle flesh with a mild flavor. Good in casseroles and other dishes. ARORA, D., CZARNECKI 1995 [Cul]; D87M

*Russula xerampelina* - *Shrimp russula* {SR}. The fruitbodies are edible, choice. Mild, creamy-white flesh, unusually meaty for a

Russula. Strong odor reminiscent of shrimp or lobster, accentuated by cooking or drying. One of the best edible Russulas. Excellent stuffed with grated cheese, chives, walnuts and parsley, and then broiled. ARORA, D., CZARNECKI 1995 [Cu], MILLER, O.; D87M

#### SACCHAROMYCETACEAE

*Hansenula anomala* - *Ragi yeast* {CU}. A yeast that is involved in the fermentation of *ragi tapeh*, as well as *arrack, kanji, to rani, tapeh ketan, tapeh ketella, brent, and yakju*. HESSELTINE, SHURTLIFF 1979, STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Kluyveromyces fragilis* - \**Kluyveromyces marxianus*

*Kluyveromyces marxianus* - *Primary yeast, Nutritional yeast* {DF}. This yeast is grown on cheese whey or molasses to produce food yeast, which is used as a nutritional supplement. It also has a role in the fermentation of *kefir* and *pozol*. Genetically modified strains produce an enzyme, *chymosin*, which is used as a rennet in the manufacture of cheese. CAMPBELL-PLATT, KOSIKOWSKI, PEDERSON, ROBINSON, R. 1995, STEINKRAUS, UPHOF; B31, E60P, G47C, H14I, H28{PD}, N7D

*Saccharomyces beticus* - \**Saccharomyces cerevisiae*

*Saccharomyces carlsbergensis* - *Saccharomyces cerevisiae*

*Saccharomyces cerevisiae* - *Wine yeast, Beer yeast, Bread yeast* {CU}. As well as occurring naturally in many fermented products, pure cultures of this yeast are widely used in the food industry. The numerous products include *sake, kustarak, champagne, sherry, pulque, ginger beer, sourdough bread, toddy, red rice, hopper, lebadura, whiskey, brewer's yeast, primary yeast, puto, ragi tapeh, kisra, ogi, pozol, chicha, kaffir beer, busaa, tesguino, cocoa, tibi, chu-chong-tsaw, and yakju*. BROUK, HESSELTINE, PEDERSON, SCHERY, STEINKRAUS, UPHOF; C7M, D81T, E13, G37P, K26M, M69. (see also Starter Cultures, page 537)

*Saccharomyces delbrueckii* - \**Torulopsis delbrueckii*

*Saccharomyces fragilis* - *Kluyveromyces marxianus*

*Saccharomyces kefir* - \**Candida kefir*

*Torulopsis delbrueckii* - *Kefir yeast, Sherry yeast* {CU}. A lactose negative-yeast that takes part in the fermentation of *kefir*, as well as *sherry* and *colonche*. BROUK, PEDERSON, STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Torulopsis taboadae* - *Torulopsis delbrueckii*

#### STROPHARIACEAE

*Hypoloma capnoides* - *Smoky-gilled hypholoma, Conifer tuft* {CU}. The fruitbodies are edible, good to choice. They have a sweet, nutty, aromatic flavor and are excellent in stir-fries. They are of best quality when still young. One of the few gourmet mushrooms adapted to cultivation on conifer stumps and logs. ARORA, D., FISCHER, STAMETS 1993 [Cu], STEINECK [Cu]; E21

*Hypoloma sublatentium* - *Perplexing hypholoma, Brick cap, Chestnut mushroom, Kuri-take* {SN}. Fruitbodies are boiled and eaten or cooked in soups. The taste is mild, not bitter. They are usually treated with vinegar before being cooked. Cultivated forms are available in Japan. CZARNECKI 1995, FISCHER, MILLER, O., TANAKA, UPHOF; E20M, E20M{CU}, E21{CU}, M87, M87{CU}

*Naematoloma capnoides* - *Hypoloma capnoides*

*Naematoloma sublatentium* -> *Hypoloma sublatentium*

*Pholiota cylindrica* -> *Agrocybe aegerita*

*Pholiota nameko* - *Nameko* {SN}. Fruitbodies are edible, choice, covered with a slippery wet coating. Also called *button mushrooms*

in Japan where they are sold fresh or in cans. They are frequently used in miso soups, steamed in a pipkin, or mixed with grated daikon as a topping for chilled tcfu. KAYE, SHURTLIFF 1975, STAMETS 1993 [Cu], STEINECK [Cu], TANAKA, TSUJI [Re], UPHOF; E21{CU}, E63G{PR}, G20M{ED}, 149,149{CU}, 174, M87, M87{CU}, M87{KT}

*Pholiota* sp. - *Cinnamon cap* {PR}. The fruitbodies are eaten, choice. Attractive, brown-capped mushroom with white stems. Excellent crunchy texture and delicate flavor. Retains its texture after cooking, making it ideal for soups and sauces. Also good in vegetable and meat sautees and stir fries. Can be frozen to enhance its taste. Developed by Gourmet Mushrooms. E63G, H73

*Stropharia rugoso-annulata* - *King stropharia, Garden giant, Wine cap* {SN}. Fruitbodies are edible, choice. A large, thick-fleshed mushroom with reddish tinged caps and an excellent flavor. Recommended for culture by home growers in outdoor cold frames or garden beds. It commonly occurs in grounds where potatoes have been planted. MILLER, O., STAMETS 1983 [Cu], STEINECK [Cu]; D87M{SR}, E21, E21{KT}, 13,149,149{CU}, 149M{KT}, 174, J60, L89{KT}, M87, M87{CU}, M87{KT}

#### STRAINS {CU}

**Gullivar:** A strain notable for its very large size. The original culture was made from a wild specimen with a cap of 15 inches in diameter. Produces associated buttons the size of grapefruits, weighing over a pound each. IIM

**Pallidus:** Produces an attractive "albino" mushroom that is medium to large in size. IIM

#### TERFEZIACEAE

*Picoa carthusiana* - *Oregon black truffle* {PR}. The fruitbodies are edible, choice. A black to dusky slate-violet underground fungi resembling the true truffles, *Tuber* spp. Delicious either raw or cooked, comparing favorably with European truffles. Somewhat larger and milder in flavor than the Oregon white truffle. ARORA, D., CZARNECKI 1995 [Re]; M34

*Terfezia boudieri* - *Terfaz, Moroccan truffle* {PD}. Fruitbodies are consumed as food in North Africa, Asia Minor, and the Mediterranean region. They are an ingredient of a lamb stew that is a traditional dish of Moroccan Jews. Sold in local markets, and available canned in Middle Eastern stores in North America. UPHOF, WOLFERT 1973 [Re]; A7

#### TREMELLACEAE

*Tremella fuciformis* - *Silver ear, White fungus, Bai mu er, Shuet yi* {DF}. Fruitbodies are eaten. They have very little flavor, but are esteemed for their excellent crunchy texture, somewhat reminiscent of seaweed or bird's nests. In Chinese cuisine, they are usually reserved for clear tonic soups made with chicken or pork. Used as a cheap substitute for the more expensive *snow fungus*—actually the sex glands of the Beijing snow frog. BENSLEY [Nu], COST 1988, COTTERELL [Pre], GRIGSON, S., LEE, G. [Re], PASSMORE, TAN [Re], UPHOF; A7, C27G, H36

#### TRICHOLOMATACEAE

*Armillaria magnivelare* - *Tricholoma magnivelare*

*Armillaria mellea* - *Armillariella mellea*

*Armillaria ponderosa* - *Tricholoma magnivelare*

*Armillariella mellea* - *Honey mushroom, Chiodini, Nara-take* {CU}. The fruitbodies are edible, choice. They are eaten cooked, pickled, salted, dried, marinated, or added to soups. Dried ones may be reconstituted in water, coated with flour, seasoned and fried in oil. FARLEY, MILLER, O., TANAKA, UPHOF; C7M, C11T{PR}, C11T{DF}, D87M{SR}, M69

*Clitocybe nuda* - *Blewits, Murasaki-shimeji, Masked tricholoma* {CU}. Fruitbodies are edible, choice. Its striking violet color, firm

texture, and good taste give this species high culinary appeal. This mushroom should not be eaten raw, only after cooking or parboiling. Also good for mixing with other mushrooms and for drying. Recommended for home cultivators and natural culture techniques. CZARNECKI 1986 [Cu], Re], GRIGSON, J. 1975 [Cu], Re], MILLER, O., STAMETS 1983 [Cu], STEINECK [Cu], TANAKA; D87M{SR}, E21,149,149 {SN}, M87, M87{SN}

*Flammulina velutipes* - *Enoki-take*, *Velvet stem*, *Winter mushroom* {SN}. The crisp, mild-flavored fruitbody is eaten raw in salads and sandwiches, boiled, sauteed, or used in sukiyaki, one-pot cookery, and as a garnish for clear soups and broths. Cultivated forms, having been grown in darkened environments, are long, thin, and pale white in color. CUSUMANO [Cu], Re], CZARNECKI 1986 [Cu], Re], MILLER, O., SCHNEIDER 1986 [Pre, Re], SHURTLEFF 1975, STAMETS 1983 [Cu], STEINECK [Cu], TANAKA, UPHOF; D87M{SR}, E13G{PR}, E21{CU}, E21{KT}, G5{PR}, H73{PR}, 149, 149{CU}, 174, J60, M87, M87{CU}, N40{PR}, N44, N44{KT}, etc.

#### STRAINS

**Yoki:** Selected strain from Japan. Likes cool growing conditions. Grow on an oak sawdust and bran mixture in light or darkness, indoors or out. I1M{CU}

*Hypsizygus tessulatus* - *Buna-shimeji*, *Yamabiko hon-shimeji*, *Beech mushroom*, *Clam shell* {SN}. The fruitbodies are edible, choice. They have a firm, crunchy texture and a sweet, nutty, delicious flavor. Excellent in soups and stir-fries. Best picked when young and firm. One of the best of the gourmet oyster-type mushrooms. Highly esteemed in Japan. Available fresh, dried or powdered. CZARNECKI 1995, STAMETS 1993 [Cu]; E13G{PR}, E21{CU}, E63G{PR}, H73{PR}, I1M{CU}, J11{PR}, M87, M87{CU}, M87{KT}, N44, N44{KT}

#### STRAINS {PR}

**Alba:** Distinctive strain with a bright, white color and a rich, exotic flavor. H73

*Hypsizygus ulmarius* - *Elm mushroom*, *Shiro-tamogi-take* {SN}. Fruitbodies are edible. The flesh is firm, hard, tough, and white throughout. The odor is pleasant and yeast-like, the taste mild. If the older caps are used only the tender parts should be cooked, though the very young ones can be used entire. FERNALD, GIBBONS 1962, MILLER, O., STAMETS 1993 [Cu], STEINECK [Cu], TANAKA; E21{CU}, N44, N44{KT}

#### STRAINS {CU}

**Bellefonte:** A vigorous strain that originated in the wild. Grows on elm and other hardwoods. I1M

*Lepista nuda* - *Clitocybe nuda*

*Lyophyllum aggregatum* - \**Lyophyllum decastes*

*Lyophyllum decastes* - *Hon-shimeji*, *Japanese honey mushroom*, *Fried chicken* {PR}. Fruitbodies are edible, choice. They are put in soups, or boiled and then eaten with vinegar. In Japan, they are cultured in bottles, producing a bunch of fruiting bodies with tan to grayish-brown caps averaging one inch in diameter. KAYE, MILLER, O., SHURTLEFF 1975, TANAKA; G5, H25M, N40

*Lyophyllum ulmarium* - + *Hypsizygus ulmarius*

*Lyophyllum* sp. - *Shimeji*, *Japanese oyster mushroom* {SN}. Fruitbodies are edible, choice. Young caps are black to elegant gray in color, becoming light brown as they mature. The stems have a more chewy texture than other oyster mushrooms. Very young clusters are sometimes harvested before the caps expand for use in gourmet Japanese cooking. Best suited for spring, summer and fall home cultivation. HOMMA [Re], KAYE; E20M, E20M{CU}, G5{PR}, 174 {KT}

*Marasmius oreades* - *Fairy ring*, *Fall mousseron* {DF}. Fruitbodies are edible, choice. Although slightly leathery in texture they have a very good flavor that enhances soups, stews, sauces, gravies and vegetable dishes. Can be picked over a comparatively long

period. Also dried for winter use. Common in lawns, meadows and other grassy areas where they form circles or rings that expand in size each year. May be grown in gardens or in strips of grass between rows of dwarf fruit trees. Occasionally sold in markets. FERNALD, GIBBONS 1962, GRIGSON, S., LAUNERT, MI-CHAEL [Pre, Cu], MILLER, O., STEINECK [Cu], UPHOF; A7, C11T{PR}, C11T{DF}, H25M, H25M{PR}, M34{PR}

*Pleurocybella porrigens* - *Angel wings*, *Angel trumpets* {PR}. The fruitbodies are edible, good to very good. They are an attractive, vivid pure white to milky-white in color, but are somewhat thin and mild-flavored compared to the common oyster mushroom, although their stalks are considered more tender. ARORA, D., FISCHER, MILLER, O., TANAKA; H25M, H73

*Pleurotus abalonus* - *Pleurotus cystidiosus*

*Pleurotus cornucopiae* w. *citrinopileatus* - *Golden oyster*, *Savory oyster*, *Hime-hira-take* {SN}. Fruitbodies are edible, choice. They are small to medium, lemon yellow in color, and are highly aromatic. Has slightly thinner flesh than other pleurotes and is therefore more delicate. Can be grown in gardens on short logs or long, prostrate tree trunks. The bright color will enliven parts of an ornamental garden lying in partial shade. STAMETS 1993 [Cu], STEINECK [Cu], TANAKA; D75T{KT}, E20M{CU}, E20M{KT}, E21B{KT}, E63G{KT}, E63G{PR}, G5{PR}, I1M, 149,149{CU}, 174, J60, M87, M87{CU}, M87{KT}, etc.

