COLLEGE

I live on Earth at present,
and I don't know what I am.
I know that I am not a category.
I am not a thing—a noun.
I seem to be a verb,
an evolutionary process—
an integral function of the universe.

I was born cross-eyed. I could see only large patterns, houses, trees and outlines of people—and all coloring was blurred. I could see two dark areas on human faces, but I could not see a human eye or a teardrop or a human hair. Not until I was four years old, in 1899, was it discovered that my cross-eyedness was caused by my being abnormally farsighted. Lenses fully corrected my vision. Despite my new ability to apprehend details, my childhood's spontaneous dependence only upon big patterns has persisted.

The most poetical experiences of my life have been those moments of conceptual comprehension of a few of the extraordinary generalized principles and their complex interactions that are apparently employed in the governance of universal evolution.

"There's a smell of paint in here.
—Overheard at The Museum of Modern Art.

1/1976
Genl

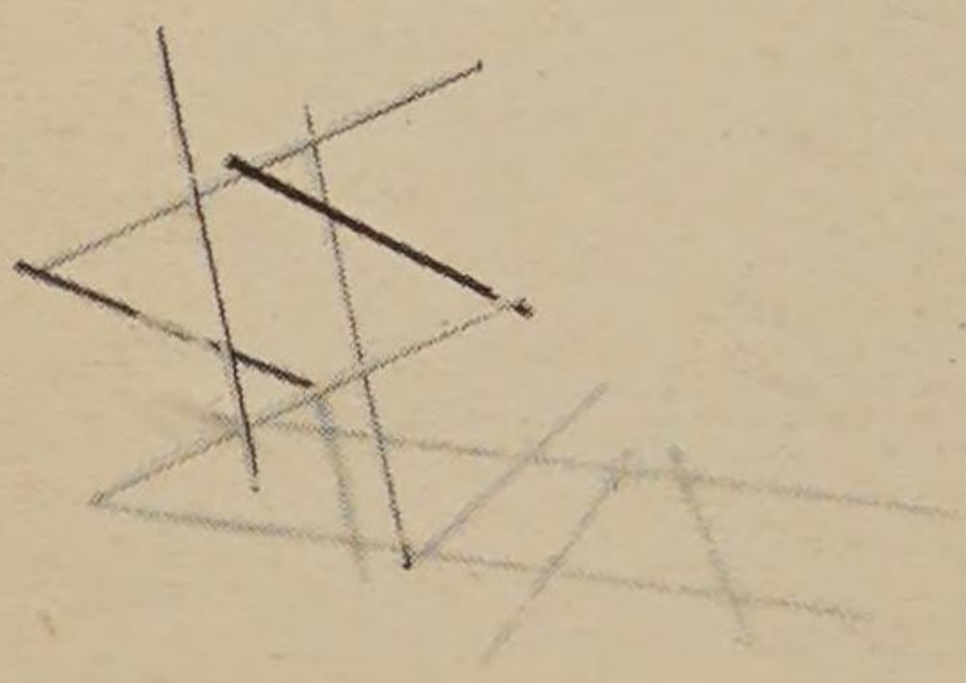

Man is a complex of patterns, or processes. We speak of our circulatory system, our respiratory system, our digestive system, and so it goes. Man is not weight. He isn't the vegetables he eats, for example, because he'll eat seven tons of vegetables in his life. He is the result of his own pattern integrity.

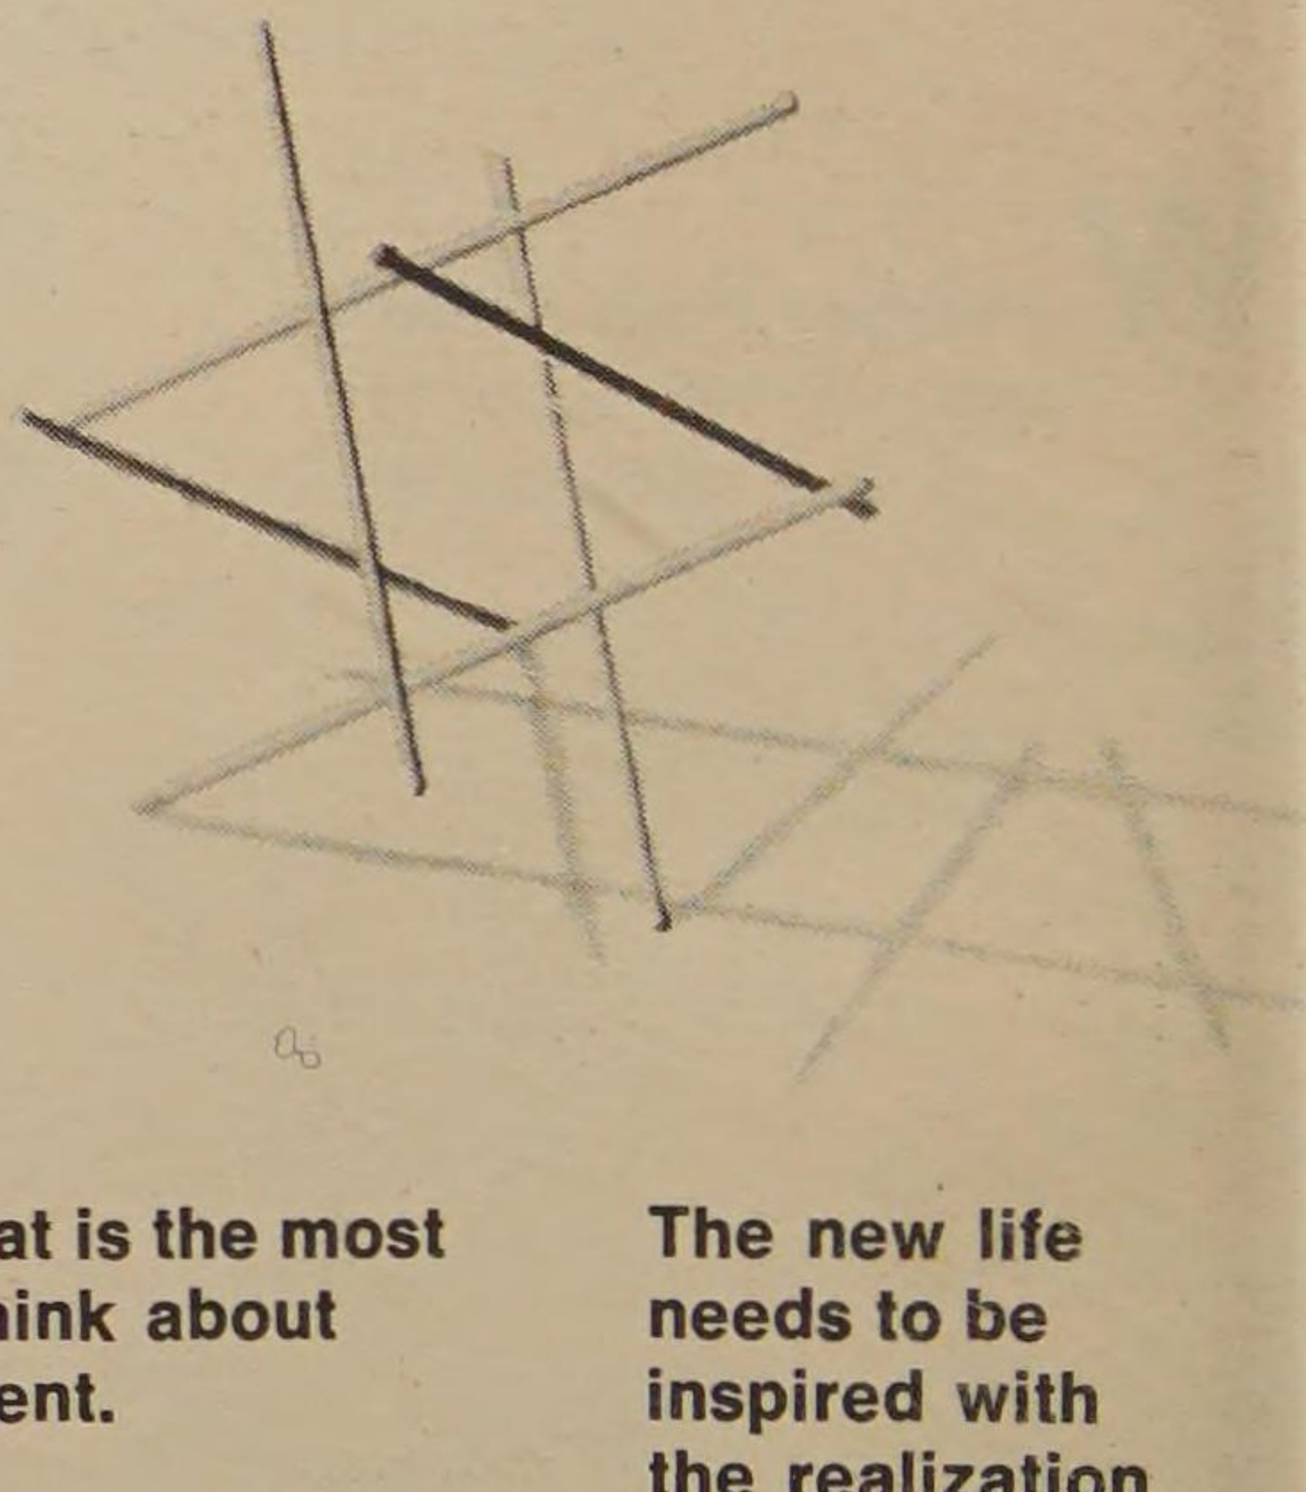

Whenever I draw a circle,
I immediately want to
step out of it.

I always start with
the universe: An organ-
ization of regenerative
principles frequently
manifest as energy
systems of which all
our experiences, and
possible experiences,
are only local instances.

The most important fact about Spaceship Earth: An instruction book didn't come with it.

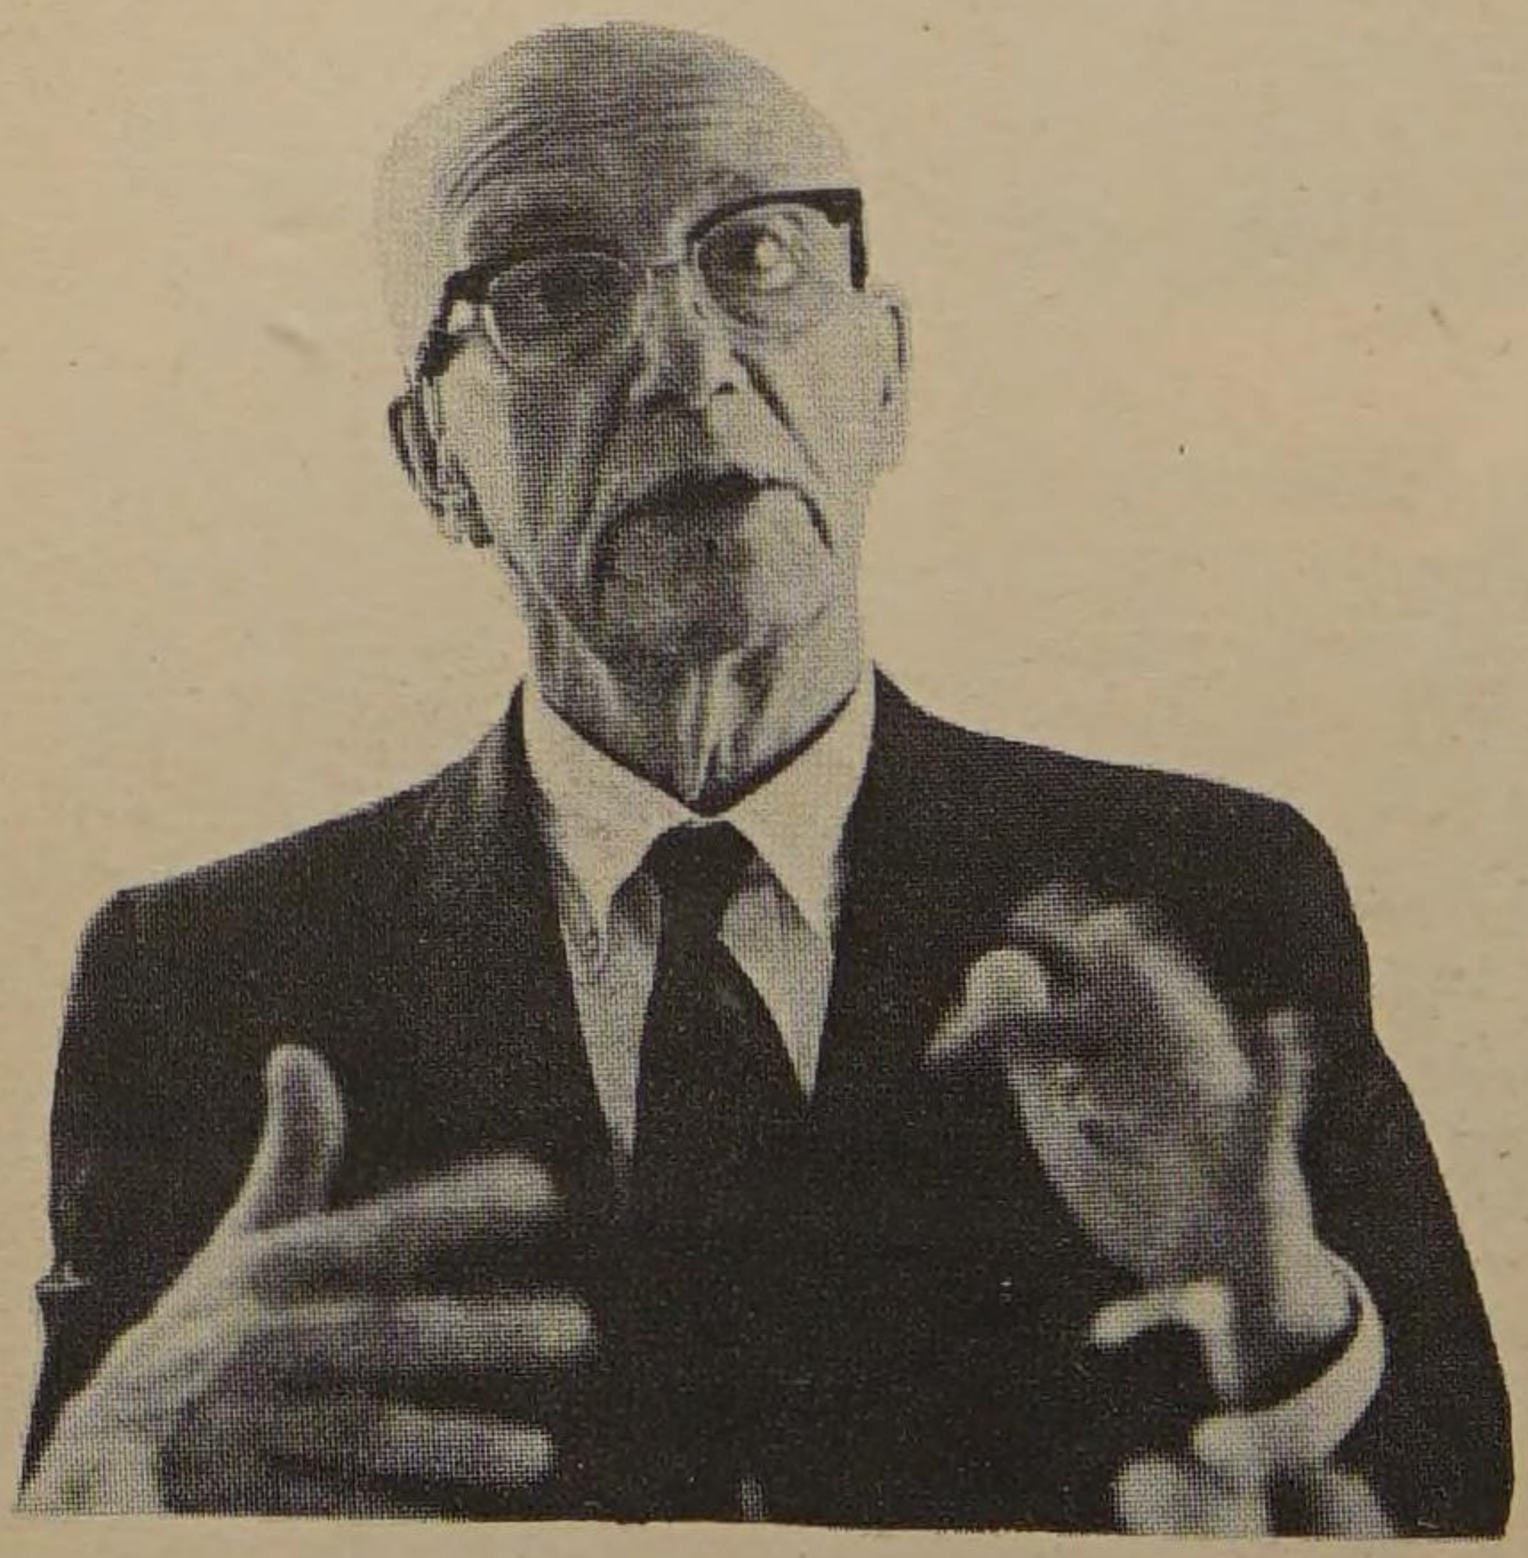

Man can approximate the magnificent efficiencies and economies of the macro-micro tensional integrities of nature.

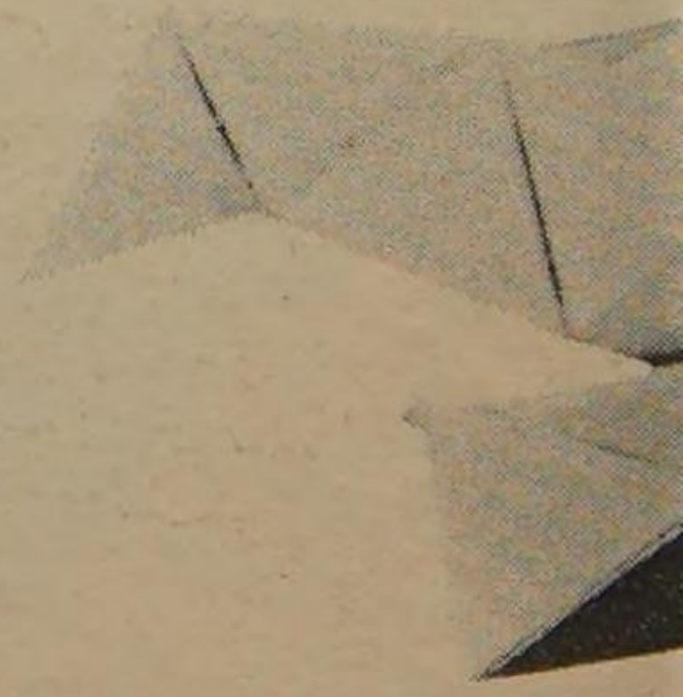

I am convinced that creativity is *a priori* to the integrity of universe and that life is regenerative and conformity meaningless.

I always say to myself, what is the most important thing we can think about at this extraordinary moment.

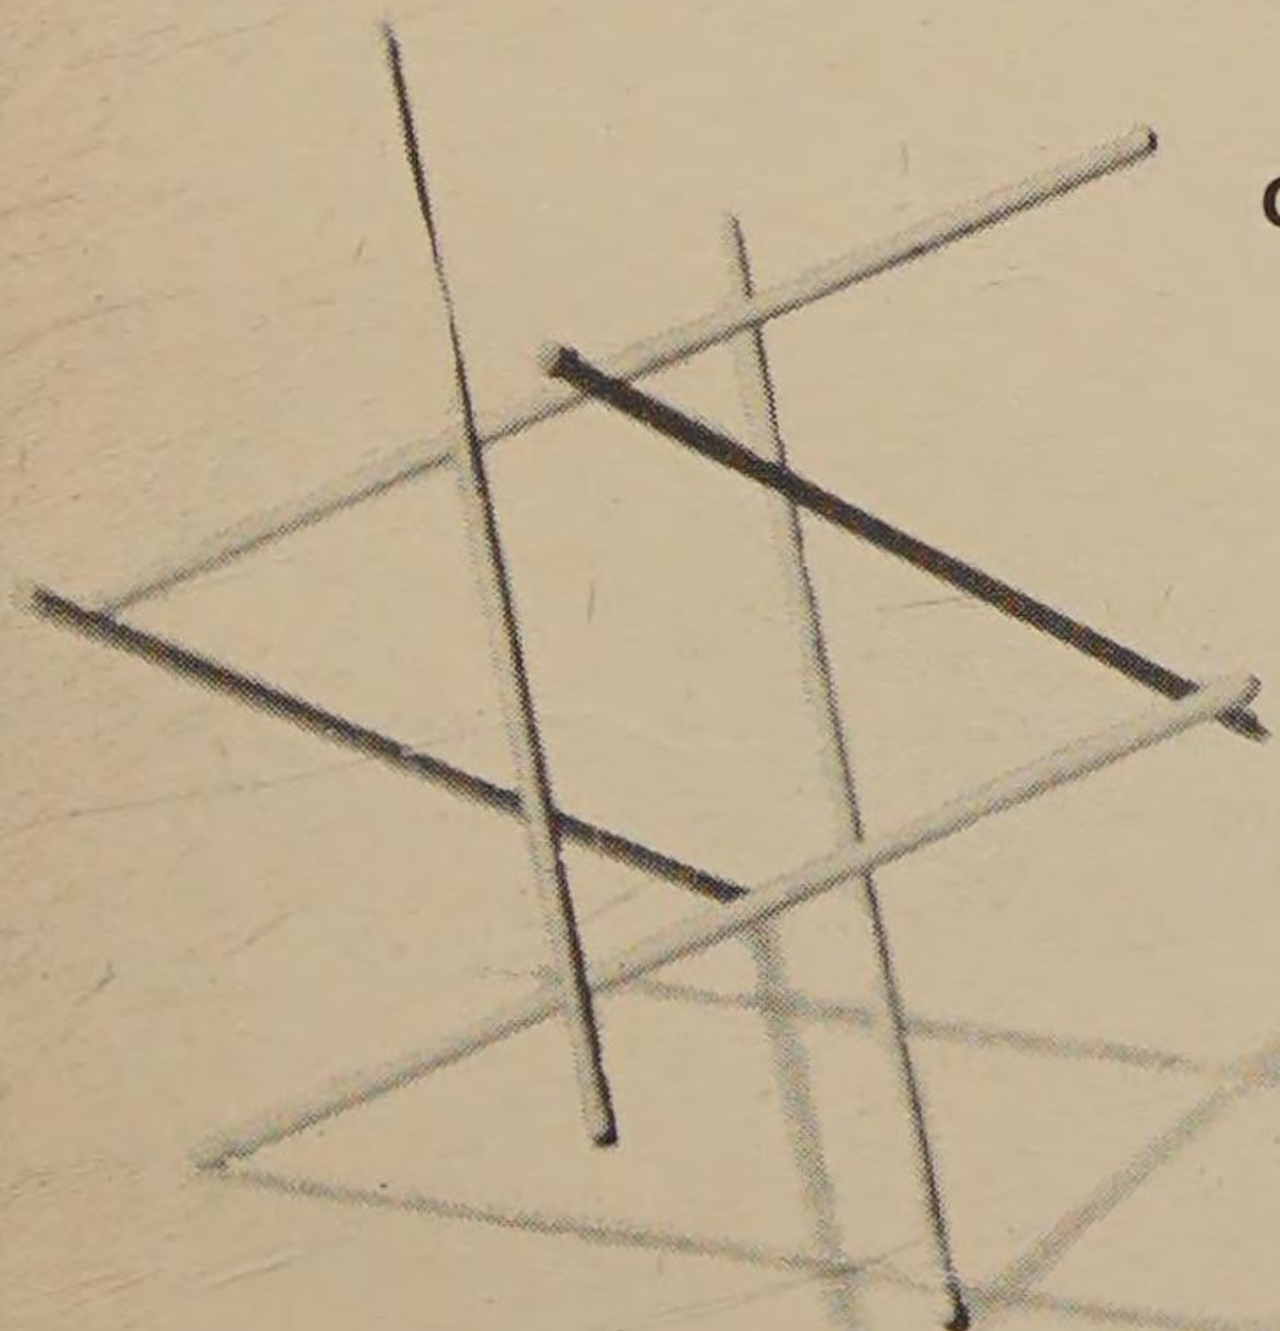

The new life needs to be inspired with the realization that the new advantages were gained through great gropes in the dark by unknown, unsung intellectual explorers.

The intellectual integrity and infinite order of the universe obviously are vastly greater than man. Man is an invention within it. What one did about this understanding would have to be through design. I decided I must not be a persuader, but a doer.

**Bite your tongue.
Get a cinder in your eye.
When you feel good,
you feel nothing.**

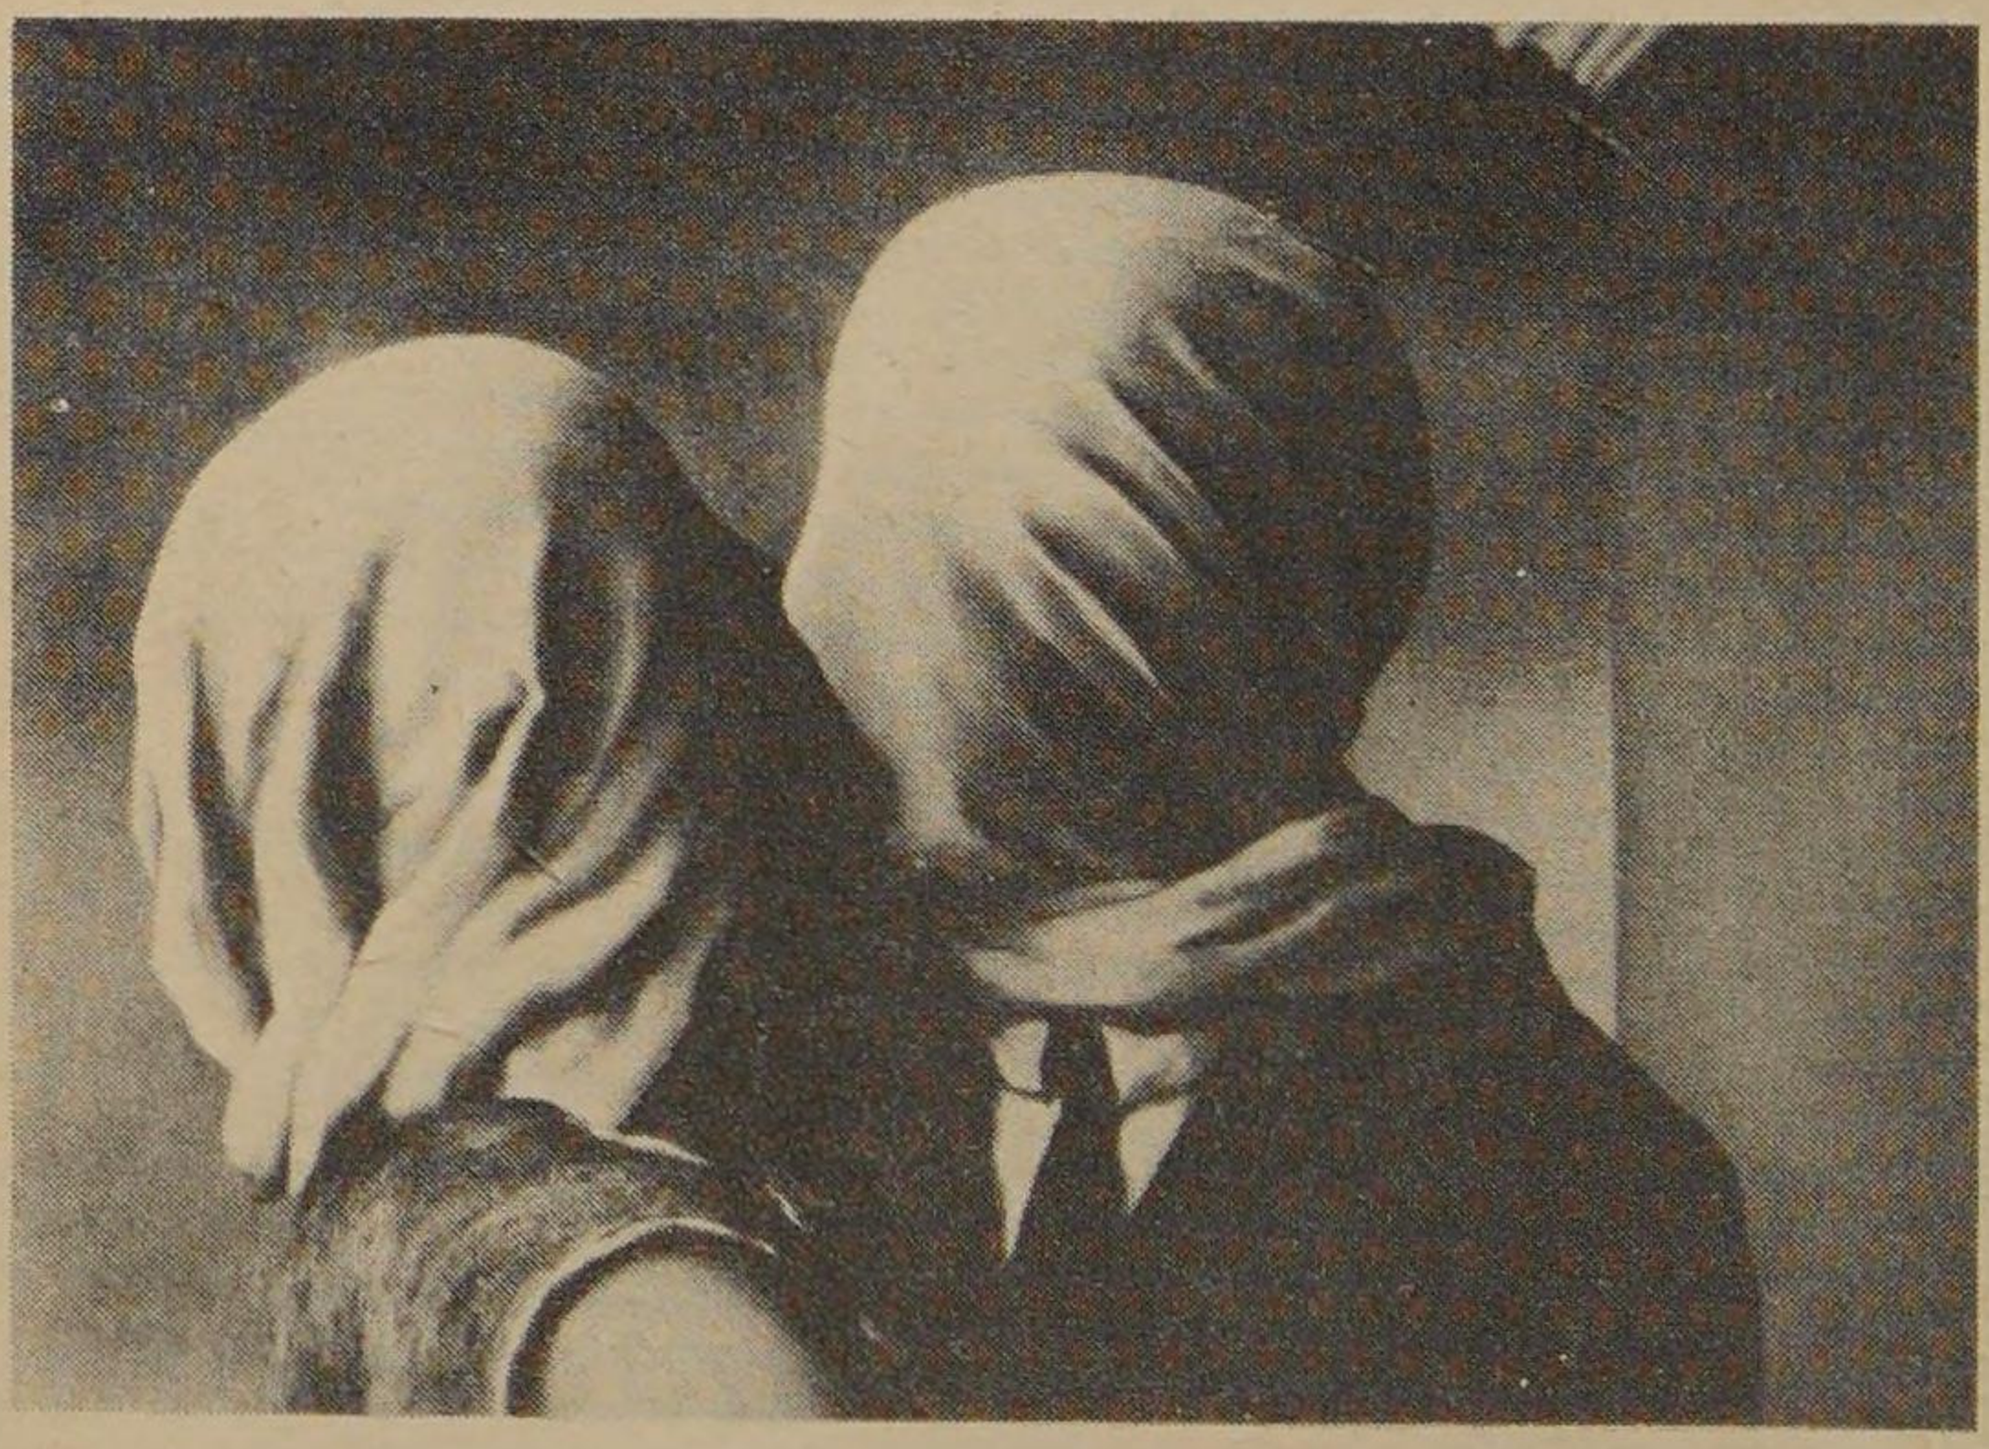

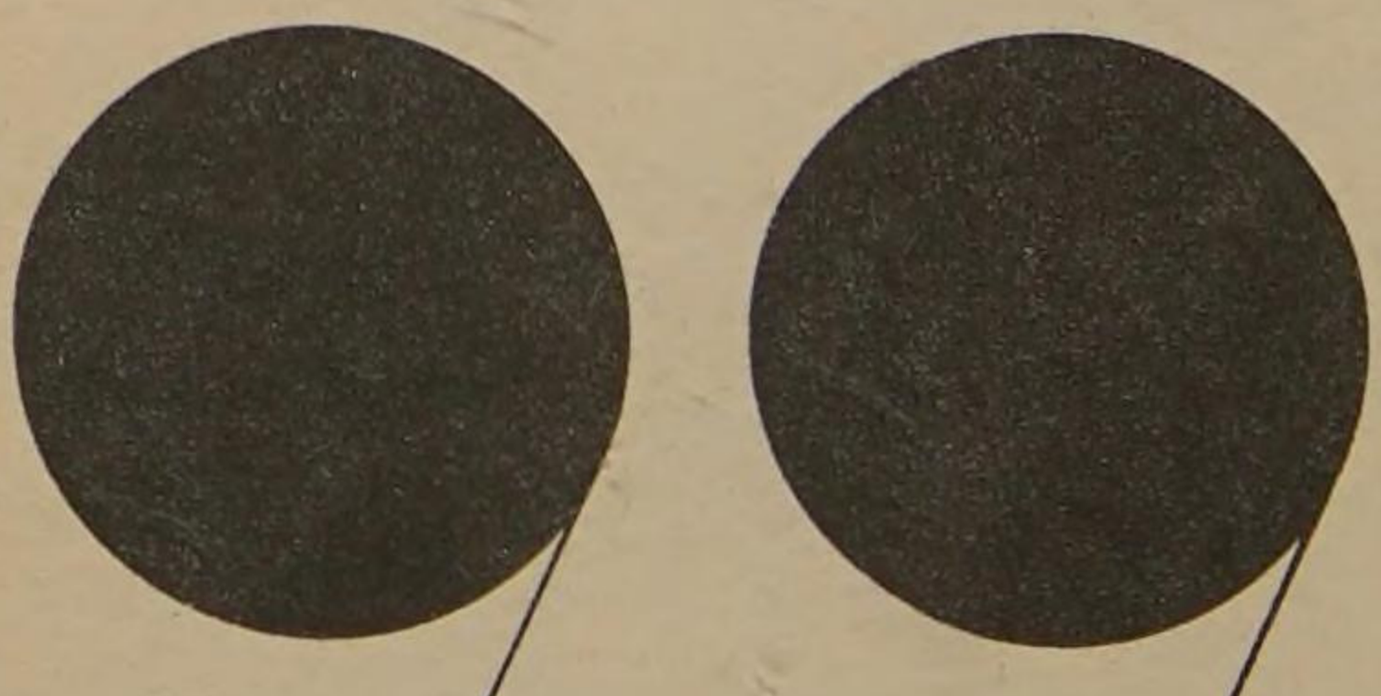

My objective has been humanity's comprehensive welfare in the universe. I could have ended up with a pair of flying slippers.

Facing page: Shell of a one-celled marine animal magnified 420 times. Look familiar?

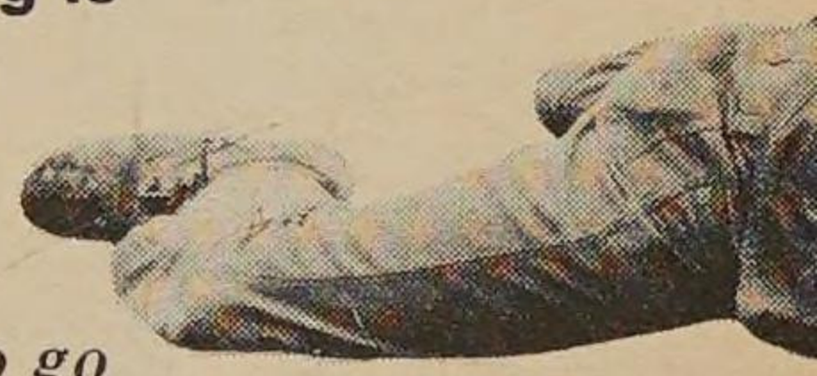

What I am trying to do. As a conscious means of hopefully competent participation by humanity in its own evolutionary trending while employing only the unique advantages inhering exclusively to the individual who takes and maintains the economic initiative in the face of the formidable physical capital and credit advantages of the massive corporations and political states I seek through comprehensively anticipatory design science and its reduction to physical practice to reform the environment instead of trying to reform man also intend thereby to accomplish prototyped capabilities of doing more with less whereby in turn the wealth-regenerating prospects of such design-science augmentations will induce their spontaneous and economically successful production by world-around industrialization's managers all of which chain reaction-provoking events will both permit and induce all humanity to realize full lasting economic and physical success plus enjoyment of all the Earth without one individual interfering with or being advantaged at the expense of another.

"When I walk onstage, man, all I can give them is me."
—Janis Ian.

Science is operating almost exclusively in inaudible and nonvisible areas. Ninety-nine per cent of all the important work relating to man's evolution is non-sensory and abstract. How long has it been since you've said to a telephone caller: "This is fantastic. I wasn't just thinking of you." Seeing-is-believing is a blind spot in man's vision.

"Cheshire-Puss," she began, rather timidly ...
"Would you tell me, please, which way I ought to go from here?"
"That depends a good deal on where you want to get to," said the cat.
"I don't much care where ..." said Alice.
"Then it doesn't matter which way you go," said the cat.

R. BUCKMINSTER FULLER

U.S. medical corpsman uses stethoscope to determine if North Vietnamese troops are undermining Khesanh outpost.

Since World War I, the world has turned from the wire to the wireless, the track to the trackless, the visible structuring to the invisible structuring. In each instance, man is able to do more with less and less and less.

There is the possibility that we shall discover, within a decade, that "telepathy" is in fact ultra ultra-high-frequency electromagnetic wave propagation. We may also find that we are communicating more frequently on a subconscious level than we are in the reality of the visually tunable ranges of the electromagnetic spectrum—the conscious level.

Dear Mr. Fuller:
I am three and one-half years old. You're right!

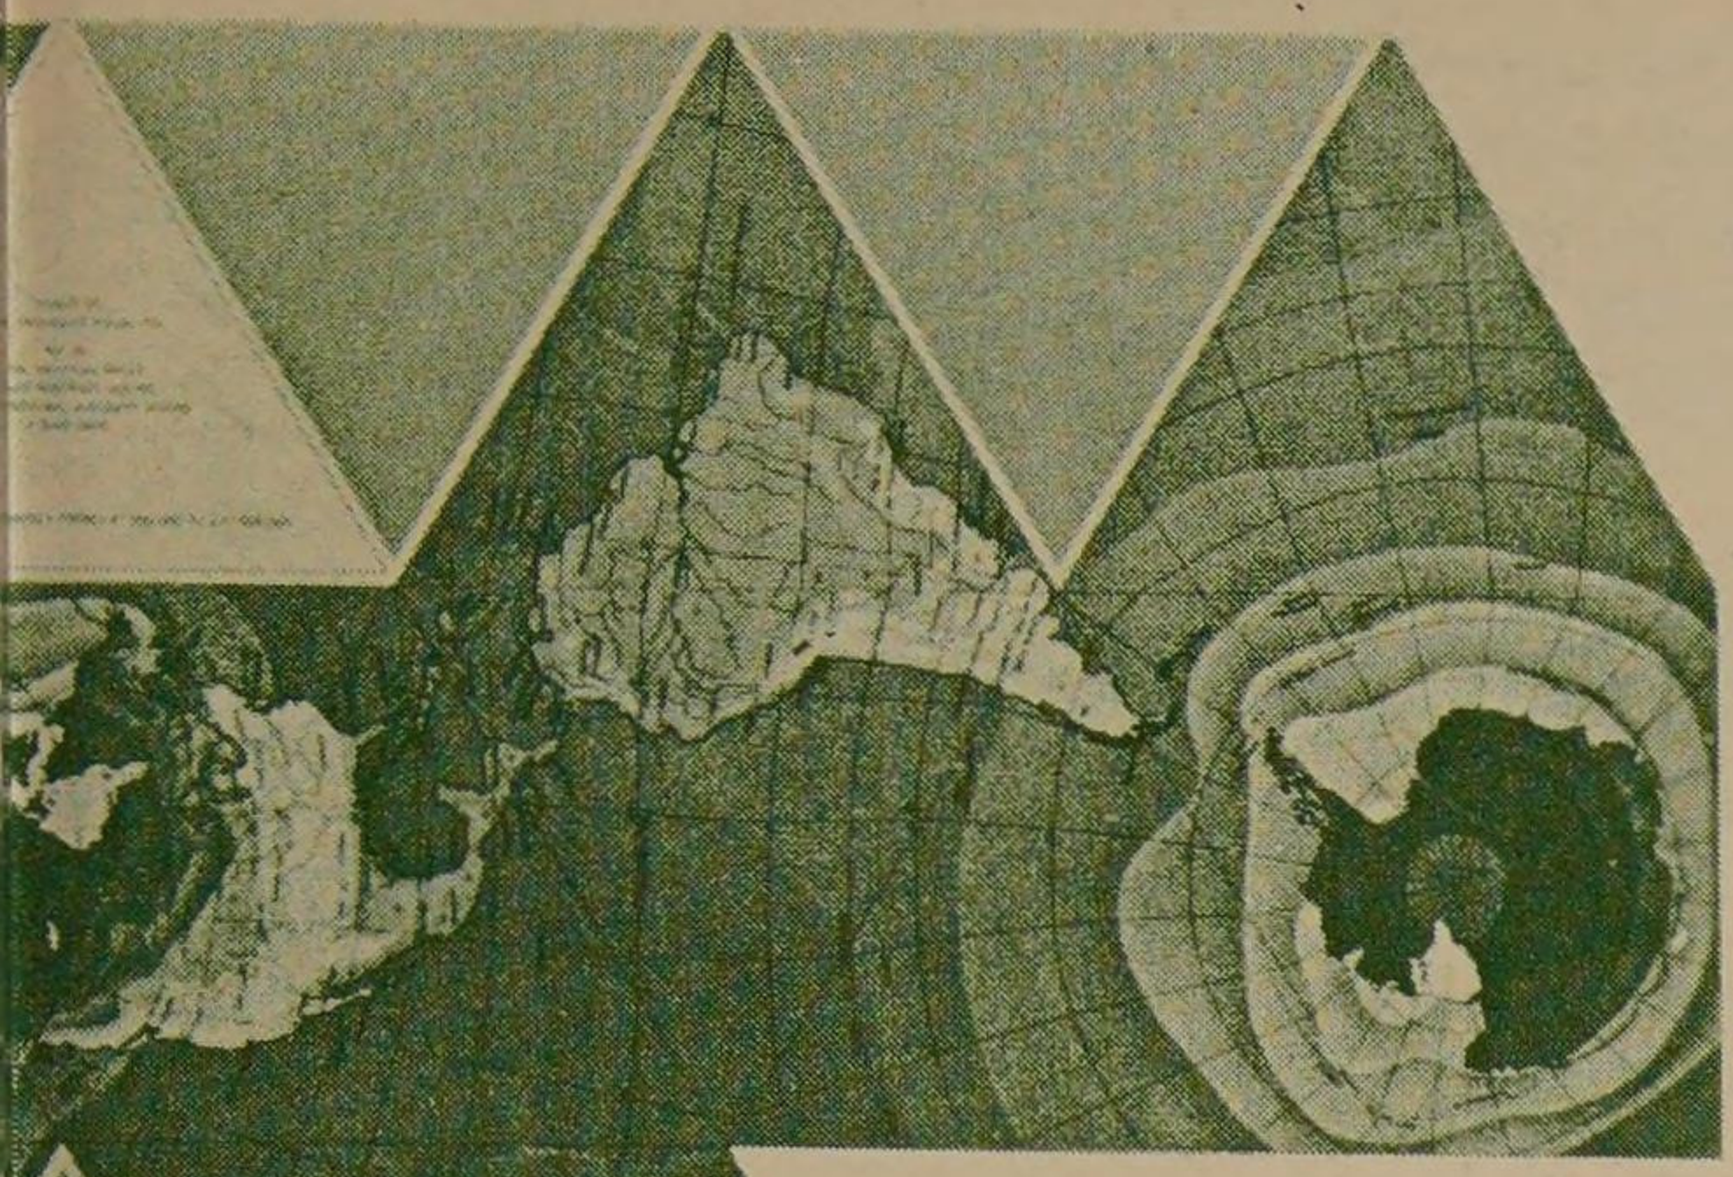

There are big things to be done in the world.

—Greenwich Village shopkeeper, talking about hippies.

I hope they're all gone. **"**

Big summer.

Space renting will become the living pattern of the future. Increasing world traffic will necessitate world citizenship. The U.S.A. is the breeding place of "world" man and "universe" man. We should, therefore, begin to act and think as World Men. With this posture, we could better understand our role in total world problems.

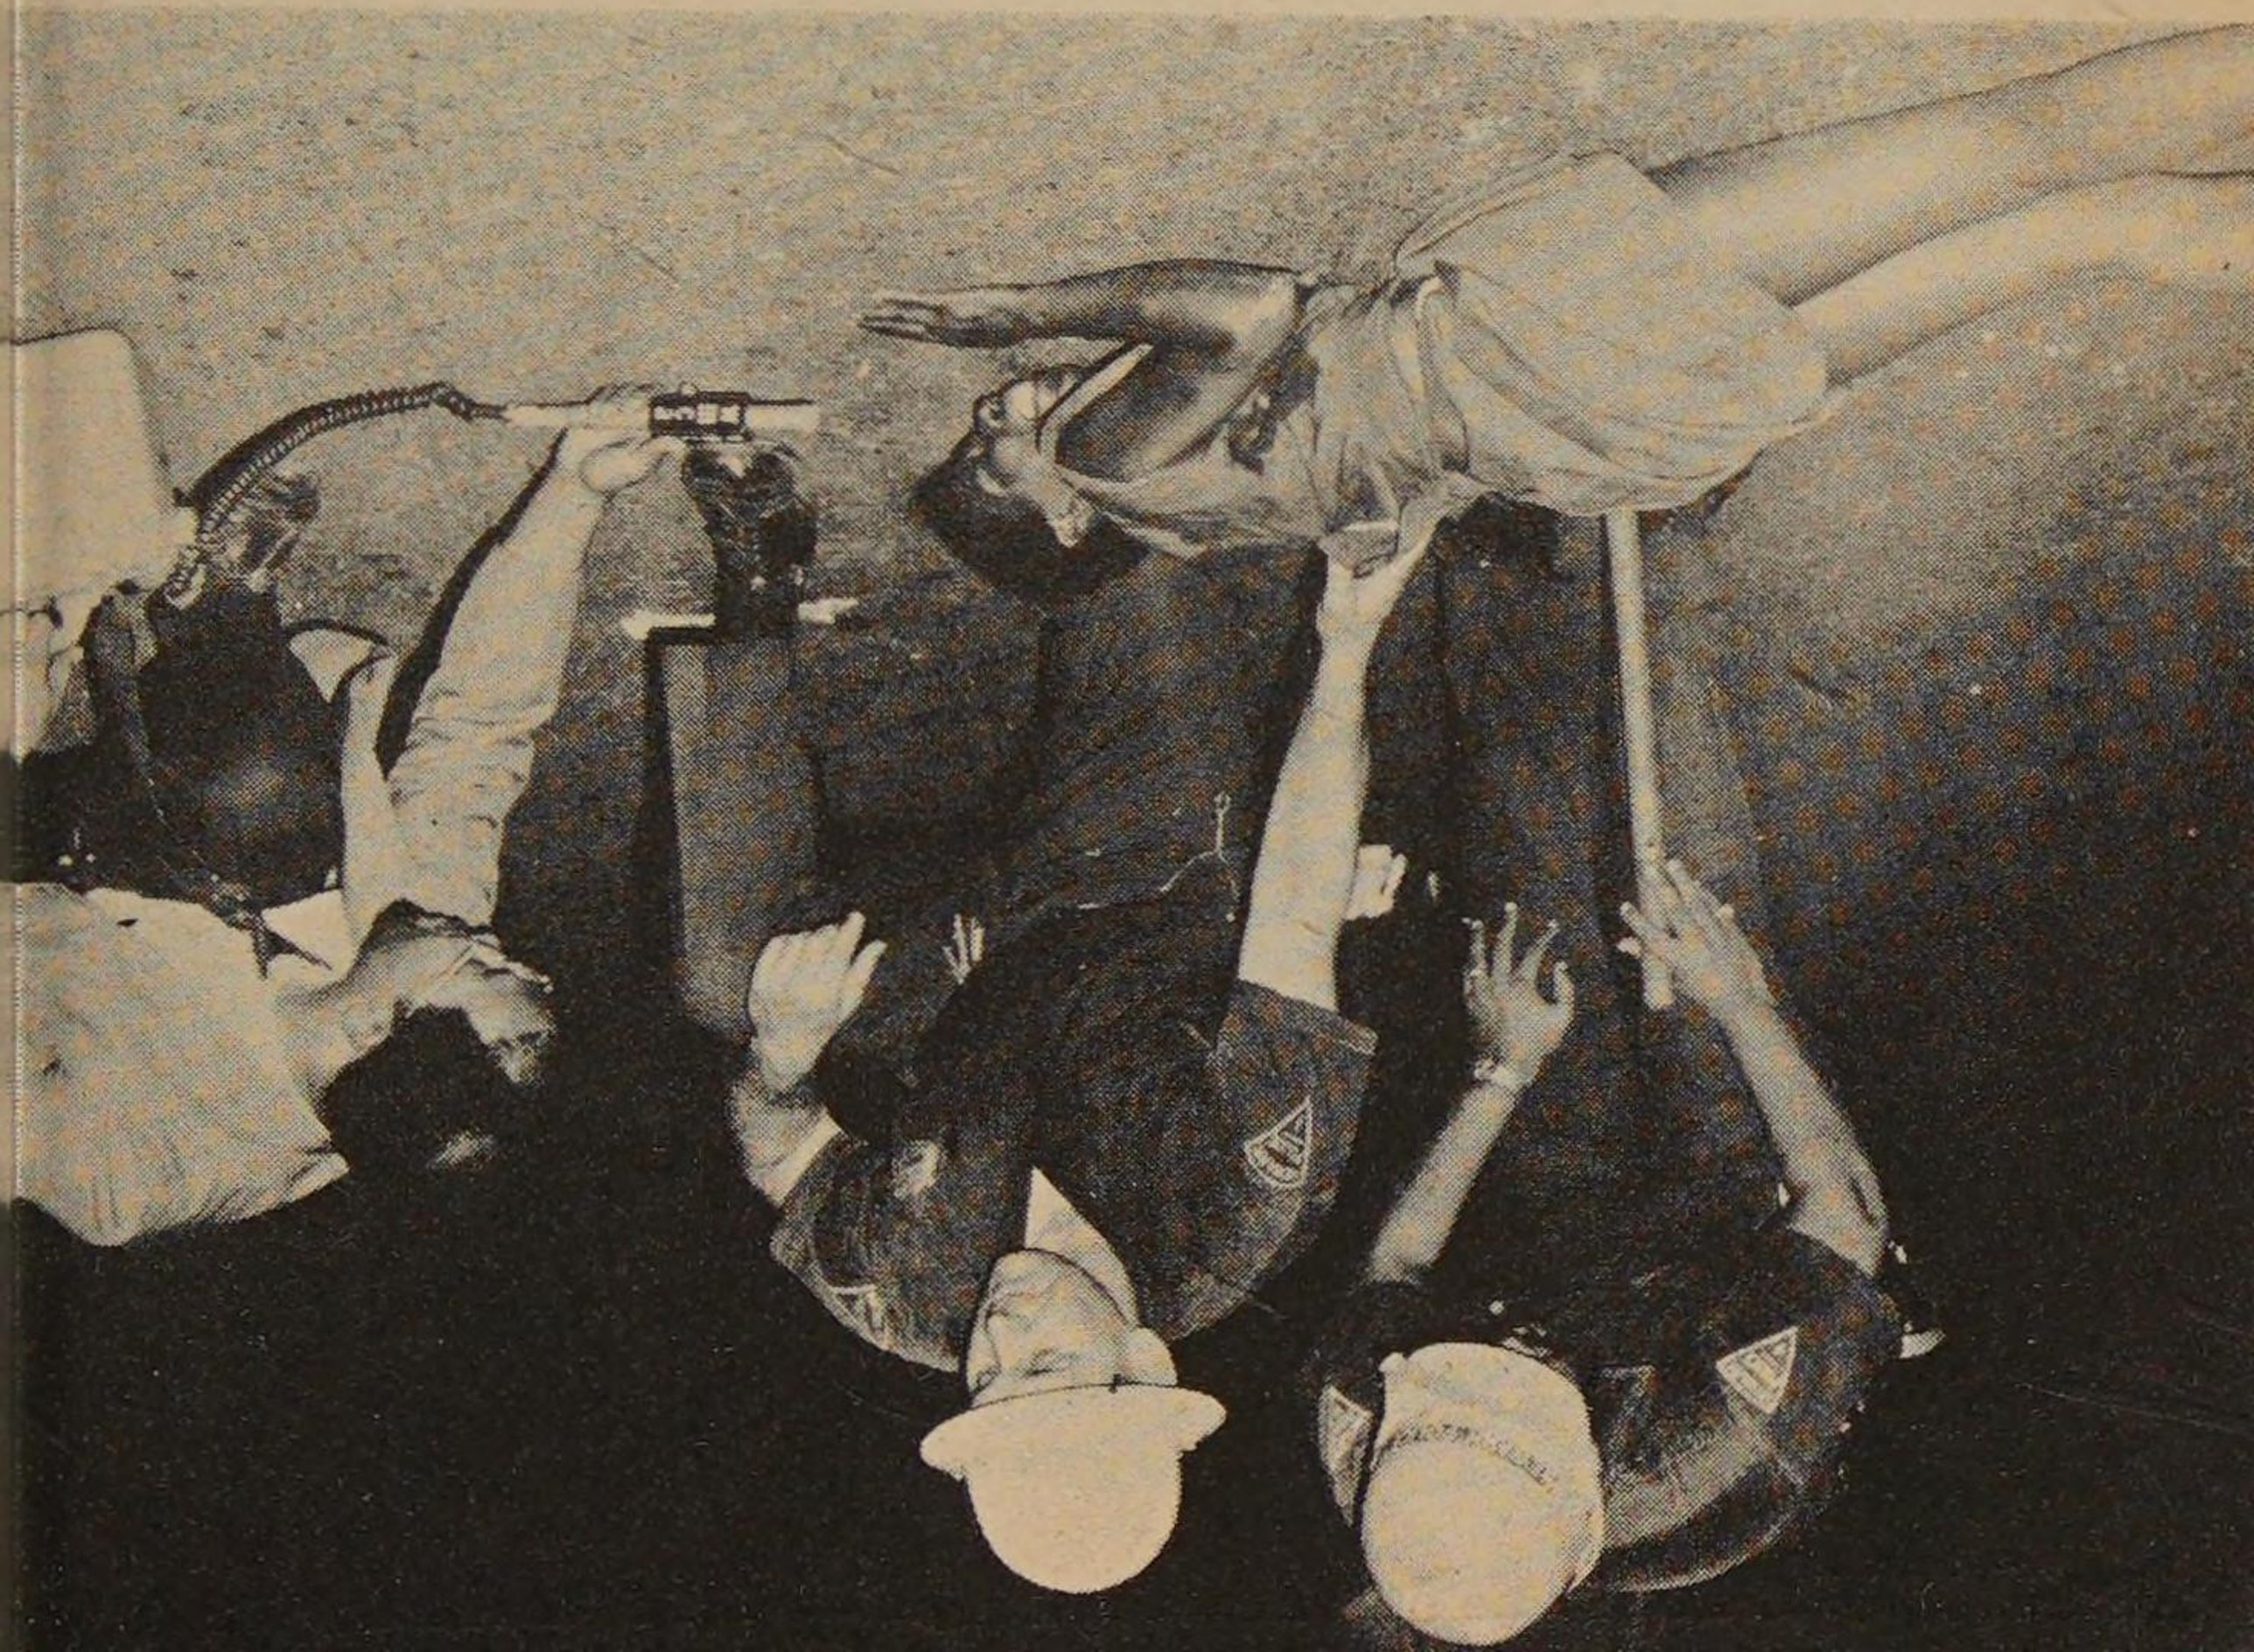

The Dymaxion Sky-Ocean World shows a one world-island in a one world-ocean.

The shape of the land masses are correct. There is no visible distortion of the relative shapes or the relative sizes of its geographical features. If you cut along the edges and bring them together, you will find that the map makes an icosahedron —a "solid" faced with 20 equilateral triangles.

The map demonstrates that there is no "right way to see the world," that there is no "right side up," that the United States is not "in the middle," and that it's "go east [not north], go cold" in 76 per cent of the areas where man lives.

L OF US. (MAN WAS DE
THER MAN IS OBSOLETE

"We are waking from the American Dream to realize that it was a dream few Americans lived in their waking hours."—*Gerald Piel.*

MALTHUS: The world's population will multiply more rapidly than the available food supply.

DARWIN: Only the fittest will survive.

MARX: The workers who produce things are the fittest because they are the only ones who know how to produce physically and therefore they ought to be the ones to survive.

FULLER: Technology providing more and more goods from fewer and fewer resources could guarantee that all men would survive.

It is very logical that man should fight to the death when he thinks there's not enough to go around.

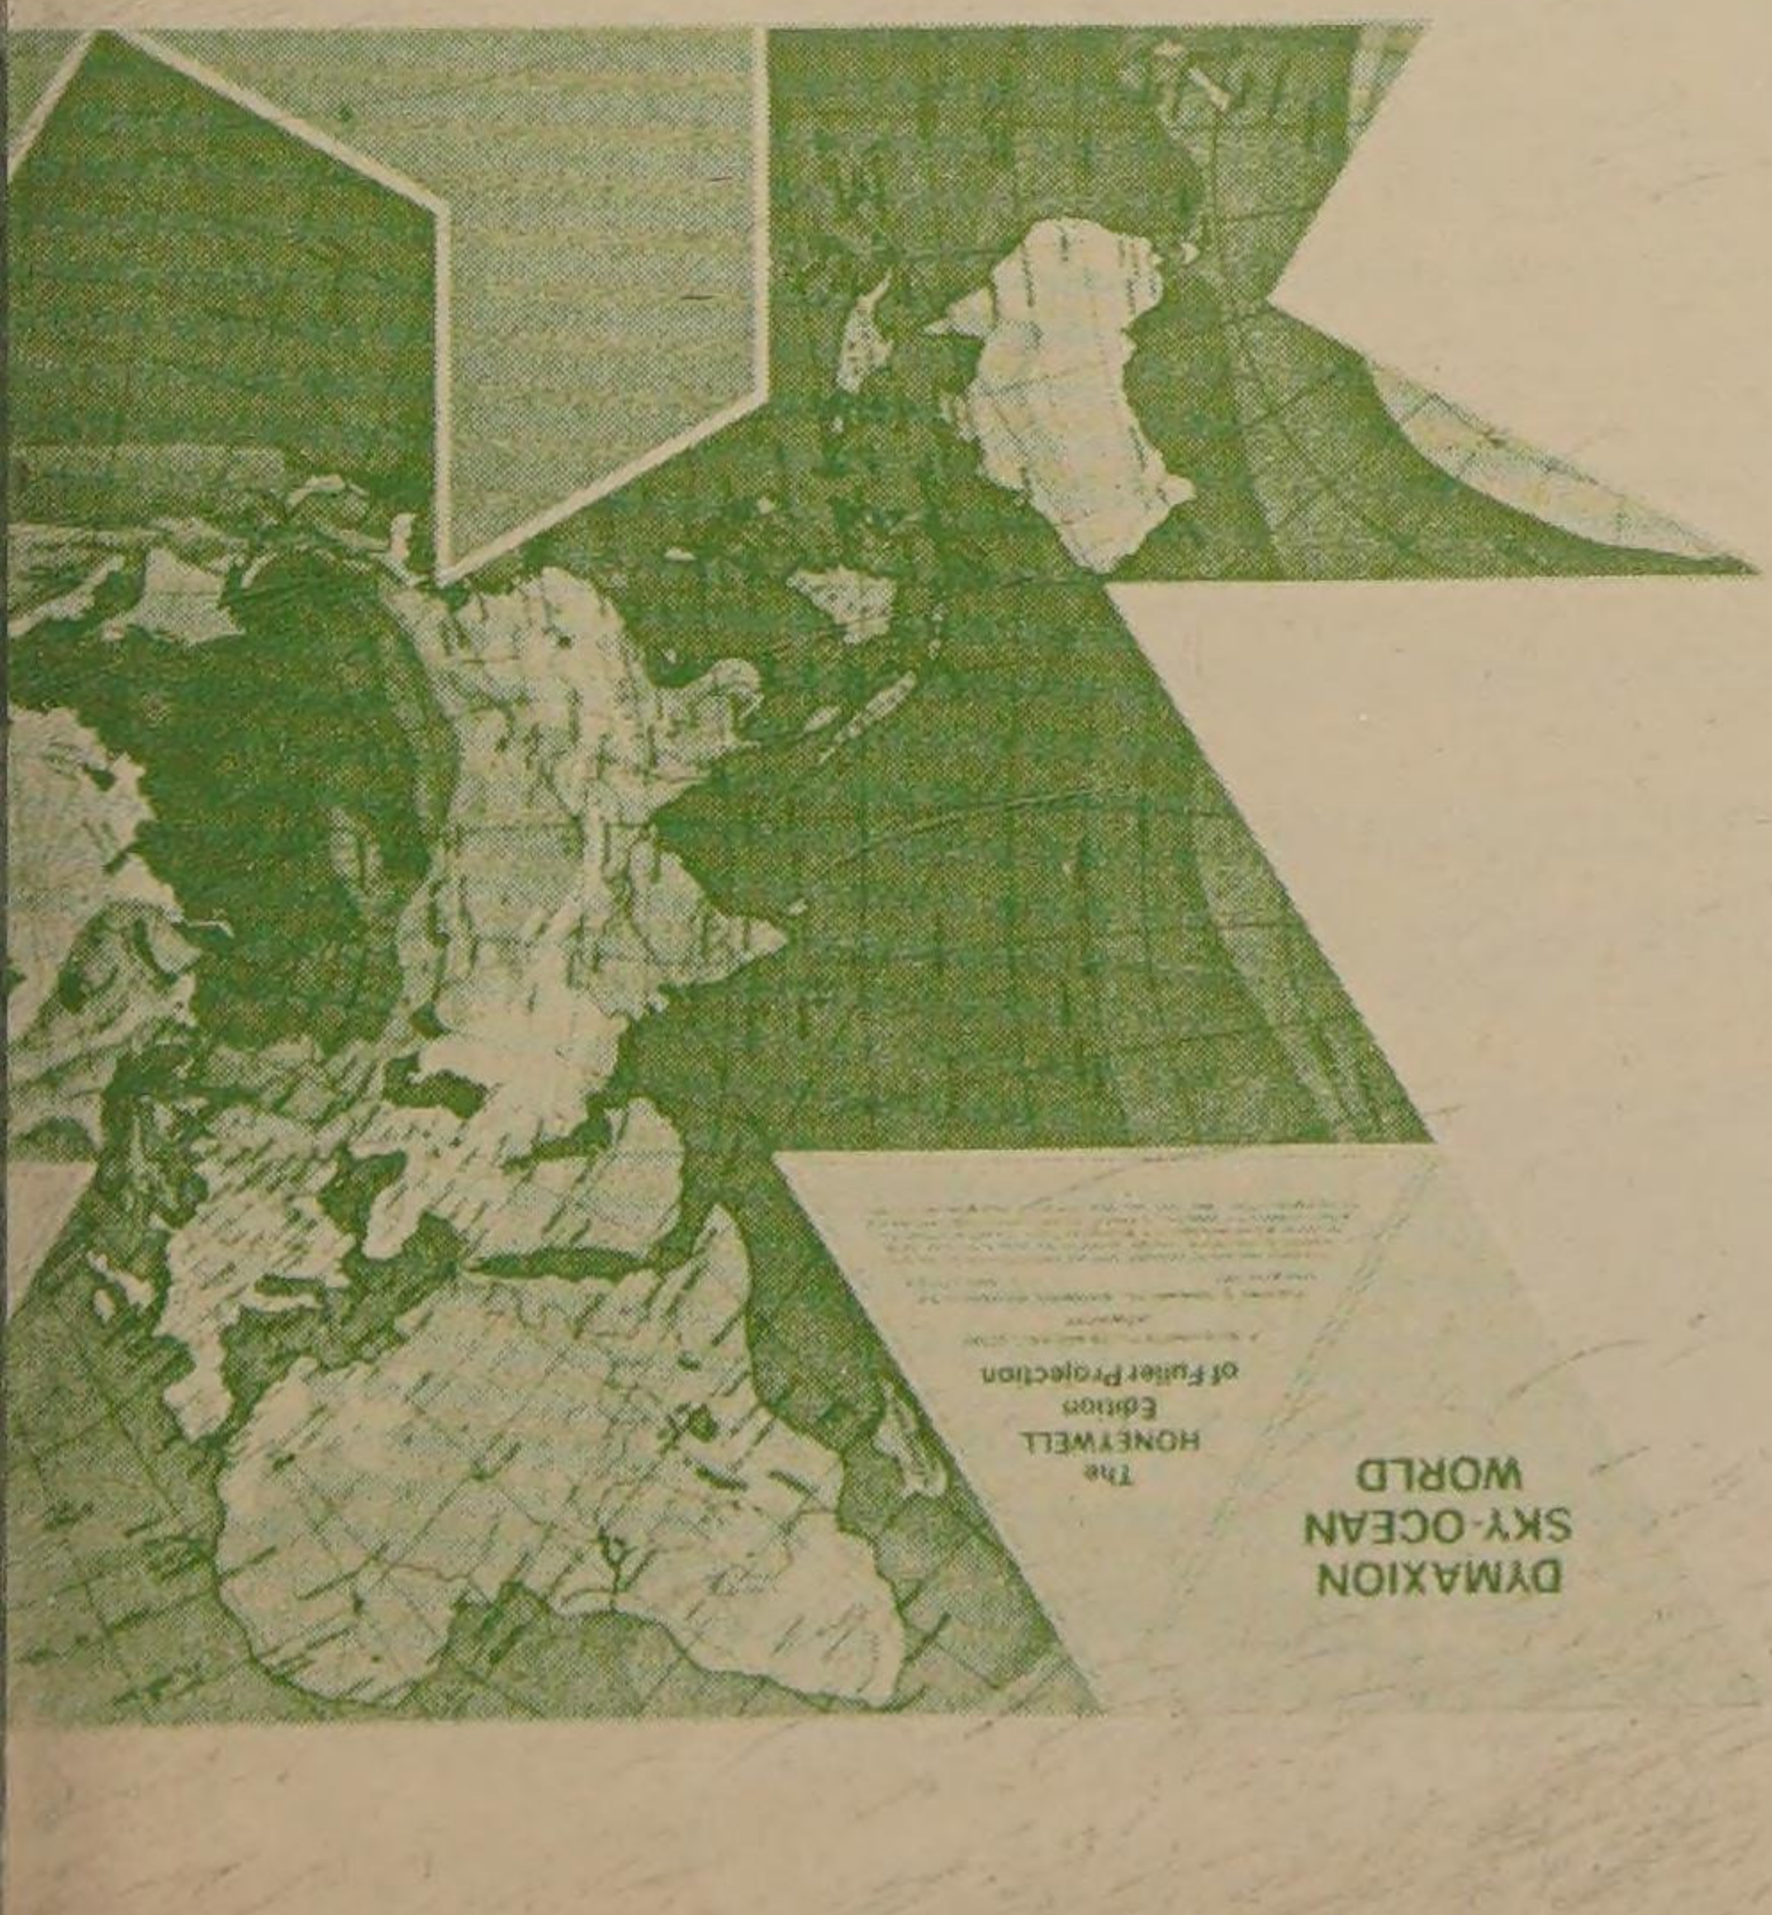

In a fire, he loses all reason, goes mad, and tramples his fellow men to death as he competes for air.

