Statement of Questions Involved

- I. All Points Contained in Briefs and Record Appendices of Other Defendants.
- II. Errors of Trial Judge. Suppression of Pertinent Evidence before the Jury Including Group D, "OROP Desert Ea," 1951-1956.
- III. Basic Principles of Scientific, Truthful Conduct in Both Basic Research and Jurisprudence.
 1. *Battle for Truthful Procedure.*
 2. *Jury rendered verdict uninformed.*
 3. *There are no authorities on new knowledge, that is, "Knowledge of the Future."*
 4. *Government must not interfere with basic research.*
 5. *Scientific literature must not be ever impounded or burned in U. S. A. as it was under Stalin and Hitler.*
 6. *Non-appearance of the Discoverer of the Life Energy in Court in Civil Complaint 1056 was a matter of principle and self-defense against crimes perpetrated by the complainant-accuser upon the Court and the Discoverer.*
 7. *Bona fide scientists must not be dragged into Court to be harassed to death by competitive commercial or political interests.*
 8. *Disclosure of scientific information, especially if secret, must not be forced by Court action or by administrative invasion of property and records. There are peaceful ways via conferences and agreement.*
 9. *New knowledge, not as yet on statute books, requires new administrative laws.*

10. *Judicial errors* must be realized and corrected. They must not be perpetuated.

IV. **The Legal Case before the Court is WITHOUT PRECEDENT.**

1. Discovery is without precedent.
2. The methods used to obtain information were without precedent.
3. The word "spy," as used in the cross-examinations and examinations of witnesses by Wilhelm Reich is without precedent.
4. Use and abuse of "orgastic potency" problems, i.e., problems of people's love life for espionage purposes are without precedent.
5. American Security System defeats itself, missing the *real enemy*, The **Enemy of Man**.

Statement of the Case

The nature of the proceeding and chronology are being set forth in the briefs of The Wilhelm Reich Foundation and of Michael Silvert, M. D., and may there be referred to.

Introductory Note

I have emphasized the lack of precedent of my basic discovery. This, however, in no way reduces my gratitude to all those men of knowledge to whose labors, trials and errors I owe so much for what I have learned from them. The unprecedented nature of the principle of machines flying heavier than air in no way reduces the preceding principle of locomotion. By the same token, the unprecedented nature of the organomic potential in no way reduces the preceding mechanistic principle of mechanical potential from high to low.

CROSSROADS AHEAD

PART I—APPEAL TO FAIRNESS

A. General Technical Grounds of Appeal and Argument

The judgment against the Discoverer of the Life Energy of May 7th, 1956, was obtained under legal conditions and social circumstances which are **without precedent** in the history of jurisprudence. These extraordinary conditions and circumstances blocked the defendants *technically* in clarifying fully the issue before the jury. The jury rendered its verdict uninformed. Had the full factual evidence involved in the case been presented, the verdict would have been "*not guilty*." However, this evidence was submerged in and blocked by *top secret* involvements of the basic research work of *Wilhelm Reich, M. D., the Discoverer of the primordial, massfree cosmic energy (also Life Energy)*.

A judgment and consequent sentence arrived at under such shrouded evidential circumstances, substantially concealed from the view of Jury and Judge alike, cannot be considered technically correct.

The appeal is therefore submitted to *review the case, to rescind the judgment and to recommend legal-technical means to bring this pertinent and material evidence fully into the open*. This is required to do justice in this extraordinary case.

Basic Technical Errors:

1. *No legal precedent.*
2. *Evidence for defense submerged in secrecy, kept from view to the Jury and the acting Judge.*
3. *The fact that the trial court did not permit testimony as to the motives, the "why" in this case is an error by the trial court and constitutes a legal basis for reversing the decision of the trial court.*

B. General Purpose of Appeal

This is an appeal to rescind judgment in an *extraordinary case, without precedent* in the annals of jurisprudence, unprecedented in Fact and in Law. Never before has mankind faced a situation such as underlies this case. On November 4th, 1955, information appeared in "C.R.I.F.O. Orbit":

"The Case for Interplanetary 'War' Space War Possible is MacArthur Hint

"Supporting CRIFO's beliefs are the timely and sobering words voiced by General Douglas MacArthur, before visiting Mayor of Naples, Achille Lauro on October 7, 1955 at the Waldorf-Astoria, New York. The Mayor revealed the General's statements to the New York Times as follows: ' * * * He thinks that another war would be double suicide and that there is enough sense on both sides of the Iron Curtain to avoid it * * * He believes that because of the developments of science all countries on earth will have to unite to survive and to make a common front against attack by people from other planets * * *.' The Mayor added that in the General's opinion the politics of the future will be cosmic or interplanetary."

Substantial matters of a top secret nature, without precedent in fact and law were involved in the legal conflict before the court:

(A) The Oranur Experiment (Begun January 5, 1951, still running)

Never before has the atmospheric energy of this planet been irritated by nuclear energy as in Oranur: Minimal amounts of NR* irritate great concentrations of atmos-

* Nuclear Radiation

pheric OR* energy. (In the atomic explosion, tremendous amounts of NR energy irritate unconcentrated atmospheric energy, unknown to classical science except as "Static.") ("The Oranur Experiment" is listed in the injunction among the books to be destroyed.)

(B) The Problem of Invaders from Outer Space

Never before in the scientific development of mankind has the intrusion of visitors from outer space into the earth's atmosphere posed such basically unformulated problems for natural science. Never before has routine technology been as unprepared as in 1951 to cope with such problems. And never before has a case been tried by a jury with the exclusion of such facts which determined the conduct of the defendants all through the injunction.

(C) The Integration of Oranur and Space Problem

Never before in the history of man's development have two such revolutionary, independent events merged into one perfect integration. The Discoverer of the Cosmic Energy was until 1953 totally unaware of the grave bearing his researches had on the invasion from outer space.

Never before has human society been as unprepared to meet such grave problems; never have the peoples of the earth been as unprepared emotionally to accept the challenge of both the invasion from outer space and the corresponding discovery of the Cosmic Energy used in the motions of those space ships. The critical economic, social, political, legislative problems, too, involved here are without precedent in the history of man.

Technical defects of the procedures ruled the pre-trial and trial events. Secrecy was imposed on the bulk of crucial, pertinent evidence, beyond control or view of either court, prosecution or accused. These defects were technically rooted in the following unprecedented circumstances:

* Orgone

1. **UNPRECEDENTED Factual Substance of the Legal Case: The Discovery of the Primordial Cosmic Energy.** This Energy obeys heretofore unknown, so-called **Functional** (neither mechanical nor metaphysical) Laws of Nature.
2. **SECRECY Which Engulfed the Social Position of the Accused: INVOLVEMENT OF TOP SECRET GOVERNMENT WORK.**
3. **IGNORANCE on the Part of the Accusers of the Scope, Nature, Secret Involvements of the Case.**
4. **FACTUAL SUBSTANCE OF THE CASE LAY OUTSIDE THE FIELD of Operations of Prosecution as Well as Court, HIDDEN from Their View in the Very Conditions of Any Kind of New Knowledge.**
5. **CONSEQUENCES of this Factual Legal Constellation.**
 - a. **RESTRICTED THE MOVEMENTS of the Defendants in Presenting Their Case Fully.**
 - b. **FORCED THEM to Act in a Manner Which They Would Not Have Adopted Had the Factual Substance of the Case Not Been Shrouded in Secrecy Compelled by Planetary Security and Related Top Secret Government Work.**
 - c. **RESTRICTED VISION of the Court as Well as the Prosecution in Judging the Case in the Full Light of All Facts Involved.**
 - d. **TEMPTED the Accuser to Use Unlawful Procedures and Techniques in Order to Maintain His Confused Legal Position, Incomprehensible Unless Seen in the Light of the Hidden Facts, Which Induced the Accusers to Act Unlawfully.**

A judgment and sentence which grew from such an extraordinary social and legal situation and was based on exclusion of materially relevant evidence cannot possibly have been in accordance with the sacred principle that justice be done. The discoverer and associates would have been freed had all the relevant facts involved been known to both the Jury and the Court. In this unprecedented case, the "Why" was crucial, just as the "Motive" in a case of murder. And attempted murder was truly, in a certain sense, involved.

