Democracy is broken ☹  
 Let's fix it.

And it's been broken since the very beginning: Socrates (470 - 399 BC) was killed 'democratically'.  
 [ See  
[https://en.wikipedia.org/wiki/Trial\\_of\\_Socrates#Support\\_for\\_Oligarchic\\_Rule\\_and\\_Contempt\\_for\\_Athenian\\_Democracy](https://en.wikipedia.org/wiki/Trial_of_Socrates#Support_for_Oligarchic_Rule_and_Contempt_for_Athenian_Democracy) ]

Socrates openly espoused certain 'anti-democratic' views, most prominent perhaps being the view that it is not majority opinion that yields correct policy but rather genuine knowledge and professional competence, which is possessed by only a few: Socrates set the basis for the future TechnoMeritocracy.

Democracy has been broken very especially since the Military-Industrial Complex –as Eisenhower warned us in his famous speech in 1961– and a bunch of psychopaths and ignorants have taken our lives and the lives of our beloved ones as well as the lives of several billion people buried in life.

See:  
[https://en.wikipedia.org/wiki/Military-industrial\\_complex](https://en.wikipedia.org/wiki/Military-industrial_complex)  
<https://www.youtube.com/watch?v=Gg-jvHynP9Y> - Jan, 17 - 1961  
 Eisenhower's "Military-Industrial Complex" Speech Origins and Significance

This is our State-of-the-Art Pyramid as human species:

\*\*\*> "The world's 62 richest people now own as much wealth as the 3.6 billion people who make up the poorest half of the global population."

Source: [https://www.oxfam.org/sites/www.oxfam.org/files/file\\_attachments/bp210-economy-one-percent-tax-havens-180116-en\\_0.pdf](https://www.oxfam.org/sites/www.oxfam.org/files/file_attachments/bp210-economy-one-percent-tax-havens-180116-en_0.pdf)

\*\*\*> "Almost 1 billion people are undernourished or lack vitamins and minerals."

Source: <http://www.fao.org/state-of-food-security-nutrition/en/>

Is that really the absolute very best that we can do after more than 300.000 years of evolution as Homo Sapiens and 3 million years since the first Homo Habilis? Do you still think that 'Democracy' is the absolute very best way to rule the world?

If not, please keep on reading.

↪ WELCOME TO THE TECHNOMERITOCRAZY

These are the 2 central tenets of the TECHNOMERITOCRAZY:

↪ 1. We are NOT all equal: the vote of a psychopath or an ignorant can't be equal to that of a decent citizen.

↪ 2. Only the 'scientifically proven' best and most skillful, the most honest, generous and willing to serve people in the world should rule us.

↪ This is HOW to Hack the Planet in 1 line of 'Code':

With a blockchain Artificial Intelligence and Deep Learning self-organized System based on a 'mutating' h-index type algorithm.

If you don't agree with that, please stop reading now. Thank you for your time.

If you do agree with that and feel curious to know more, please keep on reading. Thanks.

I feel curious and want to know more

In The Internet Galaxy (2001), Manuel Castells (the 2000–2014 research survey of the Social Sciences Citation Index ranks him as the world's fifth most-cited social science scholar, and the foremost-cited communication scholar in the world) talks about the 'network society' culture being techno-meritocratic, for hackers and virtual communitarians, and entrepreneurial.

You have to be crazy to question democrazy.

Very, very crazy. For you are going to have to fight against 2.500 years of mental and political conditioning and not everybody is ready to dare to get rid of the beliefs and prejudices that the family, the school, the college, the laws, the culture... have unconsciously programmed us with.

"It is harder to crack a prejudice than an atom."  
Albert Einstein

And you are going to have to fight not only with yourself but against the others. For almost nobody is ready to be unplugged from this subtle Prison for our Minds.

"The Matrix is a system, Neo. That system is our enemy. But when you're inside, you look around, what do you see? Businessmen, teachers, lawyers, carpenters. The very minds of the people we are trying to save. But until we do, these people are still a part of that system and that makes them our enemy. You have to understand, most of these people are not ready to be unplugged. And many of them are so inured, so hopelessly dependent on the system, that they will fight to protect it."

Morpheus - The Matrix

When you face others in denial regarding this idea you have to remember 2 things:

Patience.  
Perserverance.

↪ #TheGame23 'Dangerous' Idea Number 23:

Let's build #HIVEMIND23, a World Wide TechnoMeritocrazy.

The most apt, the most sage, intelligent, the best prepared, technically or artistically minded, in any of the branches of Human Knowledge –in the Trivium et Quadrivim spirit– and also the most kind, generous and willing to serve the others, as tagged to be the best ones by others like them, will jump straight to the top of a TechnoMeritocratic Pyramid to manage and administrate world material and human resources world wide.

See:  
[https://en.wikipedia.org/wiki/Figurative\\_system\\_of\\_human\\_knowledge](https://en.wikipedia.org/wiki/Figurative_system_of_human_knowledge)  
<https://en.wikipedia.org/wiki/Trivium>  
<https://en.wikipedia.org/wiki/Quadrivium>

How?