It is also very logical that man won't fight when he knows there's enough to go around. It is logical. It is logical. It is logical.

"He has proved himself, for he is alive." —*Elias Canetti.*

SKY-OCEAN
WORLD

Science will have to give each astronaut a little 300-pound "black box"—containing the life supplies that now support the geonaut. The spaceship will be the first scientific house in history.

The black box will be used by man on Earth to live in remote areas. It could serve as an oasis in the middle of the Sahara.

The black box will supplant the functions now performed by our bathrooms, kitchens, laundries. It will be mass-produced at about one dollar per pound and will be rented for $17 per month.

PRESS AGENT: "I'd like you to meet the producer of 'Chitty-Chitty Bang-Bang,' Albert Broccoli."

REPORTER: "Hello, Mr. Broccoli—but please don't tell my mother."

No man can prove upon awakening that he is the man who he thinks went to bed the night before, or that anything that he recollects is anything other than a convincing dream.

A poll of men along Manhattan's skid row revealed that they were in touch with the world.

"It is necessary for me to establish a winner image.
Therefore,
I have to beat somebody."

—Richard Nixon in early 1968.

If politicians are responsible for key decisions affecting Vietnam, slums, pollution, inflation, education, culture—well, it's so obvious.

"A lot of things wrong with society today are directly attributable to the fact that the people who make the laws are sexually maladjusted. 'Why should those dirty teenagers have all the fun?' "—*Frank Zappa, Mother of Invention.*

EADERS LOOK OUT ONLY
ALITY.) COPING WITH

Breakthrough in housing: Mass-production houses. The mobile home is becoming the MODular house.

"*Where did you go for your vacation?*" asked the tall man waiting for an elevator in Smithsonian Institution.
"*Cayman Islands,*" replied the second.
"*Where on earth are the Cayman Islands?*" the first inquired.
"*I've no idea,*" said the second. "*We flew.*"

—Alvin Toffler's mother on learning nature of son's book, "Future Shock," about the dizzying psychological shock suffered by people forced to adapt repeatedly to changes in society.

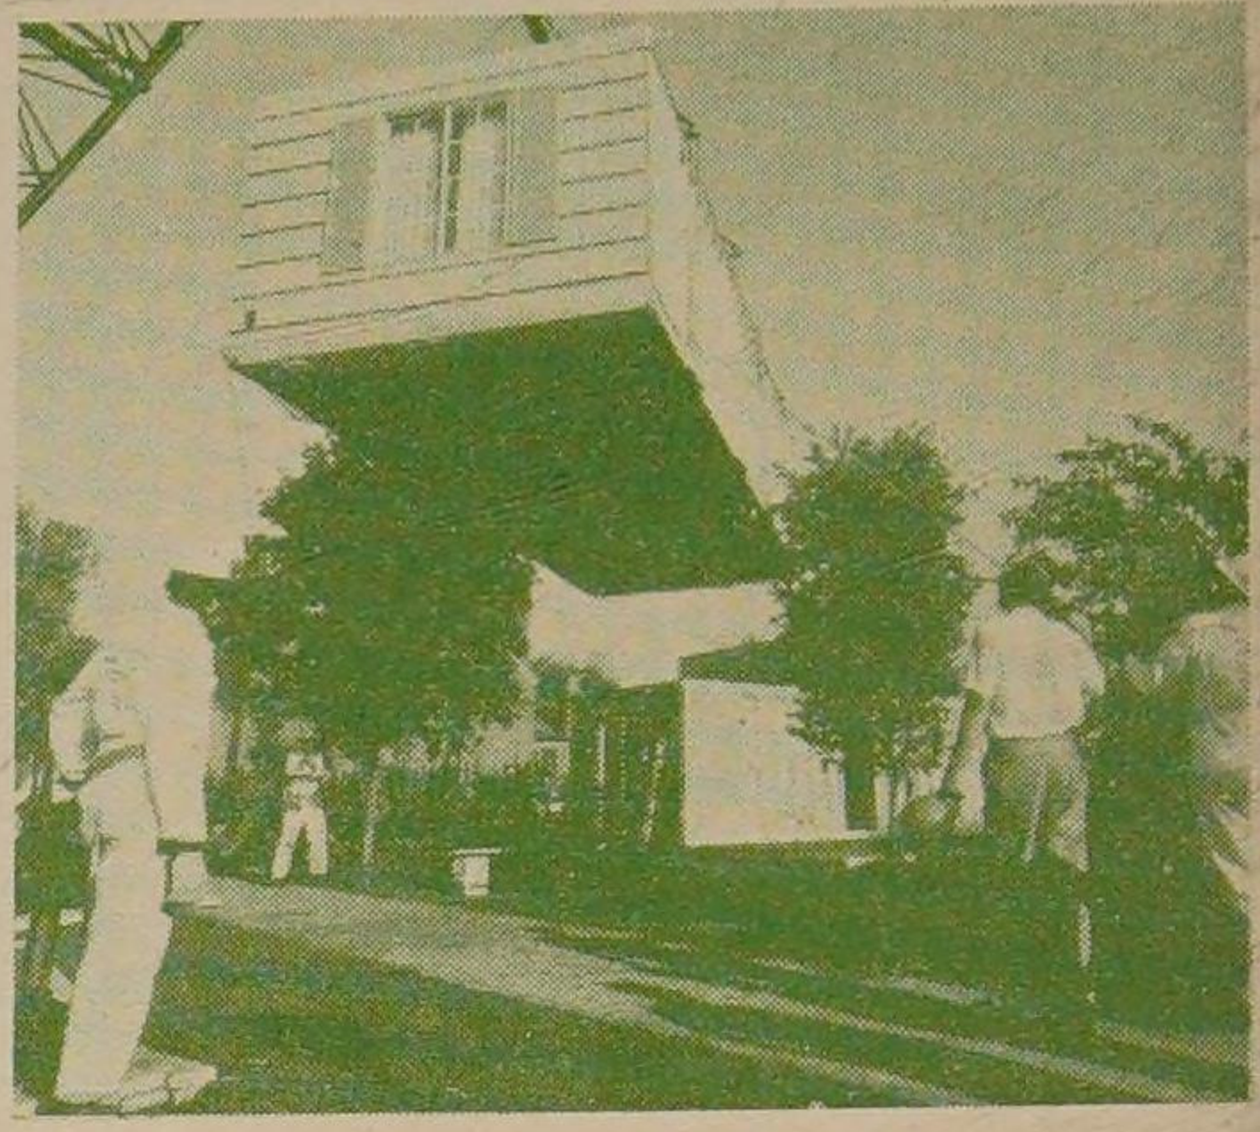

You can sail around the world; you can't walk around it.

I don't want to be here."

The sun doesn't rise or set. The earth revolves the sun into sight and out of sight. Sunset is merely a word with poetic imagery that creates erroneous reflexes. How about two new words: Sunsee and sunclipse.

"If that's the way it's going to be

Thy beams so reverend
and strong
Why shouldst thou think?
I could eclipse and cloud
them with a wink,
But that I would not lose
her sight so long.
—JOHN DONNE.

CAN BE A BLOCK TO RE

FOR THEIR OWN SIDE.

No political act can make the world's resources take care of more than 44 per cent of the world's population. It should be the function of politics to consolidate scientific and industrial gains and to work for justice.

"He's an ideal candidate. He was born in Montana, is 35 years old, studied law by candlelight for three years and walked five miles through the snow to school, plus the fact that he is affiliated with the Roman Catholic and Protestant churches, in addition to being a Jew."
—Yippie nominating a pig for President in Summer, 1968, amid cries of "Pork Power" and "Live High Off the date eat you."

Every day, thousands of people put their lives into the hands of automatic controls. They faithfully rely on instruments, not pilots, to land their planes safely at night and in stormy weather. Politicians are society's pilots.

Born helpless, children expect authority to take care of them. Young people assume that the political authority is the public parent. When dissatisfied, they protest to their public parent, assuming he can pacify them. Usually, the authority lacks the capability. The problems are usually beyond his scope. The Great Gildersleeve is not responsible for world peace.

"While we are sleeping, two-thirds of the world is plotting to do us in."—*Secretary of State Rusk.*

At the 1968 Academy Awards ceremony in Hollywood, the master of ceremonies compared such movie pioneers as Jesse Lasky and Samuel Goldwyn to Martin Luther King because "they, too, had a dream."

POLITICIANS ARE ALWA

ARN LESS. YOU CAN AL

EUVERING FOR THE NEX

The continuation of the weapons race and of cold and hot wars is motivated by fear of political disasters. Politicians cannot cooperate internationally because they fear criticism back home. They simply can't embrace new social knowledge that transcends boundaries. They must always be politicking and campaigning, in spite of their ghost writers' altruistic speeches. They must compromise their ideals into deals.

Solution of peace and war impasses must clearly come from other than political initiative.

"To avoid risks, stay in bed. And even then you can't be sure."

how mass media "bring up" children.

an immigration

Marshall McLuhan has observed that automation is not a continuation of the industrial revolution, or merely hastening things a bit. It is not just more of the same, faster. Automation is a new evolutionary development, a totally new way of thinking and living with our nerves outside us as an information environment. The speed, capacity, and universality of computers are fostering a richness, diversity, and individuality that is altering man's own image of himself and the forms and shapes of his social institutions.

for your information

freedom of choice

Some organizations which provide death benefits for their members appoint an "official" funeral director. It should be understood, however, that the family is *not* obliged to use this so-called "official" director in order to receive the organization's death benefits. Under New York State law, the family may make arrangements with *any* funeral director of its choice. The law is quite specific: freedom of choice is always the family's prerogative.

after a few years on the road."—*Purchasing officer, Detroit*
"The steel we're getting from Pittsburgh literally rots away

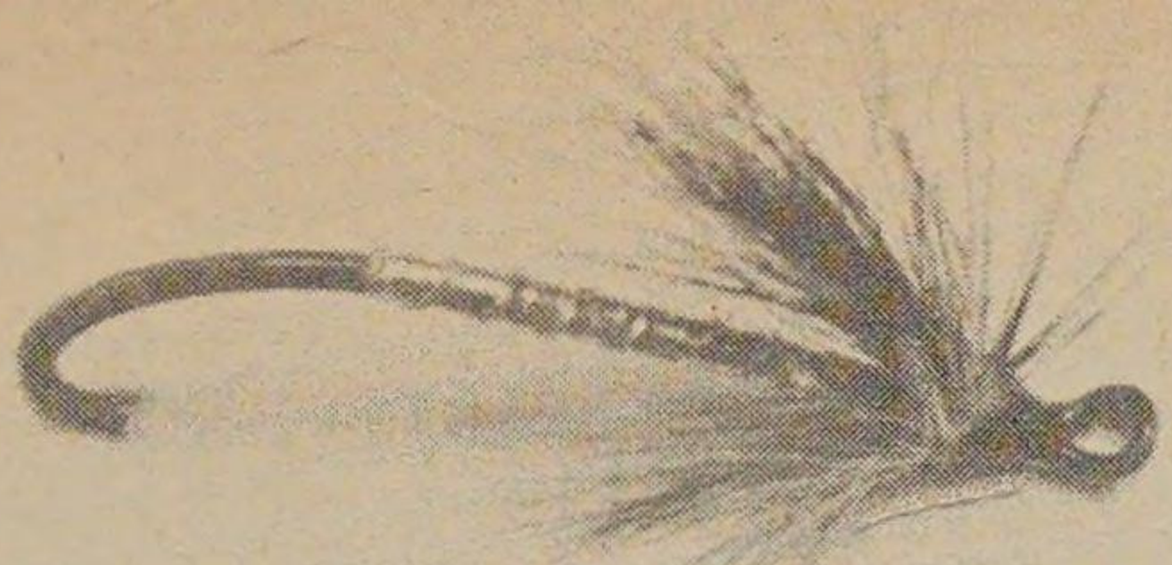

"If the press does not show up at a press conference for your author, it can lessen the embarrassment if a few people from around the shop 'drop in' with pencil and pads in hand and ask questions. Author will never know the difference."

—Publishers' Publicity Association memo to members.

41 A

SILVER RAT

"I have never known life without electricity and its advantages."

—Luci Baines Johnson Nugent.

For a score of years, television—"the third parent"—has been telling children the news of the world every-hour-on-the-hour. Parents come home from shopping or from a long commuting ride and a boring job, and say, "Oh, I had a terrible day. Let's have a drink." It's all so, well, transparent, so the children rush back to the television set for their third parent's more with-it news.

BY TELEVISION, "THE

ICAL COMMERCIAL SHAM

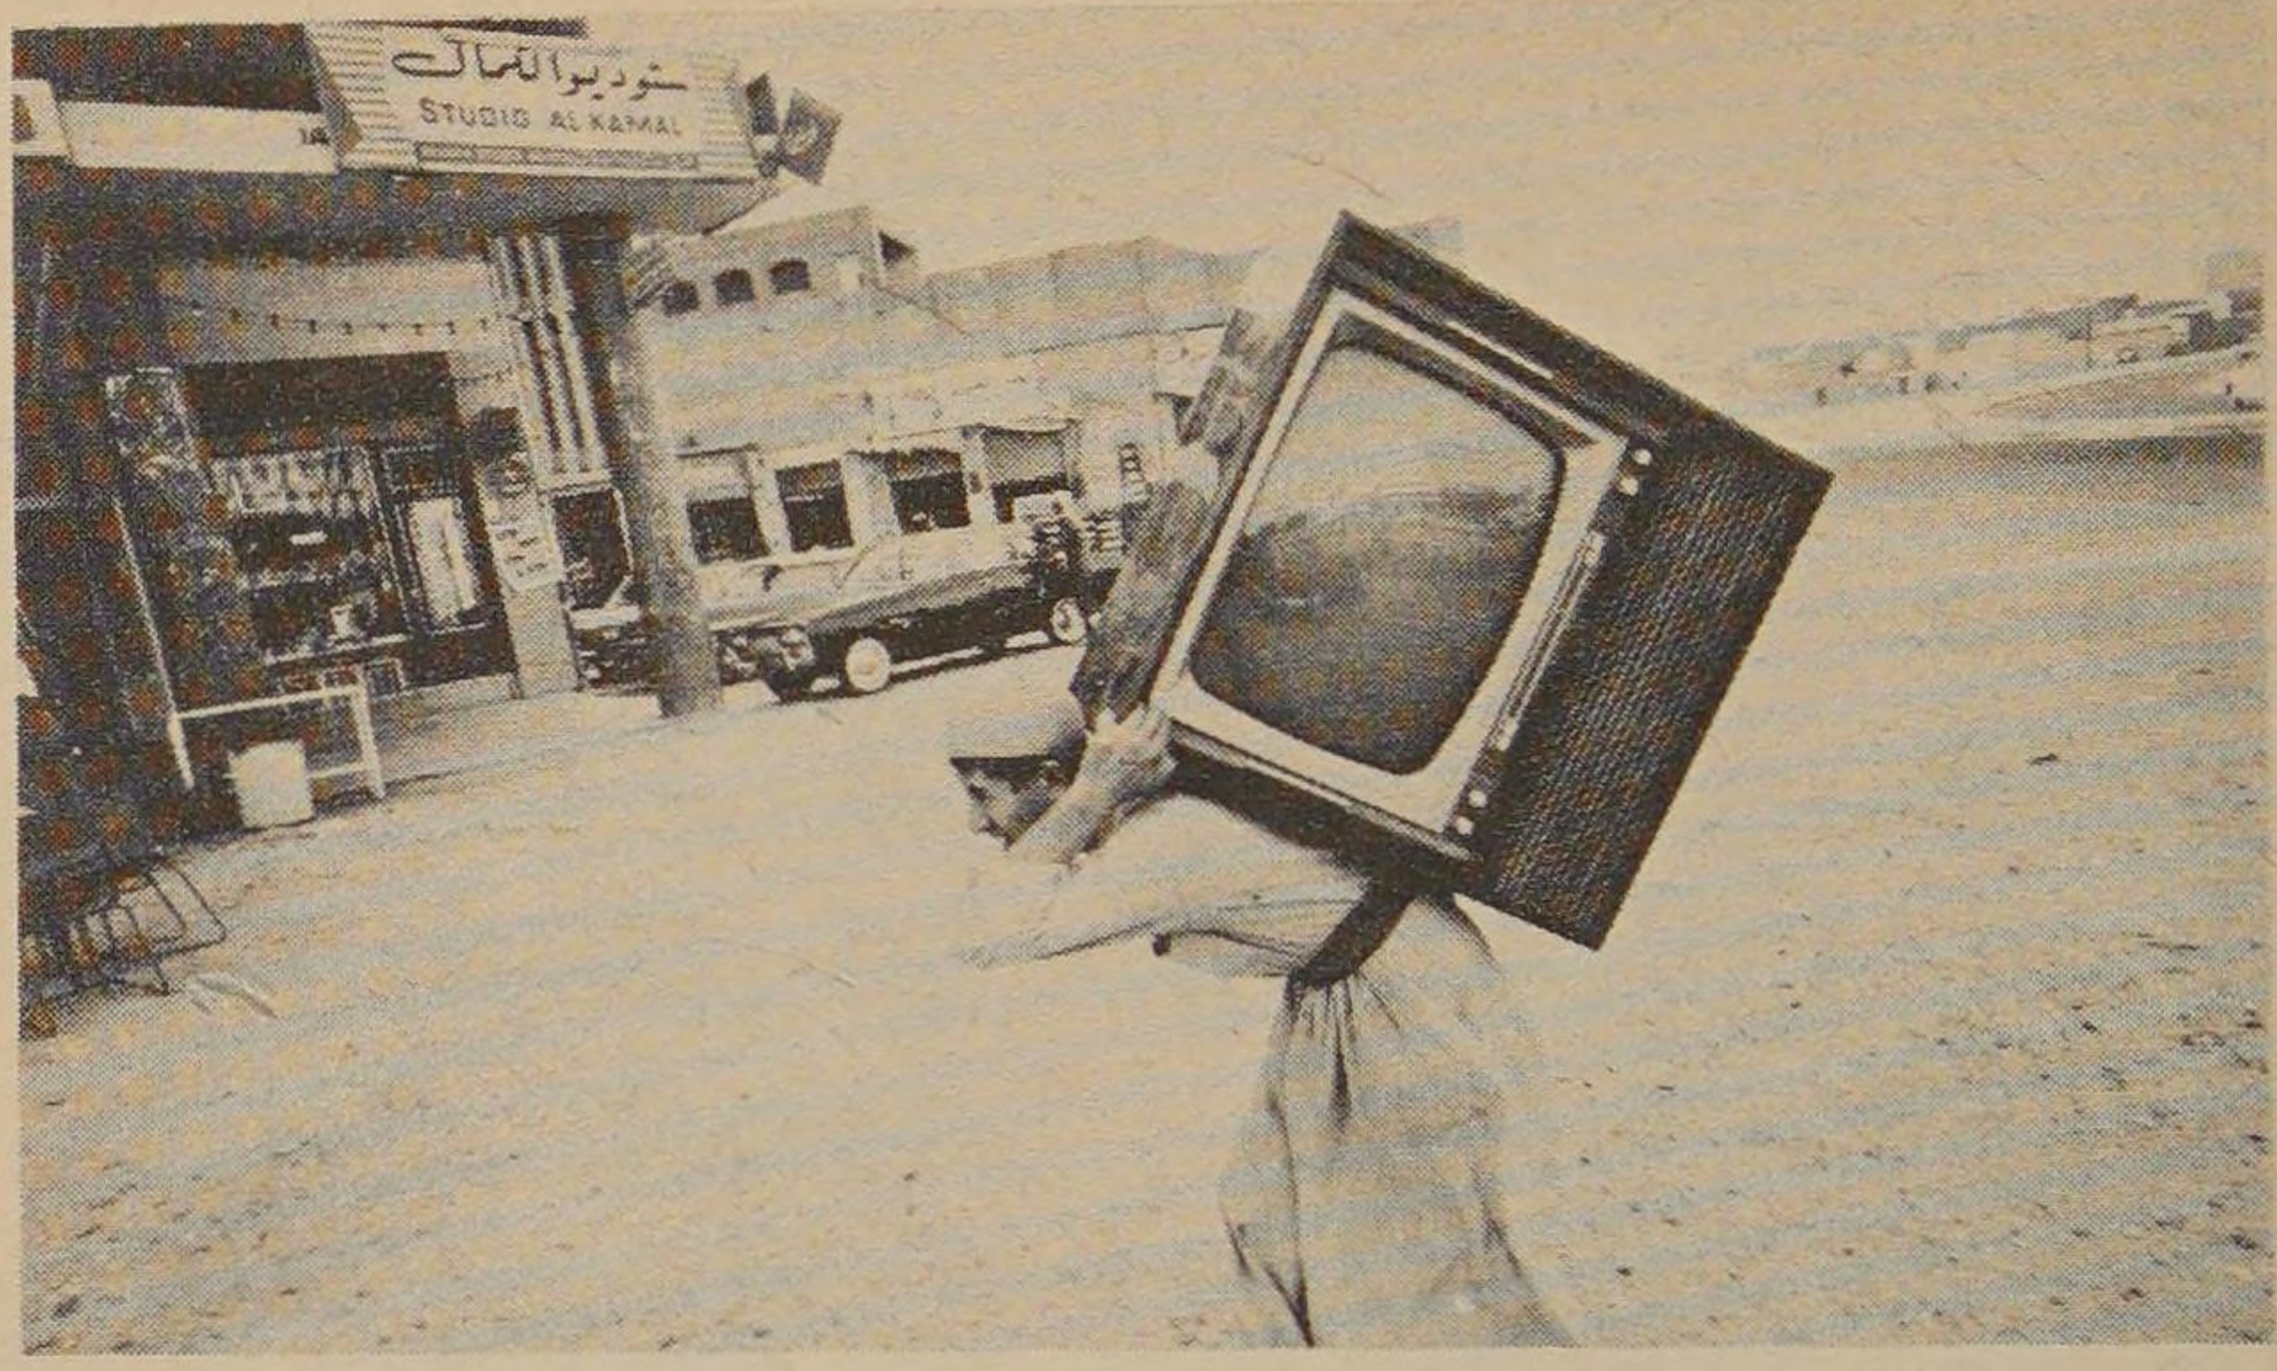

People are betting on peace, not war. In the past, stock market prices always rose during wartime. During the U.S.-U.S.S.R. confrontation of 1962 and the Vietnam war, however, the U.S. economy suffered, rather than benefited, from international crises.

41 B

"You see one redwood tree you've seen them all."

—Ronald Reagan.

It is estimated that 1800 thunderstorms are in progress over the earth's surface at any given moment and that lightning strikes the earth 100 times every second.

THIRD PARENT," THIN

NEXORABILITY. POLIT

"They're all senile, and they really dig us. When we built a mock-up of a bi-plane, they all thought it was World War One again and that we were going to take them for a ride."—Hippies living next to an old-age nurs-ing home in New Jersey.

Life magazine esti-mates that the aver-age college student sees 20 movies to every book he reads.

News reporters found a new kind of student attitude at Berkeley in 1965. The protesting students, whose average age was 20, were not inspired by loyalty to their families, colleges, or home towns. But they had not lost their idealism. They felt that it was immoral to be chauvinistic and patriotic. They were interested in the whole world and in the welfare of all humanity.

"The greatest poem ever known
Is one all poets have outgrown
The poetry, innate, untold,
Of being only four years old...."
—CHRISTOPHER MORLEY.

"I scoff at all national flags."

—Daniel Cohn-*Bonditt*.

"We are fighting for ideological survival. Our ideas will overcome your ideas. We are going to cut the country's whole value system to shreds."

—*Young Sioux, at civil rights fund-raising banquet.*

ORLD. THEY THINK DE

ES WITH ACCELERATIN

Labor insisted on higher wages. When industry fell into line, mass-purchasing power led to mass production. Capital gains.

On three occasions, Mayor Lindsay picked up wastepaper out of the gutter and gave it to aides to dispose of in litter baskets. The third time he picked up a piece of paper he gave it to an aide, who passed it to another person. That person, in turn, passed it to still another until the paper had gone through four or five hands. Eventually it reached a small boy, who threw it back onto the street.—*As reported by The New York Times.*

"VIOLENCE is a

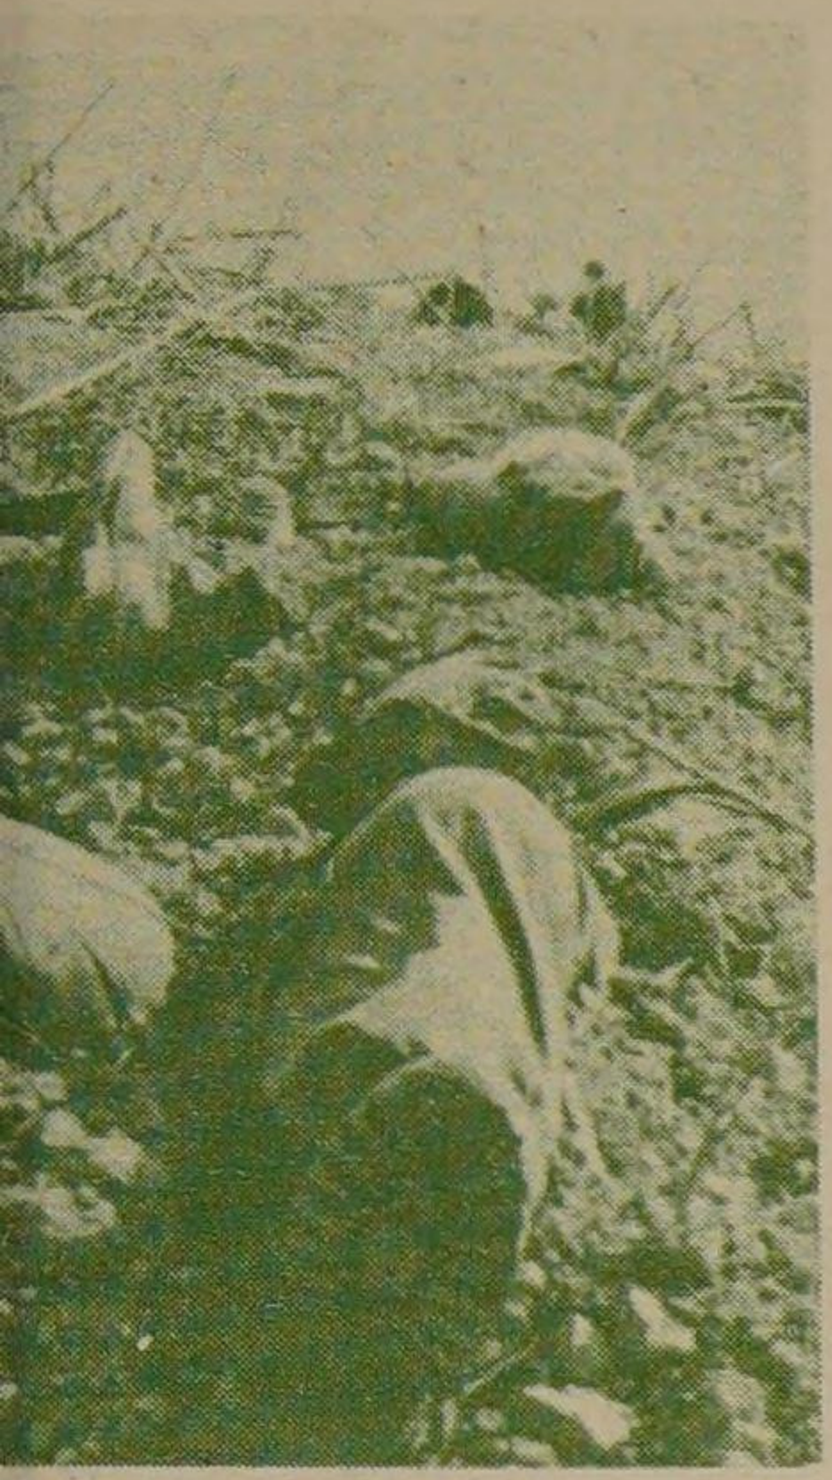

cleansing force. It frees the native from his inferiority complex."—*Frantz Fanon.*

POLICE
DEPARTMENT

"SAIGON GENERAL spurns 5-day, 8-hour war."

THIS IS THE ARMY, MR. JONES! In early '70 (1970), off-duty GIs were clandestinely publishing anti-war newspapers. Many stationed at Fort Carson, near Colorado Springs, were wearing wigs to hide their "whitewall" haircuts so that local girls would not know that they were soldiers.

Woman Student, 104, To Be Honored in Texas

Asked how she was helping her bigwig Republican husband in his political campaign against an Italian restaurant owner, Mrs. Margot Hahn, of Washington, D.C., said, "I've given up pizza."

WIN TOMORROW'S BATTL
MAND JUSTICE FOR ALL

Amitai Etzioni, Columbia University.

Because 55 to 65 per cent of parents prefer male children to female children, a pill controlling the sex of offspring would very likely affect most aspects of social life, including the two-party system. Men vote systematically and significantly more Democratic than women, notes Professor

Ocean.
1961: Russian orbits Earth in rocket capsule.
1962: DNA discovered.

1945: The atomic bomb.
1949: Giant transistorized computers begin commercial operation.
1954: Mount Everest scaled.
1955: Polio vaccine discovered.
1957: Sputnik launched.
1957: First civilian nuclear reactor begins operation.
1958: Atomic-powered submarine travels under North Pole.
1959: Soviet Union makes first photograph of back side of moon.
1960: Bathyscaphe photographs bottom of deepest hole in Pacific

World youth is realizing that its desire for the betterment of all mankind can never be effected by politics, which is inherently divisive and biased. Politics, to be effective, must eventually make war. Youth is realizing that betterment might come only from a design-science revolution. This revolution would upgrade the performance per resource, providing all humanity with an ascending standard of living.

"We want everything you have and everything you hope to have."

—Floyd McKissick, national director, C.O.R.E.

"Bobby and Betty pursue their insipid goal of a ride in the district garbage truck with good old crotchety Mr. Jones, while the deathless ride of Paul Revere goes unwept, unhonored, unsung. It is interesting and significant, I think, that education has deliberately debunked the hero to make room for the jerk."

—Max Rafferty, Superintendent of Schools, California.

HUMANITY, WITH NO EX

CTUAL INTEGRITY WILL

Industrialization, not socialism, produced Russia. Industrialization is compatible with all political systems.

"My speeches have an immediate purpose. They are not intended as timeless documents. I have never confronted myself with questions on posterity." *—Everett Dirksen.*

"They wanted to go off somewhere neither of them has ever been. I wish I were going with them."—Mrs. Lewis Douglas, on marriage, in 1968, of only daughter, Charmin' Sharman, Vassar '51.

"EDUCATORS TOLD to face new ideas"

"July 4" would be celebrated on July 3 if there had been typewriters in those days.

"Give me librium or give me meth."
—The Boys in the Band.

Young people have few loyalties. They see no reason to be biased, to be for or against. Because they are nationally unbiased, the students are engaging in the most powerful and constructive revolution in all history.

CEPTIONS. THEIRS WIL

R EMOTIONS.) INTELL

"You read a poem about green grass, trees, snow, salt spray blowing up against a beach. Well, when we think of a beach we think of chicken bones, broken glass, beer cans. We think of the only beach we know, which is probably Coney Island. And the teacher, who's a middle-class white, says you've misinterpreted the poem."

—Negro student, Rutgers University.

Jesse still believes Buster Keaton was the General.

With the railroad, the land became an extension of the ocean.

Our major technological research and development programs are financed by the government. We, in effect, are living in a partially socialized system.

Oi! Many a shaft,
at random sent,
Finds mark the archer
little meant!

"We show part of our 25-hour movie and we speak to the kids. We tell them we don't believe in goals. We don't believe in art. Everything is art. I'm nude because Andy says seeing me nude sells tickets. It's hard to believe that. I look like a parody."

—Viva.

L BE THE MOST POWERF

"We're out to build an electric Tibet."

Domed cities can be illuminated by daylight without direct sun. That part of the dome through which the sun doesn't shine directly would be transparent. In summer, the dome would be protected by polarized glass; during the sunny hours, it would not hold heat. In winter, the sun would penetrate the dome.

The domed city will be not only practical, but pretty. Covered streets—like the delightful arcaded Italian variety—will have outdoor restaurants and exhibits. Windows may be open year-round. Gardens will bloom year-round. There'll be a dust-free atmosphere. The domed city will indeed be nothing to sneeze at.

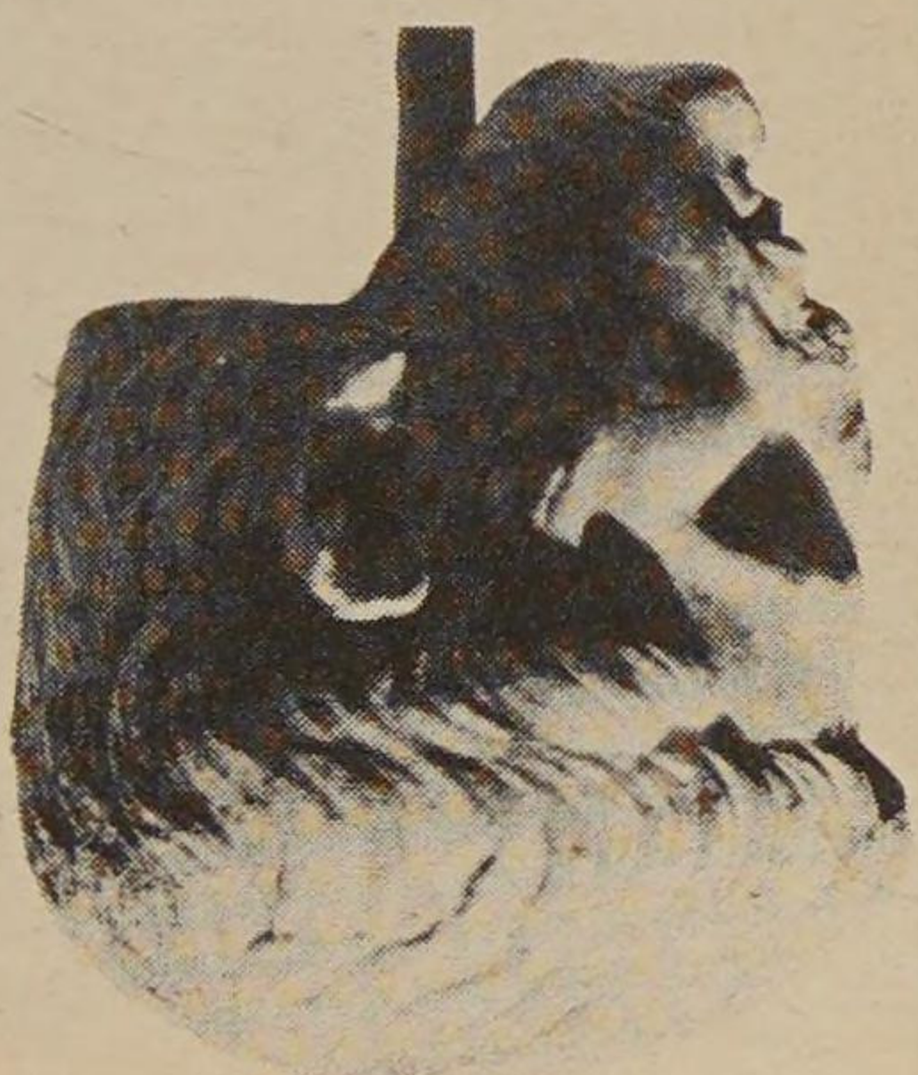

"That's fine. But what are they going to SAY?"— *George Bernard Shaw on learning that England and India had been joined by cable.*

FROM ANYWHERE AROUND

LUTION IN HISTORY. E

—President Johnson.

"Teen-agers who want to change the world should not turn off or drop out, but should butt into politics and change the world from within. When you young people speak up—people around here sit up. You won't see anyone wearing a hearing aid in the White House."

Students will discover that world industrialization is an evolutionary transformation—as fundamental as that of caterpillars into beautiful butterflies.

"It is perhaps natural that a Saudi woman in Beirut would wish to dress like other women. But what is one to think when she discards her veils and puts on a miniskirt as soon as the plane leaves the ground?" — *Commentator on new social habits in Arab countries.*

"Here's where we teach Confidence."

—Charm school hostess.

Spaceship Earth is fueled by a radiation power plant, the Sun. Because the universe is entropic, Earth's evolution is ineluctable.

"Why should they try to separate us so? We should all just smell well and enjoy ourselves more."—CARY GRANT, discussing cosmetics as means of unifying the sexes.

EARTH IS A VERY SMALL
IN ONE ANOTHER'S EAR

A "laser-listener" can convert an ordinary window into a microphone whose messages can be picked up as far as the window can be seen. Sound waves inside a room produce minute vibrations in window-glass. If a beam of very pure light from a laser is reflected from the window, which can be done easily without anyone inside the room knowing, it will pick up the vibrations. A receiver turns the vibrations back into speech. Only double windows defeat the laser-listener.

...do you, *Mister Jones?*

"My God! What is there in this place that a man should ever want to get into it."

—James A. Garfield, on the presidency.

"The insane asylum is occupied."—*Banner hung by medical students protesting inadequate aid to mentally ill in Parma asylum.*

For millenia, the average man traveled 30,000 miles. Today, the average man travels 3,000,000 miles. As the ecological revolution continues, man may some day travel 3,000,000,000,000 miles.

"This royal throne of kings, this scept'red isle. This earth of majesty, this seat of Mars. This other Eden, demi-paradise,...This blessed plot, this earth, this realm... **this bargain."**

—B.O.A.C. advertising headline.

PACE SHIP. WE ARE A

"This place will not be genius-oriented."

—Summer camp director.

All living things—both plant and animal—are linked in an extraordinarily designed, ecological balance. Man has an essential role to play in this chain of regeneration.

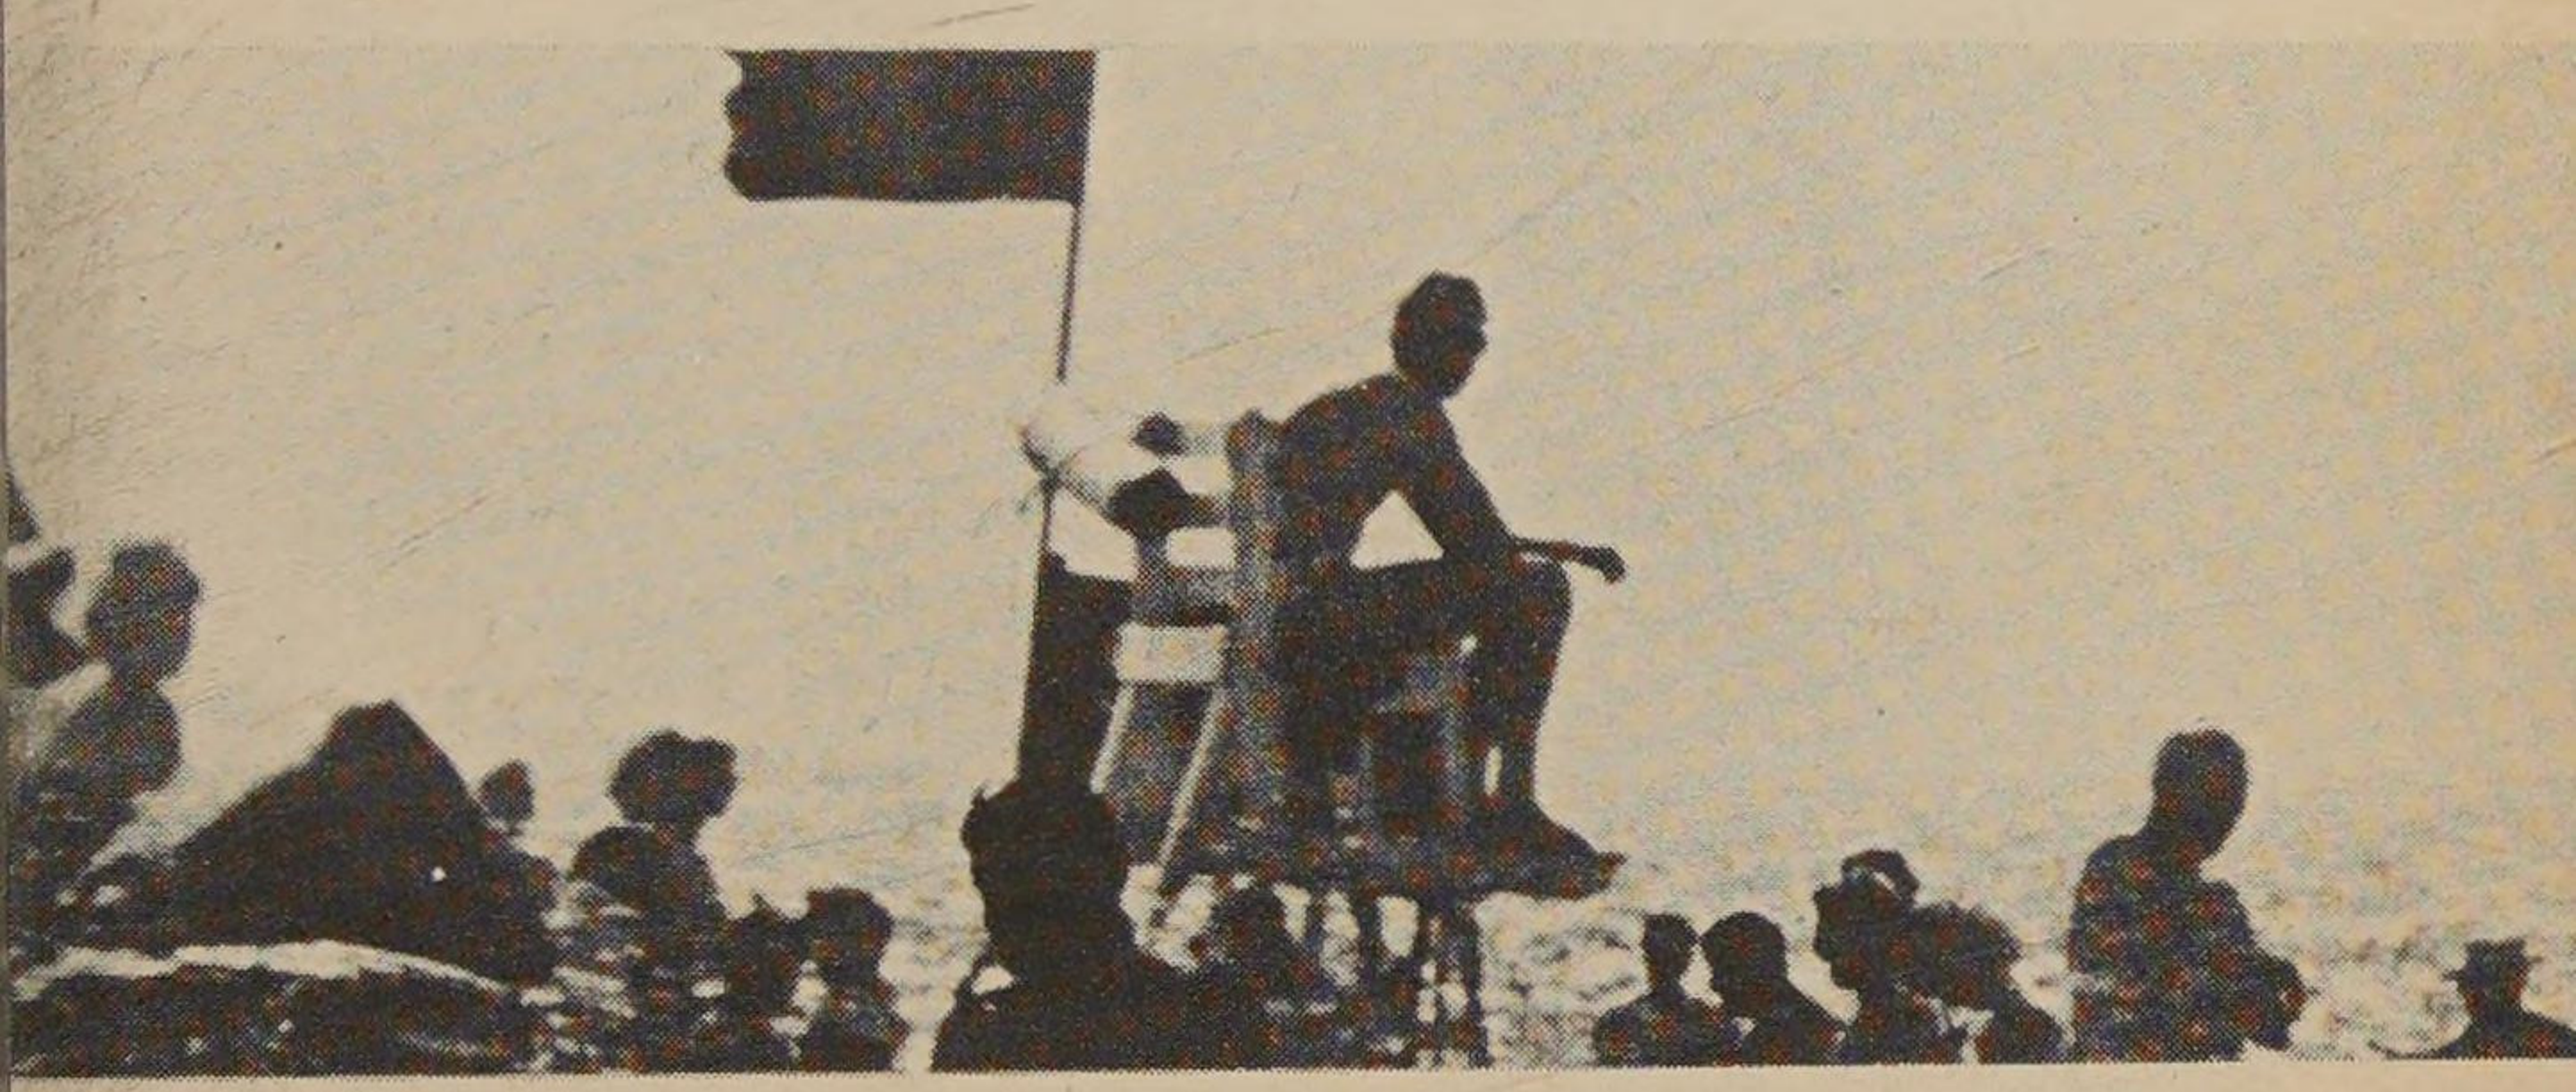

A six-times-the-force-of-gravity ride in an astronaut's centrifuge moved to a less-dangerous spot the bullet in the brain of a wounded restaurant cook in San Jose, Calif.

"It's the only way to fly."

—Hippie.

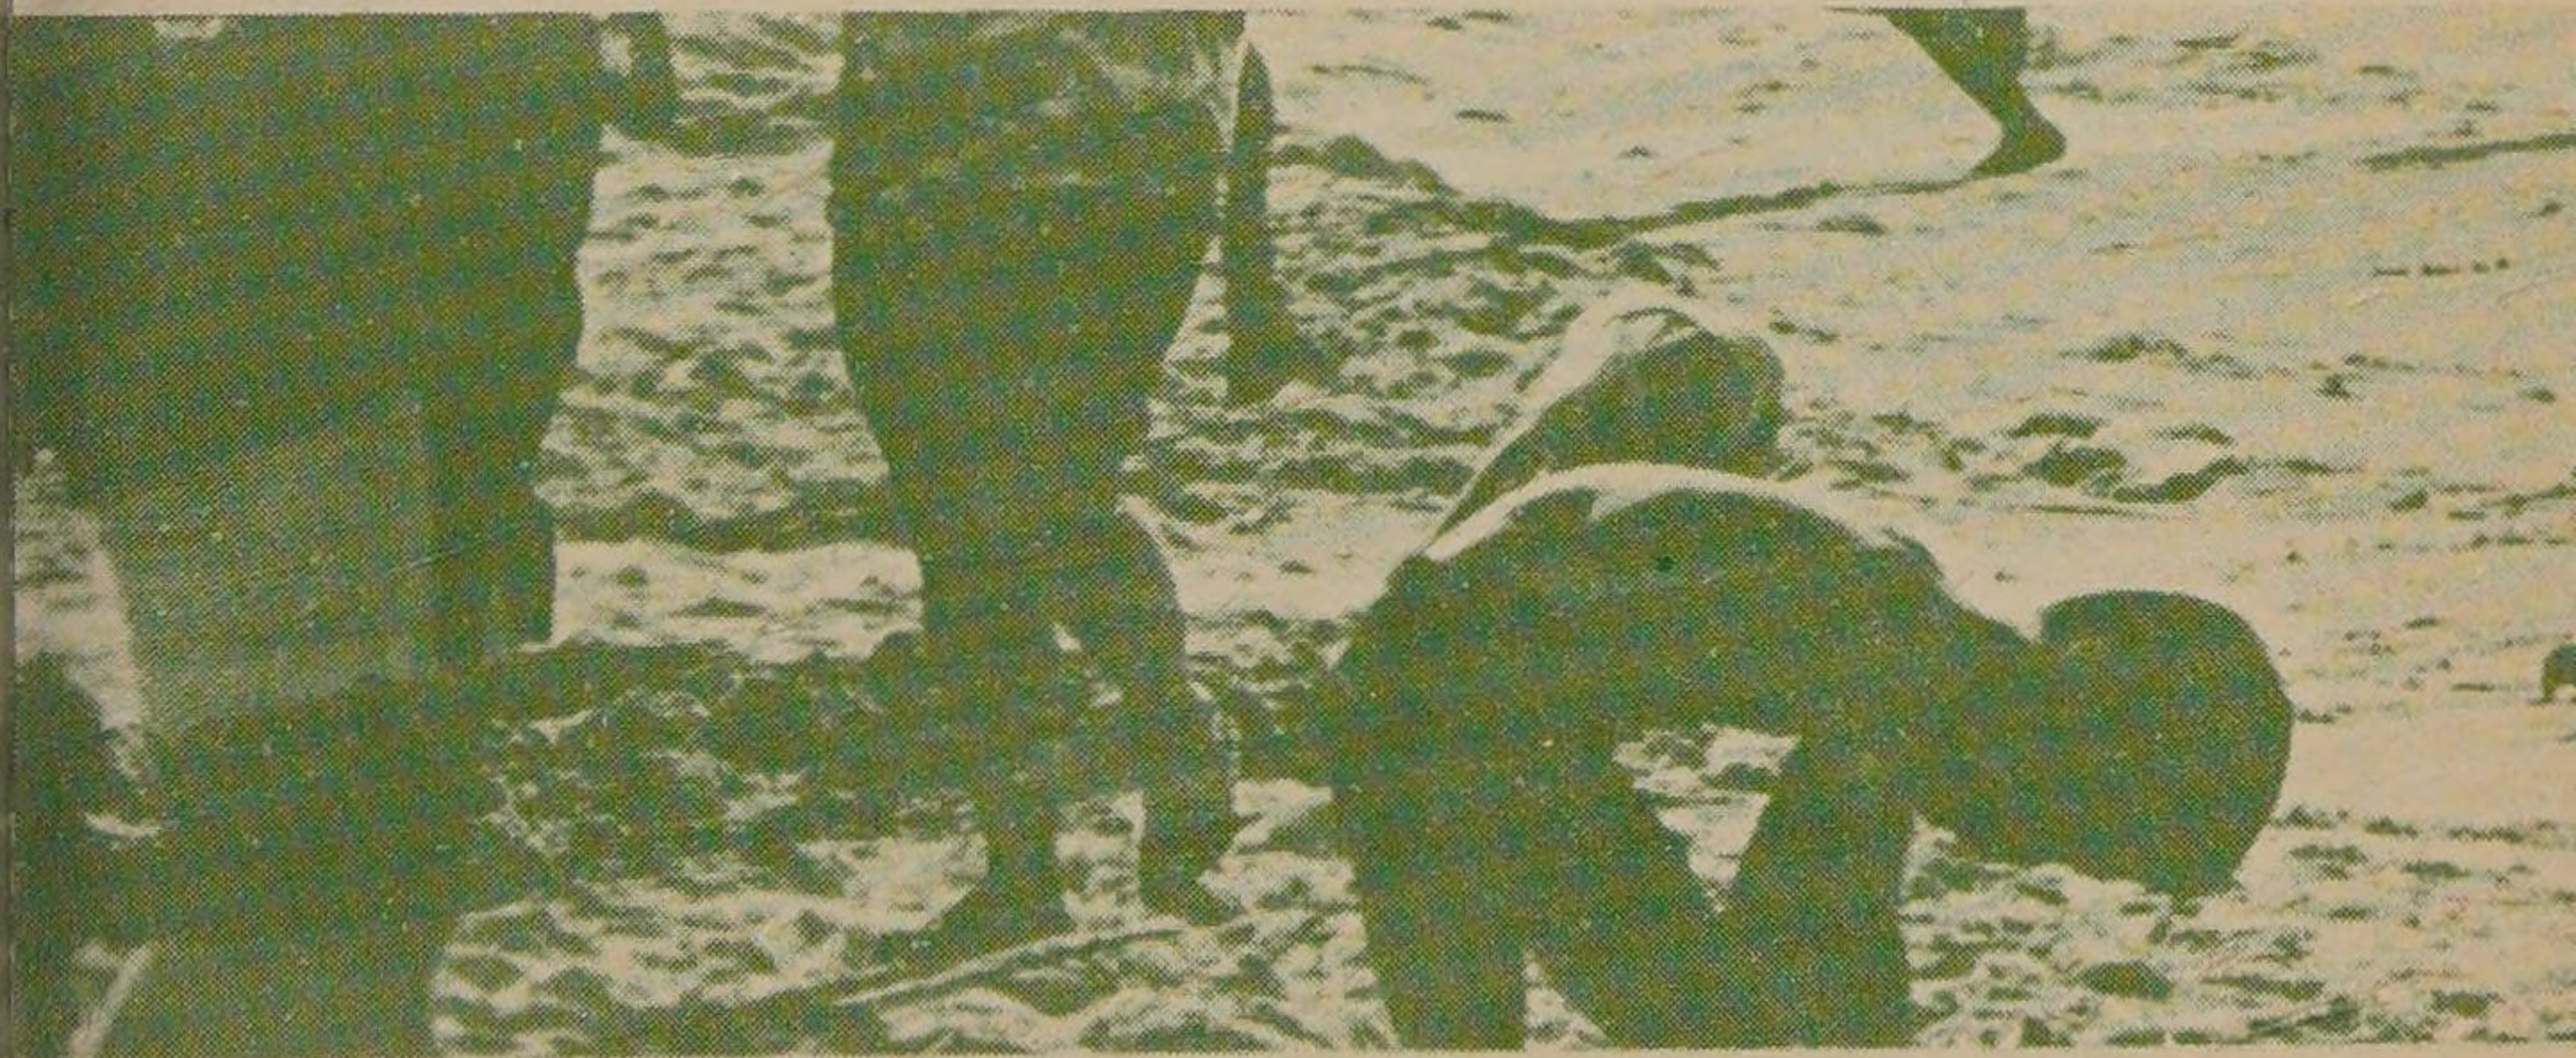

There are approximately a quadrillion times a quadrillion atoms in your brain.

Having to choose between development of weapons and development of environment, governments always give priority to weaponry. Resources and the best minds are channeled into defense rather than into social programs.

