Cheese: (White Cheesequake, Big Cheese, White Cheese) 110 days. Flattened globe-shaped fruit; 12 to 14 inches in diameter; weight 10 to 14 pounds; skin cream-colored; flesh coarse, fibrous, soft, juicy, distinctly sweet; quality poor. Largely grown for canning and stock feed. Named for its resemblance to the standard cheesebox of the 1800's. Originated prior to 1824. TAPLEY 1937; F13, K50

Chirimén: 135 days. Small, flattened globe-shaped fruit; 8 to 10 inches in diameter; weight 8 to 10 pounds; narrowly ribbed; skin dark-green, turning dull bronze-orange in storage, profusely warted; flesh yellow-orange, thick, coarse, slightly moist, moderately sweet. Of Japanese origin. Introduced into the United States about 1922. TAPLEY 1937; C20M, C92, G13M, G33

Futtsu Black: 110 days. Flattened globe-shaped fruit, with deep, high ribs; 4 inches long, 7 inches in diameter; heavily warted; skin dark blackish-green; flesh orange-yellow, fine-grained, sweet and nutty. Old-fashioned Japanese cultivar. Very popular for forcing. A2, J73, N84

Golden Cushaw: (Mammoth Golden Cushaw) 120 days. Medium-large, curved fruit, bulbous at the blossom end; 18 to 24 inches long; weight 10 to 14 pounds; widely ribbed; skin deep cream-colored, smooth; flesh pale salmon, coarse and granular, fibrous; quality

poor. Used for canning and stock food. Originated prior to 1884. TAPLEY 1937; D29P, G57M, K20M, K71

Kentucky Field: 125 days. Similar if not identical to Cheese. Flattened globe-shaped fruit; 12 to 15 inches in diameter; weight 12 to 16 pounds; widely ribbed; skin green, turning cream-colored in storage; flesh dull salmon orange, very coarse and fibrous, juicy, slightly sweet; quality poor. Used for canning and stock feed. TAPLEY 1937; K27M

La Primera Calabaza: Improved cultivar of Calabaza or Cuban squash, a long-time favorite in Central and South America and the Caribbean. Round fruit; skin hard, green when ripe; flesh rich orange, thick, fine-grained, very sweet, moist but not watery. Considered mature when the flesh is yellow just beneath the skin. HAWKES [Re], ORTIZ 1973 [Re], SCHNEIDER 1986 [Cul, Re]; B60M(PR), D33

Long Island Cheese: Long Island heirloom, long popular for pies. Medium-large, flattened, lightly ribbed fruits suggesting a wheel of cheese; average weight 6 to 10 pounds; smooth, tan skin; slender, woody stem; deep orange, moderately sweet flesh. Excellent quality for making pies. Long storage capabilities. A local favorite in New York and New Jersey. G6, G68

Mediterranean Giant: 100 days. Butternut-shaped fruit; resembles a short, straight Tahitian squash; weight 8 to 10 pounds; smooth, thin, golden-tan skin; very sweet, golden-orange flesh; keeps very well. Can be harvested as a summer squash when 6 to 8 inches long. Large, vigorous vine; does best on a trellis. Local market favorite in southern California. C20M

Musquee' de Provence: A regional squash from southern France. Flattened cheese-box shape, deeply ribbed; skin dark orange, smooth, glossy; flesh of good flavor; keeps well into the New Year when properly stored. Fast disappearing from the marketplaces. N84, Q34

Neck Pumpkin: 120 days. Similar to Tahitian squash. Large, curved fruit; 18 to 24 inches in length, 4 to 5 inches in diameter at the neck, 9 inches at the blossom end; skin light brown, smooth and hard; flesh orange, thick, solid, dry, sweet. Excellent for pies. Introduced prior to 1850. B75, F13, F73D, G57M, H85M, I63Z, J97M, K10, K50, K73

Papaya Pumpkin: (Papaya Golden, Paw Paw) 90 days. Small, ribbed fruit; round-oval, slightly tapered and flattened on top; weight 2 to 2 1/2 pounds; skin dark-green, mottled with yellow, smooth, thin; flesh deep-yellow, thick, tender, flavor very sweet and nutty; strongly resembles a papaya. Vigorous vine; virus and disease tolerant. Very common in Taiwan. D55, D56M, H49, K20M, N40M, PIG

Piena di Napoli: (Neapolitan, Carpet Bag Squash, Bedouin Squash) Large, violin-shaped fruit; 16 to 20 inches long; 5 to 8 inches in diameter at the blossom end; weight 30 to 40 pounds; broadly ribbed; skin dark-green, turning dull yellow when ripe, smooth; flesh yellow-orange, thick, very sweet and fragrant. Very productive. BURR, TAPLEY 1937, VILMORIN; J73, K20M, N84, Q11M, S17

Seminole Pumpkin: Small, globular fruit, 6 to 8 inches in diameter; slightly furrowed; skin hard, light buff-colored; flesh orange-red, fine-grained, sweet. Good boiled or steamed, excellent when baked. Stores extremely well, a waxy covering forming over the fruit. Highly productive vine; resistant to insects, drought and heavy tropical rains. Adapted to Deep South growing conditions. Found growing wild in Florida by early explorers and settlers. Now confined to the remote Everglades. ERWIN, YOUNG, J. [Re]; D33, F80

Tahitian: (Melon Squash) 150 days. Large, curved fruit, with bulbous blossom end; weight 15 to 40 pounds; skin buff-colored, smooth and hard; flesh deep orange, very sweet and rich, of good quality raw or cooked; keeps extremely well, becoming sweeter in

storage. Can also be dried or pickled. Vigorous vine; resistant to mildew. Believed to be an old cultivar dropped by the seed companies many years ago. A2, B73M, B78, D56M, E97, F73D, K46T, K49T, L3J, L11, L55J, R47

### *Cucurbita pepo*

Delicata: (Sweet Potato Squash) 95 days. Small, cylindrical, narrowly ribbed fruit; 8 to 10 inches long; weight 2 to 3 pounds; skin light cream-colored, striped with dark green; flesh deep orange-yellow, very fine-grained, dry, sweet and rich, quality good. Good specialty market item. Highly prolific vine, 8 to 10 feet long. Introduced in 1894. SCHNEIDER 1986 [Cul, Re], TAPLEY 1937; A2, D3M{PR}, D11M, D76, E24, E59Z, E97, F70, G6, H61, I64, J25M, L42, L89, N34{PR}, R47, etc.

Eat-All:<sup>4 5</sup> Unique, dual-purpose squash. Small, cylindrical fruit; skin cream-colored, striped with dark green; resembles Delicata. Hullless seeds of high nutritional value (35% protein, 40% oil). Can be cut in half and baked as is, the seeds adding a nut-like flavor to the sweet, dry, golden flesh. Or the seeds may be roasted separately as a confection. Developed by E.M. Meader at the University of New Hampshire. L88J

Gem: 70 days. Dual-purpose squash. Grapefruit-sized fruits can be harvested as summer squash, when seed development has just begun, and cooked whole by boiling or steaming until the interior is soft, then served with the top removed and topped with a pat of butter. Also used as a very early winter squash when mature, with rich orange flesh. Semi-bush vine, 6 feet in diameter. L89C, O89

Huicha:<sup>5</sup> 90 days. Light green, fragrant fruit; orange flesh; delicate flavor; harvested at 8 inches long or less, when sweet and tender. Also preferred for producing edible seed. Very large vine, to 40 feet long; leaves 2 feet across. Makes an excellent shade against summer heat if grown along the sunny side of a house. An old cultivar grown by the Indians of Mexico. THEODOROPoulos; F80, N84

Kuta: (F.) 48 days. Unique, gpurmet squash. Young, light green fruit, under 6 inches in length is eaten raw in salads or with dips, being crisp and smooth with a sweet, nutty flavor. Fruits of intermediate maturity may be used like eggplants. Fully mature fruit turns dark green and is excellent for baking or stuffing like a winter squash. Good keeping qualities. Vigorous, prolific vine. C20M, 191

Lady Godiva:<sup>5</sup> (Naked Seeded) 100 days. Grown primarily for the green hullless or "naked" seeds that do not require shelling. Can be eaten raw or roasted. High in protein and oil. The flesh can also be baked, boiled or steamed. Yellow-orange fruit, mottled with green. Highly productive vine; often produces 12 to 15 fruit. A2, D68, F73D, K20M, K46T, K49T, L11, L13M, L77D, N24M, R47

Styrian Hullless:<sup>5 6</sup> Unique oilseed pumpkin from the Styria province in southeastern Austria. Large, green and yellow striped fruits weighing up to 20 pounds. Traditionally eaten in pies, soups and casseroles. Delicious, hullless seeds which can be eaten raw or toasted, high in Vitamin E. Mostly pressed for their deep forest-green, high-quality oil, prized by gourmets. BISSELL, ORTIZ 1992; F80, H73{PD}, J82, N54{PD}, N81, N84, O53M

Sugar Loaf: 100 days. Improved Delicata type with more refined flesh. Attractive, short blocky fruit, 3 inches in diameter; weight 2 to 3 pounds; rusty tan skin, striped and mottled with dark-green; stringless, yellow-orange flesh, high in sugar, of excellent flavor. Stores 2 to 3 months. Developed by Dr. James Baggett at Oregon State University. B75M, C95, E13G{PR}, E75{PL}, G6, G13M, G82, H85M, I39, J9M, K10, L89C, M32, N40{PR}, N52, etc.

Sweet Dumpling: (Vegetable Gourd) 100 days. Small, flattened globe-shaped fruit; 4 inches in diameter; deep, high ribs; skin ivory-colored, with dark-green stripes; flesh orange, very sweet and tender. Suitable for stuffing. Requires no curing, keeping 3 to 4 months. Medium length vines. Good specialty market item. BRENNAN [Cul, Re], SCHNEIDER 1986 [Cul, Re]; D3M{PR},

D11M, E13G{PR}, E97, F70, G6, G79, H61, 164, K16M, L42, N40{PR}, 053M, R47, S55, etc.

Yellow Large Paris: (Gros Jaune de Paris, Mammoth Pumpkin) Large, flattened fruit, with well-marked ribs; skin salmon-yellow, slightly cracked or netted when ripe; flesh yellow, thick, fine flavored, sweet; keeps well. Used in France to make pumpkin soup and pies. VILMORIN; G68, P59M

BACTERIA  
YEASTS

MOLDS

### BEER YEASTS

#### ALEYEASTS

American Ale: (California Ale, Chico Ale) {LI} American-style pale ale yeast. Used commercially for several classic American ales. Very well balanced; ferments dry; finishes soft, smooth and clean. Medium to low flocculation. Apparent attenuation: 73-77%. Optimum temperature: 60-72° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F67T, F99, K54, L36M, N17, etc.

Belgian Abbey Ale: {LI} Abbey-style, top-fermenting Belgian ale yeast suitable for high-gravity beers. Contributes distinctive, estery characteristics to Belgian Dubbel, Tripel and Grand Crus, and to some British Barley Wines. Medium flocculation. Apparent attenuation: 72-76%. Optimum temperature: 58-68° F. A72M, A98, A99, B8P, B54M, B55M, C17, E68, F64, F65, F67T, F99, L36M

British Ale: {LI} Popular yeast from Whitbread of England. Ferments dry and crisp, slightly tart, fruity and well-balanced. Works well at temperatures down to 65° F. Medium flocculation. Apparent attenuation: 73-75%. Optimum temperature: 64-72° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, F64, F65, F67T, F99, K54, L36M

Burton Ale: (London Ale II) {LI} A true English pale ale yeast. Leaves a soft, almost "breadly" flavor in the finished ale. Ideal for use in bitter and pale ale type beers, as its mild flavor allows the flavor of the finest hops and malt to be fully appreciated. Slow to start fermentation. Medium flocculation. Apparent attenuation: 73-77%. Optimum temperature: 60-72° F. A72M, A98, A99, B8P, B55M, C17, C25P, E68, F64, F65, F67T, L36M, N17

Doric Ale: (Doric Canadian) Canadian yeast from Lallemand. Works equally well at ale and lager temperatures. For single stage fermentation. Clean, crisp and fast starting. Produces pleasant ale flavors and aromas. A20M, A72M, A99, B54M, B55M, C17, F64, F99, G40, H34M, J52

East Coast Ale: Brewer Patriot strain used to produce many American versions of classic beer styles. Ferments very clean and with low esters. Excellent for golden, blonde, honey, and German alt style ales. Medium to high flocculation. Apparent attenuation: 70-75%. Optimum temperature: 68-73° F. D10{LI}

EDME Ale: A popular English import for those who want an authentic British flavor in their beers. Produces characteristics desirable for hearty flavored ales. A good clean yeast of excellent quality. Medium flocculation. Apparent attenuation: 75-77%. Very

fast acting. Greatly improved over previous strains. A20M, A72M, A98, A99, B54M, C17, C25P, E68, F64, F99, G40, J52, K54, N17

European Ale: (German Altbier) {LI} Traditional ale yeast from Wissenschaftliche in Munich, Germai. Full-bodied, complex strain; finishes very malty. Produces an "old beer" style of ale that predates the lager revolution. High flocculation. Apparent attenuation: 67-71%. Optimum temperature: 60-72° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, E68, F64, F65, F67T, F99, J52, L36M

German Ale: (German Alt) {LI} A traditional German ale yeast. Produces beer not dissimilar in style from English ales, though different in flavor. Generally has a sweeter, fruitier flavor than British ale. Produces an extremely rocky head. Low flocculation. Apparent attenuation: 73-77%. Optimum temperature: 55-66° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, F64, F65, F67T, F99, J52, L36M, N17, etc.

Irish Ale: (English Brewery Ale) {LI} Ferments to a drier finish than Burton Ale, leaving a more robust, dry flavor in the finished ale. A relatively strong-flavored yeast that imparts a complex dry character, ideal for stronger ales and stouts. Medium flocculation. Apparent attenuation: 71-75%. Optimum temperature: 62-72° F. A20M, A72M, A98, A99, B8P, B55M, C17, C25P, E68, F64, F67T, F99, K54, L36M, N17, etc.

Kolsch Ale: {LI} A yeast with both ale and lager characteristics. Leaves a subtle, almost lager-like maltiness in beer with subdued fruitiness, and a crisp finish. Ideal for Kolsch-style beers and fruit beers. Low flocculation. Apparent attenuation: 73-77%. Optimum temperature: 56-64° F. A72M, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F65, F67T, L36M, N17

Munton & Fison Ale: (Muntona) A popular English yeast for those who want a real British flavor in their beers. A good clean British ale yeast for the more delicate flavored beers. R>r warmer temperature, single stage fermentation. Occasionally causes a long, drawn-out fermentation. A20M, A72M, A98, A99, B54M, 07, C25P, E68, F64, F99, G40, J52, L36M

Nottingham Ale: An English brewery yeast known for producing clarity in ales. Has a remarkably high degree of flocculation. Settles out very quickly and firmly to the bottom, resulting in a much cleaner beer. Suitable for pale ales, bitters and American ales. A98, A99, B8P, B55M, 07, DIO, F64, F65, F67T, G40

Red Star Ale: Popular general purpose yeast. Produces excellent ales and stouts with a traditional ale flavor. Maximum fermenting power is achieved at room temperature. Starts easily. Ferments rapidly. Sometimes high in ester production. Can also substitute for bread yeast. A98, H34M, J52

Scottish Ale: {LI} Ideally suited for Scottish-style ales, and high-gravity ales of all types. Leaves a rich, almost smoky and peaty character in ales. Excellent for smoked beers. High flocculation. Apparent attenuation: 69-73%. Optimum temperature: 55-70° F. A72M, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F65, F67T, F99, L36M, N17

Special London Ale: (Cask Ale, London ESB) {LI} Highly flocculent strain with a rich, malty character and mild, balanced fruitiness. So flocculent that additional aeration and agitation is needed. Excellent for cask-conditioned ales. High flocculation. Apparent attenuation: 67-71%. Optimum temperature: 64-72° F. A72M, A99, B8P, B54M, B55M, C17, E68, F64, F65, F67T, F99, L36M, N17

Swedish Ale: (Swedish Porter) {LI} Nordic-style *starkbier* yeast of unknown origin. Produces strong beers with a floral nose and malty finish. Excellent for porter beers. Medium flocculation. Apparent attenuation: 69-73%. Optimum temperature: 69-73° F. A72M, A99, B54M, B55M, C17, C25P, F65, L36M

Thames Valley Ale: {LI} Produces classic British bitter beers. Rich, complex flavor profile. Clean, light malt character. Low

fruitiness; low esters; well-balanced. Medium flocculation. Apparent attenuation: 72-76%. Optimum temperature: 62-72° F. A99, B54M, B55M, C17, C25P, F65, L36M

Whitbread Ale: Produces a thin-flavored beer, with noticeable fruity and ester-like flavors that become pronounced in the aftertaste, and a clearly defined crisp, dry edge. Settles readily in both the fermenter and the capped bottle. Relatively fast to start fermentation, but slower than EDME ale. High flocculation. Famous strain from England, excellent for Pale Ale. A72M, A98, A99, B54M, B55M, C17, C25P, E68, F64, F99, G40, J52, K54, L36M, N17, etc.

#### LASER YEASTS

American Lager: (New Ulm Lager) {LI} American lager yeast, not a Pilsner strain. Bold, complex and aromatic. Produces beers with a slight butterscotch flavor. Medium flocculation. Apparent attenuation: 73-77%. Optimum temperature: 48-58° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, F64, F65, F67T, F99, J52, L36M

Bavarian Lager: {LI} Produces rich, full-bodied, crisp, malty beers. Well suited for making Helles, Dunkels and Vienna style beers. More tolerant of temperature variations than most lager yeasts. Medium flocculation. Apparent attenuation: 73-77%. Optimum temperature: 48-58° F. Used by many German breweries. A72M, A98, B8P, B54M, B55M, C17, C25P, E68, F64, F67T, F99, J52, K54, L36M, N17, etc.

Bohemian Lager: {LI} Traditional pilsner strain from the Weihenstephan. Ferments clean and very malty, with rich residual sugar in full-gravity pilsners. Excellent with Saaz hops. Medium flocculation. Apparent attenuation: 69-73%. Optimum temperature: 46-54° F. A72M, A98, A99, B8P, B54M, B55M, C17, C25P, F64, F65, F67T, F99, L36M

California Lager: {LI} Excellent yeast for fermenting lagers at warmer temperatures. Yields malty, brilliantly clear beers. Particularly suited for producing 19th Century-style West Coast beers. High flocculation. Apparent attenuation: 67-71%. Optimum temperature: 58-68° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F65, F67T, F99, L36M

Czech Pilsner: {LI} Classic strain from Bohemia. Produces traditional pilsner beers with a clean, dry finish that retain a rich, malty character. Also ideal for making bock and Vienna style beers. Medium to high flocculation. Apparent attenuation: 70-74%. Optimum temperature: 48-64° F. A72M, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F65, F67T, L36M, N17

Danish Lager: {LI} Produces classic Dortmund-style beers—rich, yet crisp and dry. Soft, light profile which accentuates hop characteristics. Well-suited to aggressively hopped pilsners. Low flocculation. Apparent attenuation: 73-77%. Optimum temperature: 46-56° F. A98, A99, B54M, B55M, C17, F64, F65, F99, L36M

Munich Lager: {LI} Unique, very complex strain. Produces exceptional, frequently prizewinning, German beers—very smooth, well-rounded, and full-bodied. Less spicy than Bavarian Lager. Medium flocculation. Apparent attenuation: 73-77%. Optimum temperature: 48-56° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, E68, F64, F65, F67T, F99, L36M, N17

North American Lager: {LI} Traditional strain of North American and Canadian lagers and light pilsners. Will produce a lager with minimal added flavors, ideal when the cleanest possible flavor is desired. Also well-suited to American-style wheat beers. High flocculation. Apparent attenuation: 70-76%. Optimum temperature: 48-56° F. A72M, A99, B8P, B54M, B55M, C17, F64, F65, L36M, N17

Pilsen Lager: (St. Louis Lager) {LI} A classic American pilsner strain, used by a well-known U.S. brewery. Produces beers with a smooth, malty palate. Ferments dry and crisp. Medium flocculation. Apparent attenuation: 71-75%. Optimum temperature: 48-56° F.

A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F67T, F99, J52, K54, L36M, etc.

Red Star Lager: Bottom-fermenting yeast used for brewing at room temperature. Best for steam beers and for cold, lager beer fermentations. Ferments beer to a fruity finish with a slight acidic character. Popular fast starting yeast. Settles out readily to produce a very clear beer. Optimum temperature range 43 to 46° F. J52

Vierka German Lager: Produces beers with true characteristics of the famous German lagers. Also suitable for Pilsners and light lagers. Cold temperature yeast. For best results use a yeast starter. Developed in cooperation with the brewmasters of world famous German breweries. A superior yeast. B55M, G40, H34M

#### OTHERS

American Hefeweizen: Produces Oregon-style Hefeweizen, characterized by yeast in suspension but with clean flavors. Does not yield the typical banana and clove overtones. Produces some sulfur, but otherwise a clean fermenter. Low flocculation. Apparent attenuation: 70-75%. Optimum temperature: 65-69° F. D10{LI}

Bavarian Wheat: (Weizenbier) {LI} Blend of top-fermenting ale and pure wheat strains. Produces beers which are mildly spicy compared to the traditional estery and phenolic wheat beers. Medium flocculation. Apparent attenuation: 73-77%. Optimum temperature: 64-70° F. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F99, J52, L36M, N17, etc.

Belgian Lambic Blend: {LI} Belgian lambic style yeast blend with lactic acid bacteria. Rich, earthy aroma and acidic finish. Suitable for *gueuze*, *faro* and fruit beers. Medium to low flocculation. Apparent attenuation: 65-75%. Optimum temperature: 63-75° F. A99, B54M, B55M, C17, F64, F65, F67T, L36M

Belgian White: {LI} Belgian Witbier yeast. Conveys a tart, slightly phenolic character to beers. Capable of producing distinctive, spiced wheat beers, as well as Belgian-style Grand Cru ales. Alcohol tolerant. Medium flocculation. Apparent attenuation: 72-76%. Optimum temperature: 60-75° F. A72M, A99, B8P, B54M, B55M, C17, E68, F64, F65, F67T, L36M

Sake: {LI} For use in conjunction with *koji* in the production of a wide range of Asian *jius*—rice-based beverages. Full-bodied profile with true sake character. Optimum temperature range for fermentation: 65-75° F. When *koji* is added to steamed rice, it produces enzymes that convert starch to glucose. This is equivalent to the malting process in brewing beer. KONDO; A99, B55M, C17, E68, F65, L36M

Trappist High Gravity: {LI} Robust, slightly phenolic yeast suitable for higher gravity, abbey-style beers and wheat beers. Ferments dry with a rich, ester profile and malty palate. Ideal for *Biere de Garde*. Medium flocculation. Apparent attenuation: 75-80%. Optimum temperature: 64-78° F. A20M, A99, B8P, B54M, B55M, C17, F64, F65, L36M

Weihenstephan Wheat: (Delbrueckii Wheat) {LI} Traditional, pure wheat beer strain. Produces beers with a unique, slightly sour, spicy character—rich with clove, vanilla and banana. Low flocculation. Apparent attenuation: 73-77%. Optimum temperature: 64-70° F. A72M, A99, B8P, B54M, B55M, C17, C25P, E68, F64, F65, F67T, F99, J52, L36M, N17, etc.

#### BREAD CULTURES

##### NON-SOUR

Baking Ybast: Granular active dry baking yeast. One pound equals 48 small yeast cakes. Remains active for 4 months or longer. Use one level tablespoon for each large loaf. Needs to be “proofed” or dissolved in water before use. Should be refrigerated. A52M, B31, C73P, E60P, M63M, N7D

Barm: Natural mix of flour loving organisms. The fresh form will hold in a refrigerator for up to 4 weeks until ready to use. It is then

invigorated by the addition of wheat flour (spelt or kamut), sprouted grain and water, then kept at a temperature of 68° F. after which it can be used for making non-sour, light whole wheat breads, rolls, pizza or pitas. A33M, A33M{PD}, E22{FR}

Cool Rise Natural Leaven: Cool temperature loving, non-sour natural leaven that only requires whole wheat flour and pure water mixed to the consistency of a soft dough. The day before baking it should be refreshed with the addition of more flour and water and returned to the refrigerator to slowly energize. The next day it can be used for making bread, rolls or crackers. E22

European Instint Yeast: Hgh-quality, high-performance all purpose yeast specially developed for professional bakers Very vigorous, since more yeast cells remain alive after the manufacturing process. Can be added directly to dry ingredients. Manufactured by SAF Products, the world's largest yeast producer. G29

European Special Instant Yeast: Special strain of European Instant Yeast designed to provide a long, steady rise, perfect for doughs high in sugar such as sweet bread doughs, or acid sourdoughs. Also good for any dough that should rise "long and slow" to develop its flavor. Manufactured by SAF Products. G29

Fermipan Instant Yeast: (Eagle) Excellent for baking all kinds of breads including pizza, focaccia and other shaped flatbreads, where the small amount of ascorbic acid packaged with the yeast helps relax the dough's gluten. May be added directly to dry ingredients. Very popular in the baking trade. Produced in Montreal by the American Yeast Company of Derry, New Hampshire, a division of Lallemand, Inc. of Canada. G29

Fleischmann's Instant Yeast: Strong, vigorous, fast-acting instant yeast. Also contains ascorbic acid, which produces the acidic atmosphere in which yeast grows best. Doesn't need to be "proofed" or dissolved in water before being used. Formulated in Fenton, Missouri. G29

Red Star Acthe Yeast: Bulk packed for economy. Fresh active dried yeast that has superior leavening power, especially when used for breads and rolls. Needs to be "proofed" or dissolved in water before use. Comes in a reusable jar for easy refrigerator storage. To buy this much yeast in the usual small package would cost considerably more. C64, C95M, G29, H86, I39

Red Star Instant Acthe Yeast: Red Star's traditional active dry yeast produced in smaller granules so that it will dissolve instantly in liquid like instant yeast, no "proofing" being necessary. Bulk packed for economy. Instant active dried yeast is a relatively new form of baking yeast. G29

## SOURDOUGH

Alaskan: An Alaskan type sourdough culture that has been maintained for 21 years. The slow rising of the sourdough culture assists in the breakdown of complex carbohydrates to make breads more digestible and delicious. The tart flavor imparted by this culture gives hotcakes, biscuits and muffins their unique distinction. E22

Austrian: A starter from the old section of Innsbruck. The bakery carries a sign over the entrance proclaiming 1795 as the year the business opened. The culture is especially adapted to rye flours, rises somewhat slowly and produces one of the more sour doughs. WOOD, E. [Re]; L3M

Bahrain: From Bahrain, thought by many to be the ancient Garden of Eden and a curious mixture of the oldest and the newest. The sourdough culture is from the oldest of the oldest. It rises well and is one of the most sour. WOOD, E. [Re]; L3M

Brown Rice: Maintained on organic brown rice flour and pure water. Contains no wheat or gluten, therefore it is safe for people who are allergic to these foods. Makes delicious sourdough brown rice bread, rice muffins and rice pancakes. E22

Chuck Wagon: Handed down by one of the last of the chuck wagon cooks who herded cattle across the plains of the American West. Traditionally eaten around a campfire with beans. Recommended for bread, pancakes and combread. C81M

Finland: The newest culture to be introduced ty Ed Wood, author of "World Sourdoughs from Antiquity". It has performed well in various tests and imparts a wonderful and distinctive flavor and aroma. L3M

Forty Niner: (San Francisco) Obtained from a relative of Ed Wood, author of "World Sourdoughs from Antiquity" who had received it from a prospector of the California gold rush era. The culture rises quite slowly and produces moderately sour dough of exquisite flavor. WOOD, E. [Re]; L3M

French: From a small bakery on the outskirts of Paris that has been in business for over 150 years. The starter rises very well and the dough has one of the mildest sourdough flavors. Interchangeable with the Austrian culture in recipes. WOOD, E. [Re]; L3M

French Lactic: Used in making those delicious crusty loaves of French sourdough breads that everyone loves to eat. Also makes hotcakes light as a feather, and biscuits that melt in your mouth. I39{FR}

French Levain: Extremely vigorous strain created from a pumpernickel-based starter, inspired by the teachings of master baker Raymond Calvel of France. Produces *pain au levain*, a moist bread that doesn't favor the "sourness" so prevalent in American sourdough breads. Traditionally eaten with a bit of sweet butter and *fleurdesel*. G29

Giza: The bakery where this sourdough was found was almost literally in the shadow of the Sphinx in the town of Giza not far from Cairo. In Cairo there are many modern bakeries. This one, in Giza, dates straight back to antiquity. The dough rises well and is moderately sour. WOOD, E. [Re]; L3M

New England: Descended from cultures which have been in circulation in New England for over 250 years. Produces full-flavored breads, as well as excellent pancakes and waffles. Comes with recipes and instructions for feeding. G29

Oregon Pioneer: The same type of "starter" used by early Oregon pioneers in the 1850's. It was taken to the Alaska Gold Rush of 1898 and became the basis of the legendary sourdough starters of that area. The more you use and renew this "starter" the better it becomes. I39{FR}

Red Sea: From one of the oldest ethnic bakeries in Egypt. Found in the village of Hurghada on the shore of the Red Sea. The bread was actually placed on the village street to rise. One of the fastest cultures to rise and has a mild sourdough flavor. Works well in automatic home bread machines. WOOD, E. [Re]; L3M

Russian: A culture from the village of Palekh, two hundred miles northeast of Moscow. It is a fast leavening culture that handles heavy Russian whole wheat doughs very well. It also appears ideal for use with automatic home bread-making machines. L3M

San Francisco: A special strain of sourdough first introduced to the San Francisco Bay area during gold rush days. Sourdough seems to react superlatively to the cool, salty San Francisco air. Produces a bread that is sour yet almost sweet, hard and crisp yet soft, pungent yet mild. A20M, B91T, H69, I8M

Saudi Arabian: From the desert bedouin of Saudi Arabia who have survived the modern transformation of that country unchanged. The Saudi sourdough is as desert as its bedouin baker. It rises moderately well and has one of the most distinctive flavors of all sourdough cultures. WOOD, E. [Re]; L3M

Yukon: A Yukon prospector gave this starter to the physician father of a medical school classmate of Ed Wood, author of "World

Sourdoughs from Antiquity". It produces moderately sour dough and rises well. WOOD, E. [Re]; L3M

#### DAIRY CULTURES

##### CHEESE CULTURES

Aromatic Lactic: Used in the production of sour cream, fermented buttermilk, cultured butter and fresh cheeses such as cottage cheese, Neufchatel, etc. It is used in either the preparation of starters or directly in the manufacture of the above products. M46M{PD}

Blue Mold: (*Penicillium roqueforti*) A blue mold used to ripen and give flavor to blue-veined cheeses such as Roquefort, Gorgonzola, Stilton, Mycella and Danish blue cheeses. Blue molds may be added to milk or mixed with the curd. With certain cheeses such as goat's milk cheese they are sprayed on the surface. F56, H28,130

Chevre: {DS} A new "direct set" culture that produces a rich, creamy chevre goat cheese from goat milk. Excellent as a fresh cheese spread and on bagels. Often used in combination with Fresh Cheese starter culture. Also comes in a kit that includes goat cheese molds, liquid rennet and cheesecloth. F56, G73M, 130

Creme Fraiche: Will make a rich and creamy dessert that can be sweetened with honey, maple syrup or sugar. Very easy to make. Can be served with fresh fruit such as bananas, strawberries, peaches, etc Available as a "direct set" culture which is added directly to milk, saving considerable time. I30{DS}, M46M{PD}

Emmenthaler: Used for making Emmenthaler cheese and other Swiss type cheeses such as Gruyere. The culture is added directly to the milk. Often used in combination with Propionic or Thermophilic cheese cultures. Can not be recultured repeatedly like some other cultures can. 130

Flora Danica: The culture recommended in the book "Goat Cheese Small Scale Production" by the Benedictine nuns of Mont Laurier, Canada for making a variety of goat cheeses, including a delicious Camembert. Will produce a variety of goat cheeses including Fresh Chevre, Camembert, Feta and Blue. Can be recultured many times. 130

Fresh Cheese: Can be used to produce fresh "junket-style" cheeses such as Cottage cheese, Pot Cheese, Neufchatel, sour cream and other soft cheeses as well as buttermilk. Can be kept going or recultured from one batch to the next. G47C, 130

Fromage Blanc: Produces Fromage Blanc which is similar to cream cheese with a delightfully rich flavor. It can be used as a dip, a cream cheese substitute, in cooking as a substitute for ricotta, or simply spread on bagels. The starter culture also comes in a kit that includes a dairy thermometer, recipe booklet and cheesecloth. G73M{DS}, I30{DS}, M46M{PD}

Fromagina: New cheese culture producing a cheese which is a cross between Fromage Blanc and Mascarpone. *Fromagina* cheese is excellent for cooking or it can be served by itself as a cheese spread. Highly recommended for beginning home cheese makers. Developed by Ricki and Robert Carroll. I30{DS}, M46M{PD}

Lactic Mycoderma: Along with Lactic Oidia, capable of rapid initial growth on the surface of cheeses with their high acidity and high salt content. Prepares the surface for the subsequent growth of Red Bacteria (*Brevibacterium linens*). Also synthesizes vitamins. H28

Lactic Oidia: Used in the manufacture of several varieties of semi-soft and semi-hard cheese to prevent the growth of undesirable molds, metabolize lactic acid on the surface of cheese, and promote the growth of cheese ripening bacteria, particularly Red Bacteria (*Brevibacterium linens*). H28

Mesophilic: Used in the manufacture of the majority of cheeses such as Cheddar, Monterey Jack, Stilton, Edam, Gouda, Muenster, Danish blue, Cheshire, Farmhouse and other hard cheeses. Some

strains are used in the preparation of starters, others are added directly to milk and contribute to the maturation and enhancing of cheese flavor. Also used for buttermilk and sour cream. F56{DS}, G73M, G73M{DS}, H28,130,130{DS}

Mozzarella: Designed for making Mozzarella with store bought non-homogenized milk. Produces an excellent meltable Mozzarella cheese. Also comes in a kit that includes starter culture, rennet tablets, citric acid, a dairy thermometer and an easy-to-follow recipe. G73M{DS}, 130

Propionic: (*Propionibacterium freudenreichii* ssp. *shermanii*) Produces the characteristic "eyes", aroma and flavor associated with Swiss, Gruyere and Emmenthaler cheeses. Must be used in combination with Thermophilic starter for preparing Swiss type cheeses. Maintains its vitality for a year in a refrigerator and 18 months in a freezer. H28,130

Red Bacteria: (*Brevibacterium linens*) Plays an important part in the maturing and the production of flavor of certain cheeses. The softer the cheeses the more rapidly and intensely are they subject to the action of cheese maturing bacteria which constitute the typical superficial flora of soft, semi-soft and semi-hard cheeses such as Brick, Muenster, Limburger, Oka, Port Salut, Anfrom, Camembert, etc. H28,130

Thermophilic: Used in the production of cheese whose cooking necessitates high temperatures, such as Mozzarella, Parmesan, Gruyere, Romano, Provolone, Asiago and Swiss cheeses. Can also be used in the preparation of starters or in the direct seeding of the milk intended to be transformed into cheese. F56{DS}, G73M, G73M{DS}, H28,130,130{DS}

White Mold: (*Penicillium camembertii*) A mold used to ripen and flavor Brie, Camembert, Coulommiers, and a variety of French goat cheeses. It develops rapidly and confers a good flavor to cheeses in the course of its maturing. The rapid growth also contributes to the prevention of contaminating molds. F56, H28,130

##### SOUR MILK CULTURES

Acidophilus Milk: A ferment made with *Lactobacillus acidophilus*. Although it is thick-textured like yogurt, it is called acidophilus "milk". It is credited by many health authorities to possess unique therapeutic properties in the treatment of intestinal disorders. Makes an excellent base for salad dressing, or it can be used like sour cream on baked potatoes. HUNTER 1973b, KURMANN, STEINKRAUS; 130

Bulgarian Yogurt: Will produce an excellent very smooth, thick, rich and creamy yogurt that can be made with either whole milk or skim milk. The culture can be kept going for months. Contains *Lactobacillus acidophilus*. One-third ounce packet will make up to 1/2 gallon of yogurt. C95M, G73M, G73M{DS}, 130

Buttermilk: Produces a thick, delicious culture for the same cheeses as the Mesophilic culture such. Also makes an old-fashioned cultured buttermilk for use in cooking pancakes, and sour cream. The buttermilk can be made using either skim or whole milk. G73M{DS}, H28{DS}, I30{DS}

Direct Set Yoghurt: {DS} New direct set yoghurt culture that can be added directly to milk. Works well with store bought whole or skim milk, and also with goat milk. Produces a rich, creamy yoghurt. Each packet will set up to two quarts of milk. May contain acidophilus or *Bifidobacterium* cultures. H28,130

Filmjolk: Thick, ropy cultured milk drink with a clean mild flavor similar to cultured buttermilk. Traditionally used on breakfast cereals and fruit. A major fermented milk in Scandinavia, where large quantities are consumed. For culturing, any milk may be used including soymilk, which makes a rich cultured soy drink. CAMPBELL-PLATT, KURMANN; E22

Hansen's Acidophilus-Yogurt: Contains a combination of *Lactobacillus bulgaricus*, *Streptococcus thermophilus*, and *Lactoba-*

cillus acidophilus. Makes a fermented milk that has the combined rich and creamy texture of *Bulgarius* yogurt with the therapeutic benefits of *Acidophilus* milk. May be recultured. 130

Hansen's Buttermilk: Produces a rich and creamy cultured buttermilk which is perfect for any buttermilk recipe. May also be used as a starter for making Cheddar type cheeses and other cheeses that would normally use a mesophilic culture. Can be recultured. F56,130

Hansen's Yogurt: Makes a creamy yogurt that is custard-like in texture and has a full-flavored nutty, mild, almost sweet flavor. Excellent sweetened with a little honey. Has been a favorite culture for generations of yogurt connoisseurs. F56

Kefir: Reusable culture curds that are composed of yeasts and bacteria living symbiotically. Simple to culture. Add any dairy milk to the "grains", stir, and set aside to incubate at room temperature. Stir daily for 2 to 3 days before straining. Use the kefir as a drink, for baking or for making cheese. The curds that remain after the straining can be used to make another batch of kefir. HUNTER 1973b, KURMANN, STEINKRAUS; E22{FR}, F56{DS}, G47C, I30{FR}, 166

Rosell Yogurt: In use since 1932, it has a world-wide reputation. Produces an excellent yogurt in 3 or 4 hours. Only one yogurt culture permits the manufacture of yogurt for one month. Also used for making yogurt cheese. Will conserve its efficacy for 24 months if kept cold in its original envelope. G47C

Sour Cream: Will turn a pint of cream into a deliciously thick "Old World" style sour cream. Works very well with both store bought milk or goat milk. Can be added directly to milk. Developed by Ricki and Robert Carroll. G73M{DS}, H28{DS}, I30{DS}

Viili: A sweet cultured milk product that is simple to use. No special incubators or sterile jars needed. Sets at room temperature after a 24 hour incubation period. Has a mild, not tart flavor and a creamy, elastic, honey-like texture. Also works well with soy milk. Each culture is a starter for future generations of viili. Introduced from Finland over 85 years ago. Traditionally served cold with berries, sugar, miisli, dry breakfast cereal, and *talkkuna*. KURMANN, TANTTU [Re]; E22{FR}

#### SOYFOOD CULTURES

Barley Koji: (Mugi Koji) Miso koji starter. Will produce regular barley or *mugi miso* in 12 to 18 months, and mellow barley or *amakuchi mugi miso* in 1 to 2 months. Not fortified with yeast and *Lactobacillus* cultures. Includes enough spores for producing 6 pounds of koji. E22, H91

Brown Rice Koji: All-purpose home fermentation culture suitable for producing rice miso, shoyu, sake, rice vinegar and amazake. It can also be used to make sweet vegetable pickles, a delicacy in Japan. Relatively easy to use. A99, E56, G47B, H91, I19M, K54

Hama-Natto: A Japanese fermented soybean product made by fermenting whole soybeans with koji mold. During fermentation the beans acquire a dark reddish color, but turn grayish-black after being dried in the sun. Hama-natto beans are smooth and soft and have a pleasant, somewhat salty flavor resembling mellow *hatcho miso* or shoyu, but is sweeter. Usually sprinkled over rice, served as an hors d'oeuvre with green tea or cooked with vegetables as a seasoning. SHURTLEFF 1975, STEINKRAUS; H91{PD}, I19M{PD}

Natto: Whole soybeans fermented with bacteria. During the fermentation period, the beans become covered with a viscous, sticky material. The quality of the natto is determined, in part, by the stickiness of the beans. Natto is grayish, has a strong musty flavor, and is used with rice or as a side dish. One of the most digestible sources of protein and vitamin B<sub>12</sub>. HOMMA [Re], HUNTER 1973a, SASS, UDESKY; E22, E56, E66T, G20M{PD}, H91, I19M

Red Koji: (Red Rice Koji) Miso koji starter. Will produce red rice miso or *sendai miso* (fermented soybean paste) in 6 to 12 months, and sweet red miso or *edo miso* in 1 to 1 1/2 months. Fortified with yeast and *Lactobacillus* cultures. Includes enough spores for producing 6 pounds of koji. E22

Rice Koji: (Cultured Rice) Special order organic rice from Lundberg's Farm in California, polished rice, and Light Rice koji starter. The first fermentation having already taken place. For amazake and miso. Will make 10 quarts of amazake or 6 pounds of miso, or some of each. Made fresh in small batches. E22{FR}

Seed Miso: Aged unpasteurized seed miso for miso making. Contributes beneficial organisms to get new misos fermenting vigorously. Once miso has been made, some of it can be saved for seed for future homemade misos. A recommended addition to first batches of miso. E22

Shoyu Koji: Koji starter. Produces *shoyu* or *soy sauce* (fermented liquid soy seasonings) in 6 to 12 months. Fortified with yeast and *Lactobacillus* cultures. Includes enough spores for making 2 gallons of shoyu. Has a 6 month shelf life if kept cool and dry. E22

Soybean Koji: (Hatcho Koji) Miso koji starter. Will produce soybean or *hatcho miso* in 18 to 24 months, and wheat-free shoyu or *tamari* in 18 months. Fortified with yeast and *Lactobacillus* cultures. Includes enough spores for producing 6 pounds of koji or 2 gallons of tamari. Has a 6 month shelf life if kept cool and dry. E22

Sufu: A highly flavored, creamy bean paste made by overgrowing tofu with a mold and fermenting the curd in a salt brine/rice wine mixture. It is soft, pale yellow in color, and has a salty flavor somewhat suggestive of anchovies. Also called *Chinese cheese*, *fermented bean curd*, *tofurū*, *fuyu* and *to sufu*. Available in Chinatown markets. CHANG, W. [Re], COST 1988 [Cul, Re], JAFFREY, SHURTLEFF 1975 [Re]; U7

Sweet White Koji: (Light Rice Koji) Rice koji starter. Will produce sweet white or *shiro miso* in 1 month, light yellow or *shinshu miso* in 6 to 12 months, or *amazake* (sweet fermented rice drink) in 24 hours. Fortified with yeast and *Lactobacillus* cultures. Includes enough spores for producing 6 pounds of koji. FINNEGAN [Pre, Re]; E22

Tempeh: A fermented soybean cake from Indonesia that is a low cost, cholesterol free, high quality protein food that can be made at home. Homemade tempeh tastes fresher, slices better, has a better aroma, and costs for less than commercial tempeh. One pound of dry soybeans will make 1 1/2 to 1 3/4 pounds of delicious tempeh in 24 hours at 85° F. E22, H14I.I3, I19M, M87

#### VINEGAR CULTURES {FR}

Cider: Traditionally produced from apple cider. Can also be made from apple wastes. Blends well with peanut or sesame oils. *Switchel* is a refreshing drink, formerly used by New Englanders during haying season. It consists of cold well water and apple cider vinegar. The drink can be sweetened with molasses and flavored with ginger. CUSUMANO [Cul], HUNTER 1973a [Pre], PROULX [Re]; A72M, B8P, B54M, B55M, DIO, F65, K49M

French: Will produce fine quality gourmet herbal vinegars from leftover red or white wine. Comes in a kit that includes bottles, corks, labels and instructions. Legend has it that the original "mother" vinegar came from France after the last world war. F35M

Malt: Traditionally produced from beer and ale. Now commonly made with malt extract. Can be pasteurized to improve keeping qualities, but will no longer form a "mother". Malt vinegar is always served in England with fish and chips, and can be sprinkled over cooked greens or used in place of cider vinegar in any recipe. CUSUMANO [Cul], HUNTER 1973a [Pre], VON WELANETZ; A20M, A72M, A99, B8P, B54M, B55M, DIO, F65, G40, K49M

Red: (Red Wine) Interchangeable with White vinegar in recipes except where the red color would affect a pale sauce. The standard

vinegar for Italian dressings. *Rosel* or *russell* is a fermented beet-vinegar used during the Jewish Passover, and to make a Russian-type beet soup. The liquid is clear, bright red, and has a wine-like aroma. CUSUMANO [Cul], HUNTER 1973a, VON WELANETZ; A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, DIO, E68, F65, G40, K49M, K54

White: (White Wine) Similar to Red vinegar but slightly more delicate. Often infused with an herb or spice, or used as the basis for fruit vinegars. During the Renaissance in France vinegar was flavored with pepper, cloves, roses, fennel, and raspberries. By the 18th century, some 92 varieties of scented vinegars and 55 table flavors were known in France. The *mother vinegar* can be used to make additional batches of vinegar. CUSUMANO [Cul, Re], PROULX; A20M, A72M, A98, A99, B8P, B54M, B55M, C17, C25P, DIO, E68, F65, G40, K49M

#### WINE YEASTS

Assmanshauser: Similar to Pasteur Red in some characteristics, but has a slower fermentation rate and an austere fruitiness rather than "grapiness". Produces wines that are spicy, complex, and of medium body and dark color. Sometimes awkward when young, they achieve balance with barrel aging. Often preferred in Pinot Noir over faster yeasts. N27{LI}

Beerenauslese: Several wineries have had good results with this yeast on grapes infected with botrytis. It intensifies the apricot/honey flavors produced by the mold. The fermentation can usually be arrested by chilling and racking. N27{LI}

Champagne: Very vigorous, general purpose strain. Ferments colder and drier than Montrachet. Suitable for reds and whites, sparkling wines, fruit wines, mead and melomel. Also preferred for flavor in making naturally carbonated soft drinks. ACTON; A98, A99, A99{LI}, J52

Chanson: A yeast of French origin that is preferred by a number of top Chardonnay producers. Wines produced with Chanson have refined and elegant flavors with a graceful emphasis on varietal fruit. Ferments evenly, has low H<sub>2</sub>S production, and flocculates well, making compact lees. N27{LI}

Cotes de Blancs: (Epemay II) Slower fermenting than Montrachet. An excellent general purpose yeast for still or sparkling wines. Produces less foam than Montrachet. Yields a fine, fruity aroma and excellent flavor. Also good for low acid fruit wines and California grape wines. Accentuates the aromatic honey character of meads. Derived from an isolate of the original Epemay strain at the Geisenheim Institute in Germany. A20M, A72M, A98, A99, B8P, B55M, C17, C25P, E68, F64, G40, H34M, J52, K54, L36M, N17, N27, etc.