#### STRAINS

**Summer Gold:** (#25) Warm weather strain. Heavy producer of striking bright golden mushrooms. Excellent sauteed or stir-fried, although the golden color is lost. Produces mushrooms in clusters, often the size of both of a man's hands. Has survived the winter in Wisconsin, where the first flush occurs in June. K97

*Pleurotus cystidiosus* - *Abalone mushroom*, *Maple oyster mushroom* {CU}. Fruitbodies are edible, good to choice. Can be used in stir-fries, white sauces, or cooked with lamb. Cultivated commercially in parts of Asia, especially Taiwan and Thailand. Available fresh or dried. STAMETS 1993 [Cu]; A7{DF}, M87, M87{SN}

*Pleurotus djamor* - *Pink oyster*, *Flamingo oyster*, *Strawberry oyster*, *Rose oyster* {KT}. The fruitbodies are edible, good to choice. Striking reddish to pink tropical mushrooms. Generally considered tougher and more tart than other oysters. They have a very short shelf life, only four to five days. The colors may vary or fade depending on age, strain and light conditions, and they disappear on cooking. Drying may preserve some of the pinkish tones. CZARNECKI 1995 [Cu], Re], STAMETS 1993 [Cu]; E20M{CU}, E20M{KT}, E21, E21{CU}, H73{PR}, I1M, I1M{CU}, 174, M87, M87{CU}

#### STRAINS {SN}

**#172:** Produces mushrooms with pink to pale salmon-colored caps. More fragile-looking than other oyster mushroom strains. G55M

*Pleurotus eryngii* - *King oyster*, *Trumpet royale*, *Cardarella* {SN}. Fruitbodies are edible, choice. They are medium to large with a light, reddish-brown cap and a tan stem. A robust fleshy mushroom with a sweet flavor and a meaty texture, considered the best flavored oyster mushroom by many. Native of the southern European steppes and sub-tropical areas of North Africa. STAMETS 1993 [Cu], UPHOF; E21{CU}, E63G{PR}, H73{PR}, I1M, I1M{CU}, 149, 149{CU}, J60

*Pleurotus ostreatus* - *Oyster mushroom*, *Tree oyster*, *Hira-take* {SN}. The young, tender fruitbodies are stewed, sauteed in butter, prepared as tempura, used in soups, sauces, polenta, and casseroles, or sometimes dried or preserved in oil for later use. In Italy, they are served with salt cod, pork loins, or sausages. One of the most dependable mushrooms for home cultivation. Has the strongest flavor of the cultivated pleurotes. BIANCHINI, CZARNECKI 1986 [Cu], Re], FERNALD, MILLER, O., SCHNEIDER 1986 [Pre, Re], STAMETS 1983 [Cu], STEINECK [Cu], STEINKRAUS [Cu], TANAKA; C11T{PR}, C11T{DF}, C27, C27{KT}, D75T{KT},

E21, E21{KT}, E32{KT}, 13,149, J11{PR}, J60, L16{DF}, M87, M87{KT}, etc.

#### STRAINS {SN}

**#21:** Fall fruiting strain. Very heavy producer of tasty, grayish-white mushrooms. Most production occurs in late fall, with some spring fruiting in certain years when conditions are right. K97

**# 23:** Spring fruiting strain. Light colored caps with good eating quality. Produces good quantities early in the season before insects become a problem. Sometimes yields a small crop in the fall and during a cool summer. K97

**#119:** Produces mushrooms with a grayish-purple cap. Requires lower temperatures and CO<sub>2</sub> levels than other strains. G55M

**Black:** (Black Oyster) Distinctive, blackish mushrooms. Similar to Blue Capped, but with a more robust flavor. Can be used in a similar manner. Developed by Gourmet Mushrooms. E63G{PR}

**Blue Capped:** (Blue Oyster) A strain with bluish-gray caps. Produces 1 to 1 1/2 pounds of mushrooms over a period of 6 to 8 weeks in flushes of 2 to 3 weeks apart. Requires a room temperature of 60 to 75° F. and strong indirect light. D75T{KT}, E21{CU}, E63G{KT}, E63G{PR}, H73{P£}, I74{KT}, J60{CU}, M87, M87{CU}

**Fall Blue:** (#27) Cool and cold weather strain. Very attractive blue oyster whose strong points are excellent eating qualities and heavy production during the cool, insect free autumn season. A good strain to use for winter preserving. Should do well in early winter in southern states. K97

**Florida:** (Florida Oyster, Bikini Oyster) Cap whitish to gray to pale yellow brown. Flesh thin and white. This strains preference for warmer temperatures recommends it for cultivation during the late spring through early fall. Original strain is from wild specimens first cultivated in 1958 by S.S. Block of Gainesville, Florida. STAMETS 1983; D87M{SR}, I1M{CU}, 149,149{CU}, M87, M87{CU}

**Frost Queen:** Often fruits outdoors in mid-winter in central Pennsylvania during the annual "January thaw". I1M{CU}

**Sonoma Brown:** Large, brownish-gray mushrooms produced in abundance. Subtle, distinctive flavor. Sonoma Brown is a trademark of Gourmet Mushrooms. E63G{KT}

*Pleurotus ostreatus* var. *columbinus* - *Columbine oyster* {CU}. Fruitbodies are eaten, choice. A rare variety of the oyster mushroom, usually distinguished by its nearly perfect, even cap margin and broadly convex cap. Recommended for ornamental gardens, combined with yellowish and brownish species. ARORA, D., STAMETS 1993, STEINECK [Cu]; M87, M87{SN}

#### STRAINS

**Camelot:** Heavy fruiting, fast growing, flavorful strain that may produce tan, salmon, gray or even blue colored mushrooms. Does not require cold shock and often begins fruiting after just one week of exposure. Performs well on wheat straw. Should receive a minimum of 10 hours light per day. I1M

#### *Pleurotus porrigens* - *Pleurocybella porrigens*

*Pleurotus pulmonarius* - *Phoenix oyster*, *Indian oyster*, *Gray oyster*, *Sajor caju* {SN}. Fruitbodies are edible, choice. Medium to large with a white stem and dark brown cap. Excellent for stir frying. Young specimens are much superior in flavor and texture. A sub-tropical, heat-loving species from the Himalayan foothills. Requires little or no heat shock for fruiting. STAMETS 1993 [Cu]; C11T{PR}, C11T{DF}, D75T{KT}, E21, E21{CU}, E21B{KT}\ I1M{CU}, 149,149{CU}, J60

#### STRAINS

**Amvcel 3014:** Fast-growing, self-fruitful strain adapted to many types of growing conditions and substrates. Particularly well-suited to warmer growing and fruiting conditions. Depending upon which cultural practice is used, it will form clusters of large mushrooms or smaller, single mushrooms. A41

**Western Biologicals #1:** A grey brown strain. Fast fruiting at 15 to 25° C. Tolerant of adverse environmental conditions. M87, M87{CU}

**Western Biologicals #2:** A chocolate brown strain. Fast fruiting at 15 to 25° C. Not as tolerant of adverse environmental conditions as Western Biologicals #1. M87, M87{CU}

#### *Pleurotus ulmarius* *Hypsizygus ulmarius*

#### *Tricholoma conglobatum* - *Lyophyllum decastes*

*Tricholoma magnivelare* - *White matsutake*, *American pine mushroom* {DF}. Fruitbodies are edible and are highly esteemed, especially by Japanese Americans. Distinctive, chewy texture and spicy, resinous, aromatic flavor. Excellent in stir-fried dishes, grilled, or added to soups. Will not lose its character when combined with cheese or other strong flavored foods. Exported to Japan, where the native matsutake has become scarce. ARORA, D., CZARNECKI1995 [Re], FISCHER, LEIBENSTEIN [Re], TSUJI; A7, C96, E21B, E56, G5, H25M{PR}, H73{PR}, M34{PR}, M41M, M87{CU}, M87{SN}

#### TUBERACEAE

*Tuber aestivum* - *Summer black truffle*, *Red-grained black truffle*, *Truffe de la Saint-Jean* {PR}. Fruitbodies are edible, choice. They can be eaten fresh when very young. Otherwise they are baked, sauteed in butter or olive oil, added to soups, etc. One of the ingredients of certain liver sausages, called *Trüffel Leberwurst* in Germany. Considered inferior to the Piedmontese and Perigord truffles. Once collected commercially in Great Britain, near the Winterslow region of Wiltshire. Usually harvested from the first of May to the end of November in Italy. BIANCHINI, BROUK, CARLUCCIO [Re], MABEY, TORINI, UPHOF; B71G, C94M, C94M{PD}, H19M, L15G, L99, M34, M34{PD}

#### *Tuber albidum* - *Tuber borchii*

*Tuber borchii* - *March truffle*, *Tuscan white truffle* {PD}. The fruitbodies are eaten, choice but less valued than the Piedmontese and Perigord truffles. Distinctive, resinous aroma and flavor somewhat reminiscent of matsutake, with overtones of garlic. Loses flavor when cooked and becomes very spongy. Often available bottled in its own juices. Usually harvested from mid-January to the end of April in Italy, and sometimes also in the fall. Popular in Tbscan cooking. BIANCHINI, TORINI; M34, M34 {PR}, N51M

*Tuber brumale* - *Truffe violette*, *Winter black truffle* {PR}. The fruitbodies are eaten, of fine quality but slightly less desirable than the Piedmontese and Perigord truffles. Stores well when cut into slices and dried. Sold in local markets and consumed in various dishes. Much of the commercial supply is harvested in France. In season from the first of January to mid-March. ROOT 1980b, STEINECK [Cu], TORINI, UPHOF; M34, M34{PD}

*Tuber californicum* - *California truffle* {PR}. Fruitbodies are edible. They are solid, firm, marbled, and have a very strong flavor that goes well in gravies and sauces. ARORA, D.; M99M

*Tuber gibbosum* - *Oregon white truffle* {PR}. Underground fruitbodies are edible, very choice. James Beard rated them equal to the Italian white truffle. In preparing them for cooking, they need only be brush-cleaned, and slivered, grated, or crushed. Use them in pates, omelettes, as an insert under the skin of cooking turkey or chicken, or to flavor rice, barley, bulghur, eggs in the shell, sour cream, cheeses, butter, sausage, wine, and brandy. They are harvested commercially in the Pacific Northwest and marketed throughout North America. ANONYMOUS 1987 [Pre, Re], CZARNECKI 1986 [Cul, Re]; C11T, C11T{DF}, M99M

*Tuber himalaiense* - *Chinese truffle*, *Himalayan black truffle* {PR}. The underground fruitbodies are edible, good. Dark chocolate in color and with a moderate aroma and flavor. Exported from China to Europe in large numbers, both fresh and dried. Often adulterated with other species. M34, M34{DF}, M34{PD}

*Tuber magnatum* - *Piedmontese truffle*, *White truffle*, *Alba truffle* {PR}. Underground fruitbodies are edible, very choice. The most celebrated and expensive of all truffles. They have a strong, penetrating aroma and flavor, somewhat reminiscent of garlic. Raw shavings are excellent for flavoring risotto, pasta, egg dishes, cheese fondues, *bagna cauda*, and are particularly good prepared as "truffles parmesan". Often placed in containers with eggs, to which they impart their delicious flavor. Specimens weighing one pound or more are occasionally found. Does not keep as well as the Perigord truffle, only about seven days. Usually harvested from the first of October to the end of December in Italy. BIANCHINI, CARLUCCIO [Re], GRIGSON, J. 1975 [Cul, Re], UPHOF; B71G, H15T, H25M, H25M{PE}, M34, M34{PD}