C. Summary of the Milieu of the Trial and the Judgment

1. Socially No Precedent

The legal situation of the case before the court is without precedent because the discovery of the Life Energy as a realm of **Knowledge of the Future** is without precedent. This lack of precedent both scientifically and legally immediately involves *lack of authority* on this future knowledge, lack of precedents to formulate the necessary **New Laws** and to administer the *New Knowledge*.

It was never denied by the discoverer that laws to administer his discovery were needed. It was only denied that in a case without precedent the appropriate factual and legal experience is available to formulate, legislate and execute in proper procedure the rules which would fit the unprecedented factual knowledge and its social consequences. From this, and *only from this* situation, the accused derived their legal position maintained all through the pre-trial and trial proceedings, namely: *Neither Social Administration nor Courts interpreting statutory laws have or can have jurisdiction on things unknown and scientific opinions as yet unformed, uncertain and full of possible error.* The jurisdiction of court and government on established knowledge within known techniques was never denied.

The case was thus beyond the scope and vision of social experience. This fact entangled the case in contradictions between what everyone concerned clearly *knew to be true* and what he *did*; he was bound up in his *routine procedural activities* which were fitted to take care of *known functions*, but were unfitted to this unprecedented situation. To illustrate, imagine an automobile driver who is suddenly being challenged to fly a jet plane of which he knows nothing. Our jet engineers would justly refuse the automobile authority to govern their activities. If any *contempt of court* could be construed from this situation, it would rest in the circumstances and not in the intentions of the accused, certainly not in "contempt" toward the court of justice. The attitude of the accused toward the court was always respectful and cooperative.

The court may have interpreted the non-appearance of the Discoverer in court to defend himself against the original complaint (1056) and his non-compliance with the resulting default injunction as an expression of factual contempt of the court's *capability* or even *integrity* to pass judgment on the issue involved. If such was, most regrettably, the impression received by the court, it should be instantly clarified.

The intentions of the discoverer in non-appearance had nothing whatever to do with such contemptuous attitude toward the ability of the court to pass logical, just judgment *per se*. It was solely concerned with the difficulty in meeting an *unprecedented legal situation*, with crucial facts shrouded in top secrecy, and involvement of basically new knowledge; of the interests of the nation's leaders in secrecy on the subject; of the conspiratorial background of the attack upon the discovery; of the complicated and manifold commercial and political interests involved in this assault, and finally the unpreparedness of the discoverer to respond fully, *truthfully* and *forcefully*, to the assault within the given 20 days. (For further points in question, reference is made to the exposition "*The Enemy of Man*.")

There is also no *precedent in legal history* to the effect that a basic discovery in natural science should, at the same time and most effectively to boot, involve such fearful emotions in man, fear of and rage toward being threatened in his deep, emotional constitution. The total problem of *human irrationality* ("*Emotional Plague*") in all its social, judicial and political unheard-of aspects could not possibly be dragged into a legal dispute on the validity of a new technical device, the Orgone Energy Accumulator. An administrative agency, such as the FDA, dealing with foods, cosmetics and drugs, arrogated to itself the right to make decisions on the validity of Basic Knowledge of the Future, a fearful challenge to the best minds in the history of Mankind. This agency investigated and prosecuted through *one* representative in *one* person. It used *unlawful* methods of misrepresentation to the court of new facts and then it accused the victim of its own contempt of court of which the accuser had made himself guilty in an obvious manner. Neither Complainant nor District Attorney had, as can be easily shown, read the literature they had impounded as "labeling" of an allegedly fraudulent device.

It may with full justification be attributed to a combination of those factors regarding the *newness* of the substance and *lack of precedent* of the legal situation that heretofore no defense counsel could be found who, within the given framework of legal procedure, was able or willing to present to the court what in private discussion was freely admitted as true and valid: namely, the *lack of legal precedent*, the *odd emotional nature of the conspiracy*, and the *extraordinary national security situation*.

2. Legal Situation Without Precedent

May I illustrate the unprecedented legal circumstances with known ones.

We suppose, that no one has heard anything about a *Cosmic Energy Motor*, as it will be used in space travel; but everyone knows the mechanical principle of "*thrust*" as used in jet propulsion.

Let us now return to the time years ago when no one, except those working on jet thrust engines, knew anything about this type of motion, then new, too.

Let us further imagine that an administrative agency of the government, organized originally to administer steam engines, were, under pressure of the steam engine industry, to declare that thrust mechanics is a fraud, that "*it does not exist.*" Imagine furthermore that this steam engine administration would put in a complaint in court against the thrust engineers, claiming "fraud." The court has never heard of the principle of "*thrust.*" The court would therefore know nothing about it. There are no *statutory* laws on the books to tell about the legal situation of thrust engines as yet embryonic, untested knowledge. The complainant, the steam engine administrator, has succeeded in skillfully using the slander that has been spread about the thrust engineers by the competing steam engine manufacturers. The thrust engineers realize that their case has no chance in court, since their machines are unknown and without precedent, in addition to the bad reputation which was pinned upon them by those who felt threatened in their manufacture of steam engines by the new discovery. **The accuser had resorted to MURDER BY PROXY. The acting judge was, without his knowledge or intent, to act as the executioner. Everybody knew it. No one said a sane, true word nor moved a finger.**

Without doubt, in their grave predicament, the thrust engineers would then, first of all, resort to basic principles of natural science which clearly show that there can be

no jurisdiction on new knowledge and devices stemming from such new knowledge if there is no legal precedent for their judgment. They would send in a "Response" challenging the jurisdiction on new knowledge by Courts of Law.

The court, uninformed and in addition *arbitrarily misled* by the cunning complainant into believing the misrepresented facts, would not consider such "*Response*" on the part of the thrust engineers. The court would then proceed to issue a "*permanent injunction,*" a "*default decree.*" The complainant, who had misled the court, was taken seriously as a bona fide government administrator of steam engines, and not as a true representative of steam engine manufacturing interests.

From now on, due to this initial technical error, the rest follows logically with the irrational stubbornness which is characteristic of illogical procedure.

In addition, thrust engine research has been classified by another government agency as top secret, a fact which is probably known to the complainant, but he fails to communicate it to the court.

The case of the *noiseless, Cosmic Energy Motor Engines** is in exactly the same position as presented here with respect to thrust engines of some time ago. However, there is one important difference: The realm of the future cosmic technology is so much vaster than that of mechanical thrust in the earth's atmosphere. The only way left to the engineers in such a predicament is non-appearance in court, risking injunction, and working toward truthful elaboration of the factual and legal circumstances at hand.

The question "*Why*" the engineers did not appear in court is crucial and pertinent to the special case. The injunction did not concern a routine case of fraudulent production to deceive the public. It was, on the contrary, the

* Affidavits regarding this motor function were signed and notarized by the later prosecuting attorney, Peter Mills. See Appendix below.

most crucial discovery ever made in natural science by an acknowledged, widely-known scientist and physician, arbitrarily misrepresented to the court as a quack and fraudulent crook. Therefore, the injunction by default is without precedent and the "why" of the default was material to the essence of the case.

The "Why" was completely suppressed at the trial of the present case. The judgment which followed from this suppression of the "Why" must necessarily be technically incorrect. It will be shown later that the "Why" is of a crucial nature in this case, since according to the evidence with regard to motivation, "murder by proxy" is involved and the "Why" becomes just as important as in the search for motivation in the cases of true murder. (See "Red Thread of A Conspiracy" "—to kill * * * the discovery of Cosmic Orgone Life Energy and its Discoverer, Wilhelm Reich, M. D. in the USA." Record Appendix, Vol I.)

The lack of precedent in the factual substance of the case imprinted its characteristics on nearly every single aspect of the legal procedure.

There is as yet no law to be found on the statute books which would apply to the administration of and jurisdiction on a Primordial, Massfree Cosmic Energy. Nor are there statutory laws, voted on by Congress, on a creative life-producing and life-maintaining energy: *Orgone Energy* or *Life Energy*. It was pointed out by Judge Sweeney, that the injunction order against orgonomy was no statutory, i.e., no Congressional law. It was issued by a Federal Judge. It may be added here: Upon misrepresentation of facts by a lawyer, allegedly representing the U. S. Government, who probably is also the originator of the text of the injunction. With no law to be found on the statute books, no lawyer could logically be found who was able to handle the case in the strictly legal sense. Every one among the half dozen lawyers of known ability and good reputation chosen to represent the case was helpless in comprehending what went on. Each one of them admitted

that a "conspiracy" was afoot, but none acted in accordance with this conviction in open court. *Confusion* due to *discrepancies* between *statutes on hand* and *case at hand* was felt everywhere. It is the purpose of this appeal to lift the fog, to clarify issues, to open the case to full inspection. First of all: *Law officers are duty bound to know exactly what kind of act or matter they enjoin.*

The lack of precedent as well as of statutory formulation of the substance of the case before the court was also reflected in illogical contradictions as they appeared in court hearings.