Dry Mead: {LI} Classic yeast for producing meads with a dry finish. Low-foaming, with little or no sulfur production. Ferments dry, fruity and clean. Very high alcohol tolerance. Optimum temperature range for fermentation: 55-75° F. A72M, A99, B55M, C17, DIO, F64, F65, K54, L36M

Flor Sherry: Some of the better sheries such as Amontillado owe their unique bouquet and flavor to a particular strain of yeast which sometimes forms a thick film on top of the wine. For the advanced winemaker who would like to duplicate this process. Also popular for making sweet and semi-sweet wines. A20M, A99, L36M

French Bordeaux: Ideally suited for red and white wines which mature rapidly, or bigger reds requiring aging. Enhances the fruity characteristics of most wines. Moderate foaming, low sulfur production over a wide temperature range. Optimum temperature: 65-90° F. B55M, F65, L36M

Lalvin 1116: (Lalvin K1-V1116) For white, red and rose wines. Also produces a very clean and light-flavored barleywine or mead. Due to its "killer factor", high alcohol production and good activity at high temperatures, this is one of the best choices for general wine making. An extremely last starter. The "killer factor" inhibits the

growth of sensitive wild yeasts in the must. A72M, A98, A99, B8P, B55M, F65, H34M, J52, N17

Lalvin 1118: (Lalvin EC-1118, Prise de Mousse) A strain that has been isolated from the *grand crus* of the champagne region. Has excellent alcohol resistance and a powerful "killer factor". Ferments well over a wide range of temperatures. Can be used for any type of fermentation. Ideal for stuck fermentations and for both the base wine and bottle fermentation of sparkling wines. A72M, A98, A99, B54M, B55M, C25P, E68, F65, H34M, J52

Lalvin 1122: (Lalvin 71B-1122, Beaujolais 71B, Beaujeu) Suitable for aromatic wines such as Nouveaux and for wines made with very tart fruit. An excellent choice for both white and red wines where an especially "fruity" aroma is desired. Also used for concentrates. A72M, A98, A99, B8P, B55M, C25P, F65, H34M, J52, N27

Malo-Lactic: {LI} Blend of *Leuconostoc oenos* strains isolated from western Oregon wineries. Includes strains Ey2D and Erla. Excellent for high acid wines and low pH conditions. Softens wines by converting harsh malic acid to milder lactic acid. Can be added to juice any time after the onset of yeast fermentation, when sulfur dioxide is less than 15 ppm. B55M, DIO, F65, L36M, N27

Montrachet: An all purpose yeast. Good for making wine from grapes, berries, fruits and vegetables. Very vigorous fermentation. High resistance to sulphur-dioxide. Performs best at 70 to 80° F. Excellent flavor characteristics. Very easy to use, can be added to the must without prior starting. A20M, A98, A99, B8P, C17, C25P, DIO, E68, G40, 139, J52, K54, L36M

Pasteur Champagne: Used for Charmat process sparkling wines, delicately flavored white wines where a minimum of yeast flavor is desired, old fashioned soda pop, and for barley wines. Also helpful in starting stuck fermentations. For cool and cold fermentations, 65° F. and under (but must be started at 70 to 75° F.). Has high alcohol tolerance. A20M, B8P, B54M, C17, C17{LI}, C25P, E68, G40, 139, K54, N17

Pasteur Red: (French Red, Bordeaux Red) A fast, strong fermenter that is used for full-bodied red wines made for aging in oak and in the bottle. It can help give character to some less robust red grapes, or those that must be picked before optimum flavor development. Produces very complex wines, with a characteristic Cabernet-style concentration of fruit and good color extraction. A20M, B8P, B54M, B55M, C17, C17{LI}, C25P, F64, G40, N27{LI}

Pasteur White: (French White, Simi White) Intended mainly for dry, crisp white wines. Provides complexity instead of fruitiness and tends to emphasize acidity, making wines that could be described as austere. Sensitive to sudden chilling, it works best at cool, even temperatures. It can be stopped when sweet. N27{LI}

Premier Cuvee: (Red Star Prise de Mousse) Widely used in France as a champagne yeast. Also good for making Sauvignon Blanc, White Zinfandel, Peach, Bear, Apricot, and plum wines and soda pop such as birch beer, root beer, ginger beer and spruce beer. Has a good tolerance to ethanol and SO<sub>2</sub>. Ferments to dryness. A20M, A72M, A98, A99, B8P, B54M, B55M, C17, DIO, E68, F64, F65, G40, K54, L36M, N27

Prise de Mousse: {LI} Institute Pasteur champagne yeast, race bayanus. Crisp and dry, ideal for sparkling and still white wines and fruit wines. Can also be used for high-gravity beers. Good flocculating characteristics. Low foaming; excellent barrel fermentation. Ferments well at low temperatures, 55-65° F. A99, B8P, B55M, F64, F65, F99, L36M

Red Star Flor Sherry: For dry sherry type wines which require development of a sherry-flor film that is responsible for much of the characteristic flavor. Also used for Port and other strong wines. Has been used in the United States since 1963 for the production of submerged culture sherry. A72M, B55M, E68, F64, F65, H34M, N27

**Red Star Montrachet:** A popular all purpose yeast suitable for fermentations of red and full-bodied white wines. A strong fermenter with good ethanol tolerance. Has a tendency to produce hydrogen sulfide (rotten egg smell). Recommended only for experienced winemakers whose grapes are known to be relatively free of sulphur dust at harvest. Can produce variable results, depending on juice composition and winemaking skill. A72M, B55M, F64, F65, H34M, N27

**Red Star Pasteur Champagne:** Generally used for delicately flavored white wines, where a minimum of yeast flavor is desired, for barley wines, fruit wines and for stuck fermentations. Also used to carbonate soft drinks. A fast, usually complete fermenter that is not suitable for wines requiring slow fermentation. Has very good ethanol tolerance. From the Institut Pasteur in Paris. Used widely in the U.S. since about 1968. A72M, B55M, F64, F65, L36M, N27

**Rhone:** Moderately vigorous strain. Best for Petite Sirah and Rhone type varieties. Good for Zinfandel. Produces wines with fruity, estery aromas. High alcohol tolerance, up to 17%. Moderately fast fermenter. Optimum temperature range for fermentation: 59-82° E B8P.E68

**Steinberg:** A favorite among winemakers for Rieslings, other German-style wines, and apple wines. Produces a distinctive, flowery, complex combination of scents which are best when the wine is fermented cool. The activity of this cold-tolerant yeast can be slowed greatly by chilling but usually resists stopping completely without additional procedures. Also recommended for mead. ACTON; B8P, E68, N27{LI}

**Sweet Mead:** {LI} Excellent for producing extra sweet meads. Top-fermenting yeast which leaves residual sugar after fermentation. Produces very fruity, sweet meads with strong honey aromas. Requires added nutrients for a healthy fermentation. Optimum temperature: 65-75° F. A72M, B55M, C17, DIO, F64, F65, K54, L36M

**Vierka Assmanshauer:** Produces a light, dry Rhine wine. Approximate alcohol content 7 to 9%. Requires 1 pound, 6 ounces of sugar per gallon. Also used for non-alcoholic red currant wine musts which are consumed as health-drinks, and barberry wine. B55M, H34M

**Vierka Bernkastler:** Produces a light, dry Mosel wine. Approximate alcohol content 6 to 8%. Requires 1 pound, 3 ounces of sugar per gallon. Also used for dandelion, orange, and tomato wines, mead and melomel. ACTON; B55M{LI}, K54{LI}

**Vierka Bordeaux:** Produces a full bodied, dry wine. Approximate alcohol content 7 to 9%. Requires 1 pound, 6 ounces of sugar per gallon. Also used for non-alcoholic bilberry wine musts which are consumed as health-drinks, rowan wine, mead and melomel. ACTON; B55M, B55M{LI}, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Burgundy:** Produces a full bodied, dry wine. Approximate alcohol content 9 to 12%. Requires 1 pound, 12 ounces of sugar per gallon. B55M, B55M{LI}, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Champagne:** Produces a light, dry wine. Approximate alcohol content 5 to 7%. Requires 1 pound of sugar per gallon. B55M, B55M{LI}, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Cold Ferment:** (Kaltgarhefe) To be used where there is no chance of maintaining a steady 70° to 75° F. for fermentation. Will ferment thoroughly and without fail at temperatures as low as 42° F. Also used for *Swabian must*, the national drink of Baden-Württemberg, Germany which corresponds to the apple-wine of Frankfurt or the cidre of France. B55M, B55M{LI}, G40, L36M

**Vierka Johannisberg Riesling:** Produces a light, dry Rhine wine. Approximate alcohol content 8 to 10%. Requires 1 pound, 11 ounces of sugar per gallon. B55M, B55M{LI}, C17{LI}, G40, H34M, L36M

**Vierka Liebfraumilch:** Produces a full bodied, medium sweet Rhine wine. Approximate alcohol content 9 to 11%. Requires 1 pound, 12 ounces of sugar per gallon. Also used for non-alcoholic apple wine musts which are consumed as health-drinks, Oregon grape and quince wines, mead and melomel. ACTON; B55M, B55M{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Madeira:** Produces a full bodied, sweet wine. Approximate alcohol content 12 to 15%. Requires 3 pounds, 10 ounces of sugar per gallon. Also used for non-alcoholic strawberry wine musts which are consumed as health-drinks, Rowan wine, mead and melomel. ACTON; B55M, B55M{LI}, G40{LI}, H34M, L36M

**Vierka Malaga:** Produces a full bodied, sweet wine. Approximate alcohol content 12 to 15%. Requires 3 pounds, 5 ounces of sugar per gallon. Also used for non-alcoholic blackberry wine musts which are consumed as health-drinks, and Oregon grape and tomato wines. B55M, H34M

**Vierka Port:** Produces a full bodied, aromatic wine. Approximate alcohol content 12 to 15%. Requires 3 pounds, 5 ounces of sugar per gallon. Also used for non-alcoholic cherry wine musts which are consumed as health-drinks. Recommended for mead and melomel. ACTON; B55M, B55M, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Sauternes:** Produces a full bodied, sweet wine. Approximate alcohol content 12 to 16%. Requires 3 pounds, 5 ounces of sugar per gallon. Also used for pineapple wine, mead, melomel and *Swabian must*. ACTON; B55M, B55M{LI}, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Sherry:** Produces a full bodied, sweet wine. Approximate alcohol content 12 to 15%. Requires 3 pounds, 5 ounces of sugar per gallon. Also used for non-alcoholic gooseberry wine musts which are consumed as health-drinks, and orange and tomato wines. B55M, B55M{LI}, C17{LI}, G40{LI}, H34M, K54{LI}, L36M

**Vierka Steinberger:** Produces a full bodied, medium Rhine wine. Approximate alcohol content 8 to 10%. Requires 1 pound, 8 ounces of sugar per gallon. Also used for apple wine or cidre. B55M, B55M{LI}, C17{LI}

**Vierka Tokay:** Produces a full bodied, aromatic wine with high alcohol content. Approximate alcohol content 14 to 16%. Requires 3 pounds, 10 ounces of sugar per gallon. Also used for fig and rosehip wines, and mock pineapple wine made from carob pods. B55M, B55M{LI}, G40{LI}, H34M, K54{LI}, L36M

**York Creek Zinfandel:** Isolated in 1979 from a natural fermentation which reached over 18% alcohol in a Zinfandel must from the renowned York Creek Vineyard in St. Helena, California. Very fast and vigorous, it may help encourage high-sugar fermentations toward dryness. Wines other than Zinfandel tend to exhibit Zinfandel-style flavors, such as a berry-like fruitiness, when fermented with this yeast. N27{LI}

#### OTHER CULTURES

**Brewmart Cider:** Comes in a kit that includes imported apple cider extract from Normandy, and yeast. Each 3 lb. 5 oz. will yield five gallons of authentic French cider. Requires three pounds of corn sugar. Sometimes apple flavoring extract is added before bottling. A20M, C17

**Chinese Red Rice:** When cultured on rice, will yield grains of an intense red color. The red rice is dried and then used for coloring various foods including pickled vegetables, fish, drinks, pastries, sauces and for manufacturing red wine. It is also added to the brining liquid of red sufiu to give it color, thick consistency and a distinctive flavor and aroma. Also known as *ang-kak*, *anka*, *beni-koji* and *aga-koji*. COST 1988 [Cul], HESSELTINE, SHURTLEFF 1979, STEINKRAUS, UPHOF; U7

**Fermento:** Used in the production of high quality semi-dry sausage with traditional tangy flavors, where fermentation is essential.

Eliminates the curing times necessary for the fermentation process to take place. K27T

Ironmaster Country Cider: Comes in a kit that includes yeast and concentrate from the apple orchards of Normandy. Each 2.2 pound can makes two gallons of sparkling cider. E68, L36M

Kombucha: {FR} A fermented beverage with a slightly sour flavor comparable to a light wine or apple cider, but without alcohol. During the fermentation process a thick film forms on the surface of the liquid. Has antibiotic properties and is used in healing diets. Also known as *tea cider*, *tea beer*, *teeschwamm*, *tea fungus*, *wunderpiltz*, *hongo*, *cajnij*, *fungus japonicus* and *teekwass*. Consumed widely in Russia, Japan, Poland, Bulgaria, Germany, Manchuria and Indonesia. FRANK, HESSELTINE, HUNTER 1973a, STEINKRAUS, TIETZE; D87M, E20M, E22, F73D, G39G, I1M, 174, J82, L24G, M87

Onchom: (Ontjom) Produces an orange-red cake-like product resembling tempeh prepared by fermenting peanut presscake, along with solid waste from tapioca manufacture. Has a soft texture and an attractive appearance along with a meaty flavor. Consumed in Indonesia as a side-dish, either in the form of deep fat-fried slices, in the form of small portions in soups, or served as chips, a snack, or topped with sauce. HESSELTINE, SHURTLEFF 1979 [Cul, Re], STEINKRAUS; U7

Ragi: (Rqgie) Yeasts, bacteria and molds, grown on rice flour and sold in the shape of round, somewhat flattened balls or cakes. Used to saccharify starch in the making of Indonesian fermented delicacies such as *tempeh*, *ontjom*, *tape*, *arrack*, *beras*, *brem* and *peuyeu*. HESSELTINE, OCHSE, STEINKRAUS; A45

Spirulina Algae: (*Spirulina platensis*) Can be grown in a large bottle and then transferred to a fish tank, pond, or large-scale culture tank. Grows in alkaline waters, with a pH of 9 to 11 as optimum. Sodium bicarbonate and other carbonates should be present. Fresh spirulina is produced at less cost, and with higher nutritional value than the dried spirulina purchased in powder or tablet form. C7M{FR}, M32T{FR}

## STRAWBERRY {PL}

FRAGARIA X ANANASSA                      FRAGARIA OVALIS  
FRAGARIA VESCA 'SEMPERFLORENS'

### ALPINE STRAWBERRIES {S}

A distinct form of wood strawberry, characterized by long, pointed fruit that is small but much richer in flavor than the common garden strawberry. They do not produce runners and are therefore ideal for edgings or container culture. Can be grown from seed or division. Their very high pectin content makes them better suited to jam making. K85{PL}, N24M{PL}, R47. (F. vesca 'Semperflorens')

Alexandria: (Baron Solemacher Improved) Large conical fruit, up to 1 inch long; skin bright red; juicy, very aromatic flesh with an excellent sweet flavor. Small, upright plant, 8 to 10 inches tall; exceptionally vigorous; productive; very hardy; disease resistant. Earlier bearing than other types. C92, E63D, G6, H51M{PL}, J82, K49M, M82{PL}, N81, N84, Q24, S55

Alpine Yellow:<sup>1</sup> Small, very long-pointed conical fruit, 3/4 to 1 inch long; skin color ranges from pale cream to golden yellow; highly aromatic. Has an intense flavor when ripe, preferred by some over the red-fruited types. The yellow fruit is less attractive to birds. J29{PL}, J61M{PL}, M32, 053M

Baron Solemacher: (Baron von Solemacher) Medium-sized conical fruit, up to 1 1/2 inches in length; skin bright red; flesh aromatic, flavor very good when thoroughly ripe. Vigorous, upright plant, about 8 inches tall; highly productive. The first widely avail-

able alpine strawberry and a standard in Europe: Very similar to Alexandria. HENDRICKSON, SIMMONS 1978; B49, S61

Blanc Ameliore:<sup>2</sup> (Improved White) A white fruited alpine strawberry originating in France. Produces runners and makes a good ground cover. The white color makes the fruit less attractive to birds. R77

Charles V: Small but flavorful fruit, produced nearly year round in warm climates. Clumping perennial, 2 feet by 2 feet; spreads by seed or divisions. Can be used as a ground cover or in formal garden plantings. Also makes an attractive container plant. K66{PL}, M98{PL}

D'Ogni Mese: Flavor, deep-red fruits, larger than the wild woodland strawberry. Compact plant, produces few runners. Ideal for rock gardens, pots and path edgings. Sow in seedbeds in March and April. Space about 12 inches apart. Usually harvested the following spring. Q11M

Mignonette: Large fruit, up to 1 inch long; red skin. Excellent quality and flavor. Exceptionally prolific; very hardy. Makes an attractive edging or ground cover plant. Used in France for decorating pastries or dropping into a glass of champagne. L91M, N84

Pineapple Crush:<sup>1</sup> Large fruit, up to 1 inch long; light cream-yellow skin. Has an unusual fragrance and flavor reminiscent of strawberry mixed with pineapple. Compact, runnerless plant; bears very early and continuously over a long season. C9{PL}

Red Wonder: Selected for the deep red color of the fruit. Everbearing plant that produces no runners. Grows 6 to 10 inches tall. Excellent as a ground cover or in the rock garden. D37{PL}, N84

Ruegen: (Benary, Rugen) Medium to large elongated fruit, somewhat smaller than Alexandria; skin deep crimson; flesh aromatic, with an intense sweet strawberry flavor. Compact, bushy plant, about 10 inches tall; very productive and long bearing. One of the standard cultivars in Europe. C85M, D92M, E81M, F80, J20, J61M{PL}, J82, J82{PL}, J99D, K49M, N42{PL}, N84, 053M

Ruegen Improved: {PL} Rich red fruit; juicy, sweet and tender, of excellent flavor. Long-bearing strain, will bear continuously from early June through October but is especially abundant in the fall. Somewhat larger and more productive than the standard strain. B9M, B30, B75, B77, C9, D11T, D69, I18M, I39{S}, M16, M65M, M77, N81{S}, Q24{S}

Variegated Alpine:<sup>3</sup> Attractive, ornamental edible groundcover. Spreading plant, 6 to 12 inches tall; dark green leaves, heavily variegated with creamy white. White flowers, produces from spring to fall. Small, red fruits with the flavor of wild strawberries. Will grow in full sun or partial shade. I49M

White:<sup>2</sup> Small, white fruit with an excellent mild sweet flavor, not as acid as the red-fruited types. The unique white color makes them less attractive to birds. Small, upright plant, 8 inches tall, spreads to 24 inches across. K49M, K66{PL}, K79{PL}, M16{PL}

Yellow Wonder:<sup>1</sup> Extremely flavorful, pale yellow fruit with small, tender seeds. Very aromatic. Has a distinct flavor preferred by some over the red-fruited types. Allow to ripen fully before picking. Compact plants grow 10 to 11 inches high. D37{PL}, D92M, I83M{PL}, N84, S61

### GARDEN STRAWBERRIES

The familiar, large-fruited strawberries that are generally not as flavorful or as aromatic as alpine strawberries. They also produce runners which must be removed or replanted at some point in the management of the strawberry bed. Mostly F. x ananassa.

**EVERBEARING** Included here are the older, traditional cultivars and the newer types, sometimes called day neutral strawberries. True day neutral types produce buds, flowers and fruit throughout the growing season, regardless of day length, and to a certain extent,

region. In areas with winters normally too cold for strawberries, they can be grown as annuals. They are also well suited to window-sill, hanging basket, cold frame or greenhouse culture.

**Chandler:** Large, long conic to long flat wedge-shaped fruit; skin red, glossy, attractive; flesh firm, red, well-colored to the center, of very good flavor; ripens somewhat later than Douglas; ships well. Recommended for fresh market and processing. Semi-erect plant; self-pollinating throughout the season; produces numerous runners. Originated in Davis, California. Introduced in 1983. A63, C54, F87, G17, G81, I41, 199M, L46M, M81M

**Chief Bemidji:** Large, rounded wedge-shaped fruit; skin bright red; flesh firm, sweet, solid red throughout; held well above the ground. Plant extremely hardy; vigorous and productive; produces 15 to 20 large runners per plant; does well on poor soil. Survives temperatures of  $-40^{\circ}$  F. without protection. Originated in Port Hope Township, Minnesota. BROOKS 1972; C61

**Fern:** Day neutral type, always has fruit in different stages of development. Medium to large, conic to flat wedge-shaped fruit; skin bright red; flesh very firm, sweet, flavor excellent; ripens early. Semi-erect plant, more spreading than Hecker; self-fertile. Runner production good, comparable to Hecker. Low chilling requirement. Originated in Davis, California. Introduced in 1983. FI, F87, I41, M81M

**Fort Laramie:** Medium to large fruit; flesh very firm, of excellent flavor; recovers quickly after blight or hailstorms. Yields over a long season. Foliage susceptible to mildew. Excellent in mountain, coastal or other cool-winter areas. Can survive temperatures of  $-40^{\circ}$  F. HENDRICKSON, STEBBINS; B73M, C61, D65, D76, E3, E24, G16, H42, H58, 178, 199M, L70, L79, M65M

**Gem:** Fruit small, short wedge-shaped to oblate, irregular; skin deep red, glossy; flesh pale red, tart; dessert quality good. Very productive plant, but doesn't bear much spring fruit; very hardy. Susceptible to leaf spots; resistant to leaf scorch. Originated in Farwell, Michigan by Frank J. Keplinger. Introduced in 1933. BROOKS 1972; A82, G72, K28, M83

**Hecker:** Day neutral type. Large to very large, bright scarlet fruit of excellent flavor. Good for fresh use, freezing and jam making. Fairly cold hardy for a day neutral strawberry. Well suited to prairie conditions due to its earliness. Produces up to 10 months under favorable conditions. Introduced by the University of California. A65, F67, I41, M81M

**Le Sans Rivalle:** Medium to large, long-conic fruit; skin medium glossy red; flesh fairly firm, flavor very good. Moderately vigorous plant; productive; likes light or medium soil and succeeds in chalky conditions. One of the older everbearing types. Originated in France about 1937. SIMMONS 1978; U7D

**Lipstick:**<sup>4</sup> *Fragaria* x *Potentilla*. Unusual red-flowered strawberry. Large, rich, reddish-rose flowers. Much more vibrant and fade resistant than Pink Panda. Blooms from mid-spring well into fall. Small, red fruits produced sparingly. Spreading plant, 6 to 8 inches tall; very attractive deep-green foliage. Does best in sandy soil. Originated in the Netherlands. B77, DI 1M, F70, H63, H78, 149M, 191, M65M, M77

**Luscious Treat:** A dual purpose day-neutral strawberry that can be grown in hanging baskets or in the garden. Starts bearing very early and continues throughout the summer and fall, on both the crown and runners. Glossy fruit, deep red inside and out. Retains its flavor and quality when frozen. L79

**Mara des Bois:** Everbearing woodland strawberry with excellent eating qualities. Medium to large, conical, slightly elongated fruits; red skin and firm, clear red flesh. Exquisite aroma reminiscent of a wild woodland strawberry. Ripens from early August to October. Moderately vigorous plant; resistant to mildew; produces very heavy crops. Developed in France. D11M, F70, P59M

**Ogallala:** (*F. ovalis* x) Medium to large fruit; skin rich, dark red, too tender for good shipping; flesh bright red, firm, tender, sweet, of high quality; processes very well. Bears continuously from late May or early June to early November, except for a 3 week period immediately after the spring crop. Very vigorous, extremely hardy plant. A65, C61, D65, D76, E97, G16, G81, I99M, J83, K75T, L70, M83

**Ostara:** Small to medium-sized, conical fruit; skin red; flesh medium firm, orange-red, flavor moderate; husks very easily. Vigorous, tall, spreading plant; susceptible to mildew; prolific for an everbearer. Originated in Wageningen, The Netherlands. SIMMONS 1978; P59M, P68M

**Ozark Beauty:** Fruit large, often elongated, long-necked; skin firm, glossy; flesh solid, flavor very mild, sweet; dessert quality very good; good for freezing; ripens late. Vigorous, very productive plant; blooms late; produces numerous runners; widely adapted to climate. BROOKS 1972; A39, A82, B73M, B75, C61, E3, G16, G44, G71, G81, H58, H65, 178, J83, M65M, M83, etc.

**Pink Panda:**<sup>4</sup> (*Frel*) *Fragaria* x *Potentilla*. Unusual pink-flowered strawberry. Attractive pink blooms produced from spring until fall. Small, tasty red fruits. Spreading plant, 6 to 8 inches tall, very hardy and vigorous; readily produces runners. Bright, semi-evergreen leaves. An excellent groundcover. Also ideal for window boxes, containers and hanging baskets. Developed in England by Adrian Bloom. B9M, C9, D11T, D37, D95, E87, F20M, F53M, G89M, J61M, L79, M77, M92

**Quinalt:** Very large, conical fruit; skin attractive, tender; flesh soft, color and flavor good; excellent for freezing. Produces a moderate crop in June, becoming more productive July through September. Vigorous, compact plant; produces many runners; has excellent disease resistance. Main crop from crown; also produces fruit on rooted runners. STEBBINS; B45M, B73M, C54, D65, D76, E3, E97, F87, G23, I41, 149M, 178, 199M, M65M, M81M, etc.

**Selva:** Day neutral type. Large, conical fruit; skin deep red, attractive; flesh very firm, juicy, flavor very good. Produces fruit during November, December and January in coastal southern California, when fruit is unavailable from the standard short-day cultivars. Vigorous plants are prolific runner makers; will flower and fruit effectively independent of day length. Originated in Davis, California. Introduced in 1983. C34, C61, D37, D76, E97, F87, I41, M81M

**Shortcake:** Long conical fruit; skin very glossy, attractive; flesh red, well-colored to the center, sweet, of excellent flavor. Yields a primary crop of large berries in June, followed by a second crop 6 to 8 weeks later of good medium-sized berries, larger than most other everbearers. Productive in a wide range of soils and climates. B75

**Streamliner:** Very large fruit; skin rich red; flesh firm, sweet, of excellent flavor and quality. Good keeper for home use. Hardy plant; a heavy spring cropper; makes runners freely. Originated in Lostine, Oregon by Roy C. Edgmand. Introduced in 1944. BROOKS 1972; B45M, K75T, M69M, M83

**Sweetheart:** {S} One of the first open-pollinated strawberries from seed. An excellent novelty everbearing type for containers or home garden use. The fruit is 5 times larger than alpine types, but only medium-sized when compared to other everbearers grown from runners. Will produce from late July till fall from a January sowing. D27, E53M, E63D, F35M{PL}, G87, 191, J82, N84, 053M, 093, Q24, S55

**Temptation:** {S} Improved Sweetheart type. Will provide a continuous supply of fresh berries from July until fall from a January sowing. Medium-sized, deep red fruit with very good flavor. Vigorous, hardy, compact plants; almost entirely free of runners. Ideal for clay strawberry planters and hanging baskets. D11M, D37{PL}, E91G, F70, G53M, L42, L91M, M49, N81, N84, 089, P59M, R32

Tribute: Medium to large fruit, irregular to short conic; skin glossy, bright red; flesh medium red to the center, firm, flavor acidic but pleasant when consumed fresh and unsugared. Medium-sized plant; very vigorous; highly resistant to red stele and tolerant to verticillium wilt; ripens a heavy spring crop in midseason. B43M, B58, C55M, C61, G44, H65,150, M81M, N24M

Tristar: Medium-sized, symmetrical, short conic fruit; skin glossy, deep red at maturity; flesh solid medium deep red, firm, flavor excellent when eaten fresh and unsugared. Small to medium plant, of moderate vigor; produces a medium number of runners; resistant to red stele and tolerant to verticillium wilt; bears a heavy, very early spring crop. B6, B26, B58, B74, B75, C61, D37, E97, G16, G44, G87, H65,150, J61M, L33, L70, etc.

**JUNE-BEARING** Also called main crop strawberries, these produce one large crop, beginning early in spring and ending with the onset of hot weather. They are generally considered to be more vigorous, heavier bearing and of better quality than everbearing types.

#### *Early Season*

Annapolis: Medium to large, attractive, light to medium red fruits; flavor mild but good. Vigorous, very productive plant; susceptible to powdery mildew; highly resistant to most races of red stele. Popular with commercial growers and U-Pick operations. Winter hardy in Atlantic Canada. Originated in Nova Scotia, Canada. BROOKS 1997; B58, C61, C84, F87, G16, G44, H65, H88,141,150

Blakemore: Fruit medium-sized, blunt conic, shoulder broad; skin bright red, very attractive, fairly tough; flesh firm, light red, juicy, acid, high in pectin. Very good flavor and dessert quality, also very good for preserving. Vigorous, productive, disease resistant plant; produces runners freely. Adapted to southern states. A82, B45M, G72,141P, K28, K75T, M69M, M83

Cyclone: Large fruit, slightly necked so that the hull is removed easily; flesh brilliant red, juicy, flavor excellent; freezes well. Good for home gardens and local markets; not firm enough for distant shipping. Vigorous, handy, high yielding plant; produces numerous runners. BROOKS 1972; J83, K75T

Earlibelle: Medium-large fruit, averages 62 berries per pound, long-conic; skin bright red, turning deep red at maturity, very glossy; flesh a uniform bright red, firm, flavor tart, good. Very vigorous plant; produces runners so freely, they must be thinned for best fruiting performance. BROOKS 1972; A82, G81,153M

Earliglow: Medium-sized, conical fruit; skin tough, glossy; flesh rich red, firm; dessert quality good, very good for freezing; ripens 2 to 3 days later than Sunrise. Vigorous, widely adapted plant; produces numerous runners; resistant to 5 races of red stele, tolerant to wilt. Excellent for pick-your-own operations. A24, A38M{PD}, A39, B43M, B58, B75, C55M, C61, C84, D69, F87, G44, G81, H65,150, J83, K71, etc.

Fairfax: Medium-sized fruit, wedge-shaped to short blunt conic; skin quite bright red, turning dark purplish-red when ripe; flesh deep red, mildly subacid, dessert quality excellent. Doesn't keep well, but is ideal for home gardeners. Considered one of the best tasting strawberries. Especially productive when late-season runners are removed. BROOKS 1972, HENDRICKSON; H88

Florida Ninety: Fruit large; shape unique, long and tapered; skin bright red; flavor excellent; very well-suited for fresh market; ripens extremely early, in November and December. Very vigorous plant; highly productive, having a short rest period; produces numerous runners; very susceptible to leaf spot and leaf scorch. BROOKS 1972; A82,153M, M83

Northeast: Large, firm fruits with a strong flavor and aroma; ripens with Earliglow. Recommended for fresh market and freezing. High yielding plant, adapted to both hill and matted row culture. Resistant to 5 eastern races of red stele. Susceptible to powdery

mildew. Produces greater crops than Earliglow on heavier soils. A24, B58, C61, C84, F87, H88,150

Pocahontas: Large, blunt conic, fairly uniform fruit; skin medium to deep red, glossy, attractive, tough; flesh red, medium firm, very tart; dessert quality good, very good for freezing; ripens early, about 1 week after Blakemore. Vigorous, very productive plant; makes runners freely; susceptible to red stele root rot. BROOKS 1972; G65M, I41P, M83

Premier: (Howard 17) Fruit large, long-conic to wedge-shaped, the largest berries furrowed on each side; skin red, attractive, glossy; flesh firm, well-colored to the center, juicy, pleasantly sprightly; quality good. Hardy, productive plant; disease and frost resistant. Originated in Belchertown, Massachusetts by A.B. Howard. Introduced in 1909. HEDRICK 1925; H88

Senator Dunlap: (Dunlap) Medium to large fruit, round-conic, usually with a distinct neck; skin glossy, attractive light red, quickly changing to a dark red; flesh well-colored to the center, juicy, mild, pleasantly flavored; quality good. An old favorite for gardens and local markets. Originated in Urbana, Illinois. Introduced in 1899. HEDRICK 1925; C55M, C61, D76, E97, G16, J83, K71, M46

Sequoia: Exceptionally large, long conic fruit; skin dark red, tender, smooth, attractive; must be harvested at frequent intervals during hot periods or finish will become dull; flesh soft, requiring extra care in handling and shipping; flavor excellent. Begins to bear in January, hitting peak production in March. Performs like an everbearer in mild climates Well suited to home gardens and "U-pick" farms. BROOKS 1972, STEBBINS; A63, C54, D37, G17, G81,199M, K75T, M81M, M83, N33

Sunrise: Fruit medium-sized, conic, symmetrical; skin light, bright red which does not darken, glossy; flesh light pink, firm, subacid; dessert quality good; ripens early. Very vigorous plant; produces runners freely; resistant to 3 races of red stele and to verticillium wilt. BROOKS 1972; A82, B58, G72, G81, H49, H88, I41P, I53M, J83, K28, K75T, M83

Sweet Charlie: Large, orange-red, wedge-shaped to conical fruits; very sweet and flavorful. Vigorous, productive plant, tolerant of anthracnose. Easy to harvest. Adapted to the Mid-Atlantic and southern United States. Developed at the University of Florida. Winner of a taste test at the 1994 North Carolina Strawberry Grower's meeting. BROOKS 1997; D37, G81,141,150, L46M

Tioga: Medium to large fruit, long-conic to wedge-shaped; skin medium red, glossy, tough; flesh medium red, exceptionally firm, flavor good, acidity medium high; shipping quality excellent. Vigorous, prolific plant; moderately resistant to diseases; widely adapted to all growing areas of California. BROOKS 1972; A63, M83

Veestar: Medium-sized fruit, conic, uniform; skin medium red, glossy, smooth, attractive; flesh light to medium red, moderately firm, slightly tart, of excellent flavor; ripens early. Upright, medium-sized plant; of medium vigor. Runner production moderate. Originated in Vineland Station, Ontario, Canada. BROOKS 1972; B26, C85M, FI

#### *Midseason*

Allstar: Very large fruit; skin glossy, tough, bright red; flesh firm, mild, sweet, of good quality; excellent for freezing; ripens with Guardian. Vigorous, productive plant; produces numerous runners; resistant to 5 races of red stele, tolerant to verticillium wilt. Performs well under diverse soil, climatic and cultural conditions. A24, B6, B43M, B58, C55M, C61, C84, D65, G3, G44, G81, H88, 150, J97M, M65M, etc.

Cardinal: Exceptionally large fruit; flesh firm, uniformly red throughout, of excellent quality when fresh or processed. High yields. Excellent for pick-your-own operations as well as home gardens. One of the leading cultivars in Oklahoma, Missouri,

Arkansas, Tennessee and the Southeast. A39, A82, B6, B43M, B58, C55M, C84, D76, F87, F93, G81, H65, J83, L33, M83, etc.

Catskill: Fruit large, long-conic, slightly irregular; skin glos<sup>^</sup>, bright crimson, attractive; flesh light red, moderately firm, mildly subacid, dessert quality excellent. Very vigorous and productive plant; produces runners freely; adapted to a wide range of soil types; resistant to verticillium wilt. BROOKS 1972; C55M, C61, G81, H54, H88

Cavendish: Medium to very large, attractive, deep glossy red fruits; firm red flesh; excellent, sweet melon-like flavor; ripens between Honeoye and Kent. Moderately vigorous, very productive plant. Resistant or tolerant to wilt, red stele and powdery mildew. Very winter hardy. Originated in Nova Scotia, Canada. B58, C61, E97, F1, F87, G16, G44, G81, H65, M1, 150, J20

Delmarvel: Large, very attractive, symmetrical fruits with good color; highly aromatic; texture and flavor very good to excellent; ripens in early midseason. Vigorous plant with abundant runners; productive in either light or heavy soils. Disease resistance outstanding. Recommended for the Mid-Atlantic region and adjacent areas. A24, B6, B58, C61, C84, F87, G44, G81, 150, M99G

Glooscap: Medium to large fruit; skin glos<sup>^</sup>, red; flavor and quality excellent. Good for freezing or fresh market. Very large, high yielding plant; makes runners freely; does best in cool, wet climates. Extremely winter hardy. Susceptible to red stele. Originated in Kentville, Nova Scotia, Canada. A65, B26, B58, C55M, C84, F87, 141, 150, L70, M81M

Guardian: Large, irregular conic fruit; skin light red, glossy; flesh firm, light red, of good flavor; ripens 4 to 5 days later than Surecrop. Moderately vigorous, productive plant; resistant to 5 races of red stele root rot and verticillium wilt; produces a moderate number of runners. BROOKS 1972; A24, A82, B6, B58, C55M, C61, C84, D76, 141, J83, M65M

Honeoye: (NY 1409) Very large, conical fruit; skin bright red, glossy, tough; flesh firm, quality very good. Vigorous, very productive plant; produces numerous runners; very winter hardy. Recommended for more northern states and the Midwest. A24, B43M, B58, C55M, C61, C84, D65, D76, G16, G23, G44, G81, H65, H88, 150, J20, J83, etc.

Hood: Large, round conic fruit; skin bright medium red, glossy, attractive; flesh light red, medium firm, pleasantly subacid. Excellent for preserves and jams, satisfactory for local fresh fruit markets. Productive plant, yields of 6 tons per acre have been obtained. Very popular home garden cultivar in the Northwest. Originated in Corvallis, Oregon. BROOKS 1972; C34, 141, 149M, L18, M81M

Jewel: (NY-1324) Fruit large, blunt wedge conic-shaped; skin bright red, glos<sup>^</sup>, very attractive; flesh red, somewhat firmer than average, has a slightly aromatic flavor reminiscent of Holiday, of very good quality. Excellent for freezing and processing. Hardy plant; not resistant to red stele or wilt. A24, B6, B58, C61, C84, F16, F87, G16, G44, 141, 150, J20, M99G

Kent: Very large fruit; skin dark red; flesh firm, red throughout; quality good, excellent for fresh eating and frozen desserts; easily picked. Vigorous plant; produces runners freely. Well adapted to northern climates and shows excellent winter-hardiness. Released by the Kentville Research Station in Nova Scotia. B6, B26, B58, C61, C84, C85M, F16, G44, G87, H42, 141, 150, K64, M81M

Lester: Large, very symmetrical fruit; skin uniformly deep red, attractive; flesh firm, of good mild flavor; ripens with Surecrop, between Earliglow and Raritan. Resistant to 5 strains of red stele, susceptible to verticillium wilt. Runners freely to produce a fruiting bed of medium density. B6, B58, C84, H88, 150

Midway: Medium to large fruit of irregular shape; skin uniform deep red, tough, glossy; flesh firm, flavor subacid with good dessert quality; freezes well. Moderately vigorous plant; produces runners

freely; resistant to the common race of red stele. BROOKS 1972; A82, B6, B58, C55M, C61, C84, D65, G16, G44, H49, H54, 150

Porter's Pride: Large fruit of flavor good; sufficiently firm for local market but not for distant shipping. Hardy, vigorous plant; resistant to mildew; productive under prairie conditions. Originated in Parkside, Saskatchewan, Canada, by A.J. Porter, Honeywood Nursery. BROOKS 1972; F67

Raritan: Large, glossy, bright red fruit; flesh firm, dessert quality very good, color acceptable for fresh market but not for processing. Productive plant; produces runners freely, making a good matted row; susceptible to red stele and wilt. Originated in New Brunswick, New Jersey. BROOKS 1972; B6, B58, G71, H88, 150, J97M, M99G

Redchief: Medium to large cone-shaped fruit; skin deep red, glossy; flesh firm, subacid; of good dessert quality that is maintained in frozen products; ripens 2 to 3 days later than Surecrop. Moderately vigorous plant; produces runners freely; tolerant to 5 races of red stele. BROOKS 1972; A24, B6, B58, C55M, C61, C84, F87, G44, G81, H88, 150, J83

Redcoat: Medium to large fruit, maintains good size throughout the harvest season; skin glos<sup>^</sup>, light red, highly attractive; flesh firm, flavor acceptable, color rather light. Acceptable for freezing, good for jam. Tall, vigorous plant; produces runners freely; fairly resistant to powdery mildew. BROOKS 1972; C85M, G50, H85

Robinson: Medium to large, conical fruit; skin red, attractive; flesh light red, soft, flavor mild; not adapted to freezing. Being replaced by firmer, better-flavored cultivars. Small, vigorous, very productive plant; makes runners very freely; tolerant to virus diseases; very drought resistant. BROOKS 1972; B73M, C55M, D65, E3, G23, H49, H65, H88, 178, J83

Royal Sovereign: Large, bluntly conical fruit, with some berries that are wedge-shaped; skin brilliant red; flesh pale, firm, subacid, flavor excellent; ripens in midseason. Vigorous, compact plant; very productive; highly susceptible to disease. An old English cultivar, still frequently grown and held in high esteem. Introduced in 1892. SIMMONS 1978; U7D

Scott: Large to very large fruit, symmetrical conic; skin tough, resists bruising; flesh bright red, firm, flavor mild; ripens with Guardian; freezes well. Highly vigorous plant; productive; produces numerous runners; resistant to 5 races of red stele, tolerant of verticillium wilt. Good for home gardens and roadside markets. B58

Shuksan: Medium to large, conical fruit; skin glossy, bright red, resistant to abrasion; flesh firm, bright red throughout, sweet, flavor very good; ripens in late June. Good fresh and excellent for freezing. Large, vigorous plant, very hardy and productive; tolerant of wet soils. Originated in Puyallup, Washington. C34, 141, 149M, J61M, L18, M81M

Sparkle: (Paymaster) Medium-sized fruit, short blunt conic to oblate; skin rather dark red, glos<sup>^</sup>, attractive; flesh soft, mildly subacid, quality excellent; good for dessert and freezing. Productive to very productive plant; resistant to powdery mildew and one race of red stele. A long time favorite with home gardeners. BROOKS 1972; A24, B6, B58, C55M, C61, D11M, D65, D69, F42M{£D}, F70, G16, G23, G81, H88, 150, J20, J83, etc.

Surecrop: Fruit large, round conic, irregular; skin attractive, glossy, tough, light bright red that becomes a rich red but does not turn dark; flesh light red, firm; flavor tart, good; quality good for dessert. Large, very vigorous plant; produces many runners; drought resistant; resistant to several races of red stele. BROOKS 1972; A24, A39, A82, B6, B58, B73M, C55M, C61, C84, G23, H58, H65, H88, J83, M65M, etc.