*Tuber melanosporum* - *Perigord truffle*, *Black truffle*, *Winter black truffle* {PR}. Underground fruitbodies are edible, very choice. While the Piedmont truffle is very good raw, the black truffle is best cooked. For example, in *tartufo alia narsina* in which the truffles are finely sliced in layers with cheese and butter, seasoned with basil, nutmeg, oregano, and bay leaves, and then baked. They are widely used to flavor pates, eggs, butter, sauces, pastas, risotto, etc. Sometimes sold in jars of arborio rice, to which they impart flavor. Truffles can be canned, frozen, or preserved in cognac or armagnac. In season from mid-November to mid-March. BIANCHINI, CZARNECKI 1986 [Cul, Re], GRIGSON, J. 1975 [Cul, Re], PICART [Cu, Re], ROOT 1980b [Cul], UPHOF; B71G, C11T, C11T{PD}, C94M, C94M{EE}, H15T, H19M, H25M, H25M{PD}, L15G,

## ALPHABETICAL

### ALARIACEAE

*Alaria esculenta* - *Murlins*, *Dabberlocks*, *American wakame*, *Lady's tresses* {DF}. The main fronds, excluding the midribs, are steeped in water for a day or two and eaten as a vegetable, either fresh or dried. The sweet, crunchy midrib is added to salads, sandwiches, soups, stews, etc. Reproductive, finger-like sporophylls, having a flavor reminiscent of peanuts, are eaten fresh. Will yield a satisfactory food gel for home gelatin making. LAUNERT, MADLENER 1977 [Pre, Re], MADLENER 1981 [Re]; C73P, E60P, H15, H15M, H25M{PR}, H91, H19M

*Alaria marginata* - *Winged kelp*, *California wakame* {DF}. Fresh or dried blades may be used like spinach or cabbage for wrapping various fillings, or they can be added to soups and vegetable dishes. The chopped fresh midrib makes a sweet, crunchy addition to a salad. When fried, the sporophylls are said to have the flavor of peanuts. One of the sources of kelp meal used as a food supplement. LEWALLEN [Re], MCCONNAUGHEY [Pre, Re], ROOS-COLLINS [Re]; E56, H50, H91, I23G, I59D, I81T, J83U

### *Egregia laevigata* - \**Egregia menziesii*

*Egregia menziesii* - *Feather boa*, *Boa kelp* {DF}. Although thick and tough, young parts may be harvested and used as a vegetable. They become tender with brief cooking. The small, oblong floats or bladders, harvested from young or old algae, make an attractive and interesting addition to soups, stews and stir-fried dishes. CLARKE [Re], MCCONNAUGHEY [Pre]; H50

*Eisenia bicyclis* - *Arame* {DF}. The blades are eaten fresh or sun dried for later use. They can be added to soups and salads, cooked with tofu or vegetables, or marinated in a dressing of vinegar and soy sauce. Considered by some to be more delicious when fried in oil. Resembles hiziki, but softer in texture and with a milder, sweeter flavor due to a high mannitol content. Popular with natural foods enthusiasts and those following a macrobiotic diet. ARASAKI [Re], BRADFORD [Pre, Re], MADLENER 1977 [Re], MCCONNAUGHEY; A52M, E47M, E56, E60P, E66T, F88, G47B, H91, H19M

L99, M34, M34{PD}

### USNEACEAE

*Evernia prunastri* - *Oak moss* {DF}. A lichen that was reportedly used by the ancient Egyptians as a leavening agent in bread making, a practice which is apparently still practiced by the Copts and Arabs. It has also been reported that it was added to bread as a flavoring or for its ability to imbibe and retain odors. Source of various extracts used commercially for flavoring baked goods, candy, beverages, soups, puddings, etc. BURDOCK, HEDRICK 1919, MORTON 1976, UPHOF; A49D, E14T, F32D, F86G, GO, G73, G84, K2, K18M, M15M, N7D, N19M

### USTILAGINACEAE

*Ustilago maydis* - *Corn smut*, *Huítlacoche*, *Cuítlacoche* {EE}. Fruitbodies are cooked and eaten as a delicacy or dried for later use. Their texture and flavor are unique. In Mexico, they are sold in markets and are widely eaten in omelettes, crepes, soups, stews, and vegetable dishes. Some Mexican gardeners encourage the smut by scratching the base of a plant, and pile soil against the scratch so that the fungus spores infect the plant's tissues. They are harvested while still light in color and succulent. FELL 1982ft KAVASCH [Re], QUINTANA 1986 [Re], UPHOF, WEATHERWAX, WILSON, G., YANOVSKY; A7, B73T, B73T{PR}, C34G, H25M, H25M{PR}, H73, M41M

## OF ALGAE FAMILIES

*Undaria pinnatifida* - *Wakame*, *Miyok* {DF}. The sweet, delicately textured blades are eaten, either fresh or dried. In Japan, they are most often used for *aemono* and miso soups. Also eaten in salads, tofu preparations, made into *kinchi*, or cooked with rice vinegar. Often cooked with bamboo shoots to soften their tough fibers. Baked and ground into a powder, it is added to a popular Japanese rice-and-broth dish called *chazuke*, or used as a garnish for brown rice and cereal dishes, *ita wakame*, similar to nori sheets, can be toasted and use for wrapping rice balls or crumbled and sprinkled on other foods. *Kuki-wakame* or stalk wakame, the midribs, are prized as a delicacy and are commonly salted or preserved in vinegar. The sporophylls, known as *mekabu*, have a strong, salty flavor and sticky texture and are excellent added to root vegetable stews. ARASAKI [Re], BISSELL, BRADFORD [Re], LEE, F. 1988 [Re], MADLENER 1977 [Pre, Re], MATIGNON [Re], SHURTLEFF 1975 [Pre, Re]; A7, A52M, C34G, C73P, D3M, E22, E56, E60P, E66T, F88, G20M, G47B, I8M, H91, H91{ED}, I19M, I19M{ED}, I76T, etc.

### BANGIACEAE

*Bangia fusco-purpurea* - *Cow hair*, *Hair seaweed*, *Fa-tsai* {DF}. A black, hairlike sea vegetable most often found in a dry form that must be reconstituted by soaking in water. Very fragrant but completely tasteless, it absorbs the flavors of other foods and provides a slippery, bouncy texture. It can be added to soups and salads, but is most often an ingredient of *Lohan's Delight*, a Buddhist vegetarian dish. Traditionally prepared with dried oysters during the first two weeks of the Chinese New Year. In Fujian, fresh or dried rolls of cow hair are cut into small pieces and fried in oil until crisp. MADLENER 1977 [Nu, Re], SO [Re], XIA; C27G, M32T{CU}

*Porphyra columbina* - *Kiwa*, *Iwa nori*, *Karengo* {DF}. One of the best tasting sea vegetables, either raw or toasted. Soft, tender, chewable fronds with a mild flavor. Excellent tossed on salads, pasta, grains, mushrooms and vegetables. Also very good prepared as a relish and served with fish or shellfish fritters. Esteemed by the Maoris, who it as a delicacy on special occasions. In Chile, it is mixed with sea lettuce and fried with small pieces of meat. FULLER [Re], MADLENER 1977, MCCONNAUGHEY, SCHNEIDER 1997; E47M, E56, E56{PD}, H91, H91

*Porphyra perforata* - *Winter nori*, *California nori* {DF}. The blades are steamed, stir-fried, simmered in soy sauce, or wrapped around fish and sautéed. When dried, they may be toasted and eaten as a snack or ground and added to soups, breads and pastries. The Kwakiutl and Haida Indians of British Columbia developed an elaborate process that yields what is considered a highly superior product in terms of tenderness. MADLENER 1977 [Pre, Re], MCCONNAUGHEY [Pre, Re], ROOS-COLLINS; H50, H91, I23G, I59D, J83U, J83U{PD}

*Porphyra tenera* - *Ama-nori*, *Asakusa-nori*, *Sushi nori* {DF}. Source of the thin, purplish-black nori sheets widely used for wrapping vinegared rice (sushi). Also available in several other dried forms—pretoasted (*yaki-nori*), seasoned (<*ajitsuke-nori*), crumbled (*imomi-nori*), and garnish (*matsuba-nori*). Has the best flavor, texture and aroma of all the commonly marketed *Porphyra* species. In China, it is eaten in sea vegetable soups, with soy sauce, or used for making a gel used in cooking. Has been cultivated in the Orient since the 1600's. ARASAKI [Re], MADLENER 1977 [Pre, Re], SHURTLEFF 1975 [Re]; A7, C34G, E56, E60P, F88, G20M, G47B, H91

*Porphyra umbilicalis* - *Purple laver*, *Atlantic nori*, *Sloke* {DF}. The flattened, leaf-like thallus is eaten, either raw or cooked. *Laverbread*, a gelatinous puree of the algae is sold in corner grocery stores in Wales and is the main ingredient of several traditional Welsh recipes including a breakfast cake made by sprinkling the puree with oats, and then frying in bacon fat or butter, and laver sauce—served like mint sauce to accompany various meats, especially mutton. DWIES [Re], IRWIN [Re], LAUNERT [Re], MADLENER 1977 [Pre, Re], MICHAEL [Pre, Re]; E60P, H15, H15{ED}, H15M, H91, I19M

*Porphyra yezoensis* - *Susabi-nori* {DF}. The ruffled fronds are widely used in Asia for the production of dried nori sheets, which are popular for making *tsukudani*. Hardier and heavier yielding than *Porphyra tenera*, accounting for over 85 percent of the crop in Japan. SHURTLEFF 1975, TANAKA; H15

#### CERAMIACEAE

*Plocaria tenax* - *Sea-swallow nest algae* {DF}. The fronds are used for making the famous and expensive Chinese *bird's nests* or *yin waw*, widely consumed in tonic soups and jellies. Bland and delicate, but readily absorbs the flavors of other ingredients and provides texture. Often combined with chicken, duck, ham, rock sugar, etc. Cliff dwelling swallows of Southeast Asian islands line their nests with a hardened, gelatinous mixture of saliva and the predigested fronds. CHANG, W. [Pre, Re], COST 1988, LEYEL 1987a, SO [Cul, Re], TAN [Re], TANAKA; C27G, G19M

#### CLADOPHORACEAE

*Cladophora* sp. - *Khai*, *Kaipen* {DF}. A freshwater algae collected from ponds and other stagnant waters near the Mekong River and sold in the markets of Laos. Traditionally added fresh to soups and stews for flavor. Also dried and pressed into sheets along with finely sliced vegetables, then sprinkled with sesame seeds. The dried product may be grilled or briefly deep fried. SING [Re]; H3T

#### DICHOTOMOSIPHONACEAE

*Dichotomosiphon tuberosus* - *Khai* {CU}. A freshwater algae collected from ponds and other stagnant waters during the rainy season and sold in the markets of Luang Prabang, Laos. SING; M32T

#### FUCACEAE

*Ascophyllum nodosum* - *Yellow wrack*, *Knotted wrack* {DF}. One of the principal sources of *alginate*, used commercially for thickening soups, emulsifying ice-cream and salad dressings, and as a gelling agent for confectionery, puddings, gelatins, jellies and other foods. Also made into thin films which are used as edible sausage casings. BROUK, LEUNG, MASEFIELD, MATIGNON [Re]; F86G, L34

*Fucus vesiculosus* - *Bladder wrack*, *Rockweed* {DF}. The fresh parts are boiled or stewed with fish, meat or vegetables by placing them in linen or cheesecloth bags which are then suspended in a large soup pot. The bladder wrack is removed, but it adds a sweet, delicious flavor to the dish. The salt water-filled bladders act as a steaming agent for cooking foods in the traditional *New England clambake*, the steam contributing a sweet, savory, salty flavor to the dish. Dried plants are used for making an excellent herbal tea. GIBBONS 1964, LAUNERT, MADLENER 1977 [Pre, Re], MATIGNON [Re], NEUSTADT; A49D, B21P, C29T{ER}, E14T, F37T, F86G, GO, H50, I181T, J3{ER}, J83U{OR}, K2, K18M, L34, M15M, etc.