3. SCIENTIFICALLY Without Precedent

Science, where it deals with new knowledge, must be equipped to handle *unprecedented events*. This is the case, too, in the dispute before the court.

*The legal dispute deals factually with a planetary emergency, the so-called DOR Emergency.** Such an emergency is unknown in routine science and routine technology. It is also unknown legally in the administrative agencies of the U. S. A. which deal with routine technological effects of natural science.

The **DOR Emergency** is a fact comprehensible only to those who have worked and suffered in combatting this emergency. It can briefly be defined as a *deadly* emergency which arose on our planet due to **Dying of the Atmospheric Energy**. **DOR is Dead or Deadly Life Energy**. Deserts are results of **DOR**.

Such a statement is valid in science if it is based on *facts*. It makes no sense in the legal or administrative realm *where statutes are lacking to cover the substance and meaning of the new term*. There are many precedents in natural science as regards the *lack of knowledge and new knowledge*. There are no precedents whatever in the his-

* See "THE ORANUR EXPERIMENT, First Report (1947-1951)."

tory of the law regarding *New Knowledge*: It cannot be properly adjudged on the basis of statutes valid for different or surpassed knowledge. The statutes applying to the safety measures of railway systems were inapplicable to the safety demands of the air travel systems. By the same token, statutes administering legally the atomic processes (*mass-containing electrons*) cannot be applied to new knowledge concerning **Pre-Atomic, Mass-Free, Cosmic Energy**. How then, should statutes applying to the purity of foods, drugs and cosmetics apply to those functions of a most complicated, uncharted territory, awe-inspiring to any serious man of science, but usurped by ignorant food and drug inspectors, trained only to test foods and drugs?

This, too, is without precedent in the history of law. It cannot be otherwise but unprecedented since the **Cosmic Energy** as it is revealing itself to the worker in basic research has never been known as such or even hinted at as such in classical science of the known knowledge. It was known *hypothetically* as "*Ether*" in Western Science, as "*Prana*" in Eastern Philosophy.

It is characteristic of the unprecedented nature of the case that the acting U. S. attorney, Peter Mills, had failed, before issuing and signing the complaint for injunction, to check the complaint with regard to the exactness of the quotations from the literature to be banned and the claims allegedly made for cure. This omission emerges clearly from the records of the trial evidence: The books impounded as "*labeling*" of a "*fraudulent*" device were either published long before the actual discovery: "*Character Analysis*" (1928-1937), "*Sexual Revolution*" (1930-1935), "*Mass Psychology of Fascism*" (1933), or were dealing with matters unrelated to medicine such as "*Cosmic Superimposition*," "*Ether, God and Devil*," "*Listen Little Man*," "**CORE**," etc. (See list of impounded literature in "*Amended Information*" Record Appendix, Vol. IV.)

What interest may U. S. Government officials have to mislead U. S. Courts so cunningly, so persistently, and so successfully so far?

4. The Orgonomic Potential from Low to High, Without Precedent in Natural Science

Only *one* illustration of the *unprecedented* physical nature of the **Cosmic Energy** should be brought forth:

This function is well known in orgonomic physics as "*Reversed or Orgonomic Potential*." It underlies the functioning of the Cloud-Buster, the Space Gun, the Medical DOR-Buster, etc. These instruments were effectively used in Rainmaking, Cloud forming, Smog removal, DOR removal and similar atmospheric operations, witnessed and repeated by other U. S. Government agencies. They occupy a central position in the top-secret department of the case. Still, the idea that a river should flow *uphill*, or electricity from the weaker to the stronger system, or heat from the colder to the warmer body, is unthinkable in established science. **The fact of energy flowing from the weaker to the stronger** (or from the lower to the higher system) is not only the *very essence of cosmic functioning*; *this fact is indispensable in the comprehension of the existence of every single living organism, of the growth of embryos, of clouds, in the understanding of gravitational mass attraction, in the functioning of the planetary system, etc., where the smaller body is attracted by the stronger system.*

The orgonomic potential is a *new fact*, an *unprecedented* fact in the knowledge of man. *Unprecedented, too, is accordingly the legal formulation of such a fact* and any consequent action before the discovered new fact is written into law.

It is also unprecedented in that this function amends the "*Second Law of Thermodynamics*." This law postulates, in full accordance with classical knowledge, a constant, inevitable "*running down*" of the energy of the universe, its final change into a state of even temperature or a state of equalized heat, the so-called "**Law of Entropy**." The orgonomic new knowledge does not deny the "*running*"

downhill" of energy, the loss of energy in various forms and the change of all energy finally into heat that must dissipate and equalize. It only postulates in addition the "reversed" potential from low to high. It thus establishes the natural function which makes it possible that the *run-down potential is raised again to former high potential levels*. It thus establishes "Creation" in accordance with the natural laws reflected in man's religious and certain philosophical systems of thought. It thus, also, finally, unites practically the scientific and religious systems of thought.

5. Morally Without Precedent

The discoverer is inexperienced in the practice of law. Still, he had to take upon himself the difficult task of representing himself before an American Court of Justice. He could find no lawyer who appeared adequate to the task of defending the cause of *New Knowledge*. This was so (not because the lawyers were inept men of law, but) because the issue before the court was without precedent, with no congressional laws on the statute books to direct legal procedures and judgments. To the lawyers it appeared "unheard of," "startling," "incomprehensible." This was due to the fact that the factual substance of the case (facts, motives, procedures) were underground, as it were. What appeared on the surface did not agree with what really was at work. This was felt by everyone who was involved, including the press. Only the discoverer was, to a certain extent, aware of and familiar with this submerged factual background. He alone could have brought into focus and kept out of sight, as the case may have required, the material from the background. However, *the trial procedure had excluded such revelation of background facts, motives and procedures.*

The counsel for the FDA represented an underground conspiracy on the part of the powerful food and drug in-

dustry. The goal was to destroy a powerful but still embryonic competitor, the Discovery of the Life Energy. There was no way for the defense to bring this paramount fact into the open, except by indirect cross examination of witnesses.

On the part of the *discoverer* there was at work the paramount interest in keeping crucial, pertinent parts of the factual substance of the case *out of sight*, as frightening; top secrets are apt to cause panic, if not endangering the discoverer physically. The case of the defense was paralyzed legally and technically by the interest in planetary security, classified, top secret in the background (indicated in protocol taken in chambers to Judge Sweeney on May 3rd, 1956. See also Communicated Information, Record Appendix, Vol. III.)

On the part of the *court* there was justified concern to keep the tremendous issue limited as much as possible; not to permit either the conspiracy on the part of the FDA nor the Top Secrecy on the part of the discoverer to get out of control. The court had, as the counsel for the defense saw it (he may be wrong), to be careful not to cause a landslide in ugly revelations of the backstage affairs of American industry and government. Such concern was fully justified at the moment. These backstage affairs are not pretty to any view, and in the present struggle for responsible freedom of the human race, it would not have seemed advisable to let the true background affairs swamp the public with debate without circumspect preparation of the public to accept rationally the grave issues involved. However, to conceal those practices, too, would be deleterious to further development of responsible government.

In this manner then, too, the case before the court was without precedent. It was exactly the tremendous hope entailed in the Discovery of the Life Energy which would have increased the background scandal to deleterious, if not catastrophic proportions.

It was to be expected that with the pressure of secrecy, the pressure to use devious means of procedure would increase. This was actually the case, as the trial records show.

The representatives of the food and drug administration would have been more careful before they launched the attack upon orgonomy had they been *fully* informed about the work done by the discoverer; also, had they known in detail the shabby means employed by the food and drug producers in using those government employees as stooges of unlawful commercial practices.