HUMAN IS A WHOLE UNI

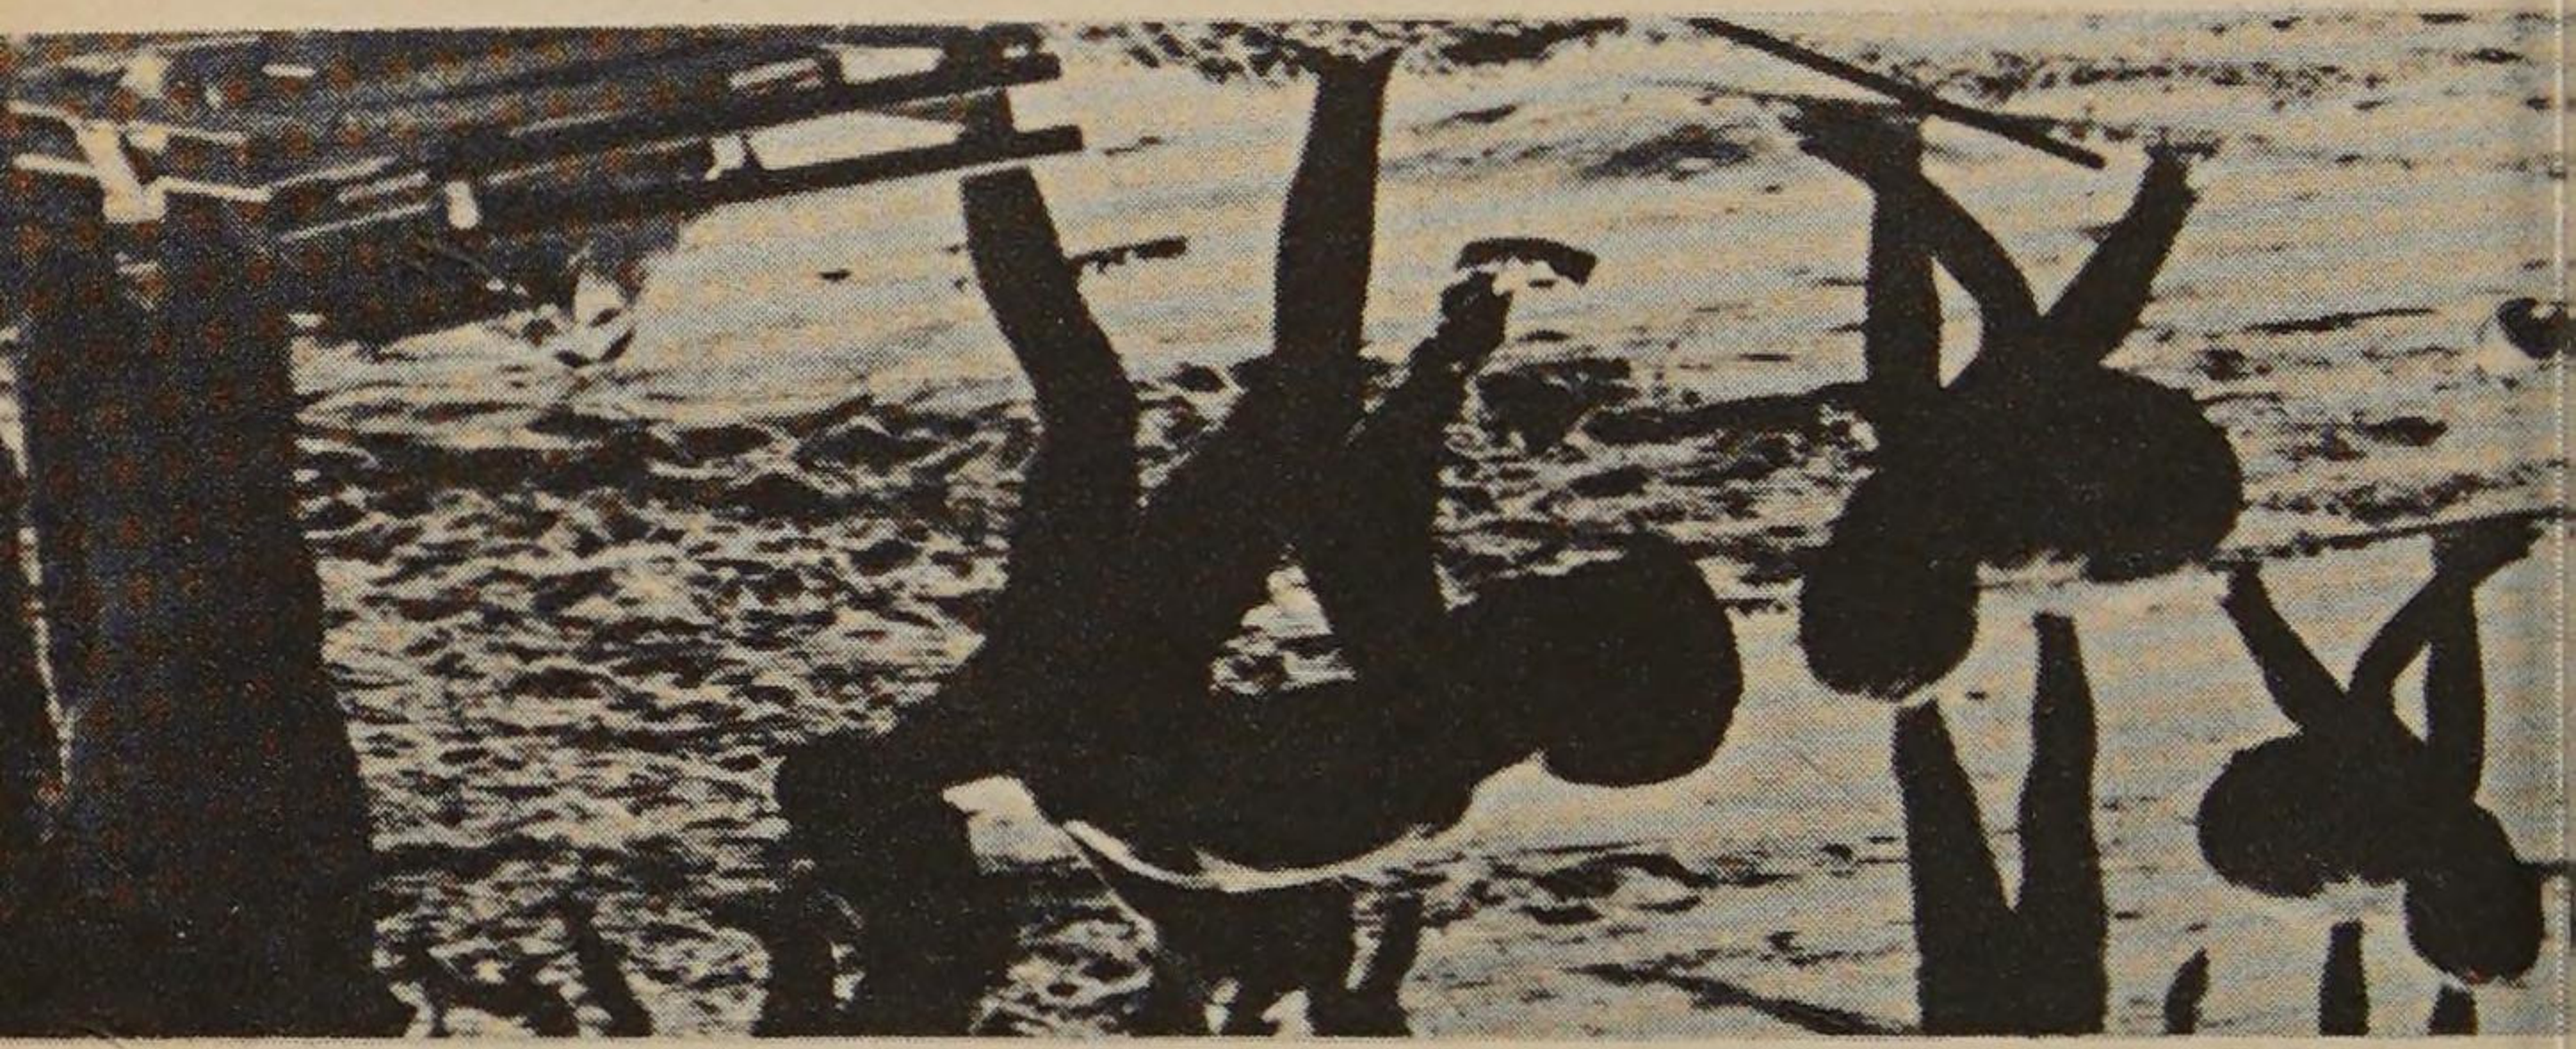

LTIPLIED MILLIONS FO

morose and introspective than people whose names begin with letters between A and R. A state of alphabetic neurosis, which begins at school age, shortens the life of S-to-Z people by about 12 years, said a long-awaited British Medical Association report submitted by *Dr. Trevor Weston.*

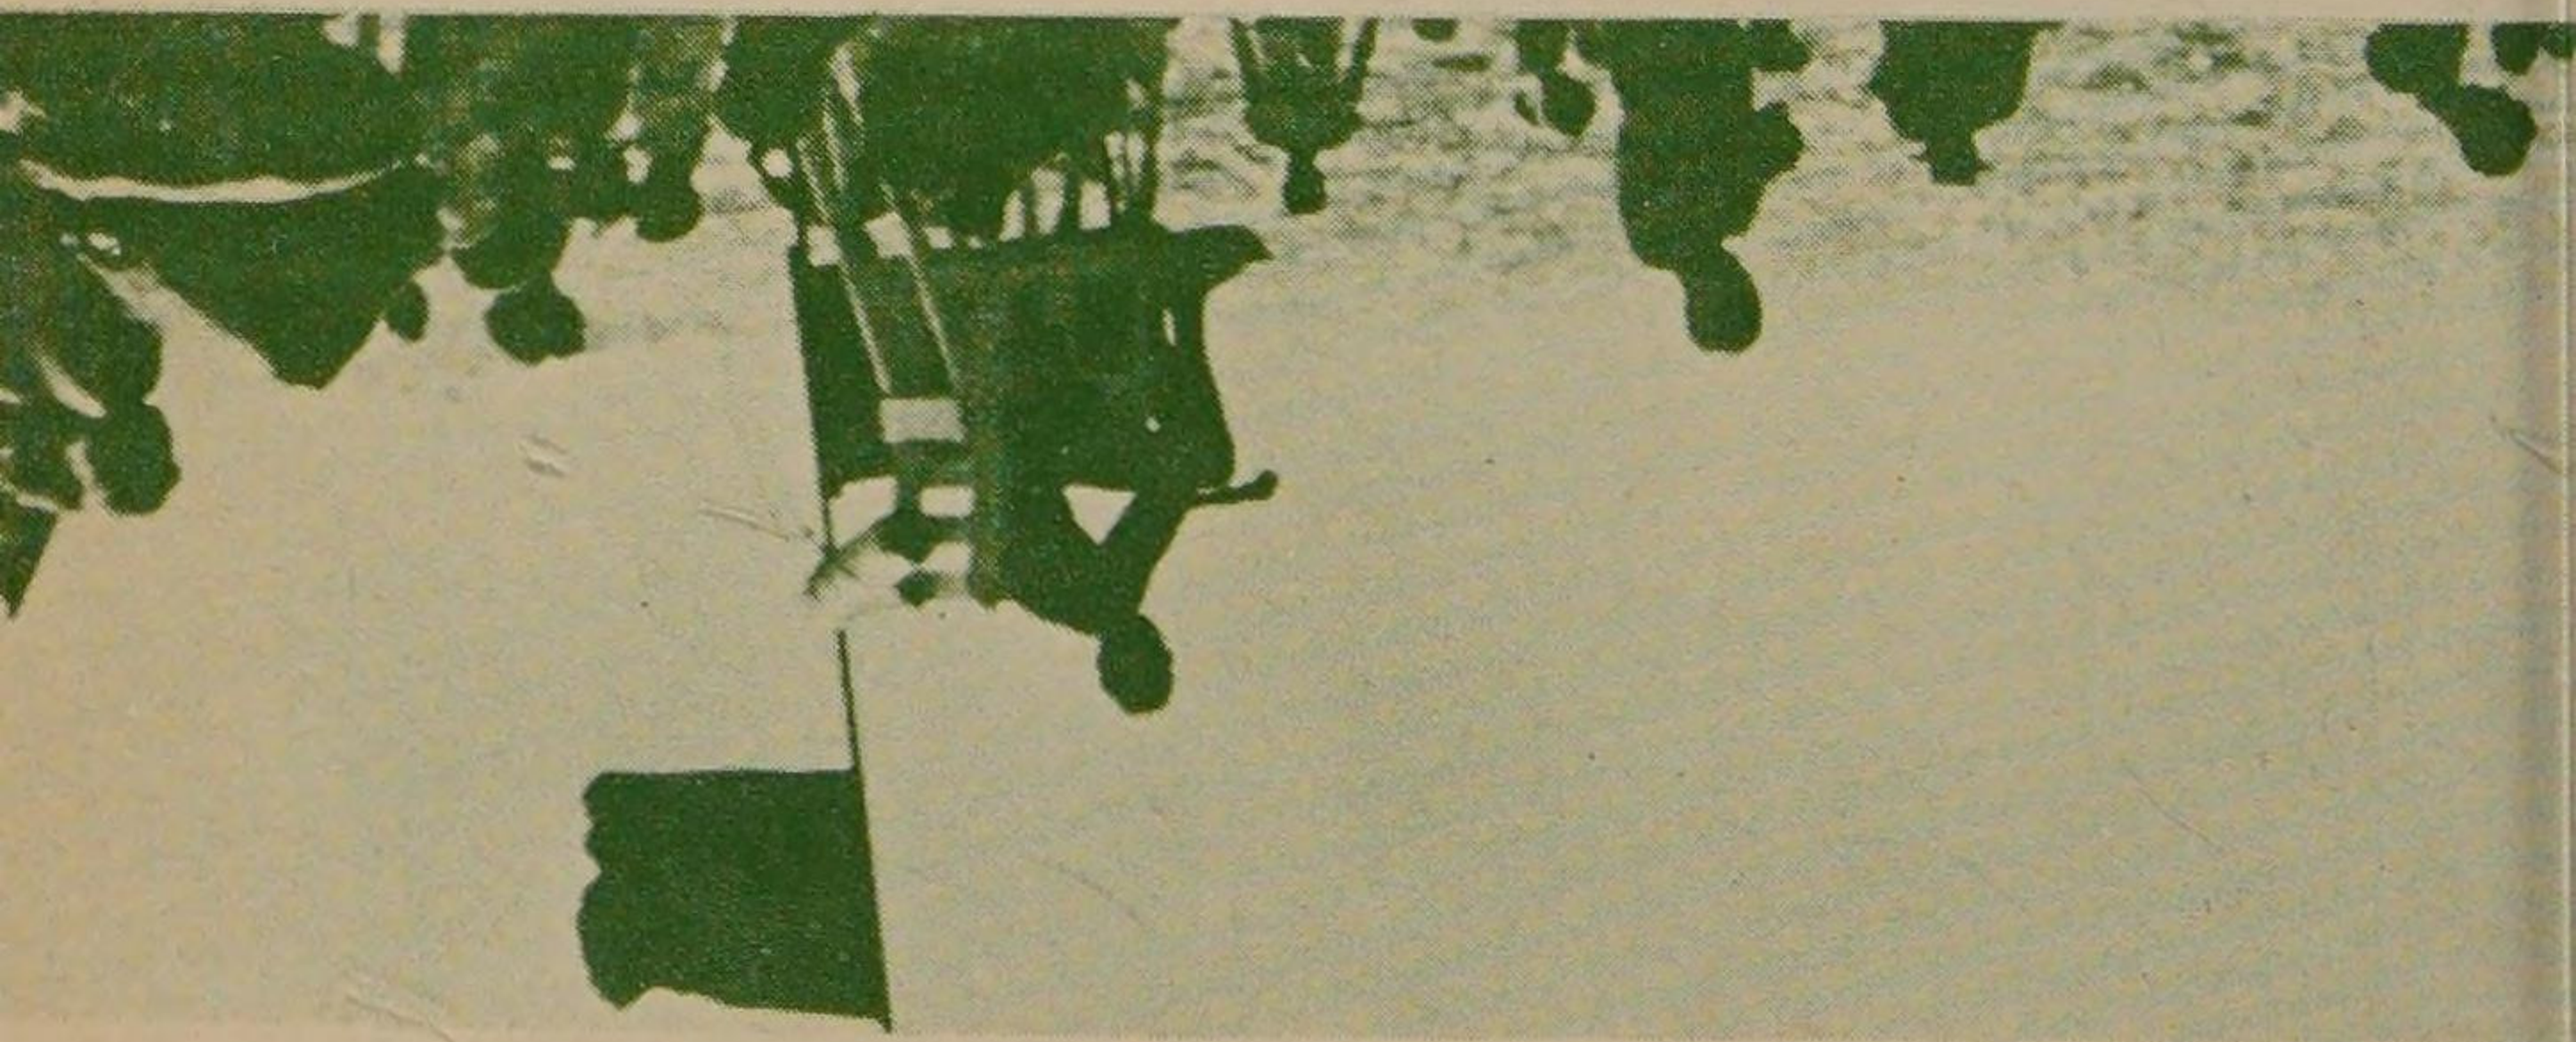

"Don't try to take on a new personality. It doesn't work."
—Advice in 16-page brochure prepared for Republicans making speeches in behalf of their presidential candidate, Richard M. Nixon.

"If you want a youthful figure, ask a woman her age."

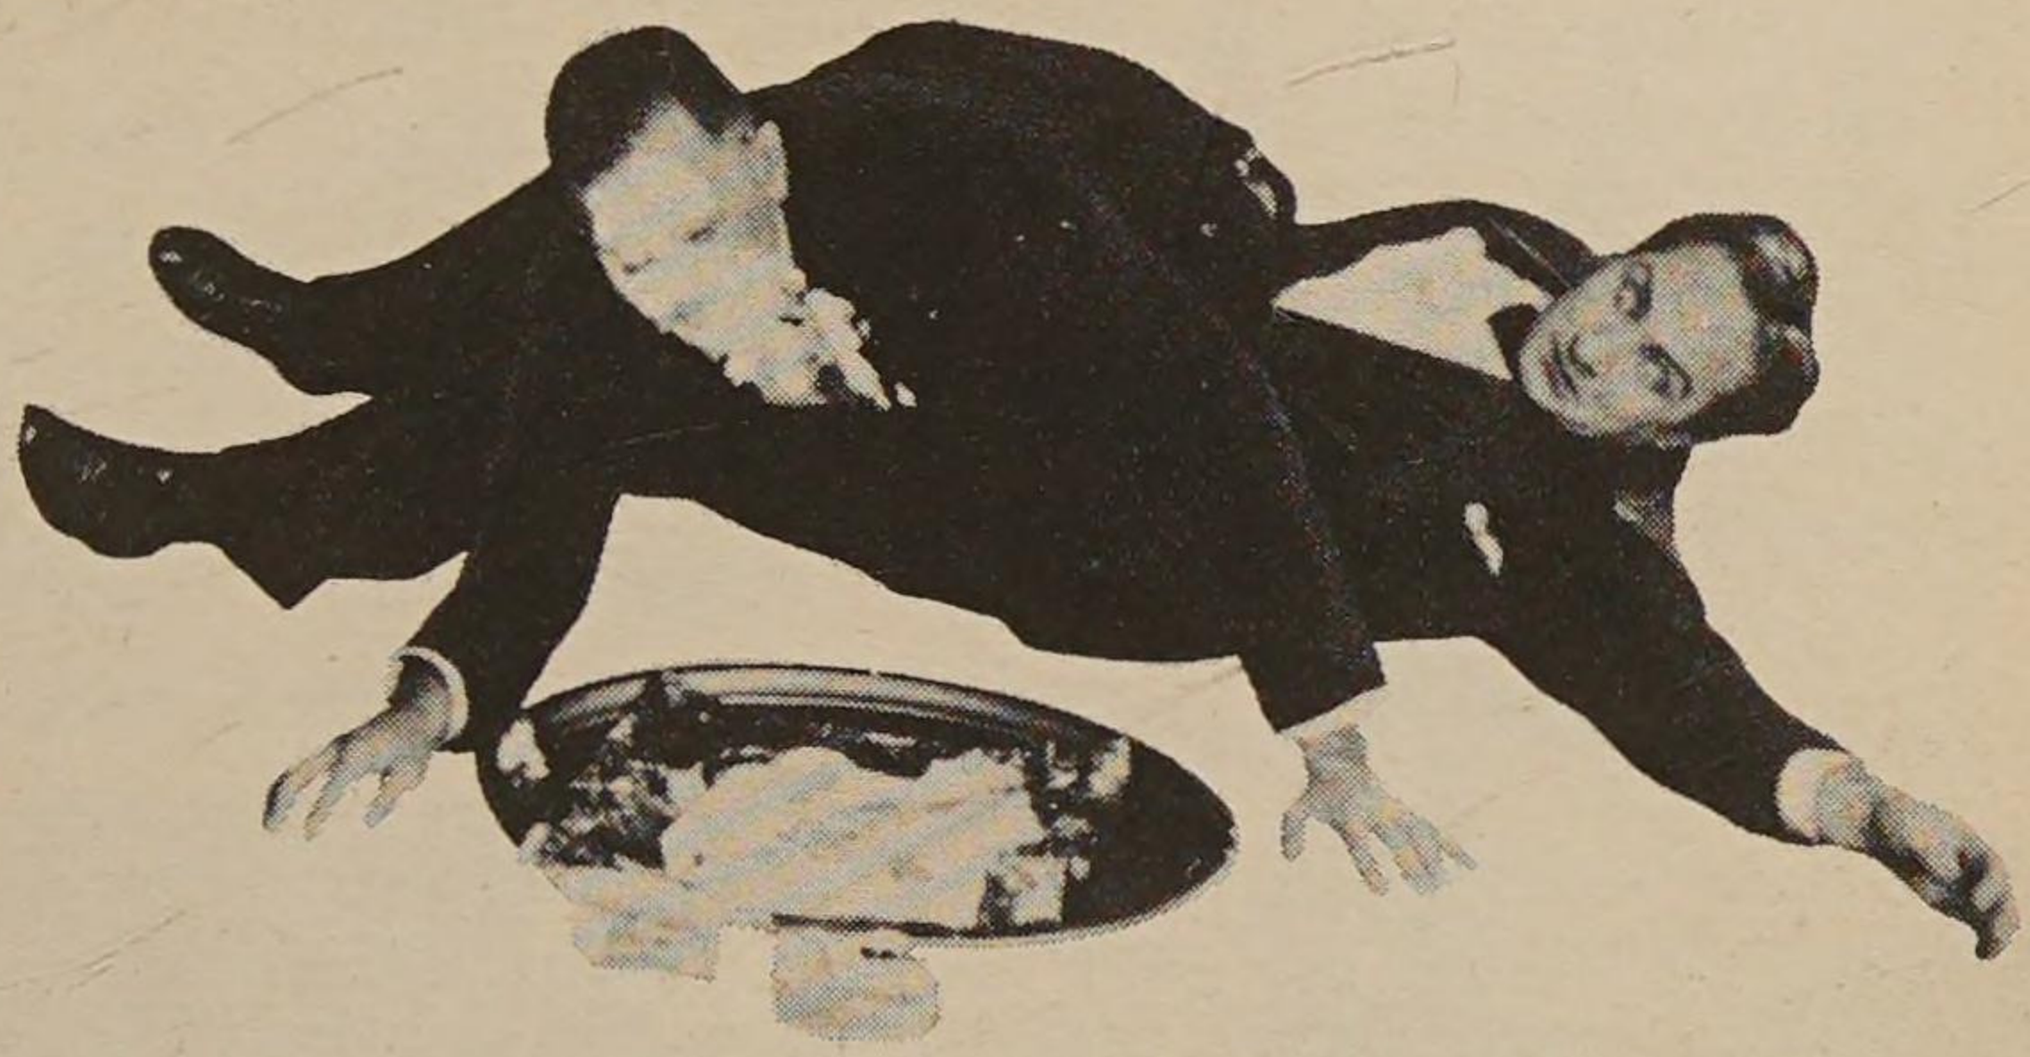

VERSE. WE HAVE 28,00

RVIVAL POTENTIALS MU

If your name is, let us say, "Trevor Weston," you're more apt to get ulcers and circulatory ailments than if you were "Charlie Brown." Waiting for their name to be called and the attendant feeling of always being last on the list make people whose names begin with the letters between S and Z more liable to become

Arms superiority changes hands frequently. What one scientist learns, all scientists eventually learn.

Synthetic sex attractants, rather than chemical warfare, are the biological weapons being developed to lure the black carpet beetle and pine bark beetle to their doom. A fly-by-night scheme?

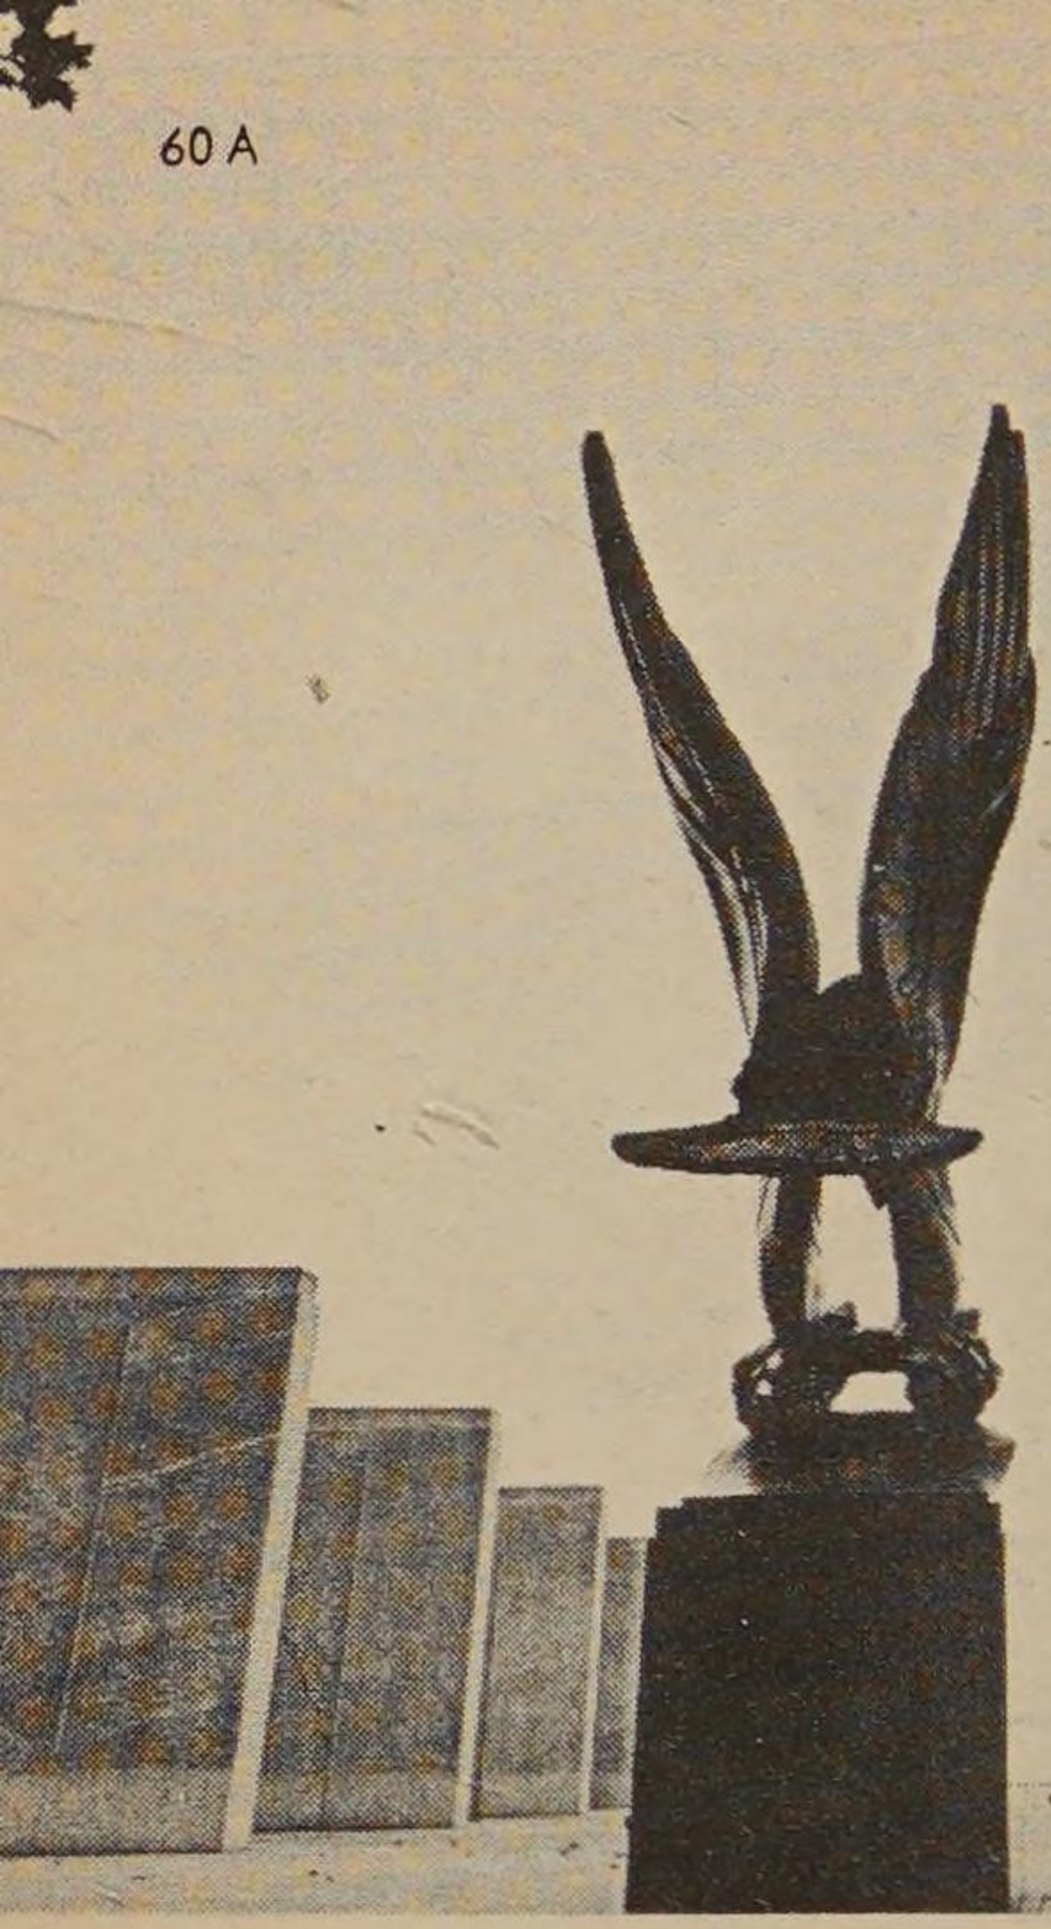

0 POUNDS OF EXPLOSIV

INTELLECT HAS HAD SU

"Most of the crackpot papers that are submitted to the Physical Review are rejected not because it is impossible to understand them, but because it is possible. Those which are impossible to understand are usually published. When the great innovation appears, it will almost certainly be in a muddled, incomplete, and confusing form. To the discoverer himself it will be only half-understood; to everybody else it will be a mystery. For any speculation which does not at first glance look crazy, there is no hope."—*Observation reported by Scientific American.*

A dome over mid-Manhattan—reaching from the Hudson River to the East River, at 42nd Street, and from 22nd Street to 64th Street—would be a hemisphere two miles in diameter and one mile high at its center. The peak of the Empire State Building's television tower would reach only one-third of the distance from the ground to the dome.

The dome would reduce energy losses in winter heating and summer cooling to one eighty-fifth of the present cost. Snow plows would not be needed. Money saved in ten years would pay for the dome.

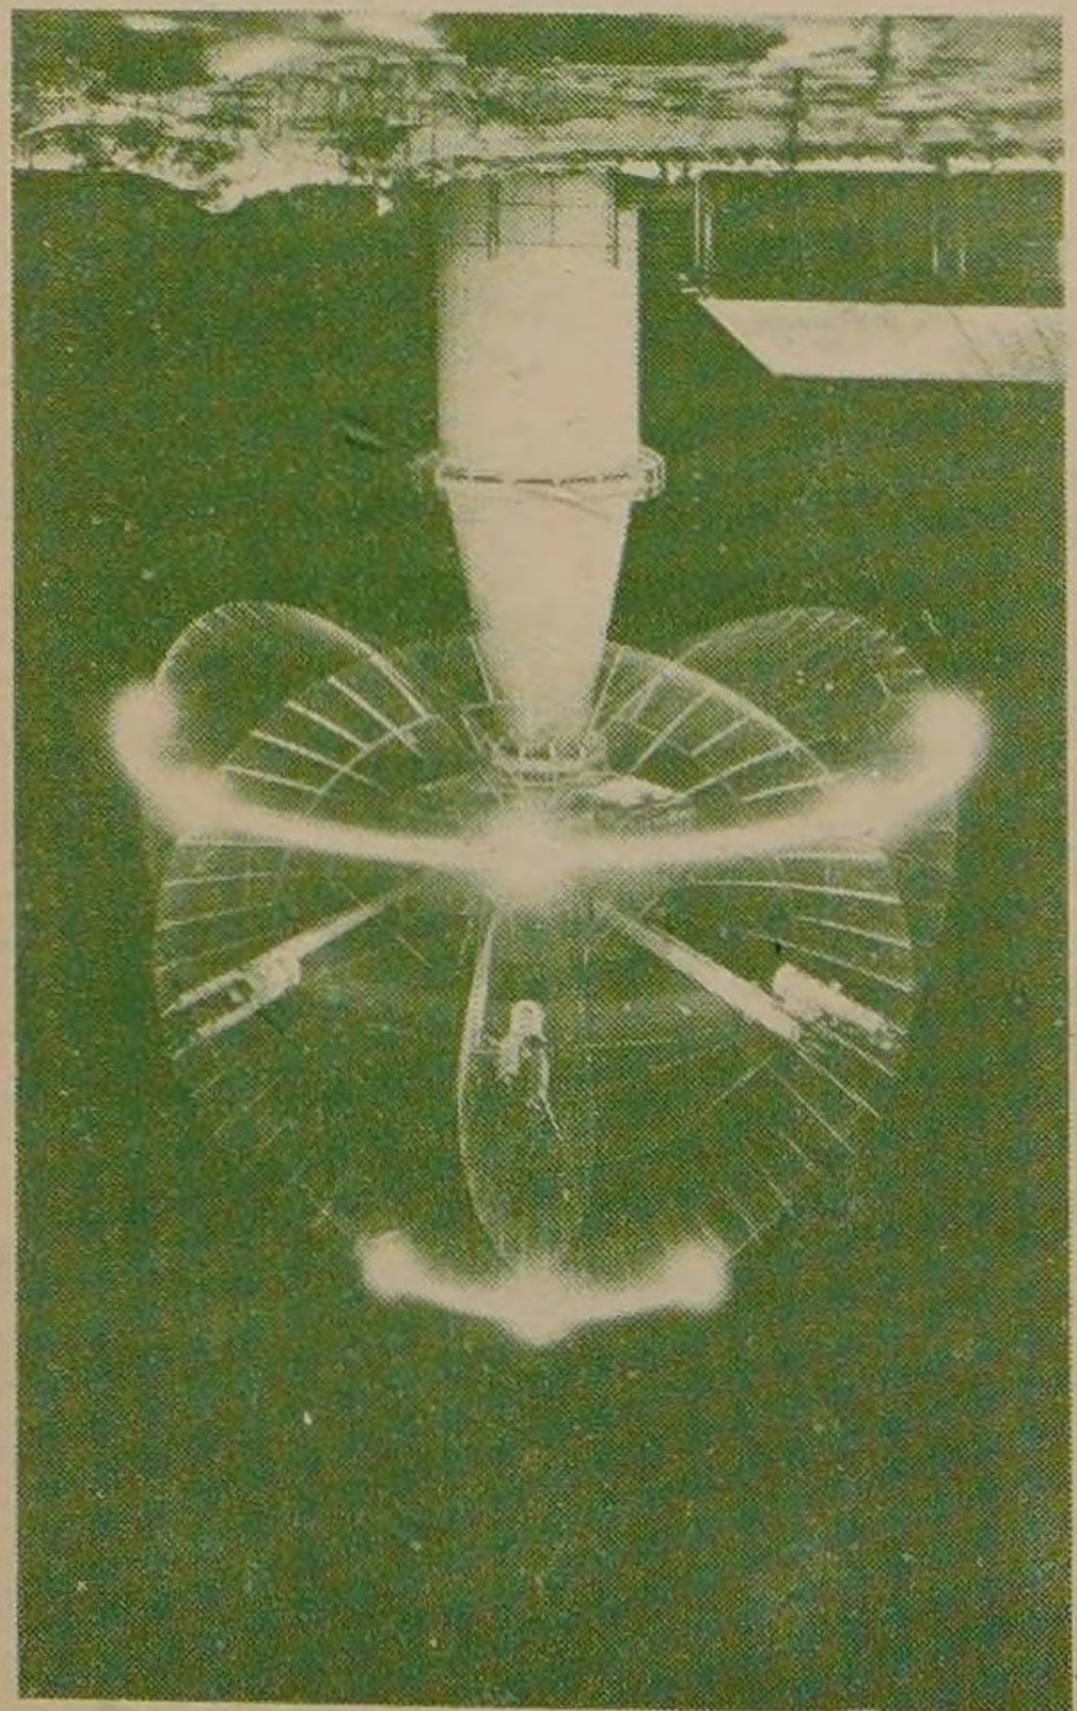

"It's hard just living. You have to fight for hot water and steam in the winter. You have to push to get on the bus, push when you go shopping. But when you're together, you're stronger and everything comes a little easier."

Memorial slabs commemorating World War II dead, New York City.

their uselessness."
—MARSHALL MCLUHAN.

"Most of our assumptions have outlived

"I was a regimental sergeant major in the Second World War and spent three years overseas—but this was the first time I was under fire in this country."—*Parks Department employee after police and sniper engaged in a gun battle in Central Park, in New York City.*

You cannot select a priority without implicitly admitting an anti-priority. Because "the enemy" has always been our priority, the home front (livingry) has been the anti-priority.

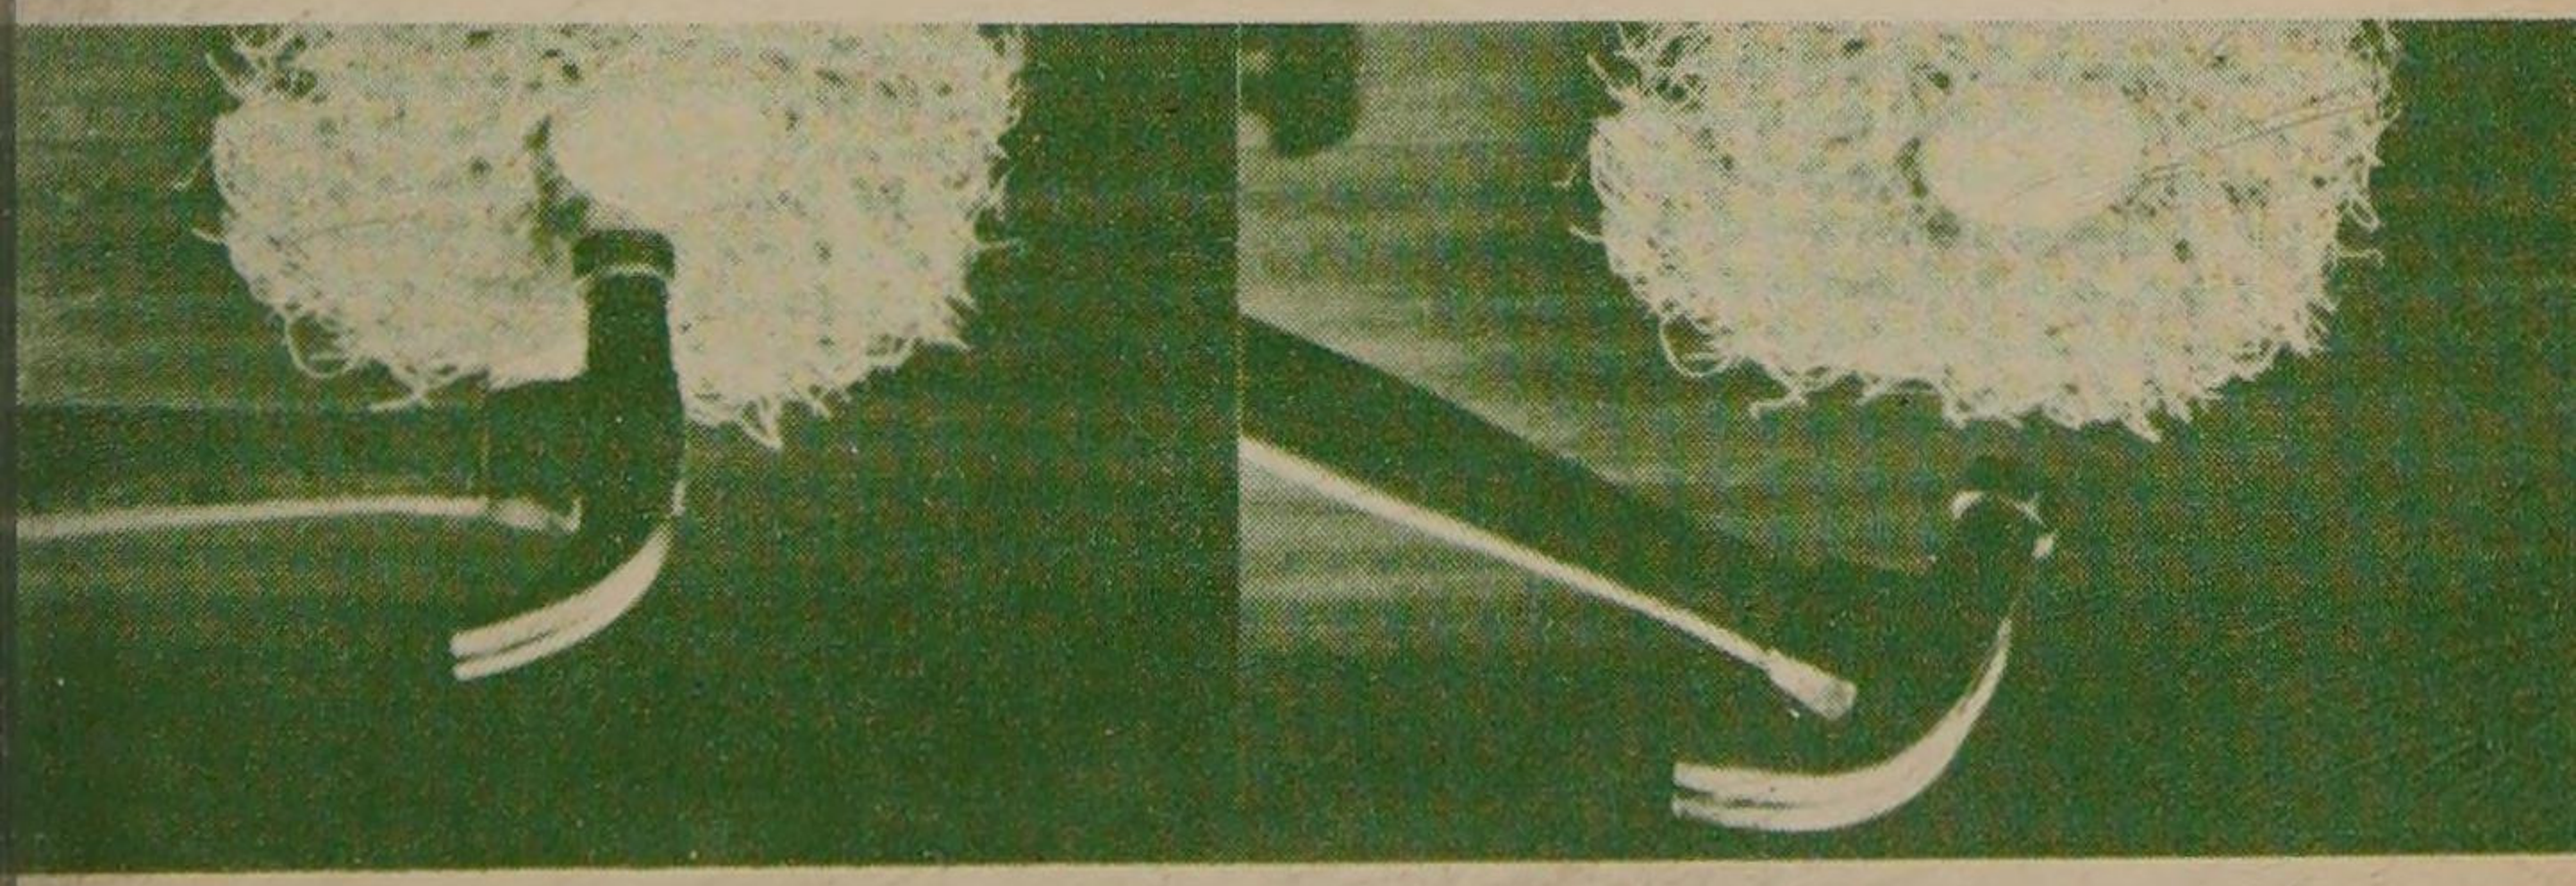

In the last century, man has invested five trillion dollars in the invention and development of 10,000,000 technical items, including the telephone, electric light, radio, television, the airplane, jet and rocket flight, and nuclear reactors—the elimination of virus diseases—the discovery and isolation of sixty additional elements, electrons and nuclear components of the atom—the tripling of human longevity.

Those who suggest that it might all have developed peacefully are as unrealistic as are those who now think that the old patterns can continue without man annihilating man.

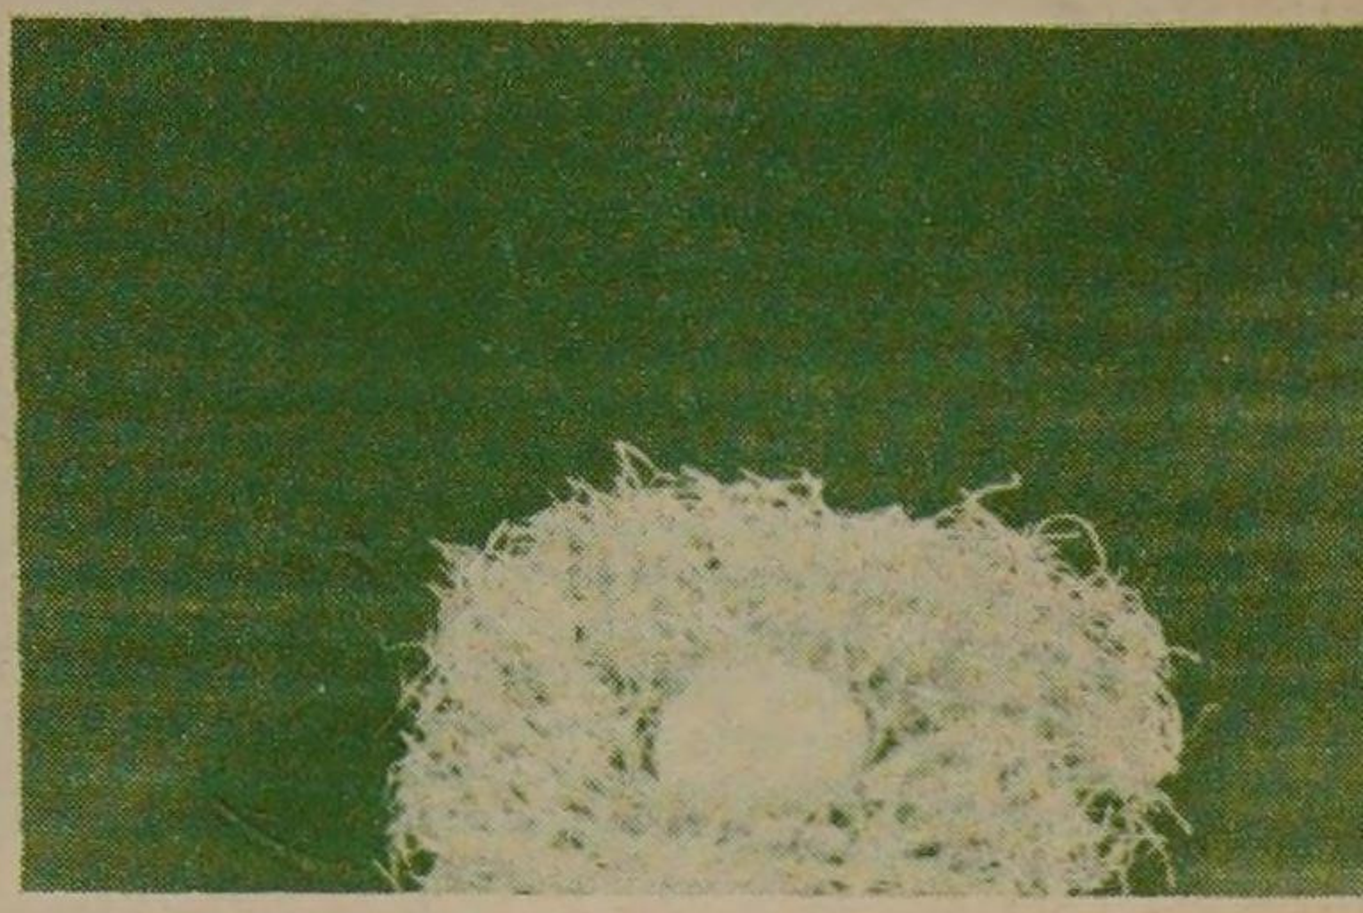

CCORDED PRIORITY OVE

LY NEW RELATIONSHI

"The burning of large quantities of marijuana [in the New Jersey meadows] creates another problem: If the wind is right, we could possibly turn on a large segment of the nearby population."—*New Jersey health department official, commenting on destruction of 20,000 marijuana plants: (Pigeons and canaries seemed to enjoy getting high on marijuana seeds and the canaries were found to sing louder and better.)* —The New York Times.

"Black people must get to know black people. We need to get our drum back."

Thinking is a momentary dismissal of irrelevancies.

There is something patently insane about all the typewriters sleeping with the beautiful plumbing in the beautiful office buildings — and all the people sleeping in the slums.

"It's all changed, it's not the same."—*Bikini islander returning home for the first time since nuclear tests of 22 years before.*

ATION INTO AN ENTIRE
R LIVINGRY. ONLY TWO

hearts.

By 1988, says a federal report, the biggest businesses in the U.S. will be: (1) The manufacture and service of cars, and (2) the manufacture, insertion, and service of artificial

"The Government is spending $450,000,000.00 a year on public relations alone—to tell us how well off we are."—Politician seeking nomination.

Political movements that call for an autocracy of a special viewpoint are doomed to failure as the trend indicates segregation of issues and a recomposed balance of all-time forces. Technocracy failed because it made no allowance for passion, fashion, chance, change, intuition, the mysticism of harmony, and, most important of all, for—"*it happens.*"

5 A

Man?

A self-balancing, 28-jointed adapter-base biped; an electro-chemical reduction-plant, integral with segregated stowages of special energy extracts in storage batteries, for subsequent actuation of thousands of hydraulic and pneumatic pumps, with motors attached; 62,000 miles of capillaries; millions of warning signal, railroad and conveyor systems; crushers and cranes (of which the arms are magnificent 23-jointed affairs with self-surfacing and lubricating systems, and a universally distributed telephone system needing no service for 70 years if well managed); the whole, extraordinarily complex mechanism guided with exquisite precision from a turret in which are located telescopic and micro-scopic self-registering and recording range finders, a spectro-scope, *et cetera,* the turret control being closely allied with an air conditioning intake-and-exhaust, and a main fuel intake.

Within the few cubic inches housing the turret mechanisms, there is room, also, for two sound-wave and sound-direction-finder recording diaphragms, a filing and instant reference system, and an expertly devised analytical laboratory large enough not only to contain minute records of every last and continual event of up to 70 years' experience, or more, but to extend, by computation and abstract fabrication, this experience with relative accuracy into all corners of the observed universe. There is, also, a forecasting and tactical plotting department for the reduction of future possibilities and probabilities to generally successful specific choice.

Finally, the whole structure is not only directly and simply mobile on land and in water, but, indirectly and by exquisite precision of complexity, mobile in air, and, even in the intangible, mathematically sensed electrical "world," by means of the extension of the primary integral mechanism to secondary mechanical compositions of its own devising, operable either by a direct mechanical hook-up with the device, or by indirect control through wired or wire-less electrical impulses.

"A man," indeed! Dismissed with the appellation "Mr. Jones"!

"Knowing what it was all about" —
that there was not enough to
go around, according to Malthus —
separated the

LTERNATIVES -- UTOP

AL WAVE OF TRANSFOR

"If these kids don't make it, neither will you."

—Advertising headline.

With our present, large vocabulary inheritance, we squander meanings on unworthy causes and communicate little that needs to be said. "Shazam." "Now, off with these clothes." "What goes up must come down."

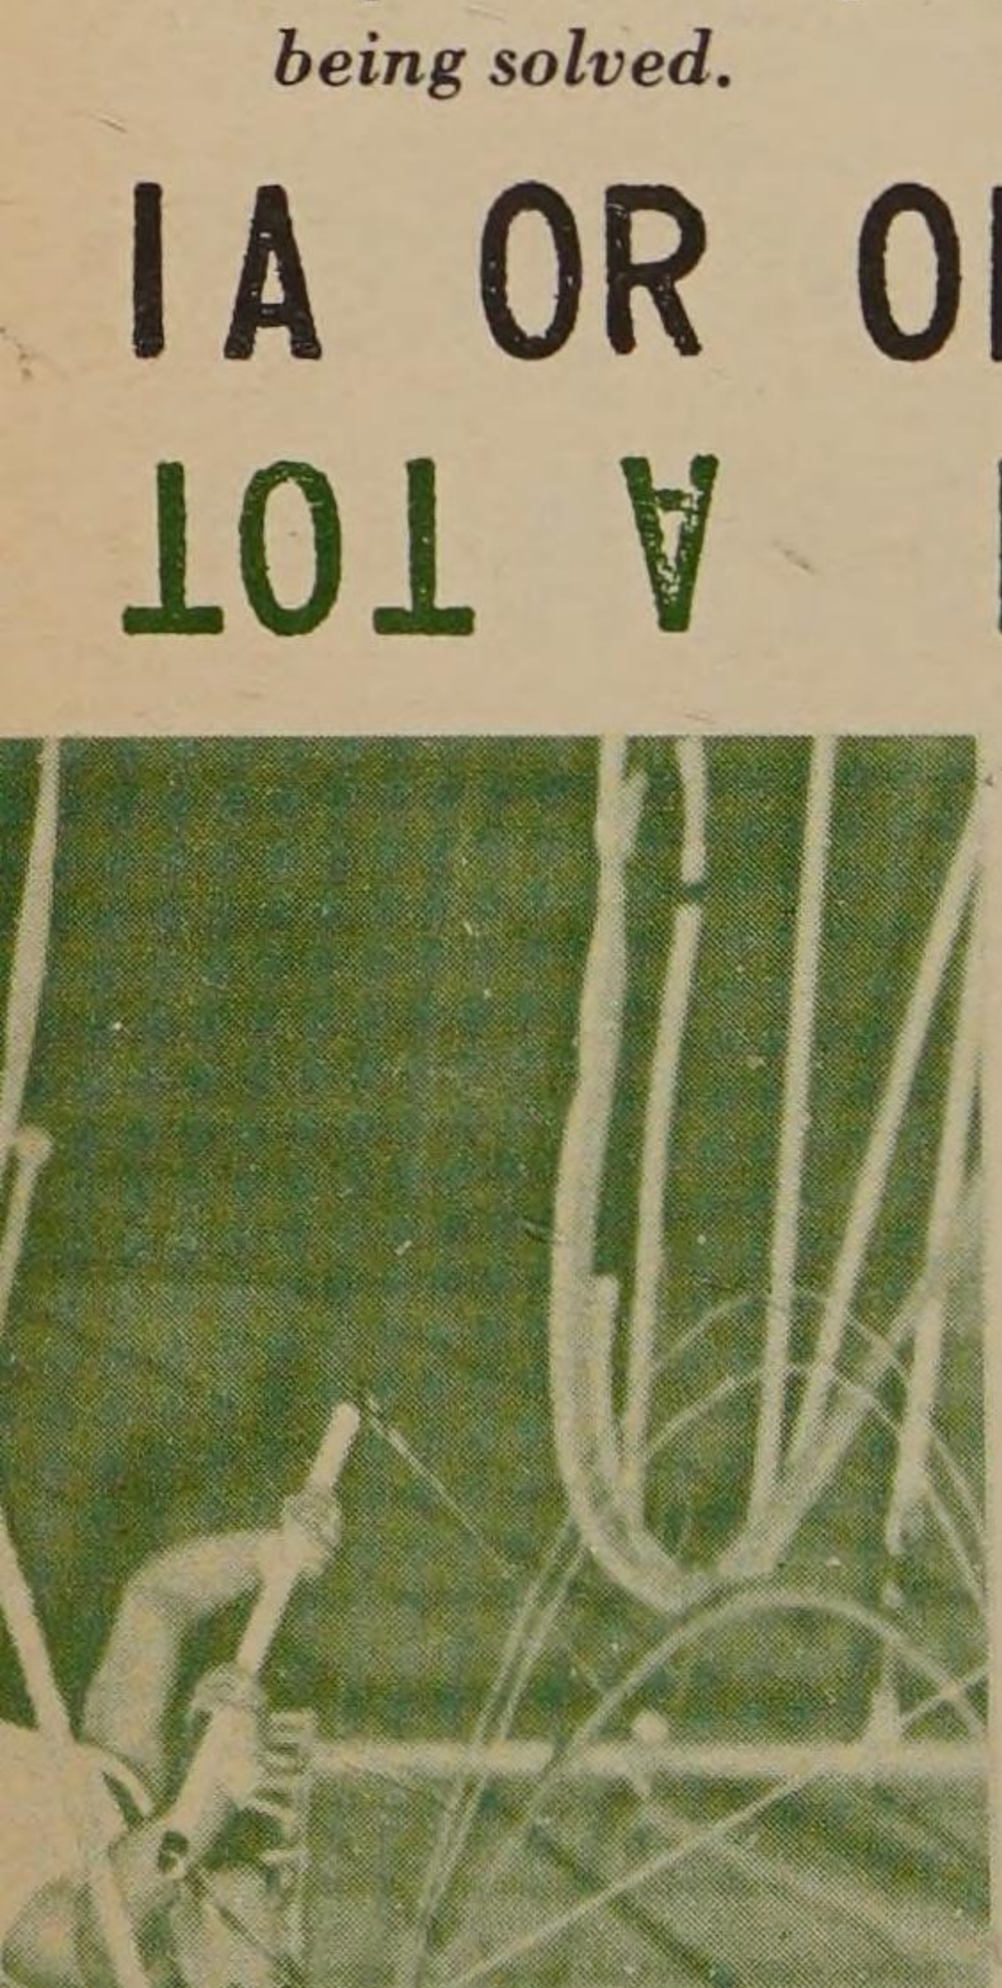

President Nixon said at his first press conference that he would not submit "a laundry list" of proposals to the North Vietnamese at the Paris peace talks.

If man chooses oblivion, he can go right on leaving his fate to his political leaders. If he chooses Utopia, he must initiate an enormous educational program—immediately, if not sooner.

A problem adequately stated is a problem well on its way to being solved.

IA OR OBLIVION. ALL

SOING THROUGH A TOT

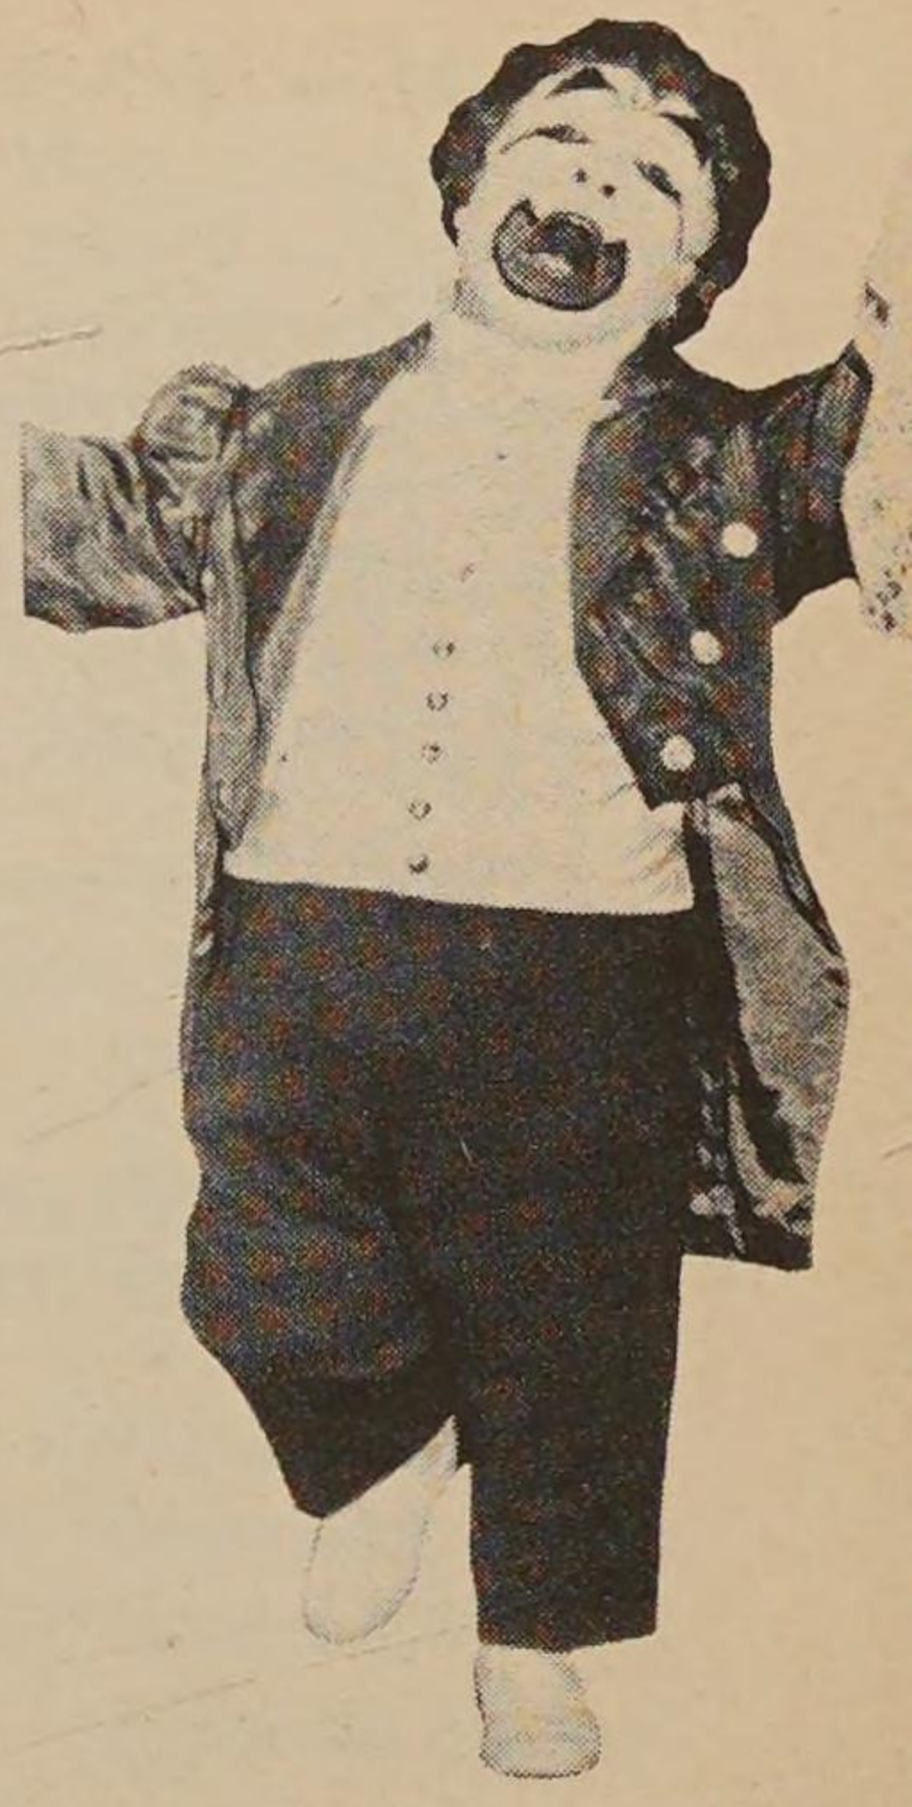

"I'm 100 per cent behind him. I think he's a terrific kid. He's loveable. But I'm all mixed up."—*Mother of Mark Rudd, 21-year-old chairman of radical Students for a Democratic Society, Columbia University.*

We should stop kidding ourselves. We should let go of things that aren't true. It's always better with the truth. The principal truth: Don't wait for George to do it, because he won't.

"There are still some bugs to be ironed out."

Utopia was impossible when people thought that there was only enough for a minority to live in comfort. But Utopia is, inherently, for all or for none. Because invisible technology can do much more with much less, Utopia is now possible for the first time. Bodily needs must precede metaphysical contentment.

"Make America a better place. Leave the country."

—Peace Corps enlistment poster.

"I have always been very lonely and have had to face many things and make many decisions on my own."
—King Hussein, on eve of his marriage to the typist Toni Avril Gardiner.

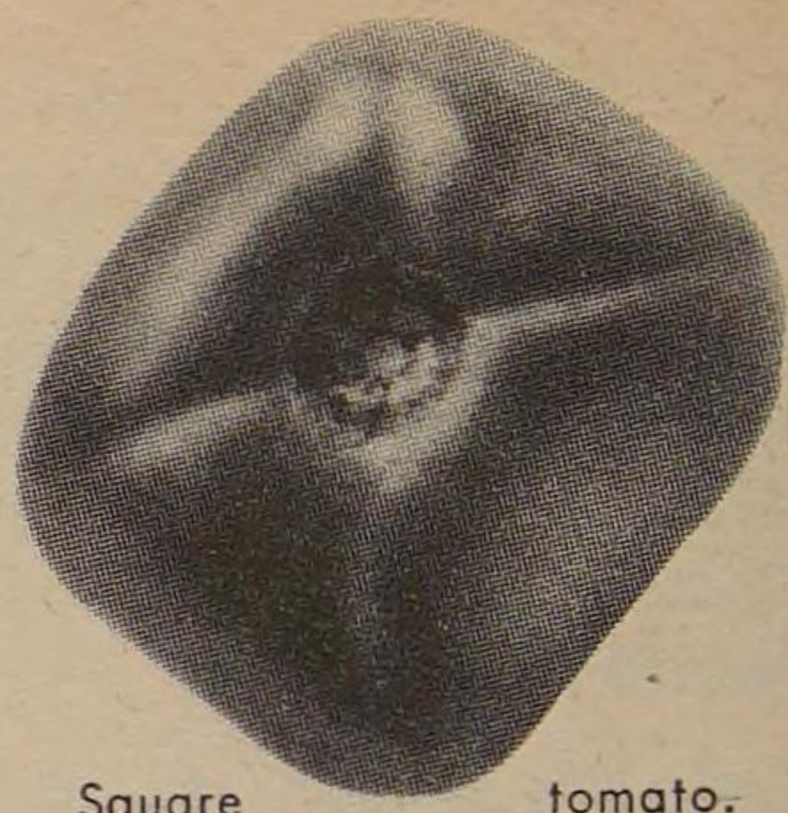

THE FUNDAMENTAL PROBLEM, TOTAL MAN MAY BE

"The word is out that none of us have to die after 21 if we don't want to. I can talk like that to the kids, but who's going to tell the parents?"—DONOVAN.

"I don't think a ∧ should become Miss America just because she's a Negro."—Miss America, 1969.

CAPS

Most of our value systems—for example, the concept of gold as essential to economic control—are lethal and obsolete. These inheritances have been retained jealously by communists and capitalists alike, who maintain control by promulgating them as natural and fundamental laws. How many millions have been slaughtered for gold found on their lands?

"If we didn't have a foreign policy, we wouldn't even have small wars."

That which is past and gone is irrevocable. Wise men have enough to do with the present and things to come."—

Francis Bacon.