#### GELIDIACEAE

*Gelidium amansii* - *Tengusa*, *Shie-hua-ts'ai* {DF}. The most important source of *agar-agar* or *kanten*, a colloidal extract used like gelatin or pectin in various foods including confectionery, Oriental-style jellies, baked goods, and dairy foods Available in bundled strips or cakes, or in cut, flaked, granulated or powdered forms. Sometimes eaten alone with soy sauce and vinegar. Cakes of jelled *kanten* are used for making *tokoroten* noodles, popular in Japan. The name *tokoroten* is derived from the original, crude gel-like dish made by boiling *Gelidium* species and allowing them to coagulate. This has been eaten in Japan for over 1,200 years. ARASAKI [Re], BURDOCK, LEUNG, MADLENER 1977 [Pre, Re], MADLENER 1981 [Re], SHURTLEFF 1975, TANAKA; A45, A52M, E56, E60P, F88, G20M, G47B, H91, I19M, I76T, M15M, N7D

#### GIGARTINACEAE

*Chondrus crispus* - *Irish moss* {DF}. A major source of *carrageenan*, a gum used widely for gelling, thickening, emulsify and stabilizing various foods such as commercial ice cream, cream cheese, yogurt, salad dressings, puddings and gravies. Also used for clarifying wines and beers. When simmered with water or milk, the fresh or dried parts produce a basic jelly or *blancmange*, respectively. Otherwise, they can be used for puddings, drinks, aspics and gelatin desserts. In France, they are traditionally mixed with *Laminaria saccharina* and made into a butter-like spread called *pain d'algues*. Occasionally used as a vegetable in soups and stews. ARASAKI, IRWIN [Re], LEUNG, MADLENER 1977 [Pre, Re], MADLENER 1981 [Re], MABEY, MATIGNON [Re], MICHAEL [Re]; A20M, A98, A99, B21P, B54M, C17, C25P, E14T, E68, F37T, F37T{PL}, F99, G40, J52, K18M, K54, L34, N17, etc.

*Gigartina exasperata* - *Turkish bath towel* {DF}. The broad, thick blades can be chopped coarsely and used as a substitute for gelatin in making vegetable aspics. Contains nearly fifty percent carrageenan, and is harvested commercially for this thickening product in the Pacific Northwest. MCCONNAUGHEY, ROOS-COLLINS [Re]; H50

*Gigartina papillata* - *Grapestone* {DF}. The blades can be used as a substitute for gelatin in making vegetable aspics. They are very good in soups and stir-fries. Also used occasionally for making sweet pudding desserts, although a noticeable seaweed aftertaste may occur. Harvested for the carrageenan industry in the Pacific Northwest. LEWALLEN [Cul], MADLENER 1977 [Re], MCCONNAUGHEY, ROOS-COLLINS [Re]; H50

#### GRACILARIACEAE

*Gracilaria bursa-pastoris* - *Ogo nori* {PR}. The branches are chopped and eaten raw in salads, pickled, as tempura, added to soups, or salted for later use. Usually not as crisp and tender as *limu manaua*, but used interchangeably in recipes. Sold in grocery stores and fish markets throughout Hawaii. ABBOTT, FORTNER [Re]; G1

#### STRAINS

**Long Red:** Long, thin branching stems, up to 2 inches in length; crisp and very tender, with a mild salty flavor. Preferred for making *poke* because it adheres better to the raw fish. Should be stored at room temperature, drained and fluffed daily. Color mutation of a

wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

*Gracilaria coronopifolia* - *Limu manauaea*, *Ogo* {PR}. The branching stems are eaten fresh, and are salted or frozen for later use. Traditionally mixed with other limu and eaten with fish and meat, or added to vegetable soups. Used as a thickener for chicken stew cooked with grated coconut or coconut milk. One of the best liked sea vegetables in Hawaii where it is sold in a variety of preparations—pickled like kim chee, dressed in a vinegar sauce (*namasu*), or combined in a raw fish *po-ke*. ABBOTT [Cul, Pre], FORTNER [Re], JOSSELIN [Re], UPHOF.

#### STRAINS

**Maui Red:** Short, thin, branching stems; attractive reddish-purple color; juicy, crisp and tender; similar to Short Red but milder in flavor. Often coated in commeal and deep-fried. Also good in sandwiches and for garnishing. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

*Gracilaria lichenoides* - *Ceylon moss* {DF}. One of the algae species used in the production of *agar-agar*. In tropical areas such as India and Sri Lanka, the fine, string-like, white strands are used in soups and jellies which may be flavored with milk, wine or spices. GRIEVE, HEDRICK 1919, MACMILLAN, TANAKA; GO, K18M

*Gracilaria salicornia* - *Ogo nori* {PR}. The stems are traditionally eaten in raw seafood dishes, especially salmon *poke* and kim chee-style pickles. They have a crisp, juicy texture and a flavor more earthy than other sea vegetables. One of the species farmed in Hawaii and exported to the American mainland. SCHNEIDER 1997.

#### STRAINS

**Thick Brown:** Short, thick branching stems, up to 1/8 inch in diameter; juicy, crisp and sturdy, with a relatively strong mushroom-like flavor. Preferred for kim chee-style pickles because the crunchier, more sturdy stems hold up better. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

**Thick Green:** Short, thick branching stems, slightly less thick than Thick Brown; an attractive olive green color; juicy and crisp, with an earthy mushroom-like flavor. Preferred for making kim chee-style pickles because of its sturdy qualities. Often cooked with red-fleshed fish like salmon for color contrast. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

*Gracilaria tikvahiae* - *Ogo nori* {PR}. The stems are eaten fresh in vegetable and seafood salads, pickled, or used as a garnish. They have a crisp, juicy texture and an earthy, mushroom-like flavor. One of the species domesticated in Hawaii and grown for export to the American mainland. SCHNEIDER 1997.

#### STRAINS

**Short Red:** Short, thin, branching stems, 1 1/4 to 1 1/2 inch in length; attractive reddish-purple color; juicy, crisp but tender with an excellent mild, salty flavor. Preferred for making *poke* because the thinner stems adhere better to raw fish. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

*Gracilaria verrucosa* - *False Ceylon moss*, *Sea moss* {CU}. Young, tender parts are eaten raw in salads, mixed with pasta, pickled, or cooked with other vegetables. In Japan, they are boiled with rice or blanched and used as a garnish for sashimi. Source of the *Irish moss* drinks of the Caribbean. Also a major source of *agar-agar*, and *tokoroten*—a gel-like product eaten with vinegar and soy sauce. *Yokan*, a popular Japanese confection, consists of agar-agar jelly, sugar and mashed beans. ARASAKI, BENGHIAT [Re], MADLENER 1977 [Pre, Re], MADLENER 1981 [Re], MATIGNON [Re], ROOS-COLLINS [Re], TANAKA; M32T, M69

*Gracilaria* sp. - *Sea sprouts* {PR}. The branching stems are eaten. One of the sources of fresh *ogo nori*, a very popular Hawaiian sea vegetable.

#### STRAINS

**Long Brown:** Thin, branching stems, 2 or more inches long; crisp and juicy, mild, salty flavor. Should be stored in a refrigerator, where it will last for about 5 days. Popular with prominent Hawaiian chefs for adding to sandwiches and garnishing. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

*Gracilaria* sp. - *Sea sprouts* {PR}. The branching stems are eaten. One of the sources of fresh *ogo nori*, a sea vegetable enjoyed throughout Hawaii.

#### STRAINS

**Long Green:** Very thin, branching stems, 2 inches or more long; strong mushroom or garlic-like flavor. Especially good when added to sandwiches like sprouts, or used as a garnish. Also cooked with red-fleshed fish like salmon for color contrast. Should be stored in a refrigerator, where it will last for about 5 days. Color mutation of a wild type that occurred at Royal Hawaiian Sea Farms. Selected by Steven Katase. K7M

### HALYMENIACEAE

*Grateloupia filicina* - *Limu huluhuhwaena*, *Mukade-nori* {CU}. In Hawaii, the slippery, hair-like branches are finely chopped and lightly salted, and then eaten in salads or with raw liver, beef stew, limpet, raw fish relish, or dried and broiled octopus. In China, they are added to soups or boiled until they form a gel, which is then flavored with sweet or salty seasonings. ABBOTT, FORTNER [Re], MADLENER 1977 [Re], XIA; M32T

### HIMANTHALIACEAE

*Himantalia elongata* - *Haricots de mer*, *Spaghetti des mers* {PR}. Unique sea vegetable resembling flat ribbon-like pasta such as linguine and fettuchine, or haricot beans. The dense, meaty strands can be used like fresh snap beans in sauteed or steamed vegetable dishes, chowders, cold salads, sauces, puddings and seafood dishes, or they can be prepared like linguine—with steamed clams, white wine and garlic. Also an excellent garnish. In France, a paste of haricots de mer flour and milk is used as a substitute for pork fat in makiif pate. MATIGNON [Re], SCHNEIDER 1997; H25M, H25M{PD}

### LAMINARIACEAE

*Hedophyllum sessile* - *Sea cabbage*, *Sweet kombu* {DF}. The blades are used as a vegetable, either fresh or dried. They have a high sugar content. MCCONNAUGHEY; H91, I59D

*Laminaria dentigera* - *California kombu* {DF}. The dried fronds are occasionally used as a wrapping for various fillings. They are more often sliced or powdered and used as a base for soup stock. Small pieces may be fried in oil, then sprinkled over cooked grains, potatoes, or popcorn. MCCONNAUGHEY [Pre, Re]; H50, H91, I59D, J83U

*Laminaria digitata* - *Fingered tangle*, *Finger kombu*, *Oarweed* {DF}. A major source of *algin*, used commercially for emulsifying salad dressings, thickening beverages, stabilizing ice cream, and as a gelling agent for confectionery and other foods. The fresh or dried fronds are eaten as a cooked vegetable or used for making soups or soup stock. BROUK, LEUNG, MADLENER 1977 [Pre, Re], MATIGNON [Re]; E14T, E56{E£}, E60P, H15, H15{ED}, H15M, H91

*Laminaria japonica* - *Kombu*, *Ma-kombu* {DF}. The dried blades are shredded or powdered and sprinkled over rice, made into sweet cakes, or used as a seasoning for meats, sauces and other foods. Widely used for *dashi* soup stock, being rich in natural flavor-enhancing sodium glutamate. Dried sheets are fried in oil, coated with sugar, and eaten as a snack or hydrated and cooked with meat and vegetables. Also pickled, wrapped around fish, or made into a

chewy confection known as *kombu-ame*. In Hokkaido, thick kombu is used as a base for kombu grilling or *Matsumae-yaki*, the kombu imparting a delicate flavor to fish, shellfish and other foods. Various grades of sliced, shredded, slivered, shaved, and vinegared kombu are available including *kizami kombu*, *oboro kombu*, *tororo kombu*, *kombu tsukudani*, and *sukombu*. Also divided into two distinct layers with and without chloroplasts—*kuro-tororo* and *shiro-tororo*, the latter being used in a famous Osakan sushi dish of pressed mackerel and vinegared rice (*battera*). Used for making *kombu-cha*—a mixture of equal parts powdered kombu, salt, and sugar dissolved in hot water to form a festive tea-like beverage. *Osha-buri*, a type of vinegared kombu, is used as a masticatory. The holdfast, called *ne-kombu*, is prized for its rich, sweet flavor. ARASAKI [Re], BRADFORD [Pre, Re], MADLENER 1977 [Nu, Re], SHURTLEFF 1975 [Re], TANAKA, TSUJI [Re]; A7, A52M, C34G, E47M, E56{DF}, E60P, E66T, F88, G20M, G20M{PD}, G47B, H15T, H91{DF}, I19M{DF}

*Laminaria longicuris* - *Oarweed, Kelp* {DF}. The broad, elongated blades are eaten, usually after having been dried and then reconstituted by soaking in water. They can be cooked as a vegetable or added to soups and stews. MADLENER 1977 [Pre, Re]; H15, H15{PD}, H15M, I19M

*Laminaria setchellii* - *Pacific kombu* {DF}. The large blades are boiled, cut into strips, and cooked with rice, beans or vegetables. When cooked with beans, the beans reportedly cook tender faster and are easier to digest. Also makes an excellent, rich soupstock. LEWALLEN [Pre, Re], MCCONNAUGHEY; I23G

#### LESSONIACEAE

*Lessoniopsis littoralis* - *Ocean ribbons* {DF}. The blades are used as a vegetable, either fresh or dried. Quicker cooking and sweeter than kombu, they can be sauteed, pickled with lime juice and tamari, or served with rice and shredded daikon. A very mild-flavored sea vegetable. MCCONNAUGHEY, SASS; E60P, H91, I23G, I59D, I81T

*Nereocystis luetkeana* - *Bull whip kelp, Bladder kelp, Sea whip kelp* {DF}. The long, thick, characteristic stipes are cut into lengths, desalted, then candied or pickled. The bulb or float is likewise treated. Pickled stipes may be cut into circles and stuffed with various fillings. *Seatron*, a product resembling candied citron is apparently still available in the Pacific Northwest. Blades covered with herring roe were dressed with candlefish oil and eaten as a delicacy by Kwakiutl and Haida Indians. Eskimos reportedly used the algae to prepare a brew called *hoochinoo*. Dried blades are cooked and eaten. LEWALLEN, MADLENER 1977 [Pre, Re], MCCONNAUGHEY [Pre, Re], ROOS-COLLINS [Re], UPHOF; B21P, D7{ED}, E56{PD}, H50

*Postelsia palmaeformis* - *Sea palm* {DF}. The tall, thick stipes, resembling the trunks of palm trees, are cut into lengths and then pickled, candied, preserved, stir-fried, boiled, steamed, added to soups, etc. They have excellent texture and a delicious flavor. Sun-dried fronds may be eaten as snacks. The tender first-growth fronds—marketed as a gourmet product called *silky sea palm*, may be marinated or lightly cooked, then served with various dressings. LEWALLEN [Re], MADLENER 1977 [Pre, Re], MCCONNAUGHEY [Pre, Re]; E22, E56, E56{PD}, E60P, E66T, F88, G47B, H15, H50, H91, H91{PD}, I19M, I23G, I59D, I59D{PD}, I81T, J83U, J83U{PD}, etc.