Suwannee: Medium to large fruit of excellent flavor. Maintains high flavor and quality under adverse weather conditions when most other cultivars fail. Rated as the best-flavored strawberry by noted breeder and berry connoisseur the late Professor George L. Slate of

the New York State Agricultural Experiment Station. BROOKS 1972, HENDRICKSON; U7D

Tennessee Beauty: Large, round-conic to wedge-shaped fruit; skin attractive, glos<sup>^</sup>, medium to deep red, evenly colored; flesh medium red, whitish toward core, firm, subacid, well-flavored; dessert and shipping quality good; freezes well. Vigorous, medium-tall plant; tolerant to virus diseases. BROOKS 1972; A82, B45M, C55M, F93, G72, G81, I41P, I53M, K28, K75T

White Pine:<sup>2</sup> (Weiss Ananas) Small, globose fruit, 3/4 to 1 inch long; relatively thin, glossy white skin blushed with pink; firm white flesh. Moderately productive. Primitive cultivar of historical interest selected at the Max Planck Institute for Plant Breeding. ANONYMOUS 1990; L90M

#### Late Season

Apollo: Large, symmetrical fruit; skin glos<sup>s</sup> attractive, deep scarlet; flesh sweet, flavor good. Medium-sized plant; produces a moderate number of runners; tolerant to leaf spot, leaf curl and powdery mildew; performs well in matted row or hills. Originated in Willard, North Carolina. BROOKS 1972; G81

Blomidon: Large, uniform fruit; skin glos<sup>s</sup> medium red, attractive; flesh firm, of very good flavor; ripens about 9 days after Earliglow. Good for fresh market, shipping and freezing. Heavy yielding plant; vigorous and winter handy. Does best in northern climates. H88

Bounty: Medium-sized fruit; skin medium red, attractive; flesh firm, of very good flavor; ripens 8 to 10 days after Midw<sup>^</sup>. Vigorous, heavy yielding plant; produces runners freely; winter-hardy; not resistant to soil borne diseases. Does best in cold, northern climates. Introduced in 1977 by the Nova Scotia Research Station in Kentville. B26, FI, G50

Delite: Medium to large, conical fruit; skin glossy, bright red; flesh moderately firm, pink, aromatic, of good flavor and dessert quality; ripens 5 to 7 days later than Surecrop. Very vigorous, very productive plant; produces runners freely. Released by Southern Illinois University. C61, K75T

Lateglow: Large to very large, symmetrical fruit; skin tough, glossy, deep scarlet; flesh firm, medium red, juicy, sweet, aromatic. Ripens with Delite, slightly later than Allstar and Guardian. Medium-sized, vigorous plant; produces runners freely; very resistant to red stele and wilt; tolerant to leaf diseases. A24, B6, B58, C84, C61, G71, H88, I50, J2M

Latestar: Lateglow x Allstar. Large, attractive fruit; firm, glossy red skin; firm, light red flesh, mild and pleasant, slightly acidic; ripens slightly later than Lateglow. Like its parent Lateglow, consists principally of glucose rather than fructose. Vigorous, very productive plant; resistant to 5 races of red stele. Introduced in 1995. BROOKS 1997; A24, B58, C84, F87, G44, G81, H88, I50

Marlate: Large, round conic fruit, easy to pick; skin bright red; flesh firm and sweet. Tall, vigorous plant; produces a moderate number of runners; resistant to some leaf diseases; susceptible to red stele. Particularly adapted to the northeastern states. H54

Trumpeter: Large, rounded conic to heart shaped fruit; skin bright red, attractive; flesh an intense red throughout, very firm, juicy, slightly tart, aromatic, flavor very good; freezing quality superior. Very tall and vigorous plant; hardy; highly resistant to root rot; performs well on several soil types. Originated in Excelsior, Minnesota. BROOKS 1972; B4, J83

Vesper: Very large fruit, up to 1 1/2 inches in diameter; skin medium tough, glos<sup>^</sup>, very attractive; flesh light red, moderately firm, mildly subacid, flavor very good; ripens 3 to 5 days after Jerseybelle. Requires more frequent harvesting than some other cultivars because it ripens rapidly. Originated in New Brunswick, New Jersey. BROOKS 1972; D65

#### CODES FOR SPECIAL TYPES

1. Yellow-Skinned
2. White-Skinned
3. Variegated
4. Pink/Red-Flowered

## SUNFLOWER {S}

#### HELIANTHUS ANNUUS

##### CONFECTIONERY SUNFLOWERS

Mostly used as a snack food, these have large seeds, approximately five-eighths of an inch in length, usually striped, and a relatively thick hull which remains free of the kernel and is easily removed. The oil content is about twenty-seven per cent. They are also used as bird food. ROSENGARTEN.

#### HYBRID

SIGCO 954: 80 days. An improved sunflower that ripens early, has a sturdy, heavy stalk and produces a good-sized head well-filled with large, heavy seeds. Stalks are 5 to 6 feet tall, and instead of branching, usually have but one good-sized, solidly packed head per stalk. G16

SIGCO SL70: High oleic, long shelf life type. Developed for the food industry to reduce the risk of roasted products becoming rancid prematurely. Contains 70% or more oleic acid, a stable monounsaturate with a fatty acid profile similar to almonds and olive oil. Has a shelf life 300 times greater than traditional types which are high in linoleic acid, an unstable polyunsaturate oil. K74G{D#}

Sun 891: 110 days. A high yielding, confectionery type sunflower, earlier and more resistant to lodging than Mammoth types. Grows to 7 feet tall, with heads that average 8 to 12 inches in diameter. One of the principal cultivars used by the top commercial sunflower growers in America. G6

Sunbred 254: 110 days. An extremely heavy yielder with above-average stalk strength, high oil content, a low hull-to-kernel percentage and tasty seeds. Resistant to rust, downy mildew and verticillium wilt. Blooms in 70 days; takes 110 days to mature. Developed by Northrup King. Tested at the University of Minnesota. C4, E97

Sunseed: Very early maturing single-headed hybrid. Large, golden-yellow heads, 12 to 15 inches across. Large, black and white seeds. Uniform, stocky plants, 4 to 5 feet tall. Excellent seed production. Can be eaten as a snack or used for the production of oil. L89

#### OPEN-POLLINATED

Apache Brown Striped: Medium-sized heads with brown-striped seeds. Planted in spring in the low desert (after frost danger has passed), or with the summer rains. Originally from the San Carlos Reservation in Arizona. Does well in TYicson. 116, N84

Black Stripe: 70-80 days. Tall, sturdy plant, grows 6 to 10 feet in height; somewhat smaller in size than Grey Stripe, but produces larger harvests of tasty seeds. Large, yellow seedheads, about 20 inches in diameter with very large seeds. E97, J73

Dwarf Russian: 60-70 days. Study, vigorous, early maturing stalks are shorter than Mammoth Russian, yet seed heads are just as large. Extra large, striped seeds. D82, K95M

Giganteus: Ihll, sturdy stalks; height 8 to 12 feet; usually produce a single large, attractive golden head, about 12 inches in diameter. Seeds are tasty and nutritious roasted. Fine for edible seed production as well as ornament. Also useful as a background or screen. C92, I91, L89, M29, M49

**Grey Stripe:** (Giant Grey Stripe, Large Grey Stripe, Mammoth Grey Stripe) 85 days. Tall, sturdy stalks reach a height of 8 to 12 feet. Attractive heads up to 20 inches in diameter filled with an abundance of large, thin-shelled plump seeds high in protein. Delicious as a snack and are also valuable as wild bird or chicken feed. C92, D68, D76, E97, G16, G82, H33M, 181, J20, K49M, K50, L7M, N52, R47

**Havasupai Striped:** Long, narrow seeds. Lodging has been a problem in the low desert. Does not do well in Tucson, Arizona. Originally from the bottom of the Grand Canyon. 116, N84

**Hopi Black Dye:** (Hopi Dye, Tceqa) The hull of the purple-black seeds is used for dyeing, but the seed kernel is edible. Can make a variety of dye colors, from blue to red, depending on the mordant used. Grows 6 to 8 feet tall, with 5 to 8 inch diameter flower heads plus smaller side heads. Develops aerial roots for better anchorage. Adapted to cool, high desert regions, but can be grown in other areas. E61, F46, 116, J25M, K20M, L3J, L7M, L11, N84

**Israeli:** 90 days. Improved single-headed type from Israel. Large, black and white seeds of good quality. Single, golden flowers, 10 to 14 inches in diameter. Stocky plants, 4 to 6 feet tall. K49T

**Jumbo:** 65 days. Produces large heads averaging 14 inches across. Large black seeds, striped with white mostly on the margins. Seeds are ready for harvesting after about 98 days. Medium-sized plants, growing to 8 feet tall. Should be planted about 18 inches apart. Introduced in 1988. C20M, H99J{SP}, L7M

**Mammoth:** 80 days. Large heads well-filled with thin-shelled, striped seeds that are plump and meaty. Makes a high-protein snack; also a valuable bird food. Tall, 6 to 12 foot plants; heavily productive; will thrive on poor soil. B6, B75, C20M, D74B, E59Z, F13, F82, G57M, H95, 139, J97M, K66, L11

**Mammoth Russian:** (Large Russian, Russian Giant) 80 days. Medium to large, striped seeds; thin-shelled, meaty, rich in flavor. Stalks average 8 to 12 feet tall and produce a large single head with occasional smaller heads. An old standard cultivar, first offered by American seed companies in the 1880's. A2, A16, C85M, D11M, D82, E5T, F70, H54, K23{PL}, K49T, K71, L7M, L79, R47

**Seneca:** Medium-large seedheads, about 10 inches across, occasional smaller branching heads; small mixed seeds of gray, white and deep purple. Used for snacks as well as oil. Grows about 8 feet tall. Originated with the Seneca Indian tribe of Nov York State. D29P, K46T

**Sundak:** (Early Sundak) 98 days. An improved, early-maturing, rust-resistant cultivar. Large, black seeds with gray stripes. Stalks grow 5 to 6 feet tall, usually with only one flower head per stalk. Heads average 8 to 12 inches in diameter, depending on spacing. Developed by North Dakota State University. E24, E24{SP}, J9M, K49M, L7M

**Sunspot:** 60 days. Dwarf, compact, erect plants; grow only 2 feet tall yet produce large, 10 inch diameter heads. Ideal for small gardens, and a natural for children. Blooms in only 60 days and provides weeks of colorful, attractive flowers, right at bed height. Mature heads yield an abundance of nutritious, tasty seeds. A25, B75, D68, D74B, D76, D92M, E97, G16, G82, 191, K49M, L91M, L42, M29, M32, M49, etc.

**Tarahumara White:** All-white seeds. Solid gold flower heads. Excellent producer of large heads in low desert areas, with irrigation. Grows 5 to 7 feet tall. Introduced and adapted over a 30 year period of cultivation. Probably of Canadian Mennonite origin, but obtained by the Tarahumara from Chihuahuan Mennonites. Unusual and rare. A2, A66, F73D, 116, K20M, K23{PL}, K49M, K49T, L3J, L77D, N84

#### OILSEED SUNFLOWERS

Primarily used as a source of oil and high-protein meal, these have small black seeds, about three-eighths of an inch long, with a thin hull which adheres to the kernel, and an oil content of

about forty per cent. They are also the type preferred for sprouting. ROSENGARTEN.

**Peredovik:** 110 days. A Russian strain grown commercially for the pressing of quality sunflower oil for salads and cooking. The small, black-shelled seeds also make good bird food, and excellent poultry and rabbit food. E81M, G26, K66, L7M, M25, N11, N84

**Polyheaded:** Spectacular plants, grow to 8 feet tall and produce 20 to 40 heads per plant, 4 to 8 inches in diameter. Orange and yellow flowers. Suitable for sunflower seed oil or for sprouting. Attractive variation of half-wild forms. L11

**Rostov:** 90 days. Early-maturing Russian black-seeded type, originally from the Ukraine. Heads average 12 inches or more in diameter. Height of plant 5 to 8 feet. Can withstand heavy rain and winds. A2, K20M, K49M, L77D

**Sunfola:** Tall, attractive garden plant; produces one flower per plant; yellow flowers with golden-yellow centers. Produces a good cooking oil. Also used as a cut flower. PIG

## SWEET POTATO {PL}

### IPOMOEA BATATAS

#### TUBEROUS SWEET POTATOES

**DRY FLESH** Mostly yellow- or white-fleshed, these are more mealy, starchier, and less sweet than moist flesh types. They are classified as dry flesh if they feel "dry" in the mouth, not by their moisture content. Some do especially well, and are favored in, the Northeast and Middle Atlantic states.

**Boniato:** (Cuban Sweet Potato) Short, plump, irregularly shaped tuber; reddish skin; white flesh, slightly less sweet and drier in texture than moist orange-fleshed types. When baked the skin becomes crunchy and very tasty. Available at Spanish markets in New York and other large cities. CUSUMANO [Cul, Re], HAWKES [Re], ORTIZ 1973 [Re], SCHNEIDER 1986 [Cul, Re]; B60M{PR}, L14G{PQ}, N40{PR}

**Ivoire:** White-skinned, white-fleshed sweet potato that has the characteristics of an Irish potato. Quite dry and dense. Has twice the starch of common types. Unusual flavbr and texture. Usually mashed and served with butter or sauce like a potato. Matures in midseason. Developed by Franklin W. Martin. H29

**Mexican Purple:** Large to very large roots, up to 5 pounds or more; skin brownish-red; flesh deep purple when cooked, dry but nut-like in flavor. Vigorous, productive vine with purple-tinged leaves. Common in the markets of Tijuana. D57

**Okinawa:** Small to medium-sized, elongated roots; skin grayish-white; flesh slightly moist when cooked, changes to a lilac-magenta color; flavor rich and sweet. Somewhat of a shy bearer in California, producing roots spottily and away from the center of the plant. Local favorite in Hawaii, where it is known as *poni*. D57, K20M

**Old Kentucky:** 120 days. Large, white-skinned roots; flesh cream-colored when cooked, sweet, fiberless, of excellent flavor; Matures late. Keeps very well but is difficult to dig. Vining type that produces roots away from the center of the plant. Old heirloom cultivar. K20M

**Sumor:** A novelty type, developed by Philip Dukes of the USDA Vegetable Breeding Lab in Charleston, South Carolina. Very smooth, light tan skin; white to yellowish flesh, very low sugar content; flavor almost as bland as an Irish potato. Stores well, with sweetness increasing after extended storage. May be baked, mashed, creamed, fried or consumed in salads. Recommended as a substitute crop in climates too hot for growing Irish potatoes. Sumor is the old English word for summer. K20M, L4, L35

Viola: Purple-skinned, white-fleshed sweet potato of very high quality. Notable for its minimal discoloration after cooking. Dry, relatively dense flesh. Can be used as a substitute for Irish potatoes. High-yielding plant with wide adaptability. Developed by Franklin W. Martin. H29

White THumph: (White Yam, Southern Queen, Poplar Root, Choker, White Bunch) 120 days. An unusual white-skinned, white-fleshed cultivar with very dry and very smooth flesh and a very sweet flavor. One of the oldest cultivars in the country. E9M, H49, J99G, K20M, K71, L35, M46

Yellow Jersey: (Little Stem Jersey) Orange skin; very dry, sweet yellow flesh. Resistant to root-knot nematode. Does well in the Northeast and Middle Atlantic states. Sweet potatoes that bake dry are sometimes called Jersey sweet potatoes after the dry-fleshed Jersey group of cultivars such as Big Stem Jersey and Little Stem Jersey. D3M{PR}, K20M

**MOIST FLESH** Sometimes erroneously called yam or *Louisiana yam*, this type has soft, very sweet, yam-like flesh that is usually dark yellow or orange-red. They are classified as moist flesh if they feel “moist” in the mouth, not by their moisture content. They grow particularly well, and are favored in, the Southern states.

Beaugard: 100 days. Uniform, rose-purple tubers with dark orange flesh. Stores well, becoming sweeter after 8 to 10 weeks in storage. Highly productive. Resistant to white grub and soil rot. Produces more #1 roots than Jewel. Early maturing type developed by the Louisiana Agricultural Experiment Station. E9M, E75, G16, H33M, 191, J14, J99G, K20M, L4, L35

Bush Porto Rico: (Bunch Porto Rico, Vineless Porto Rico, Red Yam) 110 days. Irregular-shaped roots; smooth, copper-colored skin; deep reddish-orange, sweet flesh. Old time favorite for flavor; excellent for baking. Matures 3 weeks earlier than Running Porto Rico. Semi-upright plant; comparatively short, usually only 4 to 5 feet long. Popular with gardeners who have limited space. B75, D65, D76, E9M, E97, H33M, H49, H54, H65, J99G, K20M, K71, L35, M46

Carolina Bunch: 110-120 days. Developed by the USDA and Clemson University for use in gardens where the bunch type plant habit produces high yields in less space. Uniform, spindle-shaped tubers; smooth bright, light copper skin; deep orange flesh. Vigorous, dense plants. Resistant to four races of rootknot nematode. L4

Centennial: 110 days. Root medium to large; cylindrical to tapered; skin bright orange; flesh sweet, deep-orange, has a fine moist texture and flavor. Matures early; “baby bakers” can be dug in 90 to 100 days from set plants. Long, vining type plant. Widely adapted and productive: Tolerates clay soil better than Jewel. Standard cultivar for local market and home gardens. B75, D65, D76, E9M, E97, G16, H33M, H49, H65, 191, J99G, K20M, K71, L35, M46

Excel: Attractive light copper skin and orange flesh. Excellent for baking or making fried sweet potato chips. Sizes well-shaped roots earlier than most cultivars. Yields about 15% more than Jewel. A new disease and insect resistant cultivar developed by Philip Dukes of the USDA Vegetable Breeding Lab in Charleston, South Carolina. Introduced in 1988. K20M, L4

Garnet: Large, fairly uniform tubers, tapered at both ends; very attractive, deep reddish-purple skin; deep orange flesh, very moist and sweet, rich and flavorful. Excellent for baking. One of the most widely grown sweet potatoes in California. Very popular with organic growers. D3M{PR}, D57, G44M{PR}

Georgia Jet: (Jet) 90 days. Large, uniform roots; skin dark reddish-purple; flesh moist, deep-orange in color, of excellent flavor. Vining type plant. Very early and heavy yielding; often produces table-size roots in only 75 days. Does well as far north as Canada. Released in 1974 as an early market cultivar for Georgia farmers, it has become very popular with small growers. B75, D76, E75, E97, G16, H24, H33M, H49, J99G, K20M, K71, L35, M46

Jewel: (New Jewel, Golden Jewel) 120-135 days. Skin bright-copper; flesh deep-orange, of soft texture which makes it bake more quickly; flavor rich, quality high. Holds quality and flavor well in long-term storage, up to 50 weeks. Vining type plants; heavy yielding, up to 6 potatoes per plant. Disease resistant. Accounts for 75% of all commercially produced sweet potatoes. Introduced by North Carolina State University. D76, E9M, E97, G16, G44M{PR}, H33M, H49, K20M, K71, L4, L35, M46

Nancy Hall: (Yellow Yam) 110 days. Skin light-tan; flesh moist, firm, deep-yellow, juicy, waxy and sweet when baked; keeps well. Resistant to soft rot. The “yellow yam” of the 30’s and 40’s. Although not attractive in appearance, a favorite of older gardeners because of its excellent flavor. Semi-bush type plant. F73D, H24, H33M, H49, J99G, K20M, K71, L35, M46, N84

Nugget: (Red Nugget) Smooth, slightly blocky, pinkish-red roots; cylindrical to tapered. Semi-dry, reddish flesh of excellent quality. Widely adapted. Resistant to internal cork, root-knot nematode, fusarium wilt and brown rot. Somewhat weak on sprout production. J99G, K20M

Red Jewel: 150 days. Good yields of red-skinned, orange-fleshed potatoes. Popular with home gardeners because it is especially easy to grow. One of the red-skinned cultivars preferred by consumers in Georgia over their copper-skinned counterparts. H54, L35

Regal: Brilliant purplish-red tubers with sweet orange flesh. Has excellent baking qualities. Stores well but not as long as Jewel. Produces abundant sprouts and has excellent yield potential. Resistant to many diseases and insect pests. Developed by the USDA, Clemson University and Texas A & M. L4

Satsuma-Imo: (Japanese) Very large, plump tubers, often pentagonal in shape; reddish orange skin; distinctive greenish-yellow to cream colored flesh; very dense and moist; sweet and flavorful. Excellent for baking and tempura. Made into a sweet confection known as *kinton*, a popular New Year delicacy. Widely grown in California for the Japanese and Oriental markets. TSUJI [Re]; D3M{PR}, G20M{PR}

Southern Delite: A new disease and insect resistant cultivar developed by Philip Dukes of the USDA Vegetable Breeding Lab in Charleston, South Carolina. Medium-sized, fusiform tuber; skin rose to dark copper; flesh dark orange, of very good flavor. Baking properties excellent. Stores slightly better than Jewel. Vine vigorous, moderately long. Introduced in 1986. L4

Topaz: Widely adapted orange-fleshed sweet potato of very good quality. Sweet, moist flesh. Does well in dry climate areas. Spreading plant; has a tendency to root at the nodes and produce tubers outside the row. Matures in midseason. Developed at Texas A & M University. H29

Vardanian: 110 days. Skin golden-yellow; flesh deep-orange, of rich flavor. Considered to have the best eating quality of the short-vined types; also has better resistance to fusarium wilt. Bush type plant; ideal for small gardens. Heavy yielding and early maturing. Produces well in many parts of the country and on various soil types. B75, D76, E9M, E48, E75, E97, G16, H33M, H49, H65, 191, J99G, K20M, K71, L35, M46, etc.

#### SWEET POTATO SPINACH

A distinctive class of sweet potatoes, the plants of which are usually lacking in tuberous roots. Instead, they are prolific bearers of young leafy stem tips and tender, succulent stems which are eaten like those of *Ipomoea aquatica*—the *water spinach* or *kangkong* of Asia, either boiled, steamed, stir-fried or added to soups and stews and other dishes. Popular in warmer tropical and subtropical areas. H29

## SWISS CHARD {S}

### BETA VULGARIS CICLA GROUP

#### CHARD

Grown for the leaves which can be prepared like spinach, as well as the broad, thick, frequently white stalks which are often prepared separately in the manner of asparagus. The leaves are usually considered too coarse for use in salads unless chopped finely.

**Argentata:** (Costa Argentata) 55 days. An old Italian heirloom, long selected for its good flavor which is mild, clean and sweet. Attractive, vigorous plant has silver-white crispy midribs and deep green crinkled leaves. Long standing; grows several feet tall; will stand a wide variety of weather conditions. B8, I18M, 177, K66, N84, Q11M, Q34, SI 7

**Blonde a Garde Blanche:** (Silvey Swiss Chard) 55-60 days. Large, broad, light-green leaves which are very much undulated, half erect, and remarkable for the size of their stalks and midribs, which are often 4 inches broad or more. A light and pale color in the leaves is usually accompanied by a mild flavor, while leaves of a dark-green color always have a strong taste. VILMORIN; P59M

**Blonde de Lyon:** (Blonde a Carde Blanche Race de Lyon) Large, light green leaves with very large white midribs; broad white stalks, tender and mild. Relatively short plant; resistant to heat. Recommended for summer culture. G68

**Bright Lights:**<sup>1</sup> Ornamental rainbow chard. Produces stems in colors ranging from yellow, gold and orange to pink, crimson, lavender and purple. Intermediate pastels or shades of the primary colors may also occur, as well as striping. Stems colors are evident when plants are only 3 to 5 weeks old, allowing for selection and transplanting of the most desirable colors. Some leaves may be bronze. All America Selections winner in 1998. C53, D74B, D76, E24, E97, F13, G6, G82, H85M, 139,191, K66, K71, L42, L89, M29, Q34, etc.

**Burgundy:**<sup>2</sup> (Burgundy Crimson) 65 days. Heavily crumpled, deep green leaves with maroon overtones; translucent brilliant crimson stems and leaf veins; very rich flavor. A colorful addition to salads, or the leaves can be cooked like spinach and the stems like asparagus. Plants yield until frost. D27, E91G

**Candy Stripe:**<sup>1</sup> Medium-broad, white stems with red pinstripes, contrast nicely with dark-green rumpled leaves. Just the right amount of fade from red to white to make a striking ornamental. Vigor and quality similar to that of Rhubarb or Ruby Red chards. Selected out of the original colored chard population from which the Bright Lights cultivar originated. E24

**Charlotte:**<sup>2</sup> 55 days. Improved rhubarb chard recently developed in Switzerland. Deep ruby-red stalks; narrow savoyed leaves; mild, slightly sweet flavor. Excellent raw or cooked. Large, productive plants. Of better quality and developing a darker color than Rhubarb or Ruby Red. May turn purple-red in cold weather. C53, F73D, I18M, 177, J20, N84

**Dark Green White Ribbed:** (White Ribbed, White Silver) 60 days. Large, upright plant reaches a height of 20 to 26 inches. Produces large, smooth to slightly crumpled dark-green leaves with broad, white petioles\* Very productive and flavorful. A popular and proven standard cultivar. A87M, C20M, G71, G93M, H61, K73

**Dorat:** 60 days. Pale yellow-green, deeply-crinkled leaves are mild and tender. Thick, very wide, pure white, mild-tasting stalks. An improved form of Lucullus, with more uniformity and greater vigor. Resistant to bolting. Overwinters well in mild areas. Danish gourmet seed. E63D, 177, J9M, L89

**Fordhook Giant:** (Burpee's Fordhook Giant) 60 days. A tall, vigorous strain, about 2 foot tall and 1 foot wide with broad, very

crinkled, thick, fleshy dark-green leaves. Broad, thick, greenish-white stems. Yields continuously from early summer until frost. A16, A25, B75, B78, D82, E38, F92, G6, G68, H61, I64, L89, M46, N16, R47

**Lucullus:** 50 days. Extra large, thick, fleshy, heavily crumpled, yellowish-green leaves. Stalks long, rather rounded, pure white. Vigorous, upright plant, growing about 28 inches high. Yields an enormous amount of greens. Similar to Fordhook Giant except for the lighter colored leaves. A2, A25, A75, B49, C44, C85M, FI, G16, G71, G87, I64, L7M, L79, M46, M49, etc.

**Monstruoso:** (Mostruosa d'Ingegnoli) 60 days\* Very striking and refined Italian variety. Exceptionally large, tender, broad white stems; broad, moderately savoyed, bright green leaves; very good flavor. Excellent stir-fried, baked or served raw as erudite. Very productive. Highly appreciated in Italy. C53, F73D, Q11M

**Paros:** 55 days\* Very large, upright, dark-green crinkled leaves on thick, succulent white stalks. Developed by the French for its flavor, which is distinctly milder and sweeter than ordinary American cultivars. Young leaves can be used in salads. Grows easily, yielding fine-quality harvests from early summer into winter. K66

**Rainbow Chard:**<sup>1</sup> (Five Color Mix) 60 days. A beautiful technicolor mixture of ornamental Swiss chards. Individual plants variously produce succulent stems in shades of either red, orange, yellow, cream or white. Tender and tasty in the kitchen and excellent material for flower arrangements. E53M, E91G, G57M, J9M, K47, K49M, 089, PIG, Q34, R47

**Rex Wide Ribbed:** 55 days. Vigorous and uniform plants with large, glos<sup>^</sup>, dark-green, heavily crinkled leaves. Broad, silver-white stalks average 2 inches in width. Withstands both cold and warm temperatures, making it suitable for full season production. D11M, F70

**Rhubarb Chard:**<sup>2</sup> (Burpee's Rhubarb Chard) 55 days. Deep-crimson stalks and leaf veins contrast with heavily crumpled dark-green leaves. The roots turn almost white when boiled and are sweeter than red beets. They can be pickled with caraway seeds, turned into golden beets by adding saffron, or prepared with thickened grape juice for *Harvard beets*. B49, B75, C44, C92, D11M, D82, E13G{PR}, F70, G16, H61, K73, L42, L89, M46, M49, N40{PR}, R47, etc.

**Ruby Red:**<sup>2</sup> (Ruby) 60 days. An attractive ornamental chard with crumpled, dark greenish-red leaves. The tender, sweet stalks and midribs are crimson in color, which extends into the leaf veins. Has more of a beet flavor than Fordhook Giant. Keep the outside leaves cropped off to have bright red Ruby chard greens. A16, B1M, C20M, E5T, E24, E63D, G6, G71, I39, J25M, K50, K66, L7M

**San Francisco Wild:** 60 days. Tender, light green leaves with very small midribs, 9 inches long; delicate stems. Excellent flavor, never tough or bitter. Slow-bolting plant; height 18 inches. Originally from Italy, now grows wild around the margins of the San Francisco Bay. J73, M32

**Silverado:** 55-60 days. Deeply savoyed, glossy dark-green leaves; broad, white, succulent stems; excellent texture and flavor. Compact plant, 14 to 16 inches tall; slow to bolt. Suitable for single leaf or whole plant harvest. Easy to bunch and pack for fresh markets. Also a good home garden variety. A1, A87M, C28, E24, G57M, K10, K50, K73, L10, L42, M49, S75M

**Swiss Chard of Geneva:** 60 days. An excellent cultivar with very large ribs and celery-like stalks. So hardy that it withstands severe winters and is suitable for year round culture. Tops are delicious as greens. Prepare stalks like asparagus. 191

**Vulcan:**<sup>2</sup> 60 days. An improved Rhubarb chard developed in Switzerland. Uniform bright red stems and leaf veins contrast with dark-green crinkled leaves. Leaves and stems are very sweet, with outstanding Swiss chard flavor. 191

## LEAF BEETS

Grown primarily for the succulent leaves which make an excellent hot weather substitute for spinach. This is the type preferred for use in salads. Included here are the Japanese types which are somewhat intermediate between the chards and the leaf beets. **PIG, P59M**

**Banerjee's Giant:** An improved strain of Palang Sag. The plants are very robust growing and produce large fleshy leaves double the size of ordinary strains. Sown from August to October in India. **S59M**

**Erbette:** (Vende da Taglio) Grown for its fine tasting, smooth textured greens which are used when young like spinach. Makes a very good cut-and-come-again green. Keep it cut and it will continue to produce all season long. **KASPER [Re]; B8, C53, N84, Q11M, S17, S55**

**Nihon:** (Japanese Swiss Chard) Broad, deep-green leaves with narrow, thick, light-green stalks. Resembles smooth round-leaved spinach. Stands heat well. An excellent tender green chard for home gardeners. Intermediate between broad-leaved chard and leaf beet. **L59**

**Palak Durga:** 60 days. Very tender, sweet-salty, light-green leaves with a very thin mid-rib. Similar to regular spinach in flavor and form. Much more tender and delicate than Swiss Chard. Popular in India where it is the most common form of cooked greens. Grows well in climates where spinach has difficulty. **J73**

**Palang Sag:** (Indian Spinach, Palanki, Palak) An annual herb with a prominent taproot, an erect stem with trowel-shaped leaves at the base, and leafy spikes. The leaves are used as a salad and for preparing stew. A common inexpensive vegetable seen in the markets of northern India during the cold weather season. Reselected stock of a small-leaved strain. **NAYAR, ZEVEN; R0, S59M**

**Pavich:** European small-leaved strain, very similar to Perpetual Spinach. Small, succulent leaves with small midribs. Makes a better leafy green vegetable than broad-leaved chard types due to its superior flavor. **B49**

**Perpetual:** (Perpetual Spinach, Spinach Beet, Cutting Chard) 50 days. Rare, fine old European strain related to Swiss chard. Smaller, smooth, succulent dark-green leaves with small midribs. Drought, frost, and bolt resistant. Early maturing; very productive. Has a long "perpetual" harvest. Used in soups and in the stuffing of *tortellini*. **GRAY, P. [Cul, Re], LARKCOM 1984 [Cu]; A16, B49, C53, C85M, D11M, F70, F82, F92,139, L91M, M49, O53M, R32, R47, S75M, etc.**

## CODES FOR SPECIAL TYPES

1. Multicolor-Stalked
2. Red-Stalked

## TEPARY BEAN {S}

## PHASEOLUS ACUTIFOLIUS

## BLACK-SEEDED

**Black:** Selected by Bruce Bailey, longtime member of Native Seeds/Search from white teparies purchased many years ago in a Tucson Mexican market. Similar to a historic Tohono O'odham and Yuma cultivar. Adapted to the low hot desert. Plant with the summer rains. **A90M{DF}, F73D, H15P, 116, N84**

**Mitla Black:** 80 days. Slightly smaller and rounder than Sonoran teparies. Has the same good flavor and nutrition. Excellent in black bean soup. The small pods can be used as a green bean. Less day-length sensitive and grows better in more extreme northern latitudes than Sonoran types, making two crops possible. From the Mitla Valley, Oaxaca, Mexico. **A2, C95, J39, K17M, K49T, L3J, L77D**

**San Pablo Balleza:** Black-seeded type collected in an Hispanic colonial town on the eastern slopes of the Sierra Madre in Chihuahua, Mexico. Adapted to the low desert, below 3500 feet. **116, N84**

## BROWN/YELLOW-SEEDED

**Cocopah Brown:** A small sample of these was originally collected from a Cocopah woman gardener in Sonora. The Cocopah or Cucupa live and farm along the Lower Colorado River. Brown seeds that may have some mottling. Known locally as "Frijoles Cucupa". **F73D, 116, N84**

**Paiute:** Grown on the Shivwits Paiute Indian Reservation in Utah. Includes various bean colors such as chocolate brown, speckled light tan and burnt orange. Adapted to the high desert where it is planted in June or with the summer rains. One of the most northerly tepary beans. **116, N84**

**Pima Beige and Brown:** Beans are mixed shades of beige, gold and tan. Originally collected near Santan, Arizona, on the Gila River Indian Reservation. Adapted to the low desert, below 3500 feet. **F73D, 116, N84**

**Pinacate:** Tan, slightly mottled seeds. Originally obtained from the most extremely arid agricultural area in Mexico, just south of the U.S. border, in the Sierra El Pinacate Protected Zone. Planted with the summer rains in the low hot desert. **116, L3J, N84**

**Sacaton Brown:** Commercially cultivated in the United States by the Gila River Pima near Sacaton, Arizona. Makes an excellent pate. Known locally as S'oam Bawi. Adapted to low hot desert areas, below 3500 feet elevation. **116, N84**

**Sonoran:** 90-110 days. Small, delicious beans with over 30% crude protein. Under native desert conditions they require as little as 70 days to mature. Farther north or with cooler temperatures, they require a longer growing season. Native to the Sonoran Desert, the drought tolerant tepary was domesticated by the Papago Indians. **J25M**

**Sonoran Brown:** (Sonoran Gold) 85 days. Golden brown seeds. One of the earliest cultivars to mature. Has a delicious flavor when used in soups or as a pate. Drought tolerant plant; very productive in intense heat and dry conditions. From the Papagos of the lower Sonoran Desert region. **A2, A90M{DF}, F73D, J39, K17M, K49T, L11, L77D**

**Tohono O'odham Brown:** 60-90 days. A red-brown bean from Menenger's Dam on the reservation near the Mexican border. Favored for vegetable pate. Adapted to the low hot desert where it is planted with the summer rains. Not recommended for humid regions. Known locally as "W'pegi bawi". **A90M{DF}, F86T{DF}, 116,116{DF}, J11M{DF}, L3J, N84**

**Virus Free Yellow:** Ocher colored seeds. Selected by the USDA and grown out in Tucson, Arizona. Do not infect by growing near other teparies, as others may carry bean mosaic virus. Planted with the summer rains in the low desert. **116, N84**

**Yoeme:** (Yaqui) A beige bean from a traditional Yoeme (Yaqui) village on Sonora's coastal plain at approximately 80 foot elevation. Adapted to the low hot desert where it is planted with the summer rains. In colder areas, plant in late May or early June. **F73D, 116, N84**

## MOTTLED

**Blue Speckles:** 96 days. Mayan folk race. Medium-sized, plump seeds with excellent flavor. Similar to Golden, but fuller seed with blue speckles on tan. From southern Mexico but produces a good crop in southern Arizona near 4300 feet elevation. Also grows well in northern New Mexico. Does not tolerate the heat of the low desert. **F73D, 116,116{DF}, J39, L3J, L11, N84**

**Brown Speckles:** 96 days. Small, plump, light gray seeds speckled with pale brown. Selected from Blue Speckles. Grows well at High

Desert Research Farm in Abiquiu, New Mexico, at 6,500 feet elevation. Introduced in 1981 by Good Seed Co. F73D, 116, N84

Mitla Speckled: 70-90 days. From the Mitla Valley of Oaxaca, Mexico, these are the same as the Mitla Black except for the color and a slightly different, nutty flavor. J25M

#### WHITE-SEEDED

Cocopah White: Grown in gardens by the Chupa (River People), or Cocopah, living in Sonora, Mexico, just south of San Luis, a United States border town. Known locally as "Frijoles Cucupa". 116, N84

Colonia Morelos White: Grown by Mexicans under irrigation in a small desert town originally founded by Mormons and where Geronimo agreed to surrender. Planted with the summer rains in the low hot desert. 116, N84

Guarijio White: (Warihio White) 90-92 days. Medium-large, somewhat flattened, white seeds. Prolific even in hot, dry weather. Drought resistant, but irrigation improves yield. Native staple in the Mexican Sonoran regions. A90M{DF}, C95

Kickapoo White: A transplanted Wisconsin tribe of Kickapoo Indians adopted this native desert crop for their new southeastern Sonora, Mexico home of Rio Bavispe. Planted with the summer rains in the low hot desert. In colder climates plant in late May or early June. 116, N84

Mayo White Aluvia: Small, white and green beans. Dry farmed near Las Capomas, Sinaloa, Mexico on the lower western flanks of the Sierra Madre Mountains near the El Fuerte River. Planted with the summer rains in the low hot desert. 116, N84

Namaquipe White: Purchased at a Mennonite Campo Store near Cuauhtemoc, Chihuahua, Mexico. Teparies are an adopted staple in this area of frequent drought. Adapted to low desert conditions. 116, N84

O'odham White: 90 days. Seeds creamy white rather than the more common brown. The extremely dry composition of the bean requires slightly more cooking time than standard dry beans. Commercially cultivated in the United States by the Gila River Pima, who grow it near Sacaton, Arizona under hot, arid conditions. F73D, F86T{DF}, I16{DF}, J11M{DF}

San Felipe Pueblo: Large, white-seeded beans. A traditional crop that is grown with irrigation along the Rio Grande in northern New Mexico. Adapted to the high semi-desert where it is planted with the summer rains. In temperate areas plant in late May or early June. 116, N84

## THYME {PL}

### THYMUS SPP.

#### CITRUS-SCENTED

Doone Valley: New growth is bright gold mixed with a small amount of deep green, highlighted with red in winter. Deep-green, glossy old growth provides a nice contrast. Fresh lemon scent. A moderately fast growing, prostrate cultivar; height 4 to 6 inches. Lavender flowers. Needs winter protection. C9, C43M, C67M, C81M, H51M, J82, K57, L56, L90J, M35, M53, M82

E.B. Anderson: Tight-growing evergreen mounds of lemon-scented thyme. New growth is gold with maroon undersides and stems, giving it a striking appearance. Older leaves are dark green with a few golden tints in summer, becoming bright gold in winter. Lilac flowers are long lasting. C2, C9, F32D, H51M, K22, M82

Golden Lemon Creeping: (T. x citriodorus) Attractive, glossy, dark-green leaves variegated with gold. Strong, fresh lemon scent

and flavor. Height 4 to 6 inches. An excellent ground cover for sunny locations with well drained soil. Lavender flower spikes. Mostly ornamental, but can be used for tea. C43M, C67M, G96, J76, K2, K22, K85, L56, M35

Golden Lemon Upright: (T. x citriodorus) Gold and green variegated leaves, lemon scented. Similar to Golden Lemon Creeping but with a bushy, upright growth habit. Height 8 to 10 inches. Pink flowers. Same uses as lemon thyme. Excellent color contrast in the garden with brilliant golden leaves. E61, F32D, F93G, H94M, I39, K22, K85, L56, L90J, L94M, M82

Golden Lemon Variegated: (T. x citriodorus) Dark-green leaves with striking golden and green variegation. Very strong lemon scent and flavor. Thick bushy plants. Uses and culture are the same as common Lemon thyme. C9, C43M, H29M, K57

Lemon: (Green Lemon) (T. x citriodorus) Attractive, glossy, dark-green to yellow-green leaves. Strong lemon scent and flavor. Hardy, shrub-like plant; grows 10 to 12 inches high; spreads by layering. Small, pale-lilac flowers. Excellent culinary thyme, especially good for tea. C9, C43M, C67M, E7, E61, F35M, H51M, J66, J85T{PR}, K22, M35, N19M

Lime: (Lime Thyme) Very attractive ground cover thyme with a distinctive citrus flavor. Tidy, bright chartreuse foliage with a very strong lime-like aroma and taste. Excellent for culinary use. Vigorous fast growing plant, 4 to 6 inches tall. Ideal for edging and highlighting. Hardy in Zones 6 to 9. G96, H94M, I18M, I99P, J57, K22, K57, L90J, L94M, M82, N42

Orange Balsam: Small, narrow leaves with a distinct, strong, orange-thyme fragrance and flavor. Good for tea and culinary purposes. Excellent in fruit salads and salad dressings Very good border plant, growing only 6 inches tall. Attractive pale-pink flowers. C9, C43M, C67M, C81M, E61, H94M, J66, J76, K22, K85, L90J, M53, M82

Orange Spice: Attractive creeping thyme with a very distinctive citrus scent. Bright green leaves with a very appealing orange and spice aroma and flavor. The remarkably strong, clear orange flavor lingers pleasingly on the palate without the harsh aftertaste of other thymes. Excellent for culinary use and tea. Small, spreading plant, forms dense ground-hugging mats. J82

Silver Lemon: A sport of Golden Lemon thyme. Attractive, grey-green leaves edged with creamy-white Very strong, lemon-thyme scent and flavor. Extra hardy plant; grows to a height of 8 inches. Its excellent scent and color make it a very desirable addition to gardens. C81M, E61, H29M, H94M, J66, L94M, M82

Silver Queen: Striking silver appearance with grey and cream variegated foliage, turns a distinctive maroon in autumn and winter. Rich lemon scent and flavor. Excellent in chicken soup. Mounding, twiggy, spreading subshrub; height 6 to 8 inches; width 24 inches. A good accent plant. R53M

#### OTHERS

Broad Leaf English: (Broad Leaf) Large, broad, dark-green leaves on erect stems. Low, mounding shrub; grows to medium height, about 8 inches. Lavender flowers. Yields are greater than from other types. Useful as a seasoning, and also makes excellent tea. C43M, E61, H29M, H51M, J66, J76, M82, N42

De Provence: A strain from the south of France with excellent flavor. Best grown as an annual. In short season areas, start indoors 8 to 12 weeks before planting out. Spreads nicely in between pathways and stone steps. Can even be direct seeded in lawns for fragrant mowing. C53{S}, L94M

Dot Wells' Creeping: (T. pulegioides) Shiny green leaves with an excellent thyme-like flavor and aroma. Very hardy plant, grows 6 inches tall. Lavender flowers. A superior culinary herb or ground cover. Discovered in Asheville, North Carolina in an old garden landscaped by the famous Biltmore Estate Gardens. K22, M82

Dot Wells' Upright: An upright, shrubby version of Dot Wells Creeping. Leaves and flowers very much the same. Fast growing plant; height 12 inches; spreads by layers. Hardy cultivar with superior taste. F32D, J66, K22

Down Hill Farm: Similar to the common garden thyme but more dwarf growing. Height 5 inches. Has an excellent flavor and aroma. Hardy in zones 4 to 9. Discovered at and named after a farm in Pennsylvania that grew herbs for Washington, D.C. restaurants. N42

English: (English Winter) (*T. vulgaris*) Medium-sized, oval, dark-green leaves. Semi-creeping habit; grows 10 to 12 inches high and spreads readily. An excellent culinary thyme, with an intense aroma and flavor. The most popular thyme for seasoning poultry, soups, salads, etc. Hardest of the culinary thymes. Similar to French thyme. C9, C67M, D92M{S}, F35M, H94M, K22, K85, L90J, N19M

English Wedgewood: A variegated form of English thyme with attractive, round green-edged leaves, delicately mottled with chartreuse in the center. The variation is brightest in spring and fall. Height 5 inches. Excellent culinary type with a strong thyme flavor and scent. A97, B77, E7, E61, F32D, F93G, J66, K22, L94M, M15T, M82, N42

French: (Narrow Leaf French, Summer) (*T. vulgaris*) Trim, upright plants; height 10 to 12 inches. Leaves grayish-green; narrower and more delicate than English thyme Very good culinary thyme. Considered to have a stronger, sweeter flavor than English thyme, preferred by the French. Produces an abundance of foliage over the entire season, making it ideal for multiple harvests. Pink flowers. Needs some winter protection. C9, C43M, C67M, C81M, D92M{S}, H51M, I39{S}, J66, K22, K57, K85, L90J, MJ5, N19M

German Winter: Somewhat compact, looser growing form of common thyme. Height 8 inches. Very hardy plant; winters over even in cold, harsh climates. Has the same uses as English thyme. C67M, C85M{S}, E63D{S}, F80{S}, G6{S}, G68, K22, K85, L7M{S}, M82, N42

Grey Hill: An excellent culinary thyme with good ornamental qualities. Attractive, frosty grey-green leaves with a strong, very fine flavor and fragrance. Grows into perfectly shaped mounds, about 6 inches tall. Profuse pink flowers in spring. Hardy to Zone 5. Introduced by Sandy Mush Herb Nursery. E61, H94M, K22, K85, L94M, M82

Miniature English Narrow Leaf: Tin/, narrow, grey-green leaves with an intense aroma and flavor similar to French thyme. Low, compact grower, height 3 to 6 inches. Perfect for bonsai. K22, K85, M82

Oregano: (Italian Oregano Thyme) (*T. pulegioides*) Large, round, glossy, bright-green leaves have the distinct aroma of Greek oregano. Very good culinary thyme, can be used whenever an oregano-thyme flavor is called for. Upright, shrubby growth habit, height 18 inches. Evergreen. Not reliably handy. One of the showiest thymes when in bloom. C9, C43M, C67M, F32D, H51M, H94M, I39, J66, K22, K85, L90J, M53, M82, N42

Pennsylvania Dutch Tea: (*T. pulegioides*) Hardy thyme that is especially good for tea. Large, soft, bright-green leaves. Has a unique mild flavor and fragrance, remarkably close to that of Chinese black tea. Very similar in growth and appearance to Oregano thyme. Height 5 to 7 inches. Pink flowers. F32D, H94M, J66, K22, L90J, M82, N42

Porlock: Excellent culinary thyme. Dense growth, to 12 inches tall. Dark green foliage. Mauve flowers produced early in the summer. Upright growing plant; very winter handy. Similar to common garden thyme in habit and flavor. F32D, K22, K57, M82, N42, N84, R53M

Rosa's Delight: Very similar to English thyme, but not as creeping. Rounded, somewhat pointed leaves with a very pleasant scent.