"Any kind of recreation or hobby helps, because it keeps your mind busy. Hard work of any kind diminishes sex interest, and hard physical work can make you forget about it entirely. You will notice this at time when your training is most intensive."
—*Army Life, U.S. Government Printing Office, 1944.*

• •

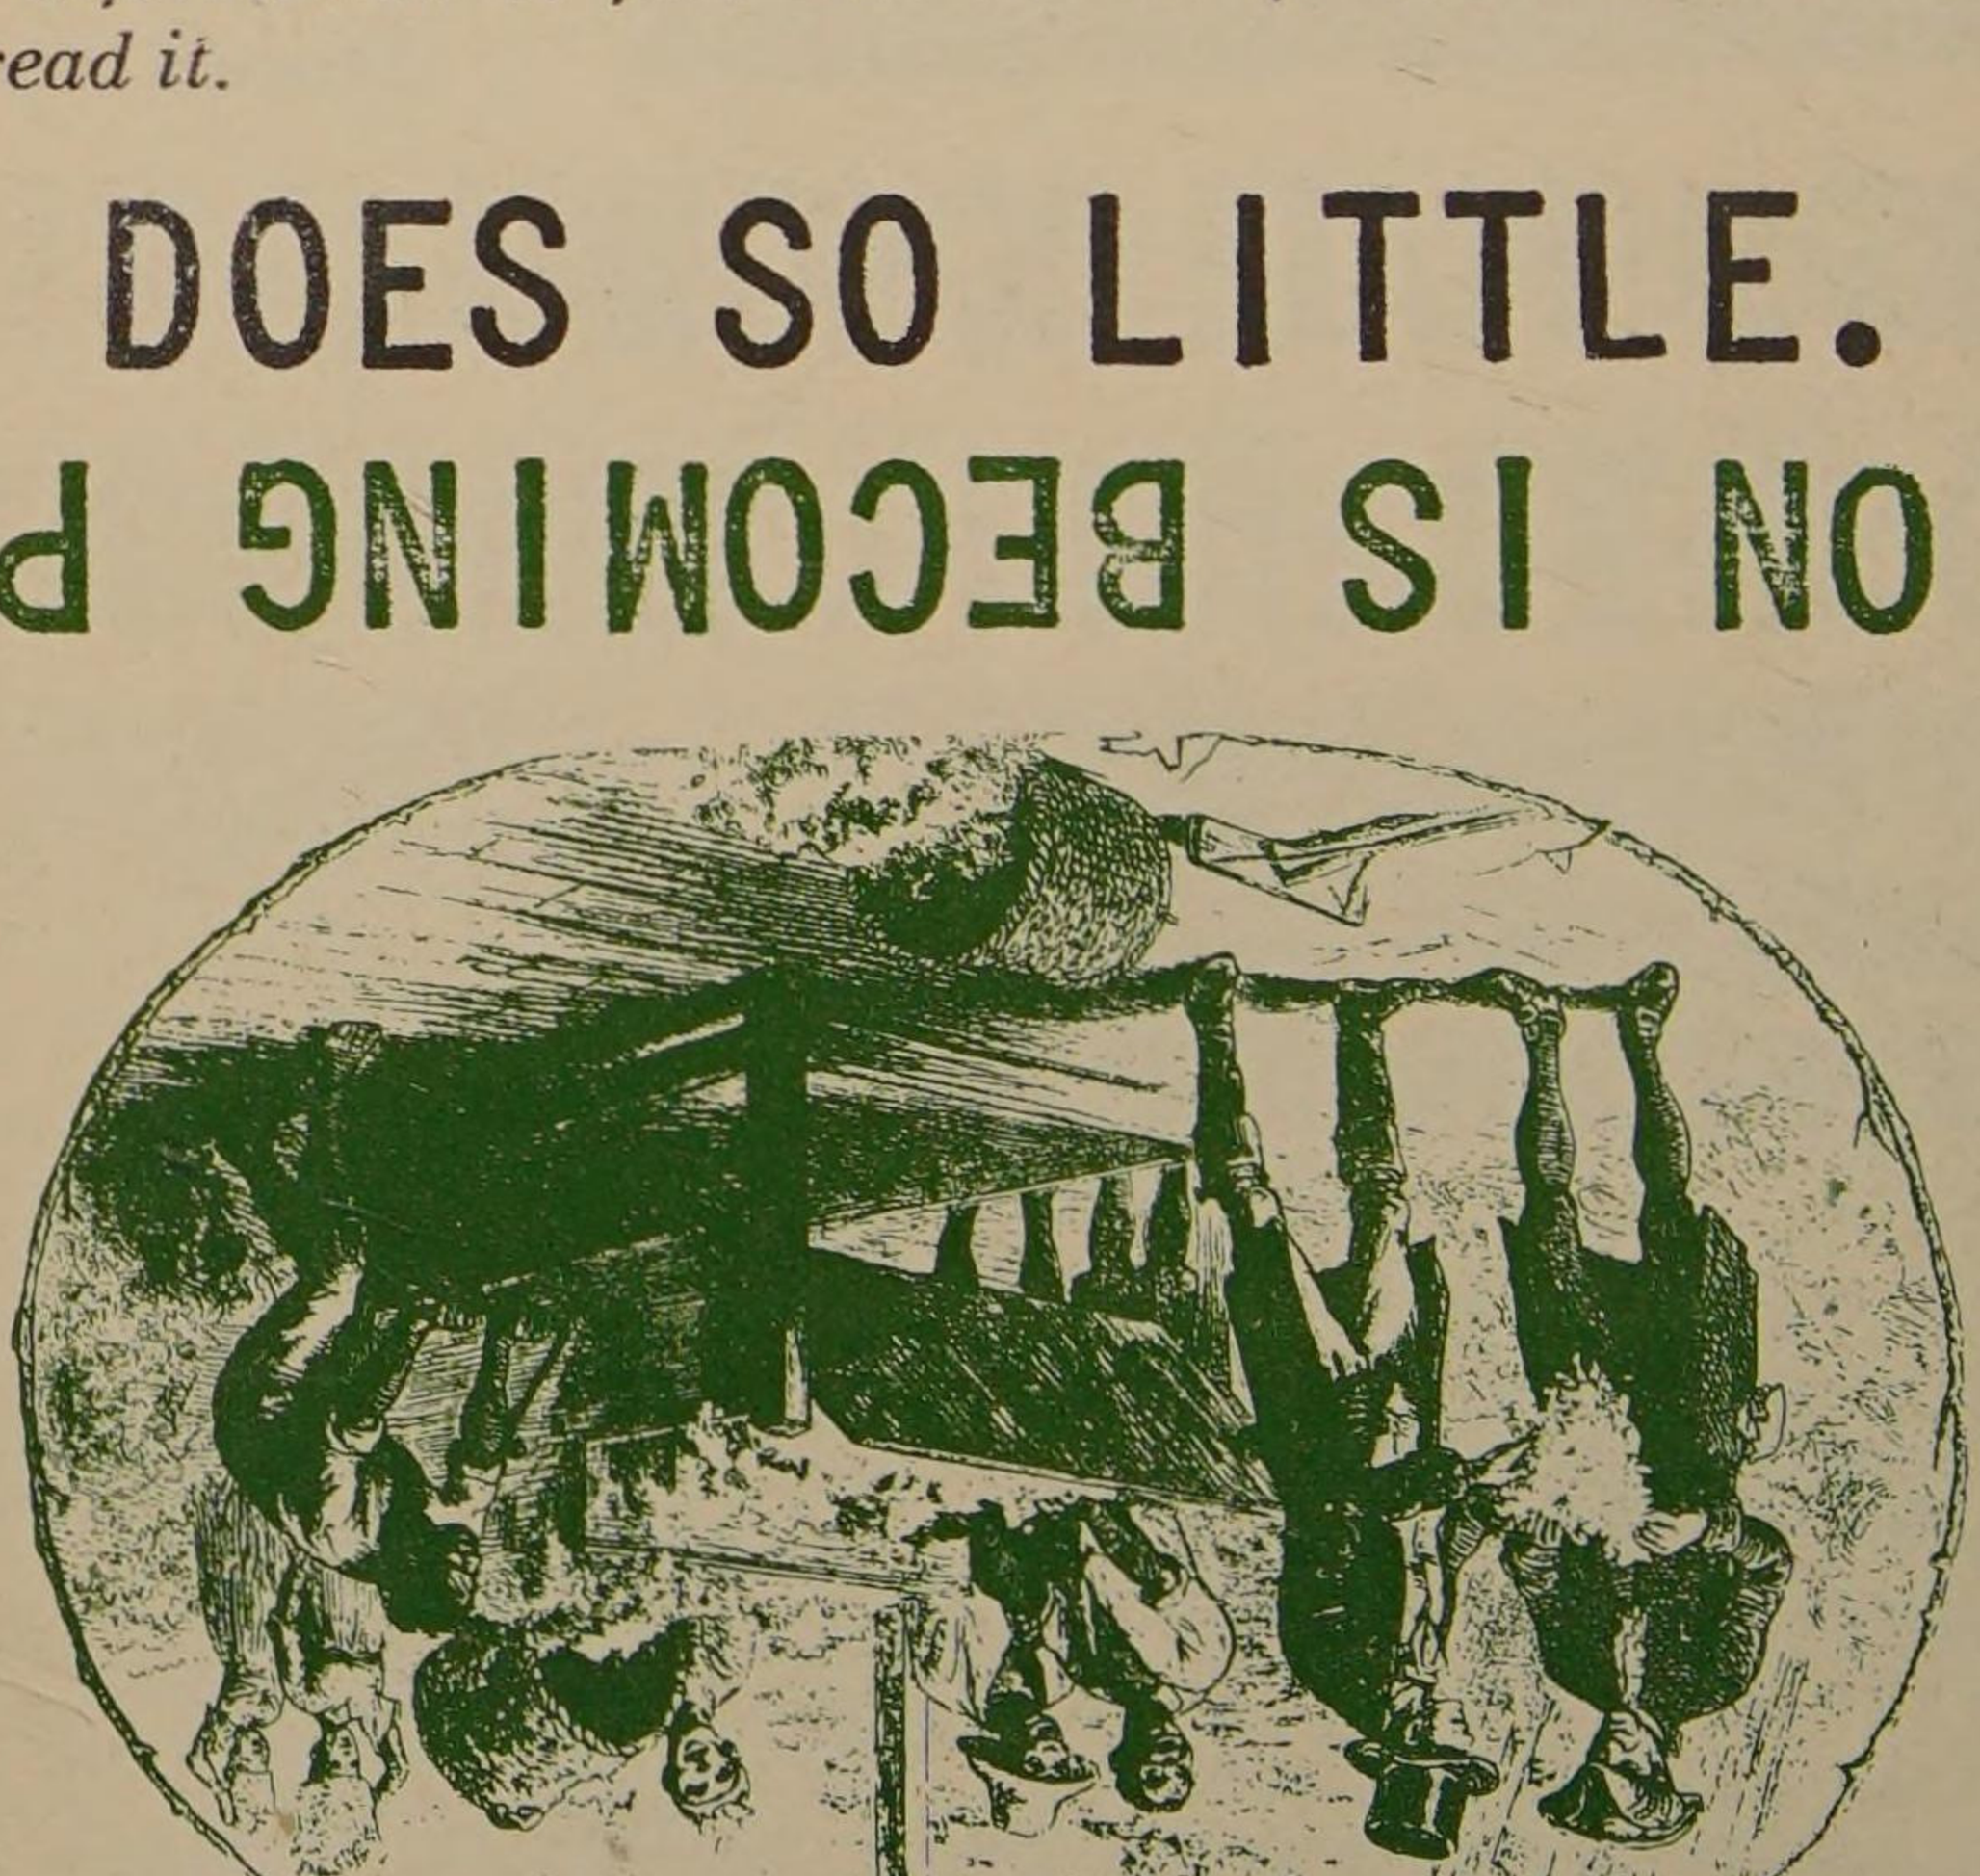

It will be cheaper to capture and re-use the chemicals being spewed from industrial smoke stacks than it will be to redress the abuses of air pollution.

Man wears blinders. He rarely sees beyond his feed bag.

• •

"One could only conclude that the management of your intelligence assets is in a state of complete disarray."—*Representative James L. Whitten to Defense Intelligence Agency officials who had reported that spies were collecting information so fast that the chiefs did not have time to read it.*

CH DOES SO LITTLE. G
ORG GNIMOCEB SI NOIS

Abraham Lincoln's concept of "Right Triumphing Over Might" was realized when Einstein as metaphysical intellect wrote the equal of physical universe, $E=MC^2$, and thus comprehended it.

EPHEMERALIZATION

The process of doing more with less.

Ephemeralization: One Telstar—weighing only 500 pounds—outperforming 75,000 tons of transocean copper cable.

Ephemeralization has flourished in different systems, for it is independent of political ideology.

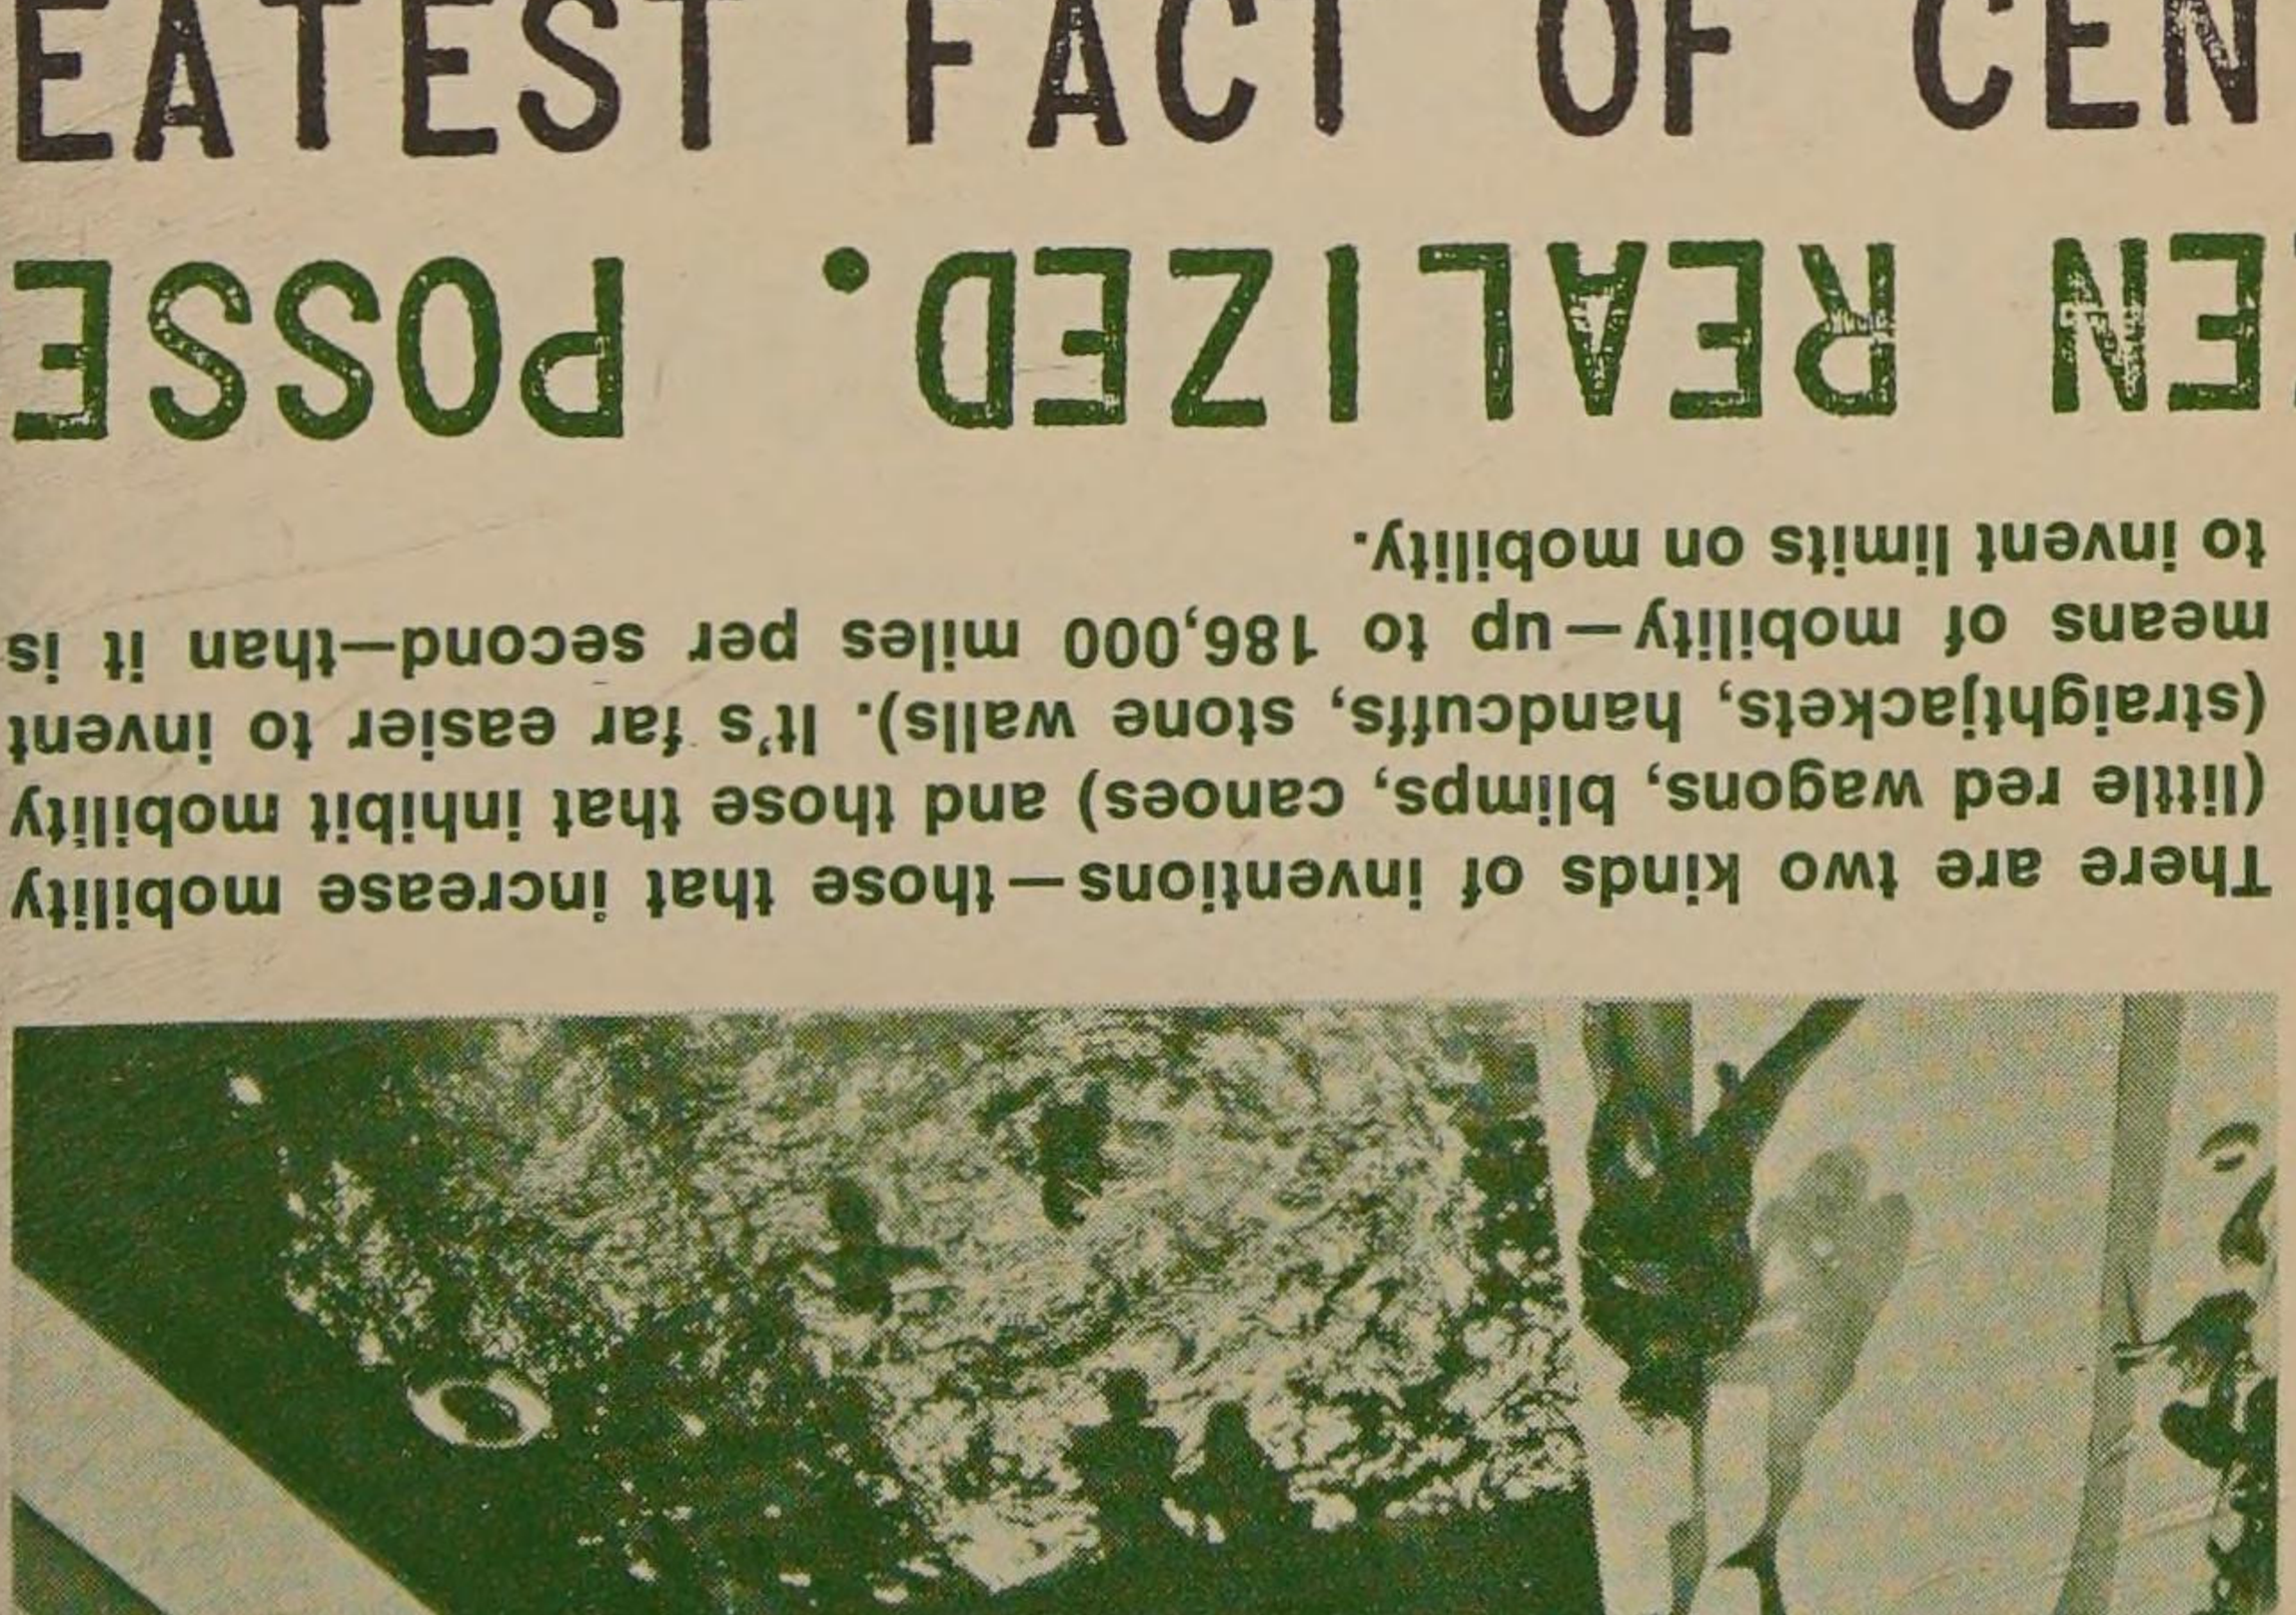

Automation, initiated by the mass production of electronics, has generated an awareness of the significance of ephemeralization.

"History is ***bunk***." —HENRY FORD.

"We've looked so long at rigid lines of print—people are more willing now to accept the illogical." —MERCE CUNNINGHAM.

GREATEST FACT OF CENTURY REALIZED. POSSESS

There are two kinds of inventions—those that increase mobility (little red wagons, blimps, canoes) and those that inhibit mobility (straightjackets, handcuffs, stone walls). It's far easier to invent means of mobility—up to 186,000 miles per second—than it is to invent limits on mobility.

"A journey of a thousand miles must begin with a single step."—CHINESE PROVERB.

The Far East has always been oriented to doing more with less: Fans, lanterns, lightweight weaving tools, sailing rigs. The Chinese also developed mathematics.

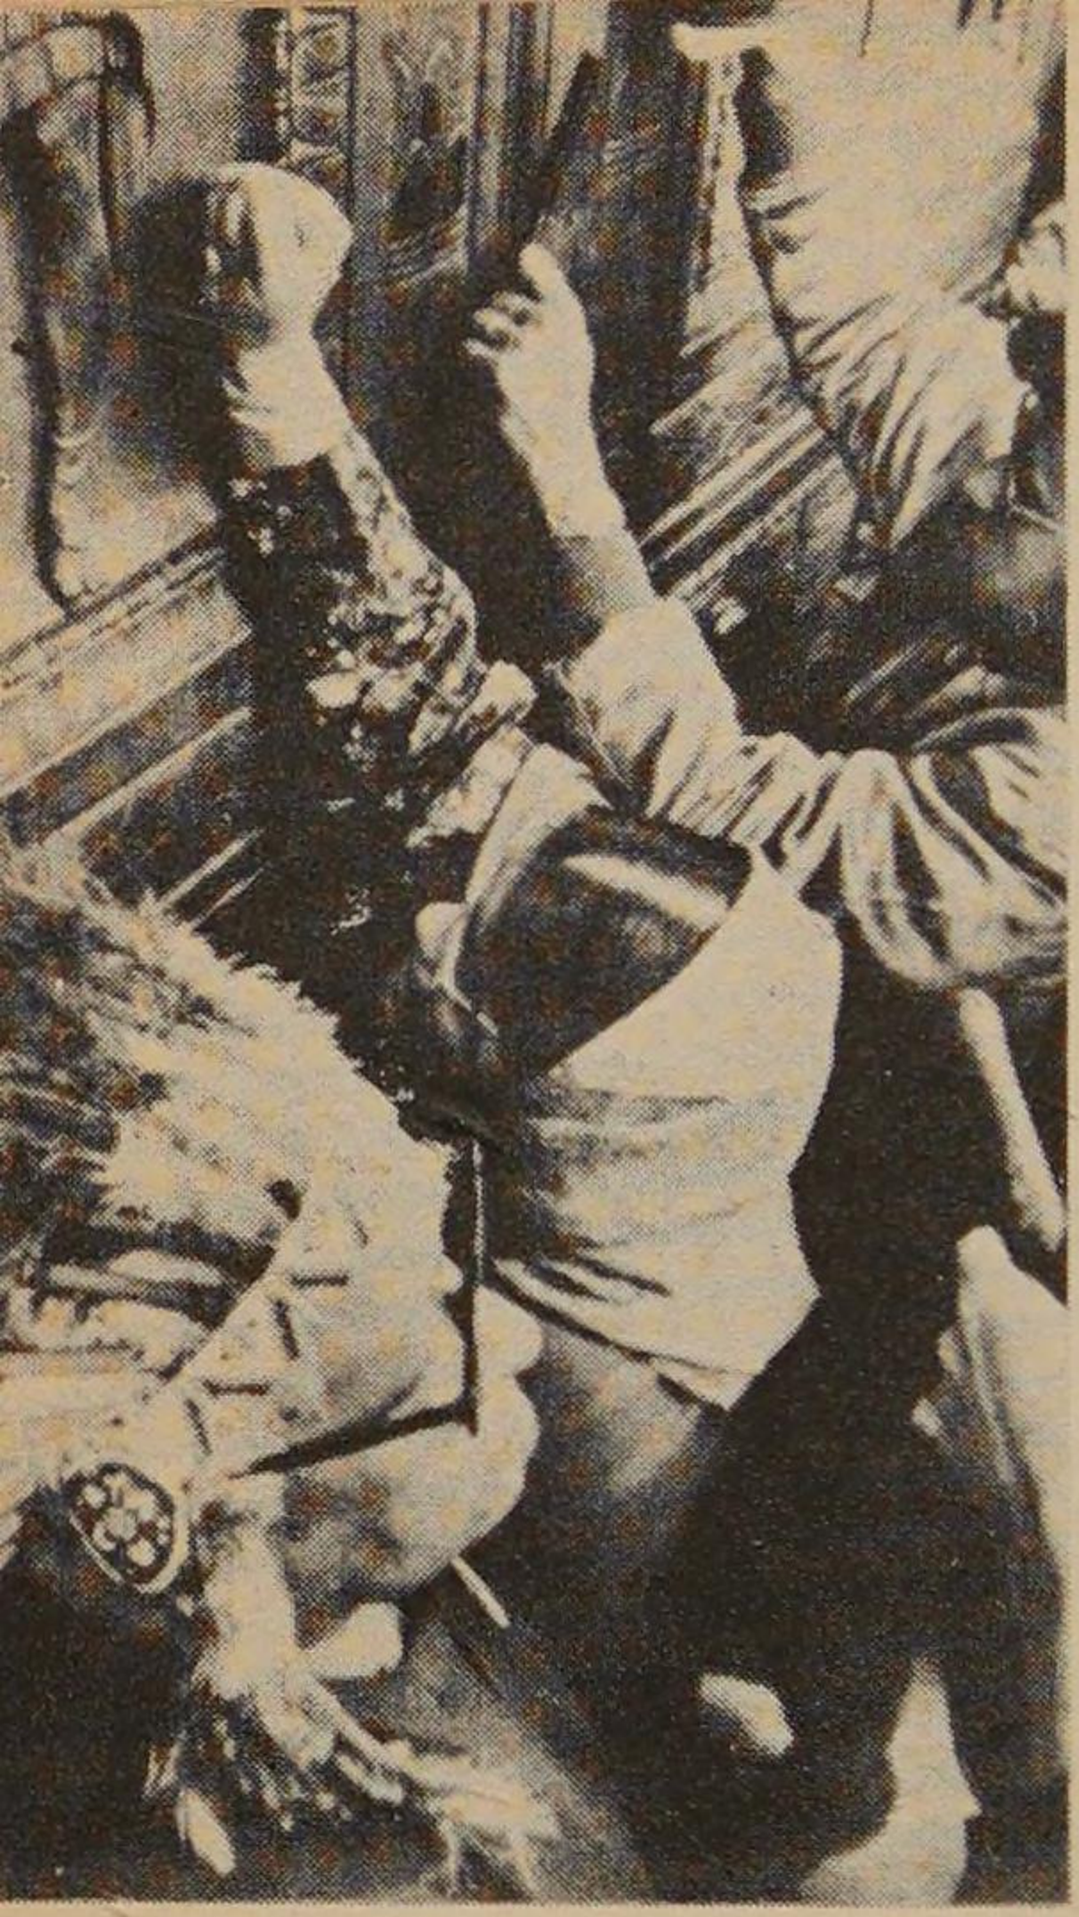

URY: WE CAN MAKE LIF

NILL PROBABLY HAVE B

Humans
may live some day
in sky ships and sea
ships, as they now vacation
in cruise ships. As people pull
up their roots, traveling from
"summer" to "winter" in hours, the
old concept of man as a static, temperate,
or tropic, dweller will change. He will become
a man for all seasons.

By devoting a larger share of their industrial budgets for the general welfare, the "have"s could share their technology with the "have not"s. The world's oppressive problems—war, overpopulation, hunger, disease—can be solved.

❀❀❀

The proper channeling of natural energy—the tides, the sun, the wind—would be the proper channeling of natural energy.

"I did it to attract women."—David Merrick explaining to Dick Schaap why he had written a put-on magazine article announcing his entry into film-making.

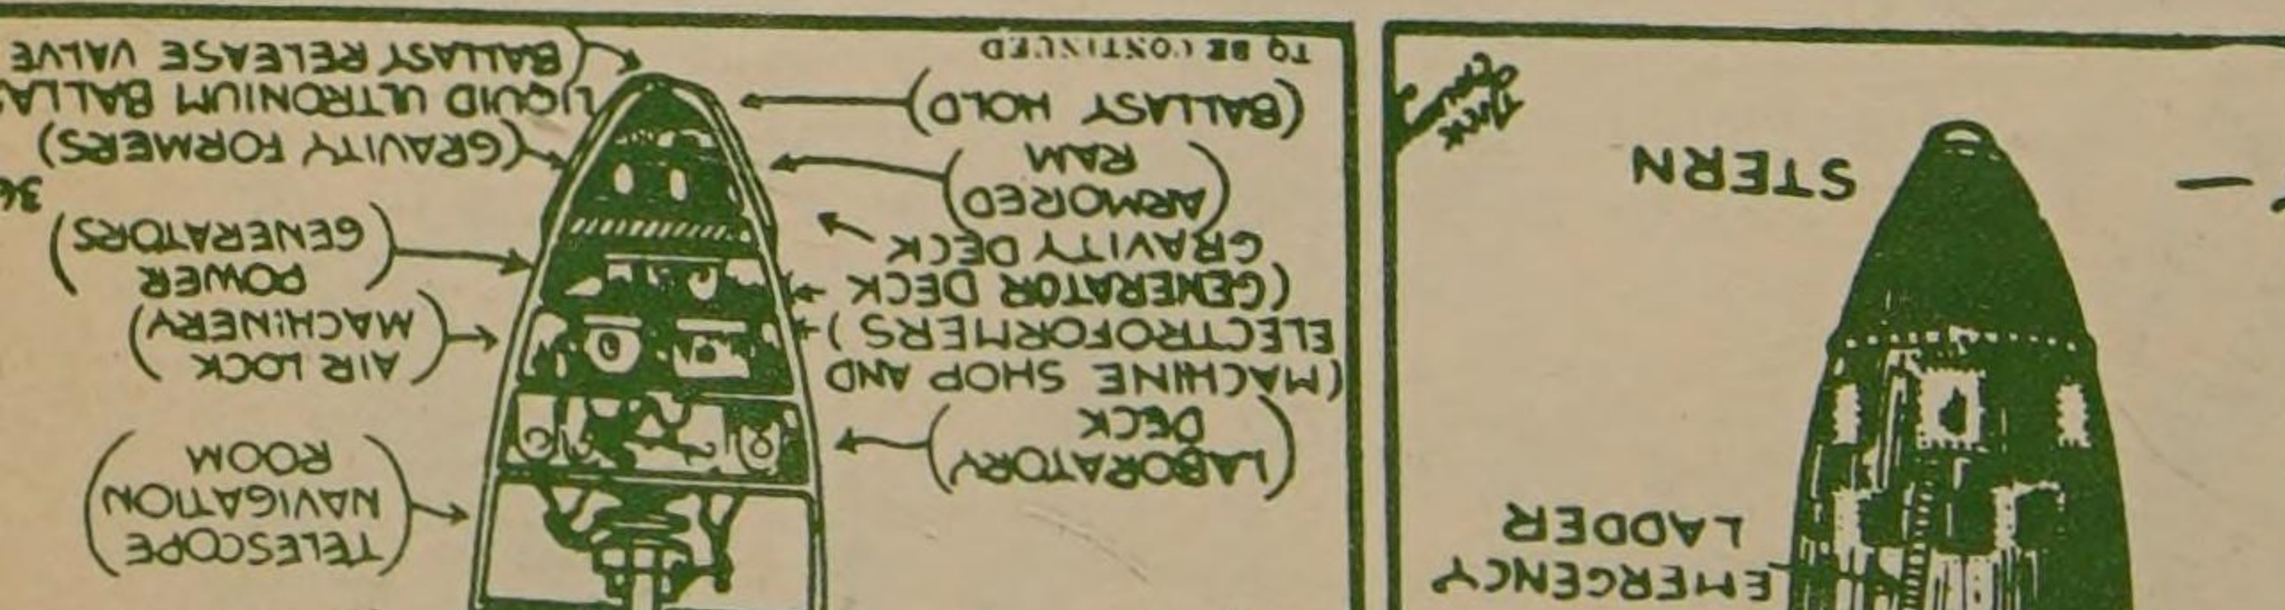

When man learned to do more with less, it was his lever to industrial success.

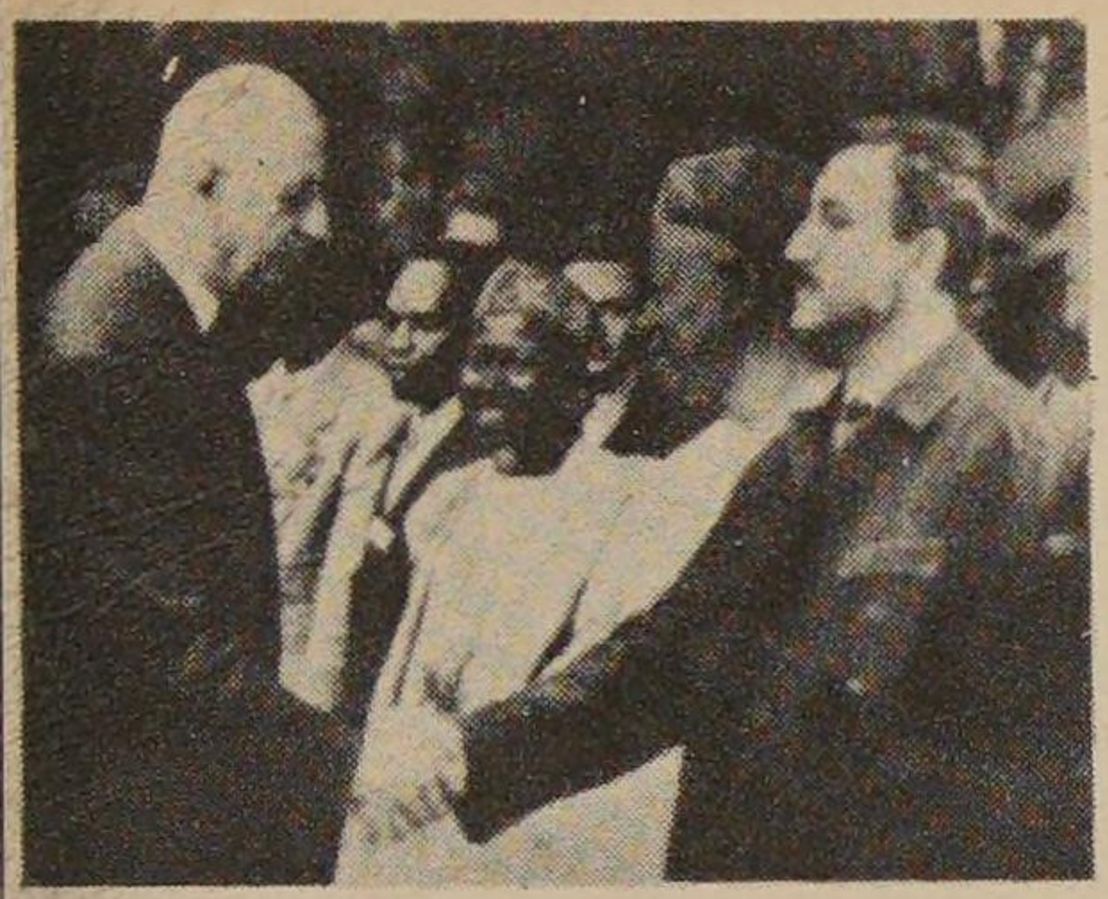

"It must be sad to be an Elizabeth Taylor, who hasn't been to a supermarket for ten years."
—JOANNE, JOANNE WOODWARD.

EVER ATTEMPTED BY MAN—A TRIP TO MARS—TO RESCUE SALLY, (Cont.)

"WE WERE ABOUT TO LAUNCH THE MOST DARING EXPEDITION

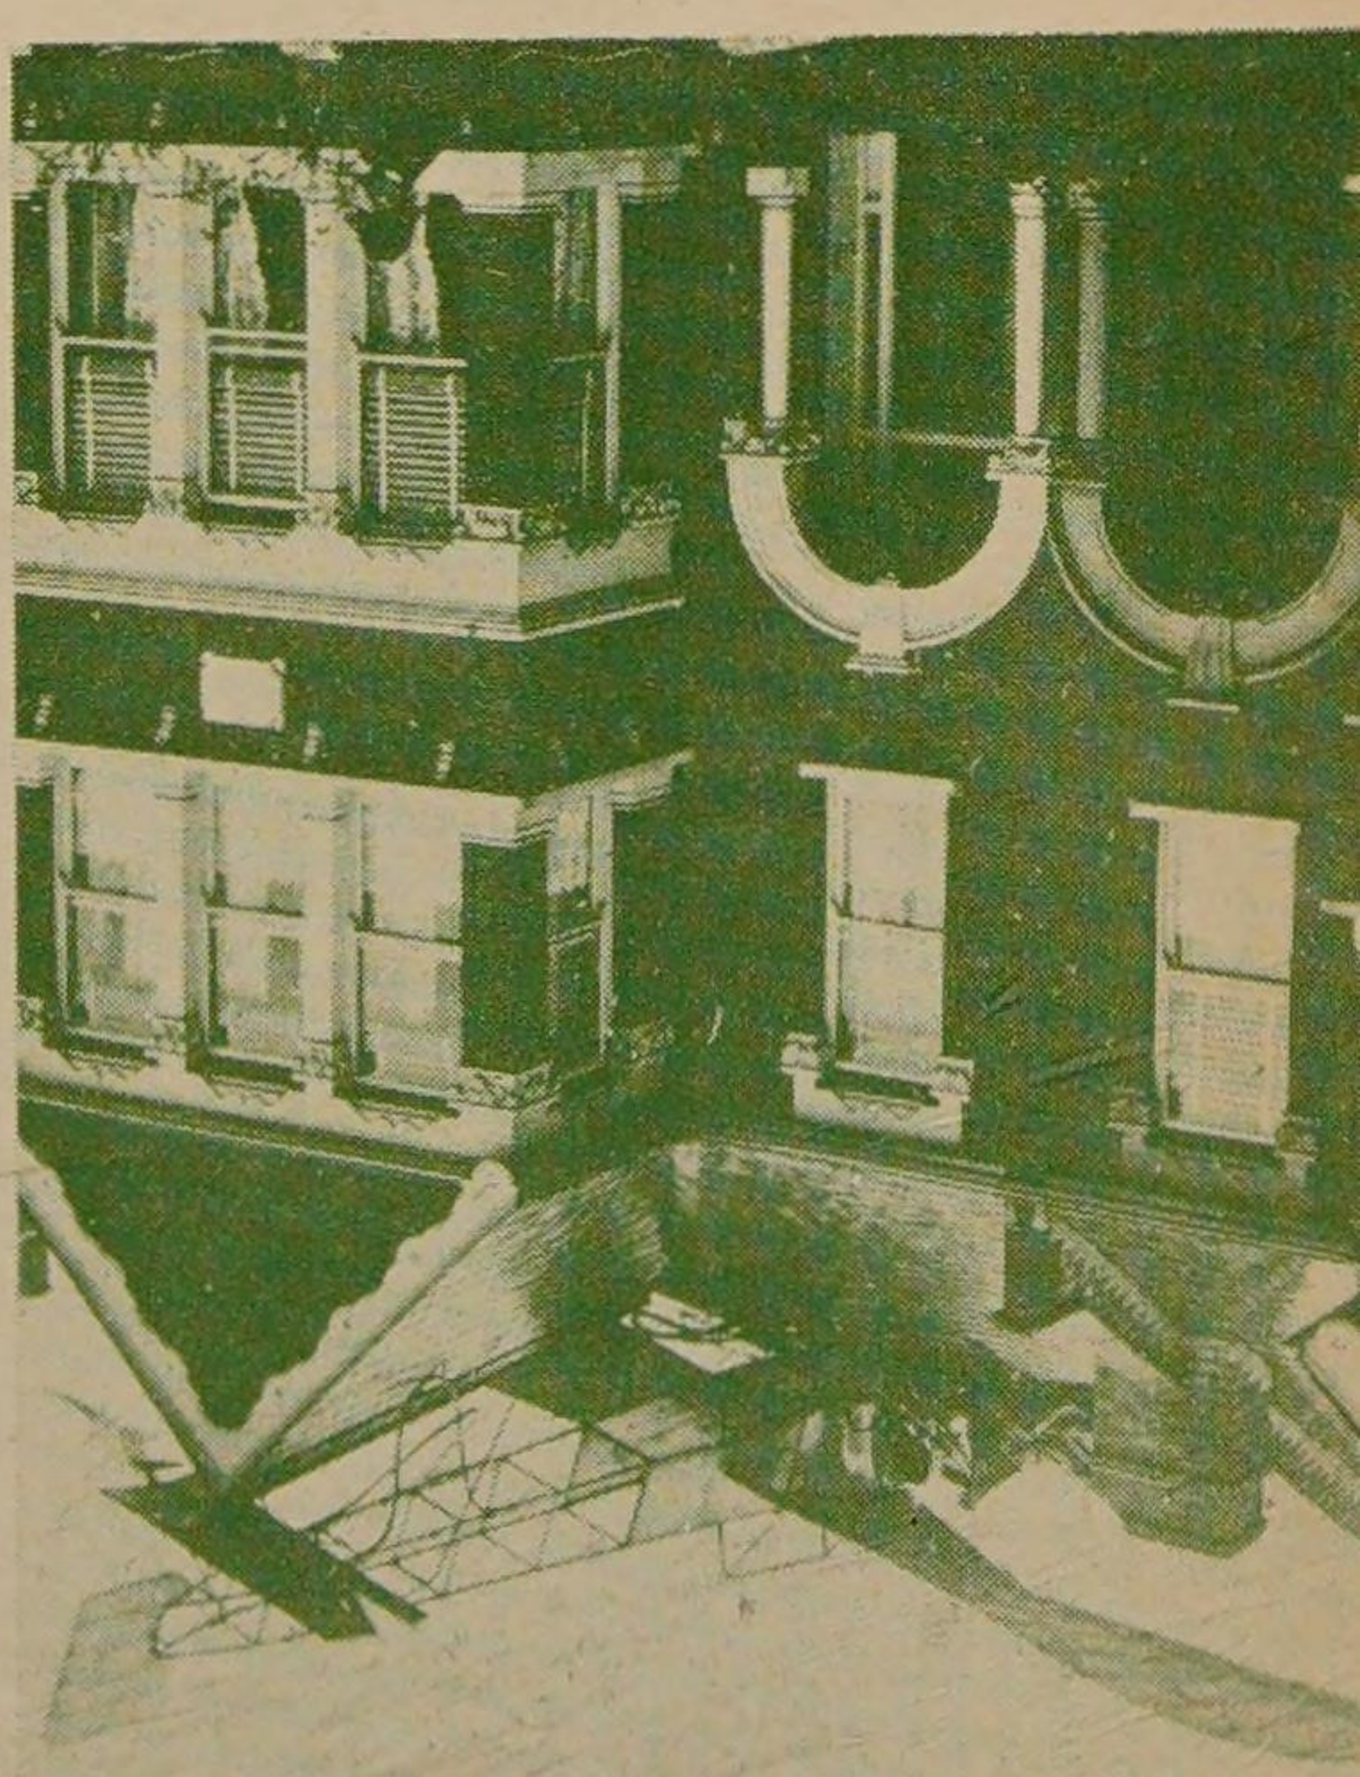

"In this era of complexity, great enterprises are designed and carried forward by the kind of man who has a vision of what might be *and* a practical strategy for getting there, a man with an idea in his head and a monkey wrench in his hand." —*John W. Gardner.*

Man's preoccupation with irrelevancies has conditioned him to believe that security is having more with more—fortress, cathedral, mansion. "Secure as the Rock of Gibraltar." Man in fear built his castle with thicker and thicker walls. *Bon moat.*

The Maginot Line was history's greatest fortress; it was overrun by the Nazis in two days.

WORLD'S PRIME VIT

10 YEARS ANYTHING RI

A solution to transportation problems in the cosmos: Since all chemical elements are frequencies, humans could be broadcast by radio. You could travel at 680-million miles per hour by broadcast instead of at 20,000 MPH by rocketship.

In the "old" days, pilots always returned to earth for dinner. But astronauts can't. Because they will be away longer than they can be nourished by sandwiches and a thermos, science must more thoroughly understand man's life processes. Guess who's not coming to dinner.

We are not aware that the Earth is spinning at 60,000 miles per hour because our motion-sensitivity spectrum is limited. We do not see even small motions well. We do not see the hands of the clock move, a child grow, a propeller turn.

"To be or not to be—okay, but what do I do with it?"

"Problems worthy of attack prove their worth by hitting back." —*Piet Hein.*

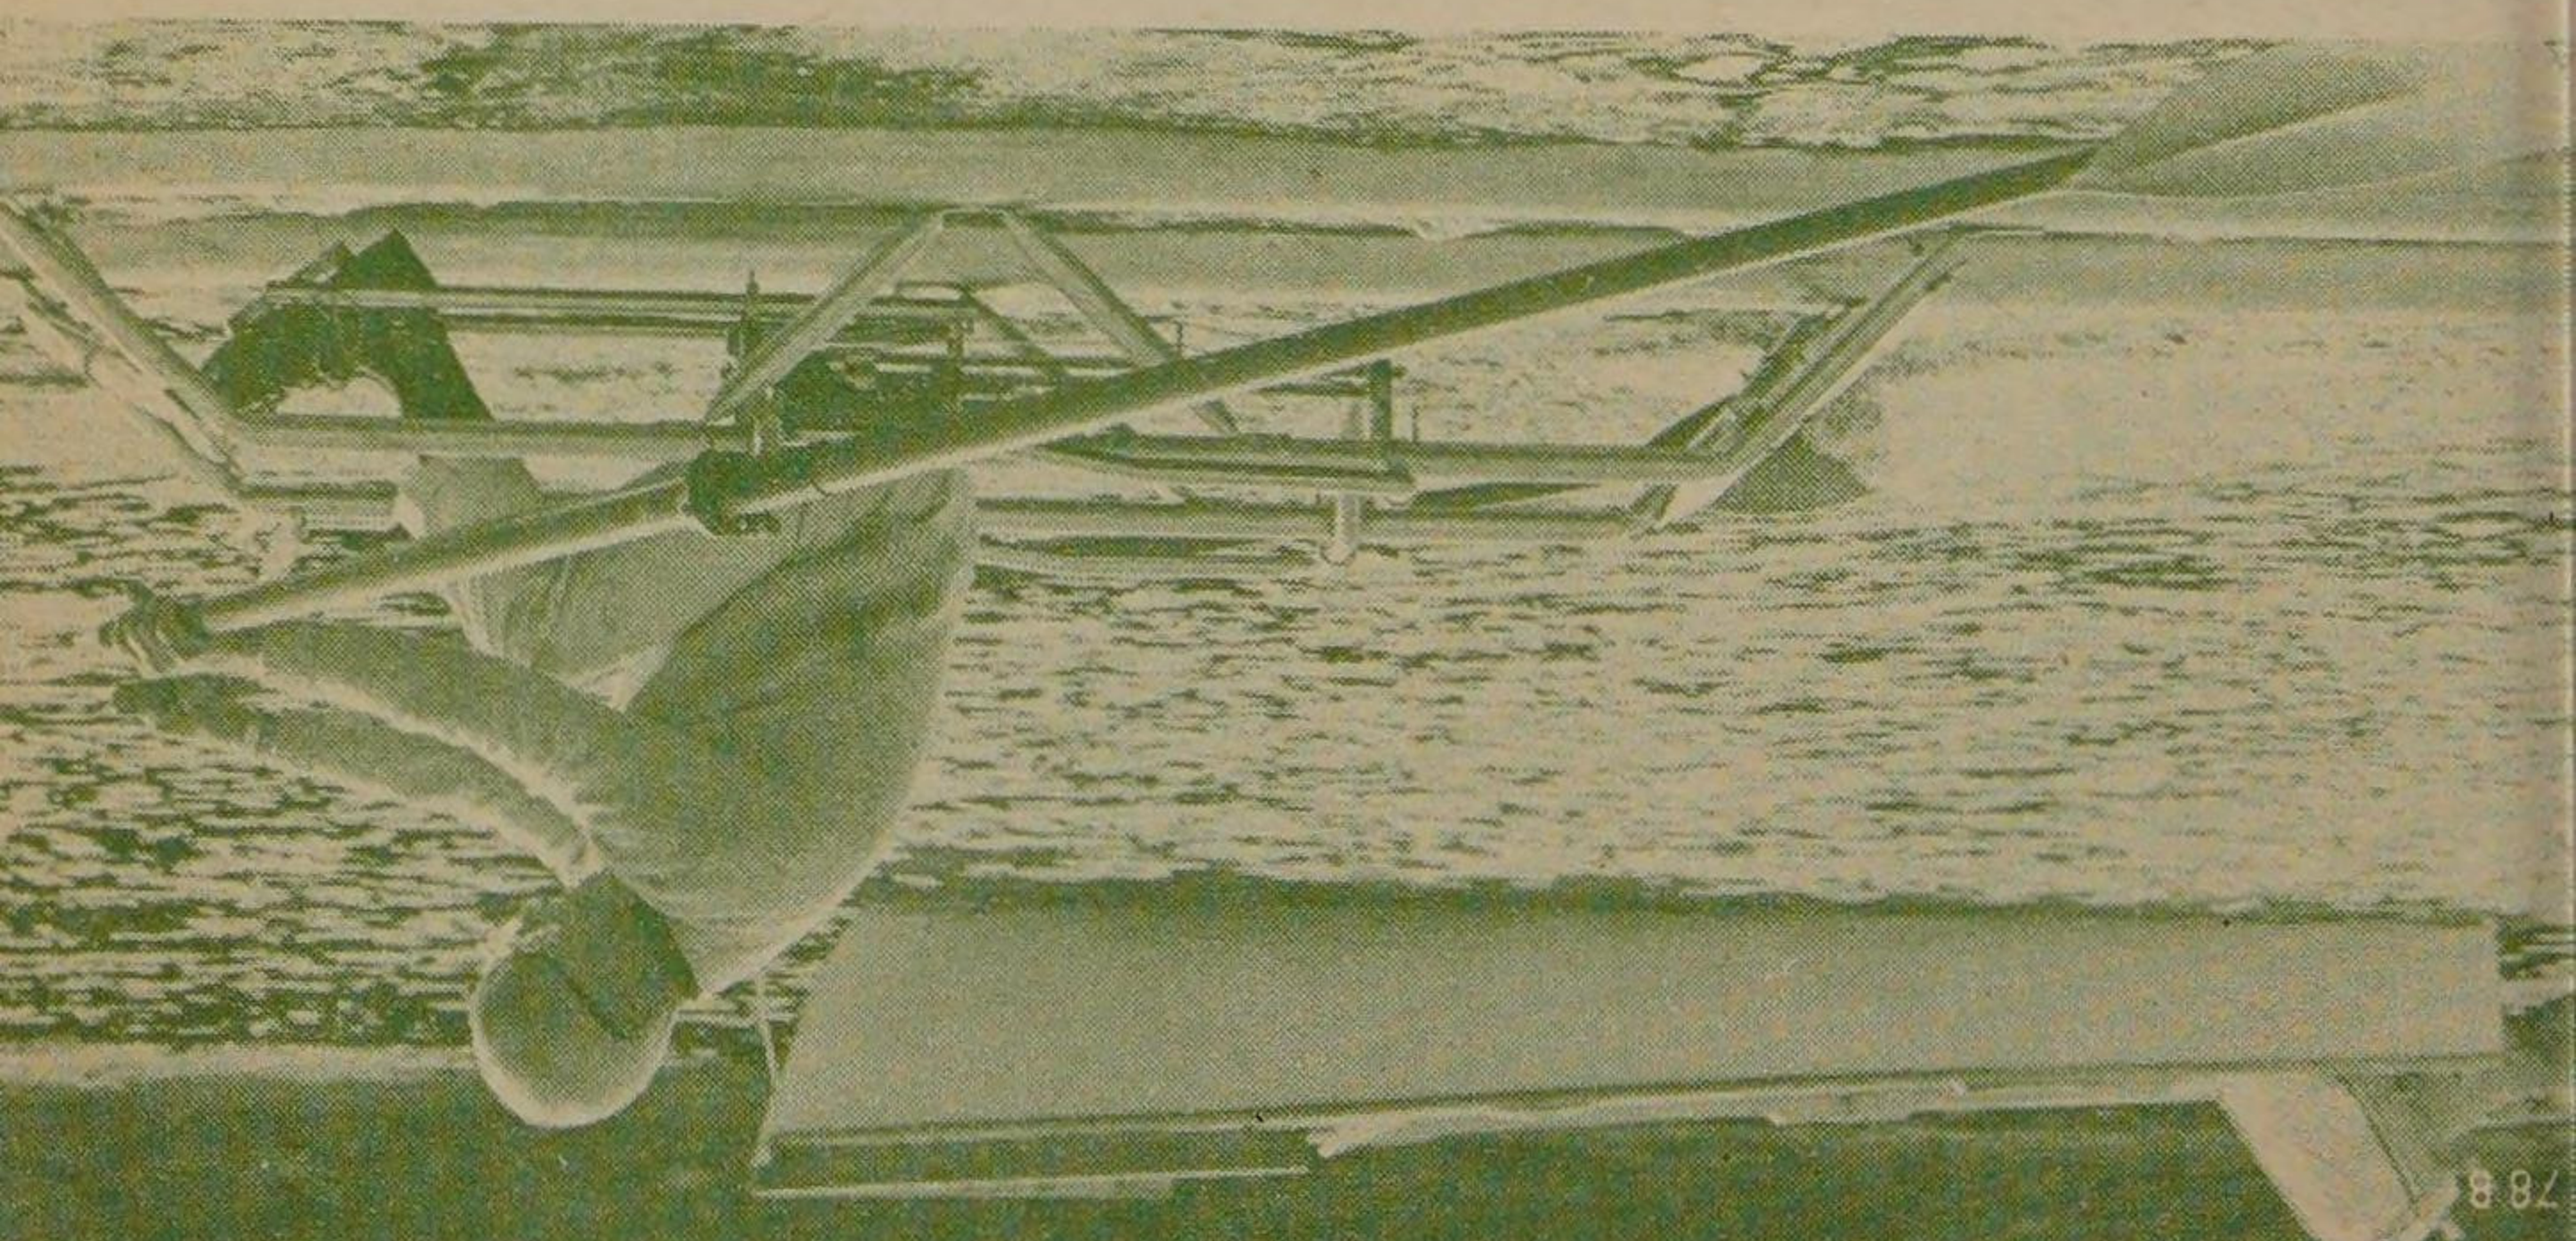

Real wealth is indestructible and without practical limit. It can be neither created nor lost—and it leaves one system only to join another—the Law of Conservation of Energy. Real wealth is not gold. Real wealth is knowing what to do with energy.

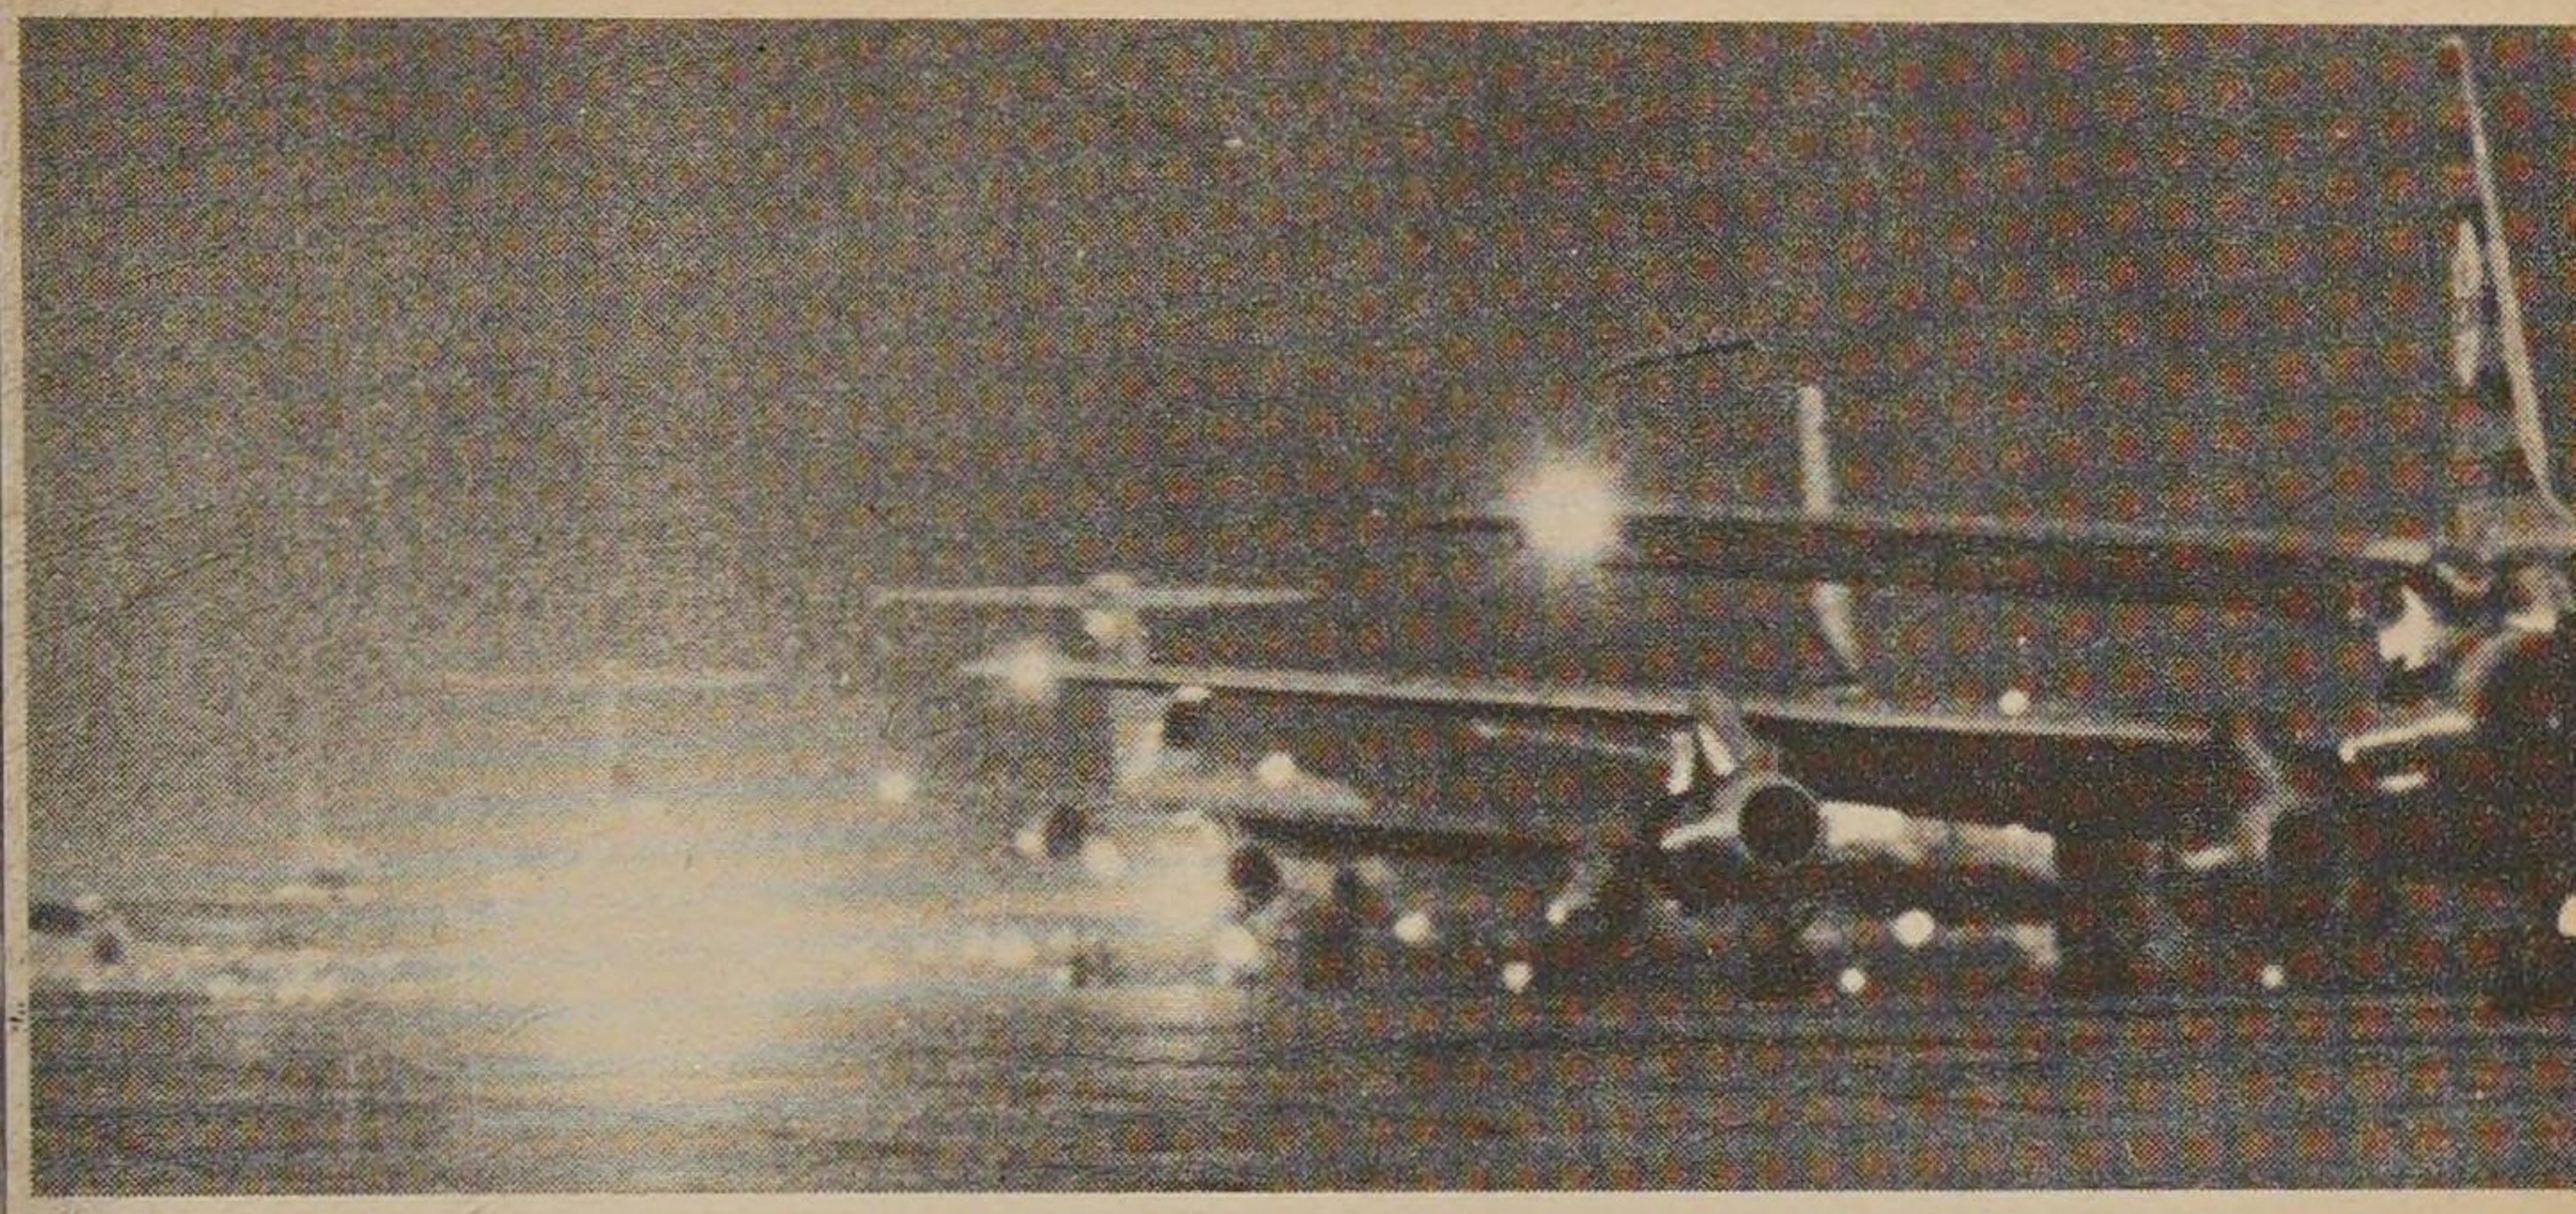

Man's intellect has the ability to tap the cosmic resources of energy and make them work for him.