Hacking the Planet with 1 line of 'Code':

With a blockchain Artificial Intelligence and Deep Learning self-organized System based on a 'mutating' h-index type algorithm.

See:

<https://en.wikipedia.org/wiki/Blockchain>

[https://en.wikipedia.org/wiki/Artificial\\_intelligence](https://en.wikipedia.org/wiki/Artificial_intelligence)

[https://en.wikipedia.org/wiki/Deep\\_learning](https://en.wikipedia.org/wiki/Deep_learning)

<https://en.wikipedia.org/wiki/Self-organization>

<https://en.wikipedia.org/wiki/H-index>

<https://en.wikipedia.org/wiki/Algorithm>

Imagine

This is ONLY a draft for the implementation of the idea: the idea has to be implemented by a Community of Hackers and Experts and not by a single individual.

Now...

Imagine a Pyramid of Excellence and Nobility with 10? (just to say a number) Supersages, Conscious Scientifics and Artists, all powerful, each one of these an expert in one branch of Human Knowledge, in the Liberal Arts education, in the Trivium et Quadrivium style, whom were tagged and chosen to be the Supersages by the human community, according to an h-index type algorithm.

The h-index is an author-level metric that attempts to measure both the productivity and citation impact of the publications of a scientist or scholar. This could be used to implement a kind of "PageRank" for people, where the people most knowledgeable about a subject would ascend steps in the Pyramid and whose tags/votes would carry more weight in the algorithm to be computed by an Artificial Intelligence system than those on the base of the Pyramid.

Imagine that those Supersages could be rotating each certain time (in order to avoid corruption or abuses of power), as determined by the Council of Computer Scientists in charge for the development of the algorithm.

Imagine that the algorithm was used so that those 10 Supersages or Experts could designate other sub-experts, whom would designate other sub-experts one step below in the Pyramid to assist them, whom could designate further sub-experts down the Pyramid and so on and so forth... in order to work with concrete and urgent issues such as the search for the cure of cancer or any Global Catastrophic Risks such as the imminent threat of Climate Change.

Maybe the fact that trusting 10 Supersages on top of the Pyramid to manage the planet thanks to an Artificial Intelligence permanently mutating in its algorithm might sound a bit distopic, right?

Well, that's an easy one: let's try and see what happens: that's the hacker attitude, right?

See:

[https://en.wikipedia.org/wiki/Liberal\\_arts\\_education](https://en.wikipedia.org/wiki/Liberal_arts_education)

[https://en.wikipedia.org/wiki/Author-level\\_metric](https://en.wikipedia.org/wiki/Author-level_metric)

[https://en.wikipedia.org/wiki/Citation\\_impact](https://en.wikipedia.org/wiki/Citation_impact)

<https://en.wikipedia.org/wiki/PageRank>

[https://en.wikipedia.org/wiki/Global\\_catastrophic\\_risk](https://en.wikipedia.org/wiki/Global_catastrophic_risk)

How to test the validity of this 'Dangerous' Idea #23?

First an anonymous #TheGame23 agent wondered who might be the best person in the world to understand this idea.

S/he needed only the absolute very best: in the same spirit that we would do if we had the System already built.

This is Jeff Dean: <https://www.csail.mit.edu/sites/default/files/2018-10/Jeff-Dean-FINAL.jpg>

Jeff Dean, computer scientist and software engineer. He is currently the lead of Google.ai, Google's AI division.

If you want to know more about Jeff Dean's work at Google, this is his home page:

<https://ai.google/research/people/jeff>

If you are not deeply impressed enough yet, you can read "The Jeff Dean Facts".  
[ <http://www.informatika.bg/jeffdian> ]

Due to his impressive background and expertise, and as lead of Google's Artificial Intelligence division, Jeff seemed to be exceptionally well positioned to understand the idea.

10 lines of 'Code' to Hack the Planet

Several years ago, on Mon, Nov 9, 2015 at 11:43 AM an anonymous #TheGame23 player sent these 10 lines of 'Code' to Jeff Dean:

Hi Mr. Dean,

Have you considered building a "PageRank" for people?

Imagine the following scenario: a meteorite is detected and it is predicted that it will hit the Earth in 24 months. Suddenly, a worldwide challenge arises: to arrange a team in the shortest amount of time with the best engineers in the whole world

coordinating world resources in order to work together towards deviating/desintegrating such threat to human survival.

Idea: a kind of a "h-index" would solve this in the shortest amount of time.

A Reputation Engine that would rank items (where items = human beings or products) according to a certain parameter, be it "trust", "skillfulness at mathematics", "knowledge about meteorites", "leadership", "honesty"..., etc.

In our view, this could hugely improve the world for the better, not only to deviate meteorites but to manage anything from running a company to running nationwide governments.

Question: do you see this as impossible to code?