Vigorous, compact plant, slightly more upright than English thyme. M82

Silver: Tall-growing plant, to 18 inches. Foliage variegated green and white. Lavender flowers. Good culinary type, with a strong thyme scent and flavor. Also makes an attractive rock garden, hanging basket or accent plant. A97, E7, E61, F35M, F37T, H51M, H94M, J66, J82, K85, L90J, M53, M82

## TOMATO {S}

### LYCOPERSICON LYCOPERSICUM

#### PROCESSING TOMATOES

Tomatoes that are processed or prepared in various ways, including paste tomatoes, canning tomatoes, sauce tomatoes, juicing tomatoes, drying tomatoes, stuffing tomatoes, and broiling tomatoes.

#### GREEN-SKINNED

Green Bell Pepper:<sup>2</sup> 75-85 days. Unique green stuffing tomato. Very attractive, hollow, thick-walled fruits; green, mottled and striped with deeper green; green interiors. Turns yellow with green stripes when fully ripe. About the size and shape of a bell pepper. Excellent for stuffing. Strong, indeterminate vine, produces good crops. A2, MO, 089

#### RED-SKINNED

##### Hybrid

La Roma: 62 days. Hybrid Roma type. Uniform, medium-sized fruits; weight 3 to 4 ounces. Vigorous, compact, determinate vine; very prolific, produced 7 times more fruit than standard Roma in field trials. Resistant to verticillium wilt race 1 and fusarium wilt, races 1& 2. K20M, MO

Milano: Long, pear-shaped, deep red fruit; plump, meaty interior, of rich flavor. Cooks down in half the time required for other tomatoes, while maintaining its flavor. Suitable for sauce, paste, drying, or cooking whole. Ripens very early. Compact, determinate vine; very prolific. K66, K73

Perfect Peel: 65 days. Medium-sized, juicy, bright red fruit. Ideal for home canning or freezing because it's so easy to peel. Also good for slicing. Compact, determinate vine; very productive; widely adapted. Resistant to verticillium wilt race 1 and fusarium wilt race 1. Introduced in 1979. MO

##### Open-Pollinated

Ailsa Craig:<sup>12</sup> 70 days. Uniform, medium-sized, deep-red fruit; very firm, of excellent flavor. Reliably productive, indeterminate vine. For cold greenhouse or outdoor use. Popular in England, where it is commonly broiled for breakfast. Old traditional cultivar that originated in Scotland. B49, K20M, L88J, N84, 053M, R32, S55, S61, S75M

Alicante:<sup>12</sup> Medium-large, round fruit, 2 to 2 1/2 inches in diameter; non-greenback; interior fleshy, of good color; quality and flavor excellent. Very popular in England where it is broiled for breakfast. Does not wilt when baked or broiled, emerging firm and full-bodied. Tall, indeterminate vine; somewhat resistant to mildew. For cold greenhouses or outdoors. E33, K20M, M1P, N84, R32, S61, S75M

Amish Paste: 85 days. Heirloom paste tomato from Wisconsin. Very large, heart-shaped fruit; 2 1/2 inches in diameter, 4 1/2 inches deep; weight about 8 ounces. Interior very meaty, with very little juice, flavor excellent; seeds few; susceptible to cracking. Excellent for sauce or paste. Prolific. Favorite of the Seed Savers Exchange. B6, B75, B75{PL}, D26D, D56M, F24D, F24M, H49, K10, K47, K71, L88J, MO, M32, M46, M65, 089, PIG, R47, etc.

Auld Sod:<sup>12</sup> 75 days. Bright red, handball-sized fruits with true tomato flavor. Keeps well when ripened on the vine and after picking. Indeterminate growth habit. Popular with Irish bed and breakfasts where they are traditionally broiled and served with “bangers and rashers”. M27, M32

Bellestar: 72 days. Large-fruited plum type Very firm, meaty, bright-red fruit; weight 4 to 6 ounces; uniformly high crimson interiors; resists cracking. Quality high for paste, sauce and juice; also has good flavor for fresh use. Large size facilitates hand harvesting and peeling. Compact, well-protected, determinate vine; suitable for high density plantings. For home gardens and roadside stands. Introduced in 1981. A2, D68, E24, G6, J39, L42, MO, M27, R47, S75M

Black Plum: 80 days. Interesting commercial Russian paste tomato with an exceptional, deep rich flavor. Elongated, deep-mahogany to brown fruit, about 3 inches long. Develops more of a blackish color in hot, sunny weather. Resembles a standard paste tomato in shape. Slightly thinner walled than Roma or Ropreco. A steady and consistent producer. Indeterminate. D29P, F73D, K47, K49T, M32

Burgess Stuffing:<sup>2</sup> 78 days. Hollow, flattened bell-shaped, bright red fruit; 3 1/4 inches in diameter, 2 1/2 inches deep; widely ribbed. Thick-walled, with a small, central core and mild flavor. Excellent stuffed with cold salads or filled and baked. Also makes attractive, distinctive slices for salads or green tomato pickles. Large, indeterminate vine. B73M, B73M{PL}, E5T, MO

Campbell 1327: 72 days. Large, smooth, flattened globe-shaped fruit; weight 6 ounces; good interior color; resistant to cracking. Vigorous, prolific, semi-determinate vine; provides good fruit protection; sets well under unfavorable conditions. Resistant to fusarium and verticillium wilts. Developed by Campbell Soup Company for canning. B75M, G71, G79, H54, H61, H95, J14{PL}, K10, K73, MO, M1P, N16, N52

Chico III: 70 days. Small, pear-shaped fruit; 2 1/2 to 3 inches in diameter; weight 2 to 3 ounces; firm, solid interior. Excellent for processing and tomato paste. Vigorous, compact, determinate vine; highly disease resistant; sets fruit well at high temperatures; widely adapted. Suitable for mechanical harvesting. C95, DIT, G57M, L77D, L89C, N52

Dad’s Mug:<sup>2</sup> 85 days. Large, blocky, deep-scarlet fruit; thick-walled; partially hollow, with seed cavities along the sides; very firm, meaty flesh of fine flavor. Good for slicing and paste; excellent for stuffing like a sweet pepper when green. Prolific, indeterminate vine. E5T, F24D, 177, K49M, MO

Del Oro: 72 days. Medium-sized, thick-walled fruit; interior thick and meaty. Excellent for canning whole, freezing, juice or sauces. Vigorous, prolific, determinate vine; resistant to verticillium, fusarium, nematodes and alternaria stem canker. Has a concentrated set. Used by many famous tomato sauce companies. Also good for home gardens. Developed by Harris seeds. F13, MO

Goliath: 85 days. Extremely large, somewhat rough, light red fruit; very solid interior with few seeds, of fine flavor. Can reach three pounds in weight. Ideal for canning. Very large, tall, indeterminate vine; requires strong support. An old heirloom, first grown in the late 1800’s. F24M, F73D, MO

Grandma Mary’s: 75 days. Very large plum-shaped fruit, weighing 8 to 12 ounces. Thick, very meaty pulp with few seeds, of excellent flavor. Delicious eaten fresh. Ripens well if picked green. Indeterminate vine; grows well under adverse conditions. Scarce heirloom cultivar. D68, M27

Heinz 1350: 75 days. Uniform, slightly flattened fruit; weight 6 ounces; bright red interior and exterior color; resists cracking. Prolific, semi-determinate vine; provides good leaf cover; tolerates verticillium and fusarium wilts. One of the leading commercial canning cultivars; also good for home gardens. G57M, G82, G87, H49, L7M, MO

Heinz 1439: 72 days. Slightly flattened, globe-shaped, non-green-back fruit; weight 6 ounces; very meaty interiors; excellent crack resistance; holds well. Compact, determinate vine; provides good leaf cover; tolerates verticillium and fusarium wilts. Has a concentrated set. Developed by H.J. Heinz Company for catsup, purees and sauce. B75M, C85M, F63, G13M, G57M, G79, K50, L42, M1P, N16

Howard German: Large, variable, elongated fruits reminiscent of an Ancho pepper. Meaty, red flesh, mild and sweet; very small seed cavity. Rated as best in flavor by noted food writer and historian William Wo>s Weaver. Excellent for canning, paste or sauces. Large, indeterminate plants. Original seed from Harrisburg, Pennsylvania. F24D, F24G, MO

Leccesi di Apulia:<sup>1</sup> Small, red plum-shaped fruit, about 2 1/4 inches in diameter. Traditionally used in the Apulia region of Italy for making bottled tomato sauce and paste for the winter season. The tomatoes are harvested in July, and ripened further off the vine before processing. Also reportedly used for drying. Small, determinate plants. GRAY, P. [Pre]; PIG

Liberty Bell:<sup>2</sup> 80 days. Hollow, bell-shaped, rich-red fruit; 3 inches in diameter, weight 4 to 5 ounces; deeply ribbed; thick-walled; small, easily removed central seed core; mild flavor. Excellent for stuffing, either hot or cold. Also makes attractive tomato rings or scoops for dips. Vigorous, indeterminate vine. E83T, M1P

Moira: 66 days. Bush beefsteak type. Developed for canning, juice, or whole pak. Uniform, round, dark-red fruit; weight 6 to 7 ounces; excellent blood-red interior color; very good flavor. Almost completely resistant to cracking and blossom-end rot, remaining blemish-free even in adverse weather. Compact, determinate vine. D68, F46

Napoli: 80 days. Italian paste type. Small, bright red, plum-shaped fruit; 3 inches long, 1 inch in diameter; weight 2 ounces; thick-walled; interior firm and meaty. Excellent for canning or paste; also good for fresh use. Compact, determinate vine; produces a concentrated set; resists fusarium and verticillium wilts. B8M, C92, DIT, D/2, K20M, L77D, M0, M1P, N84, Q11M, TIM

New Zealand Pear: 80 days. Very large, rough, pyriform fruit; resembles a Bartlett pear; susceptible to blossom-end rot. Very meaty, with excellent flavor. Green-shouldered, indoor ripening helps ripen the top. Excellent for sauce and paste as well as for eating fresh. Indeterminate vine; requires staking. A2,177, K20M, K49M, M0

Nova: 72 days. Early maturing Roma type. Elongated, pear-shaped fruit; 3 inches long, 1 1/2 inches in diameter; weight about 2 ounces; interior firm and meaty. Compact, determinate vine; high yielding; resistant to verticillium wilt and late blight. Does well in cool northern areas. Developed at the New York Agricultural Experiment Station. A2,139M, J39, K49M

Polish Paste: Extremely large, flavorful, pear-shaped fruit; 5 1/2 to 6 1/2 inches long; often weighs up to one pound; ripens in late August. Large, indeterminate vine; may produce up to 40 or 50 pounds of fruit annually. Developed by Territorial Seed Co., from genetic material obtained from the Seed Savers Exchange. C26{PL}, K49T, M0

Principe Borghese:<sup>1</sup> An Italian tomato particularly adapted to sun drying and winter preservation. Small, plum-shaped fruit with flattened sides and a nipple on the blossom end; weight 1 to 2 ounces; interior very meaty, with little juice and few seeds. Determinate vine; bears fruit in clusters. In drier climates, branches can be tied with raffia and hung up like *ristras* until the fruit is dry and leathery. BIANCHINI, DREMANN, S. 1989; A2, B49, B75, B75{PL}, C53, D68, G6, H49, J20, J73, K23{PL}, K49M, K66, L3J, M0, M1P, Q11M, R47, etc.

Roma: 75 days. Small, plum-shaped, bright red fruit; 3 inches long, 1 1/2 inches in diameter; thick-walled; interior meaty, with

few seeds. Excellent for paste, sauce, canning whole or for adding body to juice. Prolific, compact, determinate vine; disease resistant. Very popular home garden cultivar. B73M, C92, E59Z, G47D{DF}, G92{DF}, H61, J20, K71, L7M, L97G{DF}, M95M

Roma VF: 75 days. Medium-small, plum-shaped fruit; 2 to 3 inches long, 1 1/2 inches in diameter; weight 2 to 2 1/2 ounces; thick-walled; interior dry, meaty, firm, of good color. Adapted to peeling or whole processing. Excellent for sauces and paste. Vigorous, determinate vine; widely adapted; highly disease resistant. A25, B49, B75{PL}, B75M, C44, C85M, D65, G79, J14{PL}, K73, MO, M1P, N16

Romano Burghanese:<sup>1</sup> Thick-fleshed, red plum tomato, very popular for drying in Italy. Determinate vine type. Recommended for its flavor by amateur seed saver and collector Don Burke, who introduced this cultivar to Australia. PIG

Ropreco: Italian paste type heirloom. Ripens much earlier than San Marzano. Cooks down to a savory sauce or paste. Determinate vine; prolific, outyielding Roma, Nova and others. Spreads to 4 feet in diameter, making it much more manageable than San Marzano, needs no staking or training. A2, G44M, I18M{PL}, I99M, K23{PL}, K49T, K49Z, L13M

Royal Chico: 72 days. Large Roma type paste tomato. Bright red, plum-shaped fruit; weight 3 to 3 1/2 ounces; firm, meaty interior. Excellent for sauce, paste or canning. Compact, determinate vine; provides good foliage cover; highly disease resistant. More productive than Roma; produces a heavy initial set, then continues to bear until frost. C20M, E97, F63, H95, L77D, N52

San Marzano:<sup>1</sup> 80 days. Elongated, flat-sided, blunt-ended fruit; 3 to 3 1/2 inches long, 1 1/2 inches in diameter; of deep-red color; resists cracking; holds and stores well. Interior meaty, mild-flavored, free from juicy pulp. Excellent for canning whole or for puree, sauce, and paste. In Italy, they are dried, then stuffed with anchovies, fennel seeds and capers. Vigorous, indeterminate vine; sets fruit in clusters. Very popular standard type GRAY, P. [Cul]; B73M, B78, C53, C85M, G79, I18M{PL}, L13M, MO, M1P

San Marzano Lampadina: 82 days. Improved San Marzano strain from Italy. Large, lobed, elongated, deep-red fruits; thick, meaty flesh with open seed cavities; scant juice. Pleasant, mild flavor. Excellent for sauce, canning or freezing. Vigorous, indeterminate vine. In Italy, fruits are often ripened further off the vine before processing. GRAY, P. [Pre, Re]; J20, N84, Q11M

Stone: An old reliable cultivar that is excellent for canning. Bright red, slightly flattened, globe-shaped fruit; weight 5 to 7 ounces; ripens uniformly, keeps well. Flavor somewhat acidic. Vigorous, reliably productive, indeterminate vine; provides good foliar protection for the fruit; resists drought and wilt. Introduced in 1889. B38, E5T, G57M, J20, K20M, K49M, L7M, M1P

Striped Cavern:<sup>2</sup> Hollow stuffing type. Large, blocky, bell-shaped fruit; weight 8 ounces; widely ribbed; very meaty, of good flavor. Has an easily removed central core. Thick walls stay firm, and will not split or crumble making it ideal for stuffing. Also good for slicing fresh. Ripe fruit can be stored for 4 weeks; semi-ripe fruit even longer. K20M, K49M

Stuffing:<sup>2</sup> (Itepper Tomato, Hollow Tomato) 75 days. Hollow, bell-shaped, thick-walled fruit; 3 inches in diameter; small, easily removed central seed core. Excellent stuffed with a cold salad or filled and baked. Large, productive, indeterminate vine. A21, B78

Super Italian Paste: (Giant Italian Paste) 80 days. Very large, elongated, plum-shaped fruit; 4 to 6 inches long, 2 to 2 1/2 inches in diameter; weight 10 to 12 ounces. Interior firm, very meaty, with very little juice and few seeds, of sweet flavor. Excellent for sauce and paste. Prolific, indeterminate vine. B75, B75{PL}, B78, E5T, F24M, K20M, K49M, MO, PIG

Super Roma: 70 days. Improved Roma type. Medium-sized, plum-shaped, thick-walled fruit. Interior juicy, nearly seedless, of

very good flavor. Bred for ketchup, tomato juice, or soup making. Compact, determinate, prolific vine; resistant to fusarium and verticillium wilts. C20M, L91M, Q11M

Veeroma: 72 days. An early maturing Roma type. Medium-red, plum-shaped fruit; weight 2 ounces; resists cracking. Excellent for sauce, paste, ketchup or whole pak. Compact, determinate plant; higher yielding than Roma; tolerant to fusarium and verticillium wilts. Adapted to hand or machine harvest. L42

#### YELLOW/ORANGE-SKINNED

##### *Hybrid*

Italian Gold: 70 days. High quality golden Roma type. Attractive, pear-shaped, golden orange fruits; easy to peel. High-pectin flesh makes an extra thick, rich sauce. Developed for making distinctive homemade sauces and salsas. Also excellent for canning and freezing. Very compact, prolific, determinate vine; wilt resistant. B75, D76, F63, G82, I39, L42, L89, M0, M1P, M46

Yellow River:<sup>1</sup> 85 days. Attractive, plum-shaped fruits; weight 3 to 4 ounces; bright yellow skin and flesh. Excellent fresh eating qualities. Also produces an excellent dried golden product. Compact, determinate plant. Resistant to verticillium wilt and fusarium wilt races 1 and 2. Developed by United Genetics Seeds Co. 177, K50, Q11M

##### *Open-Pollinated*

Banana Legs: 75 days. Attractive yellow paste tomato. Distinctive, elongated fruits, 4 inches long and 1 1/2 inches across, usually with a nipple at the blossom end; bright yellow when ripe. Meaty, low in acid, with few seeds; flavor very good. Good for sauce or slicing. Determinate vine, very prolific. Occasional fruits will have light green stripes. A2, C95, D56M, F73D, 177, K10, M0, M1P, M65, 089, PIG, Q34

Yellow Bell: 60 days. Unique yellow paste tomato. Plum-shaped fruit; 3 inches long, 1 1/2 inches in diameter; ripens from green to creamy yellow to yellow; flavor excellent, both rich and sweet. Suitable for salads, and for making paste, juice, preserves and yellow catsup. Indeterminate vine; heavy yielding, produces an average of 5 fruits per cluster, up to a maximum of 12 per cluster. Family heirloom from Tennessee. C20M, J20, K20M, L7M, L88J, MO

Yellow Ruffled:<sup>2</sup> (Ruffled, Yellow Ruffles) 80 days. Unusual yellow stuffing tomato. Hollow, distinctly ridged, lemon-yellow fruit; 2 1/2 inches deep, 3 to 3 1/2 inches in diameter; of excellent flavor. When pulp is scooped out, it makes an attractive container for salads, desserts and other stuffings. Productive, indeterminate vine. A2, C95, K20M, K49M, K49T, MO, M1P

Yellow Stuffer:<sup>2</sup> (Yellow Stuffing) 76 Days. Yellow, bell-shaped fruit, 3 1/4 inches across, a little less in depth; hollow except for a few small seeds around the core; thick-walled; firm flesh with a nice mild flavor, very little juice. Excellent for baking, holding its shape well. Tall, vigorous, indeterminate vine. GORMAN [Re]; A2, C26{PL}, C92, E53M, F63, F80, G71, G82, L42, MO, M1P

#### SALAD TOMATOES

Small-fruited tomatoes, ideal for serving whole in salads. Many are very sweet and may be eaten out of hand like a sweet fruit. The various plum and pear types are important specialty market items and are also popular for pickling and preserving.

#### GIUEM-SJCINNED

Green Grape: 80 days. Distinctive, small, roundish, green to yellowish-green fruit; reminiscent of a large muscat grape; 1 to 1 1/2 inches in diameter. Thin-skinned, sweet, juicy and flavorful. Resists cracking. Compact, prolific vine; bears fruit in large, grape-like clusters. Best harvested when still greenish in color. Suitable for use in sauces, soups, pickles, ketchups and hors d'oeuvres. Developed

by Tom Wagner. A2, C53, C95, F80,118M{PL}, 139,177, K10, K23{PL}, K46T, K49M, K71, L7M, L91M, MO, M1P, M46, etc.

Lime Green Salad:<sup>5</sup> Earliest green-fleshed tomato. Small, 2 1/2 to 3 ounce fruits. Apple-green skin, turns yellow-green when ripe. Juicy, attractive lime-green flesh with a pleasant tangy flavor. Compact, determinate vine with rugose leaves. Developed by Tom Wagner. J9M, K20M

Thompson Seedless Grape: Small oblong fruits, 0.8 to 1.1 ounces in weight. More attractive if momentarily dipped in hot water and the yellowish-green skin removed to reveal the tasty, lime-green flesh. Very productive, indeterminate, well-branched plants. Developed by Tom Wagner. J9M

#### PINK-SKINNED

Pink Cherry: Small, round, smooth, rose-pink fruit; only 3/4 inch in diameter; of good flavor. Very attractive. Good for salads and pickling. Highly productive vine; sets fruit in bunches of 5 to 7; produces until frost. Heirloom. MO, M1P, 089

Pink Ping Pong: 80 days. Medium-small, round, rose-pink fruit; 1 1/2 to 2 inches in diameter; has an excellent mild flavor; resists cracking. Good for salads and snacks. Extremely prolific, indeterminate vine; tolerant to drought. Heirloom. A2, C26{PL}, K20M, L11, M1P

Whippersnapper:<sup>5</sup> 52 days. Extra-early cherry tomato. Small, oval, dark-pink fruit; 3/4 to 1 inch in diameter; sweet and flavorful. Compact, determinate, multi-branched vine; of trailing habit, only 12 inches tall; often produces over 100 fruit. Excellent for pots and hanging baskets. Should not be pruned or staked. D68, F44, G6, J39, K20M, L88J, N24M

#### RED-SKINNED

##### *Hybrid*

Cherry Grande: 65 days. Uniform, round, bright red fruit; 1 1/4 inches in diameter; of good flavor; firm enough for shipping. Vigorous, determinate vine; bears fruit heavily in large clusters; provides good fruit protection; highly disease resistant; widely adapted. For home gardens, local markets or commercial production. A87M, G1M, G13M, H61, K10, K50, K73, L42, MO, M1P, M29, M49

Small Fry:<sup>5</sup> 65 days. Small, round, bright-red fruit; 1 inch in diameter; interior firm, of excellent flavor. Compact, determinate vine; very productive, bears fruit in clusters of 7 or 8; tolerant to fusarium and verticillium wilts and root rot nematodes. Ideal for growing in containers or small gardens. All America Selections winner in 1970. C44, D11M, E91G, F70, G71, G79, H61, K10, L42, MO, M1P, N16, Q11M

Sweet 100:<sup>3 10</sup> 65 days. Small, round, bright red fruit; 1 inch in diameter; extremely sweet. Excellent for eating out of hand. Has a higher vitamin C content than most tomatoes. Indeterminate, multi-branched vine; requires staking for best results. Extremely productive; produces dozens of fruit per side branch, hundreds on each plant. A home garden favorite. A25, C44, DI 1M, F70, F92, G16, H42,118M{PL}, L42, MO

Sweet Chelsea:<sup>3</sup> (Chelsea) 65 days. Small, round, cherry-red fruit; 1 1/2 inches in diameter; interior thick, very firm, flavor very sweet, low in acid, high in sugar; resists cracking and splitting. Vigorous, determinate vine; produces 15 to 20 fruits per cluster, with 10 or more clusters per plant; extremely drought tolerant and disease resistant. AI, C20M, C92, D68, J20, K16M, L42, M0, M1P, M29, M46, TIM

##### *Open-Pollinated*

Baxter's Bush Cherry: (Baxter's Early Bush Cherry) 72 days. Uniform, round, bright-red fruit; 1 inch in diameter; of good flavor; very crack resistant. Will keep for up to 28 days when refrigerated, even when picked ripe. Excellent for shipping. Compact, determi-

nate vine; grows 3 1/2 to 4 feet tall; highly productive, sets well under adverse temperatures. G87, M0, M1P

Camp Joy: Small, round, bright-red fruit; 1 to 1 1/2 inches in diameter; delicious, full tomato flavor; ripens early. Large, vigorous, indeterminate vine; highly productive over a long harvest season; should be staked for best results. Developed by a small farming cooperative that sells produce to fine restaurants. G92{DF}, J39, K66, L88J

Chadwick's Cherry: 90 days. Small, round, red fruit; weight about 1 ounce; interior juicy, with a mature, full-rounded sweetness; quality excellent. Vigorous, indeterminate vine; highly productive. Disease resistant. Selected by English horticulturist Alan Chadwick. A2, B49, K17M, K46T, K49T

Cheerio: 55 days. One of the earliest red cherry tomatoes. Medium-large, bright red fruit with a delicious, full tomato flavor. For home gardens and local markets. Compact, branching, determinate vine; yields heavily for about 30 days; tolerates cold and adverse weather conditions. Suitable for stake or ground culture. L77D, M1P

Early Cherry: 56 days. Round to oval-shaped, bright-red fruit; 1 1/2 inches in diameter; under 1 ounce in weight; flavor mild and pleasant. Compact, determinate vine; produces heavily for about 30 days. Somewhat able to set fruit parthenocarpically. Developed at Cornell University. J9M, L89

Florida Basket:<sup>5</sup> 55 days. Slightly larger version of Florida Petite. Small, slightly elongated fruit, 1 to 2 inches in diameter; weight 1 3/4 ounces; of excellent flavor. Very short, determinate vine with a prostrate growing habit. When planted in a hanging basket will drape 4 to 6 inches over the edge. Resistant to gray leafspot. M0

Gardener's Delight:<sup>3</sup> (Sugar Lump) 68 days. Small, round, bright-red fruit; 1 to 1 1/2 inches in diameter; weight 1/3 to 1/2 ounce; extremely sweet; resists cracking. Excellent for eating out of hand. Indeterminate vine; bears long, grape-like clusters, 6 to 12 fruits per cluster; produces until frost. B49, B75, B75{PL}, C53, D68, D74B, E24, E33, J9M, J20, L91M, M0, M1P, 053M, S55, etc.

Large Red Cherry: 75 days. Deep globe-shaped, bright scarlet fruit; 1 1/4 to 1 1/2 inches in diameter; sweet, mild flavor. Excellent for salads, preserving or eating whole. Vigorous, indeterminate, multi-branched vine; highly productive over a long season; resists alternaria stem canker. Standard cherry type. A87M, B75M, B78, G79, G93M, H61, H85M, K71, K73, M0, M1P, N16

Mexico Midget: 60 days. Round, dark crimson fruits, 1/2 to 1 inch in diameter. Excellent, real tomato flavor. Plants grow 5 feet tall and are laden with fruit from top to bottom. One picking of six plants has produced five gallons of fruit. Favorite of the Seed Savers Exchange. K47

Peacevine Cherry:<sup>10</sup> Found to have the highest Vitamin C content among 30 cherry tomatoes analyzed by Rutgers University researchers. Small, red fruits, 3/4 inch in diameter. Delicious flavor. Indeterminate vines, 2 to 3 feet tall, produce tresses of fruits continuously. Also high in gamma amino butyric acid. Developed by Alan Kapuler. C26{PL}, D68, F46, K17M, K23{PL}, K49T, K95M

Red Cherry: (Small Red Cherry) 75 days. Small, round, bright-red fruit; 1 inch in diameter; weight less than 1 ounce; of good flavor and quality. Fine for salads or eating whole. Vigorous, indeterminate vine; produces an abundance of fruit over a long harvest period; resists fruitworm and high temperatures. Introduced prior to 1865. BURR; B6, C44, D26D, E59Z, E9iG, FI, F92, G57M, G71, G79, H21, J73, K73, L7M

Red Peach: Unusual heirloom. Small, round, red fruit, sometimes has a dull slightly fuzzy skin; 1 1/2 inches in diameter; weight 1 ounce; soft flesh of good flavor. Ripens in midseason. Indeterminate vine. M1P, 089

**Red Pear:** 75 days. Small, bright red, pear-shaped fruit; 2 inches long, 1 inch in diameter; weight 1 ounce; of mild, pleasant flavor. Excellent for salads, preserves or pickling. Vigorous, indeterminate vine; bears fruit in long clusters; highly productive over a long season. Introduced prior to 1865. BURR [Re]; B73M, C53, D11M, D26D, F70, H95, K10, K23{PL}, K71, MO, M1P

**Red Plum:** 75 days. Small, oval, scarlet fruit; 1 1/2 to 2 inches long, 1 inch in diameter; weight 1 ounce. Interior pink, or rose-red, mild, well-flavored, seeds comparatively few. Excellent for salads, pickling and preserving. Indeterminate vine; highly productive; bears fruit in clusters. Introduced prior to 1865. BURR; G79, MO, M1P

**Riesentraube:** 70 days. Distinctive, rounded pear-shaped fruits, usually with a nipple at the blossom end; 1 1/2 inches long. Excellent, rich, full-flavor similar to beefsteak tomatoes. Good for salads, juice or sauces. Compact, indeterminate vine, produces large bunches of 20 to 40 fruits. Becoming very popular with home gardeners. Heirloom from Germany. Riesentraube translates as "giant grape", and refers to the Grapes of Eshcol mentioned in the Bible. WEAVER 1997; D29P, E5T, F80, K20M, K57{PL}, L7M, L88J, MO, M1P, M32

**Sub Arctic Cherry:**<sup>4 5</sup> 43 days. Small, round fruit; 1/2 inch in diameter; weight just under 1/2 ounce. Small, compact, trailing vine; high yielding, averages over 300 fruits per plant. Ideal for window boxes and hanging baskets. Very cold tolerant, setting fruit under colder conditions than other types. Released by the Beaverlodge Experiment Station, Alberta, Canada in 1976. J9M

**Sugar Lump:**<sup>3</sup> (Jung's Sugar Lump) 65 days. Smooth, round, deep-red fruit; 1 1/2 to 2 inches in diameter; very sweet, of good quality and flavor. Excellent for eating out of hand. Also good for salads, canning whole or juice. Vigorous, indeterminate vine; bears fruit in clusters of 6 to 12; produces until frost. C95, K71, M1P

**Sweetie:**<sup>3</sup> 65 days. Round, bright-red fruit; 1 to 1 1/2 inches in diameter; unusually sweet and flavorful, sugar content as high as 14%. Has a high vitamin C content. Excellent for snacking, salads, or low-sugar preserves. Vigorous, indeterminate vine; bears fruit in long clusters of 12 to 20 fruit; widely adapted. Should be staked or trellised for best results. A16, C92, F82, G27M, G87, I39, J14{PL}, K49M, L10, L13M, L79, L89, M0, M1P, M32

**Tiny Tim:**<sup>5</sup> 55 days. Small, round, scarlet-red fruit; 3/4 to 1 inch in diameter; of very good quality and flavor. Excellent for salads and relish trays. Compact, determinate vine; grows only 12 to 15 inches tall, 6 to 12 inches in diameter. Very ornamental, with rugose leaves. Ideal for growing in pots, window boxes and flower beds. A16, A25, B73M, C85M, D1T, D11M, E38, F70, G71, L7M, L42, M1P, R47

#### YELLOW/ORANGE-SKINNED

##### *Hybrid*

**Sun Gold:** 57 days. Super sweet tomato with the flavor of a tropical fruit. Small, bite-size, bright tangerine-orange fruits. Extremely sweet, but with a distinctive, fruity or winey taste. Superior for snacking. Tall, vigorous, indeterminate vine. Yields about 20 fruits per vine, borne on long, grape-like clusters. Suitable for outdoor or greenhouse production. C20M, C53, D56M, D68, E75{PL}, G6, G93M, I18M{PL}, I77, J20, K66, L89, L91M, M0, M1P, M46, M65, Q34, S70, etc.

##### *Open Pollinated*

**Cherry Gold:**<sup>5</sup> 45 days. A golden version of Tiny Tim. Deep golden-yellow fruit; the same size as Tiny Tim, but much better flavored. Very compact, determinate vine; grows only 6 inches tall, 6 inches in diameter. Excellent for windowsill gardens, or chain store pot plant sales. Introduced by Stokes Seeds. L42

**Gold Nugget:** 70 days. Round to slightly oval fruit, 1 to 1 1/4 inches in diameter; rich golden-yellow in color; generally resists

cracking. Has a delicious, well-balanced flavor resembling Yellow Plum. Most fruits are seedless. Compact, determinate vine; highly prolific. For home gardens or commercial production. Developed by Dr. James Baggett at Oregon State University. A2, C53, C95, E24, F44, G6, G5JM, I39, J9M, J20, K10, K49M, L89, M0, M1P, Q34, etc.

**Snow White:** 65-75 days. Unusual ivory-colored cherry tomato. Medium-sized, completely round fruits, pale-yellow when fully ripe. Very delicate, smooth, creamy flavor, sweet without being overly sugary. Excellent for salads and snacking. Prolific, indeterminate vine. Developed by Joe Bratka. B49, K20M, L77D, M0

**Sundrop:** (Burpee's Sundrop) 76 days. Small, globe-shaped, deep orange fruit; 1 1/2 inches in diameter; thick-walled; firm, meaty flesh, sweet flavor. Resistant to cracking or bursting, holding well on the vine even late in the season. Excellent for snacking or relish trays. Indeterminate vine. A2, F80, L11, N24M, 089

**Wonder Light:** (Lemon Vine, Plum Lemon) 75-80 days. Unusual, lemon-like tomato. Roundish-oval fruits, usually with a nipple on the blossom end, bright yellow. Very reminiscent of a lemon in size, shape and color. Good taste and texture. Very good for salads and salsa. Indeterminate vine, hardy and productive. Collected in Irkutsk, Siberia by Kate Rogers Gessert. C44, G6, K10, M0, M1P

**Yellow Cherry:** 75 days. Small, round, bright-yellow fruit; 1/2 to 1 inch in diameter; of mild, sweet flavor. An excellent garnish or addition to salads and side dishes. Vigorous, indeterminate vine; highly productive over a long season; tolerant to heat and drought. Introduced prior to 1865. BURR; K20M, L88J, M0, M1P, N40{PR}, R47

**Yellow Peach:** Unusual heirloom. Small, round, yellow fruit, sometimes has a dull slightly fuzzy skin; 1 1/2 inches in diameter; weight 1 ounce; soft flesh of good flavor. Ripens in midseason. Indeterminate vine. M1P

**Yellow Pear:** 75 days. Small, pear-shaped, waxy clear-yellow fruit; 1 1/2 to 2 inches long, 1 inch in diameter; weight 1 ounce; of mild, sweet flavor. Excellent for salads, preserving and pickling. Large, indeterminate vine; highly prolific, produces fruit in clusters. Introduced prior to 1865. BURR; A25, B73M, B75{PL}, C53, C85M, D11M, F70, G79, H61, K23{PL}, L7M, M0, M1P, N16, R47, etc.

**Yellow Plum:** 75 days. Small, plum-shaped, clear-yellow fruit; 1 1/2 inches long, 1 inch in diameter; weight 1 ounce; of mild, sweet flavor. Excellent for salads, preserves or pickling. Vigorous, indeterminate vine; very productive, bears fruit in clusters until frost. Introduced prior to 1865. BURR; C92, D68, G13M, G71, K5M, K49M, L11, M0, M1P, M32

#### SLICING TOMATOES

Mostly medium to large tomatoes, ideal for slicing and eating raw in sandwiches and salads. The very large, meaty, richly flavored beefsteak types are especially popular for this purpose.

#### PINK-SKINNED

##### *Hybrid*

**Pink Girl:** 76 days. Large, smooth, flattened globe-shaped fruit; an attractive pink color; weight 7 to 8 ounces; has excellent tolerance to cracking. Flesh meaty, juicy, of mild flavor. Indeterminate, widely adapted vine; produces heavily until frost. Resistant to fusarium and verticillium wilts and tobacco mosaic virus. For home gardens, local markets, and roadside stands. B73M, D11M, E91G, E97, F13, F70, G57M, G82, H33M, H61, K10, M0, M1P

##### *Open-Pollinated*

**Arkansas Traveler:** 80-90 days. Rough, irregular, medium-sized fruits; weight 6 to 8 ounces; excellent, creamy, mild flavor. Indeterminate, highly adaptable vine. Southern heirloom well known for its ability to produce flavorful fruit in hot, dry weather. Popular in the

Ozark Mountains of Arkansas and Missouri. B38, D56M, E97, K10, K49T, L7M, MO, M1P, M65

Bradley: 80 days. Medium-sized, deep globe-shaped, pink fruit; weight 6 to 7 ounces; green-shouldered; very juicy, mild and flavorful. Strong, semi-determinate, short stake type vine; resistant to fusarium wilt and alternaria stem canker. For home gardens and local markets. D74B, G53M, H61, K20M, MO, M1P

Brandywine: (Pink Brandywine) 74 days. Medium-large, slightly irregular, dark reddish-pink fruit; weight 10 to 12 ounces; susceptible to cracking. Flavor extremely fine, distinctive, of gourmet quality. Excellent for slices, salads and sandwiches. Vigorous, indeterminate vine; moderately productive; has potato-like foliage. Introduced in 1889 by Johnson & Stokes seed company of Philadelphia. WEAVER 1997; B38, B49, B75, B75{PL}, E5T, E97, F15{PR}, F24G, G6, G16, H49, I63Z, J25M{PL}, K49M, K71, L7M, MO, M1P, etc.

Brimmer: (Pink Brimmer) 82 days. Heirloom from Virginia. Large, flattened globe-shaped, purplish-pink fruit; 4 inches in diameter; weight often 2 1/2 pounds or more when well grown. Flesh very meaty, with few seeds and core, mild, low in acid. Indeterminate vine. Winner of the Grand Prize for size and quality at the Jamestown Exposition, sometime prior to 1910. Introduced about 1905. L7M

Dutchman: 80 days. An heirloom Beefsteak type. Large, flattened globe-shaped, dark-pink fruit; 4 to 5 inches in diameter; weight up to 2 pounds. Flesh very solid, low in acid, flavor excellent, mild and sweet. Large, indeterminate vine; unproductive. Similar to Giant Belgium, but somewhat flatter. B38, M0, M1P

Dwarf Champion:<sup>6</sup> 8 (Tree) 70 days. Unique "stakeless" or thick-stemmed tomato. Very short, stiff stem, 1 inch in diameter, 18 to 24 inches tall; grows perfectly erect without any support. Dwarf indeterminate habit. Rose-pink fruit; weight 5 ounces; firm and meaty, mild, low in acid. First raised in the gardens of the Count de Fleurieu at the Chateau de Laye, near Villefranche, France, about 1865. BURR, VILMORIN; K71, M1P

Eva Purple Ball: 78 days. Attractive, high quality heirloom from the 19th Century. Uniform, round, pinkish-purple fruits; weight 4 to 5 ounces; crack resistant, very smooth and blemish free. Soft, tender, sweet and juicy. Ripens easily and is easy to peel. Excellent for salads and sauces. Resistant to foliar and fruit diseases. Originally from the Black Forest region of Germany. D29P, K20M, K46T, L7M, M0, M1P

German Head: 80 days. Beefsteak type. Large, smooth, well-shaped fruit; an attractive dark-pink in color; weight 10 ounces. Flesh juicy, meaty, of excellent rich flavor. Large, indeterminate vine. Recommended for roadside markets. Very old cultivar. F73D, M0, M1P

German Johnson: Heirloom from Virginia and North Carolina. Large, flattened globe-shaped fruit; pink with yellow shoulders; weight 16 to 24 ounces. Flesh very meaty, low in acid, with few seeds, of excellent mild flavor. Good for slicing or canning. Indeterminate vine; very productive; fairly resistant to disease. B38, D26D, D68, F63, F73D, K10, K71, L7M, M0, M1P

Giant Belgium: 90 days. Very large, deep oblate, dark pink fruit; 4 inches in diameter; weight 1 1/2 to 2 pounds, occasionally up to 5 pounds; smooth at the blossom end. Flesh extremely meaty, low in acid, flavor very good. Excellent for slicing. Also makes fine cocktail wines. Indeterminate vine. Developed in Ohio. D56M, F73D, 177, K23{PL}, K46T, K71, M0, M1P, M32, M46, M65

Giant Tree:<sup>7</sup> (Italian Potato-Leaved) 90 days. Very large, round, smooth, pink fruit; weight 1 to 2 pounds; flesh tender but firm, low in acid, mild flavored, with few seeds. Vigorous, strong-stemmed, indeterminate vine; will grow to 15 feet or more if trellised. Has heavy, thick leaves that provide good protection. Excellent for home gardens. F80, G82, M0

June Pink: (Pink Earliana) 75 days. Medium-sized, somewhat flattened fruit; weight 4 to 5 ounces; exterior very attractive, rose-pink, sometimes with green shoulders; interior solid, of excellent flavor; resistant to cracking. Large, vigorous, indeterminate vine; bears fruit in clusters of 6 to 10, produces over a long period. Introduced about 1900. A2, D29P, L7M, L77D, M1P

Mortgage Lifter: (Pink Mortgage Lifter) Large, well-shaped, dark-pink fruit; weight up to 1 pound; very meaty, with few seeds. Indeterminate vine. An old cultivar that is still in demand. According to folklore it was named by a farmer who sold a crop of these tomatoes to pay off a farm he was about to lose. A21, B6, B38, B49, B75, B75{PL}, E5T, F63, K10, K49M, K71, M0, M1P, M32, 089, etc.

Oxheart: 85 days. Large, heart-shaped, rose-pink fruit; weight often 1 1/2 pounds, occasionally up to 2 pounds; flesh solid, meaty, mild, with very few seeds. Vigorous, indeterminate vine; best grown in cages to protect fruit from sunscald. An old-fashioned home garden favorite. B38, B73M, C44, C92, D11M, D76, F70, F80, G68, G79, J97M, K10, M0, R47

Pomme cAmore: 95 days. Small, pink fruit; 2 to 2 1/2 inches in diameter. Medium-large vine; susceptible to wilt. One of the historical *love apples* of colonial Europe. Carried to Mauritius by one of several European governments who claimed that island as a colony. Saved from extinction by the Research Department of Colonial Williamsburg, Virginia. A2, C95

Ponder Heart: Very large pink tomato from Japan. Semi-globe-shaped fruit with a slightly pointed blossom end; very smooth, without ribbed shoulders. Flesh thick and meaty, non-acid, has a small seed cavity. A cross of Ponderosa and Oxheart. M1P

Ponderosa: (Pink Ponderosa, Pink Beefsteak) 90 days. Very large, flattened globe-shaped, deep-pink fruit; weight 12 to 16 ounces, some up to 2 pounds; susceptible to cracking and sunscald. Interior firm, meaty, with very few seeds, of excellent mild flavor. Good sliced, canned or stewed. Vigorous, indeterminate vine; produces continuously until frost. Long-time favorite. Introduced in 1891. B38, C85M, G79, G82, 139, K10, K71, M0, M1P, N16, Q34

Tappy's Finest: 77 days. West Virginia family heirloom. Large, slightly irregular, deep-pink fruit; 3 to 4 inches in diameter; weight 14 to 16 ounces, sometimes up to 2 pounds. Interior very meaty, with small core and few seeds, of extremely fine flavor. Good for slicing and processing, excellent for juice. Indeterminate vine; unproductive. K20M, L7M, M0

Watermelon Beefsteak: 75 days. Very large, deep oblate, dark-pink fruit, somewhat reminiscent of a watermelon; weight up to 2 pounds; flesh purplish-red, extremely meaty, sweet and mild. Indeterminate vine. An heirloom strain that dates back over a century. E5T, F73D, L13M, M0, M1P

#### rep-skinned

#### Hybrid

Big Beef: 73 days. High quality, early red beefsteak type. Large, smooth, globe-shaped fruits; weight 8 to 12 ounces; firm, meaty, juicy; rich, full, old-time flavor. Indeterminate vine with multiple disease resistance. Maintains production of large fruits late in the season. Widely adapted. Highly rated for flavor and overall performance. All America Selections Winner in 1994. B73M, B75, C92, D65, D65{PL}, D74B, E97, G6, G16, G71, H49, 191, J97M, K50, K66, K71, M1P, M29, etc.