#### MONOSTROMATACEAE

*Monostroma latissimum* - *Hiroha-no-hitoe* {DF}. The fresh young fronds are cooked with meat and fish, added to soups, or prepared as a condiment with soy sauce, sugar, mushrooms, Forphyra species, and seasoning. One of the principal sources of *ao-nori* or *green nori*—powder or flakes that are sprinkled on various foods such as rice, eggs, salads, soups, vegetables, and cereals. BRADFORD [Re], MADLENER 1977 [Pre, Re], MCCONNAUGHEY; E56, G20M, G47B, H91, I19M

#### OOCYSTACEAE

##### *Chlorella fusca* - *Chlorella pyrenoidosa*

*Chlorella pyrenoidosa* - *Chlorella* {DF}. Unicellular micro-algae that is used as a food supplement. Contains up to 55 % protein with all the essential amino acids. Also has a very high level of chlorophyll, up to 6%. Other vitamins and minerals supplied include vitamins A, B<sub>6</sub>, B<sub>2</sub>, B<sub>12</sub>, niacin, calcium, iron, and zinc. Usually added to other foods, including breads, pastas, juices, sweets, soups and salad dressings. HILLS, C. 1978, RICHMOND, A. [Cu], SCHERY, TANAKA; C7M {CU}, D28M, E14T, F37T, GO, G47C, H91, I43T, M32T{CU}, N7D

##### STRAINS

**Thermophilic:** A high temperature strain. C7M, M69

*Chlorella vulgaris* - *Chlorella* {CU}. Single-celled microplankton which is rich in protein and is used as a food supplement. Like *C. pyrenoidosa*, it has a very thin cell wall that makes it more digestible than other species. Very widely distributed over almost all the area on earth. HILLS, C. 1978, RICHMOND, A. [Cu]; C7M, M32T

#### POLYBLEPHARIDACEAE

*Dunaliella salina* - *Dunaliella* {DF}. Salt water microalgae that is a potent source of natural beta- and alpha-carotene. Used as a nutritional supplement by natural foods enthusiasts. Offers a richer mixture of carotenes, which are also better absorbed, than synthetic sources. MURRAY; C7M{CU}, G47C, H13M, 166, M32T{CU}

#### RHODOMELACEAE

*Digenea simplex* - *Makuri* {DF}. A red algae occasionally used as food in Japan. An extract was an ingredient of *makuri jelly*, a type of candy sold in Japan during the first half of the Twentieth Century. Source of a popular herbal brew known as *Corsican seaweed tea*. TANAKA, UPHOF; E56, F88, G47B, H91, I19M

#### RHODYMENIACEAE

##### *Palmaria palmata* -> *Rhododymenia palmata*

*Rhododymenia palmata* - *Dulse* {DF}. The reddish-purple fronds are eaten raw as a snack or in salads and sandwiches. They have a delicious flavor and are easily digested. Dried or roasted fronds are eaten as a vegetable, added to soups and breads, or used as a relish or condiment. An esteemed ingredient of ragouts, adding color and a jelly-like consistency. Also employed as a masticatory. In Kamchatka, it is made into an alcoholic beverage. Has one of the highest protein and iron contents of all algae. LAUNERT, MADLENER 1977 [Nu, Re], MATIGNON [Re], UPHOF; A49D, B21P, C73P, D74M, E14T, E56, E66T, F37T, F88, G47B, H15, H15{PD}, H15M, H25M{PR}, H50, H91, I19M, J83U, K18M, L34, etc.

##### STRAINS {PR}

**Sea Parsley:** Unique, miniature version of dulse that resembles Moss Curled parsley. The whole burgundy algae, having a crunchy texture and a mild salty flavor, is eaten raw in salads and sandwiches, dried, broiled, fried, baked, poached, added to salad dressings, or cooked with grains, vegetables, seafood, etc. Especially good as a garnish. Popular with gourmet chefs. Discovered around 1979 in the cold, clean waters of the Bay of Fundy by marine scientists from the National Research Council of Canada. Grown commercially in salt water tanks in greenhouses. I59E, I59E{DF}, I59E{PD}, I59E{PL}

#### SARGASSACEAE

*Cystoseira osmundacea* - *Sea fern, Sister Sarah, Chain bladder* {DF}. Tender portions of the blades and branches can be toasted until crisp, crumbled, and sprinkled on salads, rice or soups. The fresh air bladders, which form small chains, are said to have the flavor of raw peas. They are good in stir fries and tempura. MCCONNAUGHEY, ROOS-COLLINS; I23G

*Hizikia fusiformis* - *Hiziki*, *Hijiki* {DF}. The branching blades are eaten, either fresh or dried. The dried product expands up to five times its weight when soaked in water. Very popular in Japan, where it is boiled, steamed or sauteed, added to salads, or cooked with soybeans, tofu, and vegetables. Also used in soups, combined with *Ulva lactuca*. In China, it is made into a tea-like beverage. Very high in calcium. ARASAKI [Re], BRADFORD [Re], MADLENER 1977 [Pre, Re], MCCONNAUGHEY [Cul], SHURTLEFF 1975 [Nu]; A7, A52M, E47M, E56, E60P, E66T, F88, G20M, G47B, H91, I19M

*Sargassum fusiforme* - *Moku* {DF}. Young parts are used as a vegetable or added to soups. They are also made into a cooling tea. UPHOF; GO, K18M

#### SCENEDESMACEAE

*Scenedesmus obliquus* - {CU}. Unicellular green algae related to *Chlorella*. Has thin, very soft cell walls making it easily digested. Recommended as a food supplement, similar to *Chlorella* and *Spirulina*. Very widely distributed over almost all the area on earth. HILLS, C. 1978, RICHMOND, A. [Cu]; M32T

#### ULVACEAE

*Enteromorpha clathrata* - *Stone hair* {CU}. The branching, hair-like fronds are eaten fresh in salads, boiled in salted water, or steamed with meat. They have a delicate, crisp texture and a bean-like flavor. In China, they are pounded into a nutty powder called *tai tyaufeen* which is combined with sesame oil to form a condiment, or mixed with cane sugar and made into snacks and cakes. MADLENER 1977 [Re], ROOS-COLLINS; M32T

*Enteromorpha compressa* - *Hira-ao-nori* {CU}. The whole algae is dried, powdered and sprinkled on rice, savory cakes, and rice crackers, or consumed as *tsukudani* and in vegetable dishes. Also used as a substitute for true nori (*Porphyra* spp.). TANAKA, XIA; M32T

*Enteromorpha intestinalis* - *Green-nori*, *Green guts* {CU}. The tubular blades are eaten raw in salads, steamed with meat, stir-fried, mixed with sesame oil, made into sweets, or used as a filling for spring roll cakes. When dried, toasted and powdered, it is used as a fragrant condiment over rice, meat, fish, soups, vegetables and other foods. In Shandong, it is mixed with cornmeal and made into a bread. MADLENER 1977 [Nu, Re], ROOS-COLLINS, XIA; M32T

*Enteromorpha linza* - *Usuba-ao-nori* {CU}. The best liked and most desirable species of *Enteromorpha* in China due to its very tender thallus. It is used in vegetable soups, cooked with meat and fish, or dried and powdered for later use. In the markets of Shanghai, very popular sweet and salty breads are baked with a topping of the powder. Very high in protein, about 20%. MADLENER 1977 [Nu], XIA; M32T

*Enteromorpha prolifera* - *Limu 'ele'ele*, *Suji-ao-nori* {CU}. The finely branched fronds are eaten. In Hawaii, they are dressed with salt and allowed to stand until slightly fermented, the fermentation process enhancing the flavor and darkening the color. Traditionally eaten in stews, or with fish and poi. One of the sources for *aonoriko*, a fragrant green powder sprinkled over foods as a seasoning. In Fujian, it is commonly used as a condiment for *chun bing* (spring cake). ABBOTT [Pre], ARASAKI [Re], FORTNER [Pre, Re], SHURTLEFF 1975, UPHOF, XIA; M32T

*Ulva fasciata* - *Limu palahalaha*, *Ribon-aosa* {CU}. The broad, ribbon-like fronds are eaten, alone or mixed with other sea vegetables. In Hawaii, they are chopped into small pieces and served with raw fish, added to soups, dressed with soy sauce and sugar, or combined with chili pepper and onions and made into a relish. Also boiled with squid to form a gelatinous mass when cold. ABBOTT, FORTNER [Re], UPHOF; M32T

*Ulva lactuca* - *Sea lettuce* {DF}. Leaf-like blades are harvested when young and eaten raw in salads or used as a garnish. They are somewhat tough and should be chopped finely before use. Fresh or dried blades are cooked with meat, fish or vegetables, or added to soups and stews. In Barbados, they are made into a tea. Dried blades may be powdered and used as a table seasoning. GIBBONS 1966, MADLENER 1977 [Nu, Re], MATIGNON [Re], MICHAEL, ROOS-COLLINS [Cul]; H25M{PR}, H50, J83U, M32T{CU}

#### ZYGNEMATACEAE

*Spirogyra* sp. - *Thao*, *Phak kai* {DF}. A freshwater algae very rich in calcium and Vitamin A. Mostly eaten raw with chili sauce, used as a substitute for meat in *larp*, added to omelettes and *kaeng som*, or made into a kind of hot sauce. Also dried and pressed into sheets along with finely sliced vegetables, then sprinkled with sesame seeds. The dried product may be grilled or briefly deep fried. Sold in local markets of India, Burma, Laos, Thailand and Vietnam. CRIBB, JACQUAT, JOHNSTON, H., SING [Re]; H3T

## ALPHABETHICAL LISTING OF BACTERIA FAMILIES

#### ACETOBACTERACEAE

*Acetobacter aceti* - *Vinegar bacteria* {CU}. Microorganism responsible for the conversion of alcohol into acetic acid, which is the principal compound of vinegar. BROUK, UPHOF; C7M, M69. (see also Starter Cultures, page 537)

*Acetobacter aceti* ssp. *xylum* - *Kombucha bacteria* {CU}. The principal microorganism involved in the fermentation of *kombucha* or *tea cider*, which has become a very popular supplemental beverage. *Kombucha* that has become too sour can be used as a table vinegar. Also synthesizes cellulose in the production of the film that forms during the Philippine *nata* fermentation. FRANK, STEIN-KRAUS; T34, U7. (see also Starter Cultures, page 537)

*Acetobacter xylum* - *Acetobacter aceti* ssp. *xylum*

#### ACTINOMYCETACEAE

*Bifidobacterium bifidum* - *Bifidus milk bacteria* {CU}. Microorganism used in bifidus milk and bifidus yogurt cultures as well as various "therapeutic" lactic fermentations such as *Biogarde*, *Cultura*, or *A/B milk*. Yields products lacking the acid flavor associated with normal yogurt. An essential component of the human

intestinal microflora. CAMPBELL-PLATT, KURMANN, MURRAY, ROBINSON, R. 1995; T34. (see also Starter Cultures, page 537)

*Bifidobacterium infantis* - *Swiss cheese bacteria* {CU}. Microorganism used in Swiss cheese cultures as well as various "therapeutic" lactic fermentations such as *Bio-milk* or *A/B milk*. An essential component of the human intestinal microflora. ROBINSON, R. 1995; T34. (see also Starter Cultures, page 537)

*Bifidobacterium longum* - *Bio-yogurt bacteria* {CU}. Microorganism used in *Bio-yogurt* cultures as well as various "therapeutic" lactic fermentations such as *Bio-milk*, *Bifighurt*, or *A/B milk*. Poorly adapted to growing in milk, hence normally used in conjunction with other cultures. Yields products lacking the acid flavor associated with normal yogurt. An essential component of the human intestinal microflora. KURMANN, ROBINSON, R. 1995; D28M. (see also Starter Cultures, page 537)

#### BACILLACEAE

*Bacillus cereus* - *Arrozfermentado bacteria* {CU}. A bacteria that has a role in the fermentation of *Arrozfermentado*—2, fermented rice

product of the Andean region, especially Ecuador. It also takes part in the fermentation of *tempeh* and *pozpl*. CAMPBELL-PLATT, SHURTLEFF 1979, STEINKRAUS; C7M, D81T, E13, G37P, K26M, M69

*Bacillus laterosporus* - {PD}. A soil-based microorganism found to be a naturally beneficial substance that helps maintain and build a healthy, friendly flora in the colon and digestive tract. Available in powder and capsule forms known commercially as *Flora Balance*. The powder is mixed with water and taken as a food supplement. CORSELLO [Nu]; F90C