It is without precedent, I believe, that scientists, physicians, judges, law clerks, government employees, attorneys-at-law, U. S. attorneys were drawn en masse into a situation of utter confusion caused by the secrecy of the essential evidence involved. It was no one's design or intent; yet, like in war, everyone found himself involved with unlawful matters against his will or intent. It was, at bottom, an *unwieldy security and secrecy system*, forced upon the participants, which caused the injustice and the havoc to the accused.

Such legal holocaust due to mismanaged national security, if I am not fully mistaken, is *without precedent*, too. The case should, therefore, be re-examined in the open, fresh air, if and when candid, truthful procedure should become possible without endangering the security of the nation or the planet. The case against Orgonomy should finally be dismissed and the judgment rescinded.

It is *without precedent* that a system of national security, designed to protect society, should have caused so much anguish, injustice and outright danger to the very security of the nation. Therefore the total case of the Discovery of the Life Energy should be reopened in hearings with the factual substance presented to the public at large under rules adapted to the unprecedented case.

As an example, the following may be cited of ill-applied secrecy:

"Can't Know His Own Secrets" (From "N. Y. Herald Tribune," July 12, 1956)

"U. S. Unable to Dim Scientist's Brain

"Washington, July 12 (U. P.)—Government security officers are having trouble with a brilliant scientist who keeps inventing 'top secret ideas.' They have denied him access to his own secrets but can't seem to 'classify his head.' The case was disclosed today by former Assistant Air Force Secretary Trevor Gardner in testimony before a House government operations subcommittee.

"Gardner said the Defense Department refused to clear the scientist for access to secret papers but failed to put a damper on his brain work.

"'Unfortunately,' he said, 'this man has such an inventive ability he keeps coming up with secret and top secret ideas.'

"The results of his work have been classified as secret, Gardner said, and 'he no longer has access to them.' But, he added, 'we can't seem to classify his head.'

"Gardner, who quit his Air Force post earlier this year because the administration refused him extra funds for guided missile research, was called as a witness in the subcommittee's investigation of government information policies.

"He said 'at least' half of the classified documents in the Defense Department should be stripped of their secrecy labels because 'only a few deal with national secrets or scientific secrets'

* * *

"But the story of the internationally-known scientist seemed to intrigue the subcommittee members most. Gardner never identified the scientist by name.

" 'He is quite conscientious and tries to observe our procedures,' Gardner said, 'although they may seem ridiculous to him as to others.' "

" *The subcommittee wanted to know if the scientist knew that his ideas were secret.* "

" 'This is a sort of fuzzy line,' Gardner replied. 'He pretty well knows.' " "

(All emphases by Wilhelm Reich.)

The scientist had, according to news reports, been cleared by the U. S. Air Force.

D. Conclusion

Free men are those who refuse to yield under sentence of death what they are ready to yield of their own free will. Let us acknowledge this expression of freedom as one of the basic characteristics of free people.

CROSSROADS AHEAD

PART II—APPEAL TO REASON

Introduction

Deceit of courts, manipulation of procedure, misrepresentation to mislead judges and to win by CCC (Confusing, Conniving, Conspiring) are, of course, not without precedent. However, it is without precedent that such masterful paralysis of several judges, prosecuting attorneys and half a dozen defense lawyers was brought to the attention of the courts in such a manner that the path was laid out to go to the roots of such masterful deceit. To eliminate it forever from the social scene is the task among others at the crossroads ahead.

The momentous nature of the deceit perpetrated on honorable U. S. Courts of Justice by pathological individuals can only be explained in terms of the essence and the dimensions of the Discovery of the Life Energy.

The following pages will present this aspect of the assault as briefly and concisely as possible.

A. The Peaceful Version

An optimistic interpretation of the legal events would suggest that this legal battle be compared with a military maneuver in which live ammunition is used in the exercises: Whoever is lazy ducks bullets badly, makes bad mistakes in judgment and action, risks losing his life as he would in actual battle; "Do or Die" seems the watch-

word to be, now as before on the American scene. Let us be reminded of this fact: *Free men "DIE" faster in prison than unfree men. They fail to "DO" under pressure what they easily accomplish in free activity. "DO or DIE," thus, are specific watchwords of free men.*

These dangerous war maneuvers are taking place in order to find new leaders for a new, *Cosmic Age*. The scientific knowledge of the passing age has failed to account for the new, startling events such as the appearance of unidentifiable flying objects (UFOs) in our atmosphere. Our prominent scientists are helpless or were frightened before these events. Some resort to frantic measures such as accusing those working on this new, unprecedented research front as "insane," as "quacks," ("*Orgone does not exist*"), as "hoaxers" or as "criminally contemptuous of court," if they refuse to execute illogical, unlawful injunctions.

The Air Forces of the planet are faced with a task unheard of before. They must master the invasion from outer space as if from scratch, with nothing in their hands, as it were. Their military planes are out-distanced, out-maneuvered in every respect by the invaders from space. Ordinary weapons are useless. There is no way in classical methods to understand how such movements of space craft as hovering in a gravity field without thrust or propulsion, or sudden 90°-180° changes of direction are mechanically possible.

Fortunately, the discovery on this planet of an energy which fills the universe broke the deadlock. The so-called "*Oranur Experiment*" had, beginning January, 1951, brought forth new facts, unknown in classical earth science. The functions discovered in OR energy tallied well with functions and facts gathered so far with respect to the problem of invaders from outer space.

The Ea* problem relates to two equally grave centers of human existence: The *emotional* and the *technological*.

* Pertains to space invaders.

The *characterological make-up of mankind* turns out to be the one obstacle in the way of exploring and coming to grips with the technology of the space invader. Man, having armored his organism against his bodily sensations, especially those centered in his genital orgasmic function, fails to be free of fear in touching the Ea subject.

Not only does the average man and woman fear the cosmic force new to him, he resorts, out of terror, to slander, persecution, ostracism of those who tackle the problem. The FDA action against orgonomy is the best possible example of the fight of armored man against the realization of the existence of a primordial Cosmic Force used by the Space Men in their travels through space. Just as armored man has denied his orgonotic sensations of his bodily Life Energy, so does he deny the existence of the primordial cosmic energy, the Life Energy, in the universe, the Orgone Energy. "**Orgone Energy Does Not Exist,**" says complaint 1056 of the food, drug and cosmetics agents in 1954. "*Orgone energy is a fraud.*" The devices designed to concentrate, direct and use this energy are "*fraudulent.*" Shipped in interstate commerce, they constitute "*illegal traffic*" of "*misbranded devices.*" All printed matter pertaining to the existence of the alleged OR energy constitutes "*labeling*" of a misbranded device and should be stopped. It was stopped through the injunction. The discoverer of the Cosmic Energy was arraigned, indicted, convicted and punished for having disregarded the injunction.

Now, the U. S. Air Force has full knowledge of the invasion of the earth's atmosphere, of invaders using unheard-of kinds of motion; The AAF also became aware of the discovery of a new motor force on this earth by Wilhelm Reich. The AAF undertook to study and to protect the discovery of the primordial cosmic force. Without this new force there seemed to be no hope to cope with the invader from outer space in an adequate technological manner. However, the discovery of the Cosmic Energy

within and without the organism constitutes a revolutionary event in the history of the human race; havoc and chaos would occur should this discovery not be handled like a highly explosive bomb, more dangerous than the H-bomb. It would therefore take many years and careful step-by-step precautions to assimilate the discovery of the Cosmic Energy. There is no evidence palpable enough to constitute PROOF of this version. All circumstances point to the correctness of this assumption. All actions taken by The Discoverer were based on this version of the secret events.

B. Outlook at Crossroads Ahead

The serious research scientist will always have his attention centered on the social consequences of his work. If his search is genuine, he will inevitably change the world as it is known, be it in small or big ways.

Here are a few details in the outlook for organomic research. Since this research is *basic* research at the very roots of cosmic functioning, known to such men as Aristotle, Kepler, Newton, Bruno, the great Indian philosophers, Nietzsche, we shall expect that the consequences will be deep-reaching, drastic, at times even frightening. *Are we prepared to face them? We obviously are not; otherwise, a few emotionally sick individuals would not have succeeded in obtaining their restrictive results against organomy as they did so far.*

1. The *first* and immediate consequence of organomy will be a basic change, already underway in our world, of the handling of our newborn infants and small children. This change can no longer be stopped. I have fully succeeded in putting it across by way of my book, "Character Analysis." It will permit children to grow up unarmored, that is, without the cramps and spasms and colics and twist-

ings and crying spells and physical diseases stemming from this torture. A new type of man is being created who sooner or later will not reject in terror what is obviously true and immediately evident to every unarmored living soul. Human armoring against nature is breaking down. This is the "*Biological Revolution*" of Mankind.