Carmello: 70 days. Gourmet French tomato. Medium-sized, smooth, very attractive fruits; crack resistant. Rich, full-bodied flavor, a perfect balance of sweetness and acidity. Widely adapted, productive, indeterminate vine. Resistant to verticillium, fusarium, nematodes and tobacco mosaic virus. Very popular in Europe. C20M, I18M, I18M{PL}, 177, K57{PL}, K66

Caruso:<sup>9</sup> Large, round, slightly ribbed fruit; weight 7 ounces; faint green shoulder; fair green-ripe flavor. Vigorous, open, indeterminate vine; high yielding; early in production. Very tolerant to heat, continuing to set fruit during the summer months. Also sets and fruits under cooler greenhouse temperatures. Particularly recommended for early heated crops and autumn crops. FI, F85G, K10, L42, M1P

Celebrity: 70 days. Large, deep globe-shaped, smooth, deep red fruit; firm flesh with excellent flavor. Strong determinate vine; provides good cover; adapted to a broad range of conditions. Has multiple disease resistance, including genetic resistance to tobacco mosaic virus. Excellent for home gardens and commercial production. All America Selections winner in 1984. B75M, D11M, E75{PL}, F13, F70, G6, G71, G93M, H33M, H61, H95, H99M{DE}, J14{PL}, K73, MO, M1P, etc.

Cobra:<sup>9</sup> Truss-harvested, greenhouse forcing tomato. Large, very firm, beefsteak type fruits; extremely uniform; weight 7 to 8 ounces. One of the best tasting of the greenhouse tomatoes. Carries the interior ripening gene for field ripened flavor. Indeterminate, high yielding vine. Also suitable for tunnel and field production. AI, C85M, D11M, E91G, F70, F85G, G68,177, K50, L42, MO, M29, M49, N16, S95M, etc.

Dombo:<sup>9</sup> (Jumbo) Large, green-shouldered fruit; weight 8 to 12 ounces; very firm and flavorful. Medium late maturity. Strong but short-jointed vine; highly disease resistant. Produces 12 clusters of fruit, versus 8 clusters which is standard for non-hybrid cultivars like Vendor. Recommended for spring, summer, and early fall crops. F85G, M1P

Early Cascade: 55 days. Medium-sized, deep globe-shaped fruit; weight 4 to 8 ounces; smooth, deep red exteriors; of excellent flavor. Ideal for salads and sandwiches. Also good for canning and sauce. Tall, indeterminate vine; sets fruit abundantly in clusters of 7 to 9; continues to produce heavily all season. Tolerant to verticillium, fusarium and nematodes. A16, A25, C85M, D11M, D65, F70, G6, G79, G87, MO, M1P, M49

Floramerica: 70 days. Large, deep globe-shaped, deep red fruit; 3 inches in diameter; weight 6 to 10 ounces; of firm texture and excellent flavor. Strong, determinate vine; widely adapted. Tolerant or resistant to 15 genetic disorders and diseases. Excellent for home gardens. All America Selections winner in 1978. Developed by the University of Florida. A16, A25, B73M, C44, C85M, D11M, D27, D65, F70, G57M, G71, G79,184, M1P, N16, etc.

Heartland:<sup>8</sup> 68 days. Medium to large fruit, 3 to 4 inches in diameter; weight 6 to 8 ounces; of good quality and flavor. Compact, self-supporting plant; height 3 to 4 feet; bears all season. Dark green, wrinkled, heavy foliage. Resistant to verticillium, fusarium and nematodes. One of the first dwarf indeterminate tomatoes. F63, MO, M1P

Patio:<sup>5</sup> 70 days. Medium-sized, deep oblate fruit; weight 4 to 5 ounces; exterior smooth, deep red; interior firm and flavorful. Strong, compact, determinate vine; high yielding; tolerant to fusarium wilt. Requires support. Developed for growing in tubs or limited space gardens. D11M, E53M, FI, F70, G71, G79, G93M, H61, J84, K73, MO, M1P, N16

Pixie:<sup>5</sup> (Burpee's Pixie) 55 days. Smooth, globe-shaped, bright scarlet fruit; 1 1/2 to 2 inches in diameter; flesh meaty, juicy, very flavorful. Compact, determinate, strong-stemmed vine; only 14 to 18 inches tall. Excellent for pots, window boxes, limited-space gardens and hydroponic culture. Does well in cool northern areas. A25, C85M, D11M, F70, M1P, R32

Winter Red:<sup>11</sup> Improved Long Keeper type. Earlier and higher yielding. Has a richer flavor and redder color. Vine-ripe fruits can be harvested during the summer, green fruits will keep up to 3 months after the first frost and ripen indoors. Disease resistant. B75, B75{PL}

### Open-Pollinated

Abraham Lincoln: (Buckbee's Abraham Lincoln) 87 days. Home garden favorite since 1923. Recently re-bred by Shumway's to farther improve purity which had diminished over the years. Large, smooth, dark red fruit; sweet, solid and meaty; ripens all the way through. Excellent for slicing, juice or catsup. Indeterminate vine; produces as many as 9 fruits in a cluster, with a total weight of 7 pounds. Has bronze-green foliage. D26D, D56M, E5T, K71, L7M, M0, M1P, M65

Angora: 68 days. Medium-sized, smooth, brilliant red fruit; 2 1/2 inches in diameter; flesh firm, mild-flavored; resists cracking. Moderately vigorous, determinate vine. Stems and leaves are covered with grayish-white pubescence, making it attractive enough for the flower garden. Produces a small percentage of glabrous plants which can be rouged out at the seedling stage. C95, E83T, K20M, L88J, M0, M1P

Auriga:<sup>10</sup> 72 days. Small, orange-red, oblate fruits; average weight just over two ounces; good flavor. Has the highest carotene content of any tomato tested—4.3 mg. per 100 gs., approximately 8 to 10 times higher than regular tomatoes. Indeterminate type growth habit. Originated in Switzerland. 139, N84

Beefsteak: (Scarlet Beefsteak, Red Ponderosa, Crimson Cushion) 85 days Very large, flattened, slightly ribbed, brilliant crimson-scarlet fruit; weight 12 to 16 ounces. Solid, meaty, deep red flesh, nearly seedless, with old-fashioned "real" tomato flavor. Excellent for slicing. Vigorous, indeterminate, productive vine. Popular home garden cultivar. Scarlet sport of Ponderosa. A25, B6, F24D, F24M, F80, G71, G79, G92{DF}, H61, K49M, K71, K73, M0, M1P

Bonny Best: (John Baer) 75 days. Medium-sized, round to deep globe-shaped, bright red fruit; weight 5 to 8 ounces; solid, meaty flesh, with full tomato flavor. Vigorous, indeterminate vine; adapted to a wide range of growing conditions. Has sparse foliage. Long-time favorite for home gardens and local markets. Introduced in 1908. B38, C85M, F24M, G53M, G79, G83M, J20, J25M, K73, L11, L88J, M0, M1P, N52

Break o' Day: 65 days. Medium-large, globe shaped, orange-red fruit; 2 1/2 to 3 inches in diameter; weight 6 ounces. Flesh solid and meaty, with few seeds, low in acid, of very good flavor. Indeterminate vine; matures early and produces abundantly throughout the season; resistant to wilt. Has sparse foliage. Home garden favorite for over 50 years. K20M, PIG, R47

Bush Beefsteak: 62 days. Medium-large, flattened globe-shaped, deep red fruit; weight 8 to 12 ounces; solid, meaty, rich red flesh, with very few seeds. Ideal for slicing. Vigorous, compact, determinate vine; highly productive, even under adverse conditions. Excellent for home gardens in northern areas. A16, C85M, D27, H33M, L42, L79, M0, M1P

Cal Ace: 80 days. Large, smooth, deep oblate fruit; weight 8 to 12 ounces; uniform ripening; of good texture and flavor. Strong, determinate, highly productive vine; provides good protection. Resistant to fusarium and verticillium wilts. Used extensively for fresh market and home garden production in California. Especially adapted to arid regions. B8M, B75M, C20M, DIT, G93M, H61, K10, K73, M0, N52

Caro Red:<sup>10</sup> 78 days. Contains about 10 times the pro vitamin A found in standard tomatoes. Smooth, globe-shaped, rich orange-red fruit; 2 1/2 to 3 inches in diameter; weight 4 to 8 ounces. Has a rich, distinctive flavor. Prolific, indeterminate vine. Developed at Purdue University. K20M

Cold Set:<sup>4</sup> (Outdoor Seeder) 70 days. Seeds germinate in soil as cold as 50° F., and young seedlings tolerate temperatures as low as 18° F. Performs best in cool to moderate climates, without excessive wetness or humidity. Medium-sized, round, blood red fruit; weight 5 to 6 ounces. Determinate, high yielding vine. Introduced in 1963

by Ontario Agricultural College. A2, D27, D76, D76{PL}, E97, E97{PL}, J39, K20M

Costoluto Genovese: (Ribbed Genova) 90 days. Medium-sized, flattened, slightly ribbed, scarlet fruit; 2 1/2 to 3 1/2 inches in diameter; of excellent flavor. Indeterminate vine. Does well in hot weather, but will continue to produce when the weather turns cool. An old, unimproved cultivar from northern Italy. C53, D29P, G53M, I18M, I18M{PL}, 177, J73, K23{PL}, K49T, K66, L7M, L77D, MO, M1P, Q11M, etc.

Delicious: (Burpee's Delicious) 77 days Very large, deep globe-shaped fruit; resists cracking. Mostly over 1 pound in weight, with many 2 to 3 pounds. Produced the world record of 6 pounds 8 ounces. Interiors solid, with small seed cavities, of excellent flavor. Perfect for slicing. Indeterminate vine; moderately productive. B6, B75, E5T, E91G, E97, E97{PL}, G71, G79, H61, J14{PL}, K49M, MO, M1P

Dinner Plate: 90 days. Beefsteak type Very large, heart-shaped fruit; average weight 1 1/2 to 2 1/2 pounds; susceptible to cracking at the shoulders. Interior very thick and meaty, richly flavored, nearly seedless. Superior for slicing. Indeterminate vine, should be grown in a cage or on a trellis. Heirloom. D56M, E5T, K49M, MO, M1P, M65

Doublerich:<sup>10</sup> 80 days. High vitamin tomato. Contains 50 to 60 units of vitamin C, compared to 12 to 15 in other tomatoes. Medium-sized, globe-shaped, deep scarlet fruit; weight 4 to 8 ounces. Interior bright red, solid, meaty, juicy, with a small amount of seeds. Excellent for canning and juicing. Vigorous, indeterminate, high yielding vine. B49, C26{PL}, F46, K23{PL}, K49T, L3J, L13M, L89

Earliana: 65 days. Medium-sized, flattened globe-shaped, bright scarlet fruit; 3 inches in diameter; weight 4 to 5 ounces; thick-skinned; green-shouldered. Solid flesh of good flavor. Vigorous, indeterminate, open-spreading vine; bears fruit in clusters of 6 to 10. Widely grown for early markets. Also good for home gardens. A2, F24M, K20M, K27M, L77D, M1P

Earlrouge: 65 days. Medium-sized, slightly oblate fruit; weight 6 1/2 to 7 ounces; easily removed peel; resists cracking. Sweet, flavorful, high-crimson interiors. Good for slicing and canning. Compact, determinate vine; sets fruit well at extremes of temperature. For home gardens, local markets and shipping. Developed in Canada. C95, D68, J25M, J39, K20M, K49Z

Egg: 80 days. Small, egg-shaped, smooth fruit; 2 to 3 inches long; weight 3 ounces; resists cracking; keeps well. Firm, non-acid flesh, of very good flavor. Makes excellent juice, salsa and canned tomatoes. Very uniform in size and shape, even in poor growing seasons. Holds well on the vine and in after-season storage. Strong, high-yielding, determinate vine. L77D, N7G

Fireball: 65 days. Medium-sized, flattened globe-shaped, rich red fruit; 2 1/2 to 3 inches in diameter; weight 4 to 5 ounces; resists cracking. Compact, determinate vine; produces a concentrated set. Has sparse foliage, should be caged to protect fruit from sunscald. Widely grown for the early basket trade. B1M, B3M, C20M, C61, 184, K27M

Flora-Dade: 75 days. Medium-sized, round to deep globe-shaped fruit; weight about 7 ounces; smooth and firm; jointless. Very productive, determinate vine; well protected by heavy foliage. Well adapted to humid southern areas. Developed by the University of Florida for calcareous soils and adverse conditions. A1, A87M, B75M, D33, F63, G13M, G27M, I67M, J84, K10, K50, M0, M1P

German Red Strawberry: 80 days. Distinctive heirloom from Germany. Resembles a strawberry in color and shape. Medium-sized, fairly uniform fruits; 3 1/2 inches long and weighing about 10 ounces. Very solid and meaty with few seeds and little juice. Delicious, complex flavor. Excellent in salads and sandwiches. Indeterminate. F73D, F80, H15P, K71, L7M, M1P

Glacier: 54 days. Small, round fruit; 2 1/2 to 3 inches in diameter; weight 2 to 3 ounces; of excellent sweet flavor; resists cracking. Spreading, determinate vine, to 18 inches tall; produces up to 100 fruit, with 60 not uncommon. Does well in cool northern areas. Also successful as a winter crop in southern Florida. Heirloom from Sweden. C97, D68, E24, F46, I39M, J25M, K17M, M0, M1P

Glamour: 75 days. Medium-sized, flattened globe-shaped fruit; weight 6 to 8 ounces; exterior bright red, smooth; interior thick-walled, meaty, mild but flavorful; resistant to cracking. High yielding, indeterminate vine. Standard main crop cultivar used by bedding plant growers. C85M, E53M, E91G, F13, G79, H61, I64, I67M, K49M, K50, K73, L42, M0, M1P

Harbinger: 60 days. Medium-small, bright red fruit; 2 to 2 1/2 inches in diameter; weight 3 ounces; of very good flavor; thin skin, prone to cracking. Ripens reliably off the plant after cold summers in northern areas. Indeterminate vine; highly productive over a long season. Does well under glass. Traditional English cultivar. Introduced about 1910. B49, R32, R47, S55, S61, S75M

Homestead: (Homestead 24) 80 days. Medium-large, deep globular fruit; weight about 8 ounces; exterior smooth, dark red; interior firm, meaty, flavorful. Strong, semi-determinate vine, requires no staking. Large leaves provide good fruit protection. Resistant to fusarium wilt. Adapted to areas with hot temperatures and high humidity. A87M, C20M, D12, E5T, G1M, G57M, G68, K71, L7M, L10, M1P, N16

Imur Prior Beta: (IPB) 60 days. Small to medium-sized, globe-shaped, dark red fruit; 1 1/2 to 2 inches in diameter; weight 2 to 4 ounces; somewhat tough skin; firm, juicy flesh, very flavorful. Large, indeterminate vine; very prolific. Has potato-like foliage. Popular in short-season areas. Released by Washington State University. A2, B78, F82, H15P, K20M, K49M, K95M, PIG

Jersey Devil: Long, tapered, pointed fruit, reminiscent of a very large frying pepper; of rich red color; weight 2 to 6 ounces. Interior very sweet, but with a good full tomato flavor, has few seeds. The very firm, immature green fruit makes an excellent pickle; Very large, indeterminate vine; requires staking or caging. Good for home gardens. A2

Jung's Improved Wayahead: 63 days. One of the earliest maturing tomatoes that also has good size. Smooth, slightly flattened, bright scarlet fruit; 3 to 3 1/2 inches in diameter, 1 1/2 to 2 inches deep; weight 4 to 6 ounces. Firm interior, with a full tomato flavor. Determinate vine; highly productive over a long harvest season. G16

Landry's Russian: 70 days. Canadian heirloom, brought to the prairie provinces many years ago by Russian immigrants. Uniform, medium-sized, round fruit; 2 1/2 to 3 inches in diameter; weight 1/2 pound. Deliciously sweet, deep red flesh. Indeterminate, consistently productive vine. C92, J25M

Long Keeper:<sup>11</sup> (Burpee's Long Keeper) 78 days. Unique storage tomato. Unblemished ripe or partially ripe fruit, when harvested before frost and stored properly, will stay fresh for 6 to 12 weeks or more without a change in flavor or texture. The skin is light, golden orange-red when ripe. Medium red flesh. Firm fruits hold their shape when canned whole. B73M, B75, C44, C85M, DI 1M, F70, G16, G71, G79, J9M, L7M, L79, L89, M0, M1P, etc.

Manalucie: 85 days. Medium-large, smooth fruit; weight 6 to 8 ounces; flesh firm, meaty, of very good quality; relatively resistant to cracking. Very slow ripening, must be allowed to fully mature before harvesting. Vigorous, indeterminate vine; productive over a long period; provides good foliage cover for protection against sunscald. Has multiple disease resistance. B75, B75{PL}, F80, M0, M1P

Marglobe: 75 days. Medium-large, globe-shaped, very uniform fruit; weight 8 to 10 ounces; thick-walled; solid sweet flesh, with a full tomato flavor. Vigorous, determinate, prolific vine; somewhat

resistant to fusarium wilt. Long-time home garden favorite. A25, E53M, G68, G79, H49, I64, K71, Z70, L13M, MO, M1P, N16, S17

Marion: 75 days. Medium to large, deep globe-shaped fruit; weight about 8 ounces; exterior smooth, dark red; interior firm, of good flavor. For both home gardens and fresh market. High yielding, indeterminate vine; well protected by heavy foliage; disease resistant. Adapted to the Middle and Upper South. G1M, L4, MO, M1P

Marmande: (Marmande VF) 65 days. Medium-large, irregularly shaped, slightly ribbed, scarlet red fruit; weight 6 to 8 ounces; solid, meaty, mild flesh, with excellent full tomato flavor. Vigorous, prolific, semi-determinate vine; sets fruit early and under cool conditions; resists wilt. Developed in France by the Vilmorin Company. Very popular in Europe. B75, B75{PL}, C85M, D12, E5T, E63D, G68, K49M, MO, M1P, Q11M, S55

Moneymaker: 75 days. Medium-sized, globular fruit; weight 4 to 6 ounces; exterior intense red when ripe, smooth; quality very high. Prolific, indeterminate vine. Sets well in any weather; especially adapted to humid tropical and sub-tropical areas. Also does well in cool greenhouses. B49, E5T, F92, K49M, L89C, M1P, M27, N84, O53M, P59M, Q18, S75M, TIM

Nepal: 78 days. Medium to large, globe-shaped, bright red fruit; weight 10 to 12 ounces, occasionally over 1 pound; very meaty and flavorful; resists cracking. Retains its excellent "old-fashioned" flavor during cold weather conditions. Vigorous, indeterminate vine; very prolific. Originated in the Himalayas. A2, C95, F24M, F44, K20M, K23{PL}, L11, L88J, L94, MO, M27, R47

New Yorker: 63 days. Medium-sized, roundish fruit; weight 4 to 6 1/2 ounces; exterior smooth, bright scarlet; interior solid, meaty, of fine flavor. Compact, determinate vine; produces fruit in a concentrated set; resists verticillium wilt. Does well in cool northern or short season areas. C69, F13, F46, F63, K10, L42, MO, M1P

Oregon Spring: 60 days. Adapted to areas with cool summer nights, setting parthenocarpic fruit when temperatures fall below 50°F. When night temperatures increase, fruit will be seeded. Medium-sized fruit; weight 6 to 8 ounces; of excellent quality and flavor. Determinate vine; tolerant to fusarium and verticillium wilts. Developed by Dr. James R. Baggett at Oregon State University. A2, A21, B49, D68, D82, E24, F82, G6, H95, I39, J9M, K49T, K49Z, K66, L89, M1P, M27, M32, etc.

Pearson: 80 days. Medium-sized, deep globe-shaped fruit; 2 1/2 to 3 inches in diameter. Has a somewhat acid, "old-fashioned" tomato flavor. May have green shoulders, even when ripe. Very good for slicing; also used for canning. Medium-large, determinate plant; tolerant to semi-arid growing conditions. Has good foliage cover that protects the fruit from sunscald. A2, B75M, D1T, G57M, K5M, M32, S17

Peron: (Peron Sprayless) 68 days. Medium-large, deep globe-shaped, bright scarlet fruit; 3 to 3 1/2 inches in diameter; weight 8 ounces; solid flesh, of very good flavor. Strong, indeterminate vine; reliably productive; highly disease resistant. Introduced from South America in 1951 by Gleckler's Seedsmen. E5T, E97, K23{PL}, K49M, L7M, L11, L13M, L77D, L88J, MO, M1P

Porter: 78 days. Small, round-oval, pinkish-red fruit; weight 1 ounce; solid, meaty flesh, of very good flavor; resists cracking. Large, open, indeterminate vine; produces heavily until frost; grows well in poor soil. Has fair foliage color. Exceptionally heat and drought resistant. Developed by V.O. Porter in 1927 for home gardens and local markets in the Southwest. A2, E5T, F46, G57M, K20M, MO, M1P, N16

Pusa Ruby: 70 days. Medium-sized, uniformly deep-red fruit; 2 inches in diameter; keeps well. Vigorous, indeterminate, prolific vine; very disease resistant. Can be grown throughout the year in warm climates. Very popular with home and market growers in India. A2, J73, K20M, M1P, N91, Q18, Q45M, R0, R50, S36

Rodade: 77 days. Released by South Africa in 1982, as the first cultivar resistant to bacterial wilt, a serious disease in warm subtropical areas. Also resistant to fusarium and verticillium. Very attractive, smooth, firm fruit; ripens evenly. Similar to Flora-Dade, but produces a higher percentage of first grade fruit and is less prone to catfacing and cracking. MO

Rutgers: 75 days. Medium-large, bright red fruit; weight 8 to 10 ounces; ripens uniformly. Has a rich, mellow, full-bodied flavor. Quality very good for slicing. Vigorous, indeterminate vine; adapted to a wide range of growing conditions. An excellent all-purpose cultivar. Long-time home garden favorite. Also good for local markets and shipping. B6, B38, B49, C44, D76, F80, G79, H33M, H61, K71, K73, L10, MO, M1P, N16

San Francisco Fog: Legendary variety from the San Francisco Bay region. Particularly well-adapted to cool, wet, coastal California growing conditions. Medium-sized, globe-shaped fruits; moderately firm skins; weight 3 ounces. Excellent, full flavor, fairly well balanced. Spreading, indeterminate vine. B49, C95, F73D, K17M, K49M, M0

Santiam: 58 days. Medium-sized fruit; weight 4 to 5 ounces; thick-skinned; mild, slightly acid, sweet and juicy, of good quality. Vigorous, determinate vine, to 30 inches tall; high yielding; sets parthenocarpic fruit. Resistant to fusarium and verticillium wilts. Sister strain to Oregon Spring. Matures 1 to 2 weeks earlier, depending on the weather. A2, C95, J9M, L89C, N52

Scarlet Topper: (Pritchard, Pritchard's Scarlet Topper) 75 days. Medium-large, globe-shaped, brilliant red fruit; 3 to 3 1/2 inches in diameter; thick-walled; flesh meaty, solid, with a small seed core, flavor very good; resists cracking. Strong, compact, determinate vine; very productive; resistant to fusarium wilt. All America Selections winner in 1933. Introduced by the originator of Marglobe and Break o' Day. K49M, M1P, RUM

Scotia: 60 days. Medium-sized, deep globe-shaped, deep-red fruit; weight 4 ounces; slightly green-shouldered; firm flesh, of good flavor. Determinate vine; reliably productive; sets well in cool weather. Popular home garden cultivar in maritime Canada, especially for making green tomato relish. C85M, E38, FI, K20M, K95M, L42, M0, M49

Siberia:<sup>4</sup> (Siberian) 50 days. An experimental cultivar smuggled out of Siberia into Canada by a Russian traveler. Will set fruit at 38°F. Small to medium-sized fruit; weight 3 to 4 ounces; of fair flavor. Compact, determinate vine; often produces 40 to 60 fruit. Recommended for cold, short season areas where it is difficult to grow tomatoes. Also successful as a winter crop in southern Florida. A2, C95, C97, D11M, E5T, E24, F46, F73D, F70, F82, H42, K49Z, M0, M1P, M46, etc.

St. Pierre: Slicing tomato with an excellent subacid flavor and tender, thin skin. Large, smooth, globose fruit about 5 inches in diameter; thick, juicy flesh. Produces prolifically under adverse conditions of cool weather, little water and no weeding. Indeterminate. An old French cultivar. Very popular in parts of Europe. C95, E63D, J20, J73, M1P, N84, S77, S55, S95M

Stakeless:<sup>6</sup> 78 days. Unique "stakeless" or thick-stemmed tomato. Thick, upright main stem; 1 inch in diameter, 18 to 24 inches tall when fully mature; does not require staking. Medium-large, round fruit; 3 inches in diameter; weight 6 to 8 ounces; solid, meaty, deep red flesh. Dense, potato-like foliage prevents sunscald. Developed at the University of Delaware. B75M, H57M, M0

Stupice:<sup>8</sup> 50 days. Small to medium-sized, flattened, glossy red fruit; 2 inches in diameter; weight 2 to 4 ounces; sweet, juicy, very flavorful flesh. Compact, productive vine; widely adapted. Dwarf indeterminate in habit. Has potato-like foliage. Does well in short-season areas. Introduced by Abundant Life Seed Foundation in 1977. Originally from the former Czechoslovakia. A2, E24, E75{PL}, F44, I18M{PL}, J9M, K20M, K23{PL}, K49T, L7M, L89, M0, M27, PIG, R47, etc.

Sub-Arctic Maxi:<sup>4</sup> 52 days. The largest and most flavorful of the Sub-Arctic series. Small, round to oblate deep red fruit; 2 1/2 inches in diameter; weight 2 1/2 to 3 ounces. Compact, determinate vine; bears early, heavy yields on vigorous lateral branches after the main stem aborts. Has excellent cold set ability. Developed at the Beaverlodge Experiment Station, Alberta, Canada. E38, J39, L42, M1P

Sub-Arctic Plenty:<sup>4</sup> 50 days. Small, roundish fruit; 1 1/2 to 2 inches in diameter; weight 1 1/2 to 2 ounces; of good flavor. Compact, determinate, upright vine. Has a unique "birds nest" growth habit in which the main stem aborts, followed by fast-growing lateral branches that produce concentrated clusters at the center of the plant. Will set fruit during cold weather conditions. A2, A16, D76, E97, E97{PL}, F44, F80, J39

Super Marmande: 72 days. Medium-large, slightly flattened, somewhat irregular fruit; 3 to 4 inches in diameter; weight 6 to 8 ounces; very meaty and extremely flavorful. Excellent for slicing; sometimes used for stuffing. Compact, semi-determinate vine. Suitable for growing out of doors or in cool greenhouses. A2, B49, DIT, K20M, L77D, L91M, R32, S95M

The Amateur:<sup>5</sup> Small to medium-sized fruit; 2 to 2 1/2 inches in diameter; of sweet flavor and excellent quality; ripens early. Compact, determinate vine; grows only 15 inches tall, requires no support; reliably productive, even during adverse conditions. Ideal for growing under cloches or poly tunnels. Very popular in England. B49, N84, O53M, S55, S61

Thessaloniki: 68 days. Smooth, uniform, globe-shaped fruit with perfect blossom ends; 2 1/2 to 3 inches in diameter; weight 4 to 6 ounces. Firm, juicy interiors, mild, of very good flavor. Resistant to cracking and sunscald. Very good keeper. Indeterminate vine; highly disease resistant. Developed in Greece. A2, K10, K49T, MO, M1P

Trip-L-Crop:<sup>7</sup> 85 days. Large, bright red fruit; 4 to 5 inches in diameter; weight up to 1 pound; solid, meaty, mild-flavored flesh, contains very few seeds. Excellent for slicing; also good for canning. Vigorous, indeterminate vine, grows 10 to 15 feet tall when trellised; produces as many as 2 to 3 bushels of fruit. B73M, B73M{PL}, C69, D11M, D56M, F70, F73D, K71, L7M, MO, M1P, M65

Tropic:<sup>9</sup> 80 days. Medium-large, flattened globe-shaped fruit; weight 8 to 10 ounces; green-shouldered; solid, meaty flesh. Strong, high yielding, indeterminate vine; tolerant to heat and high humidity. Has good foliage cover and multiple disease resistance. Adapted to greenhouse culture and outdoor production in the Deep South. B8M, C97, DIT, G27M, K20M, L7M, MO, M1P, PIG

Urbana: (Giant Everbearing) 75 days. Large, smooth, bright glossy red fruit; weight 4 to 8 ounces; ripens uniformly, resists cracking. Solid flesh with few seeds, of very fine flavor. Strong, indeterminate, high yielding vine; adapted to a wide range of soils and climates. Matures early and continues to bear throughout the season. All America Selections winner in 1951. G57M

Valiant: 67 days. Large, globe-shaped fruit; weight 12 to 15 ounces; exterior very smooth, dark crimson red; interior very solid and meaty, free from acidity, of very good flavor. Ideal for slicing; also fine for juice and canning. High yielding, indeterminate vine; bears fruit in clusters of 3 to 5; sets well even in hot, dry climates. C69, K20M

Vendor:<sup>9</sup> 75 days. Standard non-hybrid greenhouse tomato. Uniform ripening, medium-large, deep globe-shaped fruit; weight 6 to 8 ounces. Interior ripening genes make Vendor better tasting in the green-ripe stage than European hybrids. Semi-compact plant; tolerant to leaf mold and tobacco mosaic virus. Also used for hydroponic and outdoor culture. D27, E38, F44, L42

Victor: 70 days. Medium-sized, smooth, deep oblate fruit; 2 1/2 to 3 inches in diameter; weight 4 1/2 ounces; firm flesh, of very good flavor and quality. Compact, determinate, highly prolific vine. Good

home garden cultivar for cool northern areas. All America Selections winner in 1941. J39

Walter: (Villemaire) 75 days. Medium-sized, deep globe-shaped fruit with good internal color; weight 7 ounces; resists cracking. Determinate vine; adapted to both short stake and field culture. Produces high quality fruit even in warm, humid areas. Has multiple disease resistance. Developed at the Bradenton Experiment Station, Bradenton, Florida. C20M, F63, G1M, G27M, L7M, M0, M1P, R47

#### YELLOW/ORANGE-SKINNED

##### *Hybrid*

Golden Boy: 80 days. Large, globe-shaped, deep golden-orange fruit; weight 8 ounces; flesh solid, meaty, low in acid, very mild flavored, with few seeds; quality excellent. Strong, vigorous, indeterminate vine; widely adapted; bears fruit in large clusters over an extended season. D68, E9IG, G16, G68, H61, H85M, H95, I91, J20, K71, M0, M1P, M46, M95M, N16, etc.

Husky Gold:<sup>8</sup> 70 days. Dwarf indeterminate type. Also known as indeterminate short intemode. Combines the unlimited production potential of indeterminate types with controlled growth. Deep-golden, 8 ounce fruits, mild and sweet. Grows 4 to 4 1/2 feet tall. Attractive, dark-green rugose foliage. Strong, thick central stems. All America Selections Winner in 1993. B73M, B75, D74B, E9IG, F13, G27M, G71, G82, H57M, H61, H95, I39, K10, L91M, M0, M1P, M29, M46, etc.

Lemon Boy: 72 days. Medium-sized, deep globe-shaped, lemon yellow fruit; weight 6 to 8 ounces; mild, flavorful, lemon yellow flesh. Vigorous, high yielding, indeterminate vine; widely adapted; resistant to fusarium and verticillium wilts and nematodes. Attractive specialty market item. B75, D76, E75{PL}, E97, G79, G82, H42, I39, I91, J97M, L42, M0, M1P

Mandarin Cross: 75 days. Medium to large, semi globe-shaped fruit; weight about 9 ounces; exterior golden-orange, smooth, attractive; interior thick-walled, solid, very meaty, low in acid, mild but flavorful. Vigorous, indeterminate vine; very productive, setting fruit in clusters of 9 or 10. Resistant to heat. A2, I18M, I18M{PL}, I77, K20M, K66, M0, S63M

##### *Open-Pollinated*

Burgess Colossal Golden: Very large, deep oblate, golden-orange fruit; weight 14 ounces, occasionally up to 2 1/2 pounds; thick, meaty, very mild flesh. Large, spreading, well-branched, indeterminate vine. Has heavy foliage cover that gives adequate fruit protection. M0

Caro Rich:<sup>10</sup> 80 days. An improved version of Caro Red, offering higher yields and better flavor. Contains 10 times more provitamin A than other tomatoes. Medium-sized, slightly flattened, deep golden orange fruit; weight 4 to 6 ounces; low in acid, of good sweet flavor. High yielding, determinate vine. Ripens too late for far northern areas. B38, B49, C26{PL}, G44M, I39, K23{PL}, K49M, K49T, K49Z, L3J, L13M, L88J, M0, M1P

Djena Lee's Golden Girl: 80 days. Family heirloom of Djena Lee since the early 1920's. Won first prize at the Chicago Fair 10 years in a row. Medium-sized, golden-orange fruit; 2 to 2 1/2 inches in diameter; weight 7 to 8 ounces; of excellent sweet but tangy flavor. Indeterminate vine. B49, K23, K23{PL}, L7M, M27

Golden Delight: 60 days. Medium-sized, flattened globe-shaped, golden yellow fruit; 2 to 3 inches in diameter; weight 3 to 4 ounces. Very low in acid, but rich in flavor. Compact, determinate, high yielding vine. Developed at South Dakota State University. A2, K20M, LI 1, L89C

Golden Ponderosa: (Yellow Ponderosa) 85 days. Yellow beef-steak type. Large, smooth, flattened globe-shaped, golden-yellow fruit; 4 inches in diameter; weight 12 to 16 ounces. Solid, meaty,

mild-flavored flesh. Vigorous, indeterminate vine D29P, F73D, G57M, K20M, K71, M1P

Golden Queen: 80 days. Smooth, slightly flattened, bright yellow fruit; 2 to 3 inches in diameter; weight 4 to 6 ounces; low in acid, of excellent mild flavor. Prolific, indeterminate vine. One of the few yellow heirlooms still available. The most popular large-fruited yellow cultivar until Jubilee was released. Introduced in 1882. C26{PL}, F24G, F24M, I67M, J20, MO

Golden Sunrise: 78 days. Round, medium-small, golden yellow fruit; smooth, thin skin; excellent mild, sweet flavor with spicy overtones. Very prolific, indeterminate vine. Adapted to greenhouse or outdoor culture. Popular English cultivar, introduced in 1896. B49, F46, N84, O53M, PIG, R32, S17, S55

Golden Treasure:<sup>11</sup> World's first golden-yellow storage tomato. Flattened-round fruit, 2 1/2 to 4 ounces in weight. Unusually crisp, golden flesh with an excellent strongly acid flavor. Green fruit picked before frost will ripen in 1 1/2 to 2 months and will keep in storage another 1 1/2 to 2 months. Vigorous, indeterminate vine. Bred for home gardeners by Tim Peters. J9M, L89

Goldie: 90 days, Very large, slightly flattened, golden-yellow fruit with a smooth blossom end; 4 to 4 1/2 inches in diameter; weight 12 to 16 ounces; low in acid, of excellent mild flavor. Vigorous, highly productive, indeterminate vine. Attractive heirloom, dating back to the early 1800's. Possibly a yellow version of Giant Belgium. B38, D68, F73D, K20M, L77D, MO, M1P

Hugh's: 89 days, Very large, beefsteak-type fruit, 4 to 6 inches in diameter; weight 2 pounds or more; skin thin, very light yellow; interior meaty, exceedingly sweet and juicy, with very few seeds. Large, indeterminate vine, requires room and heavy stakes. Heirloom from Madison County, Indiana. Favorite of the Seed Savers Exchange. F73D, K20M, K47, L7M, MO

Ida Gold: 55 days. Medium-small, round, bright orange fruit; 1 1/2 to 2 1/2 inches in diameter; weight 2 ounces; flavorful, low in acid. Compact, determinate vine; highly productive over a long season. Developed at the University of Idaho for cold northern areas. D68, E24, F44, K20M, K49M, L77D, O89

Jubilee: (Golden Jubilee, Burpee's Orange Jubilee) 75 days. Medium-sized, globular, bright golden-orange fruit; 2 1/2 to 3 1/2 inches in diameter; weight 6 to 7 ounces; thick-walled. Solid, meaty flesh, mild and flavorful. Vigorous, high yielding, indeterminate vine. All America Selections winner in 1943. A25, C85M, E38, E53M, G79, H33M, MO, M1P, N16, R47

Nebraska Wedding: 90-100 days. Great Plains heirloom being offered commercially for the first time in over 50 years. Striking, globe-shaped, deep orange fruits; 3 inches in diameter and weighing about 8 to 10 ounces. Very meaty and flavorful with a good sugar to acid balance. Vigorous, determinate vine, sets fruit in clusters of 4 or 5. A2, D26D, E5T, 177, K10, K20M, M0, M1P, Q34

Orange Queen: 65 days. Medium-sized, slightly flattened, bright orange fruit with a small blossom scar; weight 4 to 6 ounces; resists cracking. Solid, very meaty flesh, low in acid, with few seeds, of mild flavor. Determinate vine with heavy foliage cover. Does well in northern areas. J9M, J39, K49T, L42, M0

Persimmon: 80 days, Very large, deep globe-shaped, golden-orange fruit; 4 to 4 1/2 inches in diameter; weight 16 to 24 ounces, some up to 2 pounds. Solid, meaty flesh, with few seeds, has a strong, distinctive flavor. Susceptible to blossom end rot. Excellent for slicing. Large, indeterminate vine; moderately productive. Heirloom. A2, C53, C95, E5T, F13, F73D, K10, K20M, K49M, L7M, L88J, L89, L94, M0, M1P, etc.

Sunray: (Golden Sunray) 80 days. Medium-large, globular, bright golden yellow fruit; 2 1/2 to 3 inches in diameter; weight 7 ounces; thick-walled; resists cracking. Firm, meaty flesh, of excellent mild flavor. Vigorous, indeterminate vine; widely adapted; resists fusarium wilt. For home gardens and local markets. G87, L77D, M0,

M1P, PIG

Taxi: 64 days. Medium-sized, round to slightly oblate, bright yellow fruit with a small stem scar; smooth and blemish free. Firm, meaty, sweet, flavorful interiors. Compact, determinate vine; does not require staking. Ideal for the specialty market trade. A2, C95, G6, G53M, J39, K17M, K23{PL}, K49M, L77D, L89

Valencia: Round, smooth, bright orange fruit; weight 8 to 10 ounces. Firm, meaty interior, with few seeds, has a full tomato flavor. Vigorous, indeterminate vine; requires staking. Developed by Johnny's Selected Seeds from a Maine family heirloom. F46, L11, M0

Verna Orange: 84 days, Very large, orange, heart-shaped fruit of superb flavor. Among the meatiest and most seedless of tomatoes. Resembles Yellow Oxheart except for the color, slightly ribbed shape, and tendency of seed cavities to be semi-hollow. Indeterminate vine. Indiana heirloom. F73D, L7M, M0, O89

Winter Gold:<sup>11</sup> Unique golden longkeeping tomato. Large, variable well-colored fruits, 4 to 8 ounces in weight. Gold inside and out. Tangy to somewhat tart flavor. Stores for 2 to 3 months, often longer than the well-known Long Keeper. Productive, determinate vines. Developed by Peters Seed & Research. J9M

Yellow Oxheart: 79 days, Very large, bright yellow, heart-shaped fruit; often weighing close to a pound. Interior meaty, small-cored, sweet; flavor rich, full, distinctive, very well-balanced. Suitable for slicing, salads or processing. Has less than average drought and disease tolerance. Family heirloom that originated in Willis, Virginia about 1915. K49M, L7M, MO, M1P

Yellow Perfection: 70 days. Medium-small, round, deep golden-yellow fruit; 2 inches in diameter; of excellent mild flavor. Ripens well in cool or hot weather. Vigorous, indeterminate vine; highly prolific, sets fruit in clusters of 4 to 6. Has potato-like foliage. Very popular in England. Introduced by Unwin Seedsmen. A2, C26{PL}, F46, K23, K23{PL}, K49T, K95M, L88J, M32

## OTHERS

Aunt Ruby's German Green: 80 days. Unusual, green-ripening beefsteak. Large, flat-round fruits, larger than Evergreen; pale green with a slight yellowish hue when fully ripe; weight 12 to 16 ounces. Soft, meaty interior with an excellent, sweet yet spicy flavor. Large, indeterminate vine. Popular with seed savers. Heirloom originally from Ruby Arnold of Greeneville, Tennessee. D29P, F73D, G6, K47, K57{PL}, M0

Big Rainbow: 102 days. Bicolored beefsteak type. Large to very large fruit, average weight 11/2 pounds, some 2 to 2 1/2 pounds. Green near the shoulders, yellow-orange at the midsection, pink to bright red towards the blossom end; when fully ripe gold on the stem end and red on the blossom end. Resists cracking. Indeterminate vine; resistant to alternaria leaf spot; continues to bear until frost. Heirloom from Polk County, Minnesota. B49, B75, B75{PL}, C53, F73D, G53M, J14{PL}, K23, K23{PL}, L7M, L11, M0, M1P, O89, Q34, etc.

Black Krim: (Black Crimean) 80-90 days. Large, reddish-brown fruits with heavy green shoulders; weight 10 to 12 ounces; prone to cracking. Deep, reddish-green interiors, very richly flavored with a hint of saltiness. Develops a darker brown color in hot climates. Indeterminate, high yielding vine. Popular heirloom from the Black Sea region of Russia. B49, C53, D56M, D68, E5T, E97, I18M{PL}, 177, K49M, K71, MO, M1P, M46, M65, O89, PIG, Q34, etc.

Black Prince: 70-80 days. Small to medium, smooth, oval-pointed fruits, about 2 1/2 inches in diameter; deep garnet-brown, shading to dark-brown or "blackish" brown on the shoulders. Dark-red to translucent chestnut-brown interiors; tender, very juicy; excellent, rich, fruity flavor. Indeterminate. Local heirloom from Irkutsk, Siberia. A2, C26{PL}, D68, E75{PL}, 139, 177, K10, K20M, L7M, MO, M1P, N24M, Q34

**Black Sea Man:** 89 days. Unusual, determinate potato-leaf tomato from Russia. Round, slightly flattened fruits, 3 to 4 inches in diameter; weight 5 ounces; mahogany-brown with blackish shoulders; blackish-red pulp with a delicious flavor. Excellent for slicing and salads. Grows well in Moscow suburbs, but does not develop blackish color unless weather is hot and sunny. F73D, K47

**Cherokee Purple:** 70-75 days. Medium-large, flattened globe-shaped fruit; dusky pink with darker pinkish-purple shoulders; weight 10 to 12 ounces; thin skin. Soft, purplish-pink interiors with brownish overtones; sweet, rich, very pleasing flavor. Indeterminate, very productive vine. Reportedly grown by the Cherokee people more than 100 years ago. B49, C53, E75{PL}, F24D, F13, F15{PR}, G6, H49, I39, K10, K20M, K23{PL}, K49M, K71, L7M, M0, M1P, Q34, etc.