*Bacillus megaterium* - *Kishk bacteria* {CU}. One of the microorganisms involved in the production of *kishk*, a fermented milk-wheat product of the Middle East. Also has a role in the fermentation of *tesquino* and *yakju*. STEINKRAUS; C7M, D81T, E13, G37P, K26M, M69

*Bacillus subtilis* - *Natto bacteria* {CU}. A microorganism involved in the fermentation of cooked soybeans into *natto*. During the process the proteins of the beans are broken down to amino acids, making the finished product highly digestible. STEINKRAUS; C7M, D81T, E13, G37P, K26M, M69. (see also Starter Cultures, page 537)

#### BREVIBACTERIACEAE

*Bacterium linens* -> *Brevibacterium linens*

*Brevibacterium linens* - *Red bacteria* {CU}. Short, reddish, rod-like bacteria responsible for the taste and orange color of Limburger, Brick, Fontina, Bel P&ese, Tilsit, St. Paulin, Pont l'Eveque, Brie and other cheeses. BROUK, KOSIKOWSKI, PEDERSON WALTER; M69. (see also Starter Cultures, page 537)

#### LACTOBACILLACEAE

*Lactobacillus acidophilus* - *Acidophilus milk bacteria*, *Thermophilic cheese bacteria* {CU}. A bacteria which converts lactose, or milk sugar, into lactic acid, thus making it more digestible. In the commercial production of *acidophilus* milk, skim or partially defatted milk is used. Also used in non-dairy, supplemental acidophilus beverages. STEINKRAUS; C7M, D81T, G47C{PD}, E13, M69. (see also Starter Cultures, page 537)

*Lactobacillus brevis* - *Kefir bacteria* {CU}. The microorganism that produces "kefirin", a polysaccharide gum that holds together the bacteria and yeasts in *kefir grains*, the starter culture used in kefir manufacture. STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Lactobacillus brevis* ssp. *coagulans* - *Suguki bacteria* {PD}. The strain of *Lactobacillus* that activates the fermentation process in the production of the famous pickled Suguki turnip of the Kyoto region in Japan. G20M

*Lactobacillus bulgaricus* - *Yogurt bacteria*, *Thermophilic cheese bacteria* {CU}. A bacteria used in most *yogurt* and some cheese starter cultures. It grows best at temperatures of 110 to 116° F, and produces total acids of 2.0 to 4.0%. STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Lactobacillus casei* - *Thermophilic cheese bacteria* {CU}. A good agent for the maturing of cheese due to its action on casein. It can be found on the majority of cheeses allowed to mature. The temperature for optimal growth is 86° F. Also takes part in the fermentation of *koumiss*, *kefir*, *kishk*, *laban*, *dahi* and bread. HESSELTINE, MALLOS [Re], STEINKRAUS, UPHOF; C7M, E13, M69. (see also Starter Cultures, page 537)

*Lactobacillus helveticus* - *Thermophilic cheese bacteria* {CU}. Used with *Streptococcus thermophilus* to form a lactic cheese culture that grows best at high temperatures, from 110 to 115° F. It also takes part in the fermentation of *dahi* and *busaa*. KOSIKOWSKI, PEDERSON, STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Lactobacillus lactis* - *Swiss cheese bacteria*. A lactic-acid producing bacteria that has a contributing role in the fermentation of Swiss cheese. CAMPBELL-PLATT. (for sources see Starter Cultures, page 537)

*Lactobacillus plantarum* - *Pickle bacteria* {CU}. A lactic-acid producing bacteria that plays a major role in all vegetable fermentations, producing *high* acidity, often yielding three to four times as much D-lactic acid as species of *Leuconostoc*. BROUK, PEDERSON, STEINKRAUS, UPHOF; T34.

*Lactobacillus sanfrancisco* - *San Francisco sourdough-bread bacteria* {CU}. A microorganism that has been isolated from sourdough, or *sauerteig bread* of the San Francisco area, and which is responsible for the characteristic sour flavor. STEINKRAUS; T34. (see also Starter Cultures, page 537)

#### MICROCOCCACEAE

*Micrococcus* sp. - *Sausage bacteria*. A microorganism used with *Pediococci* and *Lactobacilli* in the manufacture of dry and semi-dry sausages. PEDERSON; (for sources see Starter Cultures, page 537)

#### NOSTOCACEAE

*Aphanizomenon flos-aquae* - *Klamath blue-green algae*, *Super blue-green algae* {DF}. Freshwater micro-algae consumed as an energizing food supplement. Usually sprinkled on other foods as a condiment, or mixed with juice as a drink. Contains significant levels of protein, chlorophyll, vitamin B<sub>12</sub>, amino acids, beta carotene and trace minerals. More assimilable than spirulina or chlorella. Harvested from the mineral-rich waters of Upper Klamath Lake, Oregon, freeze-dried, and marketed in powder, capsule or liquid form. MCKEITH [Nu, Re]; E56, G36, G36{£D}, G36M, G47C, H13M, I19M, L3J, M32T{CU}

*Nostoc commune* - *Star jelly*, *Fairies\* butter*, *Fat choy*, *Ishi-kurage* {DF}. A freshwater blue-green algae that is consumed raw, dried, stir-fried, sauteed with oysters, in sweet dessert soups, or with sugared vinegar. It is also made into a jelly which is then eaten or used as a thickener for other foods. Available dried in Chinese markets. ARASAKI, BROUK, BURKILL, CRIBB, JOHNSTON, H., MADLENER 1977 [Nu, Re], TANAKA; C27G, M32T{CU}

#### OSCILLATORIACEAE

*Arthrospira platensis* - *Spirulina platensis*

*Spirulina maxima* - *Techuitlatl* {CU}. A blue-green algae traditionally collected and made into soups and cake-like foods by the inhabitants of Lake Chad in Africa and Lake Texcoco, near Mexico City. Also suitable for culturing as a food supplement. HILLS, C. 1978, NATIONAL RESEARCH COUNCIL 1975a, SCHERY; M32T

*Spirulina platensis* - *Spirulina*, *Tecuítlatl* {DF}. A blue-green algae found in saline, usually alkaline, waters. The crude protein in spirulina can reach as high as 72%, which is highly digestible. It also has a high content of vitamins and minerals, including vitamins A, B<sub>2</sub>, B<sub>12</sub>, E, H, and K, calcium, iron, and niacin. Dried into cakes, it was eaten with *mole* by the Aztecs. Near Lake Chad, similar flat greenish cakes called *díhe* or *douhe* are made into a nourishing soup or a thick gravy which is used as a seasoning on millet balls. The powdered form is used as a food supplement in drinks, wafers, protein powders and *pastalina*, a soy-whole-wheat-spirulina noodle. BEASLEY [Re], HILLS, C. 1978, HILLS, C. 1979, JOHNSTON, H., NATIONAL RESEARCH COUNCIL 1975a, RICHMOND, A. [Cu, Re]; D28M, E47M, F37T, F86G, F88P{PD}, GO, G47C, /457{PD}, 166, 18IT, K18M, M15M, N7D. (see also Starter Cultures, page 537)

#### PROPIONIBACTERIACEAE

*Propionibacterium freudenreichii* ssp. *shermanii* - *Swiss-cheese bacteria*, *Propionic cheese bacteria* {CU}. The bacteria that

produces propionic acid, which is responsible for the characteristic flavor and eye formation of Swiss and Gruyere cheeses. BROUK, UPHOF, WALTER; (for sources see Starter Cultures, page 537)

#### PSEUDOMONADACEAE

*Xanthomonas campestris* - *Xanthan gum bacteria* {DF}. A bacteria used in the production of *xanthan gum*, a polysaccharide employed by the food industry as a stabilizer, emulsifier, thickener, suspending agent, and foam enhancer. It is added to foods such as French dressing, chocolate milk, puddings, etc. Also used by the natural foods industry and home bakers to produce gluten-free breads and other baked goods made from rice, potato, tapioca, scy, etc. Produced by a pure-culture fermentation of glucosa Available as a cream-colored powder readily soluble in cold or hot water. HAGMAN [Re], LEUNG; A25G, B31, D4, D43G, E68M, GO, G29,166, M15M

#### STREPTOCOCCACEAE

*Enterococcus faecium* - {CU}. A microorganism used as a source of a nutritional supplement that replenishes friendly bacteria in the colon. T34

##### STRAINS {PD}

**Cerneile SF 68:** A superior strain of lactic acid producing bacteria developed by the AB Cerneile Company of Sweden. Multiplies faster than acidophilus and other cultures. Marketed as *Ventrix* and *Ventrix-Acido*. C19

#### *Leuconostoc citrovorum* - *Leuconostoc cremoris*

*Leuconostoc cremoris* - *Aromatic lactic bacteria* {CU}. Used in combination with *Streptococcus* species to form a lactic starter culture. Also involved in the fermentation of *ripened-cream butter*, wine and *piima*. KOSIKOWSKI, PEDERSON, STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Leuconostoc oenos* - *Wine bacteria*. A heterofermentative lactic acid bacteria that is dominant in French wines. It performs a secondary malolactic fermentation which converts malic acid to lactate. CAMPBELL-PLATT; (for sources see Starter Cultures, page 537)

*Pediococcus cerevisiae* - *Lambic beer bacteria* {CU}. Lactic acid bacteria that occurs with *Brettanomyces* yeasts in the production of lambic beers. It is also involved with fermentations of *kimchi*, *sauerkraut*, pickles and wine. GUINARD, STEINKRAUS; A99, B55M. (see also Starter Cultures, page 537)

#### *Pediococcus damnosus* - *Pediococcus cerevisiae*

*Pediococcus* sp. - *Sausage bacteria*. A bacteria used with Micrococci and Lactobacilli in the manufacture of dry and semi-dry sausages. PEDERSON; (for sources see Starter Cultures, page 537)

*Streptococcus cremoris* - *Villi bacteria*, *Mesophilic cheese bacteria*, *Aromatic lactic bacteria* {CU}. A bacteria involved in the *villi* fermentation and the fermentation of certain cheeses. It has a temperature range of 72° C., and produces 0.9 to 1.0% total acids. STEINKRAUS; T34. (see also Starter Cultures, page 537)

*Streptococcus diacetiiactis* - *Mesophilic cheese bacteria*, *Aromatic lactic bacteria* {CU}. Used in the manufacture of sour cream, butter and various cheeses. It also takes part in the fermentation of *dahi*. KOSIKOWSKI, PEDERSON, STEINKRAUS; (for sources see Starter Cultures, page 537)

*Streptococcus lactis* - *Mesophilic cheese bacteria*, *Aromatic lactic bacteria* {CU}. A lactic acid bacteria used in the manufacture of sour cream, butter, buttermilk and certain cheeses. It is also involved in the fermentation of *hakko tofu*, *poi*, *ogi*, *mahewu*, *dahi*, *laban* and *jalebi*. BROUK, KOSIKOWSKI, PEDERSON, STEINKRAUS, UPHOF; C7M, D81T, E13, K26M, M69. (see also Starter Cultures, page 537)

*Streptococcus thermophilus* - *Yogurt bacteria*, *Thermophilic cheese bacteria* {CU}. One of the principal bacteria in *yogurt* and cheese starter cultures. It grows best at temperatures of 110 to 112° F., and produces total acids of 0.9 to 1.1 %. STEINKRAUS; T34. (see also Starter Cultures, page 537)

## MAJOR CROPS

### ALMOND {GR}

#### AMYGDALUS COMMUNIS

All-in-One: The best cultivar for edible landscaping, having showy white flowers that bloom late. Semi-dwarf tree is vigorous, medium upright, self fertile and a heavy bearer. Nonpareil-type, soft shelled nuts with a very good, sweet flavor; quality good to excellent. Shell is well sealed; harvest season is late. STEBBINS; A63, A88M, B74, B93M, C54, D23M, G49,168, I83M, J61M, LI, L33, L47, N20

Butte: Mission x Nonpareil. Nut medium to small, averaging 16 per ounce; shell soft to hard, thick, solid, well-sealed; cracks out about 52% of kernel; kernel medium to small, plump, smooth, few doubles, quality good, pellicle thin; harvested just after Nonpareil. Blooms late; pollinizes with Nonpareil, Mission and Ruby. Tree vigorous; produces well; grows well on almond and peach rootstocks. BROOKS 1972; B71M, D18, E4, K73M, K88T, N20

Carmel: Bud-sport of Nonpareil. Nut small, thick, light colored; kernel comprises 60% of nut, averaging 24 per ounce; lighter color than Nonpareil; quality and flavor good. Harvest 3 weeks later than Nonpareil, 1 week earlier than Mission. Early and regular producer of good quality nuts. Tree medium; bears regularly and in clusters. Pollinizes with Nonpareil and Mission. BROOKS 1972; A9, B71M, D18, D81{PO}, D81M{PO}, E4, K73M, K88T, L47, N20