2. The discovery of the Cosmic Life Energy will inevitably lead toward the mastery of *gravity*. Gravity within the confines of our planetary atmosphere, i.e., mass attraction in accordance with the laws of Newton will be practically mastered, as electricity or magnetism today. The technological mastery of *positive* gravity will further lead to the elaboration of tools which will open up the vast field of *negative* gravity or *counter-gravity*, already known today in a theoretical organometric manner. A point will be reached in human knowledge regarding the gravity function where *positive* and *negative* gravity functions will balance each other; in other words, technologically speaking, where "*Hovering*" in the field of gravity of our planet will be made practically possible without the use of mechanical force.

From the functions of negative and neutralized gravity a logical path of research will lead into the technological problems of *Space Travel*, inevitably, just as the discovery of galvanic electricity led to today's electric motor.

3. The **Space and Space Travel Functions** will depend entirely on the final organometrically, that is, functionally correct *abolition of g*, the symbol for gravity in mathematical logic, from all our space equations. With the abolition of *g*, man will for the first time in his history have left the surface of the globe, *theoretically*, at least. He will be able to calculate space and to experiment with space problems in his laboratory with the help of *OR* energy functions in the vacuum, as I have introduced it into human technological research beginning in 1947. *Space is not empty*. The long sought-for "Ether" exists, but in a

fashion entirely incomprehensible to today's scientist trained only in handling mechanical energy where there exists no functional integration of *self-sustaining processes*; where every *single* function requires its own *special* arrangement of mechanical devices. Cosmic Energy functions in a manner unknown heretofore except in physical organomy to man and his science. It is known to the living beings from outer space.

Basic pillars have already been built in mathematical organometry to conquer gravity outside the globe's gravitational field. A manuscript containing the initial space equations has been transmitted to a certain highly responsible government agency, it is contained in the secret, suppressed evidence.

4. Political interests of a foreign power in combination with national U.S.A. commercial interests entered the scene of organomic research when, in 1948, the *organomic motor function* was discovered in my laboratory and documents regarding this discovery were executed in the law office of *Mills and Mills*, including *Peter Mills*, the later prosecutor of the Discovery. This **OR-Motor** (first document was notarized by Peter Mills) was the first step in the technological development toward noiseless, smokeless, smooth-functioning locomotor machines of the future, the **Cosmic Energy Motor**. Inevitably, this new kind of motor will replace the steam engine and the electrical motor. It will be fed by the practically limitless power resources contained in the Cosmic Orgone Energy Ocean. It will be the motor that will carry our Space Ships into vastnesses as yet unimaginable. This motor will finally and irretrievably free man from the so very futile effort of overcoming gravity by way of mechanical thrust, the jet-engine-type of motor function. Both mechanical gravity, theoretical gravity and the machine to carry its own gravity field with itself, the *Cosmic Energy Field* will be ours in a not too far remote future.

One cannot resist the conclusion following from this technological development that with the freedom from positive gravity, necessarily, the freeing of man from his emotional ballast of today, *the armor*, too, will take place. The discovery of human armoring and its evil consequences was the first step in this direction through "Character Analysis." It led to the discovery of the Life Energy, and with it to all that followed in the direction of the noiseless, smokeless Life Energy Motor, and with it toward human final freedom from the bounds of this ravaged planet. This will happen without any mystical creed, solely on the force of functional knowledge of the future which submits to no authority rooted in old or surpassed knowledge.

The *Cosmic Energy Motor* will be the lever which will turn our present civilization into that of the coming *Cosmic Age*. The *Cloudbuster* and the *Spacegun* are the twin brothers of the *OR* motor. The *Cloudbuster* rests on the principle of the "Organomic potential" from low to high and on the affinity of cosmic energy to water, its "*thirst*." It is the device that will basically be used in shifting and changing Cosmic Energy potentials, in destroying and creating clouds, in drawing in energy from the cosmic (galactic) energy streams of the universe (see "Space Ships, DOR and Drought," 1954), in the coming utilization of these streams as thoroughfares for the space ships, as it were. From here did evolve the

5. **Medical DOR-Buster**. This device will do in the living organism what the *Cloudbuster* does in the atmosphere. Since organism and atmosphere are interdependent and inseparable, a new type of *curative* and *preventive medicine* will come into being: "**Atmospheric Medicine**." The Medical DOR-Buster will be its basic tool, from which other medical techniques will branch out.

Here is the principle on which the functioning of the **Medical DOR-Buster** rests:

Cloudbusting taught us that *atmospheric energy metabolizes*. It "dies" when OR energy changes into DOR energy. DOR causes the "*DOR sickness*" described and published first in 1951 during the Oranur experiment. *DOR* is "*dead*" and "*deadly*" *Life Energy*. It can be removed by drawing it into water, lakes, wells, etc. Using this principle of "*water hunger*" makes it possible in medicine to *draw off dead or stalemated life energy or DOR energy from the living organism at will, at any time and from any organ or group of organs*. By doing this, *Life energy* (OR) is metabolized; we may even assume a "*revival*" of energy gone stale by a metabolic exchange of energy between organism and environment. Such is the case in sports, swimming, etc. *Disease* is basically no more than the pathogenetic effects of *Life Energy* gone stale in various forms and phases according to the organ where it happens. Disease can therefore be "*drawn out from the organism*", as it were. This principle was well applied to the old type of medicine which used the wet compress, diuretics, laxatives, blood transfusions, etc.

By drawing dead or deadly life energy from the diseased organ, an entirely new principle of medicine, incalculable in its potentialities, is being practiced.

All disease is basically DOR sickness. It will be fought at the very roots of disease: by removal of DOR from both atmosphere and organism. Since bacterial or infectious diseases are end results of decaying life, the medical axe is thus also put to the roots of the known diseases of classical medicine.

The basic principle of Oranur Medicine may be illustrated with two examples: one from normal physiology, the *natural genital embrace*; the other from grave pathology, the *Cancer Shrinking Biopathy* (to be dealt with in a different context).

Oranur Medicine is not in disagreement with or antagonistic to classical medicine. On the contrary: It fills the

classical concepts of "disease" with a concrete meaning by introducing *tangible facts* of "*Disposition to Disease*." The animosity expressed toward Oranur Medicine, as seen in the FDA assault, is not emerging from factual scientific principles, but from commercialized interests in a mass production and sale of artificial drugs and adulterated foods.

The atmospheric Oranur Medicine of the future will further develop with a new branch of experimental science, the *pre-atomic* functions of *Orene*.

6. *Orene* has been under investigation only since about 1952, no more than five years. A preliminary report on its chemical behavior was published in 1954. The true story of *Orene* begins with its *pre-atomic* characteristics.

Orene is collected from the atmosphere on dishes filled with Na OH or Na Cl. It settles and forms *above* the fluid in fine, moist filaments. The substance is white. It dissolves in water completely, becoming microscopically invisible. It hardens without continuous water supply into a mass, white "*Orite*." It does not dissolve in water, but crumbles to little pieces, which are bionous under high magnification.

Orene plus mass emerges from atmospheric OR energy, which is a massfree function of the cosmic energy. The planet is in constant metabolic exchange with the energy system of the universe. The so-called galactic and the equatorial OR energy streams are the practically limitless sources of *Orene*, of *Life Energy*.

Orene is the *formative* life principle *per se*. Obtained in a moist state (above an Na Cl or Na OH solution), it develops biological forms under the microscope. It expands, changes form, grows and displays manifold formative functions. It shows segmentation as in coelopodia, bag formation as in embryonic brain development; spore development as in primitive plant life; formation of membranous foldings, as in the development of the peritoneum or pleura. The forms seem of infinite variety.

Moist, alive Orene requires water for its continued existence. It shows great force in penetrating sand particles. In this process, easily observable when methylene blue is added, various organic fluids, lipoid-like, droplets develop in the preparations. Orene not only contains the formative principle of life; it actually shows the power to penetrate, form, change such material as granite. The artificial production of organic oil and similar natural products are certainly already on the horizon in this connection.