AL PROBLEM: HOW TO T
AND OUTDOORS. WITHIN

"The only peaceful sign in Los Angeles is Forest Lawn."
—Visitor to the Coast.

"Getting to the moon" camouflages the real goal of the space program: Construction of space stations from which the military could rule the universe.

"My research can hardly be described as —it is a great pleasure and just as great a joy."—Lev Landau, Nobel Prize-winning Soviet physicist a few days before his death.

When the National Science Foundation asked the "breakthrough" scientists what they felt was the most favorable factor in their education, the answer was almost uniformly, "Intimate association with a great, inspiring teacher."

"**LIFE** just isn't apple pie and Mother's Day seven days a week, and if you're going to write something that isn't going to be thrown out with the coffee grounds, you have to tell it like it is."
—Rex Reed, a Dr. Pepperhead.

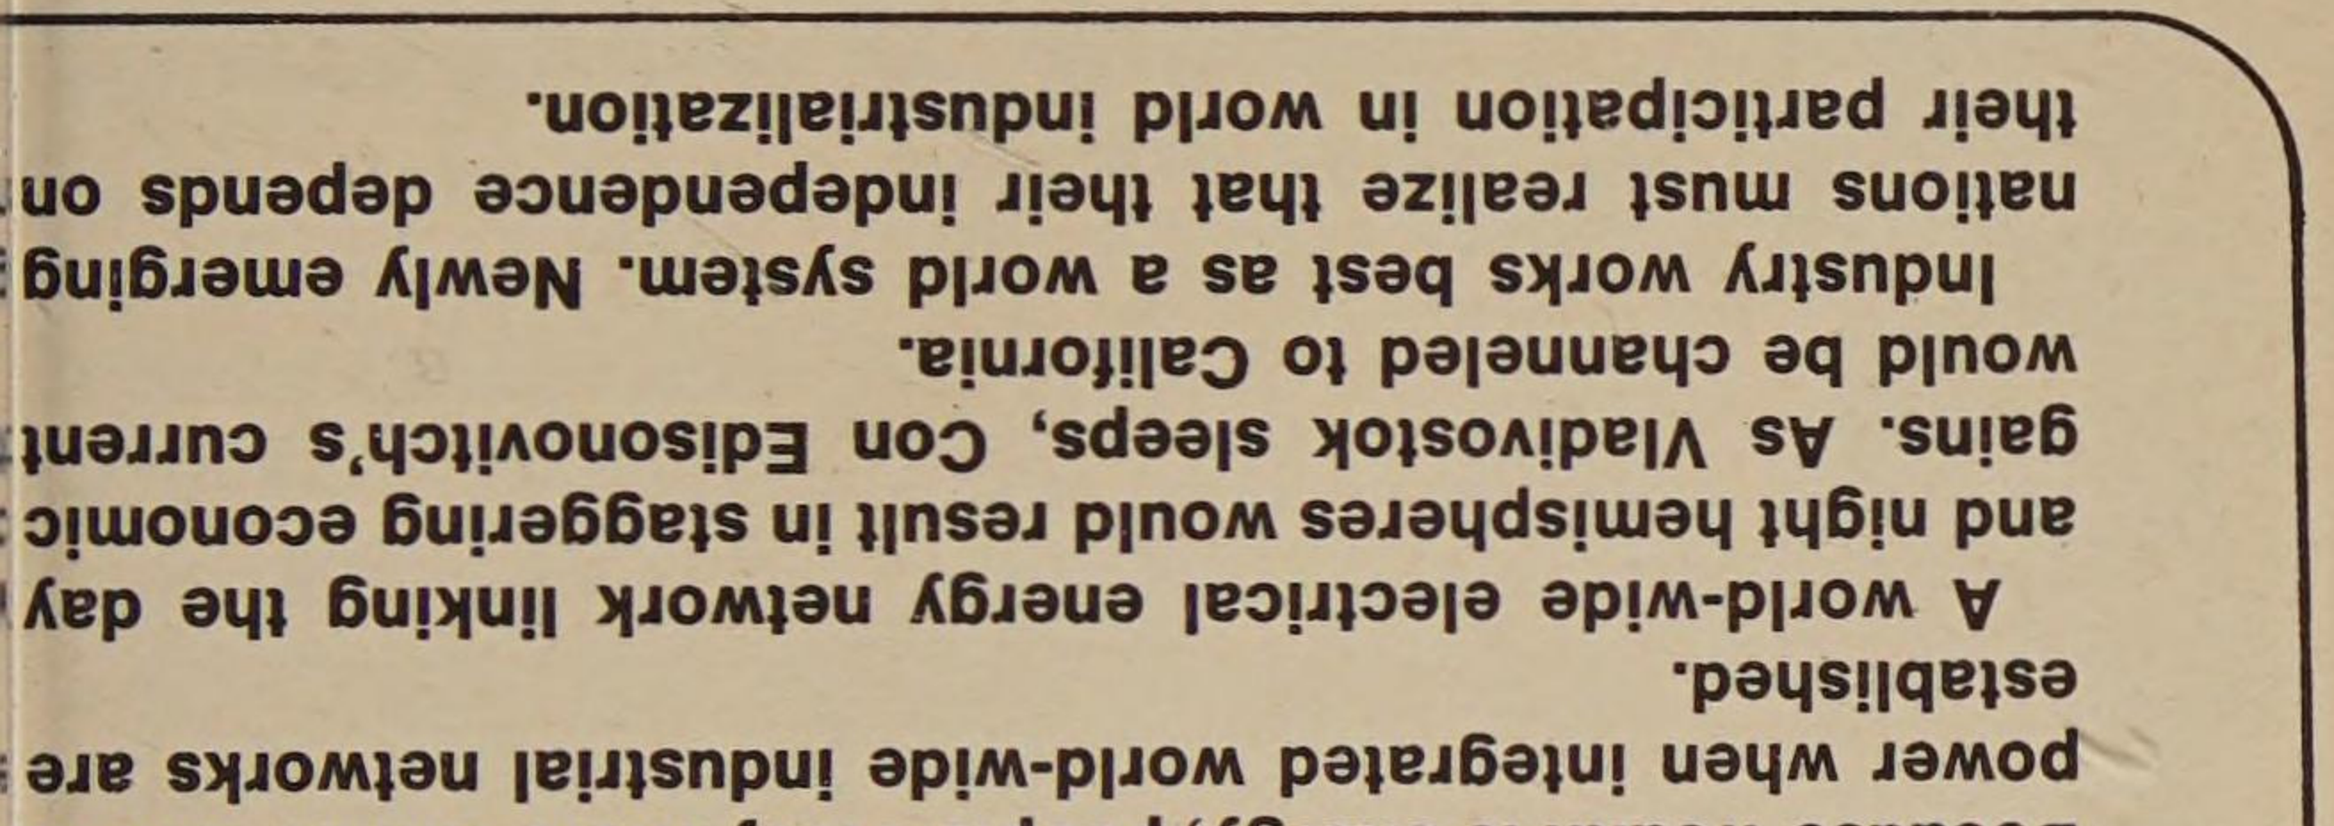

S SCHOOLROOM AND CL

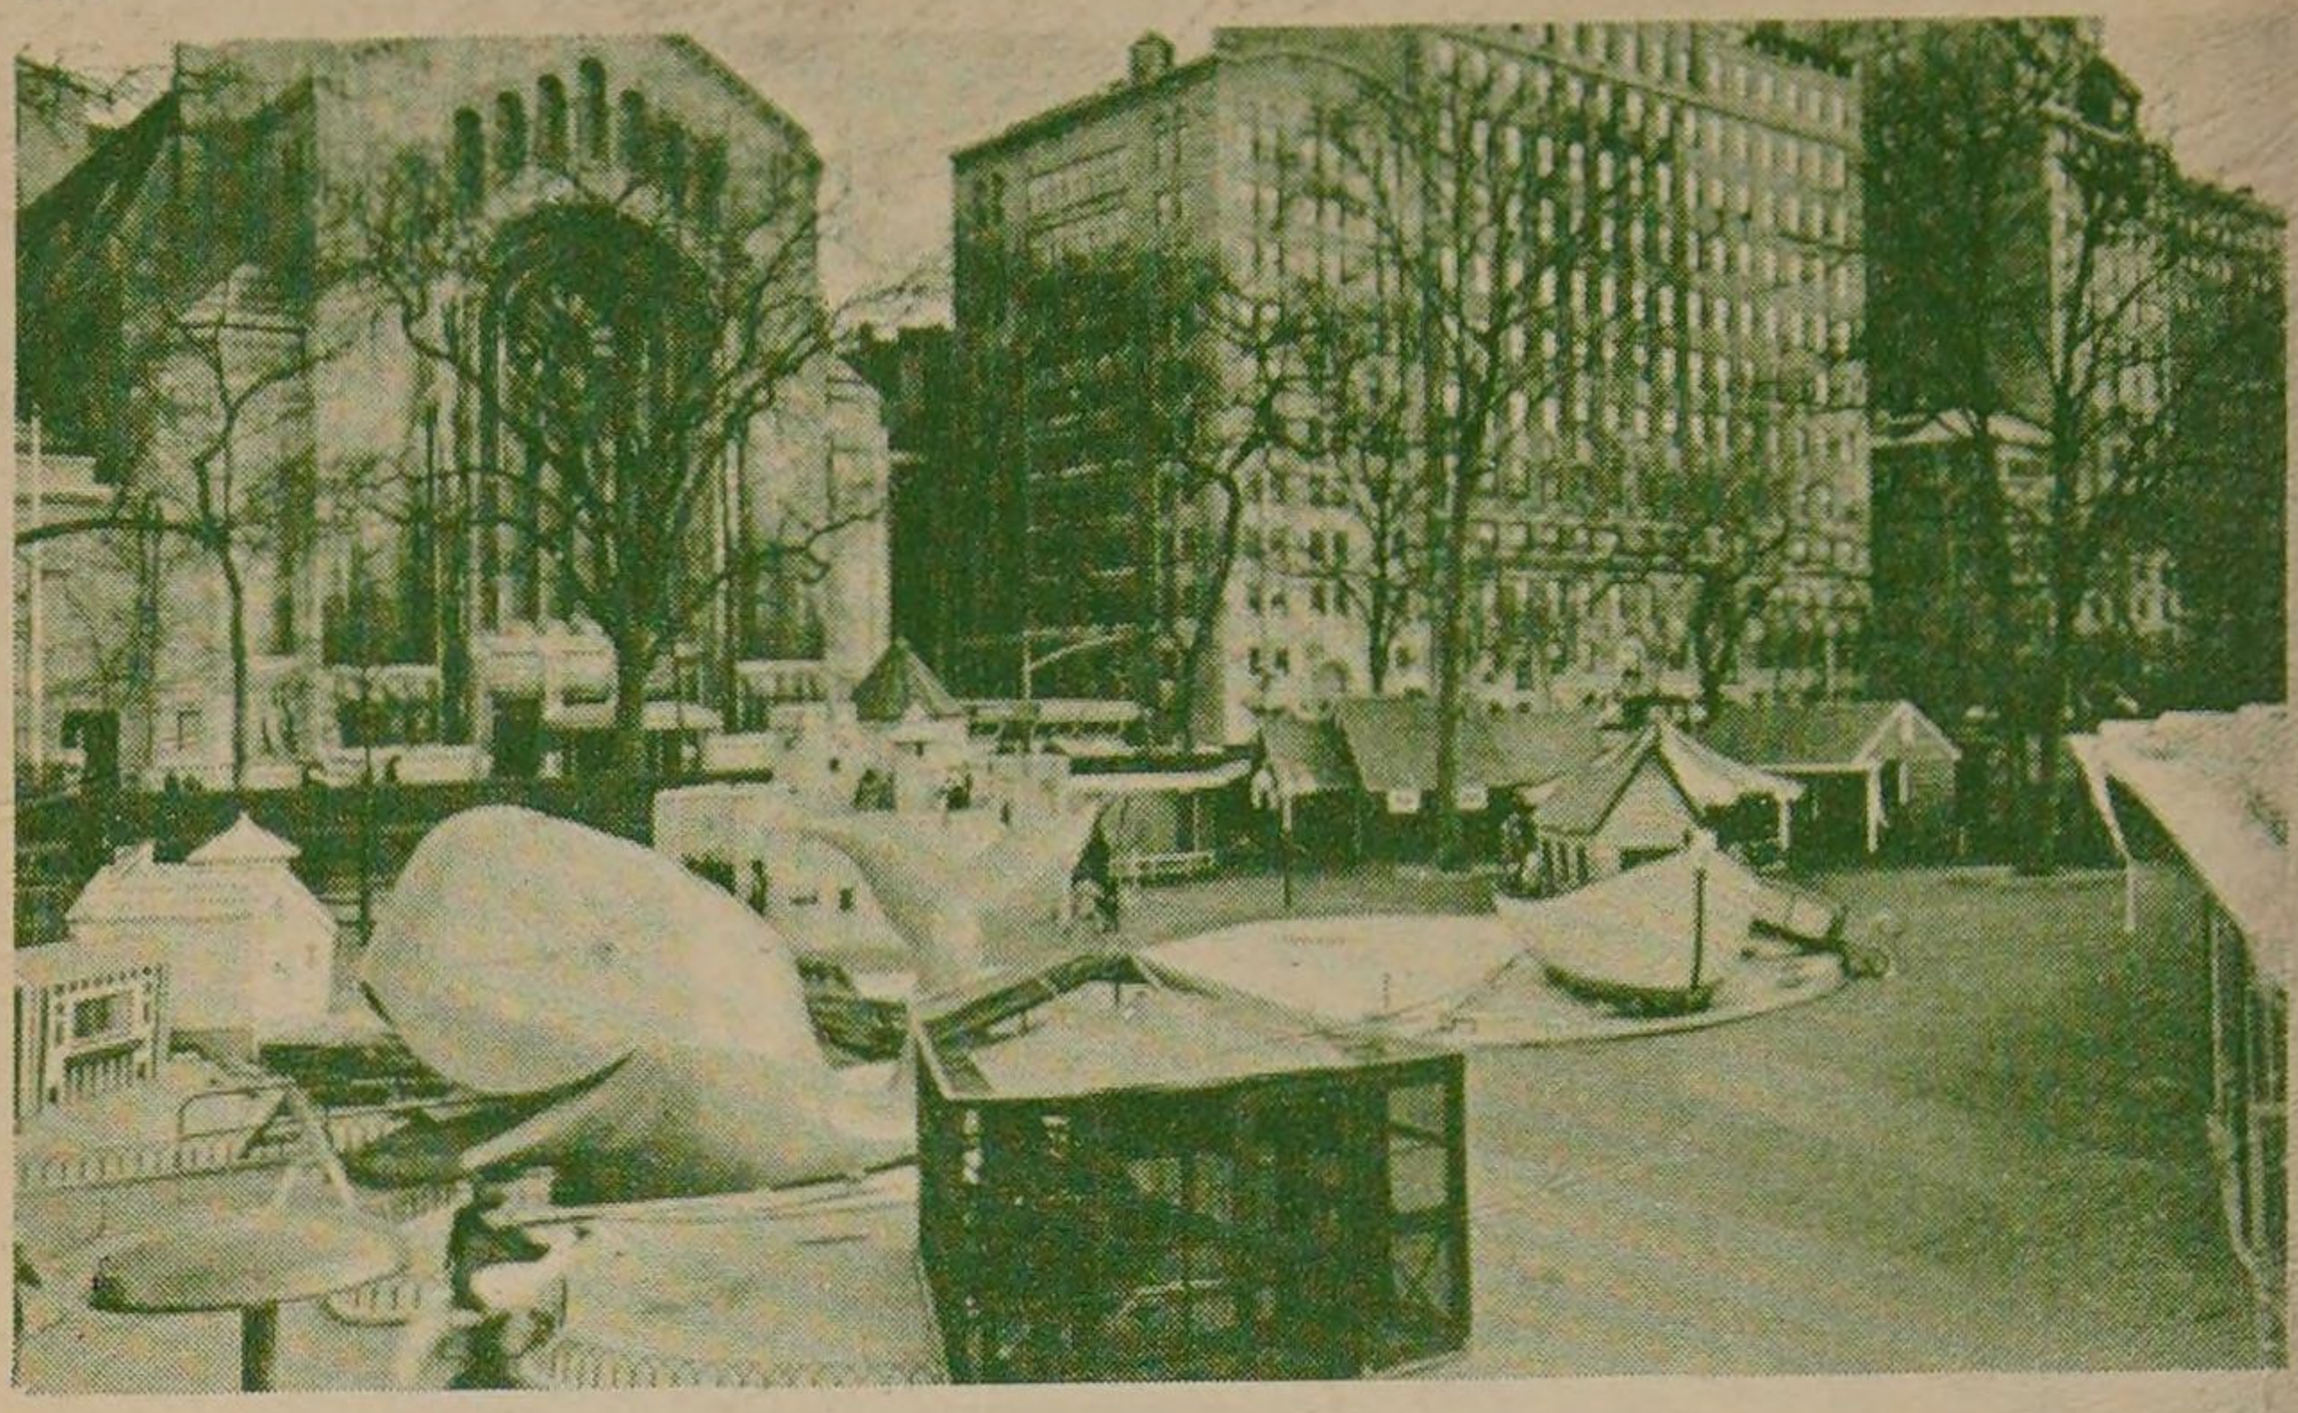

IONS PER POUNDS KILO

Because wealth is energy, people everywhere will be rich in power when integrated world-wide industrial networks are established.

A world-wide electrical energy network linking the day and night hemispheres would result in staggering economic gains. As Vladivostok sleeps, Con Edisonovitch's current would be channeled to California.

Industry works best as a world system. Newly emerging nations must realize that their independence depends on their participation in world industrialization.

"I was hung out of a third-floor window by my ankles and whipped ten times in front of every class because I couldn't learn to read." ***—Massachusetts student.***

GGEST" SCHOOL" OPPO

Tension is the great integrity: Tensegrity.

Compressional structures, such as Greek columns, masts, and trees, are limited in length in respect to their cross-sectional diameters. Greek stone columns are limited to heights which are only 18 times their diameters. Tension relations are unlimited in length to cross-section. The moon-Earth tension has zero section.

Young people are often targets for exploitation by politicians. They are easily seduced by biased jargon on "how the world turns."

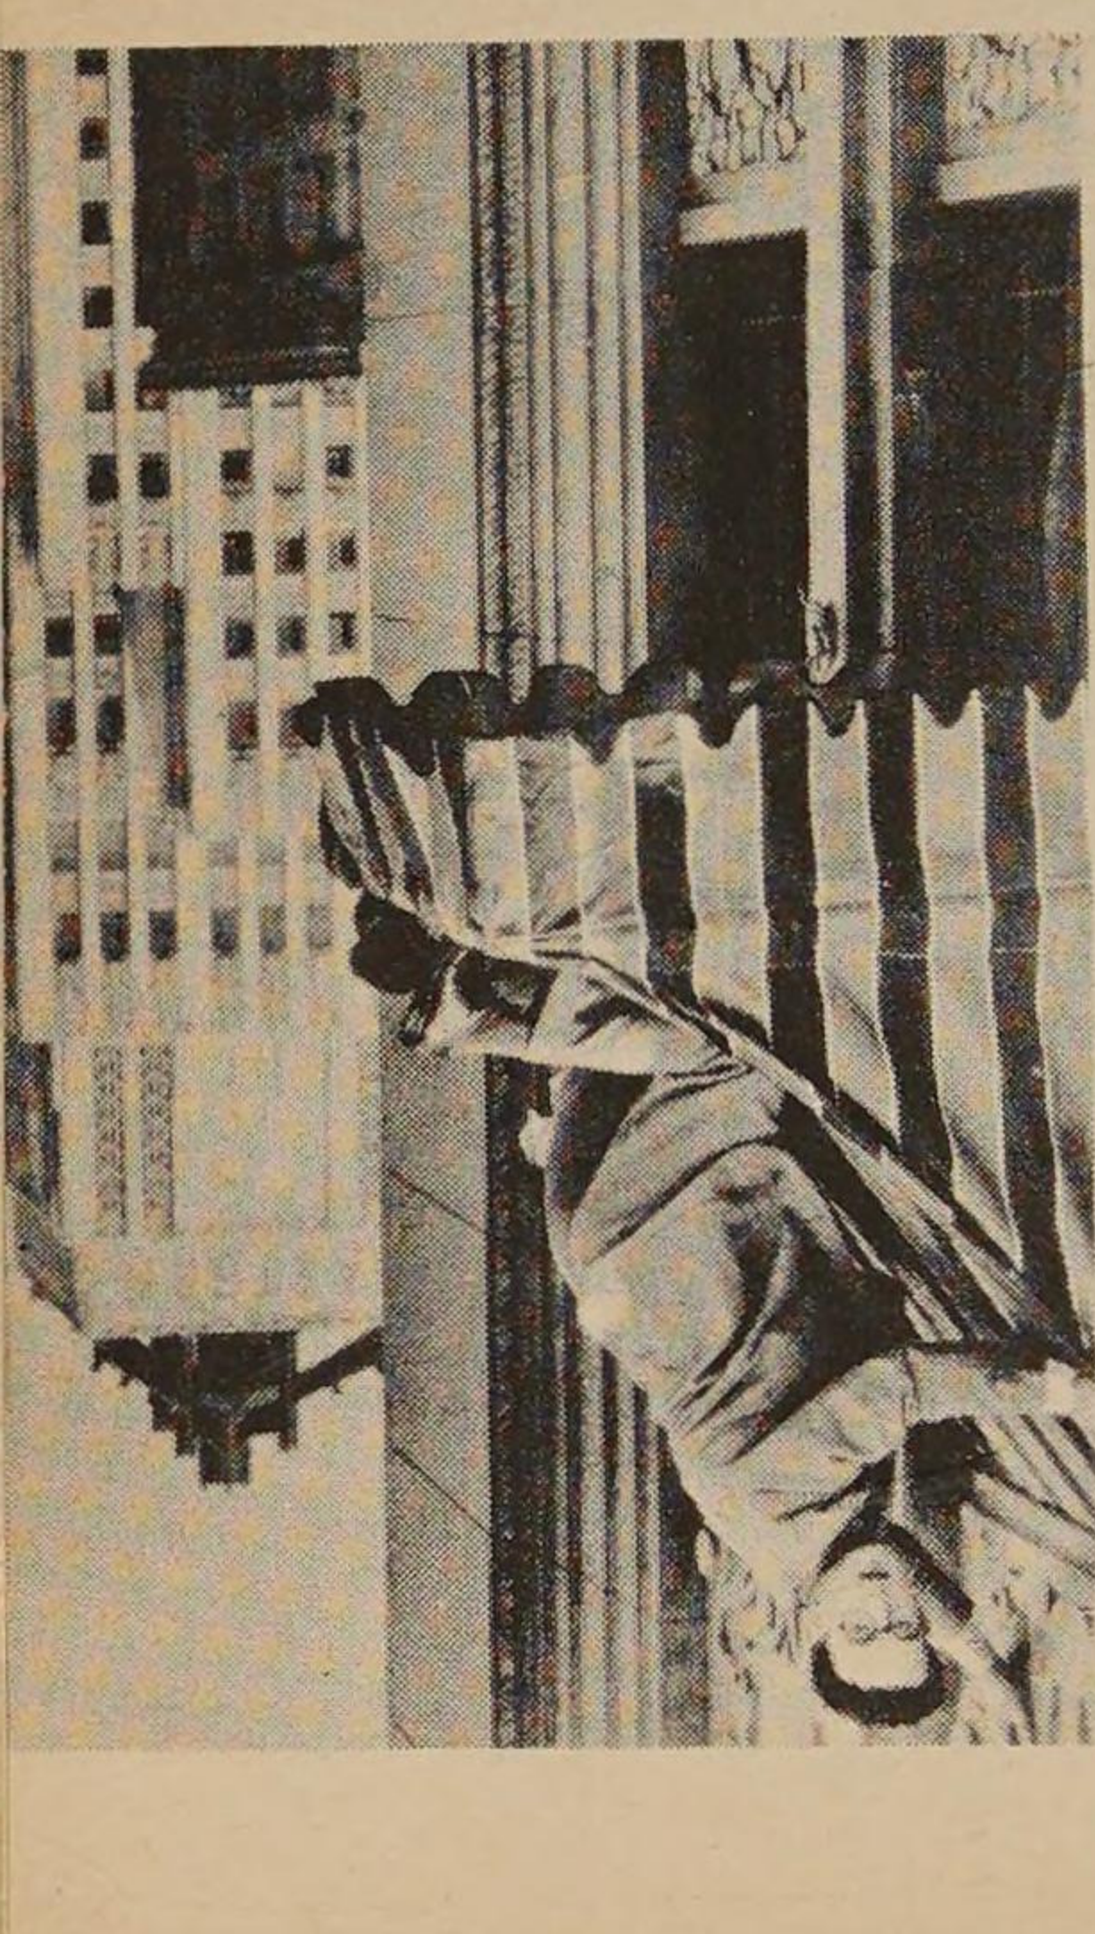

Tomorrow's manufacturers will be the universities, turning out documentary film and data rather than turning out students.

Lavishing vast and increasing amounts of time, energy, and money, we assiduously prepare our students for a world that no longer exists. We have created an educational system that in truth interrupts the student's education.

Formerly, education's task was simple: Decide what society needs, then knead the fill. The effect of this pigeonhole training was to control the process of personal growth, rather than to encourage exploration. Perceptions were standardized. Specialization and standardization in the curriculum produced close resemblance, creating hot competition between individuals. A student could only differentiate himself from his fellow specialists by doing the same thing better—and faster. This competition became the chief motive force in mass education, as it was in the whole of society. Is "making the grades" what it's all about?

D. AGES 0 TO 4 ARE E

O TNƎC REP DƎDNUH Ǝ

"Man is constantly interacting within his many environments and at many levels of organization—from the subcellular and biochemical to the most external or peripheral, that of family, work and now even his universe. We postulate that when a person gives up psychologically, he is disrupting the continuity of his relatedness to himself and his many environments or levels of organization and ...disease is more apt to appear at such times of disruptions and increased vulnerability."—*Physicians, Rochester Medical Center, exploring the relationship between psychological setting and the onset of physical disease.*

We should be able to afford to send everyone back to school, or to send them fishing, if that is where they wish to go. A great many people bent on learning, on finding out something new, should greatly increase the common wealth. Those hooked on fishing may inadvertently make a great contribution by just taking it easy. They may even discover a better way to fish.

An amateur British astronomer who spent 800 hours over six years scanning the sky with binoculars from a deck chair in his back garden discovered a new exploding star in the constellation Delphinus. The star was named Nova Alcock for the discoverer, George Alcock, a school teacher.

"Mass media do more to keep Americans stupid than even the whole U.S. school system, that vast industry which cranks out trained consumers and technician-pawns for the benefit of other vast industries."

–Frank Zappa, Mother of Invention.

IRES GET DISCONNECTE

F HUMANITY'S INCREAS

All animals, except man, adapt according to their environment. Man changes his environment, making it adapt to him.

We should look on our society as we look on the biological world, where the fungi, the manures, and the worms make an extraordinary contribution to the chemical reprocessing and upgrading of the earth. We tend to applaud the football player who makes the touchdown and overlook the lineman who does the heavy blocking. We should not applaud only the flower, the fruit, and the ball carrier.

"The main purpose of dining out in Washington is to talk, not eat."—STEWART ALSOP.

It's **FRIGHTFUL.** *Men are* **MAD**

—TWIGGY.

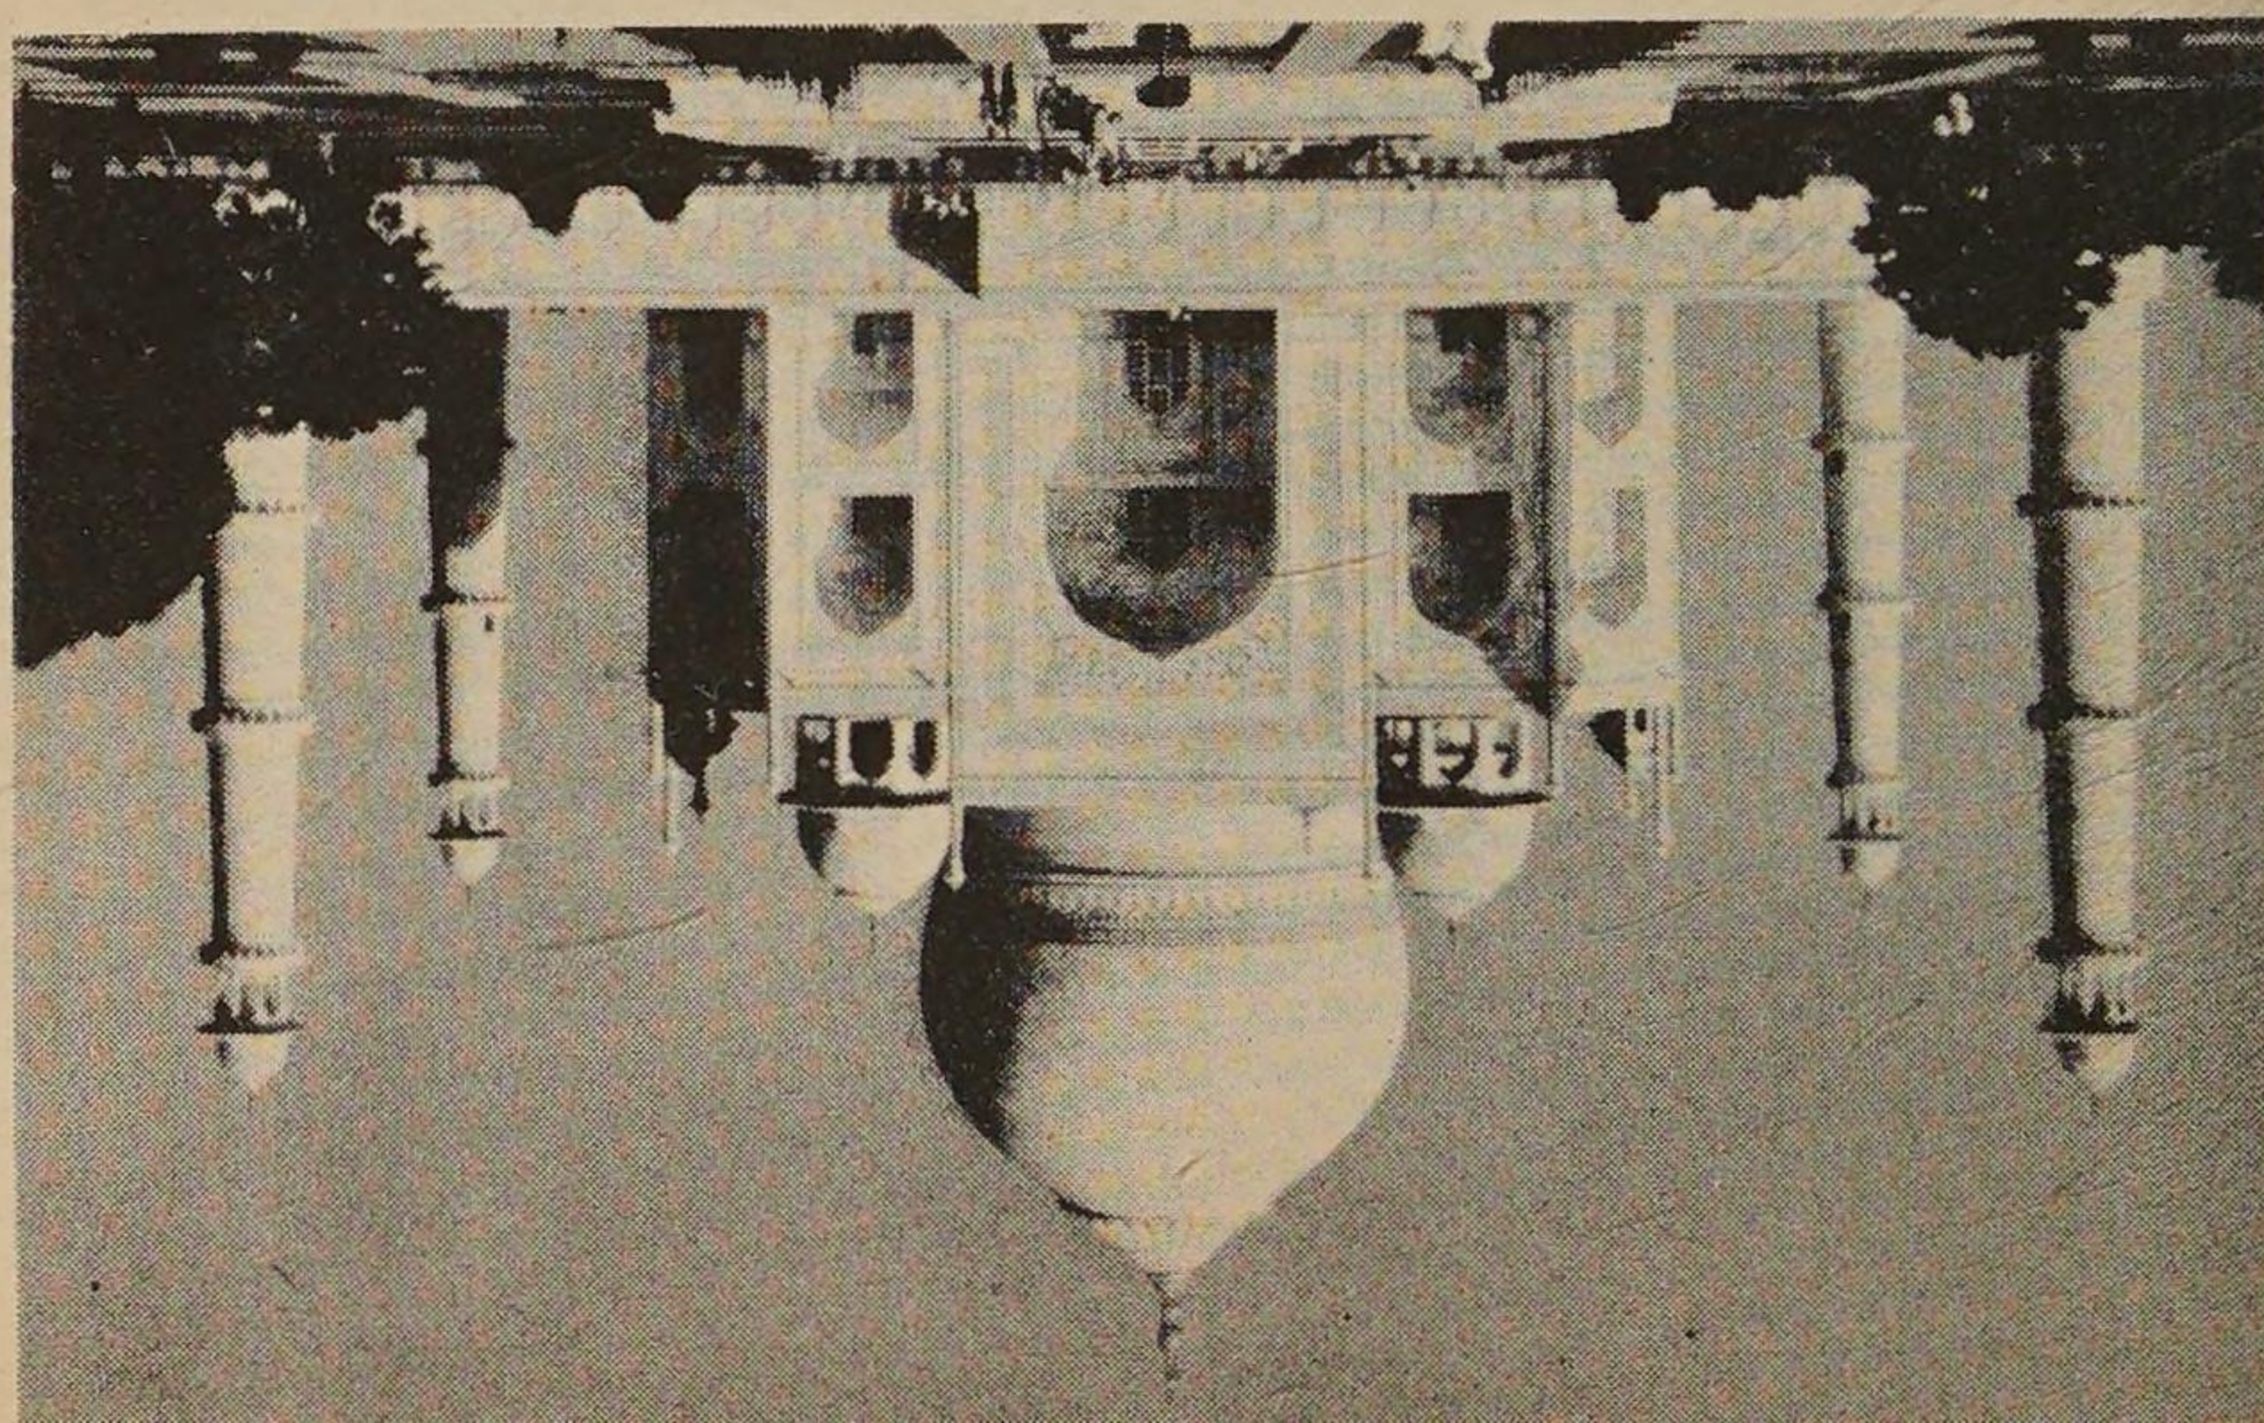

Aunt Margaret and Uncle Henry took their school days with some seriousness because they knew that what was going on in the schoolroom was related to what was going on outside. This relation is no longer possible in our electric environment which makes the "outside" information level far higher—and far more exciting—than the information level of the present schoolroom. The present educational establishment, with its factory-like setups, seems bizarre to many young people because they are growing up in a world where all data and events appear integrally related.

BEING HAS GREAT POT

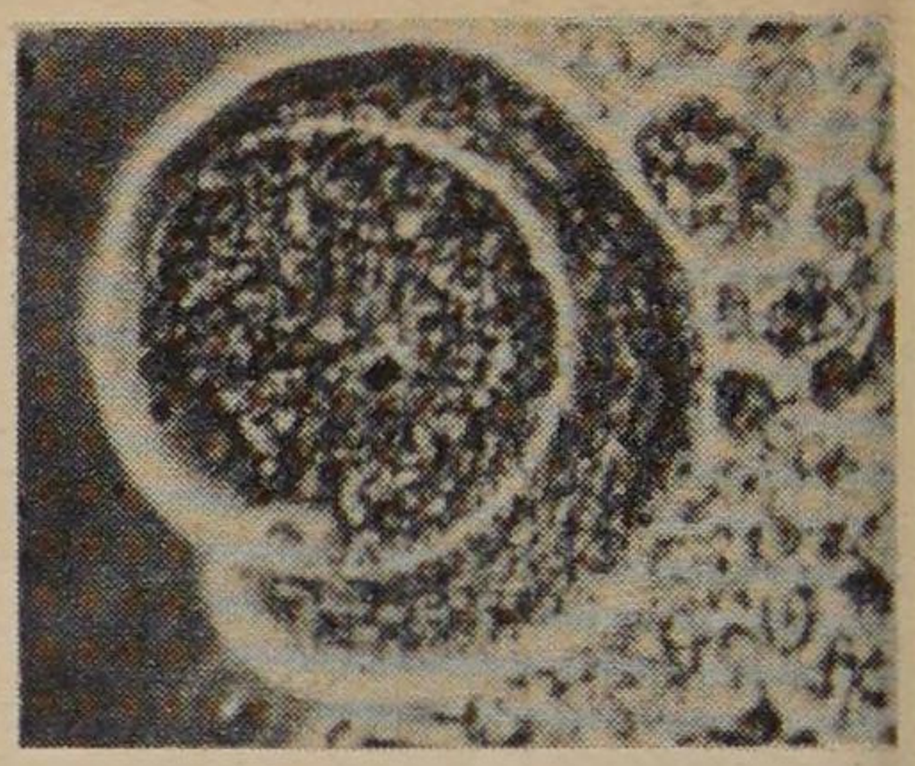

R HIGHER STANDARDS

Evolution of the environment shapes the evolution of humanity. We shape our tools and, thereafter, our tools 'ape us.

"Anybody willing to put in 100 hours a week, seven days a week, has it made." —Manhattan restaurant owner.

Havenotness is caused by society's failure to design and produce the right tools and goods. Money alone is not the panacea.

"I know that publishers don't usually care much whether people read their books just so long as they buy them, but the people who denounce our literary products don't even buy them."
—Associate Justice ABE FORTAS.

Abnormal behavior of a living human lung cancer cell is demonstrated for the first time.

"The factors of safety are based upon uncertainties in the stress distribution, uncertainties in material properties, as well as the static or moving nature of the load."—Arthur Garson, chairman, Lovable Co., announcing national contest to apply complex engineering principles of stress and load to improve brassiere design.

Louis Pasteur's view that disease germs were subvisual was not looked upon with favor by the medical profession. "After all, Pasteur's just a chemist."

Demise of Pirate Power left the subservient local rulers bereft of their puppeteers. Pirates of the high seize passed on their secrets—on the ways of the world—to "captains of industry," the new pirates.

The shape of women's legs is being studied by Aston University in Birmingham, England. It is hoped that the study will learn, for instance, whether upper-class women have shapelier legs than their working-class sisters.—"*Legs have been a neglected area of research,*" said an investigator, in dead earnest.

"Railroads are a great prop. You can do some awful wild things with them."—BUSTER KEATON.

IVINGRY. MALTHUS IS
IENTISTS ARE UTTERLY

Scientists are the most confused and irresponsible people. They are all egg-laying hens sitting on their technology nests in glass and tile henhouses. The eggs they lay are taken out from under them and all they do is crow and cackle about the lack of wisdom in their use.

Businessmen sell the eggs to politicians, who scramble or fry them as we hurtle toward oblivion.

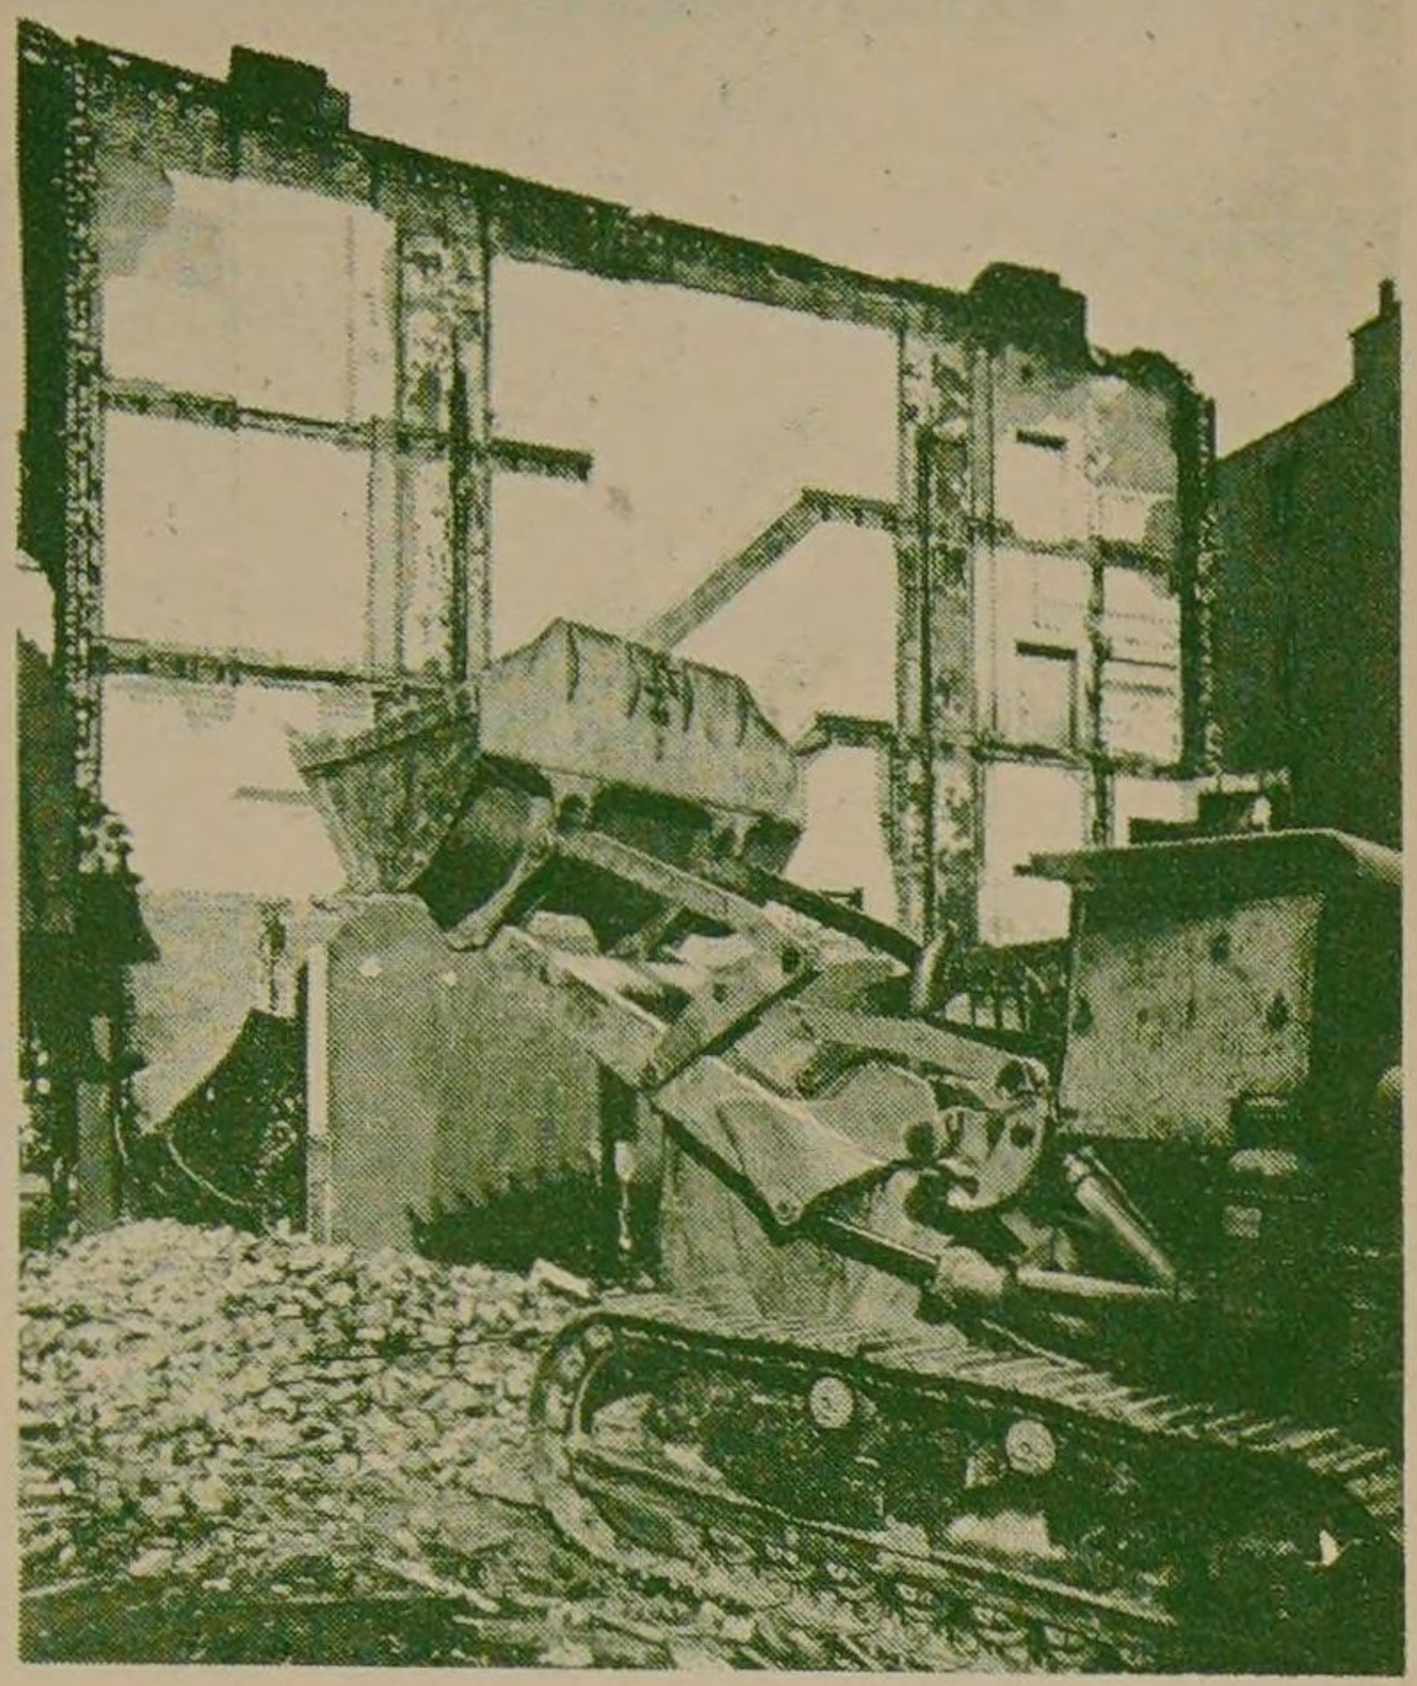

Most scientists do not welcome discovery—they only welcome new proofs of what they already know.

Discovery is unrepeatable. All scientists instinctively understand that discoveries are fatal to the backlog of their knowledge.

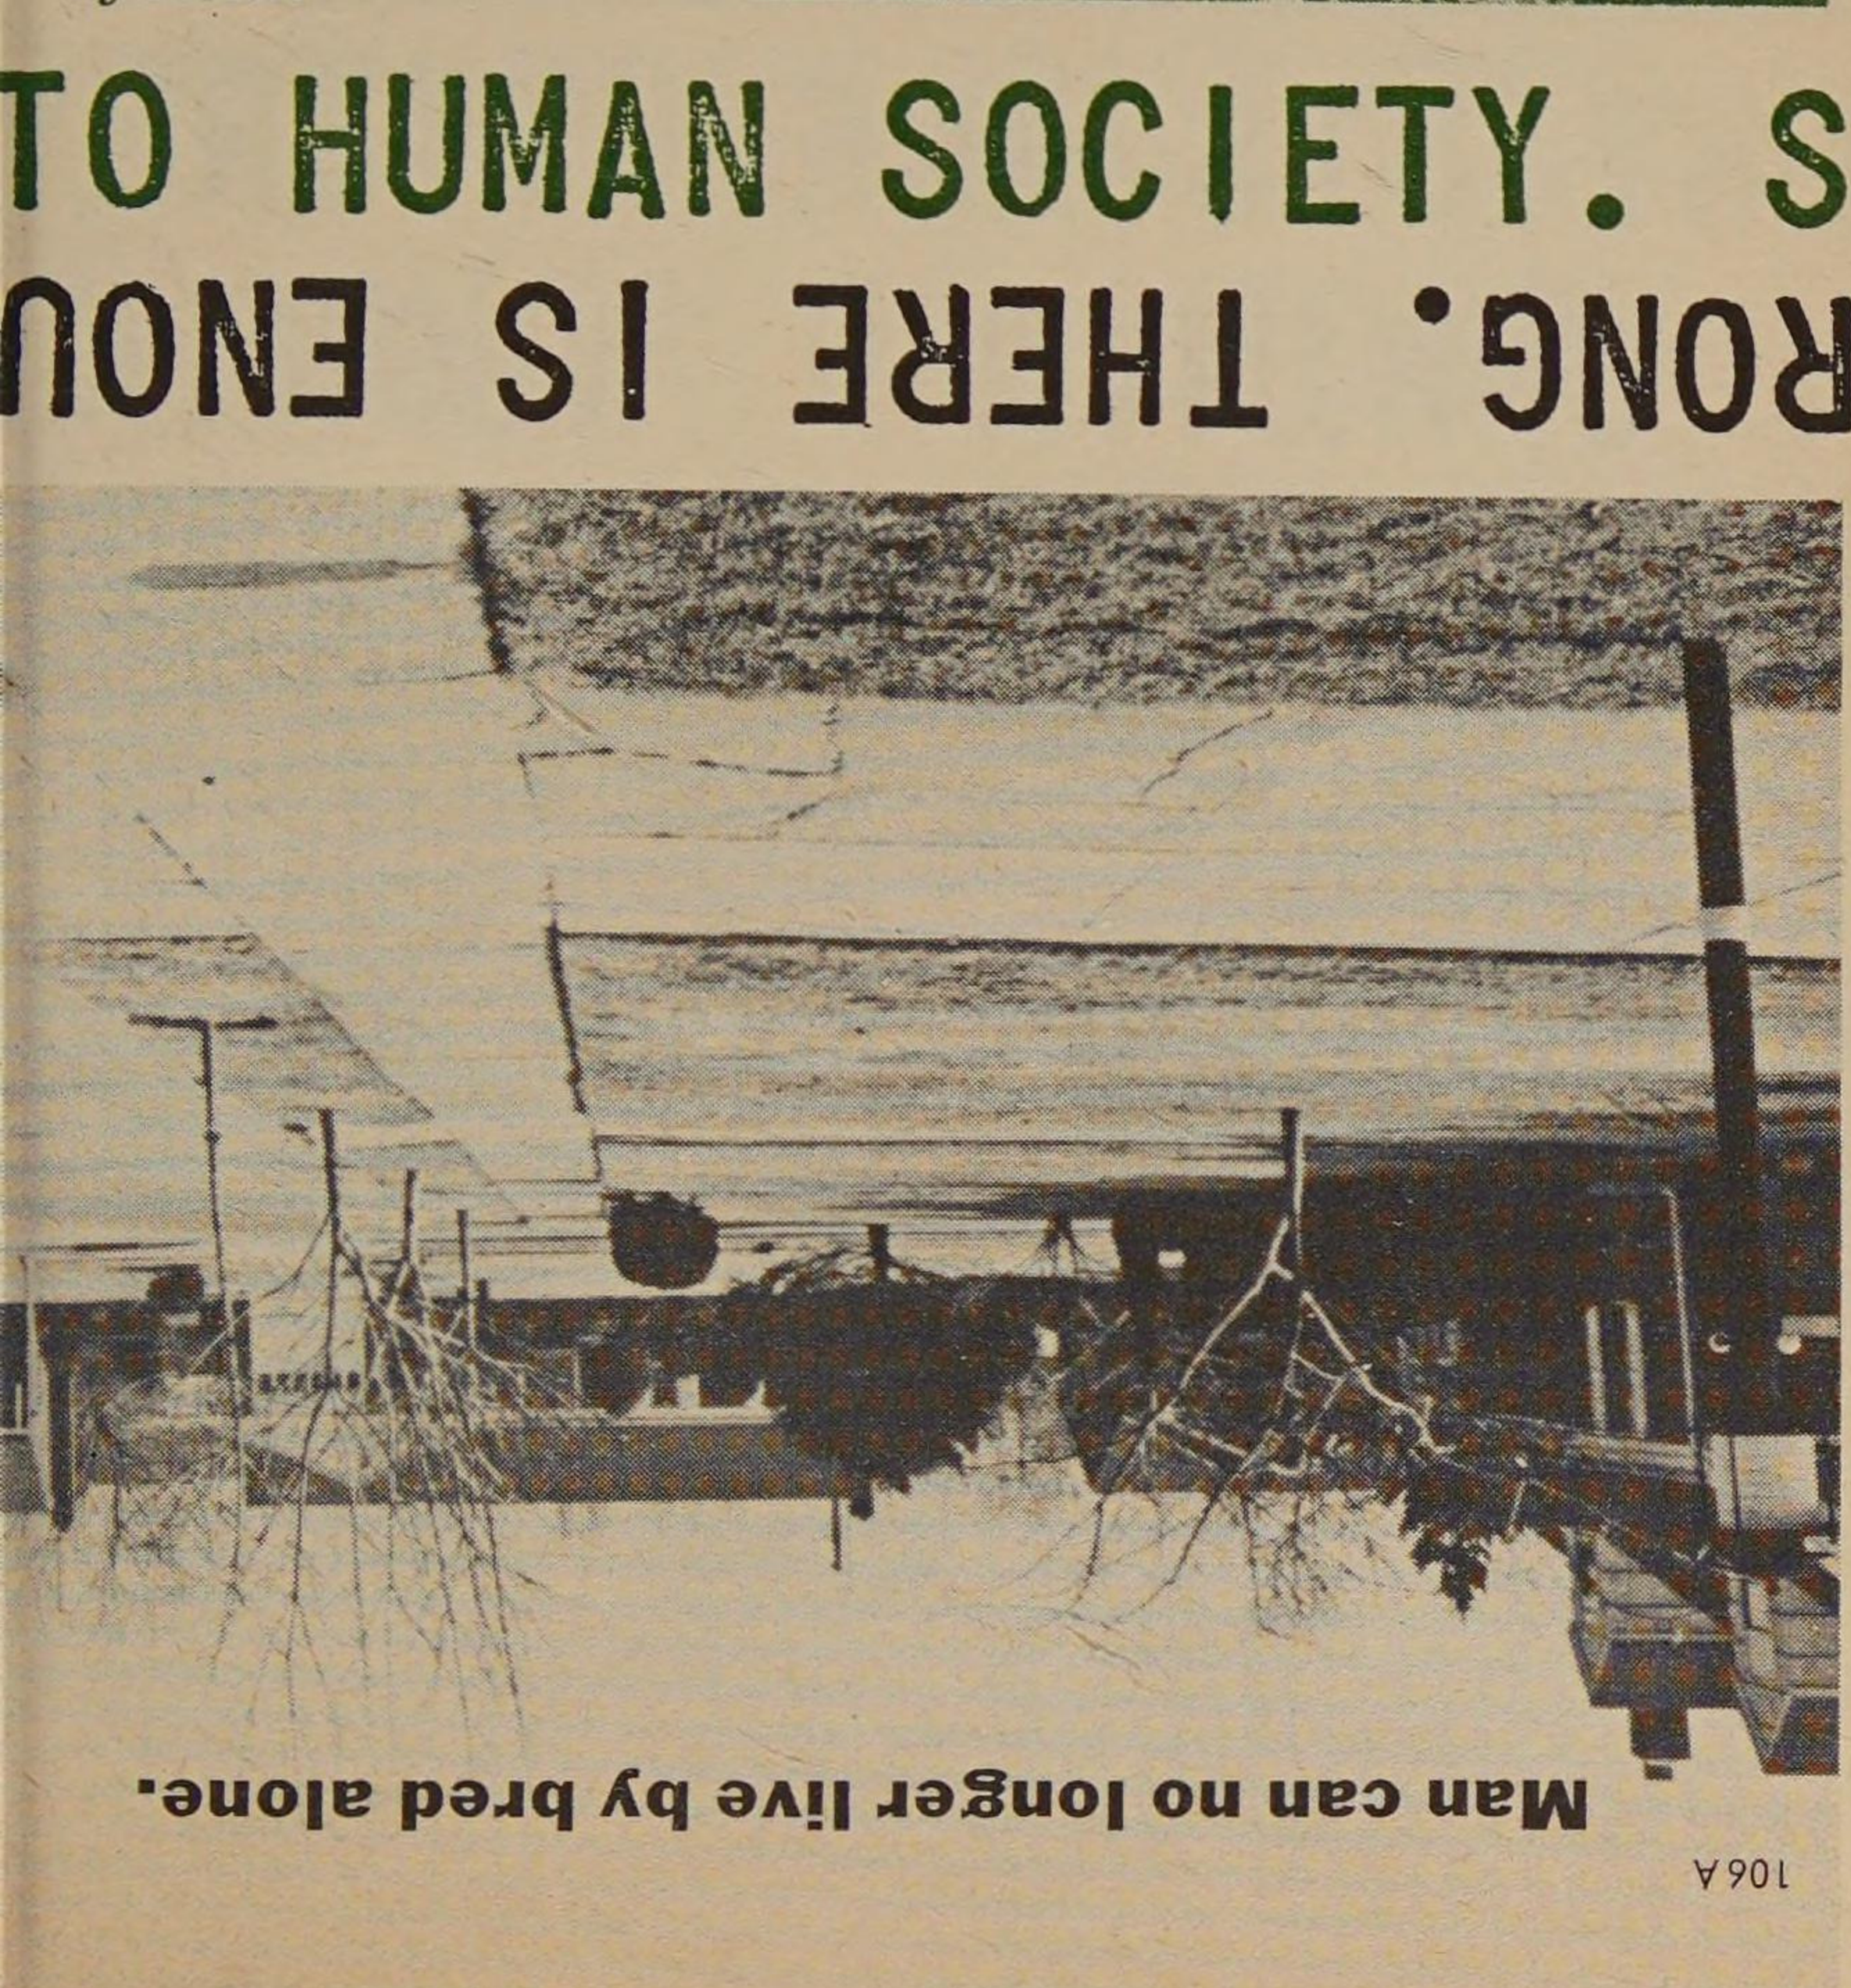

PRAVDA: "Waste, confusion and damage to industrial production resulted when the Soviet Union—in excessive haste—gave workers a two-day weekend."

"They are doing it for the pure joy of it."
—Description of firebugs preparing to burn down house in Max Frisch play.

To whittle down a property tax increase, Newark, N.J.'s City Council voted to close its excellent library system.

TO HUMAN SOCIETY. SC
WRONG. THERE IS ENOU

Man can no longer live by bred alone.