**Elberta Girl:** Unique tomato, distinct in both fruit and plant characteristics. Small, 2 1/2 to 3 ounce fruit, resembles Tigerella but with more pronounced striping. Good acidic tomato flavor. Short vines with half the yields of Tigeiella. Very furry, white foliage reminiscent of a Dusty Miller. Developed by Tom Wagner. J9M, K20M, M1P

**Evergreen:** (Emerald Evergreen) 72 days. Medium to large fruit, golden amber green when ripe. Solid, meaty, emerald green flesh, of sweet mild flavor and very good quality. Excellent for slicing, frying, pickling or preserves. Vigorous, indeterminate vine. C53, D26D, F73D, H49, I77, K10, K23, K23{PL}, K49M, M0, M1P, M65, Q34

**Forever Green:** Roundish, medium-sized fruit, 6 to 8 ounces in weight. Will store for months and still remain firm and green. Suitable for making fried green tomatoes in the middle of winter. Vigorous, prolific, determinate vines. Developed by Tim Peters of Peters Seed & Research. J9M

**Garden Peach:**<sup>11</sup> 100 days. Excellent storage tomato, will keep 5 to 6 months if harvested before frost. Medium-sized, deep globe-shaped fruit; 2 1/2 to 3 inches in diameter. Yellow-orange skin, blushed with pale-pink, slightly fuzzy, thick. Red flesh, of mild flavor that improves with storage. Ripens slwly. Indeterminate vine; produces abundant clusters of fruit. D68, E5T, I39, K20M, K49M, L77D, L89, M0, Q34

**Georgia Streak:** 91 days. Bicolored beefsteak type similar to Old German. Eye-appealing yellow and red inside and out. Predominantly yellow with a red blush and red core on the blossom end. Especially attractive in salads. Indeterminate vine. Heirloom from Georgia. E5T, J14{PL}, L7M, M0, M1P

**Great White:** 80-85 days. Heirloom white beefsteak type. Large, smooth, pale-yellow to creamy-white fruits; weight 14 to 16 ounces; resistant to cracking. Sweet, juicy interiors, low in acidity and with few seeds. Indeterminate vine, tolerant of drought. Vigorous, heavy foliage that protects fruits. Rated highly for size, appearance and quality. D26D, F13, F63, F73D, H49, I18M, I18M{PL}, I77, J39, K10, K46T, M0, M1P, Q34

**Green Zebra:** 80 days. Medium-small, uniform, round fruit; greenish-amber, striped with yellow and deep-green when mature; 2 inches in diameter. Green flesh, with a mild but pleasing flavor. Good for relishes, jams and preserves, as well as eating out of hand or in salads. Indeterminate vine; produces heavily until frost. Very striking. Developed by Tom Wagner. A2, C53, D68, E5T, I18M{PL}, I77, K10, K17M, K20M, K23, K23{PL}, K66, L7M, L94, M0, M1P, 089, etc.

**Hillbilly:** 80-85 days. Unusual bicolor beefsteak type. Very large fruits, often weighing 1 to 2 pounds; yellow-orange, attractively streaked and mottled with red and pink. Sweet, mild, fruity flavor. Indeterminate growth habit. Ancient heirloom from the hills of West Virginia. B6, D26D, D56M, E5T, F63, F73D, G82, H49, K10, K46T, K71, M0, M1P, M65

**Mammoth German Gold:** 95 days. Very large, lobed fruit; golden-yellow, blotched with red at the blossom end; weight 1 pound or more; susceptible to cracking. Of very fine mild flavor. Resembles fresh peaches when sliced. Vigorous, indeterminate vine; requires staking. A2, F24G, F24M, F73D, K20M, M0

**Marvel Striped:** 90 days. Large, irregular, heart-shaped fruit with very thin skin; flaming orange and yellow, splashed and striped with rosy red; weight 1 pound. Very juicy. Has an intensely sweet flavor. Striking when sliced. Prolific, indeterminate vine that requires staking. Heirloom originally from Oaxaca, Mexico. A2, I18M, I18M{PL}, I77, K23, K23{PL}, K49T

**Old German:** 95 days. Large, very attractive fruit; yellow, with a red center visible on the surface and throughout the core; often weighs over a pound; of outstanding flavor. Excellent for slicing. Indeterminate vine; not a heavy producer; does not tolerate drought. Mennonite family heirloom from Virginia. Introduced by Southern Exposure Seed Exchange in 1985. D56M, F13, F73D, H49, K10, K71, L7M, M0, M1P, M46, M65

**Pineapple:** 85-95 days. Unique red and yellow-orange striped tomato that can reach 2 pounds or more. Somewhat irregular shape. Has distinctive stripes that color the meaty flesh throughout as well. Sweet and juicy. Very attractive when sliced. Excellent in salads. Indeterminate vine. Favorite of the Seed Savers Exchange. B38, D26D, D56M, E5T, F63, F73D, I39, K46T, K47, K71, M0, M1P, M65, Q34

**Pink Grapefruit:** 75 days. Medium-sized, flattened globe-shaped fruit, 2 1/2 to 3 1/2 inches in diameter; weight 4 to 6 ounces. Yellow skin, pink at the blossom end. Blushing pink, firm, juicy flesh, low in acid, of delicious mild flavor. Productive, indeterminate vine. Heirloom that was reportedly grown during the Victorian era. F24G, F73D, M0

**Prudence Purple:** (Pruden's Purple) 70 days. Large, flattened, distinctly ribbed, pinkish-purple fruit; 4 inches in diameter, 3 inches deep; weight 1 pound or more; resists cracking. Firm, meaty flesh, mild but flavorful, contains very few seeds. Vigorous, prolific, indeterminate vine with potato-like foliage. Heirloom. A2, B75, B75{PL}, C95, D29P, E5T, G6, I18M, J20, K10, K23{PL}, L88J, M0, M1P, M46, Q34, etc.

**Purple Calabash:** 75 days. Medium-sized, oblate, highly lobed, dark pinkish-purple fruit; 2 1/2 to 3 1/2 inches in diameter; weight 5 to 6 ounces; thin-skinned. Sweet, juicy, seedy flesh, of fair quality for fresh use, excellent for making vinegar. Susceptible to cracking; stores poorly. Vigorous, productive, indeterminate vine. A2, B38, C95, D29P, F73D, F80, J39, K20M, K49M, L88J, M1P, 089, PIG

**Sun & Snow:** Medium-sized, beautifully-shaped, 4 to 8 ounce fruits. Iridescent yellow skin and snow-white flesh at early ripening stages. When fully ripe, both skin and flesh may be yellow. Prolific, indeterminate vines. Resistant to some common diseases. Developed by Peters Seed & Research. J9M

**Tigerella:** (Mr. Stripey) 56 days. Medium-small, globular fruit; reddish-orange, striped with golden-yellow when ripe; 1 1/2 to 2 inches in diameter; of very fine flavor. Indeterminate vine; highly productive over a long season. Has good disease resistance. Suitable for greenhouse or outdoor culture. A2, B49, E97, F13, F63, F80, J9M, K49M, K71, L91M, M0, M1P, 089, PIG, R32, S55, etc.

**White Beauty:** (Snowball) 80 days. Medium-large, ivory white fruit; weight 8 to 12 ounces. Rrm, meaty, paper-white flesh, extremely mild and sweet due to high sugar content, contains few seeds. Excellent for slicing. Very attractive in salads. Moderately productive, indeterminate vine. Possibly known as White Apple before 1920. B38, B73M, J9M, K20M, K23{PL}, K49M, K71, L7M, L77D, M0

**White Potato Leaf:** 80 days. Medium-sized, flat, ruffled fruit; creamy white, sometimes streaked with reddish-pink; 3 1/2 inches in diameter. Solid, meaty, aromatic flesh, with a distinct fruity flavor.

Makes excellent white tomato sauce. Productive, indeterminate vine with potato-like foliage. D68, K17M, K20M, M1P

White Princess: 100 days. White beefsteak type. Laige, flattened, ribbed, ivory-white fruit; 4 inches in diameter. Solid, meaty flesh, high in sugar, mild but flavorful, contains few seeds. Large, productive, indeterminate vine; requires staking. Has sparse foliage cover. F73D

White Wonder: 85 days. Medium-sized, flattened, irregular, creamy white fruit with a large blossom scar; 2 1/2 inches in diameter; weight 4 to 8 ounces; susceptible to cracking. Very firm, sweet, white flesh, has a high sugar content. Excellent for slicing. Prolific, indeterminate vine with heavy foliage cover. Attractive and unusual as well as useful. C53, D56M, G16, K17M, L7M, L91M, M1P, M65

## TURNIP {S}

### BRASSICA RAPA RAPIFERA GROUP

#### ROOT TURNIPS

Grown primarily for their roots, they also produce edible leaves, however these are generally not of the same quality as those of the foliage turnips.

#### GREEN-TOPPED

Green Globe: Medium sized, globe-shaped root; very white below, green above ground; flesh pure-white, firm in texture. Becomes spongy and often decays in autumn or early winter. Tops make very good greens. Vigorous growing, hardy plant; produces very heavy crops. Introduced before 1865. BURR; S59M, S61

Green Top Norfolk: (De Norfolk a Collet Vert) Spherical roots, 6 or 7 inches in diameter and 5 inches deep when mature; green above ground, white below; tender white flesh, somewhat watery. A very late field turnip that succeeds best in a cool, moist climate. VILMORIN; Q11M, S17

Green Top Stone: Globe-shaped roots, green on top, white on the lower part; flesh firm and tender; flavor good, mild. Keeps well. Very hardy; suitable for September sowing and spring harvesting in mild-winter areas. S75M

#### PURPLE-TOPPED

##### *Hybrid*

Royal Crown: 45-55 days. Hybrid Purple Top White Globe type with excellent uniformity. Semi-globe shaped roots, 4 to 6 inches across and averaging 14 ounces in weight; deep-purple shoulders and white bottoms; tender white flesh, resists pithiness until late in the season. Thick, deep green, cut-leaf tops are excellent for greens. Ah C28, D26D, D76, E97, F65, G27M, G87, H61,191, J20, J84, K16M, K50, K73, L42, M29, etc.

##### *Open-Pollinated*

De Milan:<sup>2</sup> (De Milan Rouge) 35 days. Small to medium-sized, quite smooth, very flat root; pure white on the underground part, and

of a lively violet-red color on the upper part. Leaves entire, erect, very short, few in comparison with the size of the root. Very rapid-growing; well adapted for forcing, even in spring. Can be picked young as "baby" turnips. Known prior to 1885. VILMORIN; E63D, F73D, G68, K49M, K66, P59M, S17, S95M

De Nancy: (Rouge de Nancy) 42 days. An attractive form of the Early Flat Purple-Top turnip, remarkable for its earliness, the regularity of its shape, and the very deep color of the upper part of the root. Globe-shaped with deep-violet necks and creamy white bottoms. Creamy flesh, sweet and mild. Pick when young and tender. Known prior to 1885. P59M, S95M

Hinona:<sup>13</sup> (Aka-Na) 40 days. Long, tapered root; 8 to 10 inches in length, 3/4 to 1 inch wide; upper one-third above the soil surface colored purplish-red, underground part pure white. Leaves upright, lobed, reddish-purple. A favorite delicacy in Japan, both the leaves and roots are pickled to remove the harshness and served as a garnish, called *sakura zuke* for its cherry-blossom color. LARK-COM 1991, TANAKA; E83T

Milan Early Red Top:<sup>2</sup> A quick-forming white globe, topped with rosy red. Successfully grown as a baby vegetable, and a nice change from the standard purple topped turnips. Q34

Purple Top Milan: (Early Purple Top Milan) 35-40 days. Bulb very flat, of medium size, quite smooth, white with a bright purple top. Leaves few, short and of light color, growing very compact and making an exceedingly small and neat top. The pure white flesh is of choice quality, hard, solid and fine-grained. An excellent keeper; keeps all winter. Introduced prior to 1888. ANONYMOUS 1888; E83T, Q11M, S55, S61

Purple Top Strap Leaved: 50 days. Bulb medium-sized, very flat, smooth, produced almost entirely above ground; skin above clear bright purple, below pure white; flesh clear white, firm, solid, sugary, mild and well-flavored. Early; hardy; very prolific. Traditionally used for New Year's dinner, served lightly mashed with butter and cream. Introduced before 1865. BURR; C20M, G57M, /59M, K20M

Purple Top White Globe: (Early Purple Top White Globe) 55 days. Smooth, globular root; bright purplish-red above ground, white below; becoming 5 to 6 inches in diameter. Flesh white, firm, fine grained and tender when young. Tops medium, compact, cut-leaved; can be used for greens. Standard home, market garden, and shipping cultivar. Introduced prior to 1895. A16, A27M, B73M, B75M, B78, C44, E24, FI, G6, G16, H33M, H61, L7M, M49

Red Tankard:<sup>1</sup> (Herbst Rube, Navet Rose du Palatinat) Long, cylindrical root; 8 or 9 inches in length, 4 or 5 inches in diameter; weight about 3 pounds; skin purple or violet-tinted red above ground, white below; flesh firm, sugary, well-flavored. Early and productive. Generally considered a field turnip, but may be used for the table when young. BURR, VILMORIN; Q11M

Yeitch's Red Globe: Round, medium-sized roots; skin white with a red top, similar to a French Breakfast radish, smooth; pure white flesh with a good flavor. Matures quickly so it can be sown as late as July and still store well. Introduced about 1882. B49, R32, S61

#### RED-SKINNED

Ohno Scarlet:<sup>3</sup> 55 days. A pale magenta skin with bright white flesh makes Ohno Scarlet an interesting addition to home gardens and an excellent specialty market item. Cook like beets (without peeling). Delicious pickled, the skin tinting the flesh a pleasant rose color. Tall, dark green, red-veined tops are an extra attraction. K49M, L77D

Red Globe: 65 days. An unusual rosy-red turnip with crisp, tender white flesh. Smooth, globe-shaped roots averaging 3 inches across, reminiscent of a large radish. Excellent storage capabilities. EST, G57M

Scarlet Ball:<sup>3</sup> (Round Red) Smooth, semi-globe shaped root with deep scarlet-red skin and white flesh. Attractive red stems and red-veined foliage. When cooked unpeeled the entire turnip is suffused with pink. If sliced and held overnight in pickling brine it will be bright scarlet. An old time Asian favorite. C20M, C95, F73D, 139, N24M, Q34, Q45M, S70

### Hybrid

Just Right: 28-60 days. A fast-growing hybrid that will produce tender, glossy greens in 28 days, and a smooth, white, flattened, globe-shaped, 5 to 6 inch diameter root in 60 days. White, tender mild flesh. A dual-purpose turnip for fresh market use in late spring and fall. All America Selections winner in 1960. B73M, E97, G1M, G13M, G27M, H33M, H95, K10, M29, S63M

Market Express:<sup>2</sup> 38 days. Small, globe-shaped, pure white roots; smooth skin; sweet flesh. The perfect cultivar for "baby" turnips, bunched like radishes, but keeps its crispness and pleasant texture into the 2 to 3 inch diameter size. Dark green, hairless tops with good flavor. Very early. For specialty and ethnic markets. K66, 053M, R32, S55

Tokyo Cross: 35-60 days. Semi-globe, perfect shaped, smooth, sweet crisp roots. Both skin and flesh are pure white. Can be harvested at 2 inches in diameter, but continues growing up to 6 inches, while holding the same excellent quality. Leaves can also be used for greens. Has good disease resistance. For spring and summer sowings. All America Selections winner in 1969. A16, C85M, D65, D76, F63, G16, J20, K10, K71, M46, S63M

### Open-Pollinated

All Seasons: 28 days. Globe-shaped, white skinned, white fleshed turnip that is ready 4 weeks after sowing regardless of the season when sown. Retains its shape long after the roots are fully formed and stays sweet even during hot and dry weather. K49M

Croissy: (Rand des Vertus) Round or slightly top-shaped roots, about 3 inches in diameter and depth; smooth, white skin; tender, very white flesh, sugary, of very agreeable flavor. Erect, medium-sized, clear green tops. Excellent for forcing. An old French heirloom, at one time a great favorite with Parisian market gardeners. VILMORIN; F73D, K49M, S95M

Gilfeather: 80 days Top-shaped, creamy white root; unusually mild, delicate, sweet flavor reminiscent of rutabaga; smooth in texture when cooked. Can be harvested at 2 1/2 inches in diameter, but will grow much larger without becoming pithy or strong-flavored. Smooth, dark-green leaves make excellent kale-like "greens" when young. Vermont heirloom developed by John Gilfeather (1865-1944) of Wardsboro, Vermont. C53, D41M, D68, F24G, G6, J9M, J20, K49M, K71, M46, 089, Q34, R47

Long Des Vertus Marteau:<sup>1</sup> (Jersey Navet) 55 days. Root white; nearly cylindrical, but swollen at the lower end; 5 or 6 inches long, and about 2 inches broad at the thickest part. Flesh white, very tender and sugary. Like radishes the roots become hollow at the center if allowed to grow too large, and are generally harvested for use when about two-thirds grown. Traditional market garden turnip of Paris. VILMORIN; C20M, E63D, G68, L3J, SI 7, S66M

Presto:<sup>3</sup> (Tokyo Market Sagami) 30 days. Very small, smooth, uniform, pure-white turnip that can be harvested when the roots are about 1 inch in diameter and used for pickles. Leaves are suitable for use as greens. Easily grown anytime except during periods of extreme heat or cold. C20M, 139

Snowball: (Early Snowball) 40 days. Bulb small to medium in size, nearly spherical, smooth and uniform, 3 to 4 inches in diameter; skin pure-white. Flesh of the young bulb white, fine-grained, tender and sweet; if overgrown or stored for long, it is liable to become dry and spongy. Rapid growing. Known prior to 1865. BURR; B49, D27, G93M, N81, 053M, FIG, Q45M, R32, R50, TIM

Suguki-Na: White, top-shaped roots, curving to a point at the base; serrated leaves. Both the leaves and roots are pickled. Grown only in the Kamigamo River region of northern Kyoto where it is the most famous pickled vegetable. For over three hundred years, it was a favorite of the nobility and clergy, eventually becoming a traditional dietary staple of all residents of Kyoto. TANAKA; G20M{PD}

Teltow:<sup>1</sup> Root entirely sunk in the ground, conical, about 3 inches long; skin grayish-white. Succeeds very well in light, sandy soil. When cooked it has a peculiar flavor, completely different from other turnips - it is milder and more sugary, and the flesh is almost floury, instead of juicy and melting. The peculiar flavor is in the outer rind, when used it should not be peeled. Used in the preparation of a German delicacy called *teltower rüebchen*, produced by browning young turnips in sugar. BURR, HEDRICK 1919, ORGAN, VILMORIN; U33

Tokyo Market: (White Tokyo, Kanamachi Forcing) 30 days. An improvement over Kanamachi, developed for growing with plastic protection or under glass, for an early spring crop. Roots are very small, about 1 1/4 inches wide and 7/8 inch deep when at their best for early marketing. White skin. Solid, white flesh, crisp and mild-flavored. C20M, C92, D55, G33, H61, K10, N52, S63M, S70

White Egg: 50 days. Medium-large, egg-shaped root with thin white skin; 3 1/2 inches long, 2 1/2 inches in diameter; keeps well. Very solid, fine-grained, clear white flesh, sweet, mild and tender. Makes attractive bunches for early market. Fast-growing. Excellent either as a late or early cultivar. Introduced before 1888. ANONYMOUS 1888; A75, C44, C97, D72, E38, F63, F80, G1M, G27M, G68, K49M, K71, L7M

Yorii Spring: 38 days. Small, slightly flattened roots. Pure white inside and out. Sweet and crisp when about 1/2 inch in diameter. Also produces an abundance of tasty greens Very early and slow bolting. Does well in cool, short-season areas. A2, E24

### YELU>W,SKMNPE

Amber Globe: (Large Yellow Globe) 60 days. Root almost round, or more usually top-shaped; pale yellow with a green neck; flesh yellow, fine-grained, sweet, tender and mild. Leaves entire, long, light-colored. Hardy and keeps well until late in the spring. Introduced before 1888. C44, Di2, F80, G57M, H54, K49M, L7M, LI0, M95M

Golden Ball: (Orange Jelly) 55 days. Root perfectly spherical when small, slightly flattened when mature; generally 4 or 5 inches in diameter. Skin very smooth and quite yellow. Flesh yellow, softish, fine flavored but slightly bitter. Highly esteemed in Scotland and northern England. Introduced before 1859. VILMORIN; A2, B49, C85M, D27, E38,139, L3J, R32, R47, SI7

Petrowski: (Petrowski Yellow) Medium-sized, flattened globe-shaped, golden yellow roots; very smooth and clean skin. Ripens in midseason. An old Alaskan favorite that is firm, shows some resistance to root maggot, and is excellent for storage. Originally from Europe. C95, C97

### FOLIAGE TURNIPS

Also called *turnip greens* and *turnip tops*, these are grown primarily for the leaves which are more succulent than those of other turnips. Some cultivars also produce good quality roots or can be used for *broccoli raab*. The best types have leaves which grow rapidly, and resprout quickly after having been cut. SCHNEIDER 1986 [Cul, Re].

### HYBRID

All Top: 35 days. Vigorous, erect, fast-growing hybrid Crawford type that is especially good for greens. Produces large, smooth, thick, strap-shaped, dark green leaves of very high quality. Regrows very quickly after being harvested. Bolt resistant. Very fibrous roots are not used. Introduced in 1979 by Abbott and Cobb. AI, A27M, A87M, C20M, C28,191, K10, K16M, K50, M29

Topper: 35 days Very heavy-yielding Shogoin type. Vigorous, upright tops, 24 to 28 inches tall. Thick, smooth, lobed, broad dark-green leaves. For greens, bunching, processing and fresh market. Resistant to turnip mosaic virus. Tolerant to aphids and downy mildew. *Al*, *A27M*, *C28*, *D11M*, *F70*, *G1M*, *G82*, *H61*, *J84*, *K10*, *K16M*, *K50*, *K73*, *L10*, *M29*, etc.

open-pollinated

Nozawa-Na: (Hakabu-Na) Long, dark-green leaves and petioles. Leaves become purplish and more tender and sweet after a frost. Used both as a fresh green vegetable and for pickling, combined with dried sardines or bonito flakes. Popular during skiing holidays in Nagano Prefecture, Japan. Vigorous, erect, fast growing plant; tolerant of heat and cold. Recommended for cold and mountainous regions. LARKCOM 1991, TANAKA, YAMAGUCHI; *D55*, *G20M{PD}*, *Q34*, *S70*

Seven Top: (Southern Prize) Fast-growing, cool-weather crop that is grown primarily for its abundant crop of greens. Grows 20 to 22 inches tall. Produces large, dark-green, very tender leaves. Can also be used for *broccoli raab*. Roots are tough and fibrous and are best used for livestock food. Very popular cultivar in the southern United States where it is used as a winter annual. *A75*, *B3M*, *C44*, *E38*, *F80*, *G1M*, *G71*, *G82*, *G93M*, *H61*, *I64*, *K71*, *K73*, *L7M*, *N16*, etc.

Shogoin: 30-70 days. Excellent dual-purpose cultivar grown both for tops and large roots. Very large tops with broad, serrated, tender leaves, resistant to aphid damage. Smooth, white, globe-shaped roots grow 5 to 6 inches in diameter and have tender, white flesh. Yields greens in 30 days; roots in 70 days. *A75*, *C92*, *G68*, *G79*, *G83M*, *I39*, *I64*, *K27M*, *K71*, *L89*, *N16*, *R47*

Turnip Tops Green: (Raapstelen) Smooth, green leaves with a distinctive taste. Grown for quick early cooking greens in spring. Cut at 6 inch stage, and they will grow back for later cuttings. Cook like spinach. *C85M*, *FI*

## UNCLASSIFIED {S}

VARIOUS GENERA

Included here are entries that cannot be placed in the Botanical listings or under a cultivar heading, due to the incomplete nature of the descriptions given in the catalogs.

Gallito del Rio: (Little Rooster of the River) The green pods are roasted in embers and the white, flour-like substance between the immature seeds is eaten. The seeds themselves are not eaten. A large, leguminous vine to 30 or 40 feet, with almost white stems and large, smooth, glossy trifoliate leaves. Rises from a long, thick fleshy root which could probably be overwintered indoors in harsh climates. Fragrant violet-rose flowers look like little roosters. Possibly a *Canavalia* sp. THEODOROPOULOS; *F80*

Hoja del Pescado: (Leaf of the Fish) Drought resistant, herbaceous perennial of the Composite family. Grows to 10 feet tall. The leaves are cooked and eaten with fish, steamed vegetables, or in soups. THEODOROPOULOS; *F80*

Mrs. Hawkin's Spinach: Planted early, and weekly after that, the large plants produce tender leaves, large enough to use as wrappers for cabbage rolls. Originally from Australia, but not New Zealand spinach. Related to wild lamb's quarters. Does well in greenhouses or cold frames. *C82*

Schwarzwurzein: European black root vegetable grown exactly like parsnips or salsify. According to the supplier, "this is not black salsify". *C82*

## WALNUT{GR}

JUGLANS REGIA

### PERSIAN WALNUTS

Included here are cultivars primarily grown in California. They are not tolerant to extremely low winter temperatures. When fully dormant, they will withstand 12° to 15° F. without serious injury. The French cultivars are somewhat more hardy. JAYNES.

Amigo: Large, round nut; shell poorly sealed in some years; kernel 54% of nut, quality high, 80% having light-colored kernels; matures early to midseason. Tree productive, with many clusters of 4 nuts and 80% of lateral buds producing pistillate flowers. Leafs out 14 days after Payne making it a valuable pollinizer for Hartley and Tehama. BROOKS 1972; *B71M*, *K88T*

Carmelo: Open-pollinated seedling of Payne. Very large nut; shell well-filled with a kernel of good quality; ripens about with Payne. Not susceptible to blight or sunburn. Tree precocious; productive; leafs out late. Has a lateral growth habit similar to Payne. An excellent home garden and novelty cultivar. BROOKS 1972; *A88M*, *C54*, *H4*, *N20*

Chandler: Large nut; kernel 49% of nut, kernel color very good; ripens in midseason, a few days after Hartley. Tree moderately vigorous, semi-upright, similar to Vina in characteristics; leafs out 18 days after Payne. Has high fruitfulness with 80 to 90% of lateral buds being fruitful. Pollinate with Hartley and Franquette. Most promising of introductions released by the University of California breeding program. *A88M*, *B71M*, *B74*, *C54*, *D18*, *E56{DF}*, *J70D{DF}*, *K73M*, *K88T*, *LI*, *N20*

Chico: Nut round; shell seal fair to good; kernel 49% of nut, quality excellent, 90% having light-colored kernels; matures early to midseason. Tree leafs out 6 days after Payne, with 80% of lateral buds producing pistillate flowers. Sheds pollen late, making it a suitable pollinizer for early leafing cultivars such as Ashley, Serr, and Vina. BROOKS 1972; *B71M*, *K73M*, *K88T*

Cisco: Introduced as a pollinizer for Chandler and Howard. Medium to light-colored nuts, slightly larger than Franquette; texture medium; kernel color variable. Semi-upright tree, moderately vigorous. Produces a moderate pollen crop during period of peak receptivity of Chandler and Howard. Released in 1990. *B71M*, *D18*, *K73M*

Eureka: Large, attractive nut, perfectly sealed; kernel light-colored, of excellent quality. Large, vigorous tree; a good producer but slow to come into bearing. Leafs out in midseason, making it moderately susceptible to spring frost damage. Pollinate with Chico. An old California cultivar, available from nurseries since 1911; now being superseded in commercial plantings by cultivars with better yield and nut quality. JAYNES, STEBBINS, WICKSON; *A88M{OR}*, *B71M*, *B93M*, *D18*, *199M*, *K73M*, *K88T*, *N20*

Franquette: Medium to large nut with a well-sealed thin shell; of very good flavor; resists codling moth. Large tree, suitable as a shade tree; partially self-fruitful but has relatively low yields and lacks lateral-bud fruitfulness. Very late leafing; not susceptible to spring frost damage. Slow to come into bearing, but long-lived. Pollinize with Hartley or Chandler. An old French cultivar. Was the most important commercial cultivar in northern California until 1960. JAYNES, STEBBINS; *A88M*, *B93M*, *C34*, *C54*, *D18*, *H89M*, *K88T*, *L47*, *N20*, *Q30{SC}*

Hartley: Large nut with a broad, flat base and pointed tip; shell light-colored, thin, seals fairly well; kernel light-colored, not tight

in shell; flavor mild. Tree medium leafing, 2 weeks after Payne; very productive but comes into production slower than cultivars with lateral bud fruitfulness. One of the leading commercial cultivars in California, especially for in-shell nuts. BROOKS 1972, JAYNES; A63, A88M, B23M{DF}, B71M, B93M, C54, D18, G49, J70D{DF}, K73M, K88T, L47, N20

Howard: Large nut; kernel 50% of nut; kernel color excellent; ripens in midseason, slightly ahead of Hartl<sup>^</sup>. Leafing date quite late, 14 days after Payne. Tree small to medium, semi-upright, moderately vigorous; smaller than Vina and Chandler. Potentially very productive with 80 to 90% of lateral buds being fruitful. Pollinate with Hartley and Franquette. B71M, D18, K73M, K88T

Mayette: Medium to large, rounded nut, with a broad base on which the nut will sit up; shell fairly thin, white; kernel well-filled, richly flavored. Tree medium-sized, spreading; a good bearer; blooms late; moderately precocious, but tends to be biennial. Originated in France. J70D{DF}, Q30{SC}

Payne:<sup>1</sup> Medium to small nut; kernel averages 49% of nut with fair color; matures in midseason. Nuts tend to be borne on the outside of the tree and consequently are susceptible to sunburn. Early leafing and therefore quite susceptible to spring frosts and walnut blight. Leafing date of late March in the Central Valley of California is the standard by which other cultivars are compared. Small to medium tree with heavy production. The first important cultivar in California with lateral-bud fruitfulness. JAYNES, STEBBINS; A88M{OR}, B71M, C54, D18, 150D{DF}, K73M, K88T, N20

Pedro: Large nut; shell heavy, fairly well-sealed; kernel light-colored, 50% of nut; flavor excellent; matures midseason to late. Tree small; consistently produces many catkins and sheds pollen over a long period. Can be used as a pollinizer for most early cultivars such as Ashley, Serr and Vina. Very high summer temperatures can injure shell and kernel quality in hotter districts. Excellent for home plantings. BROOKS 1972; A88M, I83M, LI, N20

Placencia:<sup>1</sup> Medium-sized nut; smooth, thin, strong shell; light tan meat that fills shell; quality good; ripens in midseason. Tree large; heavy bearing; precocious; partially self-fruitful. Early leafing and therefore susceptible to spring frosts. Low chilling requirements; does best in coastal areas and southern California. STEBBINS; A88M, C54, D23M, H4, I83M, N20

Scharsch Franquette: Medium-sized, well sealed nut; high percentage of light-colored kernels; ripens late, otherwise resembles Franquette. Tree starts bearing both pistillate and staminate flowers earlier in life than Franquette, with approximately 20% of lateral buds producing pistillate flowers. Otherwise, growth characteristics similar to typical Franquette. BROOKS 1972; B71M, K73M

Serr: Nut large, similar to Payne; shell thin, seal fair to good; cracking quality good, 96% having light-colored kernels; matures early to midseason. Highly resistant to sunburn. Tree very vigorous when young, grows rapidly; leafs out 5 days after Payne. Only 50% of lateral buds produce pistillate flowers. Early leafing, with moderate danger of spring frost damage. BROOKS 1972; A88M{OR}, B71M, B93M, C54, D18, K73M, K88T, N20

Sunland: Long, smooth, oval nut; resembles Serr; kernel weight 60% of nut; quality excellent; ripens about the same time as Hartley. Very vigorous, precocious tree, highly productive. Pollinate with Chico, Tehama or Hartley. Originated in Davis, California by Harold I. R)rde. Introduced in 1979. BROOKS 1997; B71M, D18, K88T

Tehama: Nut similar to Payne; shell seal good, making it suitable for in-shell nuts and cracking; kernel 53% of nut, 70% having light-colored kernels; matures in midseason. Tree very productive, with 80% of lateral buds producing pistillate flowers. Leafs out 18 days after Payne. A pollinizer is desirable to help set heavy crops. BROOKS 1972; B71M, D18, K73M, K88T

Tulare: Nearly round nut; kernel weight 53.3% of nut, with 75% light kernels. Ripens in midseason, about the same time as Hartley. Upright, moderately vigorous tree; precocious and productive; about 75 % lateral bearing. Recommended for hedgerow or high-density plantings. Introduced in 1992. BROOKS 1997; B71M, D18, K73M, K88T

Vina: Nut pointed, somewhat similar in shape to Hartley but with a less flattened base; shell seal good; kernel 49% of nut, of high quality, 70% having light-colored kernels; matures early to mid-season. Tree a very productive and consistent bearer, with 80% of lateral buds producing pistillate flowers. Leafs out 8 days after Payne. Tolerant of high summer temperatures. BROOKS 1972; B71M, D18, K73M, K88T

#### CARPATHIAN WALNUTS

Included here are cultivars originating from seed brought from the Carpathian mountains of Poland by Reverend Paul C. Crath and other cold-hardy cultivars, including those brought by German immigrants to Pennsylvania and other states in the 1700's. When fully dormant, they can withstand temperatures of -30° to -35° F. with only minor injury. JAYNES; M39M. (J. regia 'Carpathian')

Ambassador: Very cold-hardy, has withstood extreme cold temperatures in Idaho. Produces high quality, thin-shelled, well-sealed nuts. Easy to harvest. Bears very young, often in the first year, with significant crops in 3 years. Good resistance to blight and codling moth; not drought resistant. Grows best on fertile, deep soils. A88M, E87, N20

Ashworth: Nut rather small, well-shaped; kernel sweet; ripens early. Tree strong, vigorous; very hardy, withstanding temperatures of -36° F. Seeds germinate well. Originated in Heuvelton, New York by Fred L. Ashworth, St. Lawrence Nurseries. Introduced in 1948. BROOKS 1972; E91M

Broadview: Large to medium nut; shell soft, well-sealed; cracking quality good; ripens slightly little before Franquette, beginning in early September; keeps well. Tree very productive, lateral bearing; very hardy. Originated in Westbank, British Columbia, Canada by J.U. Gellatly. Introduced in 1930. Seed brought from the ancestral home of the Utki family in Odessa, Russia. BROOKS 1972; E62{PL}, E62{DF}, E91M{PL}, 140, 081, Q30{SC}, R77

Cascade: Very heavy bearing Russian x Manregian cross. Nut large; shell thin; kernel averages 56% of nut, cracks to halves, has excellent flavor. Tree spreading; very winter-hardy; early bearing. Chambers recommended as a pollinator. Widely planted in the Pacific Northwest. Rated #1 in 1983 Northern Nut Growers Association evaluations. B74, C34, 140, J61M

Chambers: Heavy yielding Manregian stock selection from Oregon. Medium large, high quality nuts. Precocious and vigorous growing; hardy. Leafs out 10 days before Franquette or Spurgeon. Highly regarded cultivar for the Pacific Northwest. B74, I49M, J61M

Chopaka: Parent of Cascade. Quality nearly as good but the tree is harder. Nuts average 20 per pound. Tree upright in form; hardy; precocious; sets nuts in clusters of up to 6 nuts. Has a tendency toward heavy lateral bearing. A91{PL}, B74

Colby: Medium-sized nut; shell thin, well-sealed; kernel plump, of good flavor, represents 53% of nut; matures early. Tree hardy and fruitful in central Illinois. Probably best adapted to areas north of the Ohio River. Originated in Urbana, Illinois by A.S. Colby, Illinois Agricultural Experiment Station. Introduced in 1952. BROOKS 1972; 140

Fateley: Nut very large; shell rough; kernel quality good. Tree very hardy; vigorous; bears well. Originated in Franklin, Indiana by Nolan W. Fateley. Introduced in 1956 by J.F. Wilkinson, Indiana Nut Nursery. BROOKS 1972; 140, N33

Fickes: Round, slightly above average, free husking nut; shell very thin, not well sealed; kernel white, very sweet, represents 51% of

nut; ripens early. Tree comes into bearing early; prolific; easy to graft. Originated in Wooster, Ohio by W.R. Fickes. Introduced in 1951. BROOKS 1972; 140

Greenhaven: Nut averages 12.73 grams; kernel color light, flavor sweet, oil content 61 %, averages 45.8% of nut; ripens in midseason, usually late in September. Tree a consistent annual bearer. Originated in Perrington, Michigan by Lee Somers at Greenhaven Farm. Introduced in 1962. BROOKS 1972; E91M, E91M{PL}, 140

Hansen: Small to medium-sized, round nut; shell very thin, smooth; flavor mild, sweet, good; kernel 60% of nut. Tree small, essentially dwarf; very productive; self-fruitful; hardy; resistant to disease and husk maggot. Bears young and continues with early ripening crops. Of German origin, it was selected in Ohio. The most widely planted winter-hardy cultivar. BROOKS 1972, JAYNES; A91{PL}, B74, B99{PL}, E91M, E91M{PL}, E92,140,186{SC}, R77

Helmle: (Helmle #2) Nut small to medium in size, of good quality. Tree very hardy; very productive; slightly later vegetating than most. A good pollinator for most other Carpathian cultivars. Originated in Breckenridge, Illinois by Herman C. Helmle. Introduced in 1954. BROOKS 1972, JAYNES; 140

Himalaya: Medium to large, slightly oval nut; shell thin; kernel of good quality except when there is a cool summer; ripens in September. Tree upright, slightly spreading; vigorous; productive; not injured by temperatures of -42° F. Originated in Kalispell, Montana. Introduced in 1968 by David A. Lawyer, Lawyer Nursery, Plains, Montana. BROOKS 1972; E91M

Idaho: Very large, sweet, excellent eating nut with good quality. Ripens in late September. Tree vigorous; an early and heavy producer; very hardy, withstands extreme cold. Requires 700 hours of chilling. A selection from the large bijou-type nuts. Originated in Parma, Idaho. Introduced to California by E.T. Rice. BROOKS 1997; A88M, C54, L47, N20

Kentucky Giant: Nut very large; shell thin; flavor good; matures early. Tree blooms late; comes into bearing early, at about 6 years of age; tolerant of low winter temperatures. Bears heavily when well pollinated. Originated in Jefferson County, Kentucky by H.B. Briggs. Introduced in 1956. BROOKS 1972; 140,186{SC}

Korn: Nut averages 29 to 32 per pound; apex pointed, slightly longer than wide; shell quite thin, cracking quality fair to good; kernel bright, very plump, quite sweet, flavor mild; ripens early. Tree vigorous; bears annually. Originated in Berrien Springs, Michigan. Introduced in 1928. BROOKS 1972; E91M, E91M{PL}

Lake: Nut large; shell thin, easy to crack; kernel 50% of nut; quality very good; ripens in mid-season. Tree hardy, productive, starts bearing at an early age. Originated in Bluffs, Illinois by Royal Oakes. Introduced about 1954. BROOKS 1972, JAYNES; E91M, 140,186{SC}, L33

Manregian: Large, round nut; shell thin but rather hard, with a grayish cast; kernel dark in color, of excellent quality. Tree very hardy. Also used as a rootstock. Originated in Chico, California. Introduced in 1954. Seedling of a walnut collected in 1906 in the mountains north of Peiping, China by noted plant explorer Frank N. Meyer. BROOKS 1972; H89M, M39M{PL}, N0{PL}

McDermid: Large nut; shell rather thick, smooth, apex pointed; kernel sometimes astringent, in other districts kernel quality very good. Tree a vigorous grower. Usually never bears heavily being susceptible to late spring frosts; but in other locations, it bears well and appears to be hardy. Originated in Ontario, Canada. BROOKS 1972; 140

McKinster: Nut large; kernel 48% of nut; flavor and quality high. Tree very productive; self-pollinating; well adapted to the climate of Ohio and Michigan. Subject to "June drop". Originated in Columbus, Ohio by Ray McKinster. Introduced in 1952. BROOKS 1972, JAYNES; E91M, 140

Mesa: New Carpathian type from New Mexico. Large, well-sealed nut, resistant to sunburn; thin shell; plump, light-colored kernels of good flavor; ripens in early October. Self-fruitful tree; blooms late; requires 700 hours of winter chilling. Withstands cold as well as hot, dry climatic conditions. A88M{OR}, C54,N20

Metcalfe: Medium-sized nut, averages 42 to 45 per pound; shell thin, light amber; kernel 53% of nut, white, sweet, of very good quality. Tree very vigorous; hardy to -20° F; does not bear well. Originated in Webster, Nov York by Mrs. Ward H. Metcalfe. Introduced in 1952. BROOKS 1972, JAYNES; E91M, H65,140

Perry: Thin-shelled nut with light kernels; kernel weight 56% of nut; ripens the third week of September. Precocious tree, will bear 3 years after planting, a heavy bearer of large clusters; lateral bearing; has good disease resistance. Cold hardy to 34° F. with no damage or winter dieback. E92

Russian: The Russian walnut came to southern British Columbia, Canada with Russian Doukhobor immigrants. These seedlings are crosses of the Russian parent and large-fruited cultivars from a nut breeder's orchard. Used as a hardy nut producer or as a rootstock. A91{PL}

Shiawassee: Large, heavy nut with well-sealed shells; light-colored kernels, kernel weight 58% of nut; ripens the second week of September. Precocious tree, often bears 2 years after planting of seeds, lateral bearing; a heavy bearer of large clusters; has good disease resistance. Cold hardy to 34° F. with no damage or dieback. E92

Somers: Nut medium-sized, averages 11.6 grams; slightly elongated, flattened on both ends; shell attractive, cracks easily; kernel color light, averages 55.6% of nut, oil content averages 64.7%; flavor sweet, pecan-like. Ripens in early September, being noted for its early maturity. Tree a consistent annual bearer; hardy to -34° F. BROOKS 1972; A91{PL}, B74, E92,140,186{SC}

Spurgeon: Large nut; shell very thin, with a good seal; kernel light brown, flavor good; matures late. Tree moderately productive; partially self-fruitful, but production can be improved by planting Franquette as a pollinizer. Late leafing, with no danger of spring frost damage. Originated in Vancouver, Washington by John F. Spurgeon. Introduced about 1920. Considered to be a seedling of Franquette. BROOKS 1972, STEBBINS; B74, C34,149M, J61M

#### CODES FOR SPECIAL TYPES

1. Low-Chill

## WATERMELON {S}

### CITRULLUS LANATUS

#### RED-FLESHED

#### HYBRID

#### Seeded

Funbell:<sup>1</sup> 4 65 days. Unusual, extra early "icebox" type. Small, round fruit; weight about 4 1/2 pounds; attractive, light yellow rind with light green stripes; sweet, juicy, pink-red flesh. When the green stripes change from green to yellow the fruit is ripe. Widely adapted to various types of soils. Excellent for home gardens. C20M, D76, E97, Q39

Garden Baby:<sup>12</sup> 70 days. An early, short-vined watermelon with good flavor. Round fruit, 6 to 7 inches in diameter; "icebox" size, averaging 6 to 8 pounds; dark-green rind with faint striping; juicy, crisp, sweet red flesh. Seeds very small. Ripens even earlier than Sugar Baby. Prolific vine, 3 to 4 feet long; good for gardens with limited space. D65, G6, G82, J20, K57{PL}, L89, M46

Golden Crown:<sup>1 4</sup> 70-80 days. Attractive golden-rinded icebox melon. Small, oblong fruits weighing 6 to 8 pounds; golden-yellow rind, thin but tough; brilliant red flesh, very sweet, sugar content 12%; small seeds. Commonly produces 4 or more fruits per plant. Good tolerance to powdery mildew, anthracnose and viruses. All America Selections Winner for 1991. B75, D11M, D68, E91G, F70, G16, I91, N84, Q39

Kily Edible Seeded:<sup>3</sup> (Wanli) 80 days. Grown for its large, plump black seeds. Delicious eaten like squash seed, dried or roasted. Very vigorous plant; bears 5 to 6 globe-shaped fruits, each capable of producing 400 seeds or more. Disease resistant. N84, Q39

Red Shine:<sup>3</sup> 80 days. Round fruit with black rind; weight about 5 1/2 pounds. Large red seeds, good for roasting and table use. Seed count is about 5,000 seeds per kilo. Vigorous, widely adapted vine; tolerant to diseases; suitable for close spacing due to its small leaves. Q39

Sangria: 85 days. Very productive, high quality hybrid. Large, oblong fruits weighing 20 to 25 pounds; dark green rind, striped with light green; bright red flesh, very sweet and refreshing, sugar content normally in excess of 11%; dark, medium-sized seeds. Highly resistant to fusarium wilt; tolerant of anthracnose, race 1. A1, B75M, D26D, D68, E97, F63, G13M, G82, H85M, H95, I50G, J97M, K10, K50, K73, M29, etc.

Sun Torna:<sup>1 4</sup> (Sun, Sun God) 68-70 days. An unusual, yellow-rinded "icebox" watermelon. Round, medium-sized fruit; average weight 6 1/2 to 11 pounds; rind light yellow with darker yellow stripes; flesh red, juicy and sweet. Ripens extremely early. For indoor and outdoor cropping. B1M, C20M

Sweet Favorite: 80 days. One of the best oblong watermelons for cool, northern areas. Average fruit weighs about 15 pounds; rind bright green with darker stripes; flesh bright scarlet, sweet, of high quality. Small seeds. Ripens much earlier than other oblong cultivars, just after Sugar Baby. Vigorous vine; tolerant to anthracnose and fusarium. All America Selections winner in 1978. B6, C44, C85M, D11M, D68, D76, E75{PL}, F70, G6, G13M, G16, I67M, K10, K16M, L42, M29, etc.