It may be safely predicted that Orene sooner or later will make it also possible to *grow any kind of food stuff artificially*. It may be expected that the nightmarish slaughter houses for millions of cattle, sheep, pigs, poultry, etc. will vanish and stop marring our conscience. *Food will be grown from natural living energy resources without killing of developed, self-conscious life.*

The problem will arise, what should be done to curb the immense productivity of life on this planet. But let this be the worry of future generations.

7. Making deserts green and fruitful: The discovery of the cosmic Life Force, ORENE, Melanor, Orite, in 1953 made it possible to approach the task of fructifying desert lands. The laboratory experiments of 1953 with Orene, conducted in Maine, were tested in the desert of Arizona during the winter months of 1954-55.

The experimentation in the Arizona desert proved the results obtained from laboratory findings in Maine to be correct. *Desert land in Arizona became green after removal of DOR from the atmosphere.* The Air Force was observing these operations during our Arizona Expedition ("OROP Desert Ea").

Atmospheric conditions returned to normal. The form of rain changed from downpours with flooding in the mountains, in the desert manner, to gentle Oranur rains in the

plains. It is clear what this may mean in terms of eliminating poverty everywhere. (See "Report OROP Desert Ea, 1954-1955.")

The Discoverer is well aware of the implications of the discovery for such industrial empires as the Rockefeller Empire or the massive chemical industry. They shrivel in the face of the Cosmic Energy Ocean. Not protection of old financial or political privileges but safeguarding the planet Earth and transforming its technological structure is the task of today. Let us hope that the great industrial powers of our planet have retained their pioneering spirit; that they have not sunk to the low level and the shabby method used against the discovery of the Cosmic Energy by a corrupt U. S. Administrative Agency.

C. Why the Case Should be Entirely Dismissed

1. A Pledge

As a young student of medicine, early in 1920, embarked on the study of natural philosophy, I was impressed by mistakes made by scientists in old age. It was then that I pledged myself to stop publishing scientific information once I reach the age of 60 (March 24, 1957). The best, then, I could do, so I reasoned with myself, would be to live as straight as I could continue to do under the given circumstances. Then let my fellow men decide for themselves what they wished to do with *my* way of life: imitate it, emulate it, ignore it, or punish me for it by imprisonment for two years. However, I was firmly resolved not to yield to any power on earth in what I called "*my way of life*," which was to be a life of dedication to *knowledge, truth, work and love; to be rather killed than yield to principles other than those enumerated.* I would have shaken my head in disbelief had anybody told me at that time that I would actually have to face extinction of my life, work and honor in 1954 (at the hands of food and drug

—Du Pont, Rexall, Merck—industry agents). I succeeded in discovering the primordial cosmic energy, with it the Life Energy on our planet, and this was my ill fate. The "Pledge" still holds. It has been vindicated:

Having become responsible to a certain extent for the outcome of the present struggle of mankind for cleanliness, clarity and self-preservation in the cosmic DOR emergency, I am facing the dilemma between my pledge of 36 years ago to stop advising mankind at 60 and the new fact that the discovery of the Cosmic Life Energy seems persistently to become the pivot on which the turn of the age hinges: The turn from the passing age of Mechanism and Mysticism to the *functional COSMIC AGE*.

2. Invasion from Outer Space

The Cosmic Age seems to develop from two basic foundations: The *restructuring of the Human Character in newborn ones* and the entering into our lives of a *technology* of the primal, massfree, cosmic energy that fills the universe.

These are daring words, indeed; more, they are frightening words. Mankind is facing the most crucial, most dangerous development in its history: *The planet on which we live and breed our race together with other living species is being visited, so many reliable observers, including myself, say, by living beings from outer space.* These beings are superior technologically to ourselves in the use of motor force, speed, in nearly everything, including intelligence. They have conquered the pull of gravity that keeps us down to earth.

We are approaching *crossroads* in our existence, in every type of existence, excluding none. Upon our timely and correct decision will depend the fate of our future existence; *whether we shall continue to exist at all or shall vanish forever, leaving only a dead planet behind, like the moon which is covered with white ORITE.*

In what manner are we to face this unprecedented event? What hope may we have to pass alive through the crisis ahead of us? It consists basically in having been thrown into a new reality characterologically, scientifically, philosophically and morally *unprepared*.

3. Conditions of Survival

We are approaching crossroads of sound versus cowardly judgment in Science, Technology, Religion, Education, Social Administration and—last but not least—in everyday personal behavior. Survival in good form will depend on how well we manage to read and to pass by the many confusing road signs. And let us not be mistaken: *Confusion is the uppermost objective of the old roadsigns.* Let us with Nietzsche's Zarathustra put up *new roadsigns*.

Judgment: The mechanistic age, which had some three to four hundred years ago superseded the mystical age, is dead as far as ruling our lives in the future is concerned. True, there will continue to be production of mechanical gadgets of various kinds, but these gadgets will no longer determine our kind of emotional, social or economic existence as heretofore. To exemplify: Alka Seltzer (CO₂) may still continue to sponsor daily news reports. But the production of CO₂ will no longer determine the fate of humanity. In the same vein, the mystical age of saints and ghosts still exists; but it is dead as far as determination of our total social existence is concerned. Our guides of the past in living and thinking are dead in the face of the new, Cosmic Age.

What will replace them? Something strong, true and pregnant with future knowledge will take charge if we are to emerge from those crossroads ahead alive and whole. The responsibility is *Everybody's*. There are "Fuehrers" no longer. They perished with their age. *Everybody, without exception, is on trial.* Everybody has been found guilty by the Highest Court, *Life*, of gross neglect of duty to

Truth and its offspring; of treason to *The Living*. Only a few good guides as in old pioneering times of 1494 or of 1770 have remained.

Science. All human existence rests on some kind of *knowledge*, no matter how primitive or incomplete; our future, with the past dead, will rest on a new kind of knowledge. The present battle raging in the U. S. A. between the commercial forces of "atomic" chemistry and the embryonic knowledge of "pre-atomic," (primordial, massfree) cosmic energy is a part of the dilemma with regard to which roads ahead to take: the *atomic* or the *pre-atomic* one, or, as in Oranur, a combination of both. Are matter and mass the *primary* constituents of the Universe, as the mechanico-mystical view demands? Or, is massfree energy *before* matter the primary source of Existence? "*Matter*," "*Particle*," thus are reduced to secondary natural functions in our existence. They will no longer rule our lives. And with the "particle" or "atomic," i.e. *chemical view of life*, also the rule of chemistry monopolies, artificial drugs, unnatural adulterated foods, noise, smoky motors will end, never to return. Those who kept the Enemy of Man going hard against orgonomy know that this is the fate awaiting them.

The battle between the material atom and the massfree orgone energy unit in the cosmic energy ocean has been raging for quite a while subterraneously since about 1924, openly since 1937. There can be little doubt as to the outcome, who is the stronger power and who will win. Will mankind *realize* this and *practice* it in its institutions, laboratories, courts, legal decisions, administrative regulations to the fullest extent possible as soon as possible? Before we reach the crossroads ahead, we must have made up our minds in the right, not the wrong direction.

Technology: The appearance of visitors from outer space, superior to us technologically, forces point-blank, off-the-bat action with regard to our mechanistic scientists *BEFORE* we reach the crossroads ahead and not *while* we

are passing through the tangle: the mechanistic physicist, astronomer and biologist will needs have to realize the change and resign or he will integrate his work, within the *valid* realm of mechanistic thinking, into the total effort of humanity to conquer outer space.

It is necessary to clean up the field of operations regarding space technology before we approach the task itself. Otherwise, to judge from past experiences, we shall be crushed to pulp by those who obstruct our efforts by every means available, in terror of their emotions and orgonomic realities from mere biopathic reasons.

4. There are No Authorities

This sounds strange. It is not strange. We shall coordinate on the following pages the problems of visitors from outer space and the typical *biopathic* reaction of Man to this problem. We shall do so in broad terms only.

We should reach some orientation free from arbitrary confusion. The basis of the coordination will be on the one hand available information on the so-called UFOs or Ea and the physics of OR energy, and on the other hand the parallel human reaction *against* those facts, both on the broad social scene and in the narrower realm of orgonomic psychiatry.