If you want more info, please let me know.

Regards,

[#TheGame23 player]

Jeff Dean kindly replied to that message on Nov 10, 2015, 5:14 AM:

Hi [#TheGame23 player],

I've thought about similar things a few times. I do think there are lots of benefits in getting people with similar interests that don't otherwise know each other or interact to do so. Unfortunately, I haven't had a lot of time to work on this.

I think that one would really want it to not be a single PageRank value per person, but rather a context-sensitive value, depending on what kinds of expertise was of interest. Someone that knows a lot about the structure of concrete should be very high in the context of answering materials sciences kinds of questions, but probably low in the context of answering psychology questions.

A good place to start might be to use large corpora of published scientific articles as the way of computing this information.

Unfortunately, I'm busy enough with other things that these ideas remain mostly just occasional thoughts rather than an active project.

-Jeff

Excellent.

Jeff Dean not only understood #TheGame23 player's idea but he actually shared some ideas about how to improve it. Unfortunately –and understandably– he is quite busy to develop it. Thank you Jeff.

Then that #TheGame23 player thought that it was needed to contact the absolute very

best person in the world to understand blockchain and cryptocurrencies.

That person was that genius called Vitalik Buterin, obviously. Co-founder of Ethereum, THE blockchain platform.

Vitalik Buterin: <https://i.imgur.com/W9CRCx5.png>

Vitalik Buterin (Russian: Виталий Дмитриевич Бутерин; born January 31, 1994) is a Russian-Canadian programmer and writer primarily known as a co-founder of Ethereum and as a co-founder of Bitcoin Magazine.

On Mon, May 2, 2016 at 5:45 AM that #TheGame23 player sent to Vitalik the same email that s/he sent to Jeff Dean.

He got back on Tue, May 3, 2016, 12:48 AM with the following reply:

Hmm, sounds like what you're describing essentially is what we call a "decentralized reputation system".

So yes, quite doable on ethereum, and there may be groups trying to do it already.

Great.

Vitalik also understood the idea and even assured #TheGame23 player that it could be done on Ethereum. Thank you Vitalik.

[ PROOF of Jeff Dean and Vitalik Buterin's replies to #TheGame23 agent:

<https://i.imgur.com/CMEvTi0.jpg> ]

[ PROOF of Jeff Dean and Vitalik Buterin's replies to #TheGame23 agent:

<https://i.imgur.com/CMEvTi0.jpg> ]

[ PROOF of Jeff Dean and Vitalik Buterin's replies to #TheGame23 agent:

<https://i.imgur.com/CMEvTi0.jpg> ]

#TheGame23 player got the two confirmations that s/he needed: now the System was ready to run on its own.

Something like this would definitely change the world for the better. From the technological to the economics, to the political, the ethical and even the philosophical: now we know that it IS doable.

I like this #HIVEMIND23 idea. How can I help?

↪ Share this idea and this pastebin and spread the message with these hashtags: #HIVEMIND23 and #TechnoMeritocracy

↪ Create some original Art, be that an image, a wallpaper, a YouTube video, an mp3... featuring #TheGame23 and the #HIVEMIND23 idea.

↪ Speak about it in boards and social networks. Send a kind email/tweet/DM to

experts you know, introducing the idea.

→ Start an Etherpad/GitHub/Board/whatever and begin to politely brainstorm and discuss design and code ideas with fellow hackers.

→ Monitor <https://twitter.com/search?q=%23TheGame23> and you will be updated with news as they happen.

→ Join <https://TheGame23.com> and you will be updated with news as they happen.

FAQ:

Q: Is #HIVEMIND23 the perfect system of government?

A: No. None is. But we firmly believe that, as Socrates sharply suggested –and even died for it–, this is the least bad.

Q: Is this a technocrazy?

A: No, this is a TechnoMeritocrazy.

Q: Is this a meritocrazy?

A: No, this is a TechnoMeritocrazy.

Q: Is this a Black Mirror episode like Nosedive?

A: No.

Q: Is this going to work like the Social Credit System in China?

A: No. Not. At. All. Actually this is the polar opposite to that.

Q: Why you don't have the Answers to all the Questions?

A: Because we are only humans. Instead, we want all of us to politely dialogue, brainstorm and answer as many questions that we all pose about Strengths, Weaknesses, Opportunities and Threats of this 'Dangerous' Idea together.

License: Public Domain

The anonymous #TheGame23 player who originally sent those several hundred mysterious emails from 2014 to 2016 has released this idea into the Public Domain in order to guarantee that we (the writers of this pastebin/webpage/etc.) don't pursue any material benefit with it at all. Once it's been released, the idea doesn't belong to us anymore: it's absolutely free for you to act upon it. Or not.

Final thoughts

We as the global Human kind that we are, face global challenges of an imminent urgency, such as as Climate Change and a million other problems.

With millions of children dying of hunger each year, this cannot bet the best of all possible worlds as Leibniz suggested. We must have done something terribly wrong.