Tiger Baby:<sup>1</sup> 75-80 days. Early icebox type for fresh markets or home gardens. Small, roundish to oval fruits weighing 7 to 10 pounds; light grayish-green rind, striped with dark-green, tough and crack-resistant; pinkish-red flesh, firm, dense, very sweet and flavorful. Semi-bush type plant; resistant to fusarium wilt. Does well in short-season areas. C85M, C92, E75{PL}, F63, G13M, G16, G82, H57M, H95, I39, K10, K50, L42, L91M, K66, M29, TIM, etc.

### Seedless

Jack of Hearts: 80 days. An early maturing "seedless" watermelon. Round oval fruit, weighs 10 to 15 pounds; bright green rind with dark green stripes; bright-red, crisp, very sweet flesh, sugar content 10 to 11%, contains very few immature seed coats. Highly disease resistant. Pollinator needed for fruit to set. Plant 2 hills of seedless cultivar to 1 hill of pollinator for best results. C20M, F63, G71, H95, J97M, L42, L79, M46

King of Hearts: 80-85 days. Blocky, slightly oblong fruit; weight 14 to 18 pounds; thick green rind with medium green stripes; firm, medium-textured, bright red flesh, crisp, sweet and delicious. Perfect for making melon balls. Vigorous, medium-sized plant gives good foliage cover to the fruit. C20M, D26D, E97, F63, G16, H49, H85M, I39, J84, N52

Laurel: 85-90 days. High quality triploid Crimson Sweet type. Medium to large, globe-shaped fruits weighing 14 to 22 pounds; tough medium-green rinds, striped with dark-green; bright red flesh, very sweet, texture and quality excellent. Well suited to long distance shipping. A87M, C20M, F63, J84, K10, K50, K73, N52, S63M

Nova: 90 days. High-quality "seedless" watermelon that also keeps well. Round fruit, weighs 15 to 17 pounds; rind thick and tough, withstand shipping well, deep green with darker green stripes. Medium firm, deep rosy-red flesh, juicy, of good flavor, has a consistently high sugar content. Vigorous, productive vine. Pollinator required. A1, C20M, F63, G13M, J84, K10, K16M, K50, K73, N52, N84, TIM

Queen of Hearts: 80-85 days. Triploid or "seedless" type. Oval-shaped fruit, weighs 12 to 16 pounds; rind light green with dark green stripes, thick, resists bruising; flesh bright red, crisp, very sweet. Suitable for shipping. As with all seedless watermelons, environmental conditions may cause partially seeded fruit. C20M, F63

Redball: 80 days. Triploid or "seedless" type. Round to slightly oval fruit, about 8 1/2 to 9 1/2 inches in diameter; weighs 10 to 12 pounds; rind dark green; flesh bright red, firm, very sweet, seedless except for a few immature seed coats. Vigorous, productive vine. Includes seeds of Crimson Sweet to be used as a pollinator. B75

Seedless Sugar Baby:<sup>1</sup> 80 days. Hybrid seedless version of the popular Sugar Baby variety. Retains all the good eating qualities of the original. Perfectly round, very dark-green fruits, 8 inches in diameter and weighing 8 to 9 pounds; deep red flesh, juicy, very sweet. Ideal for small servings. Very productive. B75

### OPEN-POLLINATED

Allsweet: 95 days. Crimson Sweet type. Oblong fruit, 18 inches long, weighs 25 to 30 pounds; medium-green rind with light-green broken stripes, thin, hard, tough; flesh bright red, firm, sweet. Small seeds. Has a longer shelf life than Crimson Sweet, Charleston Gray or Jubilee. Resistant to fusarium wilt and anthracnose races 1 and 3. A87M, B75M, F60, G1M, G71, G79, I64, J84, K5M, K10, K73, L10, M29, N16

Black Diamond: (Black Cannonball, Florida Giant) 90 days. Large oval fruit, about 15 inches long, weighs 40 to 50 pounds; rind smooth, tough, glossy, dark gray-green; flesh bright red, crisp, tender, sweet, of excellent quality; grayish-black seed. Popular shipping melon in the South. A27M, B3M, B6, B49, B73M, B75M, C92, D76, F60, G16, H85M, K5M, K71, N16

Bush Charleston Gray:<sup>2</sup> 90 days. Similar to Charleston Gray, except for the smaller size of the fruit and vine. Oblong fruit, weighs 10 to 13 pounds; rind gray-green; flesh deep red, fine-textured, sugar content high. Short-vined plant, only 3 to 5 feet across; disease resistant. Ideal for small gardens. G57M, G79

Calsweet: 90 days. A very popular shipping melon in the Southwest, especially California. Blocky-oblong fruit, about 17 inches long, weighs between 25 and 30 pounds; rind light green with dark green stripes; flesh bright red, sweet. Seeds medium-sized, brown. Resistant to fusarium wilt. A1, C20M, DIT, F60, G57M, G71M, G93M, M29, N16, N52

Carolina Cross: Long, light green fruit with darker green stripes; red flesh. Has produced the last 6 world record watermelons. Seed was selected from melons weighing 260, 226, 220, 200, 188, 185, and 181 pounds. These seed melons were chosen for size and shape. Germinates poorly in soil temperatures below 85° F. B75, B73M, C92, D26D, D65, D76, E43M, E97, G16, G27M, G71, H95, I39, I81, J97M, K10, K71, L91M, etc.

Charleston Gray: 85 days. Large cylindrical fruit, 24 inches long, weighs 30 to 35 pounds; rind thin, tough, light greenish-gray; flesh red, crisp, free of fiber, quality excellent. Vigorous, productive vine; resists sunburn, wilt and anthracnose. Standard shipping cultivar for the Mid-Atlantic states. A27M, A75, B75M, D12, D26D, D76, F60, G57M, G71, I59M, I64, I84, K5M, K71, PIG, etc.

Chilian Black Seeded: 90 days. Nearly round fruit, about 10 inches long, weighs 12 to 16 pounds; rind thick, tough, medium green striped with dark green; flesh sparkling red, very sweet,

delicious. Seeds large, almost black. Attractive market melon of very fine quality. G57M

**Cobb Gem:** (Kolb Gem) 100 days. One of the largest fruiting watermelons. Extremely large, attractive, oblong fruits often weighing 100 to 125 pounds or more; dark green rind; sweet, bright red flesh, flavor good; medium to large, grayish-black seeds. High yielding plants. Ideal for exhibiting at shows and fairs. D26D, E97, H85M, K10, K20M, K71, N16

**Congo:** 90 days. Large cylindrical fruit, 27 inches long, weighs 35 to 40 pounds; rind very tough, dark green with darker green stripes; flesh deep red, very firm, medium-grained, has a high sugar content. Seeds white to light tan. Very good shipper, but not immune to bruising. Resistant to anthracnose; susceptible to downy mildew and fusarium wilt. All America Selections winner in 1950. D1T, D74B, F60, G1M, G27M, G57M, G79, H54, I59M, L10, M95M

**Crimson Sweet:** 85 days. Fruit round to slightly elongated, 12 inches long, weighs 25 to 30 pounds; rind thick, hard, tough, light green with darker green stripes; flesh bright red, very sweet, of fine texture. Seeds medium-sized, brown. Vine vigorous and productive; widely adapted; resistant to anthracnose and wilt. Excellent for fresh market and home garden use. A27M, A75, B49, B73M, B75M, D65, F60, F82, G16, G71, G79, K73, L7M, N16, R47, etc.

**Dixie Queen:** 80 days. Attractive, blocky oval fruit; 13 inches long, weighs 25 to 35 pounds; rind very light green with narrow, dark green stripes; flesh deep red, very sweet, free from fiber, of excellent texture. Seeds white. Vine extremely vigorous and productive; resistant to fusarium wilt. Very popular home garden cultivar. D26D, G57M, G71, G79, H33M, H85M, K49M, M95M

**Early Canada:** 75 days. Nearly round fruit, about 10 inches long, weighs 10 to 15 pounds; rind grayish-green with fine green stripes and veining; flesh bright red, sweet, of very fine quality. Seeds small, reddish-brown. Very prolific. Widely grown in the Canadian prairie states. K49M

**Garrisonian:** (Rattlesnake, Georgia Rattlesnake) 90 days. Large, cylindrical fruit, about 22 inches long, weighs 35 to 40 pounds; rind hard, light green with attractive "rattlesnake" markings; flesh bright red, firm, very sweet, of good quality. White seeds with dark tips. Very uniform in size and appearance. Resistant to sunburn and anthracnose; susceptible to wilt. B75, E97, N16

**Golden Midget:**<sup>1 2 4</sup> (Early Golden Midget) 70 days. A unique, short-vine "icebox" type with golden skin. Small oval fruit, 7 to 8 inches long, weighs 6 to 7 pounds; rind thin and tough, green, turning golden-orange at the peak of ripeness; flesh bright red, crisp, very sweet. Small, dark seeds. Busty, compact vine; ideal for small gardens or container culture. Developed by Professor E.M. Meader. F73D

**Jubilee:** 90 days. A large, late-maturing shipping type for longer season areas. Fruit oblong, 24 inches long, weighs 25 to 35 pounds; rind light green with dark green stripes, medium-thick; flesh bright red, firm, sweet, quality good. Seeds large, nearly black. Vine less prolific than Charleston Gray; resists anthracnose and wilt. A27M, A75, A87M, B75M, D26D, D76, G57M, G71, G93M, K5M, K10, K20M, N16

**King and Queen:**<sup>4</sup> (Winter Queen, Winterkeeper, Christmas Melon) 85 days. Nearly round fruit, about 10 inches long, weighs 15 to 20 pounds; rind yellowish-green with faint green stripes, turns pale yellow when ripe; flesh bright scarlet, sweet, almost as firm as a citron melon. Very prolific. Excellent for storage and shipping, keeping until Christmas if picked when ripe and dipped in wax. F60, G13M, H95, I39, J25M, J73, K49M, K71, L77D, N24M, N52

**Kleckley Sweet:** (Monte Cristo) 85 days. Oblong fruit, 24 inches long and 12 inches in diameter, weighs 30 to 40 pounds; rind dark bluish-green, glossy, thin; flesh bright red, very crisp and fine-grained, extremely sweet, with a broad stringless heart; quality excellent. Large white seeds. Does not ship well. An older cultivar, very

popular with home gardeners. C44, D26D, G57M, G87, I59M, K27M, L10, M95M

**Klondike:** (Klondike Dark Green, Klondyke) 80 days. Oblong blocky fruit, 14 inches long, weighs about 25 pounds; rind tough, hard, fairly thick, light-green with irregular stripes of dark-green; flesh scarlet, juicy, sweet, sugar content very high. Small seeds. Ships well. Heavy yielding. G83M, K27M, N52, PIG, R47

**Malali:**<sup>3</sup> 100-110 days. Medium-sized, nearly round fruit; weight 8 to 10 pounds; thin, olive-green skin with fine stripes; crisp, very sweet, light red flesh; keeps well. Also produces large white seeds with black edges that have a delicious flavor. Requires a long hot summer for maximum sweetness. Popular in Israel. K49T, P75M, T27M

**Moon and Stars:**<sup>5</sup> 100 days. Legendary cultivar, rediscovered in rural Missouri by Kent Whealy of the Seed Savers Exchange. Round to oval fruit, weighs about 40 pounds; rind thin, brittle, slightly ridged, dark green with bright yellow spots resembling the "moon and stars"; flesh bright-red, very sweet and rich. Seeds brown with white tips. Foliage is also speckled. Introduced in 1926 by the Henderson Seed Co. A2, B49, D26D, D68, E7M, E24, F24G, F24M, F63, F73D, K23{PL}, K49M, K66, K71, L7M, PIG, etc.

**Moon and Stars Long Milkyway:**<sup>5</sup> 95 days. Elongated Moon and Stars type speckled with bright yellow pinpoint star-like markings resembling a panorama of the Milky Way. Large, bright yellow "moons". Large fruits weighing about 35 pounds; dark-green rind; delicious, bright-red flesh. Highly productive. Developed by Glenn Drowns. K23{PL}, K46T, L7M

**Mountain Hoosier:** 85 days. An old-fashioned cultivar that was once a local favorite in southern Indiana, Ohio, and northern Kentucky. Slightly oblong fruit, weighs 75 to 80 pounds; rind dark green; flesh deep red, sweet, crisp, of very fine flavor. White seeds with slightly black tips. Extremely productive. N16

**Navajo Sweet:** 90 days. Roundish fruits weighing 10 to 20 pounds; rind pale green, moderately splashed with dark green, thin to medium-thick; firm red flesh, unusually sweet; shiyy, dark-red seeds. Very good shelf life. Excellent for shipping and roadside markets. Can also be used as a winter melon when properly harvested. A favorite of the Navajo Indians. B75M, J73, K49M

**New Hampshire Midget:**<sup>1 2</sup> 70 days. Very early "icebox" type for cool, short season areas. Fruit nearly round, about 6 inches across, weighs 4 to 5 pounds; rind thin, light green with dark green mottling and striping; flesh orange-red, of good flavor but coarse. Seeds black, numerous. All America Selections winner in 1951. F73D, J39

**Northern Sweet:** (Early Northern Sweet, Fourth of July) 75 days. Nearly round fruit, 9 inches long, weighs between 12 and 15 pounds; rind thin, dark green with light green stripes; flesh scarlet red, crisp, tender, very sweet and fine-grained. Seeds light tan. Very early, often ripens by the Fourth of July. Highly productive. A2, C95, F80, K49M, K49T, N84, PIG

**Scaley Bark:** 98 days. Unusual variety with a tough, rough skin resembling the bark of a tree. Medium-long, oval fruits; green-striped rind, thin but tough; rich, sweet, crimson flesh. Good for eating fresh. Also excellent for preserves. An old heirloom reintroduced by Shumway's after an absence of 100 years. F73D, K71

**Small Shining Light:** 90-100 days. Round fruits, 10 to 12 inches in diameter; dark-green rind; sweet red flesh. Will ripen in the middle territories of the former Soviet Union and in northern areas of the United States. An old traditional Russian cultivar, very popular in Moscow street markets. K47

**Stone Mountain:** 90 days. Blocky nearly round fruit, about 15 inches long, weighs 30 to 35 pounds; rind smooth, thick and tough, medium green with darker green veining; flesh deep red, very sweet, all solid heart, with no white hearts or strings, sweet to the rind.

Seeds white, tipped with black, few. Very popular home garden and local market type. C69, G57M, J59M, K27M, K49M, M95M

Strawberry: 85 days. Long, medium-sized fruit; 20 inches in length, 8 inches in diameter; weight 15 to 25 pounds; rind dark green with darker green stripes. Intense red flesh, ripens to within 1/2 inch of the rind, of delicate texture and excellent, sweet, distinctive flavor. Very good disease resistance. Home garden cultivar. L7M

Sugar Baby:<sup>1</sup> (Icebox Midget) 75 days. An excellent "icebox" type with the coarse texture and sweetness of larger watermelons. Round fruit, 6 to 8 inches in diameter; average weight 8 to 10 pounds; rind thick, dark green, almost black when mature; flesh bright red, sweet, of fine texture. Seeds small, dark brown. For local markets and home gardeners. A16, A27M, A75, B73M, B78, C44, C92, F60, G6, H85M, L7M, M46, N16, R47

Super Sweet: 95 days. Medium-sized, round oval fruit; 8 inches long, weighs 10 to 15 pounds; rind, thin, tough, light green with dark green stripes; flesh bright red, extremely sweet. Small, black seeds. Resistant to anthracnose and fusarium wilt. Developed by Dr. Charles V. Hall at Kansas State University from the same breeding line that produced Allsweet and Crimson Sweet. B75M

Sweet Princess: 90 days. Charleston Gray type with extremely small seeds. Large oblong fruit, weighs about 25 pounds; rind light yellow-green with narrow medium green stripes, smooth, thick and tough; flesh light red, crisp, fine-textured. Seeds tan, unusually small, comparable to tomato seed. Resistant to anthracnose and fusarium wilt. B8M, 184, N16

Tom Watson: 90 days. Large, oblong fruit, 10 to 12 inches in diameter; weight 30 to 40 pounds; rind dark green with slight mottling, tough and elastic; flesh dark red, somewhat coarse, firm, juicy, sweet. Ships well, especially for long distances. Also a traditional home garden favorite. F24M, G57M, K71

#### WHITE-FLESHED

Cream of Saskatchewan: 85 days. Nearly round fruit, about 10 inches long, weighs 8 to 10 pounds; rind thin, brittle, pale green with dark green stripes; flesh white to creamy white or pale yellow, sweet, very flavorful, fragrant, of good quality. Seeds black. Vigorous, prolific vines. Does well in northern areas. Heirloom. D29P, D68, E24, F73D, K20M, L88J, L94, N24M, N84, 089

#### YELLOW/ORANGE-FLESHED

##### HYBRID

##### Seeded

Yellow Baby:<sup>1</sup> 75 days. Round to oval fruit, about 7 inches in diameter, weighs 8 to 10 pounds; rind thin, tough, light green with darker green stripes; flesh bright yellow, crisp, sweet, quality excellent. Seeds small, few. Has better storage qualities than other "icebox" types. All America Selections winner in 1975. C20M, E91G, H95, 191, K10, L42, Q39

Yellow Doll:<sup>1 2</sup> 65 days. A very early maturing, hybrid "icebox" type with yellow flesh. Round fruit, weighs 5 to 8 pounds; rind thin, medium green with very dark green stripes; flesh yellow, crisp, extra sweet. Seeds small, black. Semi-compact vine. B6, B73M, C85M, C92, D76, E75{PL}, G16, G93M, H33M, H85M, 139, K73, L89, M46, N16, etc.

##### Seedless

Golden Fummy: Round fruit, weighing 15 1/2 to 17 1/2 pounds; glossy green rind, with dark-green stripes; crisp, bright yellow flesh with a high sugar content; seedless. Good for long distance shipping and storage. Very vigorous vine; produces a high percentage of marketable fruit. C20M, Q88

Honeyheart: 80-85 days. Small, round fruit; weight 8 to 11 pounds; rind light gray-green with darker green stripes; flesh bright yellow, crisp, juicy, fine-grained, very sweet; seedless, or with a

few immature soft seeds. Ripens just after Jack of Hearts. For home gardens and fresh market. E75{PL}, F63

##### OPEN-POLLINATED

Black Diamond Yellow Fleshed: 90 days. Exactly like standard Black Diamond except for the color of the flesh. Round to oval fruit, weighs 60 to 70 pounds under favorable conditions; rind thin, tough, glossy, dark grayish-green; flesh yellow, tender and sweet. Seeds grayish-black, rather small. Ships well. K5M, N16

Desert King: 85 days. Round to slightly oblong fruit; rind medium thin, tough, light green; flesh deep yellow, very sweet and tender. Seeds grayish black. Holds on the vine a month or more after ripening without losing quality or becoming sunburned. A good shipper. Very drought tolerant. C20M, D26D, E97, H85M, K5M, K10, K49T, N16

Golden Honey: 85 days. Round to oval fruit, about 12 inches long, weighs 30 pounds; rind brittle, medium green with darker green stripes; flesh bright yellow, crisp, tender, of fine flavor. Seeds large, light tan. Very popular with home gardeners and local market growers. C20M, C92, G57M, K49T

Hopi Yellow Fleshed: 100 days. Small round fruit, weighs 3 to 4 pounds; exceptionally sweet, crisp, full-flavored yellow flesh. Drought resistant; traditionally dry farmed in sand dunes. Crushed seeds are used to grease the stones on which the traditional Indian *piki* bread is baked. C95, F73D, 116, N84

Moon and Stars Yellow Fleshed:<sup>5</sup> A family heirloom from Georgia. Rare white-seeded, yellow-fleshed cultivar of the Moon and Stars class. Rinds have yellow "moons" with many small yellow "stars". Excellent flavor, though not quite as sweet as the pink-fleshed Moon and Stars. Somewhat tolerant to disease and drought. B49, E7M, K23{PL}, K49M, L7M

Orangelo: 85 days. Large, cylindrical fruit, grows up to 50 pounds; rind very thin, light green with darker green stripes; flesh solid, very crisp, sweet and flavorful. Seeds cream-colored with dark rings and tips. Vigorous, productive vine. Very popular with local market growers. K20M, L77D, N16

Tendergold: (Willhite's Tendergold) 80 days. Large, cylindrical fruit; very uniform in size and shape; weighs 22 to 28 pounds; rind tough, dark green mottled with lighter green; flesh sweet, yellow, becomes more orange and sweeter as it matures. Black seeds. A good shipper for a yellow-fleshed melon. Will last 7 to 20 days longer after ripening than Tendersweet Orange Fleshed. C20M, L77D, N16

Tendersweet Orange Fleshed: 90 days. Oblong fruit, 18 inches long, weighs 35 to 40 pounds; rind light green with dark green stripes, medium-thick; flesh orange, very sweet and rich. Seeds medium-sized, off white. Of fine eating quality, but must be harvested promptly when mature. Considered sweeter than Tendersweet Yellow Fleshed. A75, B75M, C20M, D76, G57M, H85M, K5M, N16, N52

Tendersweet Yellow Fleshed: 80 days. Oblong fruit, about 18 inches long, weighs up to 30 pounds; dark green rind with light green stripes; flesh yellow, very tender, never stringy, of exceptionally high sugar content. Seeds solid white to cream with black rims and tips. A good shipper. C20M, K49M, K71

Yellow Crimson: 80 days. Nearly round fruit, very similar to Crimson Sweet in size and appearance; rind light green with darker green stripes; flesh bright yellow, of very good flavor. Seeds black. Ripens somewhat earlier than Crimson Sweet. A27M, D26D, H85M, N16

##### CODES FOR SPECIAL TYPES

1. Icebox
2. Short-Vined
3. Edible-Seeded
4. Yellow-Rinded

## 5. Spotted

## WHEAT {S}

## TRITICUM X AESTIVUM

**Arlin:** Hard white winter wheat. One of the cultivars used for *Natural s'Wheat* white wheat, a trademark of the American White Wheat Producers Association. Producers naturally white whole grain flours and breads that are much sweeter and lighter in color than those from traditional red wheats. Very productive, semi-dwarf plants; earliest maturing of the white wheats. Developed by Kansas State University. A38P{DF}, A38P{PD}

**Baart:** White spring wheat which is very drought tolerant and high in protein. Esteemed for tortillas and pastry flour. Grown as a winter wheat in California. Originally from South Africa. Was grown widely in the United States until the 1950's, when it was replaced by shorter-stemmed cultivars for machine harvest. SMITH, C.; F73D, L3J, L77D, N84

**Bronze Chief:** High-protein, hard red spring wheat of outstanding quality. Produces excellent stoneground whole wheat flour with 15% protein content. Superior for making bread and other baked goods. Developed in Montana, where it is a popular local variety. M96{DF}, M96{PD}

**Dwarf Indian:** Rather short heads, somewhat reminiscent of bottle brushes; plump, nearly round kernels. Short, very upright plant, just under 3 feet tall; very productive. Ripens in mid-July. Bred for ease of harvest. Can be sown in the fall or early spring. J39, K17M

**Early Triumph:** 260 days. A tall, high quality, hard red winter wheat, tolerant of most wheat diseases of the Central United States. Grows 36 to 40 inches tall and is a heavy straw producer, which subjects it to lodging on high nitrate soils. Yields 40 bushels per acre on good soil with no chemical fertilizer. A week earlier to ripen than Turkey Red in Salina, Kansas test plots. F73D

**Globe:** (Globe Wheat) Unique kernels that are spherical, almost round. Sturdy, dependable plants have a reputation for drought resistance. Spring growth-habit; may be autumn planted in mild-winter areas. Stiff straw; early maturity. Traditional baking wheat of pre-modern India. G47

**Hard Red Calcutta:** Hard red spring wheat. Ripens very early, 2 or 3 weeks earlier than Red Fife: Very short straw; bearded heads; not very productive. Types with white, brown, or black chaff are known. Introduced into Canada from India in the late 1800's. BULLER; F73D, K17M

**Huron:** Ladoga x White Fife. Bearded, hard red spring wheat. Ripens in mid-season, a few days earlier than Red Fife. Produces good crops. Originated by A.P. Saunders at the Central Experimental Farm, Ottawa, in the late 1800's. Still grown commercially in Quebec and Atlantic Canada. BULLER; J39

**Klasic:** Hard white spring wheat. One of the cultivars used for *Natural s'Wheat* white wheat. Produces sweet, light-colored whole-meal breads preferred by consumers. Developed by Northrup King. Released for production in California in 1981. Also an important cultivar in Colorado and the intermountain and Pacific Northwest states. A38P{DF}, A38P{PD}

**KS196:** Hard white winter wheat. One of the cultivars used for *Natural s'Wheat* white wheat. Golden-colored kernels, not as plump as those of Arlin or Oro Blanco. Tends to have a higher protein content than Rio Blanco. Moderately productive, semi-dwarf plants; very winter hardy; resistant to stem rust. Susceptible to sprouting in areas of high humidity. Developed by Kansas State University. A38P{DF}, A38P{PD}

**Ladoga:** Awnless, hard red spring wheat. Ripens about 10 days earlier than Red Fife. Produces commercial flour which is somewhat deficient in strength, coarse-textured, and very yellow in color. Originated near Lake Ladoga, north of Petrograd, Russia. Introduced into Canada in the late 1800's. BULLER; F73D, J39, K17M

**Lavras:** Notable for its very good flavor when cooked as a whole grain. Matures in mid-July. High yielding plant, grows about 3 1/2 feet tall. Can be sown in the fall or early spring. Originated in Brazil. K17M

**Maris Widgeon:** An old English cultivar that is experiencing a revival thanks to increased interest in organic gardening. The grain is of good bread making quality, and the tall straw is much in demand for thatching. Also good for sprouting. R32

**Marquis:** 115 days. Early, beardless, hard red spring wheat. Very plump, heavy, rich-red, highly uniform grains. Good milling and baking qualities. Susceptible to leaf and stem rust. Grows 28 to 48 inches tall. Principal wheat grown in western Canada during the 1920's and 1930's. Developed from Red Fife and Hard Red Calcutta by C.E. Saunders at the Central Experimental Farm, Ottawa. Introduced in 1909. BULLER; F73D, J39, K17M

**Oro Blanco:** Hard white winter wheat. One of the cultivars used for *Natural s'Wheat* white wheat. Yields sweet tasting, light-colored breads and bakery products that require less sweetener than those made from the stronger flavored red wheats. High yielding, semi-dwarf plant; matures in midseason. Developed by Kansas State University. A38P{DF}, A38P{PD}

**Pacific Blue Stem:** (White Lammas) Turn-of-the-Century heirloom from California. Soft white spring wheat. Plump, white berries. Became famous for its excellent baking qualities. Also had the reputation of being a good weed competitor, due to its height. Stem and awns are striped with blue. Susceptible to stem rust and Hessian fly. Originated in Australia. B49, F73D

**Perennial:** (Perennial Wheat) Novelty plant with good productivity and grain flavor. For fall planting. Genetically programmed to lie dormant under winter snow blanket until spring. Some of the plants will live on to produce grain in successive years. G47

**Polk:** A hard red, spring bread wheat. Not as high-yielding as winter wheat, but planted and harvested during the same growing season. Polk is a high protein, high gluten, medium-height spring wheat with superior bread baking quality. Sow in early spring as soon as ground can be prepared. G6, N84

**Prairie Gold:** (Golden 86) {DF} High-protein, hard white spring wheat. Excellent for bread as well as all other baking needs, its naturally golden color makes baked goods of outstanding appearance. Due to its low tannin content, it produces breads that are milder and sweeter tasting. Developed by Wheat Montana Farms & Bakery. E31, E31{PE}, M67, M96, M96{ED}

**Prelude:** Hard red spring wheat. Excellent baking and milling qualities. High protein content. Ripens at the very start of the wheat harvest in Canada, about 2 weeks sooner than Marquis. Short straw; bearded heads; relatively low yields. Developed by C.E. Saunders. Introduced in 1913. BULLER; J39

**Red Fife:** (Scotch Fife) Awnless, hard red spring wheat. Excellent milling and baking qualities. Mother of the North American spring wheat industry. Most popular Canadian hard red spring wheat in the 19th Century. Named after David Fife, an Ontario farmer who was the first to raise Red Fife in North America, in 1842. Originated in central or eastern Europe. BULLER; F73D, J39, K17M

**Reward:** 78 days. Marquis x Prelude: Awnless, hard red spring wheat. Short, plump kernels of good quality. Easy to hand-thresh. Early maturing cultivar tolerant of acid soils. Originated by C.E. Saunders at the Central Experimental Farm, Ottawa, Ontario, Canada. Released in 1928. U8M

Rio Blanco: Hard white winter wheat. One of the cultivars used for *Natural sWheat* white wheat. Semi-dwarf plants with good yield potential and winter hardiness; matures medium early. Has the widest range of adaptability of the white wheats approved by the American White Wheat Producers Association. Developed by AgriPro Biosciences. A38P{DF}, A38P{PD}

Roblin: Hard red spring wheat. Very early maturing, beardless type. High in gluten. Makes a superb bread flour. Popular in Maine. Should be planted as early in the spring as possible. Sow 4 to 6 pounds per 1,000 square feet. D68

Rose: A hard red, winter bread wheat, higher yielding than spring wheat. Rose is awned (bearded), medium height, and winter hardy. Developed in South Dakota. Sow August 25 to September 10 in climate similar to Maine, later further south. Grain matures July to Early August. G6

Rouge a Bordeaux: Hard red spring wheat. Awned type. Excellent for making bread. Yields well. Heirloom from France where it is esteemed for its flavor. L3J

Rough Rider: Hard red winter wheat. Selected for winter hardiness, milling and baking qualities, and medium maturity. Should be planted the first two weeks of September. To reduce the chances of winter-kill, limit growth to 4 to 6 inches. Developed in North Dakota. Released in 1975. D68

Snow White: Hard white winter wheat. Lacks the tannin in the bran that makes hard red wheats red and creates a bitter flavor in whole grain breads. Excellent for baking, producing a much sweeter loaf. Produces white bran suitable for use in breakfast and snack foods. Developed by Goertzen Seed Research. F21T{DF}, F21T{PD}

Talavera: Awnless, white spring wheat. Large, thin-skinned, very white grains. Produces fine, attractive flour. Large, plump, well-filled heads; long, stiff straw. Will not survive severe winters. Not adapted to clay soils. Selected by a Colonel Le Couteur of Bellevue Villa, Jersey, Channel Islands. Introduced in 1838. Of historical interest. KLIPPART; U8M

Turkey Red: Hard red winter wheat. Excellent bread making quality. Delicious, nutty flavor. Makes loaves that are high, light, fine-textured and nutritious, Tall and bearded. Fair producer under drought conditions. An old cultivar, originally brought to Kansas in 1874 by Mennonite families emigrating from the village of Annenfeld in Crimea. Widely used in breeding contemporary bread wheats. LEONARD, VOTH; L3J

White Sonora: Beardless spring pastry type used to breed Green Revolution wheat. Short, wedge-shaped ears. Very drought adapted. Lodges if over-watered. Once grown by the Tohono O'odham Indians, but now endangered. It was their traditional *torilla* wheat. Originated in Mexico. F73D, J25M, K17M, L3J, N84

---

## WHITE SAPOTE {GR}

---

### CASIMIROA EDULIS

---

Bravo: Selected as having the best flavor in a blind taste test conducted by the North San Diego County chapter of the California Rare Fruit Growers. Produces over-size, yellow-green fruit in the fall. I83M

Chestnut: Medium to large, roundish fruit; up to 4 inches in diameter and 3/4 of a pound; skin greenish-yellow, thin, slightly bitter; flesh golden-yellow, of fine texture; flavor rich, but does not become overly sweet; quality very good; ripens August to September. Keeps and ships well, and has therefore been used as a commercial cultivar. Tree bears very large crops every other year, up to 3 tons. Originated in Vista, California by Wesley C. Chestnut. D57

Denzler: Small to medium-sized fruit, about 3 inches in diameter; light green skin; very smooth white flesh with a sweet, melting flavor; quality excellent fresh; seeds 2 or 3; ripens October to December, handles and ships well. Skin is peeled off and not eaten. Large, vigorous, upright tree; bears lightly. Selected at Mr. Denzler's farm in upper Kona on the Big Island of Hawaii. J22

Golden Globe: Small, attractive, rounded fruit; turns a pale yellow when ripe; has an excellent complex flavor; large seeds. Keeping qualities of ripe fruit only fair. Tree not a heavy bearer; apparently self-fertile. Recommended as a backyard variety for warmer areas. GLOWINSKI; Q93

Lemon Gold: Medium to large fruit; weight 4 to 6 ounces; skin attractive, light yellow when mature, resists blemishes. Quality very good, with a pleasant slightly acid flavor. Seeds small, usually 4. Season October to November; ripens on the tree and holds there for several weeks without much deterioration. Develops a good flavor when ripened off the tree. Keeps well. Tree bears good crops annually. A63,174,183M, Q93

Leroy's: Medium to large, flat-ovate fruit; weight 6 to 8 ounces; skin golden colored on the side exposed to the sun, when ripe; flesh sweet, with a distinct, rich butterscotch-like flavor. Ripens over a long season, from August to Christmas. Originated in Vista, California by Leroy Ross. D57,174

Louise: Large, baseball-sized, roundish fruit; skin yellow; quality high; excellent, vanilla custard-like quality. Season January to September but will ripen nearly year round in frost-free areas. Tree bears heavy crops. Originated in Chula Vista, California by Pacific Tree Farms. I83M

McDill: Very large, round to oval fruit, up to 1 1/2 pounds; skin thin, light yellowish-green when ripe; flesh sweet but not cloying, eating quality excellent; usually 1 to 3 large seeds; ripens November to December, does not keep well. Tree vigorous, precocious, prolific. D57, G49,174,183M, J22, Q93

Ortego: Oval fruit, usually with only 1 relatively small seed; average weight 4 to 5 ounces. Has good eating and keeping qualities. Ripens in late mid-season and continues for about 2 months. Tree compact, somewhat drooping; a regular and heavy bearer. Originated in Escondido, California by Orton H. Englehart. T49M{SC}

Pike: Large, rounded or oblate fruit, to 4 inches in diameter and 9 ounces; skin dark green, thin, very fragile, somewhat bitter; flesh white to yellowish, of rich, non-bitter flavor. Usually has 4 rather large seeds. Ripens September to December, keeps fairly well. Tree small, bears regularly and heavily. Has been used as a commercial cultivar. Originated in Santa Barbara, California in the late 1920's. BROOKS 1972; T49M{SC}

Reinecke Commercial: Fruit irregular in shape, weighs about 5 ounces; skin an attractive golden-orange when ripe; flavor good. Seeds moderate in number. Has excellent keeping qualities, and even if picked prematurely will soften and become fairly good eating. Tree a relatively poor yielder. Originated in San Diego, California by John M. Reinecke. Q93

Suebelle: (Hubbell) Medium to small, roundish fruit, weight 2 to 6 ounces; skin green or yellowish-green, bruises easily; flesh custard-like, melting, of excellent flavor; sugar content 22%; seeds few, rather small; ripens July to April; does not store or ship well. Tree precocious; nearly everbearing within a mile of the coast. Originated in Encinitas, California by Susan Hubbell. Introduced in 1931. BROOKS 1972, MORTON 1987a; A63, D23M, D57, G49, 174,183M

Sunrise: Medium to large, roundish to oblate fruit, weight 6 to 10 ounces; irregular in shape; skin light-green turning yellow when ripe, thin, easily bruised; flesh creamy-white, sweet but not cloying, balanced by a delicate lemon-like flavor, very well-textured; quality excellent; ripens July to October. Tree tall, upright, vigorous; very

productive, bears 2 crops some years. Originated in Vista, California. 174

Vernon: Medium to large, roundish fruit; skin relatively thin, yellow when ripe; flesh very sweet, flavor excellent; ripens November to January, keeps relatively well on the shelf. Tree very productive and dependable, bears over a long period of time. Does well in coastal areas. Originated in Vista, California by Wells W. Miller. D57,183M

Vista: Small, somewhat flattened fruit, averages about 8 ounces; skin light yellow when mature; flesh rather firm, eating quality very

good; seeds 1 to 4, depending on size; ripens October to November, keeps well. Tree bears well but has a tendency toward alternate bearing. T49M{SC}

Yolinda: Very good flavor. Taste test winner at tastings conducted by the California Rare Fruit Growers. Medium large tree. Seedling of unknown parentage originating in Yorba Linda, California. I83M

- X82 International Institute of Tropical Agriculture - P.M.B. 5320, Ibadan, Nigeria.
- X88M Jardim Botânico do Rio de Janeiro - Rua Pacheco Leão 915, Rio de Janeiro, RJ 22.460, Brazil. Seeds are offered for exchange with other scientific institutions only.
- Y0M Jardín Botánico de la Universidad de San Carlos - Centro de Estudios Conservacionistas, Avenida de la Reforma 0-63, Guatemala City, Zona 10, Guatemala.
- Y2 Jardín Botánico Nacional de Cuba - Carretera del Rocfo, km 3 1/2, Calabazar, Boyeros, Havana, Cuba. Offers a free exchange of seeds to other botanical gardens and scientific institutions. Cannot accept requests from the general public.
- Y14M Jardín Botanique de la Ville et de l'Université - Place Marechal, Leclerc, Besangon F-25000, France. Will exchange seeds with other institutions and serious collectors. Does not accept requests from the general public.
- Y17M Jardín Botanique National de Belgique - Domaine de Bouchout, Meise B-1860, Belgium. Honors all requests from other institutions and collectors on an exchange basis.
- Y18 Jardín Botaniques de la Ville de Nice - 78 Corniche Fleurie, Nice F-06200, France. Encourages reciprocal exchanges between other institutions and collectors. Cannot accept requests from the general public.
- Y29 Kaunas Botanical Garden - Botanical Institute, Z88 Lithuanian Academy of Sciences, Botanikos 4, Kaunas 233019, Lithuania. Encourages the general public to make requests through their local institution.
- Y29M King's Park and Botanic Garden - Fmser Ave., West Perth, WA 6005, Australia. Surplus seed is distributed free to botanical gardens which issue seed exchange lists and to scientific institutions which require seed for research purposes. Private collectors and the general public should apply through their local official institutions.
- Loko Agroforestry Program - B.P. 1377, Bangui, Central African Republic. Project of Christian development groups working to promote agroforestry as an alternative to "slash and burn" farming in Africa, and around the world. Honors all requests from the general public.
- Y76 Nanjing Botanical Garden - 1 Qian hu hou cun, Outside Zhongshan Gate, Nanjing, Jiangsu, China.
- Y81 National Bureau of Plant Genetic Resources - Indian Agricultural Research, Institute, New Delhi 110012, India.
- Y83 National Fruit Trials - Brogdale Horticultural Trust, Brogdale Rd., Faversham, Kent ME13 8XZ, England. Will provide reasonable quantities of material for breeders and other research and official collections overseas free of charge. Cannot normally supply private individuals due to the cost and difficulties over plant health regulations.
- Y89M Nikita Botanical Gardens - GP.Q, Yalta, Crimea 334267, Ukraine.
- Z5 Philippine Root Crop Research and Training - Visayas State College of Agriculture, Baybay, Leyte 7127-A, Philippines.
- Z7M Plant Genetic Resources Laboratory - Agricultural Research Council, P.O. Box 1031, Islamabad, Pakistan.
- Z12 Plew Horticultural Experiment Station - G.P.O., Chantaburi Province, Thailand.
- Z19 Real Jardín Botánico - Plaza de Murillo, 2, Madrid 28014, Spain. Government institution that honors all reasonable requests from the general public.
- Z23M Research Center for Agrobotany - Institute for Plant Production and Qualification, Tapiosele 2766, Hungary. Government gene bank that provides material free of charge on an exchange basis. Suggests that the general public inquire through their local institution.
- Z25M Royal Botanic Garden - Inverleith Row, Edinburgh EH3 5LR, Scotland. Honors requests for plant material from its Catalog of Plants to institutions and private individuals with whom they have established plant exchange relationships. Plant material is not available to the general public, nor is material available on a sales basis.
- Z72 Unidad de Recursos Fitogenéticos - Centro Agronómico Tropical de Investigación y Enseñanza, P.O. Box 15, Turrialba, Costa Rica.
- University of Uppsala Botanic Garden - Villavagen 8, Uppsala S-752 36 Sweden. Accepts requests on an exchange basis with other institutions, collectors and commercial interests only.
- Z91 N.I. Vavilov All-Union Institute of Plant Industry - 44 Bolshaya Morskaya St., St. Petersburg 190000 Russia. Honors all requests from collectors, institutions and commercial interests on the basis of equivalent exchange. Encourages the general public to make inquiries through their local institution.

## APPENDICES

### APPENDIX A: USAGE AND EDIBLE PARTS

ADJUVANTS, ADDITIVES - *Abelmoschus moschatus*, *Albizia odoratissima*, *Aleurites moluccana*, *Ananas comosus*, *Ariocarpus fissuratus*, *Aspergillus niger*, *Bidens pilosa*, *Buddleia asiatica*, *Carica papaya*, *Catha edulis*, *Chimaphila maculata*, *C. umbellata*, *Chondrus crispus*, *Citrus x amblycarpa*, *Ficus insipida*, *Fumaria officinalis*, *Gladiolus italicus*, *Glycine max*, *Glycyrrhiza glabra*, *Gouania lupuloides*, *Grewia asiatica*, *Guaiacum officinale*, *Guazuma ulmifolia*, *Gypsophila paniculata*, *Hibiscus bifurcatus*, *Hordeum vulgare*, *Humulus lupulus*, *Kigelia africana*, *Kydia calycina*, *Larrea tridentata*, *Ledum groenlandicum*, *Macaranga grandifolia*, *M. tanarius*, *Manilkara hexandra*, *Myrica gale*, *Myrtus communis*, *Ornithogalum narbonense*, *Phaseolus metcalfei*, *Punica granatum*, *Quillaja saponaria*, *Randia echinocarpa*, *Ruta graveolens*, *Sapindus mukorossi*, *Saponaria officinalis*, *Spondias mombin*, *Stevia serrata*, *Syzygium cumini*, *Terminalia tomentosa*, *Tetrapleura tetraptera*, *Trichodesma zeylanicum*, *Vigna caracalla*, *Vitis vinifera*, *Yucca elata*.