Ever since about 1937, when the assault upon orgonomy by frightened Little Men in the Norwegian administration of mechanistic science (Kreyberg, Scharffenberg, Langfeldt and consorts) had revealed the nature of the Enemy of Man and Orgonomy, the position was taken: *There are no authorities in new realms of natural research*. The mechanistic mind is not only not trained to think functionally; the mechanistic mind thinks *contrary* to most basic qualities of the primal cosmic energy. This is the reason why the mechanico-chemistic mind had so consistently and accurately bypassed the existence of this

energy in the universe; it is also the reason why it had used the most elaborate methods of evasion, interpreting away, laughing or slandering away all manifestations of the massfree cosmic energy. The Enemy of Man never succeeded, of course, in eradicating the structural knowledge in man of the Life Energy, and *he knew it*. The fight of the mechanistic Enemy of Man against *functional* natural research simply refused to accept proof. Their present catastrophic predicament in the interpretation of the planetary emergency is of their own design and making. There was no amount of proof, no degree in accuracy of observation, and no limit in the exactness of presentation of facts that would have convinced the mechanist whose emotions were set against any proof like the hindlegs of a stubborn mule against the ground. "*Don't Touch It*"—was and still is his watchword. An agency of the U. S. A. social administration, established to examine foods and drugs for misbranding had construed by misrepresentation of facts, a legal case against this very background: The Cosmic Energy "*does not exist.*" Here, too, no amount of proof would ever be sufficient to convince frightened souls. Here, too, authority in matters of basic research were denied to both Court and Government for this very reason of emotional, irrational prejudice.

5. Terror Stricken Men of Science

The decision: "*There are no authorities of Knowledge of the Future*" was reinforced by the other decision never to ask for or to expect from anyone "*Recognition*" of the new knowledge by the administrations of the present age and its mechanistic knowledge. To yield at this point would be paramount to treason to fact, truth and future.

These guiding lines did not help to keep out dangerous intruders, however. Since the organomic researcher did not accept their authority, they attempted to break by

force into his laboratory, his psychiatric clinic, his medical office with the intent of dishonoring him by slander and destroy his work. *They were stopped*. All information regarding the gentlemen who talk "*Ethics*" and break into laboratories and medical offices to steal knowledge and to kill the giver of knowledge, is available in several volumes of the "*History of the Discovery of the Life Energy.*" We shall not bother with this point any longer in this context. It was mentioned here only because such behavior fits so well the reports on space ships by Ruppelt, the head of "*Project Bluebook*" of the Technical Intelligence Center (ATIC) of the U. S. Air Force until 1952.

The work on so-called flying saucers was, according to this report, systematically obstructed by a *malignant ignorance* which refused to budge and still usurps the role of "*final*" authority in these matters. The Ruppelt Report on Unidentified Flying Objects demonstrates clearly beyond any doubt:

A. *The earth planet has been invaded by a powerful intruder from outer space.*

B. *The mechanistic physicists are incapable of coping with the problem.* Earth's scientists are not equipped methodically or factually to understand how craft can travel through "*empty*" space with such speed and efficiency. Mechanistic, classical physics knows nothing of the Primal Cosmic Energy.

C. *Frightened and confused*, the present-day mechanistic scientist obstructs rational progress in this matter by *ridicule, persecution, shabby means of argumentation, cowardly gossip behind the back, slander and outright threat of putting the pioneers of the Cosmic Age into penitentiaries or lunatic asylums.* These methods were used, according to records, by the New Jersey Neurological Association, under the leadership of Gordon, Richie, Robbie, Englander, to

mention only a few conspirators, for example, in its assault upon orgonomy 1947-1954: *Criminal conspiracy* to kill by slander, legalistic enmeshment and outright force. History will never forget these men of evil.

D. *The so-called ordinary people seem to know the truth or want to know it; but as usual in such struggles it stands by passively, either admiring the pioneers helplessly or supporting the slander of good work by The Enemy of Man. However, their sympathy seems in general to be on the side of the development forward.*

E. *Due to this emotional holocaust, those responsible for the outcome of the current Battle of the Universe went underground. They clamped a tight lid on all its affairs, and justly so. The complaints of citizens about this secrecy, their clamor of their right to know all are appreciated. But as long as the public only wants to know and to exercise its right to "criticize," as long as it does nothing to keep the Enemy of Man out of serious affairs; as long as the means have not been found, both moral and legal, to stop ridicule, slander and outright murder of the workers in this dangerous field of research, the work must remain top secret. It would be the end of all hope if we would permit the public to interfere with this complicated, dangerous work by swamping the men and women involved in it by an avalanche of nuisance letters, questions, criticism without positive action and all the other unpleasant qualities of certain characters who have heretofore done little more than exercise the right to vote and the duty to pay taxes. The people have done nothing so far anywhere to remove the Modju and the Hig from our life; on the contrary, up til very recently the public everywhere has supported*

the Higs by silence and has harassed free givers by sapping their strength and their good will with nuisance demands. Those of the "public" who see straight and think straight know very well what I am talking about and agree with me. Since I have no intention of becoming a representative in Congress, I feel free to tell my fellow men the truth about themselves. They can take it or leave it. The responsibility is theirs.

It is clear: *The problem of outer space must come into the open.* But it should be kept secret until we are certain the Hig is rendered powerless and the public has basically changed enough to help along instead of only claiming rights they know not how to use against the Enemy of Man.

We shall then be in a position to discuss our grave predicament in the open without fear of confusion and distraction by sick people. Then, too, serious officers of the Air Force will not need to sit on the fence regarding the question whether they themselves believe UFO's do exist or not. It is so very evident *they do exist* and give us a heap of trouble.

No amount of proof has been enough in eight years of struggle around the UFO problem to convince the Enemy of Man in mechanistic science of a clear-cut reality. No amount of proof ever will convince the mechanistic heir of Stanlinitic methods. The work on our space problems is stuck in a mire of *evasion* of the essential. Back-slapping and fake socialitis, "making no enemies," avoiding ridicule at all cost seems more important than the existence of the human race.

"What Constitutes Proof?" The answer is: *Nothing*, as long as the Enemy of Man is permitted to foul up everything important on the social or scientific scene.

"What do you want?" one officer, hardworking and harassed by the pressure from both outer space and a few

frightened Little Men asked: "*Does a UFO have to come in and land on your desk at the ATIC?*"

Nothing will convince them. They are frightened. Orgonomy would have long since gone under had it not resolved to let the "authorities" come to the pioneers in cosmic research to learn, before they could judge. The public will get used to these new ways. Before Humanity can hope to cope with the space problem it will needs have to reconstruct itself and its society.

However, to judge from the experience of more than a dozen workers in orgonomy during the five years of the DOR emergency, man on earth will needs grow up to his fate; moreover, he will not escape the power of Oranur which has gripped our planet. *The Biological Revolution Of Man Is On.*

6. "Revelation," "Delivery"

For ages now man has yearned and prayed in various forms of devotion to God to be delivered through "revelation." Now, when scientific revelation of man's biological structure is under way, he runs amok, confused, bewildered, murderous. What is in this revelation that makes some earth men run berserk? How does it work?

Let me illustrate: For ages man has hidden, could not help hiding his true nature; more, he prosecuted those who were about to reveal it. Science taught man that what he refused to know is the *Repression* of thought. But thoughts could not be seen. You may have an unwelcome thought, but you still can hide it.

Along came "Character Analysis" and with it the understanding of the *emotional expression of the organism*. This happened around 1930 A.D. *Now man could hide no longer.* He revealed himself whether he intended to or not, liked it or not, by his emotional expression and behavior. A new science was thus born to know man by looking at him, to see how he expressed himself emotion-

ally. This was too much. The hunt of the revealer was on once more, rarely before excelled in fierceness and readiness to kill.

The very depth of the person, its secrets, were threatened to be revealed: the little secrets of the married woman who had embraced a man, out of wedlock, but cherished her family; the structural spy, who hid behind a veneer of docility, meekness and good behavior; the student who appeared devoted to his teacher on the surface, but was really out to steal knowledge and to kill the giver; the legal counsel who became a U. S. attorney and impounded scientific literature without having read this literature, later cringing like a worm on the witness stand from bad conscience. The power to read expression from movement and behavior was bad enough. But now the menace to be revealed was driven to fearful proportions by Oranur. The dynamics of revelation by Oranur can be told in a few sentences.