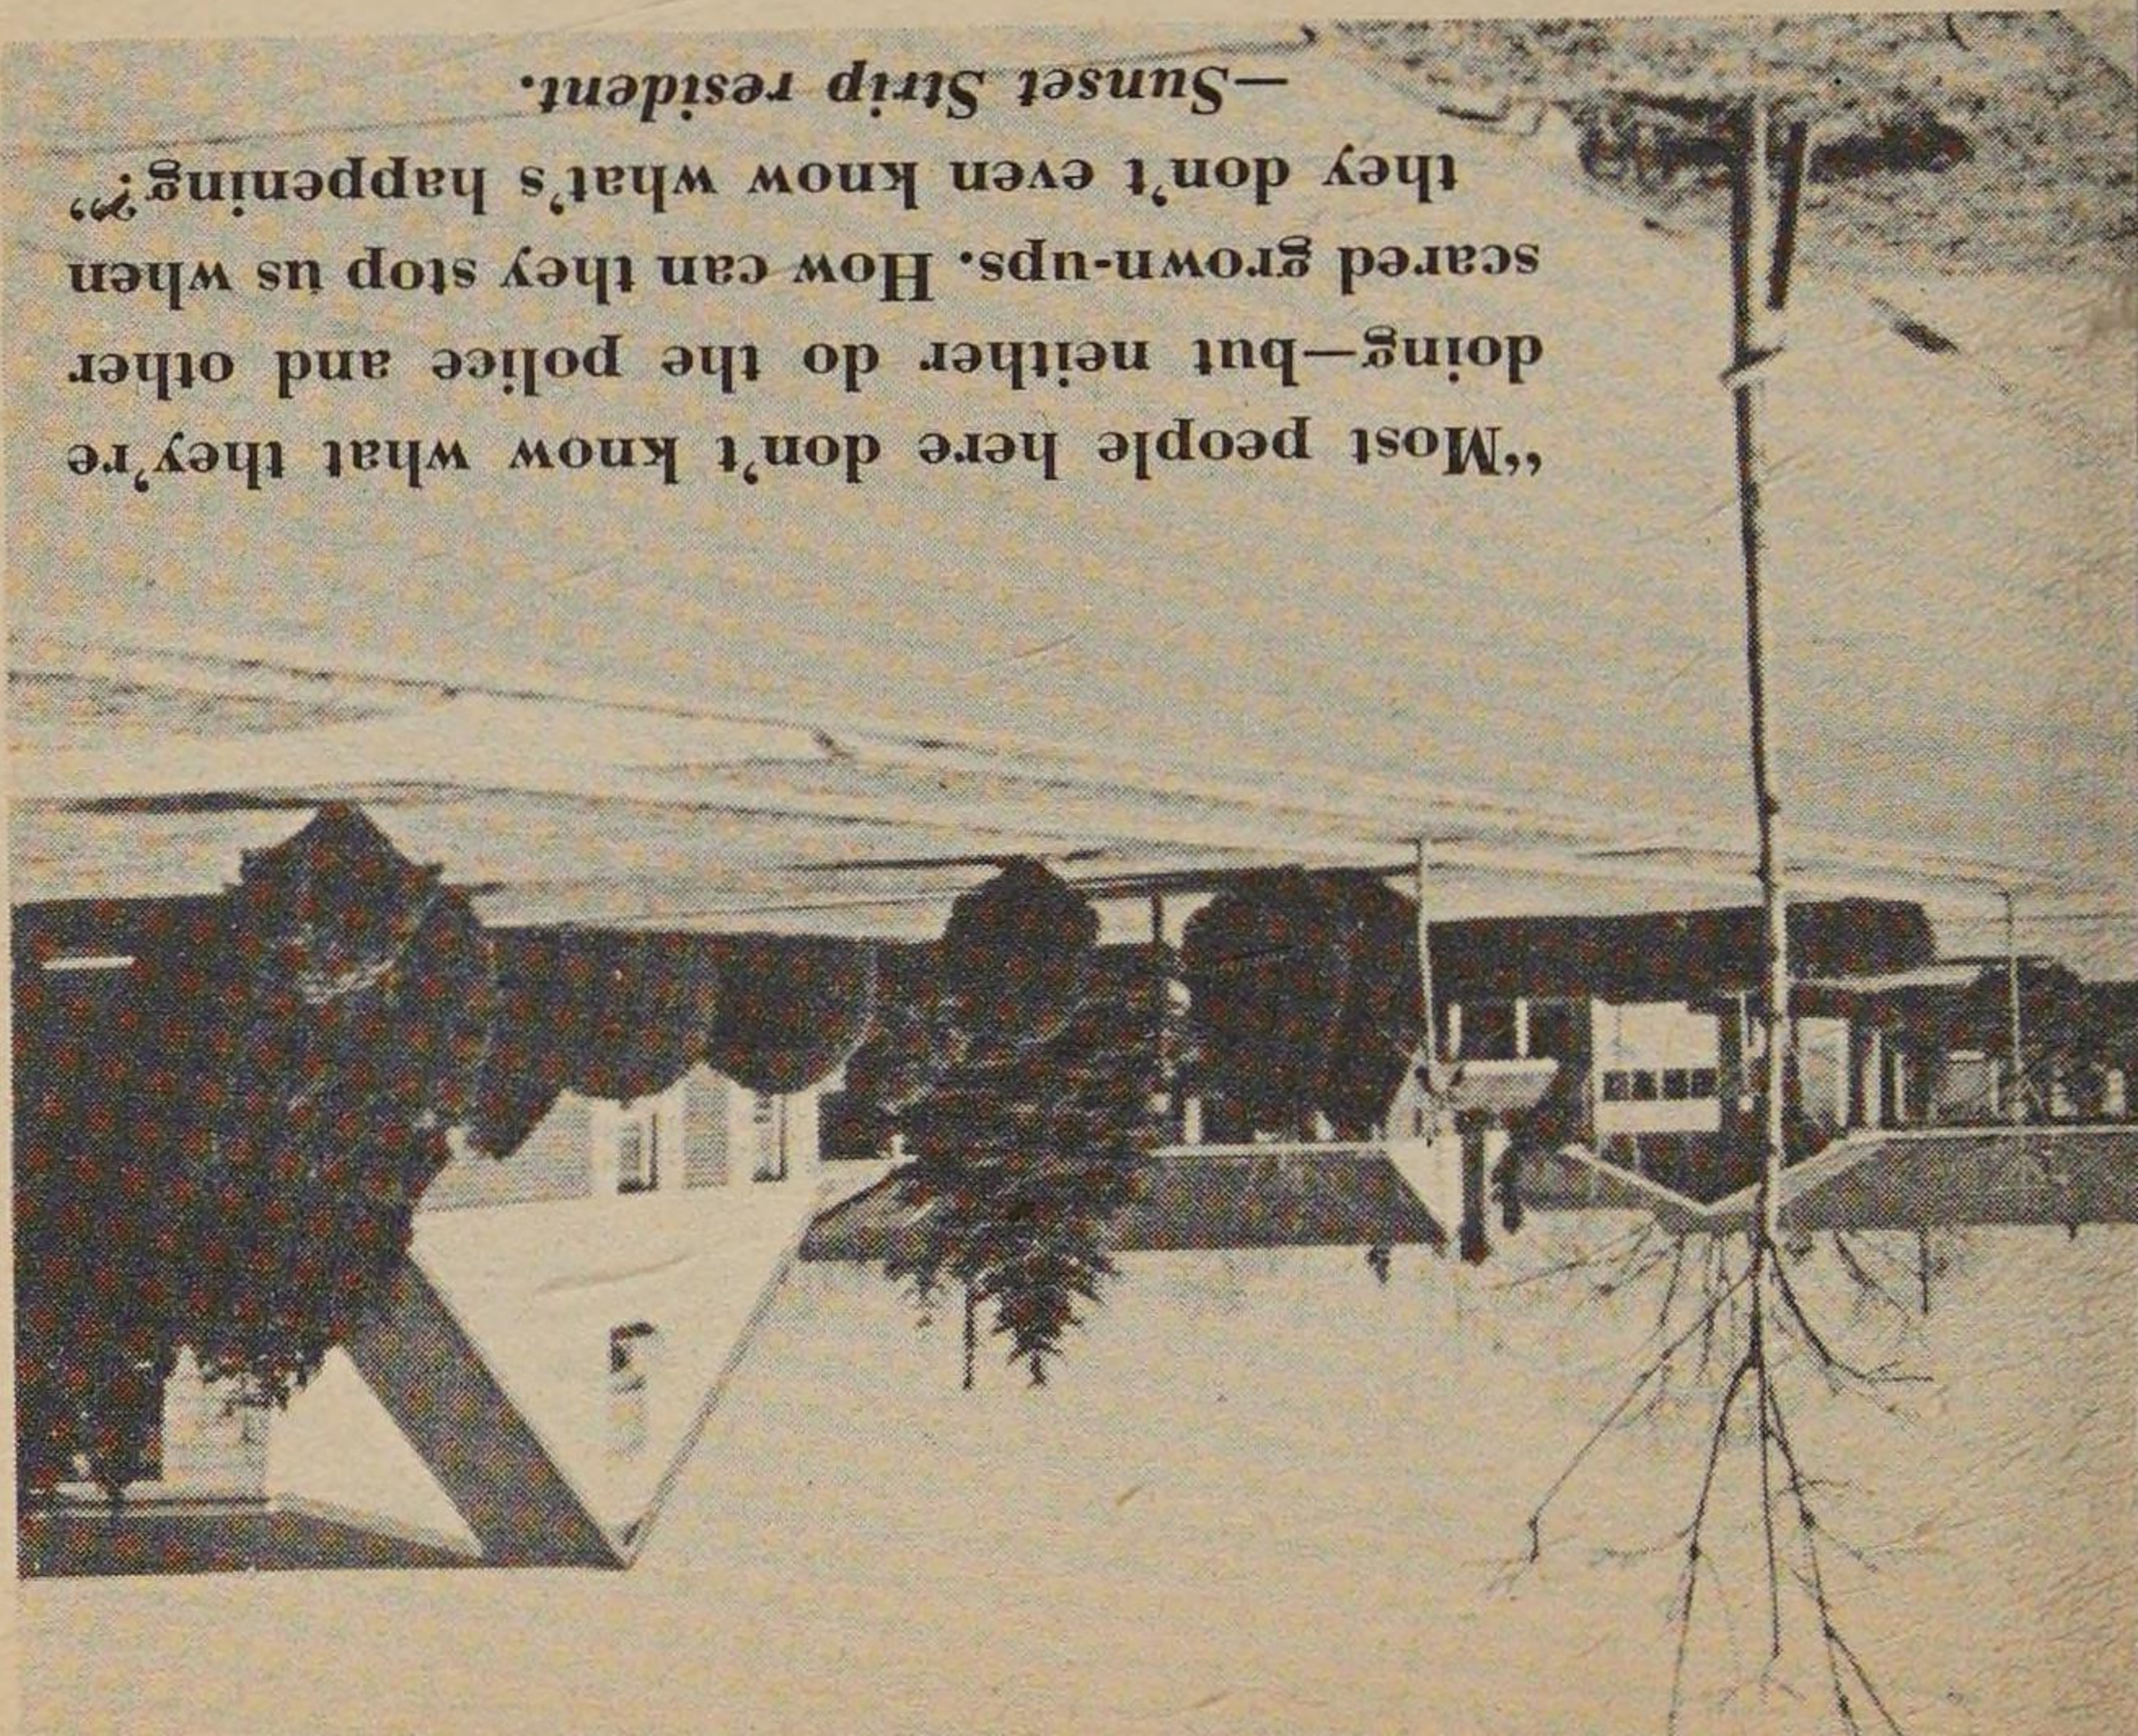

Artists haven't painted themselves into the specialist corner. Because of a comprehensive outlook, their art reflects the many disciplines, especially science.

"My father warned me the business world was very different from the world where we live."*—Twenty-one-year-old Francine Gottfried whose measurements—43-25-37—attracted vast crowds on her way to work in Wall Street. *"I think they're all crazy. What are they doing this for?"

Specialists need generalists to organize and implement their discoveries. The artist's greatest faculties are his imagination and the ability to think conceptually.

"Women are different now,"

said Chief Njiri Karanja of Kenya. *"They are getting clever. They are wearing expensive dresses instead of skins. They are painting their faces with cosmetics instead of mud. They are wearing high wigs that look like beehives. All these things cost money, and women didn't know about*

Modern technology is creating a society of such complex diversity and richness that most people have a greater range of personal choice, wider experience and a more highly developed sense of self-worth than ever before. For the first time, the common man has the opportunity to establish his own identity, to determine who he will be.

A two-mile-high tetrahedronal city
will consist of an open truss framework
"structural mountain" whose sides are covered
with parked mobile homes.
At night, the city will be ablaze with lights,
as are petroleum refineries now.

City domes will be so high and
their structural members so delicate
that they will appear to be invisible.
The domes operate as a controlled cloud,
bringing shadow when shadow is desirable,
bringing sun when sun is desirable.
They will keep out rain, snow, storms,
and exterior industrial fumes.
They will collect rain water.
The temperature in the city will be stabilized,
there will be a semi-tropical atmosphere.
People will live in gardens,
or upon garden-terrace skyscrapers,
needing only local screening for privacy.

NEXT 30 YEARS WILL B

Maximum gain of advantage from the minimum energy input.

The more people studying and experimenting, the more dis-

in their herds, the foundations for the tyranny of the state were laid."—*Elias Canetti*, Crowds and Power.

"A slave is an *animal* which is owned. A single slave can best be compared to a domesticated dog.... The desire to turn men into animals was the principal motive for the development of slavery.... Once men had succeeded in collecting large numbers of slaves, as they collected animals

Because society does not understand how its industrial wealth developed, it maintains a parochial, agricultural outlook.

"Now, John, you know perfectly well that I've never enjoyed having a good time."—John Cage's mother.

When you put three triangles with common sides around a point, a fourth triangle is formed at the base: A tetrahedron.

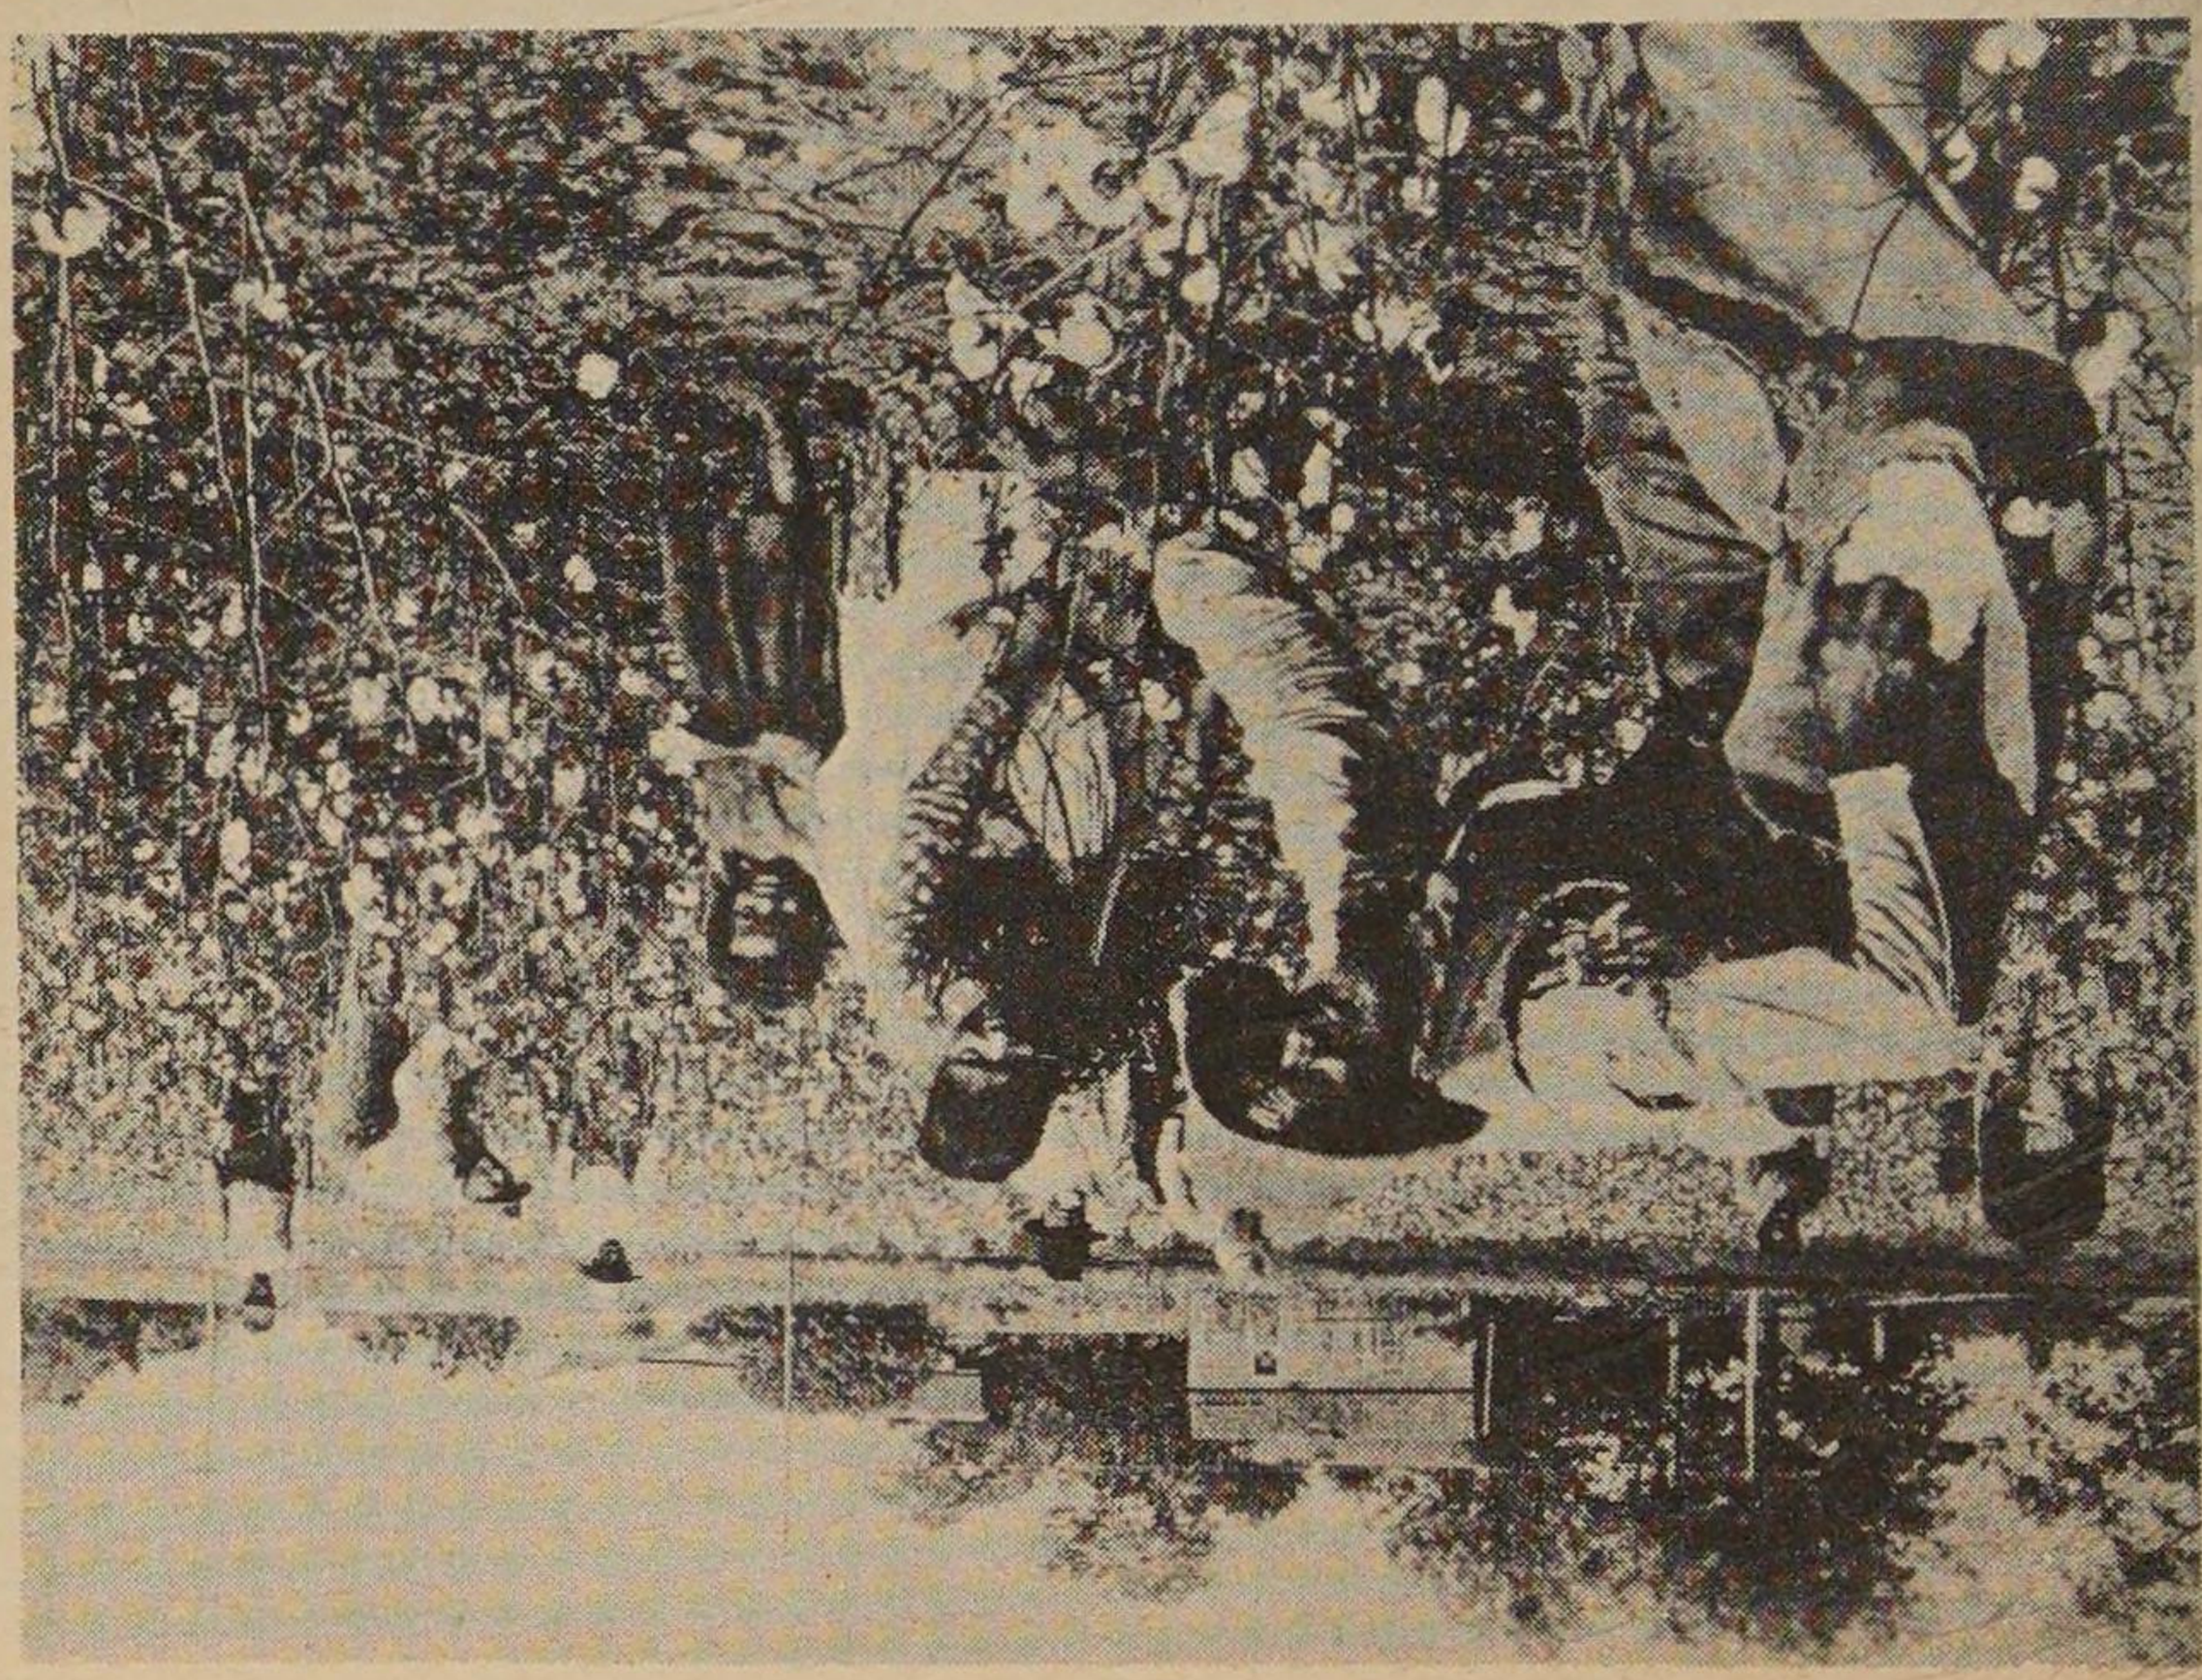

Tetrahedronal

Tetrahedronal cities floating on the ocean will use atomic reactors for energy and desalinization. Major ships already desalinate their water.

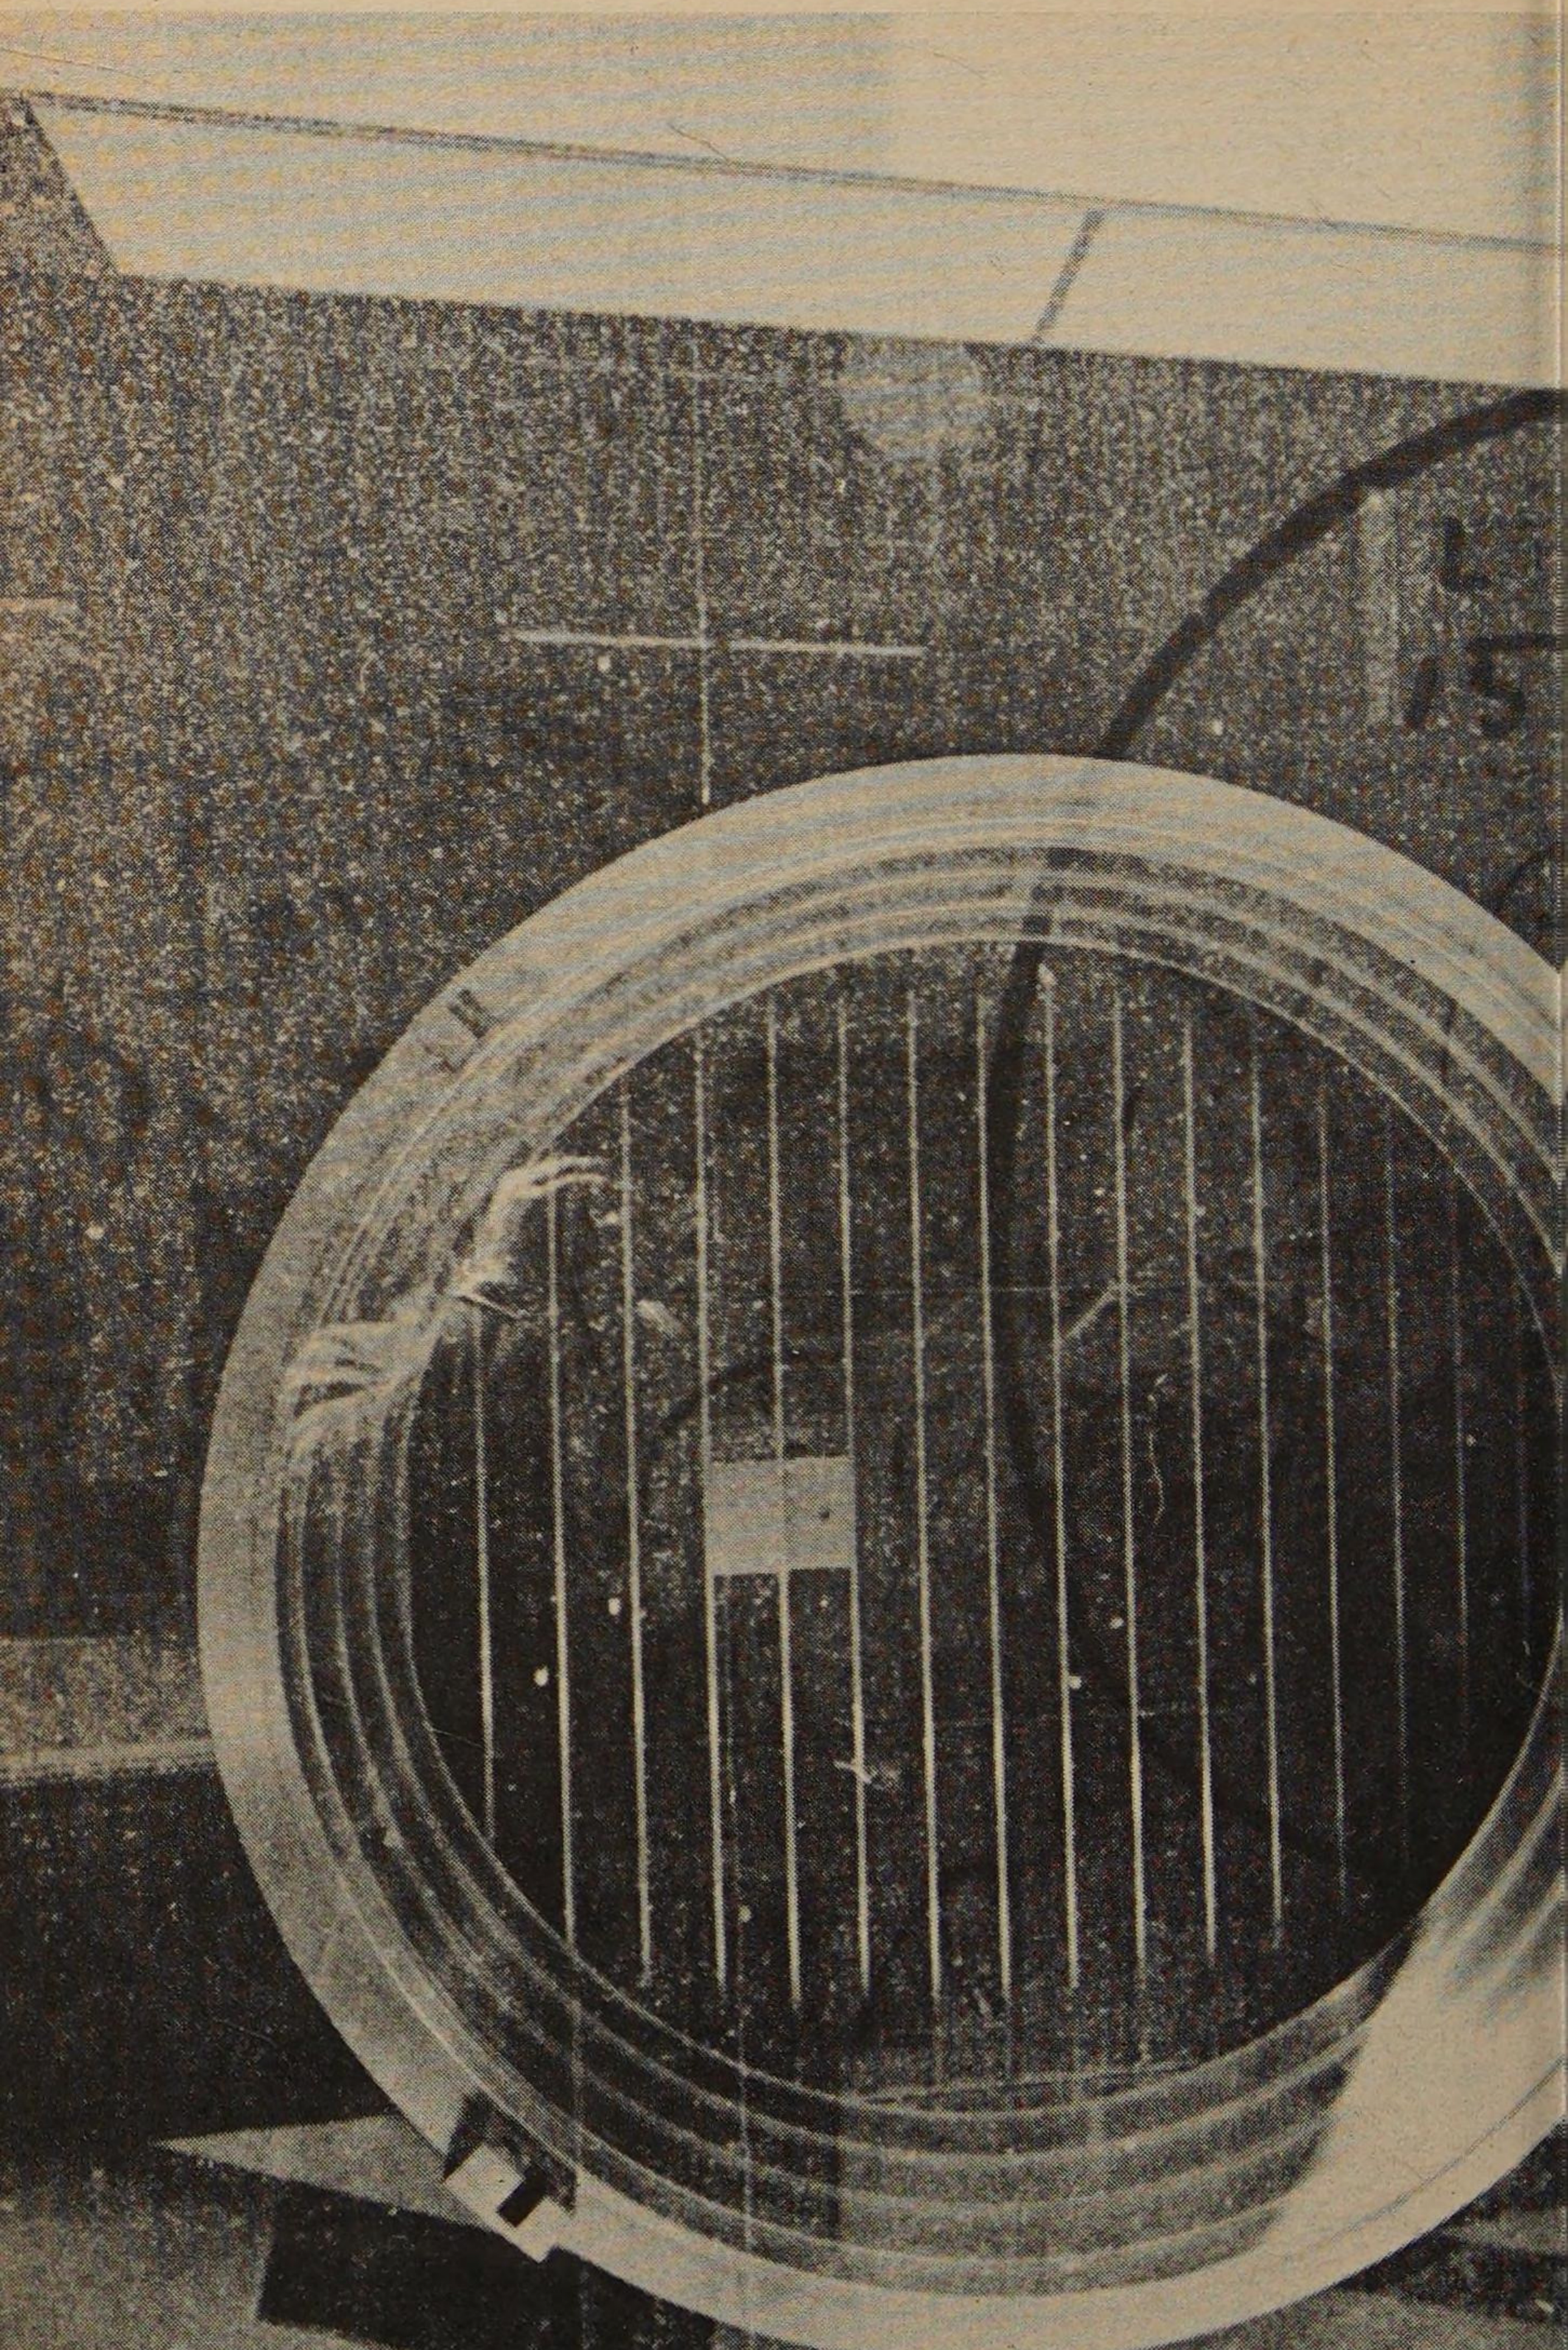

Tetrahedronal cities will grow symmetrically. They will never change their shape as populations grow from thousands to millions. Each family will always have 200 square feet of floor space.

Y IMPOSSIBLE FOR WOR

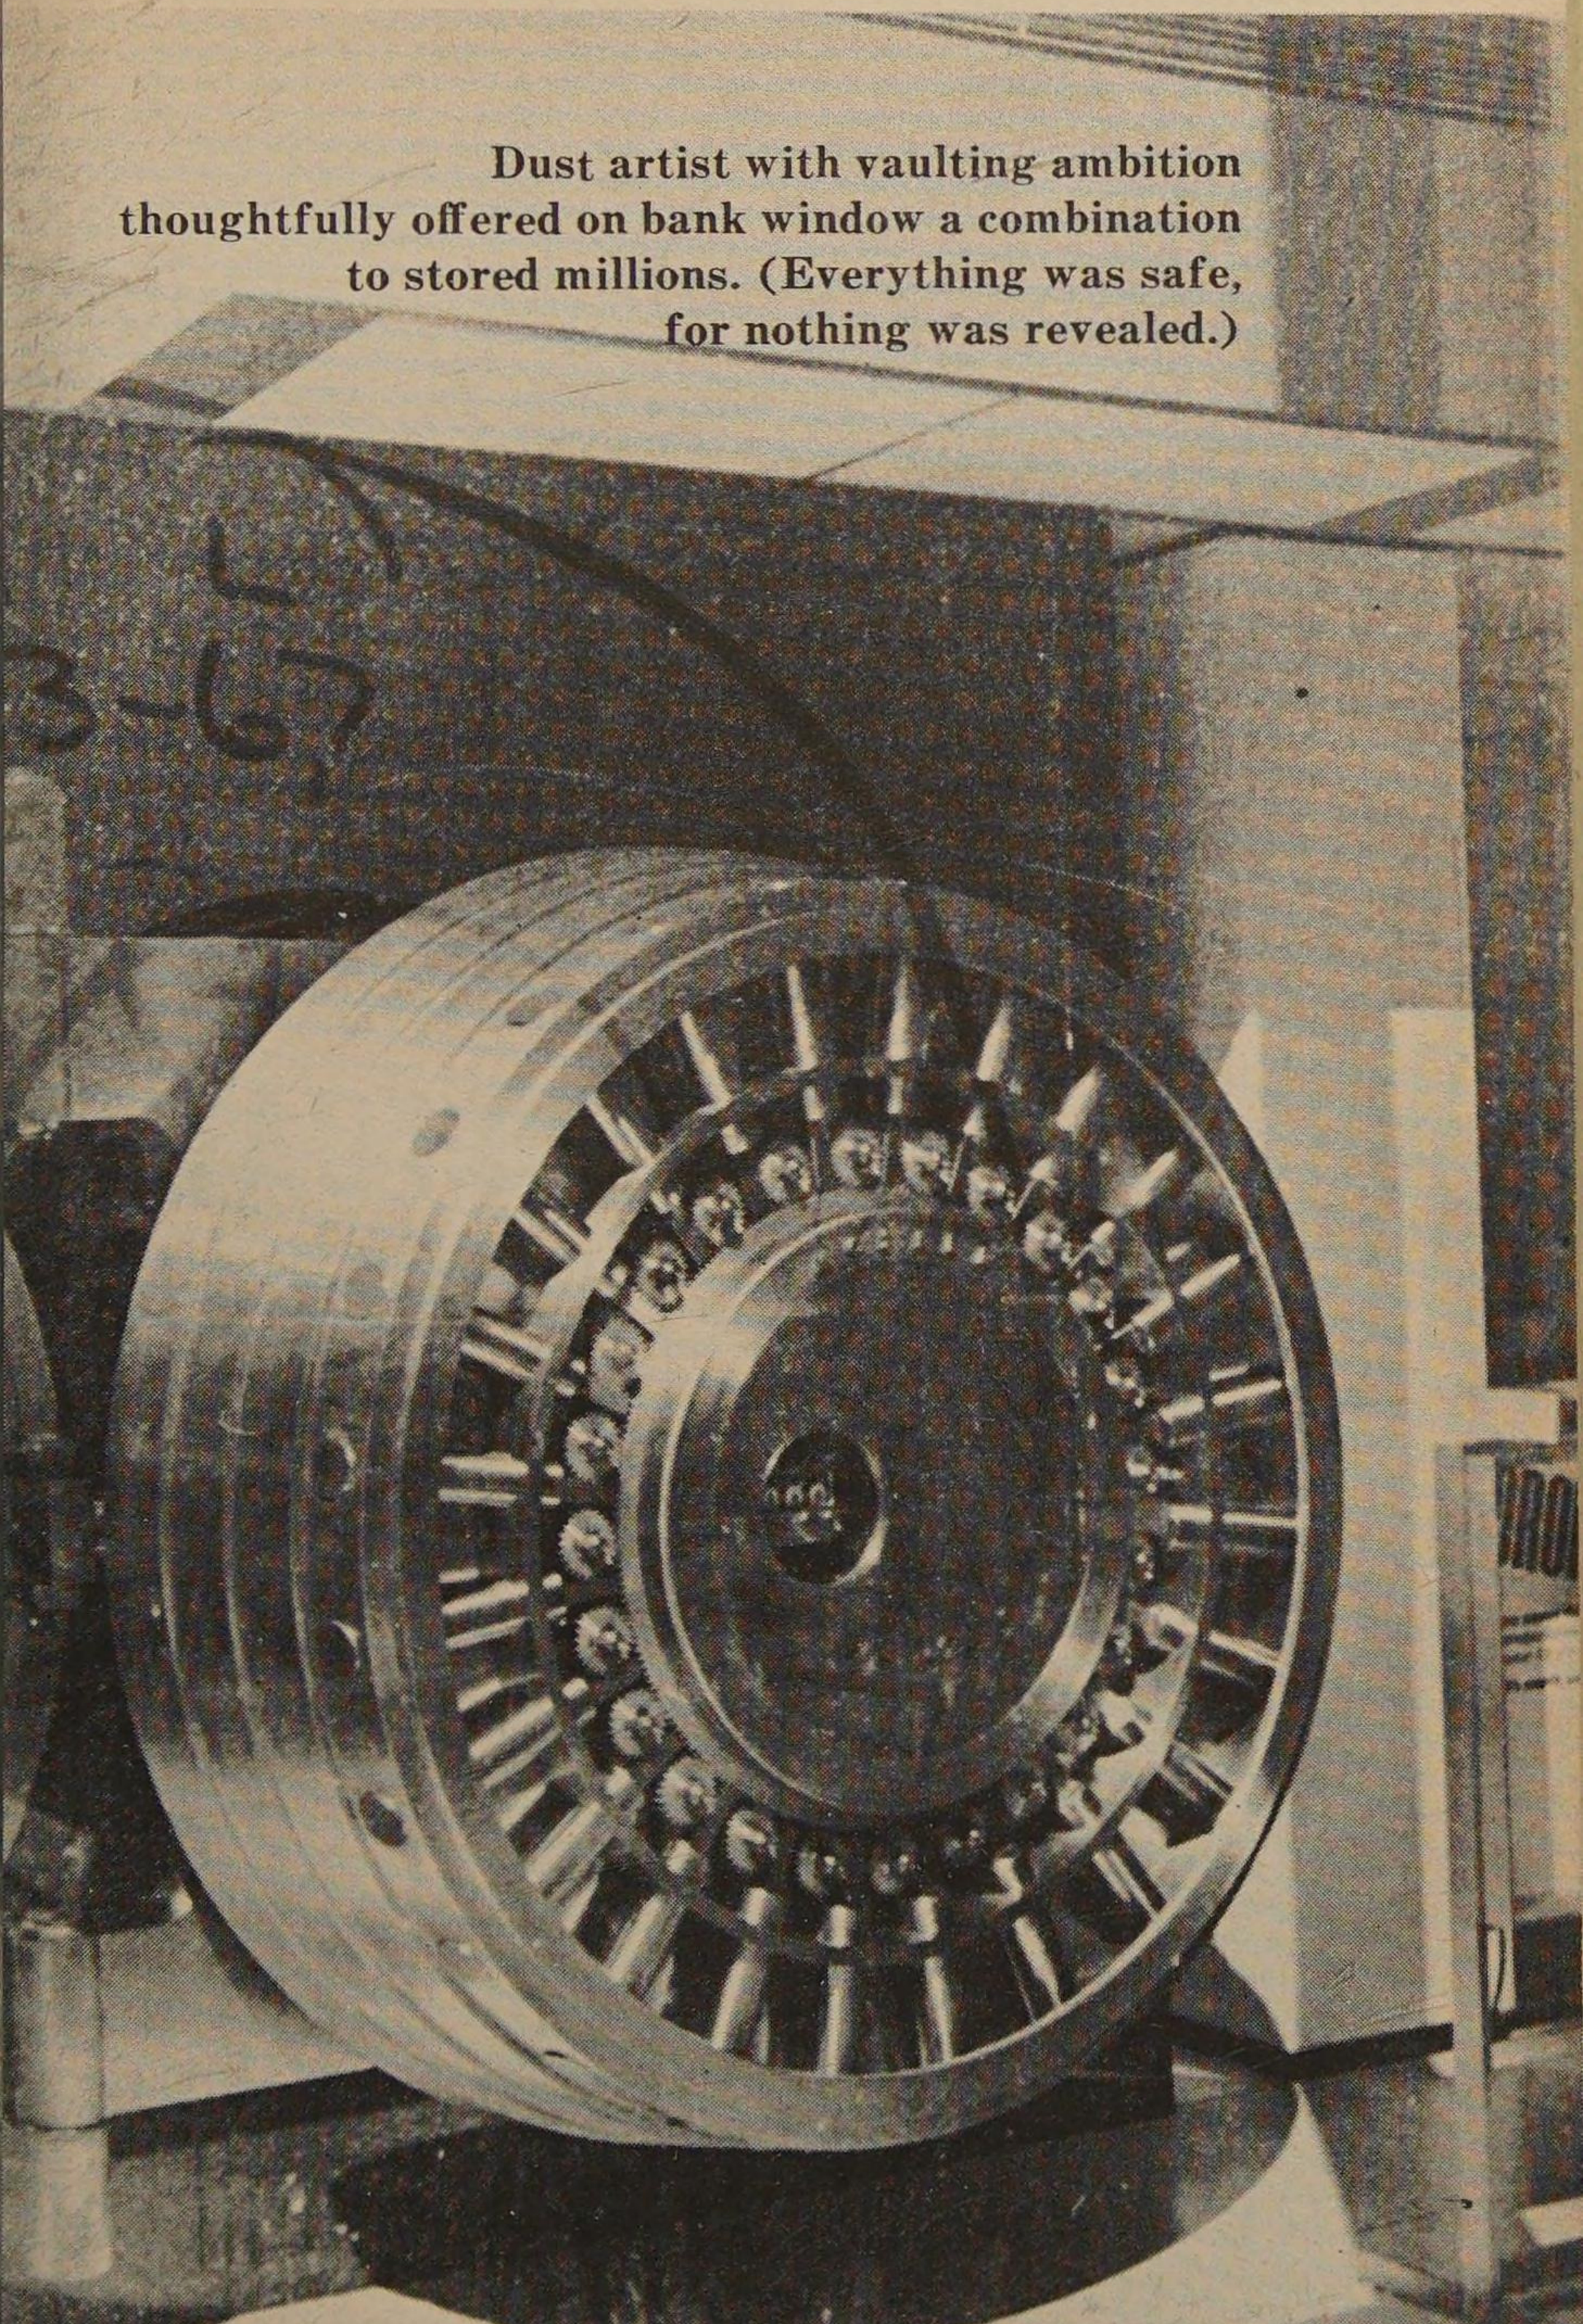

LIMIT -- IS COMBIN

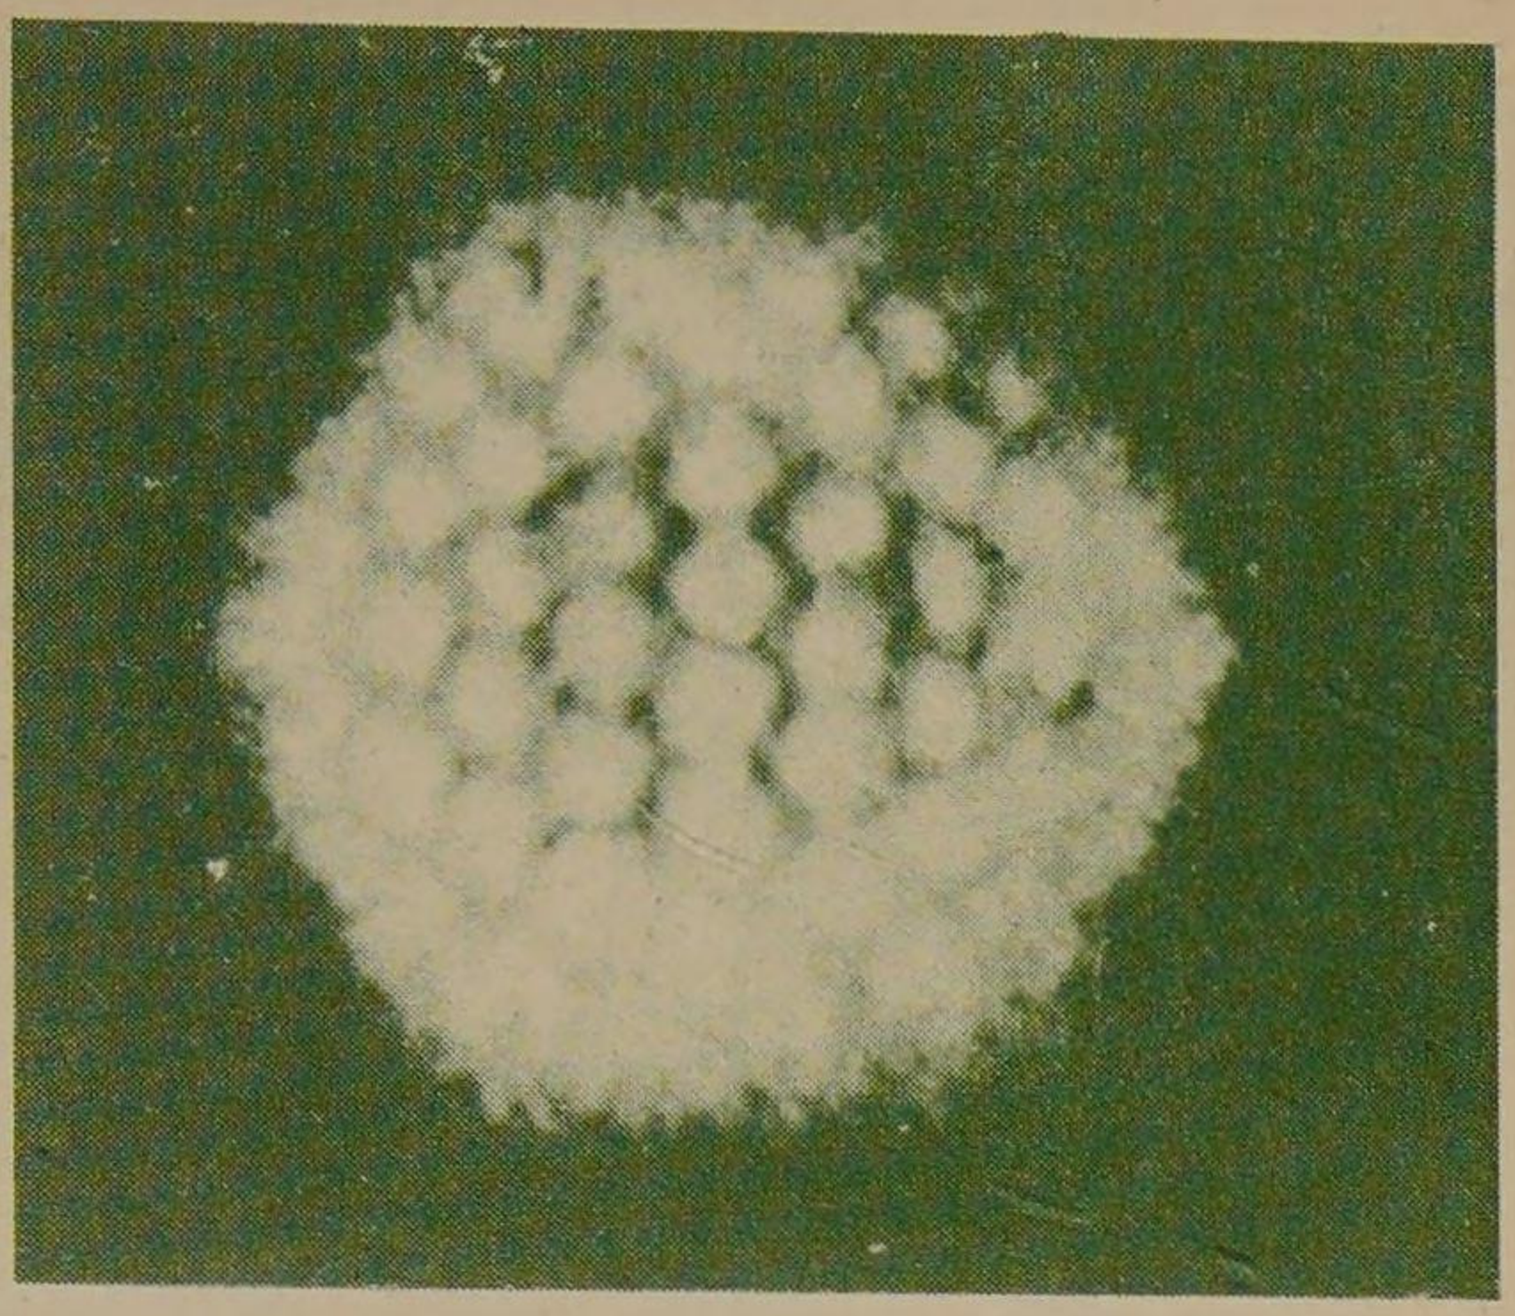

117A

Dust artist with vaulting ambition thoughtfully offered on bank window a combination to stored millions. (Everything was safe, for nothing was revealed.)

The mathematical formula for the design of the geodesic dome applies perfectly to the structure of the protein shell that surrounds every known virus. The common cold virus is the shape of an icosahedron—a solid with 20 triangular sides and 12 corners.

Five-year-old boy: "What is the temperature?"

Father: "58 degrees."

Son: "Is that cold?"

"Facial expressions are often more reliable guides to a man's intentions than speech. Our looks give us away." —*Dr. Nikolaas Tinbergen, professor of animal behavior, Oxford University.*

IT IS APPROXIMATEL
ATION OF PHYSICAL E

"Today is the first day of the rest of your life."
—Abbie Hoffman.

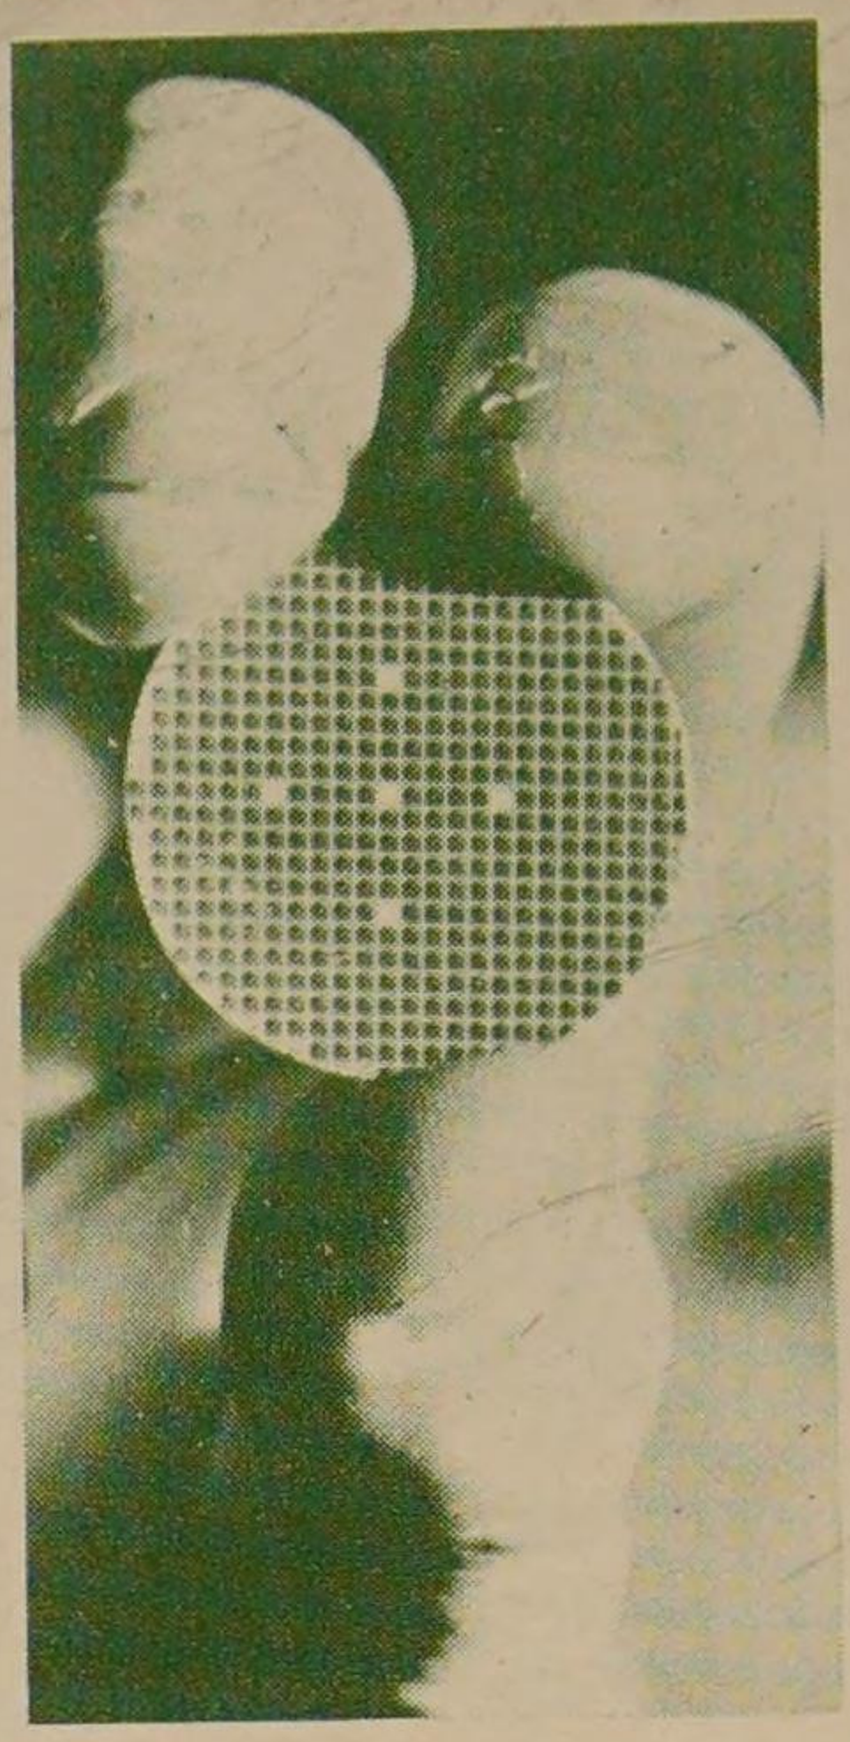

Everything you've learned in school as "obvious" becomes less and less obvious as you begin to study the universe. For example, there are no solids in the universe. There's not even a suggestion of a solid. There are no absolute continuums. There are no surfaces. There are no straight lines. Why *did* the chicken cross the road?

Higher standards of living guarantee that the population will never explode.

Disposable handcuffs have been tested by Cleveland police. Made of nylon straps, the cuffs are locked by a steel spring and must be cut off the suspect's wrists. At 50 cents a pair, they are considered too expensive for everyday police use—*"but they're ideal for mass arrests of demonstrators,"* a Cleveland official said.

All the people in the world today could be housed in the buildings of Manhattan—with each person having as much floor room as at a cocktail party.

All the cities of the world occupy less than one per cent of the Earth's surface.

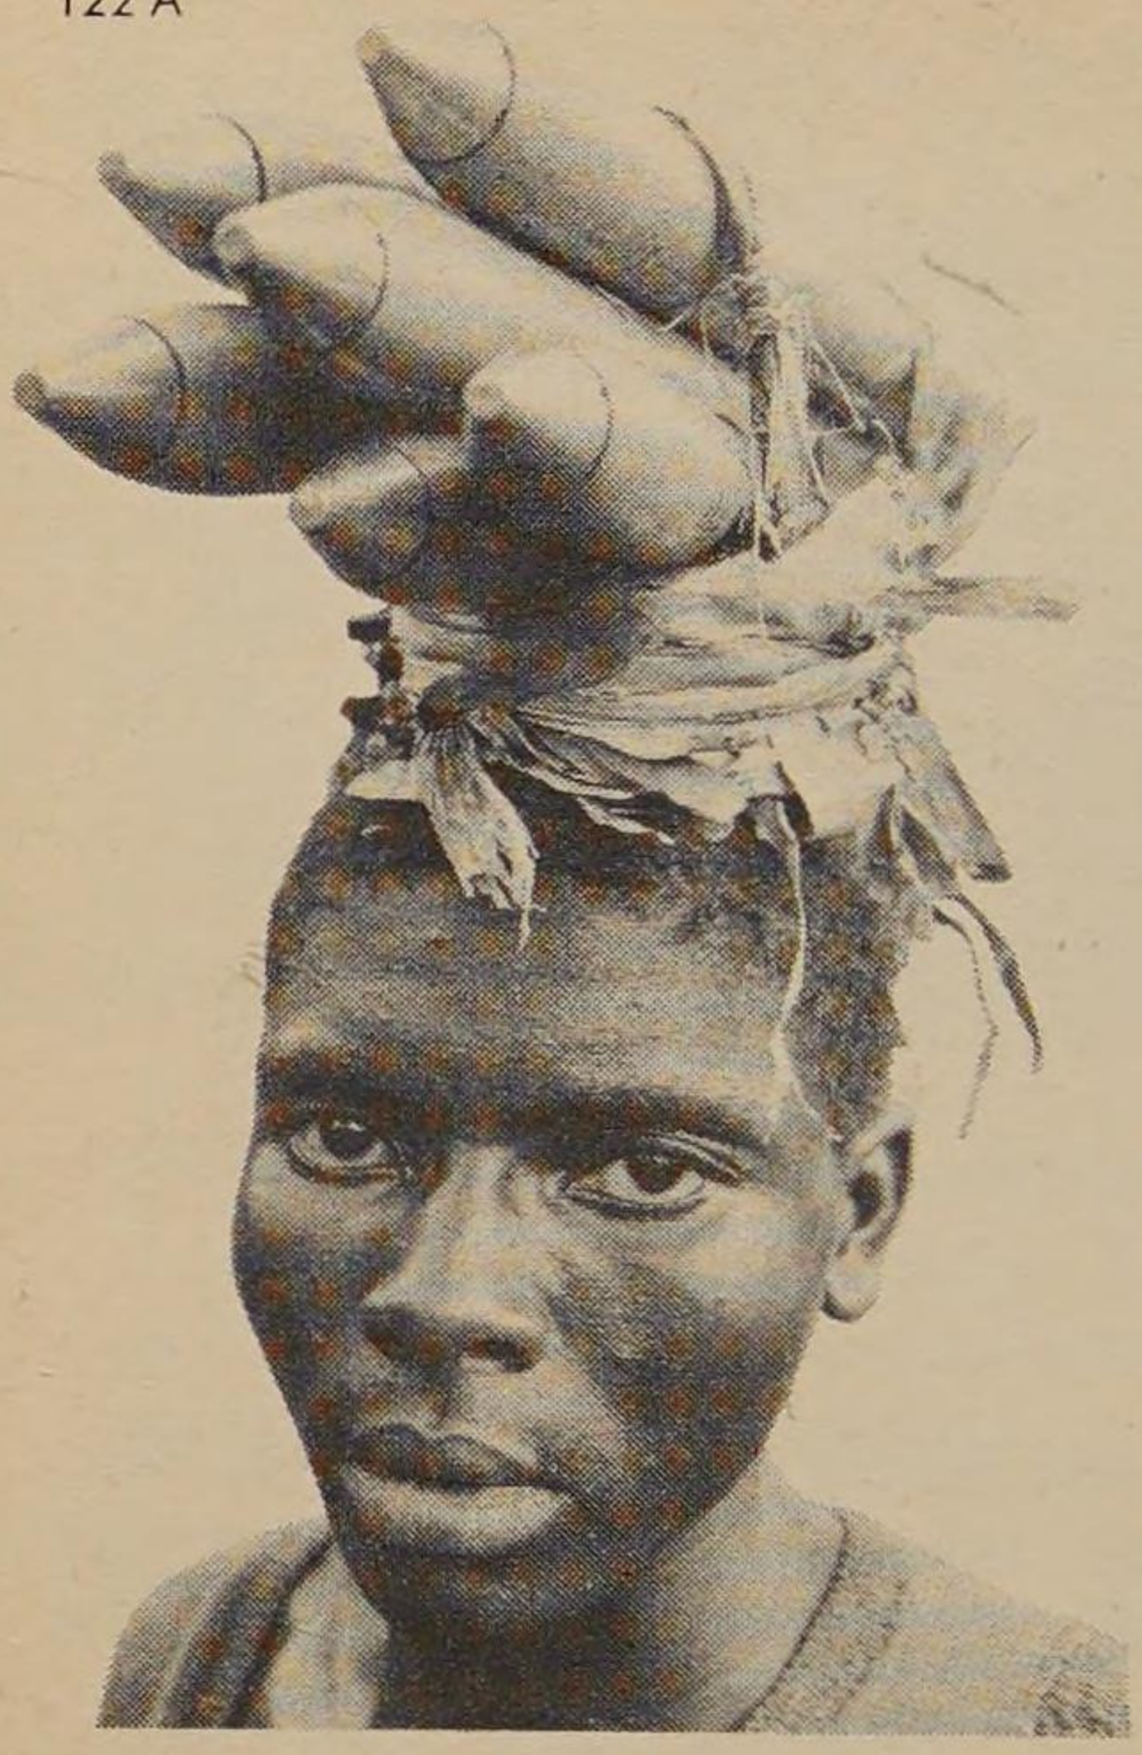

Doming of established cities in the moderate climates will probably not occur until domed cities in virgin lands have proved successful—or when environmental and other emergencies make immediate doming imperative.