Double Nut Softshell: So named for a frequent tendency to produce double nuts—2 nuts per shell—with soft shells. Collected near Sache, Xinjiang province, in the vicinity of Kashgar (Kashi), People's Republic of China. U7G{SC}

Eagle's Beak: So named for the distinctive curved beaking at the styler end of the shell. Collected near Sache, Xinjiang province, in the vicinity of Kashgar (Kashi), People's Republic of China. U7G{SC}

Fritz: Small, ovate nut with a solid, thick, hard to semi-soft shell. Kernel medium to small, smooth and of good quality. Pollinizes with Nonpareil, Mission, and Ruby. Harvested late, with Mission. Originated in Modesto, California by Burchell Nursery. Introduced in 1970. JAYNES; B71M, D18, D81M{PO}, E4, K73M

Garden Prince:<sup>1</sup> Medium-sized kernel is a sweet Nonpareil-type; well sealed with a soft shell. Self-fruitful, does not need a pollinizer. Tree a genetic dwarf, approximately 8 to 10 feet tall at maturity; productive; good for container planting. Blooms early, with Nonpareil but may be easily protected by covering with a tarp. STEBBINS; A63, A88M, C54,168, I83M, LI, N20

Hall's Hardy: (Hall, Ridenhower) Parentage unknown, but has the characteristics of a hybrid between an almond and a peach. It's main value is as an ornamental with showy pink blossoms and shiny green leaves. The tree is hardy and the self-fertile flowers bloom relatively late. The kernel is slightly bitter. Originated in Coffeyville, Kansas by a Mr. Hall. B53, C54, D37, D76, H49, I53M, J61M, M83, N20

I.X.L.: Nuts large with, as a rule, single kernels; shell soft, smooth, thin, not always well-sealed; hulls easily, no machine being

needed, nor is any bleaching necessary; flavor very good; ripens in midseason. Tree a sturdy, rather upright grower, with large leaves; pollinates with Ne Plus Ultra. Largely discarded for shy bearing, but desirable in some areas. WICKSON; F91T{SC}

Ingrid: A self-fertile selection developed in Sweden. Recently introduced into the United States. Should grow to about 15 feet tall when mature. Resistant to peach leaf curl. Reportedly hardy in Zones 6 to 9. F43M

Marcona: Excellent, sweet, flavorful almond. The most popular Spanish variety. Peels easily and has just the right oil and fat content for making soft *turrón* or *marzipán*. Also mixed with Nora peppers to make *Romesco* sauce, or they can be fried in olive oil, dusted with sea salt, and eaten as a tapa. Very hard shell. Highly productive. Widely grown in the Alicante region of Spain. L13P{DF}, L13P{PD}, N51M{PD}

Merced:<sup>3</sup> Medium sized nut; shell paper thin, well-sealed, lighter in color than Nonpareil; small, broad kernel, averages 58 to 63% of nut; ripens with Nonpareil. Tree medium-sized, vigorous, upright; blooms with Nonpareil; very prolific; cross-compatible with Nonpareil. Mission x Nonpareil. BROOKS 1972; A9, B71M, D18

Mission:<sup>2</sup> (Texas) Round, hard-shelled nut with a slightly bitter flavor preferred by some; shelling percentage 40 to 45. Resistant to navel orange worm and bird damage. Good for late frost areas as it blooms late; also harvested late, late September or October. Pollinizes with Nonpareil, Ne Plus Ultra, and Carmel. Chilling requirement 284 to 310 hours. The second most important cultivar in California. JAYNES, RUCK; A9, A63, A88M, B71M, B93M, D18, D81M{PO}, E4, H89M, I68{ES}, K73M, L47, M83, N20

Monterey: Elongated nut, 1/2 inch by 3/4 inch; slightly greater width than thickness; hard, well-sealed shell; kernel 1 inch x 1/2 inch; ripens with or just after Mission. Large, vigorous tree; more tolerant of frost than Nonpareil; a heavy and regular bearer; tolerant of brown rot and shot hole fungus. Originated in Merced, California. BROOKS 1997; B71M, E4, K73M, L47

Ne Plus Ultra:<sup>2</sup> Large, flat nut with a soft shell; rather poor quality kernel with relatively large number of doubles; shelling percent 55 to 60. Early blooming and thus subject to frost damage in most areas. Blooms about a week ahead of Nonpareil, for which it is a common pollinizer. Chilling requirements are relatively low. Nuts drop readily. JAYNES; A9, A63, B71M, B93M, D18, D81{PO}, D81M{PO}, E4, G49,168, K73M, K88T, L47, M39M, N20

Nonpareil:<sup>3</sup> The most important almond cultivar in the United States, accounting for over half the commercial production. Smooth, uniform, attractive kernel with paper-thin shell and sweet flavor; light brown in color; shelling percentage 60 to 70. Blooms moderately early, but tends to be somewhat resistant to frost in the early bud stages. Susceptible to noninfectious bud-failure, worm damage, and bird damage. JAYNES; A9, A88M, B71M, D7{PD}, D18, E4, E97P{DF}, F6{DF}, I68, K73M, L15M{DF}, L47, M39M, N20

Padre: Kernel plump, broad, averages 25 to 30 per ounce, resembles Mission; shell hard, resists worm damage, represents 45 to 50% of nut; matures moderately late but before Mission. Tree upright, resembles Mission; a productive and consistent bearer; blooms with Mission. Originated in Davis, California by Dale E. Kester. Introduced in 1983. A9, B71M, D18, E4, K73M, K88T

Peerless:<sup>2</sup> Regular and heavy bearer of a very large nut with a hard shell; shelling percentage 30 to 40. Kernel quality is moderately good. Early blooming and thus susceptible to late frost. Pollinizes with Ne Plus Ultra and Nonpareil. Nuts ripen just after Nonpareil but drop so easily that they are often harvested early. Low chilling requirements. Marketed primarily as an in shell nut during Christmas time. JAYNES; *B71M, D18, E4, K73M, K88T, N20*

Price: (Price Cluster) Consistently high yielder of soft-shelled nuts with a high quality sweet kernel; kernel averages 26 per ounce. The nuts are borne along the branches in clusters; resembles Nonpareil in shape but more plump; some double kernels. Tree very heavy bearing; midseason bloomer. Pollinizes with Mission, Nonpareil, and Ne Plus Ultra. BROOKS 1972; *A63, A88M, B71M, D18, E4, K73M, K88T, N20*

Roy: Relatively soft-shelled nut of good quality. Self-fertile tree with attractive pink blossoms. Blooms later than most almonds and so has a better chance of setting fruit in the Pacific Northwest and similar areas. Recommended for edible landscaping. Originated in Stayton, Oregon. BROOKS 1972; J61M

Ruby: Regular, heavy producer of good quality nuts. The shell is thicker, harder, and better sealed than Nonpareil; kernel averages 53% of nut, 28 kernels per ounce. Tree blooms late, 2 to 3 days after Mission; production high; bears regularly. Harvesting period coincides with Mission. BROOKS 1972; *A9, B71M, D18*

Solano: Attractive, high quality nut, smooth and flat; resembles Nonpareil; 60% kernel to nut ratio; matures 7 to 10 later than Nonpareil. Medium to upright tree; as productive as Nonpareil. Pollen compatible with Nonpareil, Ne Plus Ultra, Mission and others. Originated in Davis, California by Dale E. Kester. BROOKS 1997; *B71M, E4, K88T*

Thompson:<sup>3</sup> Nut small with a soft to paper-thin shell, well-sealed. Plump, white kernel with a mildly bitter flavor, quality good; kernel averages 60% of nut. Productive, early bearing tree, bears consistently; very vigorous; blooms late, usually with Mission. Pollinizes with Mission, and All-In-One. Originated in Clovis, California by L.M. Thompson. Introduced in 1957. BROOKS 1972; *A9, B71M, D81M{PO}, E4, K88T*

Vesta:<sup>3</sup> Shell soft, easily cracked; suture closed and tight making the kernels less subject to worm damage than Nonpareil; kernel very similar to Nonpareil, but larger, flavor good; ripens 10 to 14 days after Nonpareil. Tree very vigorous; consistently productive; blooms with Nonpareil, which it pollinates. BROOKS 1972; F91T{SC}

#### CODES FOR SPECIAL TYPES

1. Genetic Dwarf
2. Low-Chill
3. Papershell

## AMARANTH {S}

#### AMARANTHUS SPP.

##### GRAIN AMARANTH

Mostly *A. cruentus* and *A. hypochondriacus*. The former is the most adaptable of all grain amaranth species, and it flowers under a wider range of day lengths than the others. *A. hypochondriacus* is later maturing which limits its usefulness in more northern areas, however it is the most robust and highest yielding of the grain types.

**1011:** (R1011) 110 days. Considered to be one of the best and most uniform Mexican grain types. Large golden seeds. Late season maturity. Medium-tall plants with green flower heads that turn pink as they mature. Stout stalks resist lodging. Very similar to 1041. Developed at the Rodale Research Center, Kutztown, Pennsylvania. C25M

**1023:** (R101) (*A. hypochondriacus*) 150 days. Very bushy, green plant with no predominant seed head; grows up to 8 feet tall; quite resistant to lodging. Produces large, high quality white seeds. Has shown excellent seedling vigor. Matures very late. Should be planted at high densities to discourage bushiness. Developed at the Rodale Research Center, Kutztown, Pennsylvania. C25M

**1024:** (R103) (*A. typhochondriacus*) Very bushy, green plant with thick, succulent stalks; quite resistant to lodging. Has small seed heads borne across the top of the plant. Produces high quality gold seeds. Matures very late. Should be planted at high densities to discourage bushiness. Developed at the Rodale Research Center. C25M

**1041:** (R149) (*A. cruentus*) Uniform, high-yielding, green plant; height 5 to 6 feet; mostly single-stemmed when planted at recommended densities. Predominantly white-seeded. Medium length growing season. Somewhat resistant to *Lygus* infestations. The most commonly grown cultivar in the United States. Developed at the Rodale Research Center. C25M

Alegria: (*A. cruentus*) Produces blonde seed typically used for the traditional confection *alegria*, which is made with popped seed and honey in central Mexico. 116, N84

Black-Seeded: Very small seeds, 1/30 inch in diameter compared to 1/15 or 1/16 inch which is typical of the white and gold-seeded types. Can be used as a substitute for poppy seeds, or they can be ground into flour for use in dark colored food products. C25M

Burgundy: (*A. hypochondriacus*) 105 days. A widely adapted cultivar. Has yielded well on the Olympic Peninsula of Washington and the windswept plains of north central Kansas. Striking purplish-red foliage, stalks, and seedheads; productive, heavy seedheads; small, creamy white/beige seeds. Height 5 to 7 feet. Young leaves can also be used for greens or in salads. A2, C95, 177, J39, K49T, L3J, L11, N7G, N84

Chihuahuan Ornamental: (*A. cruentus*) From the heart of the Chihuahuan desert, where it is called Sangre de Castilla (the Blood of Noble Spain). The black seed is edible. Can also be used as a potherb. Planted with the summer rains in the low desert. 116, N84

Dreadicus: (Mercado Dreadicus) (*A. hypochondriacus*) 125 days. Large, green, tightly packed, matted seedheads resembling dreadlocks; full of golden seed. Very good flavor. Pale green leaves make good greens. Tall, long-season plants growing 8 to 10 feet; high yields. Very drought tolerant. Originally from the Mexican highlands. A2, C95, F73D, I99M, K46T, K49T, L3J, L77D, N84

Elephant's Trunk: (Elephant's Head) 65-80 days. Unique heirloom brought to the United States from Germany in the 1880's. Named after the stunning deep-red to purple seedhead, which has a long drooping form—an 18 to 24 inch protuberance that resembles the trunk of an elephant. Grows to a height of 3 to 4 feet. B49, C95, D68, F73D, F80, I99M, K49T, L11, L13M, L77D, N7G

Golden Giant: (*A. cruentus*) 120 days. Large orange-golden seedheads on 6 to 8 foot plants; no side branching; green leaves, but golden brown veins, stalks, and flowers. Large seeds are mixed light and dark golden. Early and heavy bearing. Can yield up to a pound per plant. Easily gathered and threshed, but susceptible to lodging. Ornamental. B49, C95, F35M{PL}, I99M, K49M, K49T, L77D, N84

Golden Grain: (*A. typhochondriacus*) Very early maturing strain with golden-yellow to orange foliage and seedheads. Uniform, short plants; height to 4 1/2 feet. Easier for mechanical harvest, but less productive than Burgundy. Midseason in maturity. The grain can be added to most bread recipes for a delightfully crunchy texture. A2, F73D, J25M, L11, L7M

Guarijio Indian: (*A. hybridus* x *A. hypochondriacus*) White-seeded grain type commonly used for *tamales*, *pinole*, or popping. From the Rio Mayo in Sonora, Mexico. Planted in spring or with the summer rains in the low desert. 116, N84

