Fukushima

neuron - a grayish or redish granular cell, with specialized processes
it is the fundamental functional element of the nervous system.

Synapse - the point of contact where nerves impulses are transmitted
from one neuron to another

network - an arrangement of wires that cross at regular intervals
forming open spaces that are knotted at intersections
or system of lines or channels

specialized network

system - a number of networks functioning as a whole
distributing or serving a common purpose.

the psychological unconscious Stenerin
 neural holographic process(es) Phillip Westlake
 The flow of thought and the
 flow of substance in the brain McElwaine

1975 - Fukushima

Cognition: a self organizing, multi layered neural network

- the organ of synopsis

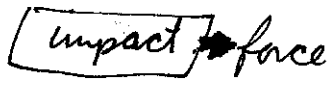

1978 - self organizing - feedback type cognition

1980 - neo-cognition

overtraining

1. time to grow cells
 Bio cyclenic growth - matures
2. wearout - try to force a network into a system
 instead of creating a system of networks