Ceramic mosaic containing 8000 separate silicon "tiles" arranged to form 440 integrated circuits.

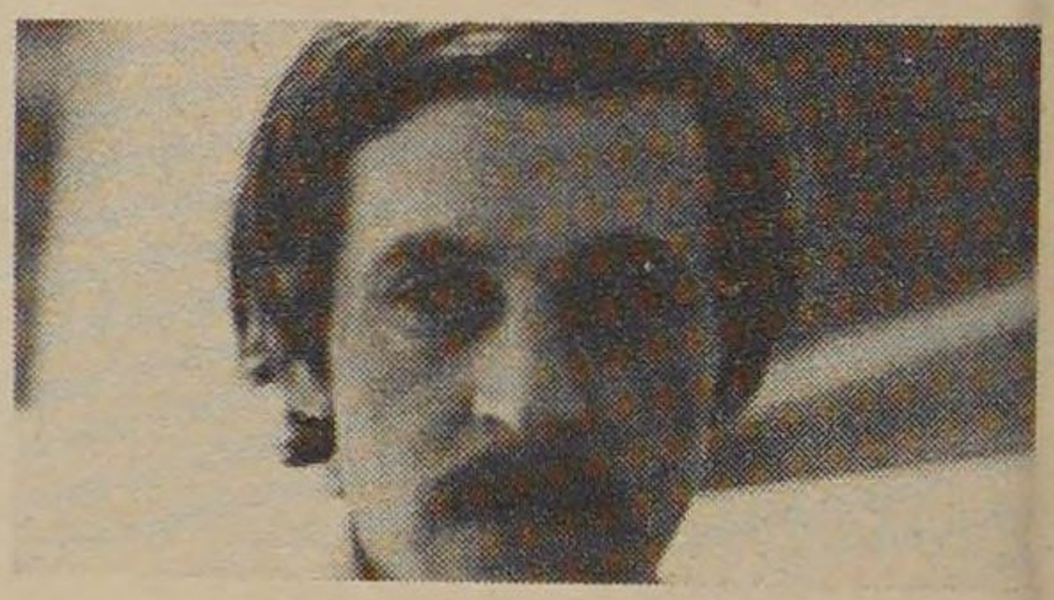

ATIONS ARE INVISIBL
ERGY AND HUMAN INTEL

In 17th-century America, the average family had 13 children. With the installation of waterworks and sewer systems, the average family had fewer children. In fully industrialized America, the average family has 1.9 children

The more industrial a nation becomes, the more rapidly its birth rate decreases.

Invention often occurs when individuals, frustrated by circumstances, try to transform the environment rather than to reform human nature.

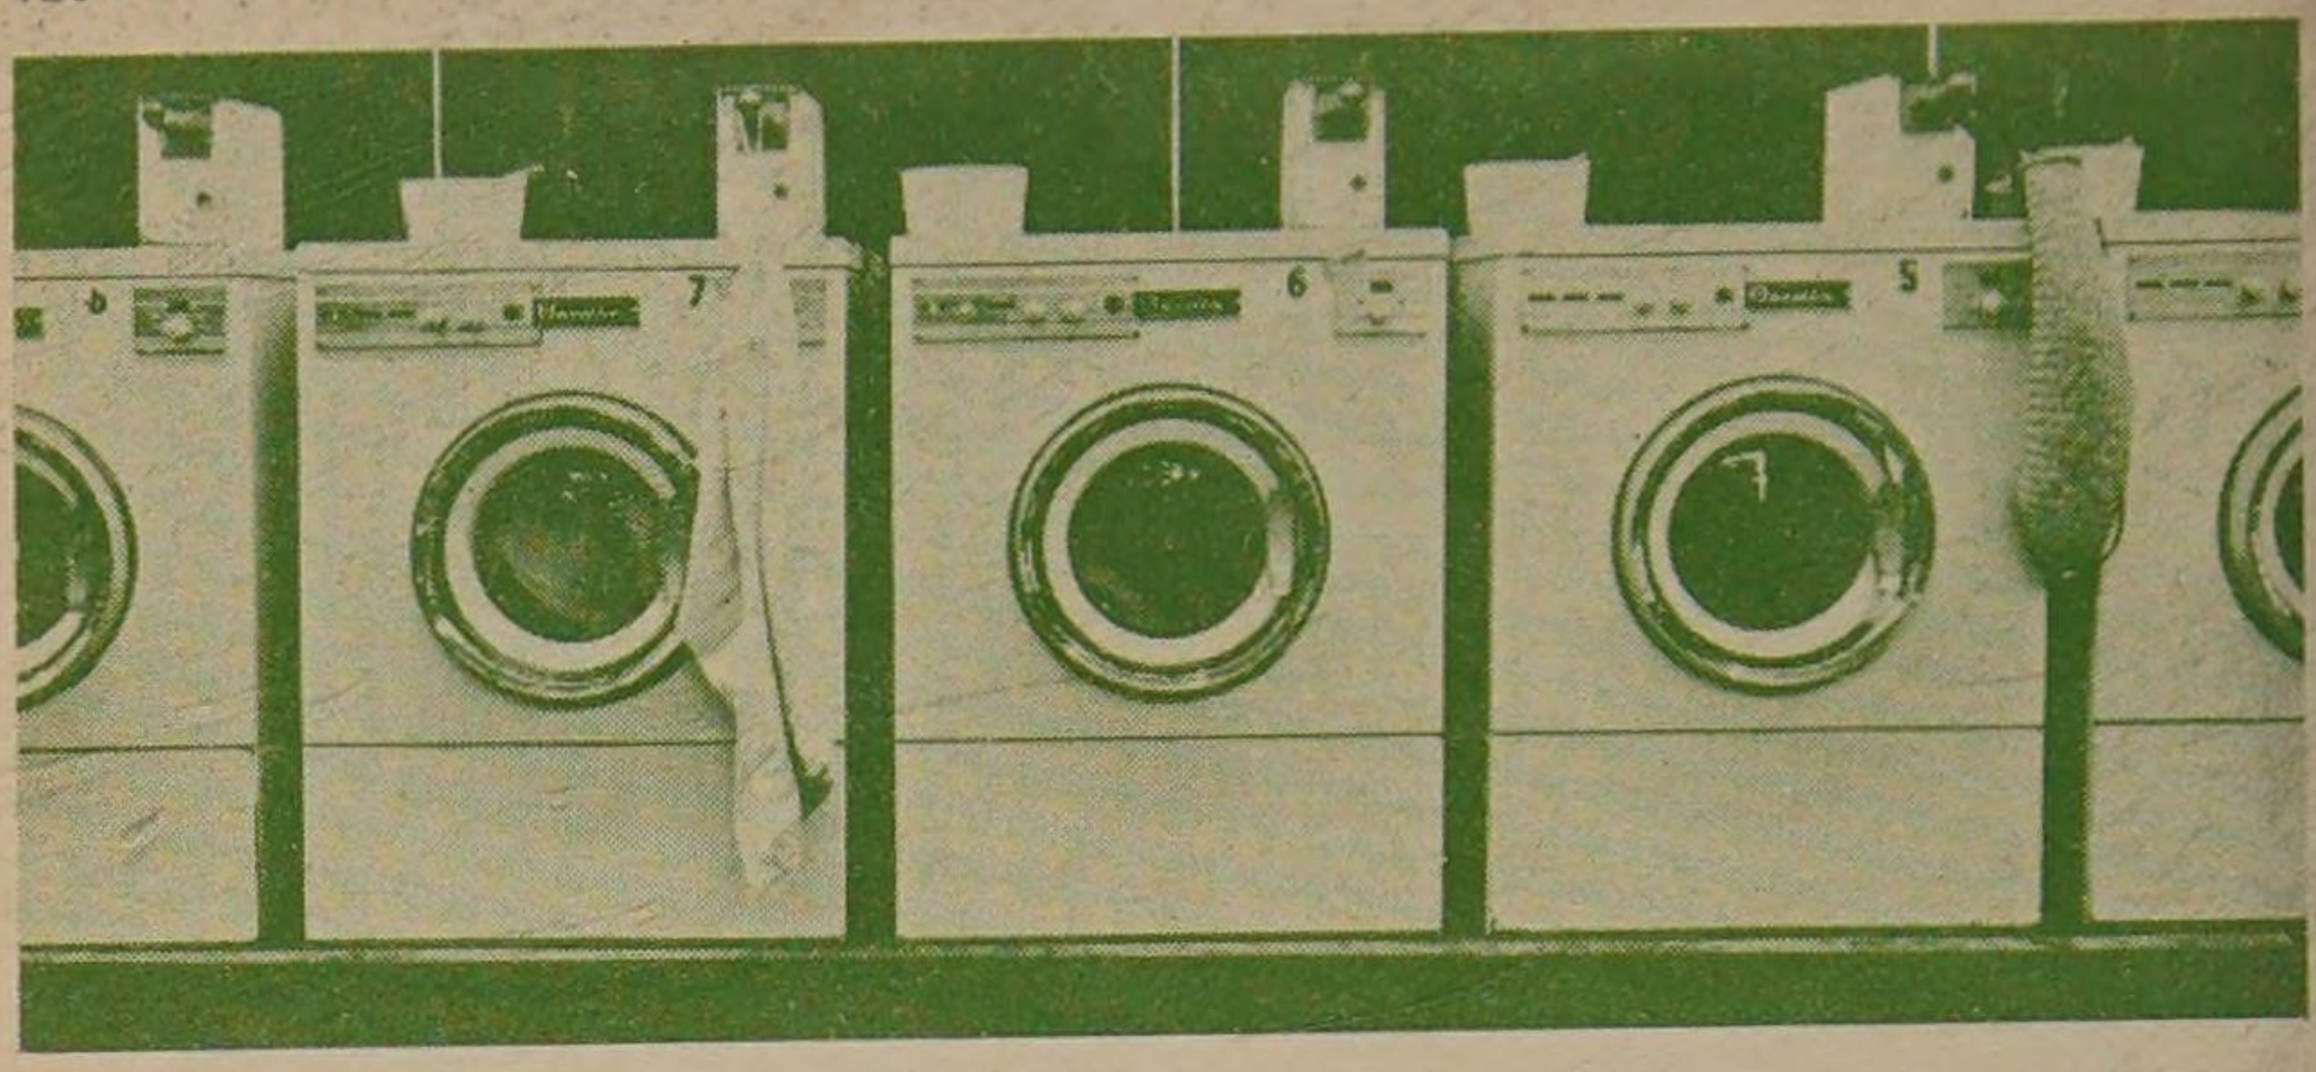

***"It's like free play, or study hall, to make an audience comparison. You learn a lot from it."*--Al Kooper, the organist, on rock jam sessions.**

LECT. EVERY TIME WE
OLUTIONARY TRANSFORM

Ships are total environments, unlike buildings. The Queen Mary was a beautiful environment, benefiting from design principles that could be adapted for city use. Getting there may be all the fun.

Until New York was built, all the great cities were products of Newtonian "no change" norms. Their romance lay in their pre-occupation with man's historical, bastioned past. What makes New York City the "most important something" in all history is that it was the first great Einsteinian reality. Its romance is its living manifestation of history continually in the making. It is the center of world-wide communications networks. Its population is transient; the average residence is three years.

AL. BECAUSE PRIME E
ISE REAL WEALTH IT I

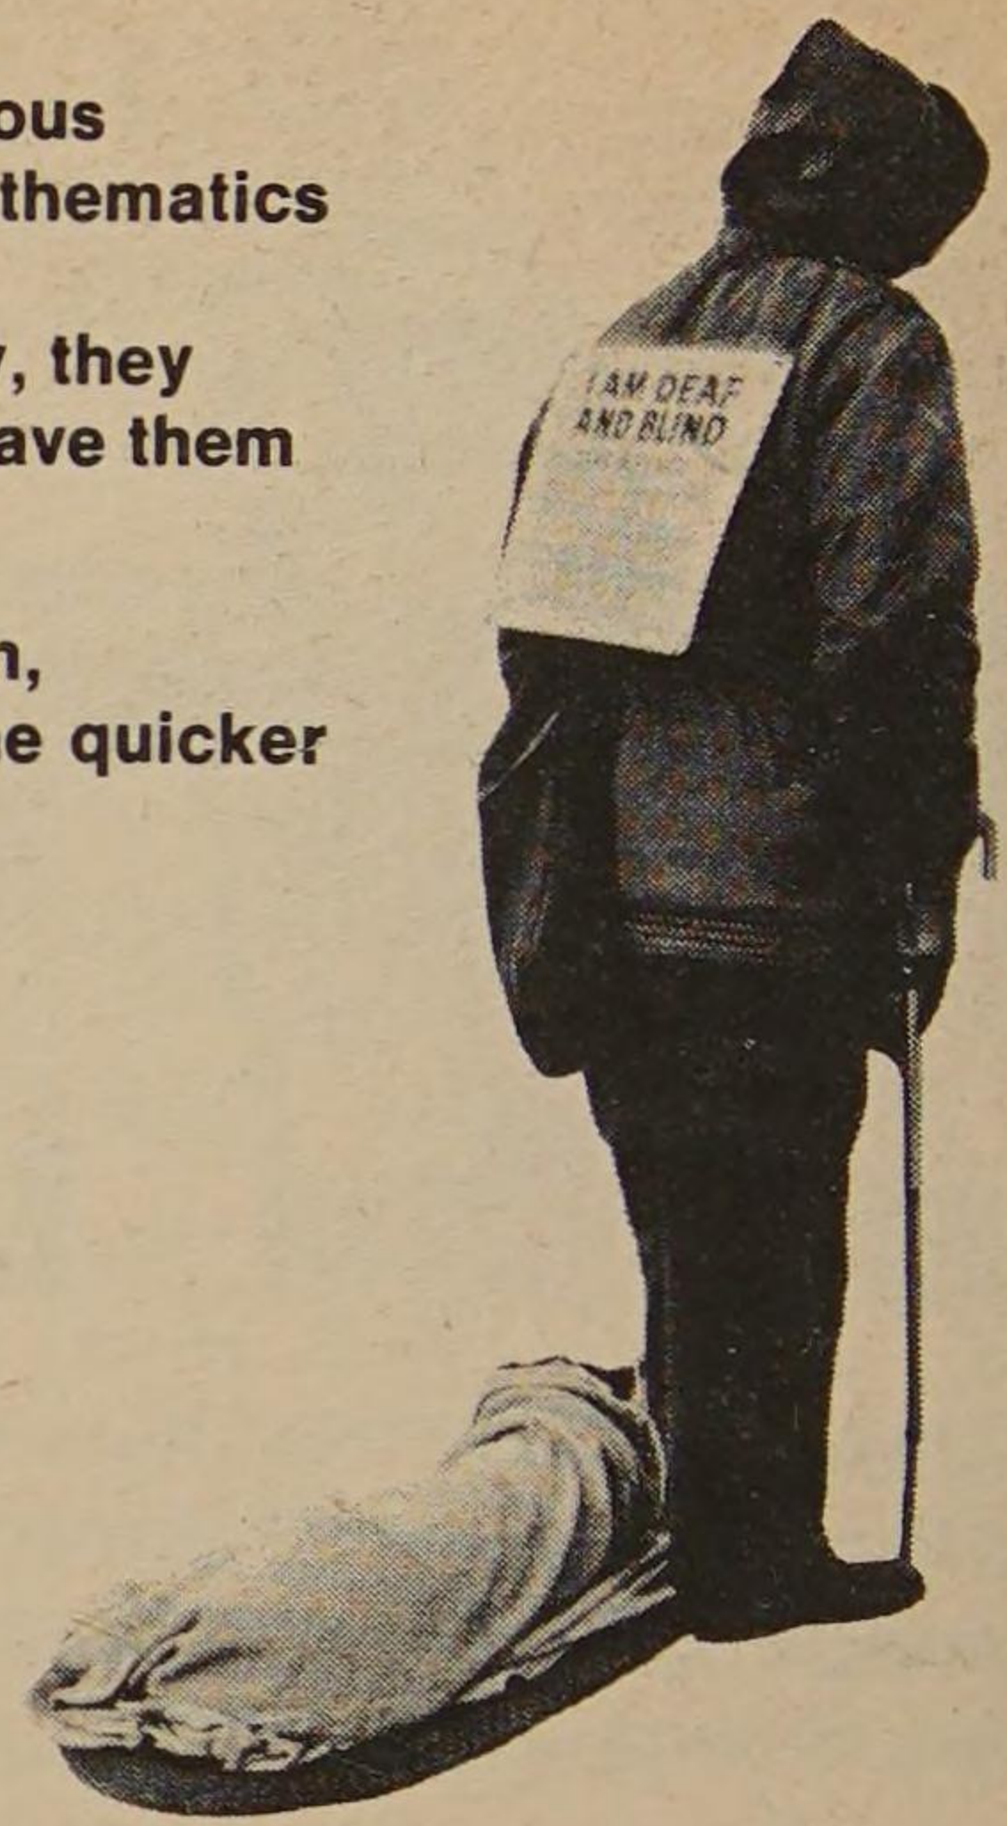

"One of our professors discussed a lot about whether our ultimate responsibility is just to make money, or to promote change. I'm not against money, but I certainly have no investment in the status quo."

Mariners lived in a state of continuous discovery. They *had* to develop mathematics to survive.

Limited by the laws of floatability, they designed lightweight vessels that gave them technical superiority.

The closer man lives to the unknown, the more inventive he becomes—the quicker he adopts new ways.

It may be that all that is chaotic is in man's illiterate and bewildered imagination and fearful ignorance.
OSLO KEY BASES TAKEN, BIG SEA AIR BATTLES ON.

"What's heartbreaking is the glossy, glamorous press-agent pictures versus the actors themselves."—SIDNEY LUMET, filmm

Inventor, you can ask cosmic questions:

Is man needed in the universe?

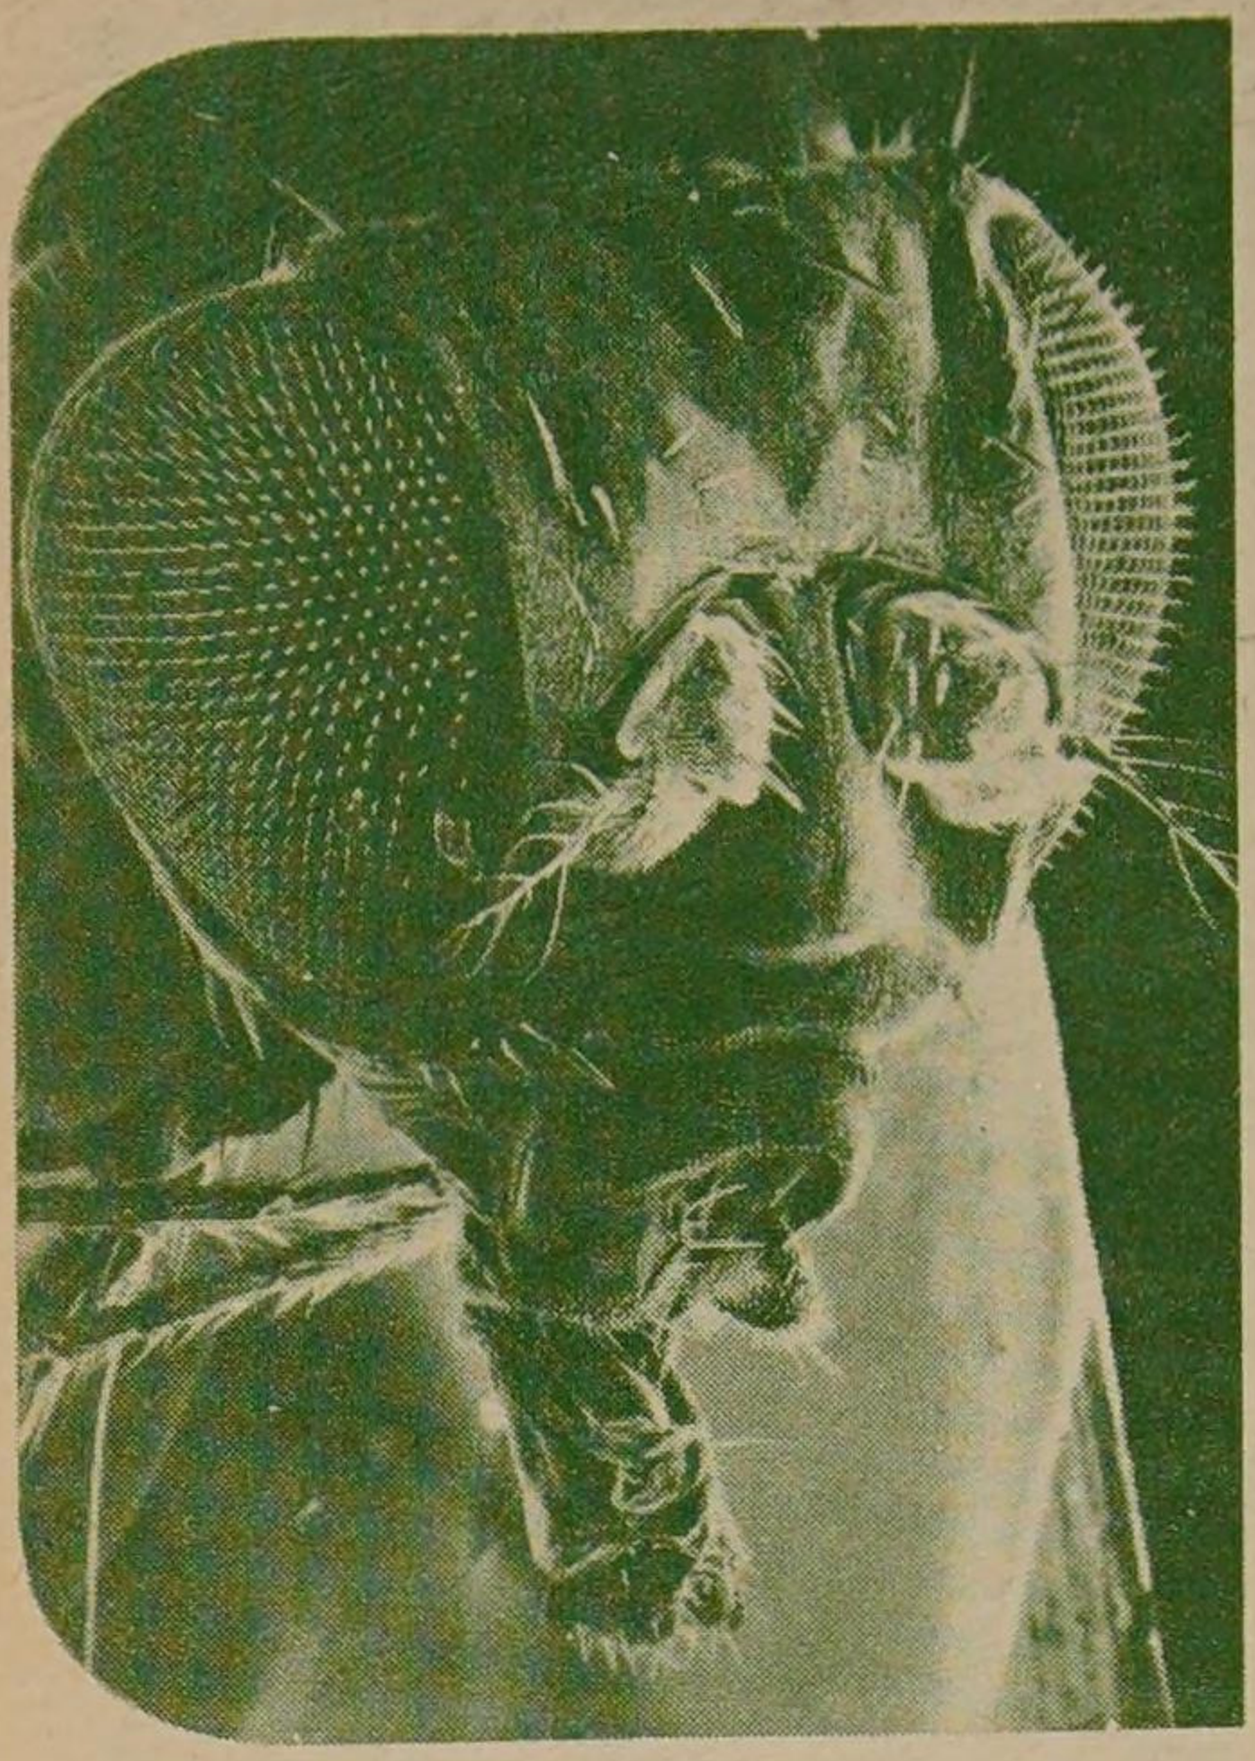

Does he have a universal function?

If he is essential, what needs to be invented to improve his functioning?

What are the largest overall trends of human evolution that need attention?

Everybody is born an inventor. As children, we invent games until "grown-ups" persuade us that our inventing is "futile," that we should conform with yesterday's seemingly proven but usually outworn invention.

But inventiveness remains latent in all of us. Inventors may channel man's innate capability to think in cosmic terms. As

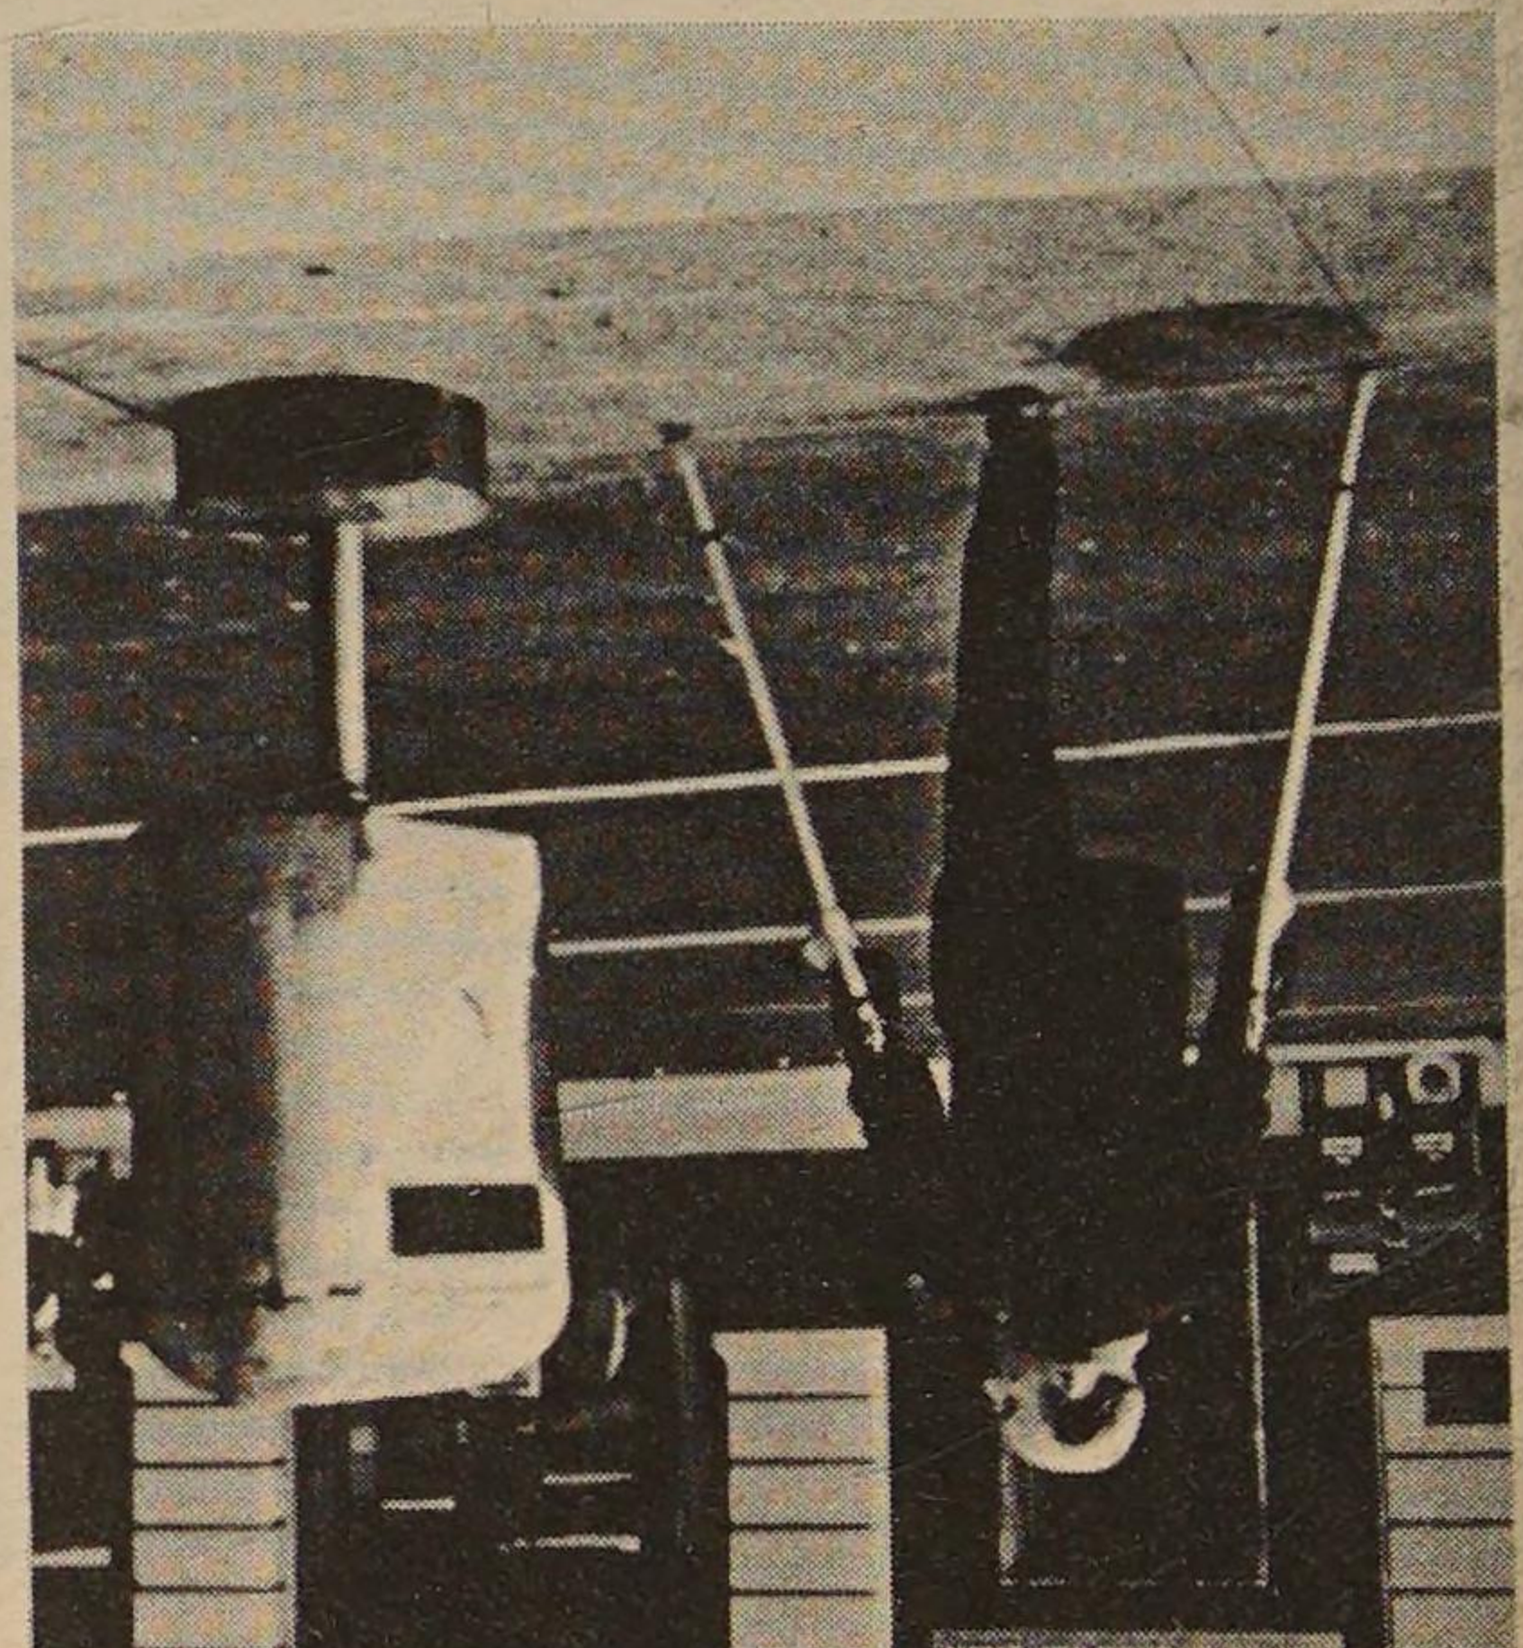

Scanning electron microscope enables biologists to study in three dimensions the fine structure of objects so small that zillions could fit on the head of an angel.

Though two people may think that they are experiencing the same environment, each individual's environment of the moment is unique and constantly changing. One never really sees, "See what I mean?".

Environment is the result of individual selectivity and response. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52,

in a two-part profile by Jane Kramer, The New Yorker.

It soon will be possible for children to go through life with all the beauty, metaphysically and physically, with which they were endowed.

Every child is interested in the universe. His questions are universal—and usually impossible or hard to answer. Development of specialization has been either the result of "forced feeding" or inbred talent; two musician parents tend to produce musician children.

On television, the interviewer asked Dr. Milton Friedman, University of Chicago economist, "How can we improve the incomes of the poor?" *Dr. Friedman:*

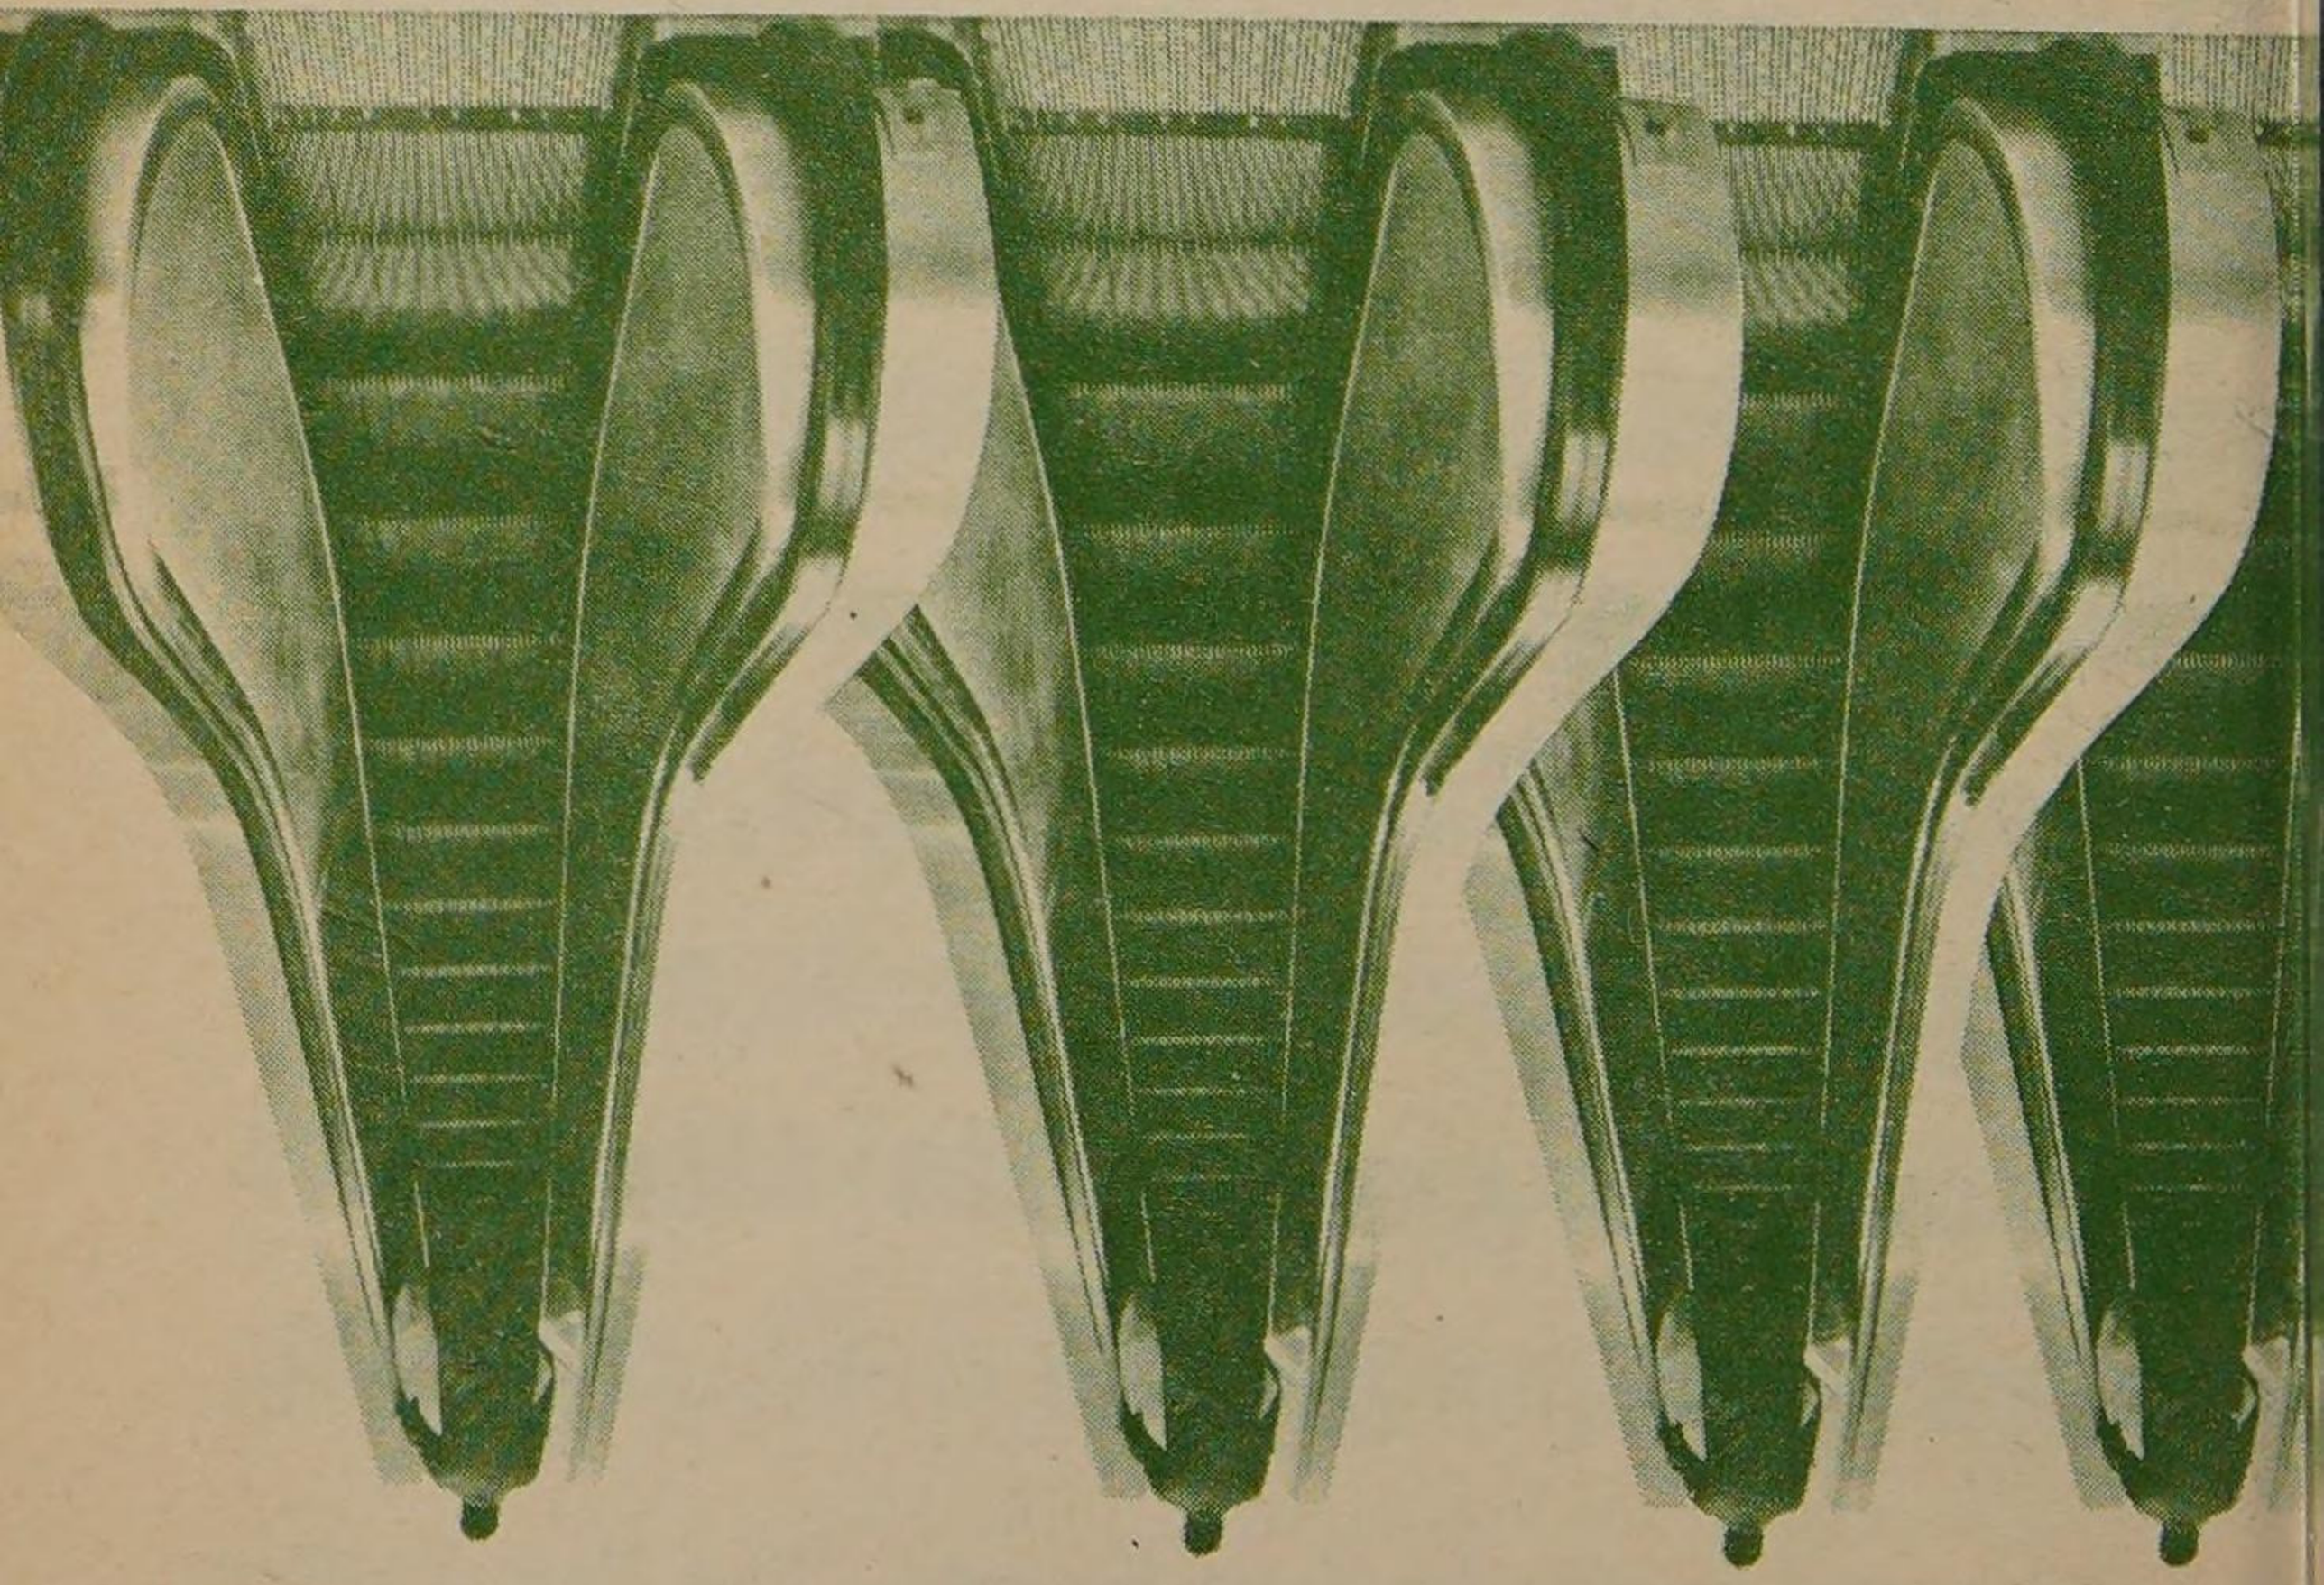

"Give them money."

On television, the interviewer asked Albert Shanker, president of United Federation of Teachers, "How can we improve the situation of the poor?" *Mr. Shanker:*

"Give them money."

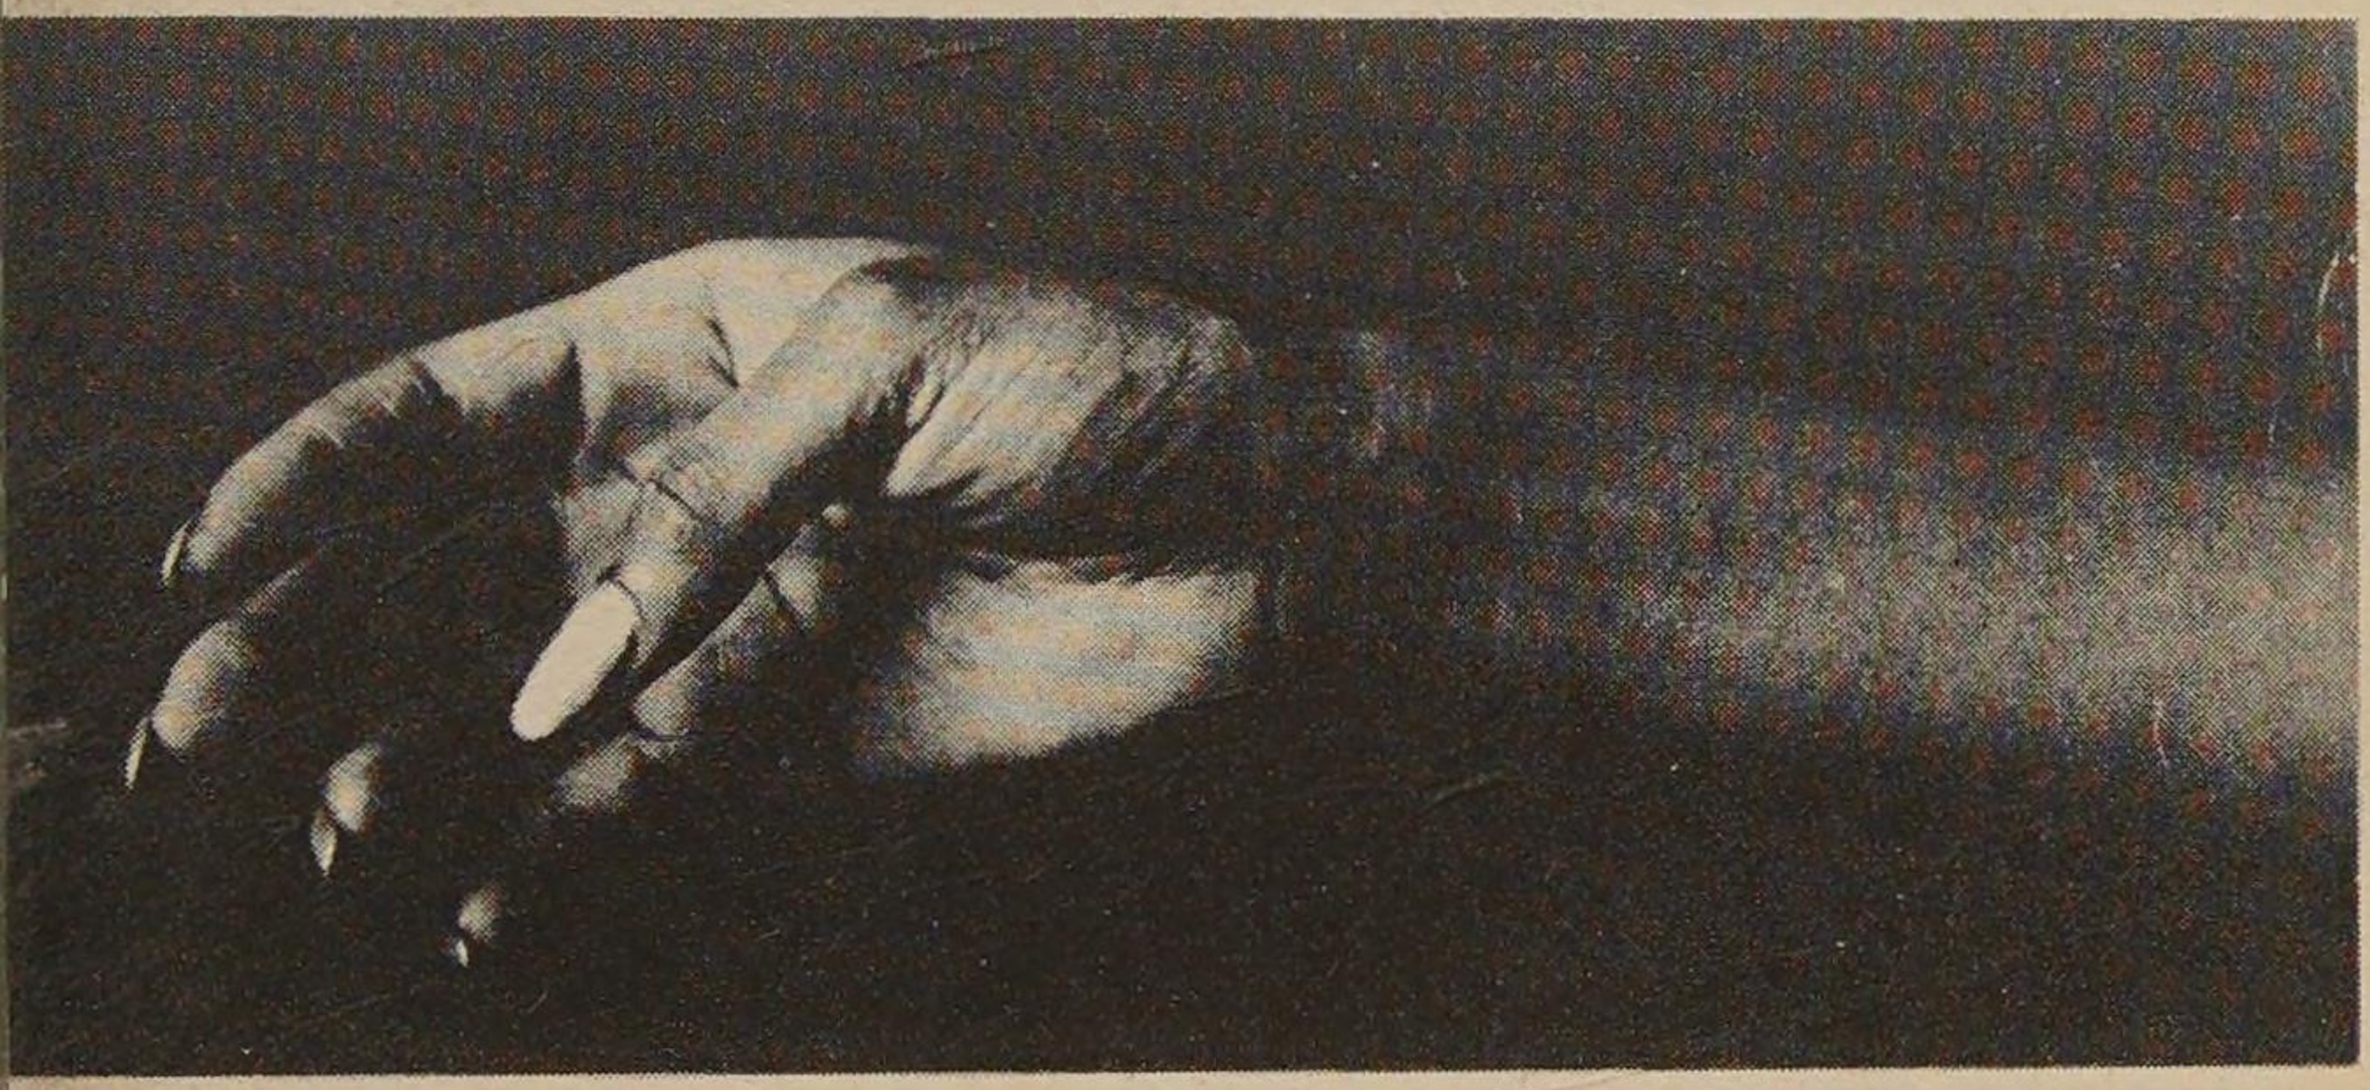

T CRITICAL EVENTS RE

ETE AS PHYSICAL PROD

Only inadvertently has humanity been saved from extinction. The surprise factor that is saving us is a fallout from the weapons-support system. The new fallout technology—automation—is propitiously displacing man as specialist.

Big business will cease lobbying for tariffs when the world has become its marketplace. All the world's a checkout counter.

ALIZING THAT REVOLUT

N HAS MADE MAN OBSOL

"I want music, not tears."

—Mother of five, who selected rock-and-roll records she wanted played at her funeral—then committed suicide.

The F.B.I. reported that shoplifting had increased 93 per cent in the United States between 1960 and 1966.

How DO we know that the people we meet are not computers programmed to simulate people?

"Every perfect traveler always creates the country where he travels." **—Nikos Kazantzakis.**

Apparati developed for moon voyages will be adapted for domestic use. "Rocket it to me."

Advanced technology developed for war "falls out" into the home economy about 25 years later. Electric generators, steam boilers, electric lights, radio, oil burners, refrigerators, and air conditioners were all developed for battleships, for example.

The adaptations developed when contractors who had produced the advanced technology found themselves "all dressed up" with the tools, the scientists, and the skilled workers—and no "defense" contracts. The home market became an unexpected bonanza.

Desalinization has been possible in the Navy for half a century. It is now being piped into the home economy.

Progress may be war's most important product.

"For a while, I would just like to sit in the shade with a glass of wine in my hands just watching the people dance."

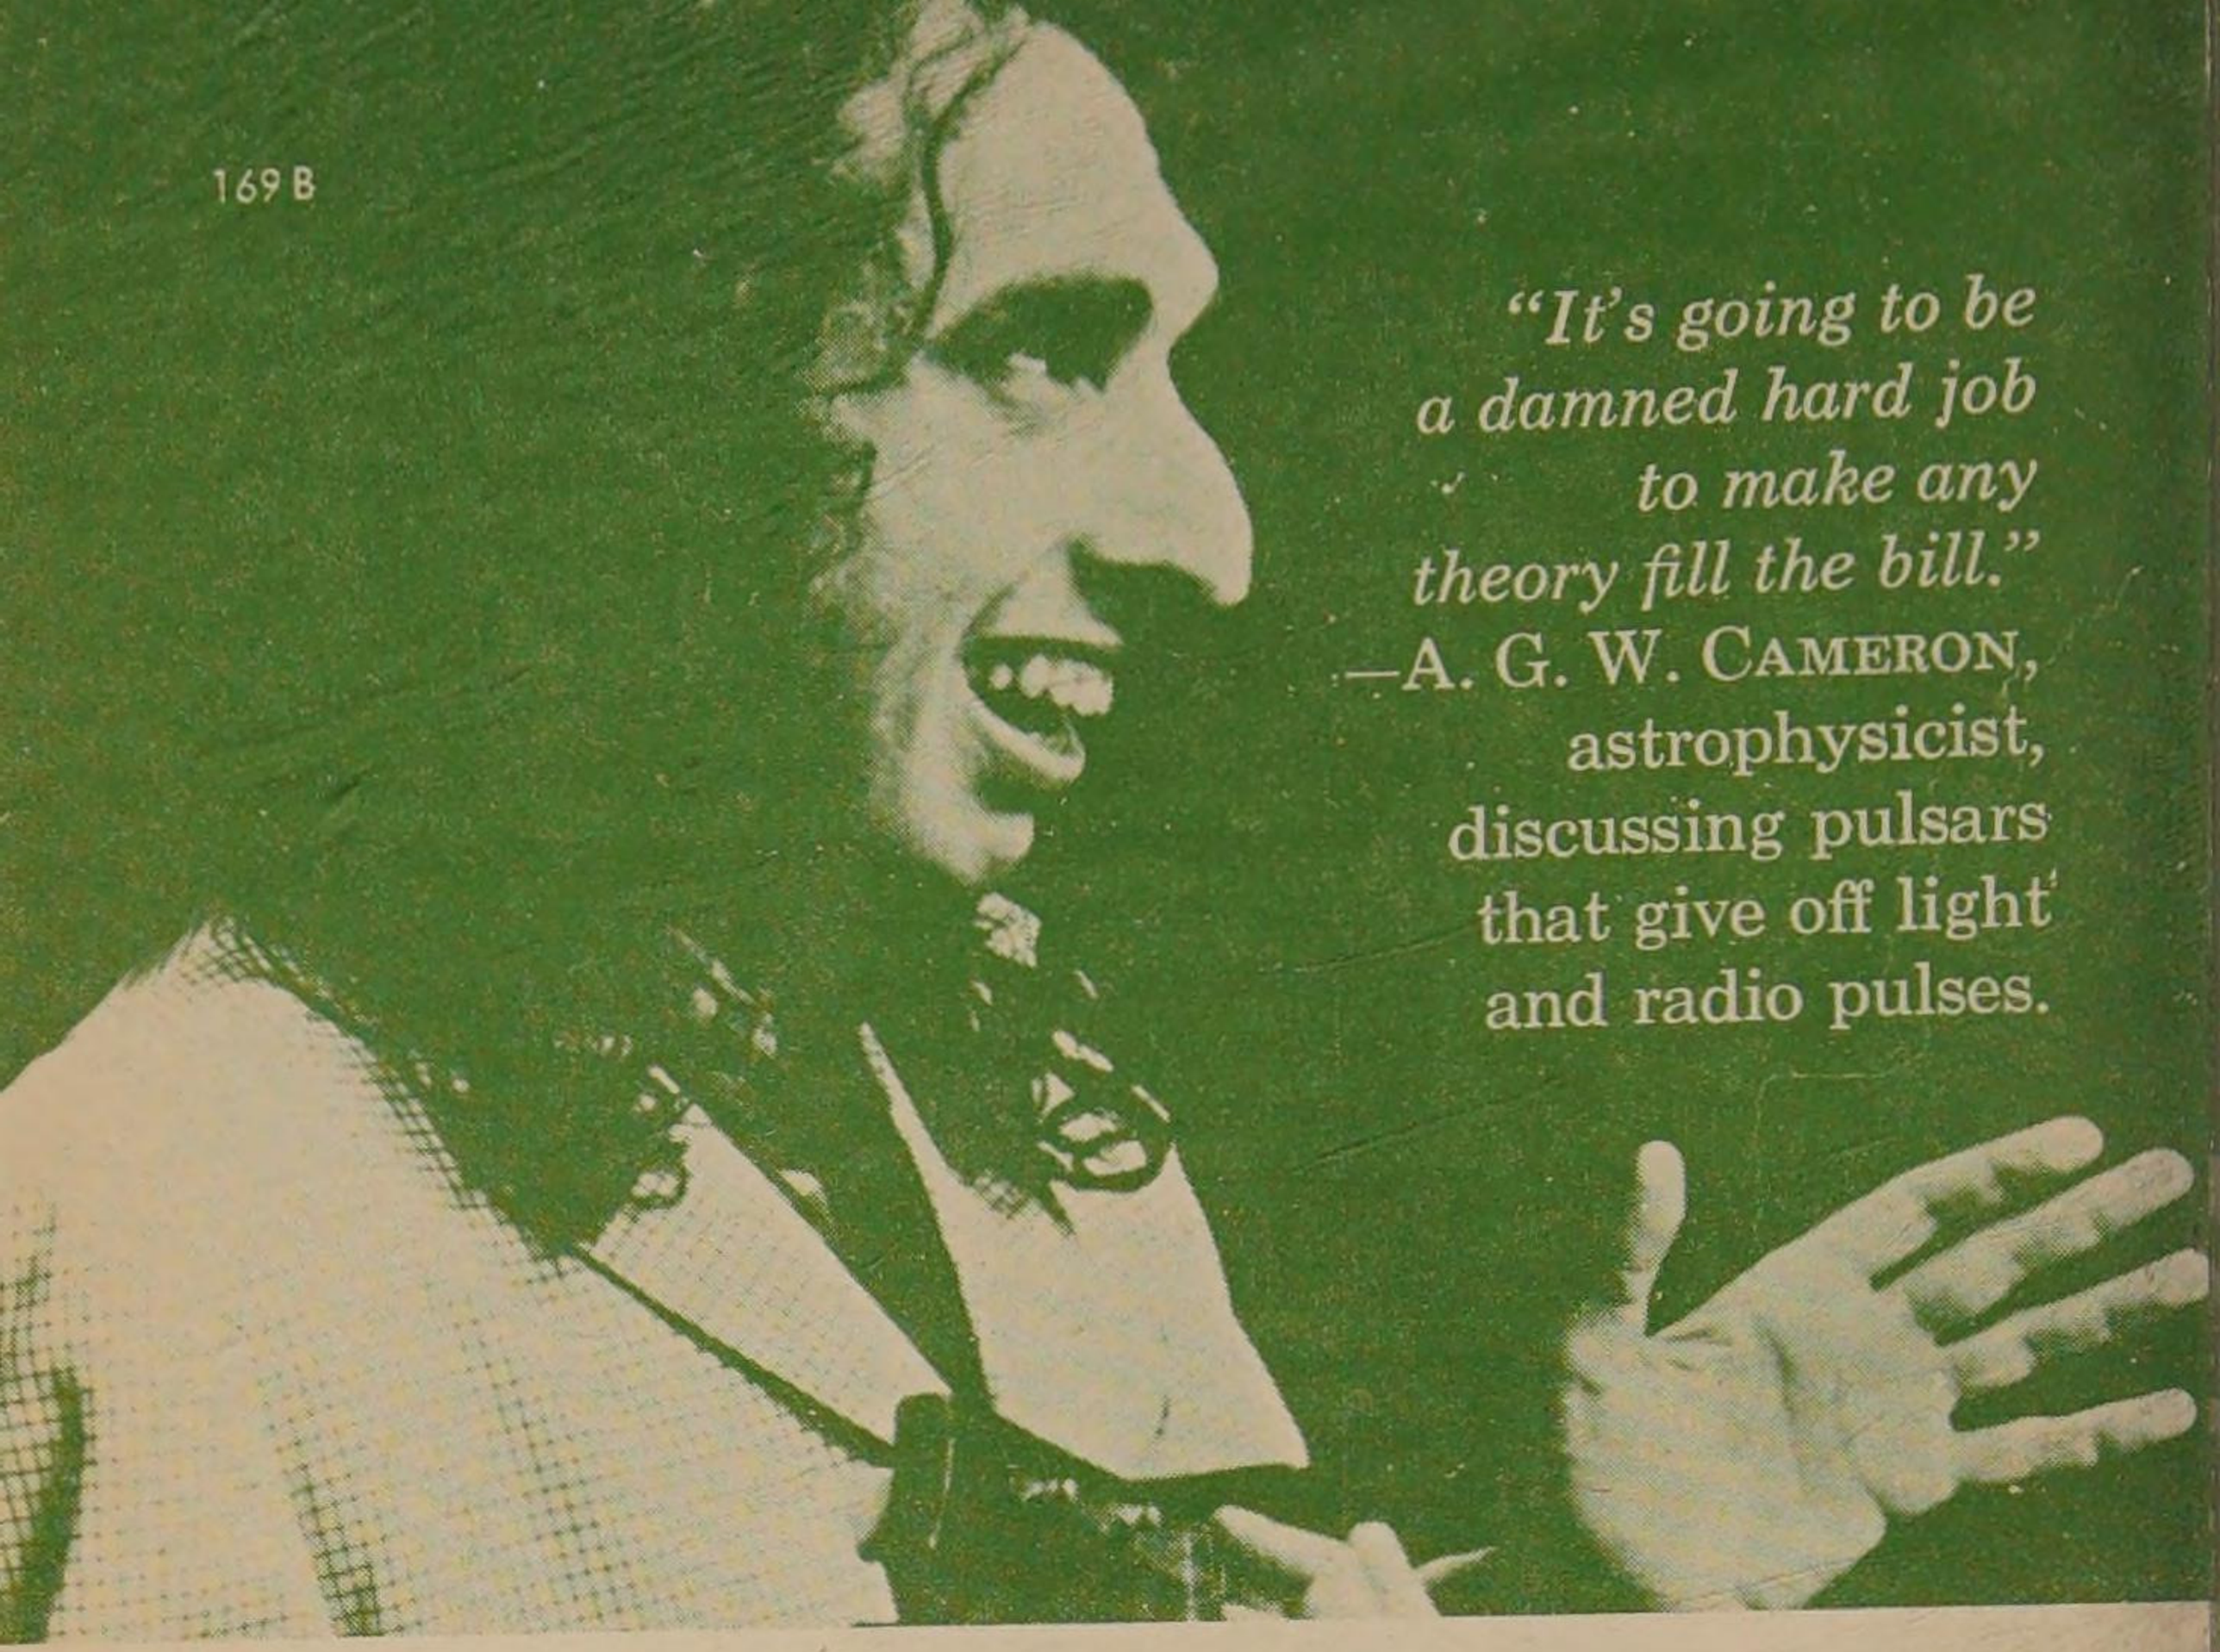

—Adlai Stevenson, just before his death.

when January 20
gets here."—LBJ AIDE.