ALCOHOLIC BEVERAGES - *Acacia nilotica*, *Acanthopanax sessiliflorus*, *A. sieboldianus*, *Acer pseudoplatanus*, *Acrocomia aculeata*, *A. mexicana*, *Actinidia polygama*, *Agave americana*, *A. angustifolia*, *A. atrovirens*, *A. deserti*, *A. salmiana*, *A. sisal ana*, *A. tequilana*, *Amaranthus spinosus*, *Amelanchier x grandiflora*, *A. ovalis*, *Amygdalus persica*, *Anacampseros albissima*, *Anacardium giganteum*, *A. occidentale*, *Ananas comosus*, *Annona squamosa*, *Antidesma bunioides*, *Araucaria araucana*, *Arbutus unedo*, *Arenga pinnata*, *Aristolelia chilensis*, *Armeniaca mume*, *A. vulgaris*, *Arracacia xanthorrhiza*, *Artemisia absinthium*, *Artocarpus heterophyllus*, *Astrocaryum tucuma*, *Avena abyssinica*, *A. sativa*, *Azadirachta indica*, *Baccaurea motleyana*, *Bactris maraja*, *Balanites aegyptiaca*, *Berchemia discolor*, *Betula lenta*, *B. nigra*, *B. papyrifera*, *B. populifolia*, *Borassus aethiopicum*, *B. flabellifer*, *Bromus mango*, *Butia yatay*, *Byrsonima crassifolia*, *Calluna vulgaris*, *Caltha palustris*, *Cannabis sativa*, *Camegieia gigantea*, *Carya illinoensis*, *Caryota urens*, *Celtis australis*, *Ceratonia siliqua*, *Chamaenerion angustifolium*, *Chenopodium ambrosioides*, *C. quinoa*, *Citrus x aurantium*, *C. grandis*, *C. medica*, *C. x paradisi*, *C. reticulata*, *C. sinensis*, *Clausena lansium*, *Coccoloba uvifera*, *Cocos nucifera*, *Coffea arabica*, *Coix lacryma-jobi*, *C. lacryma-jobi 'Ma-Yuen'*, *Colubrina elliptica*, *Cordyline australis*, *C. fruticosa*, *Comus mas*, *C. officinalis*, *Corypha elata*, *Crataegus C. oxyacantha*, *Cryosiphila nana*, *Cucurbita ficifolia*, *Cycas revoluta*, *Cynara scolymus*, *Dacrydium cupressinum*, *Dimocarpus longan*, *Diospyros digyna*, *D. mespiliformis*, *D. virginiana*, *Drosera rotundifolia*, *Echinochloa colonum*, *E. stagnina*, *Elaeis guineensis*, *Eleusine coracana*, *E. indica*, *Empetrum atropurpureum*, *E. nigrum*, *Eragrostis tef*, *Eucalyptus gunnii*, *Eugenia uniflora*, *Euterpe oleracea*, *Fagopyrum esculentum*, *Fagus sylvatica*, *Ferocactus acanthodes*, *Ficus carica*, *Ficus sycomorus*, *Fragaria x ananassa*, *Fraxinus excelsior*, *Garcinia livingstonei*, *Gaultheria G. procumbens*, *G. shallon*, *Gaylussacia baccata*, *Gleditsia triacanthos*, *Glottiphyllum linguiforme*, *Glycosmis trifoliata*, *Gourliea*

*decorticans*, *Grewia excelsior*, *Grewia asiatica*, *G. occidentalis*, *Harpephyllum caffrum*, *Heracleum sphondylium*, *Hordeum vulgare*, *Hymenaea courbaril*, *Hypericum perforatum*, *Hyphaene coriacea*, *H. natalensis*, *Ilex aquifolium*, *Imperata cylindrica*, *Ipomoea batatas*, *Jubaea chilensis*, *Juglans regia*, *Juniperus communis*, *Khadia acutipetala*, *Lansium domesticum*, *Laurus nobilis*, *Leucanthemum vulgare*, *Litchi chinensis*, *Lycium chinense*, *Madhuca indica*, *M. longifolia*, *Mahonia aquifolium*, *Malus fusca*, *M. pumila*, *M. sylvestris*, *Mammea americana*, *Manihot esculenta*, *Manilkara hexandra*, *Marshallocereus thurberi*, *Mauritia flexuosa*, *Mimusops elengi*, *Monascus purpureus*, *Morus alba*, *M. australis*, *Musa x paradisiaca*, *Myrciaria floribunda*, *Myrica cerifera*, *M. rubra*, *Nereocystis luetkeana*, *Nypa fruticans*, *Opuntia leucotricha*, *O. megacantha*, *O. robusta*, *O. stieptacantha*, *O. tenuispina*, *Orbignya cohune*, *O. martiana*, *Oryza glaberrima*, *O. sativa*, *Oxytenanthera abyssinica*, *Parinari capensis*, *Passiflora edulis\**, *P. incarnata*, *P. mollissima*, *P. rubra*, *Pastinaca sativa*, *Pennisetum americanum*, *Persea americana*, *Phoenix dactylifera*, *P. pusilla*, *P. reclinata*, *P. sylvestris*, *Picea abies*, *P. mariana*, *Pimpinella saxifraga*, *Pinus densiflora*, *P. koraiensis*, *Plinia cauliflora*, *Podocarpus spicatus*, *Pourouma cecropiaefolia*, *Primula veris*, *Prosopis chilensis*, *P. juliflora*, *P. pubescens*, *Prunus cerasoides*, *P. cerasus*, *P. domestica*, *P. padus*, *P. pseudocerasus*, *P. salicina*, *P. spinosa*, *P. virginiana*, *P. x sp.*, *Pseudocyonia sinensis*, *Pseudophoenix vinifera*, *Pterocarpus marsupium*, *Pyrus communis*, *Quercus petraea*, *Raphia hookeri*, *R. vinifera*, *Raphionacme hirsuta*, *Reynoutria japonica*, *Rheum palmatum*, *R. rhabarbarum*, *Rhododendron mucronulatum*, *Rhodymenia palmata*, *Ribes grossularia*, *R. nigrum*, *R. sativum*, *Rosa canina*, *R. Carolina*, *R. rugosa*, *Rubus caesius*, *R. chamaemorus*, *R. crataegifolius*, *R. flagellaris*, *R. fruticosus*, *R. idaeus*, *R. parvifolius*, *R. phoenicolasius*, *R. saxatilis*, *R. strigosus*, *Saccharum officinarum*, *Sambucus canadensis*, *S. melanocarpa*, *S. nigra*, *S. racemosa*, *Sandoricum koetjape*, *Sarothamnus scoparius*, *Scheelea butyracea*, *Schinus molle*, *Sclerocarya birrea*, *S. caffra*, *Secale cereale*, *Setaria italica*, *Sicana odorifera*, *Smilax rotundifolia*, *Solanum x burbankii*, *S. tuberosum*, *Sorbus americana*, *S. aria*, *S. aucuparia*, *S. domestica*, *S. scopulina*, *S. sitchensis*, *Spondias dulcis*, *S. mombin*, *Stachytarpheta jamaicensis*, *Stenocereus stellatus*, *Syzygium cordatum*, *S. cumini*, *S. jambos*, *Taraxacum officinale*, *Terminalia bellarica*, *Theobroma cacao*, *Tilia x europaea*, *Trichodiadema stellatum*, *Triticum x aestivum*, *Tsuga canadensis*, *T. heterophylla*, *Turnera diffusa*, *Tussilago farfara*, *Uapaca kirkiana*, *Ulex europaeus*, *Ulmus pumila*, *Urtica dioica*, *Vaccinium myrtillus*, *V. uliginosum*, *Vangueria infausta*, *Verbena officinalis*, *Viburnum opulus*, *V. opulus 'Xanthocarpum'*, *V. trilobum*, *Vitis amurensis*, *V. berlandieri*, *V. californica*, *V. candicans*, *V. coignetiae*; *V. labrusca*, *V. rotundifolia*, *V. vinifera*, *V. vinifera Monopyrena Group*, *Wisteria sinensis*, *Ximenia americana*, *Zea mays*, *Zingiber officinale*.

ALKALOIDAL BEVERAGES - *Camellia sinensis*, *Catha edulis*, *Coffea arabica*, *Cola acuminata*, *C. nitida*, *Ilex paraguariensis*, *I. vomitoria*, *Paullinia cupana*, *Piper methysticum*, *Theobroma cacao*.

AROMATIC WATERS - *Amygdalus besseri*, *Blighia sapida*, *Citrus x bergamia*, *C. grandis*, *C. x paradisi*, *Jasminum sambac*, *Laurocerasus officinalis*, *Lecaniodiscus cupanioides*, *Mimosa pudica*, *Pandanus fascicularis*, *Pelargonium graveolens*, *Polianthes tuberosa*, *Rosa blanda*, *R. x damascena*.

ASHES - *Atriplex canescens*, *Juniperus utahensis*, *Sesamum indicum*.

BAKING POWDER SUBSTITUTES - *Adansonia digitata*, *A. gregorii*, *Vitis vinifera*.

BARKS - *Abies alba*, *A. balsamea*, *A. excelsior*, *Betula lenta*, *B. populifolia*, *Picea glauca*, *Pinus densiflora*, *P. edulis*; *P. sylvestris*, *Pipturus argenteus*, *Populus tremuloides*, *Salix daphnoides*, *Thuja plicata*, *Tsuga canadensis*, *T. heterophylla*, *T. mertensiana*, *Ulmus pumila*, *U. rubra*.

BEVERAGES - *Aegle marmelos*, *Agave utahensis*, *Amygdalus communis*, *Annona muricata*, *Arbutus unedo*, *Arctostaphylos Columbiana*, *A. glauca*, *A. patula*, *Atriplex canescens*, *Banksia marginata*, *Batis maritima*, *Bauhinia canonii*, *B. hookeri*, *Beccariophoenix madagascariensis*, *Borago officinalis*, *Borojoa patinoi*, *Canarium ovatum*, *Centella asiatica*, *Chaenomeles speciosa*, *Cicer arietinum*, *Citrus x aurantifolia*, *C. limon*, *C. medica*, *C. x natsudaidai*, *C. x paradisi*, *C. reticulata*, *C. sinensis*, *Clausena lansium*, *Cocos nucifera*, *Codonopsis lanceolata*, *Coffea arabica*, *Colubrina elliptica*, *C. texensis*, *Corylus avellana*, *C. x columnoides*, *C. maxima*, *Costus guanaiensis*, *Crescentia alata*, *Curcuma xanthorrhiza*, *Cydonia oblonga*, *Cyperus esculentus*, *Dahlia pinnata*, *Dasylium texanum*, *D. wheeleri*, *Descurainia pinnata*, *Dialium guineense*, *Dimocarpus longan*, *Duabanga sonneratioides*, *Eleusine coracana*, *Embelia ribes*, *Eucalyptus dumosa*, *E. gummifera*, *E. intermedia*, *E. pachyphylla*, *Eugenia uvalha*, *Euterpe precatoria*, *Feronia limonia*, *Ficus pumila* var. *awkeotsang*, *Fouquieria splendens*, *Galium verum*, *Genipa americana*, *Grevillea juncifolia*, *G. robusta*, *Grewia asiatica*, *Guazuma ulmifolia*, *Hakea eyreana*, *H. suberea*, *Helianthus annuus*, *Hibiscus sabdariffa*, *Honkenya peploides*, *Hordeum vulgare*, *H. vulgare* Coeleste Group, *Hymenaea courbaril*, *Hyphaene natalensis*, *Hyptis suaveolens*, *Imperata cylindrica*, *Jessenia bataua*, *J. polycarpa*, *Juglans regia*, *Kaempferia galanga*, *Karatas plumieri*, *Lecaniodiscus cupanioides*, *Leptospermum coriaceum*, *Linum usitatissimum*, *Mahonia aquifolium*, *Malus angustifolia*, *M. coronaria*, *M. pumila*, *Medicago laciniata*, *Melicoccus bijugatus*, *Mespilus germanica*, *Mimusops caffra*, *Mirabilis expansa*, *Mitranthes sartoriana*, *Modiola caroliniana*, *Morinda citrifolia*, *Nuphar luteum*, *Nyssa ogeche*, *Ocimum basilicum*, *O. canum*, *O. sanctum*, *Oenocarpus distichus*, *Orbignya martiana*, *Orchis mascula*, *O. morio*, *Pandanus tectorius*, *Panicum sonorum*, *Parinari capensis*, *Parkia filicoidea*, *Passiflora alata*, *P. antioquiensis*, *P. caerulea*, *P. edulis*; *P. incarnata*, *P. laurifolia*, *P. ligularis*, *P. maliformis*; *P. manicata*, *P. mollissima*, *P. pinnatistipula*, *P. platyloba*, *P. tripartita*, *P. vitifolia*, *Photinia arbutifolia*, *Phytelephas macrocarpa*, *Pithecellobium dulce*, *Podophyllum peltatum*, *Polymnia sonchifolia*, *Rmteria lucuma*, *P. sapota*, *Prosopis chilensis*, *P. juliflora*, *Prunella vulgaris*, *Prunus cerasus*, *Pseudocydonia sinensis*, *Psoralea glandulosa*, *Pyrus communis*, *Raphia farinifera*, *Rhus aromatica*, *R. copallina*, *R. coriaria*, *R. glabra*, *R. integrifolia*, *R. trilobata*, *R. typhina*, *Robinia pseudacacia*, *Rubus glaucus*, *R. ursinus*, *Saccharum officinarum*, *Salvia apiana*, *S. carduacea*, *S. columbariae*, *S. hispanica*, *S. reflexa*, *S. tiliaefolia*, *Sambucus melanocarpa*, *S.*

*racemosa*, *Schinus molle*, *Solanum pectinatum*, *S. pseudolulo*, *S. quitoense*, *S. sessiliflorum*, *S. sessiliflorum* var. *alibile*, *S. vestissimum*, *Soighum bicolor*, *Sterculia apetala*, *Strychnos cocculoides*, *S. spinosa*, *Symphytum x uplandicum*, *Tagetes patula*, *Tamarix aphylla*, *Telopea speciosissima*, *Terminalia glabra*, *Teucrium polium*, *Theobroma cacao*, *Treculia africana*, *Triticum x aestivum*, *Vitis amurensis*; *V. labrusca*, *V. rotundifolia*, *V. vinifera*.

BITTERS, BITTER TONICS - *Achillea erba-rotta* ssp. *moschata*, *Aloe barbadensis*, *Artemisia absinthium*, *Carissa edulis*, *Centaureum erythraea*, *Cetraria islandica*, *Cinchona succubra*, *Cinnamomum camphora*, *Cnicus benedictus*, *Commiphora myrrha*, *Curcuma zedoaria*, *Galipea officinalis*, *Gentiana cruciata*, *G. lutea*, *G. punctata*, *G. purpurea*, *Picrasma excelsa*, *Quassia amara*, *Rheum officinale*, *Swertia chirata*, *Vernonia amygdalina*.

BULBILS, AERIAL ROOTS - *A. ampeloprasum* var. *babingtonii*, *Allium canadense*, *A. x proliferum*, *A. sativum*, *A. ursinum*, *Dioscorea alata*, *D. bulbifera*, *D. japonica*, *Pandanus tectorius*, *Ranunculus ficaria*.

CALYCES - *Abelmoschus esculentus*, *Anogeissus leiocarpus*, *Bombax buonopozense*, *Calonyction album*, *Dillenia indica*, *Hibiscus heterophyllus*, *H. sabdariffa*, *Salmalia malabarica*.

CAPERS, CAPER SUBSTITUTES - *Allium ursinum*, *Bauhinia variegata*, *Bellis perennis*, *Berberis vulgaris*, *Boscia albitrunca*, *Caltha leptosepala*, *C. palustris*, *Capparis decidua*, *C. sepriaria*, *C. spinosa*, *Cassia tomentosa*, *Cercis canadensis*, *C. occidentalis*, *C. siliquastrum*, *Clematis maximowicziana*, *Drimys lanceolata*, *Genista tinctoria*, *Larrea tridentata*, *Levisticum officinale*, *Muscari botryoides*, *Piper nigrum*, *Ranunculus ficaria*, *Rhus coriaria*, *Sambucus canadensis*, *Sarothamnus scoparius*, *Staphylea colchica*, *Tropaeolum majus*, *T. minus*, *Ulex europaeus*, *Zygophyllum fabago*.

CHOCOLATE SUBSTITUTES - *Astrocaryum murumura*, *Butyrospermum paradoxum* ssp. *parkii*, *Camellia sinensis*, *Canarium ovatum*, *Castanea dentata*, *Ceratonia siliqua*, *Chenopodium pallidicaule*, *Cinnamomum japonicum*, *Geum canadense*, *G. rivale*, *Irvingia gabonensis*, *Nephelium mutabile*, *Oenocarpus bacaba*, *Orbignya martiana*, *Salvadora persica*, *Sapium sebiferum*, *Shorea robusta*, *S. stenoptera*, *Simmondsia chinensis*, *Theobroma bicolor*, *T. grandiflorum*, *Tilia americana*.

COFFEE SCENTS - *Abelmoschus ficulneus*, *A. moschatus*.

COFFEE SUBSTITUTES - *Abelmoschus esculentus*, *A. ficulneus*, *A. moschatus*, *Acacia giraffae*, *A. karroo*, *Adansonia digitata*, *Arachis hypogaea*, *Arctium minus*, *Asparagus officinalis*, *Astragalus boeticus*, *Avena sativa*, *Balsamorhiza sagittata*, *Beta vulgaris* Crassa Group, *Boscia albitrunca*, *Brabejum stellatifolium*, *Brachychiton diversifolium*, *Brosimum alicastrum*, *Canavalia ensiformis*, *Cannabis sativa*, *Cassia auriculata*, *C. bicapsularis*, *C. floribunda*, *C. occidentalis*, *C. tora*, *Castanea dentata*, *C. sativa*, *Ceratonia siliqua*, *Cicer arietinum*, *Cichorium intybus*, *Cocos nucifera*, *Coffea canephora*, *C. liberica*, *C. racemosa*, *C. stenophylla*, *Coix lacryma-jobi* 'Ma-Yuen', *Copernicia prunifera*, *Cornus mas*, *Crataegus oxyacantha*, *Crescentia cujete*, *Cyperus esculentus*, *Daucus carota*, *Diospyros kaki*, *D. virginiana*, *D. whyteana*, *Echinochloa crusgalli*, *Eriobotrya japonica*, *Fagus grandifolia*, *Ficus carica*, *Galium aparine*, *Genista tinctoria*, *Glycine max*, *Gossypium herbaceum*, *Gymnocladus dioica*, *Helianthus annuus*, *H. annuus* ssp. *lenticularis*, *H. tuberosus*, *Hibiscus sabdariffa*, *Hordeum jubatum*, *H. vulgare*, *Ilex latifolia*, *Iris missouriensis*, *I. setosa*, *Juniperus communis*, *J. horizontalis*,

MEAT TENDERIZERS - *Ananas comosus*, *Carica papaya*, *Ficus insipida*, *Mangifera indica*.

MILK SUBSTITUTES, NUT MILKS - *Amygdalus communis*, *Anacardium occidentale*, *Avena sativa*, *Brosimum alicastrum*, *Canarium ovatum*, *Cannabis sativa*, *Carya illinoensis*, *Chrysophyllum cainito*, *Cocos nucifera*, *Corylus avellana*, *C. maxima*, *Cucurbita pepo*, *Cyperus esculentus*, *Faba vulgaris*, *Glycine max*, *Helianthus annuus*, *Hyphaene natalensis*, *Jessenia bataua*, *J. polycarpa*, *Juglans regia*, *Mammillaria simplex*,

Oenocarpus distichus, Orbignya martiana, Oryza sativa, Pinus pinea, Sesamum indicum, Solanum tuberosum, Treculia africana.

NECTARS, HONEYDEWS - Agave deserti, A. parryi, A. shawii, Aloe arborescens, A. ferox, A. marlothii, A. zebrina, Aquilegia buergeriana, Banksia marginata, Bauhinia carionii, B. hooker i, Beloperone californica, Burchellia bubalina, Capparis decidua, Dianthus superbus, Eucalyptus gummifera, E. intermedia, E. pachyphylla, Gladiolus dalenii, Grevillea excelsior, G. juncifolia, G. robusta, Hakea eyreana, H. suberea, Halleria lucida, Lambertia formosa, Leptactina benguelensis, Leptospermum coriaceum, Lonicera japonica, Melianthus major, M. minor, Musa x paradisiaca, Phormium tenax, Protea angolensis, P. cynaroides\* P. repens, Salvia hians, Spathodea campanulata, Telopea speciosissima.

OILS - Abelmoschus esculentus, Abutilon guineense, Acanthosicyos horridus, Acrocomia aculeata, A. mexicana, A. sclerocarpa, A. totai, Adansonia digitata, Aleurites moluccana, Allium sativum, A. tuberosum, Ambrosia artemisiifolia, Amygdalus communis, Arachis hypogaea, Argania spinosa, Armeniaca brigantina, A. vulgaris, A. vulgaris 'Ansu', Astrocaryum murumura, A. tucuma, Balanites aegyptiaca, B. wilsoniana, Barbarea verna, Bertholletia excelsa, Borago officinalis, Brassica carinata, B. juncea, B. napus, B. rapa Chinensis Group, B. rapa Sarson Group, B. toumefortii, Buchanania lanzan, Butyrospermum paradoxum ssp. parkii, Camellina sativa, Camellia japonica, C. kissi, C. sasanqua, C. sinensis, Canarium commune, C. ovatum, C. schweinfurthii, Cannabis sativa, Camedia gigantea, C. tinctorius, Carya illinoensis, C. ovata, Caryocar nuciferum, C. villosum, Ceiba pentandra, Celosia argentea, Ceratotheca sesamoides, Cinnamomum japonicum, Citrullus colocynthis, C. lanatus, C. lanatus ssp. colocynthoides, Citrus x paradisi, Cocos nucifera, Conringia orientalis, Corozo oleifera, Corylus avellana, Crambe orientalis, Crescentia alata, Cucumis melo, C. sativus, Cucurbita foetidissima, C. pepo, Cyperus esculentus, Elaeis guineensis, Eruca sativa, Euodia daniellii, Euterpe oleracea, E. precatória, Fagopyrum tataricum, Fagus grandifolia, F. sylvatica, Fevillea cordifolia, Ginkgo biloba, Glaucium flavum, Glycine max, Gossypium arboreum, G. barbadense, G. herbaceum, G. hirsutum, Guizotia abyssinica, Gynandropsis gynandra, Helianthus annuus, H. annuus ssp. lenticularis, Hesperis matronalis, Hibiscus cannabinus, Hildegardia barter i, Hodgsonia macrocarpa, Impatiens glandulifera, Jessenia bataua, J. polycarpa, Juglans ailantifolia var. cordiformis, J. cathayensis, J. cinerea, J. mandshurica, J. nigra, J. regia, Kosteletzkya virginica, Lactuca serriola, Lagenaria siceraria, Lallelantia iberica, Lepidium sativum, Linum usitatissimum, Luffa cylindrica, Lupinus mutabilis, Lycopersicon lycopersicum, Macadamia integrifolia, Macrotyloma uniflorum, Madhuca indica, Madia sativa, Manilkara hexandra, Mauritia flexuosa, Maytenus boaria, Meconopsis nepalensis, Mimosa elengi, Moringa oleifera, Nephelium lappaceum, N. mutabile, Oenocarpus bacaba, O. distichus, O. multicaulis, Oenothera biennis, Olea europaea, Oncoba spinosa, Onopordum acanthium, Orbignya cohune, O. martiana, Oryza sativa, Panda oleosa, Pangium edule, Papaver rhoeas, P. somniferum, Pappia capensis, Parajubaea cocoides, P. torallyi, Passiflora edulis, Perilla frutescens, Persea americana, Phoenix dactylifera, Pinus cembra, P. pinea, P. sibirica, Pistacia atlantica, P. lentiscus; P. mutica, P. terebinthus; P. vera, Pithecellobium dulce, Plantago psyllium, Prinsepia utilis, Proboscidea louisianica, P. parviflora, Prunus cerasus, Psidium guajava, Psophocarpus tetragonolobus, Quercus ilex, Rapphanus sativus, Ribes nigrum, Ricinodendron heudelotii, R. rautanenii, Ricinus communis, Salicornia europaea, Salmalia malabarica, Salvia hispanica, Scheelea butyracea, S. macrocarpa, S. preussii, Schleicheria oleosa, Sclerocarya caffra, Sesamum alatum, S.

capense, S. indicum, S. radiatum, Simaiouba glauca, Staphylea trifolia, Syagrus coronata, Tamarindus indica, Telfairia occidentalis, Terminalia catappa, T. chebula, Tetracarpidium conophorum, Torreya californica, T. nucifera, Treculia africana, Trichodesma zeylanicum, Trichosanthes kirilowii var. japonica, Triticum x aestivum, Tyiosema esculentum, Vitis vinifera, Ximenia americana, X. caffra, Zea mays.

PEDUNCLES - Heracleum sphondylium, Hovenia dulcis, Juglans ailantifolia, Lupinus albus, Pistacia terebinthus, Solanum melongena.

PETIOLES - Angelica archangelica, A. atropurpurea, A. sylvestris, Apium graveolens, Arctium lappa, A. minus, Begonia x tuberhybrida, Beta vulgaris Cicla Group, Borago officinalis, Brassica rapa Chinensis Group, B. rapa Rapifera Group, Carludovica palmata, Colocasia esculenta, Crambe maritima, C. tatarica, Cryptotaenia japonica, Cynara cardunculus, C. scolymus, Emex spinosa, Eutrema wasabi, Foeniculum vulgare Azoricum Group, Gunnera tinctoria, Helianthus annuus, Heracleum lanatum, H. persicum, Ipomoea batatas, Levisticum officinale, Ligularia kaempferi, Ligusticum scoticum, Nuphar luteum, Osmorhiza aristata, Oxalis oregana, Peltiphyllum peltatum, Petasites japonicus, P. palmatus, Rheum australe, R. palmatum, R. ribes, Rumex hymenosepalus, Scolymus hispanicus, Snymium olusatrum, S. perfoliatum, Spinacia oleracea, Taraxacum officinale.

PITHS - Carica papaya, Chamaenerion angustifolium, Cocos nucifera, Cycas revoluta, Metroxylon rumphii, M. sagu, Osmunda claytoniana, Phoenix paludosa, Sabal minor, S. palmetto, S. texana, Syagrus coronata, Thuja occidentalis, Typha angustifolia.

POLLENS - Arctotheca calendulaceum, Eucalyptus calophylla, E. marginata, E. wandoo, Eugeissona utilis, Pandanus tectorius, Phoenix dactylifera, Pinus densiflora, P. koraiensis, Scirpus lacustris, S. paludosus, S. validus, Typha angustifolia, T. domingensis, T. elephantina, T. latifolia, Zea mays.

POPPING SEEDS» PARCHING SEEDS - Amaranthus caudatus, A. cruentus, A. hypochondriacus, Chenopodium murale, Cicer arietinum, Digitaria exilis, Echinochloa crusgalli, Eleusine coracana, Euryale ferox, Faba vulgaris, Hordeum vulgare, Nelumbo nucifera, Nuphar luteum, Nymphaea tuberosa, Oryza sativa, Panicum miliaceum, Paspalum scrobiculatum, Pennisetum americanum, Phaseolus vulgaris, Salvia azurea var. grandiflora, Setaria italica, Sorghum bicolor, Tripsacum dactyloides, Triticum x aestivum, Vigna angularis; Voandzeia subterranea, Zea mays, Z. mexicana, Zizania aquatica.

RECEPTACLES - Carlina acanthifolia, C. acaulis, C. vulgaris, Cirsium eriophorum, C. vulgare, Cynara cardunculus, C. humilis, C. scolymus, Gundelia toumefortii, Helianthus annuus, Onopordum acanthium, Parkia speciosa, Silybum marianum.

RENNETS - Acanthosicyos horridus, A. naudinianus, Adansonia digitata, Carduus nutans, Carlina acaulis, Carnegiea gigantea, Carthamus tinctorius, Cirsium arvense, C. vulgare, Citrus x aurantifolia, C. limon, Cynara cardunculus, C. humilis, C. scolymus, Drosera rotundifolia, Heus carica, F. insipida, F. palmata, F. sycomorus, Galega officinalis, Galium verum, Kluyveromyces marxianus, Mucor miehei, Nitraria schoberi, Nypa fruticans, Oxalis acetosella, Pinguicula vulgaris, Prunus spinosa, Rhus chinensis, R. javanica, Rumex acetosa, R. acetosella, R. vesicarius, Solanum incanum, S. torvum, Streblus asper, Tabernaemontana elegans, Urtica dioica, Withania somnifera.

ROOTS, UNDERGROUND PARTS - *Abelmoschus ficulneus*, *A. moschatus*, *Abronia latifolia*, *Acorus calamus*, *A. gramineus*, *Adansonia digitata*, *Agave utahensis*, *Alisma plantago-aquatica*, *Alpinia caerulea*, *Althaea officinalis*, *Amorphophallus campanulatus*, *A. variabilis*, *Angelica atropurpurea*, *Anredera cordifolia*, *Anthriscus cerefolium*, *A. sylvestris*, *Antigonon leptopus*, *Apios americana*, *Apium graveolens* Rapaceum Group, *Aplectrum hyemale*, *Aponogeton distachyus*, *Aralia racemosa*, *Araucaria bidwillii*, *Arctium lappa*, *A. minus*, *Arisaema triphyllum*, *Armoracia rusticana*, *Arracacia xanthorhiza*, *Arthropodium milleflorum*, *Asarum canadense*, *Asclepias speciosa*, *A. tuberosa*, *Asparagus cochinchinensis*, *A. sarmentosus*, *Asphodeline lutea*, *Asplenium bulbiferum*, *Balsamorhiza deltoidea*, *B. hooferi*, *B. sagittata*, *Beta vulgaris* Cicla Group, *B. vulgaris* Crassa Group, *Boesenbergia pandurata*, *Bongardia Chrysogonum*, *Borago officinalis*, *Boscia albitrunca*, *Brachychiton diversifolium*, *Brasenia schreberi*, *Brassica juncea*, *B. napus* Napobrassica Group, *B. rapa* Perviridis Group, *B. rapa* Rapifera Group, *Brodiaea douglasii*, *B. pulchella*, *Bunium bulbocastanum*, *Cakile edentula*, *C. maritima*, *Calathea allouia*, *Calla palustris*, *Callirhoe involucrata*, *Calochortus gunnisonii*, *C. nuttallii*, *Caltha palustris*, *Camassia leichtlinii*, *C. quamash*, *Campanula rapunculoides*, *C. rapunculus*, *Canarina canariensis*, *Canna edulis*, *Capsella bursa-pastoris*, *Carludovica palmata*, *Carum carvi*, *Ceropegia bulbosa*, *Chaerophyllum bulbosum*, *C. bulbosum* ssp. *prescottii*, *Chlorogalum pomeridianum*, *Cichorium intybus*, *Cirsium arvense*, *C. oleraceum*, *C. vulgare*, *Claytonia caroliniana*, *C. megarrhiza*, *C. virginica*, *Codonopsis lanceolata*, *C. pilosula*, *Coleus blumei*, *C. dazo*, *C. parviflorus*, *Colocasia esculenta*, *Conopodium majus*, *Cordylone australis*, *C. fruticosus*, *Costus speciosus*, *Crambe cordifolia*, *C. orientalis*, *C. tatarica*, *Crassocephalum crepidioides*, *Crocus cancellatus*, *C. sativus*, *C. sieberi*, *Cryptotaenia canadensis*, *C. japonica*, *Curcuma longa*, *C. mangga*, *C. xanthorrhiza*, *C. zedoaria*, *Cynara cardunculus*, *Cyperus esculentus*, *C. rotundus*, *Cyrtosperma chamissonis*, *Dahlia pinnata*, *Daucus carota*, *D. carota* Sativus Group, *D. pusillus*, *Dentaria diphylla*, *D. laciniata*, *Dioscorea alata*, *D. bulbifera*, *D. cayenensis*, *D. esculenta*, *D. japonica*, *D. opposita*, *D. pentaphylla*, *D. trifida*, *Dioscoreophyllum cumminsii*, *Eleocharis dulcis*, *Emex spinosa*, *Eryngium campestre*, *E. maritimum*, *Erythronium albidum*, *E. americanum*, *E. dens-canis*, *Eucalyptus dumosa*, *Euryale ferox*, *Eutrema wasabi*, *Ferula assa-foetida*, *Fockea angustifolia*, *F. edulis*, *Foeniculum vulgare*, *Fritillaria camtschaticensis*\* *F. verticillata*, *Glycyrrhiza lepidota*, *Gundelia tournefortii*, *Hedysarum boreale*, *H. mackenzii*, *H. occidentale*, *Helianthus x laetiflorus*, *H. maximiliani*, *H. tuberosus*, *Hemerocallis filifera*, *H. lilio-asphodelus*, *H. minor*, *Heracleum lanatum*, *Hordeum bulbosum*, *Houttuynia cordata*, *Humulus lupulus*, *Imperata cylindrica*, *Inula helenium*, *Ipomoea aquatica*, *I. batatas*, *I. digitata*, *I. sp.*, *Iris setosa*, *Ixeris dentata*, *Jaltomata procumbens*, *Kaempferia galanga*, *K. rotunda*, *Lablab purpureus*, *Lathyrus tuberosus*, *Leichhardtia australis*, *Leonurus sibiricus*, *Leopoldia comosa*, *Lepidium latifolium*, *L. meyenii*, *Levisticum officinale*, *Lewisia rediviva*, *Ligusticum hulthenii*, *L. scoticum*, *Lilium auratum*, *L. brownii*, *L. lancifolium*, *L. longiflorum*, *L. maculatum*, *L. superbum*, *Litsea cubeba*, *Lomatium californicum*, *L. dissectum*, *L. macrocarpum*, *L. nudicaule*, *L. triternatum*, *Lunaria annua*, *Lycopus uniflorus*, *Macrotyloma uniflorum*, *Manihot esculenta*, *M. glaziovii*, *Maranta arundinacea*, *Matteuccia pensylvanica*, *Medeola virginiana*, *Melilotus officinalis*, *Menyanthes trifoliata*, *Mertensia maritima*, *Meum athamanticum*, *Mirabilis expansa*, *Momordica dioica*, *Moraea fugax*, *Muscari neglectum*, *Myrrhis odorata*, *Nelumbo lutea*, *N. nucifera*, *Nuphar advena*, *N. luteum*, *Nymphaea lotus*, *N. odorata*, *N. stellata*, *N. tuberosa*, *Oenanthe javanica*, *O. pimpinelloides*, *O. sarmentosa*, *Oenothera biennis*, *O. hookeri*, *Onoclea sensibilis*, *Ophiopogon*

**VEGETABLE CURDS** - *Abelmoschus esculentus*, *Faba vulgaris*, *Glycine max*, *Gossypium hirsutum* Nonglanduliferous Group, *Lablab purpureus*, *Lagenaria siceraria*, *Luffa cylindrica*.

**VEGETABLE SALTS** - *Achyranthes aspera*, *Allium cepa*, *A. sativum*, *Amaranthus spinosus*, *Asplenium nidus*, *Avicennia germinans*, *Borassus flabellifer*, *Capparis decidua*, *Ceiba pentandra*, *Cyperus haspan*, *Eleocharis dulcis*, *Euterpe oleracea*, *Heliotropium curassavicum*, *Heracleum lanatum*, *Iriartea ventricosa*, *Musa x paradisiaca*, *Orbignyia martiana*, *Oxytenanthera abyssinica*, *Petasites*

palmatum, Piper guineense, Pistia stratiotes, Portulaca oleracea, Raphanus sativus, Rhus chinensis, R. javanica, Sabal palmetto, Saccharum spontaneum, Salvadora persica, Tussilago farfara.

VINEGARS - Acer saccharum, Acetobacter aceti, Acetobacter aceti ssp. xylinum, Agave salmiana, Anacardium occidentale, Ananas comosus, Arenga pinnata, Armeniaca mume, Baccaurea macrocarpa, B. motleyana, Betula lenta, B. papyrifera, B. populifolia, Borassus flabellifer, Bromelia pinguin, Carissa edulis, Chamaenerion angustifolium, Cicca acida, Cicer arietinum, Citrus x junos, C. x paradisi, Cocos nucifera, Corypha elata, Dillenia indica, Diospyros virginiana, Hordeum vulgare, Malus baccata, M. sylvestris, Mangifera indica, Manihot esculenta, Manilkara zapota, Musa balbisiana, M. x paradisiaca, Nypa fruticans, Oenocarpus distichus, Oryza sativa, Papea capensis, Primula veris, Pyrus communis, Rubus chamaemorus, R. fruticosus, R. idaeus, Saccharum officinarum, Schinus molle, Sonneratia caseolaris, Sorbus aria, S. torminalis, Soighum bicolor, Syzygium cumini, S. guineense, Theobroma cacao, Vitis labrusca, V. vinifera.

WOOD FLAVORINGS - Acer rubrum, Alnus rubra, Carya ovata, Castanea sativa, Cryptomeria japonica, Fagus sylvatica, Fraxinus excelsior, Morus alba, Prunus avium, P. serotina, Quercus alba, Q. garryana, Q. petraea, Q. robur, Tectona grandis, Thuja plicata, Zanthoxylum piperitum.

YEAST HOSTS, FERMENTATIVE ORGANISM HOSTS - Amygdalus persica, Artemisia annua, Cosmos caudatus, Elephantopus scaber, Evemia prunastri, Glycine max, Glycosmis trifoliata, Hibiscus tiliaceus, Humulus lupulus, Mestoklema tuberosum, Physalis peruviana, Ptelea trifoliata, Raphionacme hirsuta, Severinia buxifolia, Solanum jamesii, S. tuberosum, Tectona grandis, Trichodiadema stellatum, Uvaria microcarpa, Vernonia cinerea.

#### APPENDIX B: SPECIES NATIVE TO OR NATURALIZED IN NORTH AMERICA

Abies amabilis, A. balsamea, A. excelsior, Abronia latifolia, Acacia greggii, Acanthocereus tetragonus, Acer circinatum, A. grandidentatum, A. macrophyllum, A. nigrum, A. pensylvanicum, A. rubrum, A. saccharinum, A. saccharum, Achlys triphylla, Adiantum capillus-veneris, Aegopodium podagraria, Agastache cana, A. foeniculum, A. neomexicana, A. urticifolia, Agave atrovirens, A. deserti, A. parryi, A. salmiana, A. utahensis, Alisma plantago-aquatica, Allium canadense, A. cernuum, A. drummondii, A. geyeri, A. schoenoprasum var. sibiricum, A. stellatum, A. tricoccum, A. triquetrum, A. unifolium, A. validum, A. vineale, Alnus crispa, A. rubra, A. tenuifolia, Amaranthus graecizans, A. hybridus, A. retroflexus, Ambrosia artemisiifolia, Amelanchier alnifolia, A. arborea, A. bartramiana, A. canadensis, A. denticulata, A. x grandiflora, A. laevis, A. obovalis, A. x spicata, A. stolonifera, A. utahensis, Amorpha canescens, A. fruticosa, Amphicarpaea monoica, Andromeda glaucophylla, Angelica atropurpurea, Annona glabra, Anthoxanthum odoratum, Apios americana, Aplectrum hyemale, Arabis alpina, Aralia nudicaulis, A. racemosa, A. spinosa, Arbutus menziesii, Arctium lappa, A. minus, Arctostaphylos Columbiana, A. glauca, A. patula, A. uva-ursi, Ariocarpus fissus, Arisaema triphyllum, Armoracia rusticana, Aronia arbutifolia, A. melanocarpa, Artemisia dracunculoides, A. frigida, A. ludoviciana, A. vulgaris, Aruncus dioicus, Arundinaria gigantea, Asarum canadense, A. caudatum, Asclepias incarnata, A. speciosa, A. syriaca, A. tuberosa, Asimina obovata, A. parviflora, A. triloba, Astragalus crassicaulis, Atriplex canescens, A. confertifolia, A. semibaccata, Azalea nudiflora, Balsamorhiza hookeri, B. sagittata, Barbarea vulgaris, Batis maritima, Beloperone californica, Berlandiera lyrata, Betula alleghaniensis, B. lenta, B. nigra, B. papyrifera, B. populifolia, Blephilia ciliata, B. hirsuta, Bourreria ovata, Brassica nigra, Brodiaea douglasii, B. pulchella, Bromus breviaristatus, B. carinatus, Cacalia atriplicifolia, Cakile edentula, Calla palustris, Callirhoe involucrata, Calochortus gunnisonii, C. nuttallii, Calonyction album, Caltha leptosepala, C. palustris, Calycanthus floridus, C. occidentalis, Camassia leichtlinii, C. quamash, Campanula rapunculoides, Canella winterana, Capsicum annuum var. aviculare, Cardamine oligosperma, C. rotundifolia, Camedegia gigantea, Carpobrotus aequilaterus, Carya carolinae-septentrionalis, C. cordiformis, C. glabra, C. illinoensis, C. laciniata, C. myristiciformis, C. ovata, C. tomentosa, Casasia clusiifolia, Cassia

occidentalis, Castanea alnifolia, C. dentata, C. pumila, Castilleja linariaefolia, Ceanothus americanus, C. cuneatus, C. ovatus, C. velutinus, Celtis laevigata, C. occidentalis, C. reticulata, Centaurea nigra, C. solstitialis, Centaurium erythraea, Cercidium floridum, C. microphyllum, Cereis canadensis, C. occidentalis, Cercocarpus ledifolius, Chamaedaphne calyculata, Chamaenerion angustifolium, C. latifolium, Chenopodium album, C. ambrosioides, C. berlandieri, C. botrys, C. capitatum, C. nuttalliae, Chimaphila maculata, C. umbellata, Chionogen hispidula, Chionanthus virginicus, Chlorogalum pomeridianum, Chrysolepis chrysophylla, C. sempervirens, Cirsium arvense, C. vulgare, Claytonia caroliniana, C. megarrhiza, C. virginica, Cleome integrifolia, Clinopodium vulgare, Clintonia borealis, Coccoloba diversifolia, C. uvifera, Colubrina elliptica, C. texensis, Commelina communis, Comptonia peregrina, Conradina verticillata, Conyza canadensis, Coptis trifolia, Coreopsis cardaminifolia, Cornus canadensis, Corylus americana, C. cornuta, C. cornuta var. californica, Coryphantha vivipera var. arizonica, Cowania mexicana, Crataegus aestivalis, C. douglasii, C. flava, C. marshallii, C. succulenta, Crepis capillaris, C. setosa, Cryptotaenia canadensis, Cucumis melo ssp. agrestis, Cucurbita foetidissima, Cunila origanoides, Cylindropuntia fulgida, C. imbricata, Cyperus rotundus, Dasylyrion texanum, D. wheeleri, Daucus carota, D. pusillus, Dentaria diphylla, D. laciniata, Descurainia pinnata, D. sophia, Desmanthus brachylobus, Diospyros texana, D. virginiana, Distichlis palmeri, Dudleya edulis, Echinocactus horzonthalonius, Echinocereus dasyacanthus, E. engelmannii, E. enneacanthus, E. stramineus, E. triglochidiatus, Echinochloa crusgalli, Echium vulgare, Elaeagnus commutata, Eleusine indica, Elymus canadensis, E. triticoides, Empetrum atropurpureum, Ephedra nevadensis, E. viridis, Epigaea repens, Eriodictyon californicum, Erodium cicutarium, Erythrina herbacea, Erythronium albidum, E. americanum, Fagus grandifolia, Ferocactus acanthodes, F. viridescens\* F. wislizenii, Forestiera neo-mexicana, Fouquieria splendens, Fragaria californica, F. chiloensis, F. ovalis\* F. vesca, F. vesca var. americana, F. virginiana, Fritillaria camtschatcensis, Galinsoga parviflora, Galium aparine, G. verum, Gaultheria myrsinites, G. ovatifolia, G. procumbens, G. shallon, Gaylussacia baccata, G. dumosa, G. frondosa, Geranium viscosissimum, Geum canadense, G. rivale, G. triflorum, Glechoma hederacea, Gleditsia triacanthos, Glyceria fluitans, Glycyrrhiza lepidota, Gossypium hirsutum, Grindelia

squarrosa, *Gymnocladus dioicus*, *Halesia Carolina*, *Hamatocactus hamatacanthus*, *Hedeoma pulegioides*, *Hedysarum boreale*, *H. mackenzii*, *H. occidentale*, *Helianthus annuus*, *H. annuus* ssp. *lenticularis*, *H. giganteus*, *H. x laetiflorus*, *H. maximiliani*, *H. tuberosus*, *Hemerocallis fulva*, *Heracleum lanatum*, *Hesperoyucca whipplei*, *Hierochloa odorata*, *Hirschfeldia incana*, *Holodiscus discolor*, *Honkenya peploides*, *Hordeum jubatum*, *Humulus lupulus*, *Hydrocotyle sibthorpioides*, *Hydrophyllum canadense*, *H. virginianum*, *Ilex cassine*, *I. glabra*, *I. opaca*, *I. verticillata*, *I. vomitoria*, *Impatiens capensis*, *I. pallida*, *Iris missouriensis*, *Isomeris arborea*, *Juglans californica*, *J. cinerea*, *J. hindsii*, *J. major*, *J. microcarpa*, *J. nigra*, *Juniperus horizontalis*, *J. pachyphloea*, *J. scopulorum*, *J. utahensis*, *Kosteletzkya virginica*, *Krugiodendron ferreum*, *Lactuca serriola*, *Lamium amplexicaule*, *Larix occidentalis*, *Larrea tridentata*, *Lathyrus japonicus* ssp. *maritimus*, *Laurocerasus ilicifolia*, *L. #### APPENDIX D: ABBREVIATIONS AND CODES USED

##### FOR TYPE OF PRODUCT OFFERED

BO - Bonsai Nursery Stock  
 CU - Pure Cultures (Fungi, Algae, Bacteria)  
 DF - Dried food, Botanical  
 DR - Starter Cultures (Dry)  
 DS - Starter Cultures (Direct Set)  
 DW - Dwarf Nursery Stock  
 ES - Espalier Nursery Stock, Topiary  
 FR - Starter Cultures (Fresh)  
 GR - Grafted, Clonal Nursery Stock  
 IN - Interstems  
 KT - Mushroom Kits  
 LI - Starter Cultures (Liquid)  
 OR - Available On Request, Special Order, Custom Grafting, etc.  
 PD - Food Product  
 PL - Plants, Seedlings, Bulbs, Divisions, Corms, etc.  
 PO - Pollen  
 PR - Produce  
 S - Seeds, Spores  
 SC - Scionwood, Cuttings, Benchgrafts  
 SN - Mushroom Spawn  
 SP - Sprouting Seeds  
 SR - Mushroom Spores  
 ST - Onion Sets

##### FOR ANNOTATED BIBLIOGRAPHIC CITATIONS

CU - Culture  
 CUL - Culinary  
 NU - Nutrition  
 PRE - Preparation  
 PRO - Propagation  
 RE - Recipes

##### IN SUPPLIERS LISTINGS

CAT - Catalog  
 CC - Credit Cards  
 ENGL - English Language Catalog  
 IMO - International Money Order  
 IRC - International Reply Coupon  
 M.O. - Minimum Order  
 OC - Other Currencies  
 OVER - Overseas  
 PC - Personal Checks  
 R & W - Retail and Wholesale  
 RET - Retail  
 SASE - Self-Addressed Stamped Envelope  
 WHLS - Wholesale

## INDEX

Principal vernacular names occurring after the Latin names in the text are listed in normal text. Product and other names occurring elsewhere in the text are listed in *italicized* text. Names of Families and Genera are listed in CAPITALS. Synonyms of Families and Genera are listed in CAPITALIZED and *italicized* text.

- A/B milk* 261  
*A la florentine* 77  
 Abalone mushroom 255