K112: (*A. cruentus*) Rodale selection from a cross of a Mexican grain type and an African grain type. Slightly shorter plant than Mexican types, with a more branched habit. Both seed heads and leaves are red. Produces mostly white seed. Matures earlier than Mexican grain types. Has shown some resistance to the tarnished plant bug (*Lygus lineolaris*). C25M

K266: (*A. cruentus*) Mexican x African breeding line from the Rodale Research Center. Green-flowered plants that mature about a week earlier than 1011 due to the influence of the African grain type parent. Tight seedheads that produce grain that is slightly smaller than typical Mexican grain types. C25M

K283: (*A. cruentus*) Mexican x African breeding line from the Rodale Research Center. Produces flowers with varying shades of red and pink, and tight seedheads with small grain which matures at the same time as K266. Grows somewhat shorter than the Mexican grain type. C25M

K343: (*A. hybridus* x *A. hypochondriacus*) 117 days. Productive grain producer developed at the Rodale Research Center. One of the highest yielding lines in yield trials in Kansas, Nebraska and Minnesota. Grows 5 to 6 feet tall with red flower heads and yellow seed. Has superior resistance to lodging, especially after a frost. Widely grown by a small group of commercial growers. C25M

K432: (*A. hybridus* x *A. hypochondriacus*) 95 days. First semi-dwarf grain amaranth from the Rodale Research Center. One of the earliest and best yielding cultivars. Grows 3 to 5 feet tall with large pale pink flower heads and leaves that are purple-blotched when young. Light tan seeds, of good quality for cooking and baking. Easier to combine than taller types. C25M, G6, J39, K17M, L7M, N84

Kinnauri Dhankar: (*A. cruentus*) 90-100 days. Old landrace from the Himalayan region. Mixed blond, pale green, and burgundy heads with white seeds. Burgundy and pale green leaves. Grows about 8 feet tall. Very decorative. K46T, L3J

Manna de Montana: (*A. hypochondriacus*) 120 days. Delicious, golden-orange grains resemble sesame seeds and can be used in a similar manner. Also used for milling into flour, as a cooked cereal or for popping. Early, uniform and dependable, grows 4 to 6 feet tall. Very heavy seedheads. D29P, K49M, K49T

Mayo Indian: (Mayo Red) (*A. cruentus*) A black-seeded cultivar from Sonora, Mexico. Bright red flower spikes and leaves. Seeds are used for esquite (parched), *pinole* and *atole*. The leaves are used as quelites (greens). Planted in spring or with the summer rains in the low desert. B49, F24D, F80, L7M

Nepalese: (*A. cruentus*) 150 days. High-yielding, fairly late-maturing strain, height 6 to 8 feet. Attractive reddish-pink seedheads. Leaves are also red. Apparently prefers higher elevations but has been grown successfully at low elevations in the West Coast and South. C95, F73D, N84

New Mexico: (*A. hypochondriacus*) Beautiful pink and white inflorescences that yield golden seed. From a dooryard garden near Rinconada, New Mexico. Planted in spring or with the summer rains in the low hot desert. E61

Polish: Intensely purple plant similar to Burgundy, but with deep purple seeds. Recommended by Shoulder to Shoulder Farm as a somewhat better flavored salad green. Originated in Poland. N7G

Popping: (*A. cruentus*) 110 days. High-yielding red and tan seed head; breaks off easily in the wind. White-seeded. May be popped in a frying pan or wok at high heat, no oil needed. As with corn, popping is an interesting alternative to grinding or whole-grain cooking. Grows to about 6 feet tall. A2, F73D, J39, K46T, N84

Prima x Nepal: (*A. hybridus* x *A. hypochondriacus*) Large, densely-spiked red head; very good yields. Prone to lodging. Early in maturity. Stable cross. Introduced by the Rodale Research Center, Kutztown, Pennsylvania. C95, N84

R158: (*A. ementus*) 93 days. A predominately white-seeded, early maturing, refined grain amaranth with red leaves and stems. Vigorous growing plant that lodges easily; an excellent producer. Medium-sized seeds high in lysine. Sow 1/8 inch deep in rows 24 inches apart, thinned to 3 to 4 inches apart. Harvest, thresh, and winnow after frost. Used for flour, popping, or sprouting. Developed at the Rodale Research Center, Kutztown, Pennsylvania. C25M, J39

Rodale Multiflora: (*A. ementus*) 95 days. Green plant with seedheads that vary in color from red, yellow and green to egg-white; height 5 to 6 feet. Produces an abundance of white seeds. Medium to long season. Recommended for its uniformity, shortness, and yield for machine or hand harvest. C95, N84

Sunset Orange: 110 days. Slightly golden, white seeds produced on large, attractive sunset orange seed heads. Young leaves are also useful as cooked greens. High-yielding, 6 foot tall plants with heavy golden-brown stalks. Suitable for use as an ornamental as well as for grain, the seed heads remaining colorful over a long period. J9M

Warihio: 105 days. Ornamental as well as useful. Brilliant red foliage and seed heads. Nutty-flavored seeds are used as grain. Leaves are also eaten. Traditionally used on festive occasions such as the Mexican Day of the Dead ceremonies. Drought tolerant. K49T

#### LEAF AMARANTH

Assam Red: Small, red plant with a hollow stem; soft, sweet, non-fibrous. The whole plant is used as a vegetable. When cooked, the juice retains its reddish color. Very popular in parts of India. N91

Bengal Red: Large, branching plant, often reaching a height of 3 1/2 feet or more; stems and leaves red; slightly fibrous. Both the leaves and stems are used as vegetables. The juice does not retain its red color when cooked. Sown in spring and summer in India. N91

Champa Natia Sag: (Chaulai, Chowlai Bhaji) Dwarf bushy plants. Very sweet leaves and shoots are used in curries. Sown from February to August in India. N91, Q45M, R0, R50

Fote Te: (*A. tricolor*) An excellent leaf amaranth with fine taste. Will bolt in hot weather, especially in northern areas. Recommended for hot, humid areas of the southern states. Originally from Dahomey in Africa. B49

Gujarati White: Large, greenish plant; non-fibrous. In early stages of growth, the whole plant can be used as a vegetable. Later, only the leaves are suitable. Entirely free from diseases. Sown in spring and summer in India. N91

Jamaican Gtllaloo: Very vigorous plant, growing to 7 feet tall, productive and prolific. Both the leaves and tasty stems are used. Can be grown as a winter crop in areas of the Deep South as it will not run to seed like other types do under the short day conditions. A2, D33

Lai Sag: Bushy plants growing to a height of 2 to 3 feet. In India, sown from February to May and again from September to December. S59M, S93M

Lotus's Purple: Vigorous, upright, thick-topped plants; height 5 to 7 feet; large, reddish-purple heads. Heavy yields of dark, purple seeds. Can be used both as a cereal and as a potherb or for salads. F73D, N84

Merah: (Coleus Leaf) 80 days. Very attractive bi-colored, heart-shaped, crinkled, dark-green leaves with red veins, resembles a coleus. Slightly sweet, walnut-like flavor makes an attractive addition to salads. Or its large leaves, 5 inches long and 6 inches wide, can be used for wrapping, like grape leaves. Excellent for the edible landscape. C95,177, J73, K49T, K66, M32, N84

Orissa White: Large, branching, green-stemmed plant; height 3 to 3 1/2 feet or more; somewhat fibrous. Both the leaves and stems are

eaten, the stems being particularly sweet. Popular throughout India. N91

Perfecta: (A. tricolor) Attractive plant with lance-shaped, multicolored leaves of yellow, green and crimson. Popular with specialty growers who harvest the leaves when young for adding to *mesclun* mixtures. Grows to about two feet tall when mature. 177,191

Pinang: 80 days. Light-green leaves, 6 to 8 inches long and 3 to 4 inches wide have a mild, sweetish flavor. Appropriate for use in salads, or they can be cooked like spinach. Plants grow 12 to 18 inches tall. J73, N84

Puteh: (Besar) 80 days. Light green, spade-shaped leaves, 5 to 6 inches long and 5 inches wide with a mild flavor. Good for salads, or they can be cooked like spinach. Plants grow 12 to 18 inches tall. J73, N84

Quintonil: Red stems and maroon tint to leaves. Black seed. The mountain Zapotecs customarily do not plant any green vegetables, but make abundant use of this wild amaranth as a potherb. It is allowed to reseed itself each year in the milpas (cornfields). From 6500 feet altitude; tolerates much rain and cool temperatures. QUINTANA 1994 [Re]; F80, N84

Red Leaf: (A. tricolor) 40-60 days. Small, lightly fuzzy, oval-heart shaped green leaves are overlaid with burgundy red (coleus-like). Multi-stalked plant, 12 to 18 inches tall. Slightly sweet with a unique tangy flavor. Heat tolerant; plant thinly in warm 70° F. soil. A flavorful, colorful salad and cooking green. C20M, D55, G6, Q34, S55, S70

Red Stripe: (A. tricolor) 28 days. Large oval leaves patterned with deep red. Height about 18 inches. Easily grown; heat tolerant. Sow in late spring or summer. Good stir-fried with peppers and onions. A favorite vegetable in China, Japan and Africa. F73D, F80, F85, K49M, L59, L79G

Tampala: (Fordhook Spinach) (A. tricolor) 70 days. Heat-resistant spinach substitute, ready 6 to 8 weeks after sowing; produces all summer. Young, tender leaves cook quickly; also good raw in salads. Stems can be harvested when 4 or 5 inches long and cooked like asparagus. Artichoke-like flavor. K49M

Tiger Leaf: (Tiger Eye) Broad, medium green leaves with a distinct red blotch in the center. Grows to 3 feet tall and is extremely branching, producing many side shoots. Very productive, easily giving a number of cuttings. A79M, D33, E83T, F85

White Round Leaf: (A. tricolor) 50 days. Large, light-green, rounded leaves on bushy plants to 18 inches tall. Easily grown; stands heat well. Sow in late spring through the end of summer. Tender, succulent leaves and young stems are cooked like spinach or added to salads. D55, F85, L59, Q39, S55

## APPLE {GR}

MALUS BACCATA

MALUS PUMILA

---

### CIDER APPLES

Included here are "true" hard cider apples, mostly grown in England, France, Spain and Quebec. They are characterized by high acid and tannin levels which make them unfit for table fruit, but give ciders distinctive flavors and body.

Alford: (Sweet Alford) Sweet type. Medium-sized, conical fruit; skin waxy yellow often blushed with pink; flesh white, juicy, sweet and non-astringent. Harvested in October; milling period up to 3 weeks. Yields a pure sweet cider of good quality. Large, slightly spreading tree with forked twigs due to tip bearing. Originated in England. F88G, F91T{SC}, LI

Amere de Berthecourt: Small, yellowish-green fruit, washed with carmine on the sunny side; juice moderately colored, slightly bitter, perfumed, rich in sugar and tannin; quality excellent. Harvest date October 25 at Geneva, Nov York. Tree very productive, very healthy and vigorous, often drooping under weight of the fruits. Very common in Normandy and Brittany. H90M{SC}, M22, N24M

BreakwellPs Seedling: Bittersharp type. Small to medium-sized, roundish fruit; skin yellow blushed with dark red; flesh white, soft and juicy, mildly sharp, sometimes slightly astringent. Harvested late September to early October; milling period less than 3 weeks, the fruit rotting rapidly. Yields a medium bittersharp, rather thin and light cider of only average quality. Tree medium-sized, spreading, a good pollinator. Originated near Monmouth, England. WILLIAMS, R.; F88G, F91T{SC}, I61M{SC}

Brown Snout: Bittersweet type. Small, conical fruit; skin yellowish-green; flesh white, soft, dry, sweet with slight astringency. Harvested in November; milling period more than 3 weeks. Produces a mild to medium bittersweet cider of average quality. Tree medium-sized, very subject to splitting at the crotches, a good pollinator. Originated in Herefordshire, England. WILLIAMS, R.; H90M{SC}

Brown's Apple: Sharp type. Flattened, dark-red fruit, often with red-stained flesh; acidic juice, low in astringency. Harvested in October. Produces a vintage fruity cider, mildly bittersharp in character. Popular in England since the 1920's. Tree medium-sized, slightly spreading. Originated south of Devon, England. MORGAN, I.; H90M{SC}, M22

Bulmer's Norman: Bittersweet type. Medium to large fruit high in sugar and tannin; ripens in mid-October, ready for milling up to 3 weeks after harvest. Yields a pleasant cider of characteristic flavor and aroma. Rated as "medium bittersweet", between "mild" and "full". Useful for blending purposes. Tree large and vigorous, spreading; cropping heavy but usually biennial; resistant to fire blight. Useless as a pollinator. WILLIAMS, R.; F88G, F91T{SC}, H90M{SC}, I61M{SC}, M22