In 1853, United States Review predicted that electricity and automatic machinery would so transform life and relieve mankind of drudgery that, within 50 years, "every man will have electric communication laid to his own house...machinery will perform all work—automata will direct them. The only task of the human race will be to make love, study, and be happy."

The world's great cities were built around caravan and ship routes. Electric energy enables us to build anywhere.

Cities floating in the air or on the ocean are now real possibilities.

In answer to the question, "**What do you want to be?**", one third-grader wrote: "I would like to be myself. I tried to be other things, but I always failed."

Everything is perpetually moving in the direction of least resistance. By designing the environment, we should be able to move in preferred directions.

ED.) AUTOMATION CA
"ME." "NEW, PHYSICA

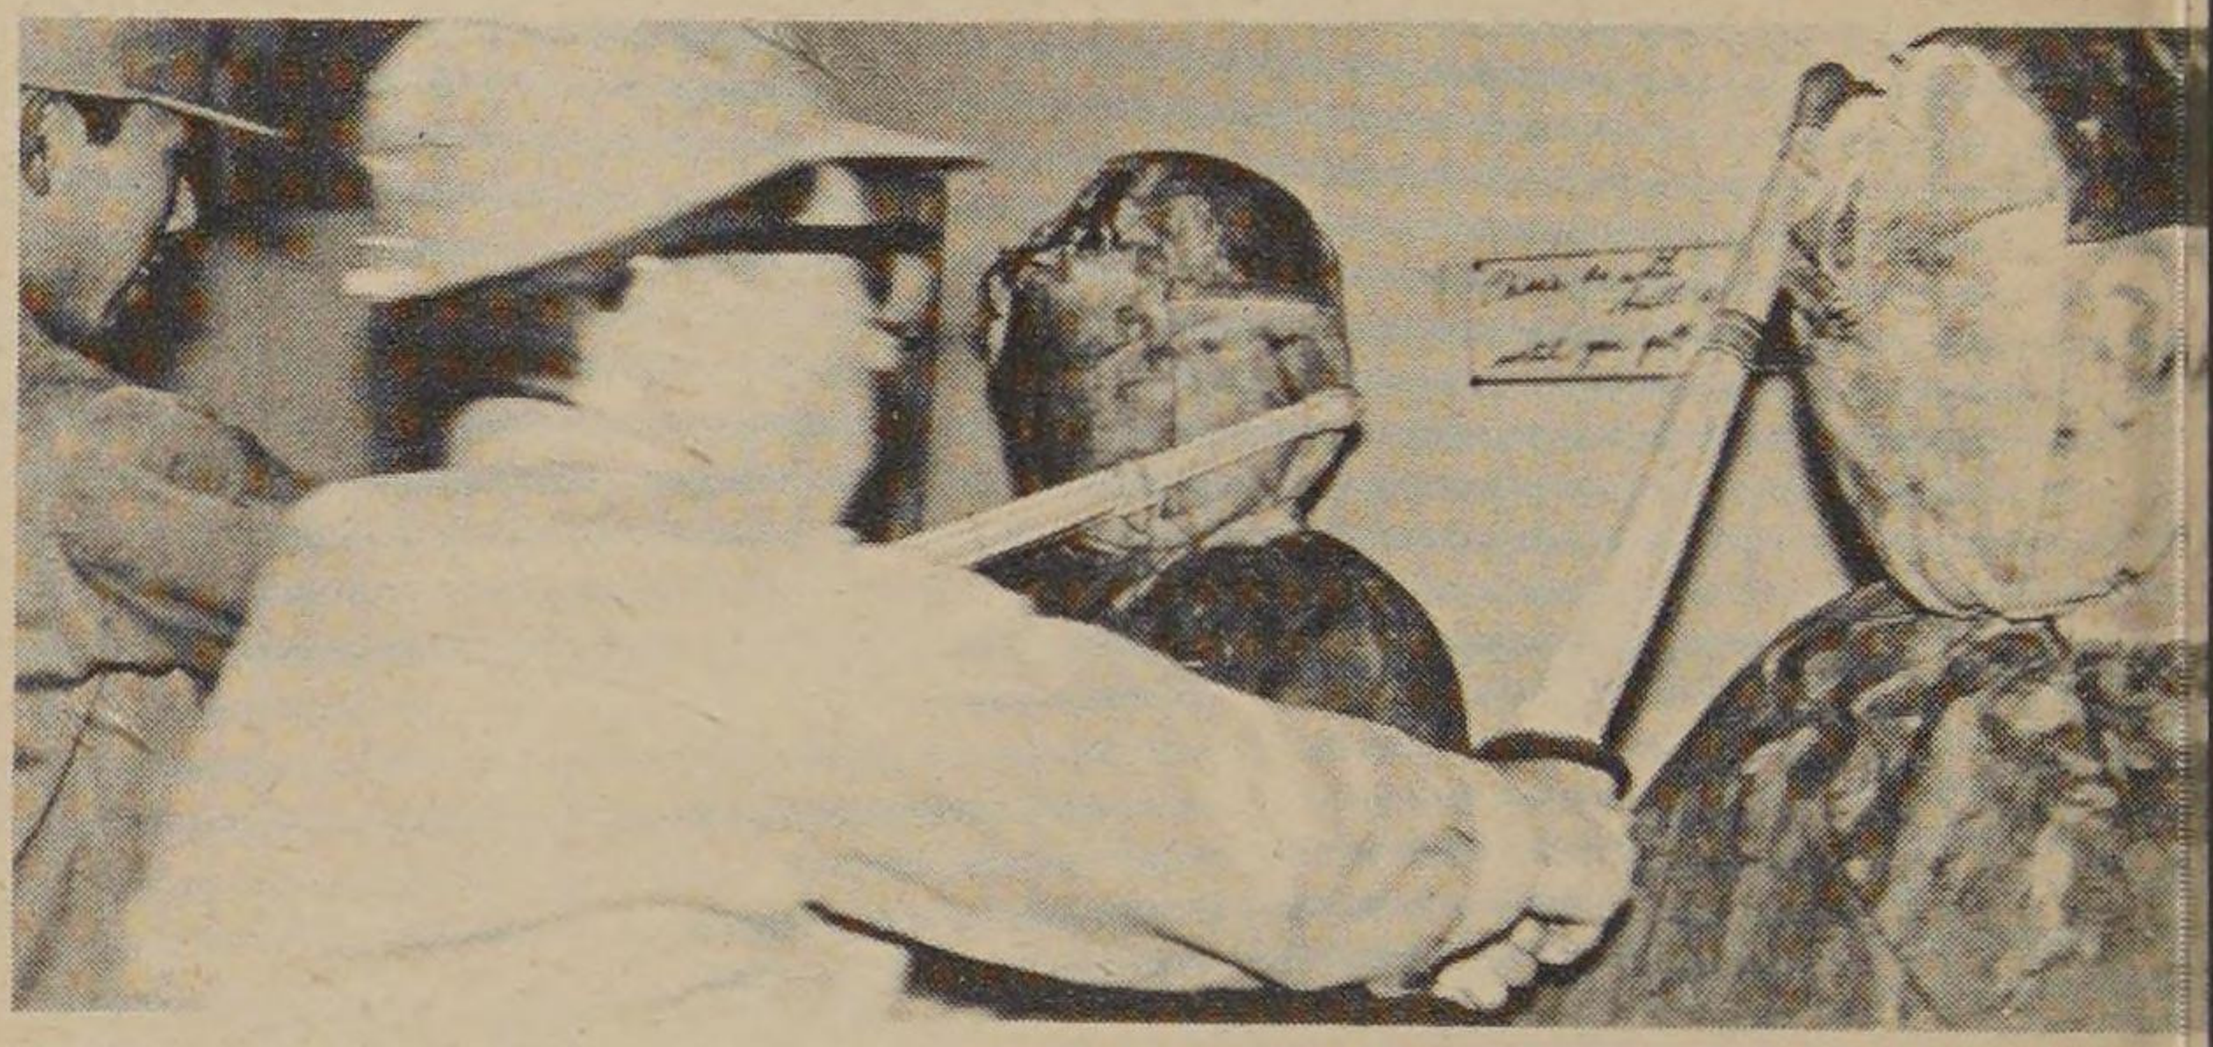

—Stanley Kubrick.

"Words are a terrible straitjacket. It's interesting how many prisoners of that straitjacket resent its being loosened or taken off. There's a side to the human personality that somehow senses that wherever the cosmic truth may lie, it doesn't lie in A, B, C, D."

A system is a local phenomenon in the universe that is geometrically definable because it returns or closes upon itself in all directions.

Our beds are empty two-thirds of the time. Our living rooms are empty seven-eighths of the time. Our office buildings are empty one-half of the time. It's time we gave this some thought.

The most important man on Earth will be the man who best unde stands and channels the natal capabilities of all men.

TGIF. In Matsushita Electric self-control room, employees dispel work-induced men stresses by beating dummies of foremen with bamboo swords.

ry more than you can practice dying."

nitiative can neither be created nor delegated. It can only spring om the self-determining individual, who decides that the wisdom f others is not always better than his own.

"What is soul? ***It's like electricity—we don't really know what it is, but it's a force that can light a room."*—Ray Charles.**

"Don't sit around and tear comedy apart. It is like a fine watch, and you'll never get it together again. And don't ask me why people laugh —that's the mystery of it all."

—Stan Laurel.

"Actually, I felt like packing up last year, but it was just a feeling that passed."—Mick Jagger.

TAPHYSICAL INITIATIV
PRESSIVELY MODERN NA

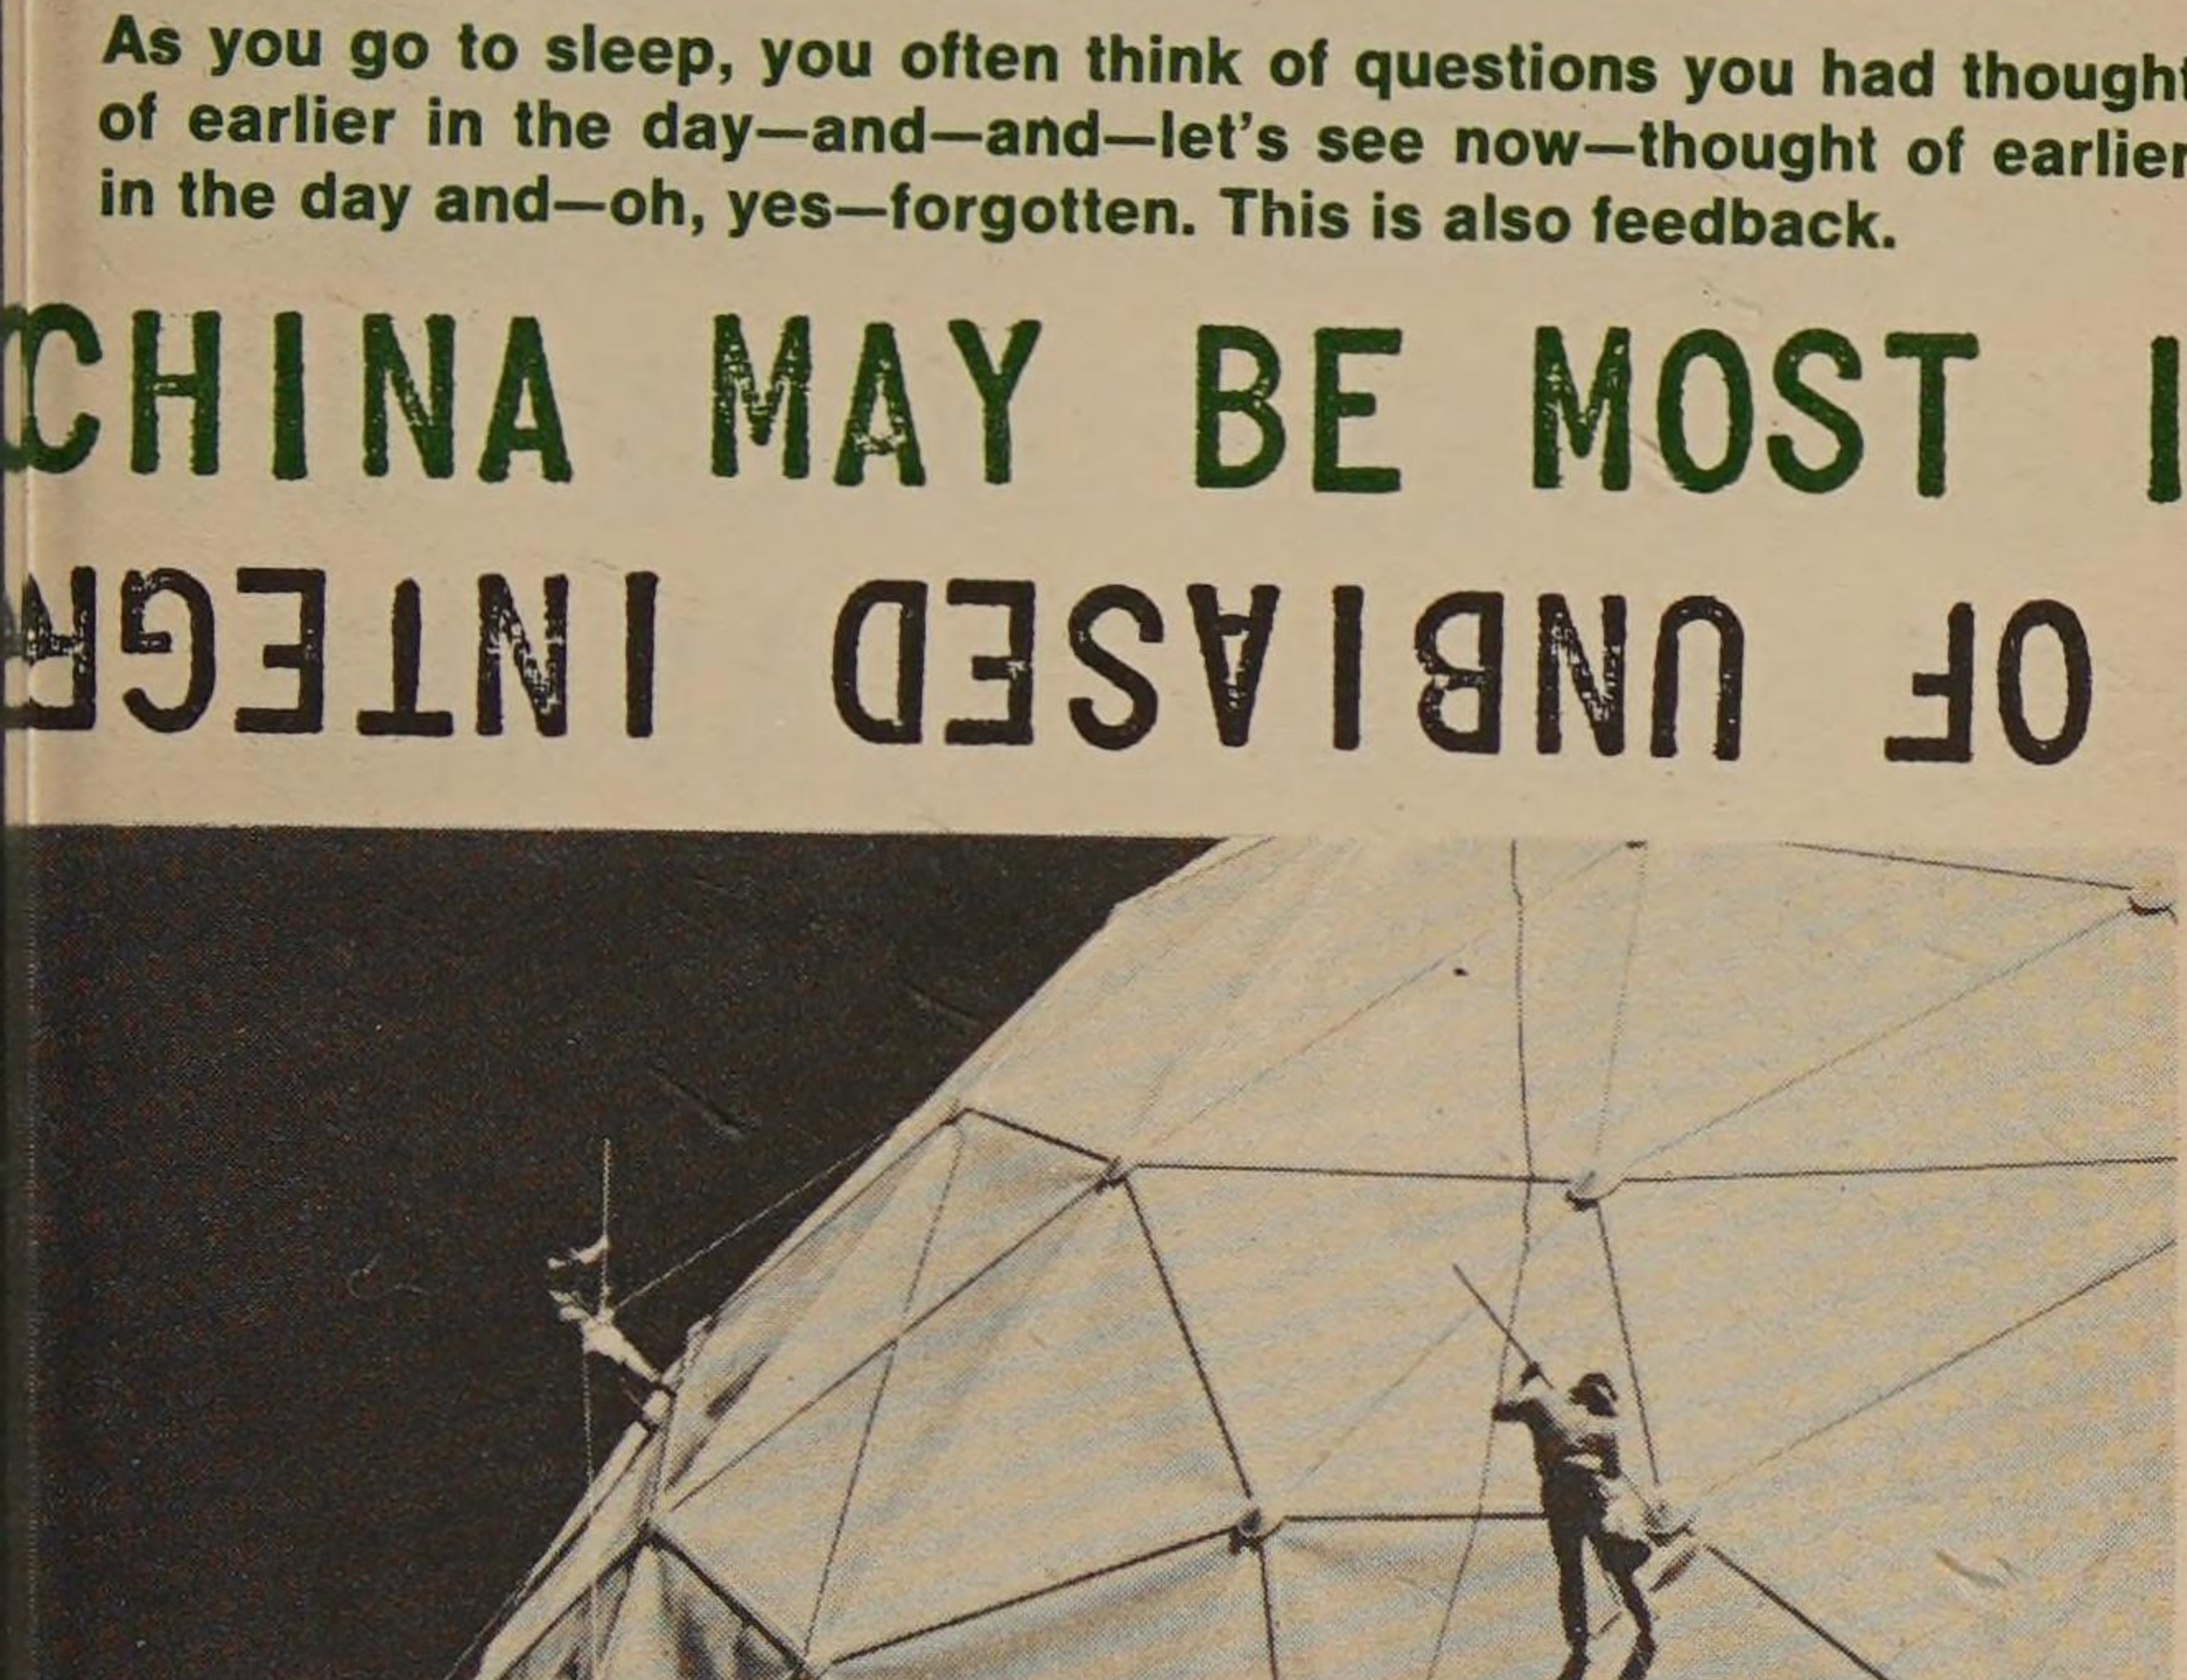

—Napoleon.
"Let China sleep.
When she awakes,
the world will be sorry."

As you go to sleep, you often think of questions you had thought of earlier in the day—and—and—let's see now—thought of earlier in the day and—oh, yes—forgotten. This is also feedback.

CHINA MAY BE MOST IM

E OF UNBIASED INTEGR

China started her modern industrialization at the automation level. She started with computers, fission, transistors, jets—not "Flying Jennys" or "Mustangs." And she started with a three-to-five-millenia-old philosophic sophistication that had originated industrialization with its emphasis on less-is-more.

The more customers you have, the more you can spread the cost, the lower your prices can be, the quicker you can amortize your investment. If present patterns continue, China will be fully automated by 1975—and will have the most customers.

"We don't want a chemical plant. The chemical industry is too automated. We need assembly-line type operations, long rows of tables with women across them face to face."
—Lament of community-minded problem-solver concerned with unemployment in Brooklyn.

AUTOMATON. (BY 1975 ITY COULD UNIFY WORL

"up"

thought to be flat, all perpendiculars to the flat would be parallel to one another. Being parallel to one another, they then would alternate. In one direction, they would point up; in the other direction, they would point down. But the earth is spherical—and none of the perpendiculars are, of course, parallel to one another. What may be up at one point is not necessarily up to another point.

"down"

The words "up" and "down" have no meaning. They were invented to explain what seemed to be happening. In a world

instairs

In circumnavigating, the captain didn't move around rapidly enough to "sea" what was really "up." But the aviator rapidly realized that the "four corners of the earth" was a square idea. He knew that when he was in a position that was called "upside down," he wasn't really upside down. He had to have exact language for his experience. The aviator comes "in" for a landing, and goes "out." We go in toward various masses in the universe and we go out from them. We go instairs and outstairs.

outstairs

D. IT COULD AND PROB
K MACHINE -- A SLAVE

—President Nixon-appointee.

"I've got to have my dreams, too, you know." —38-year-old father, tugging at his $1.50 New York Yankee cap and chucking knuckleballs to his butterfingered six-year-old son in a sandlot.

"I don't intend to live on $30,000 *a year."*

"I'm really too old for this." —28-year-old pilot climbing into his helicopter gunship in Vietnam.

Because they have so much less to unlearn, young people have a great advantage over their elders. They recognize, to take an easy example, that the water and the air belong to everyone and that water pollution and air pollution are a world-around problem. They recognize that the world's resources belong to everyone, not to the nation that just happened to have had a dinosaur die in it.

181 B

"It is unbelievable what a burden genius is."

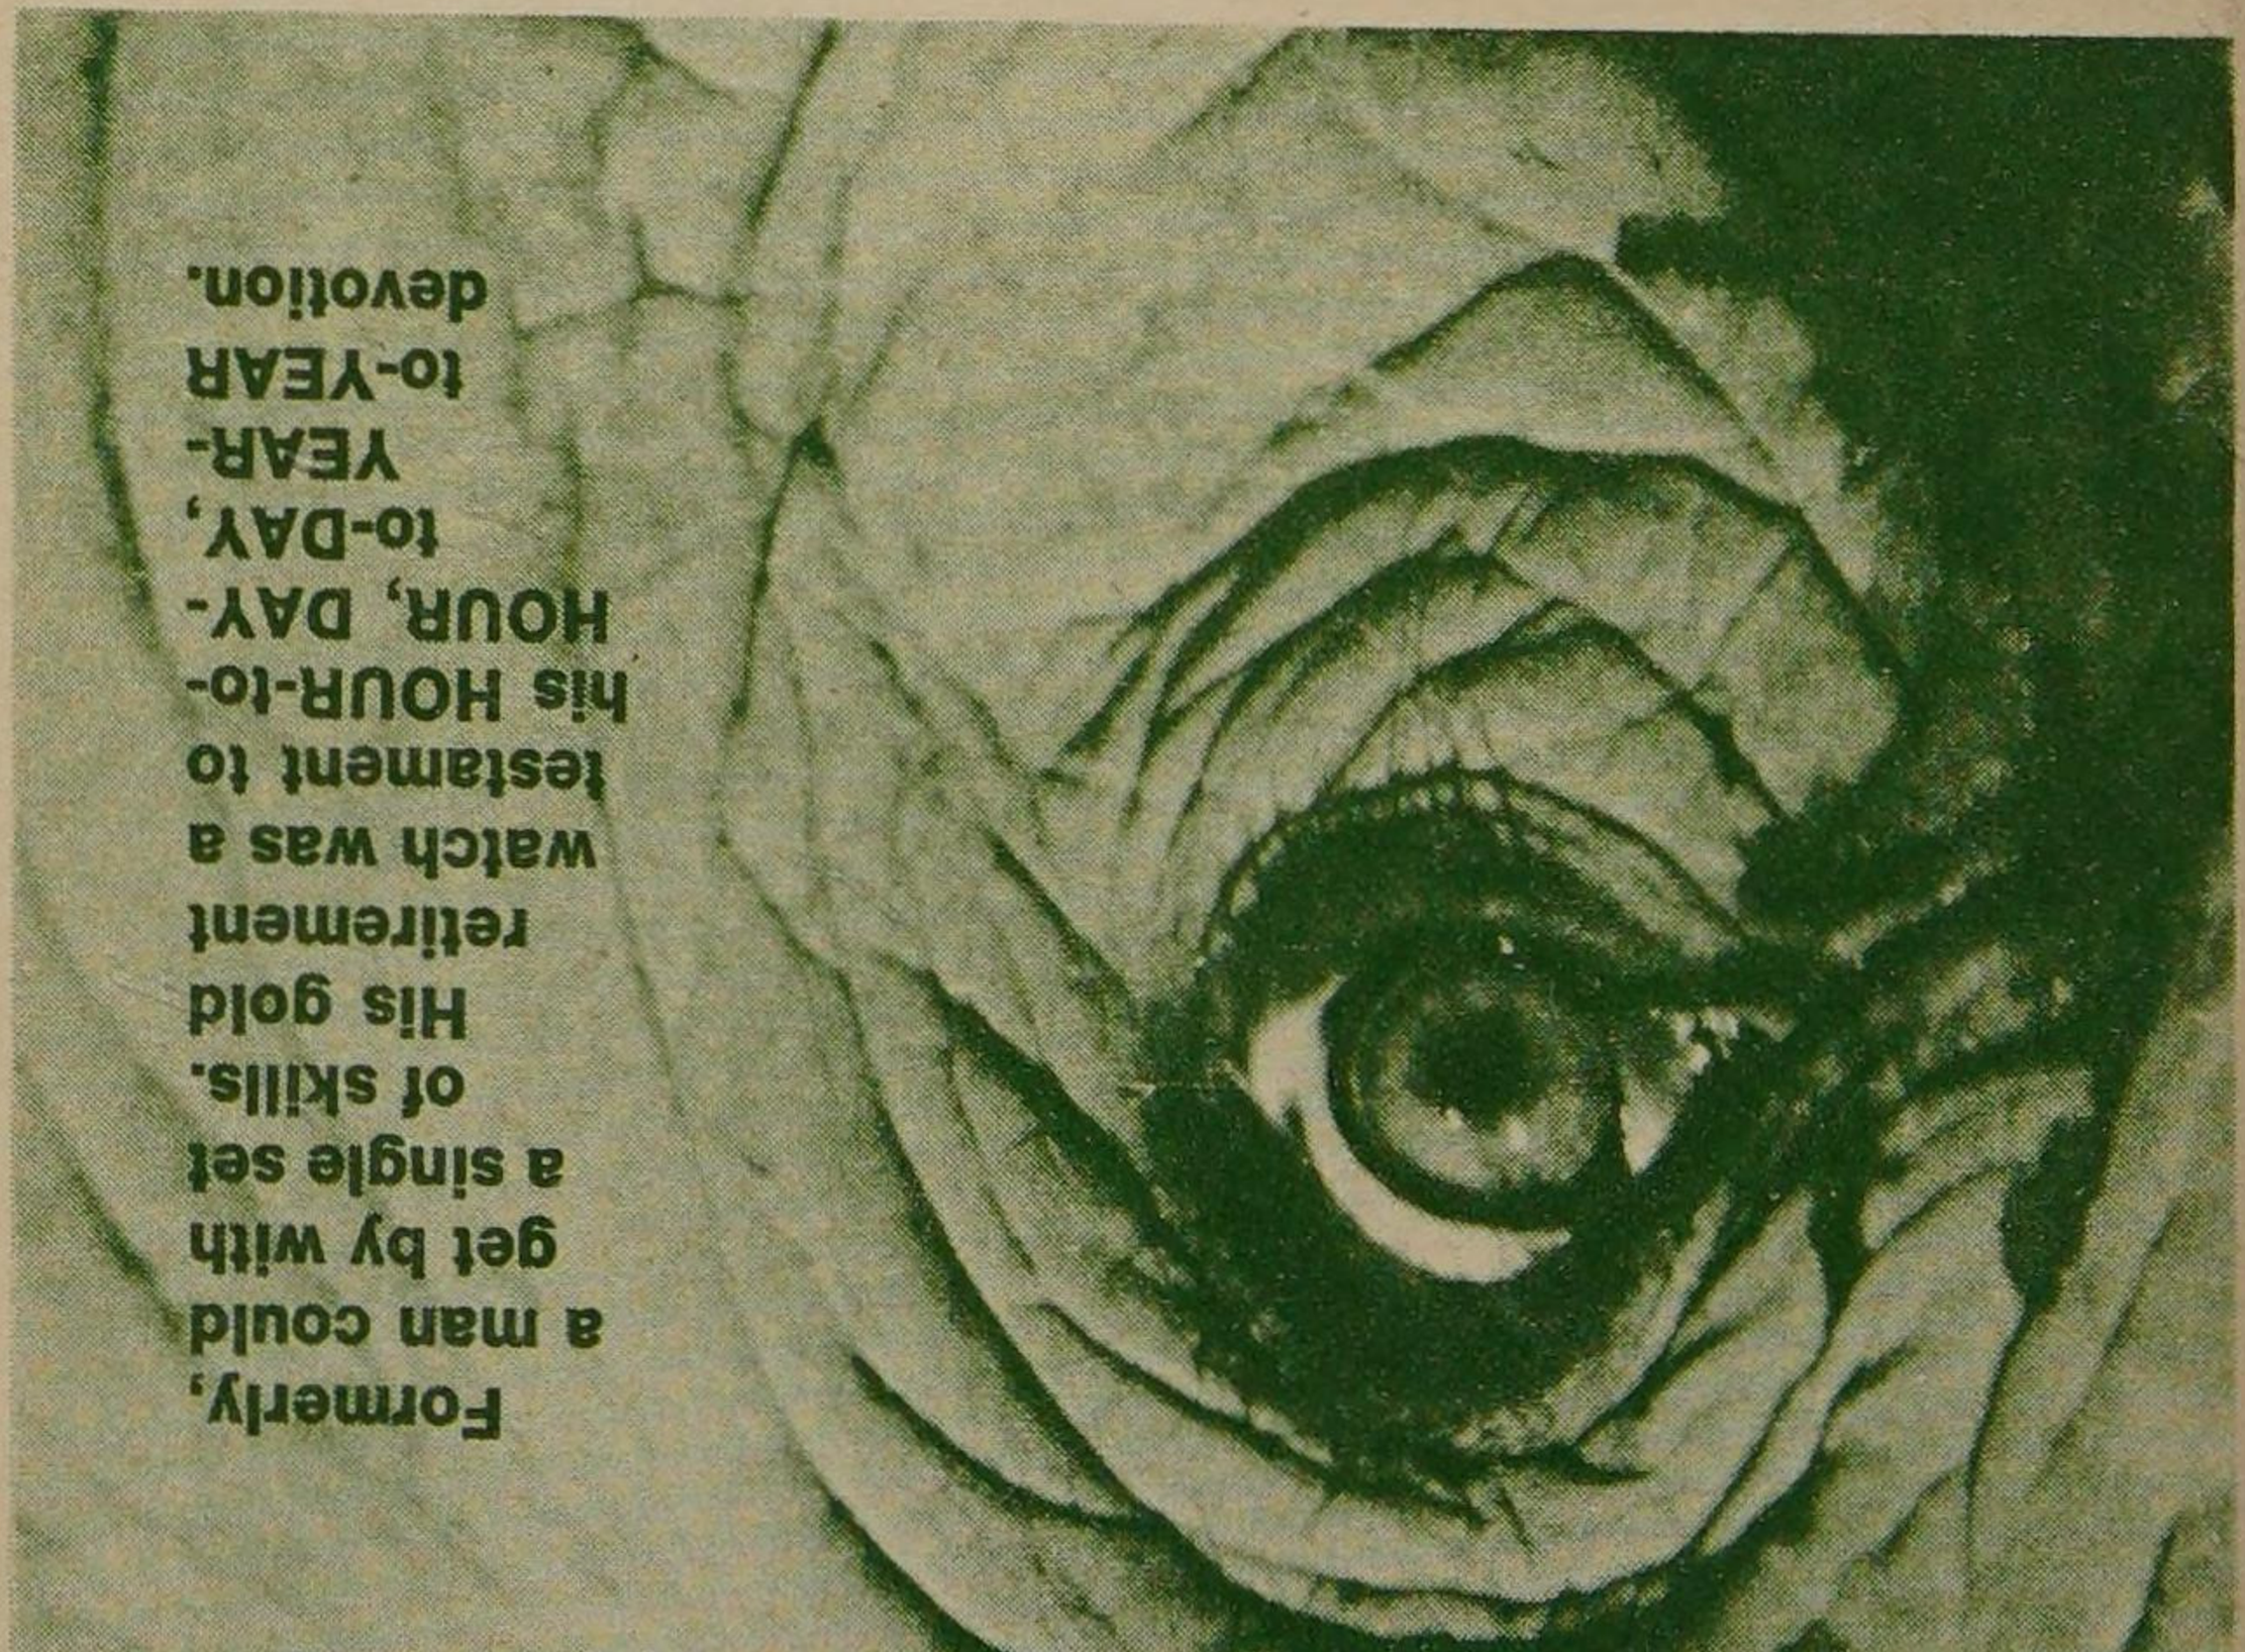

"I'd *like* to be Vice President."—*Julian Bond, on being nominated at Democratic national convention.*

"The truth of a thing

is in the *feel* of it, not the *think* of it."

ABLY WILL BE PROVIDE
PLE MUSCLE AND REFLE

Cities, as we know them, are urbsolete in respect to yesterday's function as warehouse and trading post. Trying to rebuild cities to make them accommodate the new needs of World Man is like trying to reconstruct and improve a wrecked ship as it rests upon a surf-pounded reef. The great cities, like New York, Paris, London, Tokyo, will turn into universities as automation replaces the humans who function only as automatons.

The computer is an imitation human brain, but its capacity, speed of operation, and tirelessness, as well as its ability to operate under environmental conditions intolerable to the human anatomy, make it far more effective in performing special tasks than is the human brain minus the computer.

"Any of you who can't SHOUT in a company president's FACE and MAKE him BUY might as well LEAVE now. You WON'T be around LONG anyway."—*24-year-old executive.*

"Do they?"

"You go around looking for love and somebody hits you in the face. Well, it hurts. You keep feeling the fist... Maybe people over 30 stop feeling the fist."

"Never once did anyone ever make it clear what I was being educated for."
—Paul McCartney.

A new technology—microelectronics—reflects the trend in the computer industry to cram more and more electronic gear into a smaller and smaller space—making circuits faster, cheaper, more reliable. This momentous advancement in circuitry design is causing important and shattering changes in the computer industry.

A transistorized electronic computer can—in one minute—print out the solution to a problem that a decade ago would have taken two years to solve if every educated person on Earth worked full time on the calculation. The computer's impartial solutions are acceptable to those who suspect the counsel of long-haired, eggheaded specialists.

Two days after his one hundredth birthday, D. Frank Dakin, of Somers, N.Y., received a patent—his fourth—for metal forms for concrete.

"After all, Sirhan isn't the kind of person who'd go to a hotel like the Ambassador."

Spaceship Earth—8000 miles in diameter and spinning at 60,000 miles an hour in orbit around the mother ship, our nearest star, the Sun—is a mechanical vehicle, just as is an automobile. Putting oil and gas into your automobile helps you develop a thermodynamic sense. Of course, all machines must be kept in running order.

"How to Make the World Work" is a computer program under way at Southern Illinois University. Data are fed into the machine's memory bank: What resources are available?, Where are the people?, and so forth. Essence of the program: Making every man a world citizen, able to enjoy the whole Earth at no one's expense. One happy goal: Lots of beautiful shade trees for everyone.

"I don't think more than a few bars ahead."—Mick Jagger, discussing his future.

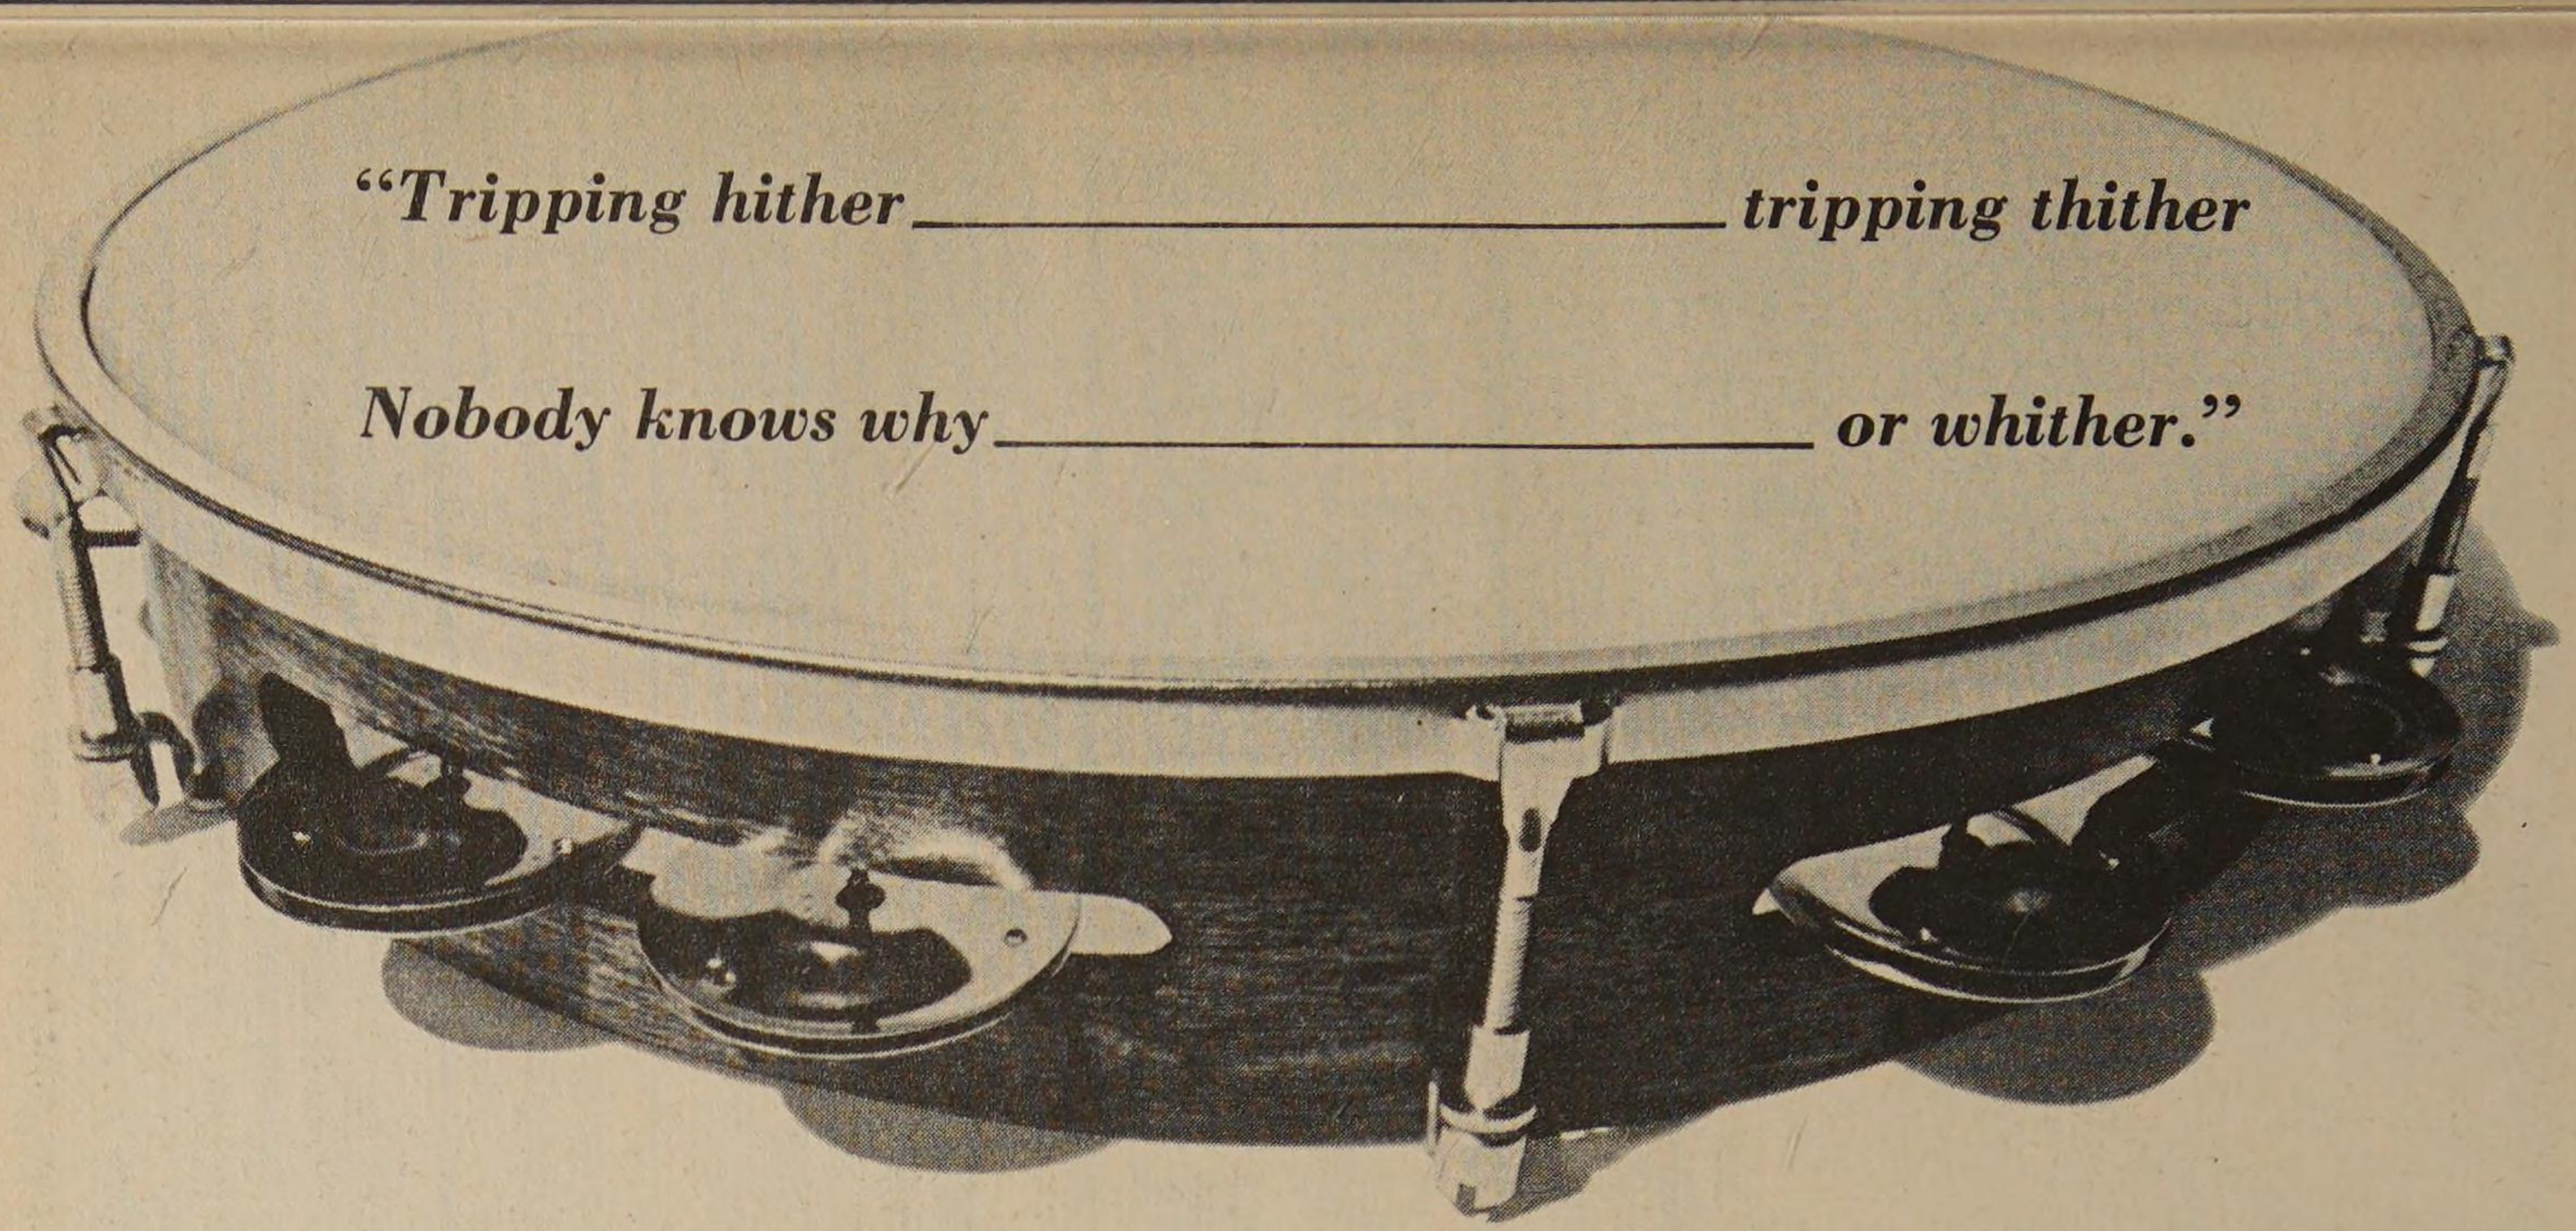

"Why don't I send you any news about our books? We don't have any news."—*Publicity director for major paperback publisher to news reporter.*

Weather scientists have requested, for civilian use, military radar that is 100 times more effective than their present equipment.

S SUPERHUMAN RANGE O

S FACE-SAVINGLY ACOU

It has been noted that consciousness deals only with a few things at a time, translating one sense to the other, unlike the unconscious, where everything happens at once all the time. In mechanical societies where information moves slowly, the conscious is the environment. In conditions of instantaneous movement of information, the subconscious becomes the environment.

"One cause of frustration and violence on campuses is the effort to sweep problems under the rug by asking elderly men of great repute and inertia to study them."

—JOHN KENNETH GALBRAITH.

We will develop an increasing confidence in the well-programmed computer that can provide unbiased answers to intricate questions. It can even provide answers that show how powerful segments of world society could mutually profit. Surprising mergers of previously opposed interests are likely. Hello. *Mao?*

"As far as we're concerned, art stops at the door of the theatre, and then we apply community standards."—*New Haven (Conn.) chief of police commenting on Julian Beck's Living Theatre performance that led the audience in dress the police considered indecent.*

FIC RELIGIOUS LEADER
CALCULATIVE CAPABI

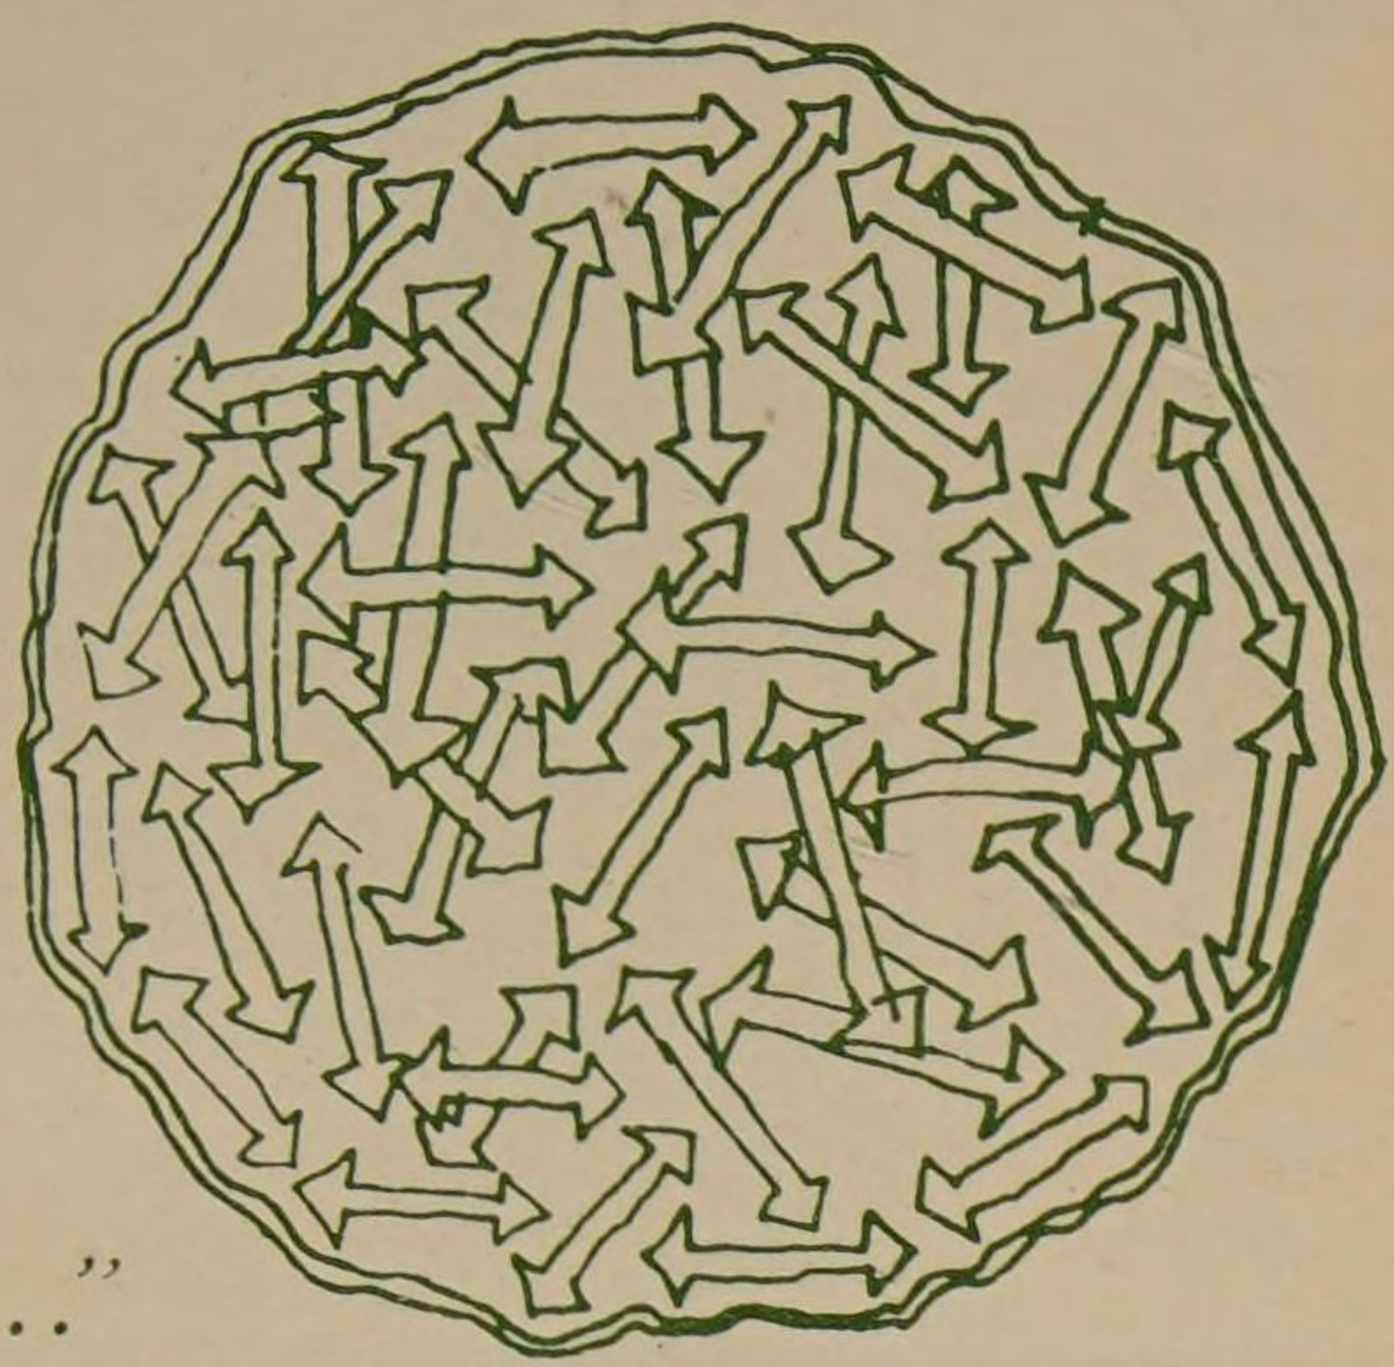

"Regardless of my industry and ingenuity, more than once I've been haunted by the suspicion that I'm yodeling in an echo chamber."—*Richard Maney, celebrated press agent.*

It is possible that Charles Darwin was wrong. Man may have come to Earth from another planet. In Darwin's time, all the sciences were unsophisticated and Darwin had to base his theory of evolution on available information. Now there is different information, gained from nuclear physics, genetics, molecular chemistry. Archeologists keep finding examples of man having lived on Earth as long as four million years ago, but the evidence does not always indicate a more ape-like structure. Evolution may be going the other way — Nimrad — and it is possible that we may be making monkeys of ourselves.

Three or more sets of angularly independent circularly continued push-pull paths must inherently triangulate by push-pull stabilization of opposite angles. Triangulation means self-stabilization, which creates omni-directional symmetry, which makes an inherent three-way spherical symmetry grid, which is the geodesic structure.

"My co-star, Janet Margolin, and I have been an unremitting source of delight to ourselves. If this movie could break even on two tickets, we'd do all right."

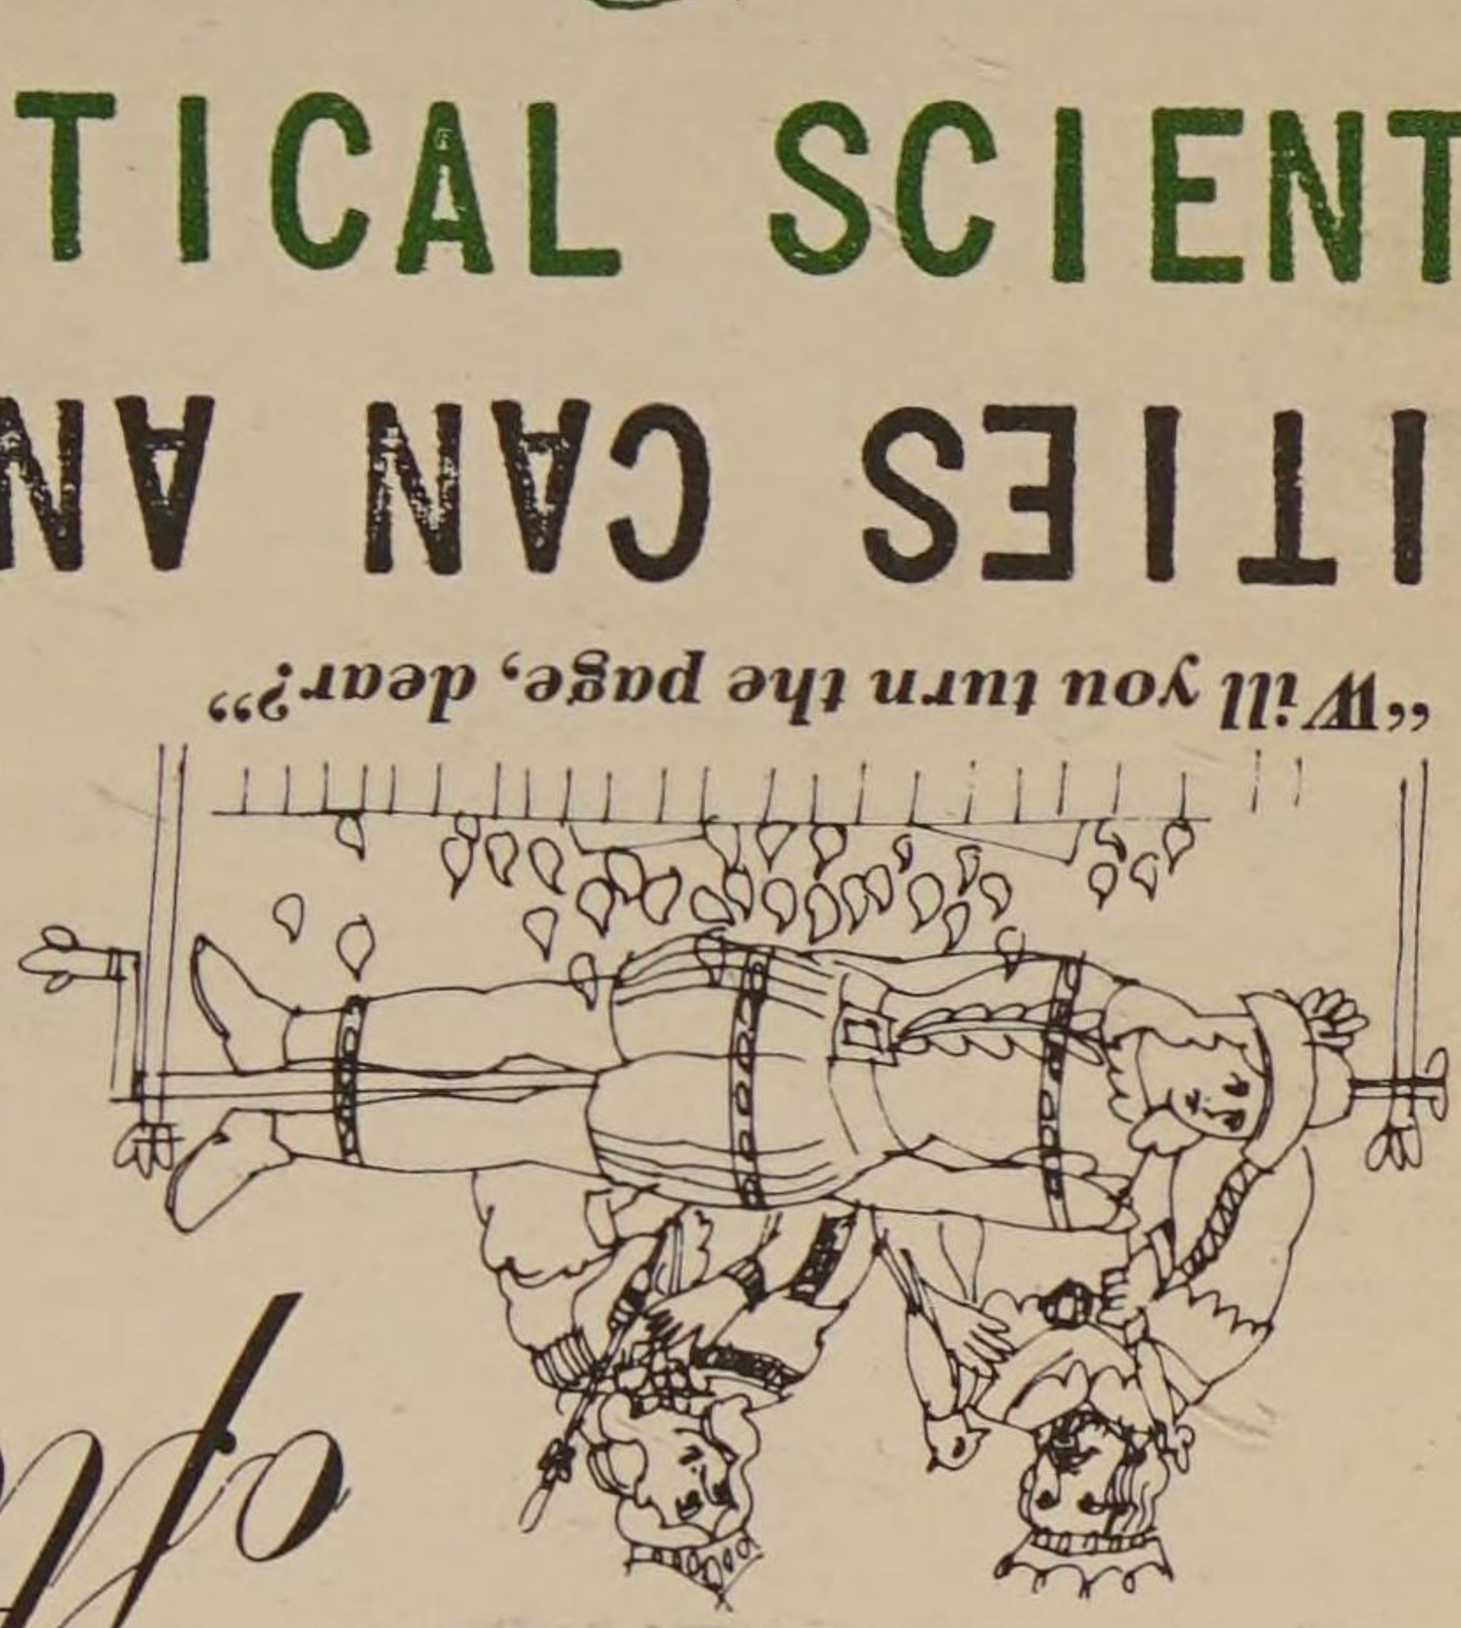

—WOODY ALLEN.