Well-hidden secrets were pressed forward to the surface from the depth, as it were. The hider could do nothing to prevent this from happening. During the Oranur experiment we have seen excellent, reliable workers, men and women who had served our work long and well, run as far away as Hawaii and Mexico to escape the revealing pressure of Oranur. However, the thing they wanted to hide was *within themselves*; they carried it with themselves wherever they went; they could not get rid of the feeling that their secrets were pushing outward to the surface, visible to everyone. There was a force acting in them that pressed these hidden things out into the open; and they could do nothing about it. It appeared as if the *Days of "Revelation"* had come, preceding the Day of Judgment of Evil, the Devil in Man, his original sin.

Here the true value of my theory of human nature manifested itself. Oranur had charged the core of the bio-system in everyone to the utmost. The core energy now was pushing outward, expanding irresistibly. The

characterological armor broke down. Habitual hiding failed. The hidden spy, the unfaithful wife, the coward, the legal murderer, etc. came to the fore, mercilessly. Until then, the well-built armor block had been sufficient to prevent the breaking down of the dam that held the secret. Now the core energy flooded the armor, broke through the barriers, flooded the whole person and threatened to flood even the consciousness to the degree of insanity. There seemed to be no escape from this, except one: To stem the flood of self-revelation, there was the way to *transform* the flood into an *attack on somebody else*, a well-known way to divert attention from oneself. The Enemy of Man accuses its victim of exactly his own evil practices.

According to background, temperament, and structure this diversion of the flood took many forms. The mildest was evasive *disbelief*, academically or scientifically camouflaged. If the Oranur effect, *Cosmic Energy*, the "*Flying Saucers*," UFOs did not exist, then everything seemed well under control. Disbelief could grow into slight *disparagement* of the one who challenged the revelation of one's well-hidden depth.

Disparagement could take many forms. From the slight cutting remark by a psychiatrist, himself in terror of being revealed at a clinic, to the persistent carrying on of an old-maidish rumor of 20 years ago: The discoverer of the cosmic energy had "gone off beam 'lately'." Once upon a time he had been a respected, famed psychiatrist, but now, the poor fellow—. Since everybody is identified with everyone else in hiding the genitals and their doings, those who had become masters in building mass movements and mass murder of the Stalinite school on the fear to be revealed, could hook onto such rumors, born in circles of genitally frustrated men and women. Such rumors came handy also in killing a dangerous rival philosophy of life. It never had been a rival philosophy to any "ism"; it had never intended to be. However, great politics came onto the scene behind the iron curtain to arrange for all kinds

of legal processes grouped around the legislative dictum of a corrupt, subversive administrative agency: "*Orgone Energy Does Not Exist*"; the discoverer is either a "faker" or a "lunatic," both equally good for the kill.

This one example from the history of orgonomy may suffice to show: From a cutting remark to criminal slander and prosecution of truth is under such circumstances only a step. And this it was that impressed the reader of the Ruppelt UFO report of the Air Force Intelligence: *The fear of slander, ridicule, and prosecution by everyone involved in the handling of the planetary emergency*. This fact far exceeds in power the factual sighting reports, which are good, precise and true. Shortly: A pestilent character, if high enough in social position and frightened enough to burst open under the threat of the new knowledge, could disorganize, confuse a whole scientific region, block any effort to evaluate the available data, sidetrack crucial factual reports as actually happened with Project "Blue Book."

In this manner the unprecedented emergency on our planet and the terror that strikes certain character types merge into what brought so much anguish to a brave scientific community. It is improbable that such agony should continue unabated.

D. Conclusion

If the U. S. Government should have intended, for reasons of national security to stop the publications on the Discovery of the Life Energy, it should have said so frankly. The discoverer would gladly, of his own free will, have followed such a request. If American society should find that the Discovery of the Life Energy be squelched, millions of dollars of legal expenses, also the anguish that went into the assault, could have and should have been spared. The Discoverer had always dreamed of withdraw-

ing from public life and devoting himself wholly to theoretical orgonometry. He had suffered from the duties he had taken upon himself and had carried on for decades at his own effort, at his own expense of close to half a million dollars worth of cash, work done, donations given, etc. He never expected recognition or routine rewards. But neither did he expect such infamous assaults.

A word on authority of the U. S. Government would suffice to give the discoverer the peace he so ardently desires. Harassment and imprisonment are not necessary to silence the spirit and the inventiveness of the discoverer. He has been ready to resign from any public activity a long time ago, since seeking social power is not among his intentions. This does not mean, of course, that the discoverer yields to force. He only withdraws to a realm where no power on earth can reach him. His power is of a different kind. It does not require the use of force.

The case against the discoverer should be finally dismissed; its further continuation is apt to do much harm in the social sense, intended by no one involved. Neither the ideas of the discoverer nor his historical influence on society can ever be eradicated by his forced death or by persecution of his fellow workers. The discoverer would eagerly join those of his enemies who fear the rising of a new religion with new holy wars and revolutions, with another billion human souls to be maimed and killed in such wars and revolutions. To make a martyr of the discoverer would only enhance such threat to human society. The case should therefore be finally dismissed and forgotten.

If the teachings of the discoverer are true; if they are designed to *help* the world of man to find a better way in dealing with his affairs; if orgonomy is knowledge of the future, then there can be no sense or purpose in continuing the present procedures against the discovery of the Life Energy. *No one but the discoverer himself is in a position to help the world to digest what is really ruling this world*

of ours: A primordial physical force, the Cosmic Energy, active in living being, Life Energy, called "God" in religion, "Ether" in 19th century physics, "Entelechy" of Aristotle and Driesch, "Spirit," "Prana" in metaphysical natural philosophy, "full orgasmic experience of mating in the natural embrace," the physical material security of "liberty, life and happiness" of mankind as the basis of a good decent life.

May I quote from "The Oranur Experiment," (1951): "My sharp theoretical and practical formulations on biopsychiatric aspects of public health should not stand in the way, since they are already at least partially incorporated in present-day teachings all over the world. My past affiliations with the revolutionary movement in Europe of some twenty years ago should not stand in the way since for more than eighteen years I have had no political affiliations whatsoever. I have never been active in the *Political* sense of the word, but I have kept myself well-informed on every feature of the plague of dictatorship, black as well as red. I have fought dictatorship of any and every kind factually since the very early beginning of my career; and I have particularly fought every sneaking evildoer, no matter in what party, as early as 1931, with all my vigor and knowledge, long before anyone really knew what it was all about; also long before the recognition of the USSR government by the U. S. A. I have not the slightest intention of forcing any of my scientific beliefs upon any nation or any part of it; and I believe myself to be the only one today who *really knows* where the dangers connected with orgonomic teachings are to be watched out for. My belief, based on rich experience, is that if there is any hope of ever emerging from the present-day social chaos into the bright light of peaceful social living—and to my mind there is great hope—its factual, powerful roots are harbored by the alive, forward-looking forces that are at work everywhere in the world. Only a very few responsible people are fully aware today that an old, tired, bound-up

world is breaking down, and that a new, hopeful, young world is slowly and painfully being born. The current *biosexual* revolution, now in progress over the past thirty years, constitutes its core."

There are few who appreciate as does the discoverer the old, wise rule, namely, that one should not let trees grow too high into the sky. The discoverer is fully aware of the fact that, in working with the primal cosmic energy, whatever he touched, be it in sociology, psychiatry, medicine, biology or physics, grew instantly, mostly against his intent or design, to enormous, unmanageable proportions. This was so because he dealt with matters of research at the very roots of existence, with the *movements of the Living* and the functional natural law itself.

The secrecy was not the fault or design of the Accused. It was forced upon the proceedings by certain social circumstances. On the contrary, the Accused had good reason to hope that the secret background evidence would be brought into the open (see letter to Central Intelligence Agency, on record, in possession of the trial Judge). The accused themselves protested against certain evidence to be brought out in open court out of loyalty to the U. S. Government departments, mainly Air Force and CIA, with which the discoverer had cooperated for years in the fulfillment of certain crucial research jobs:

The task was to protect the unprecedented invasion of our planet by visitors from outer space; by living beings far superior to us in technological intelligence. Those working with this problem were very well aware of the fact that these invaders from outer space were using technologically, far surpassing our fastest jets, the very primordial cosmic energy which the drug and food agents, prodded on by atomic commercial interests of the food and drug industries, had declared non-existent and the study or even mentioning of which they had banned by the injunction.

This is the essence of the background affairs. The crucial nature of the suppressed factual evidence for the defense can be easily proven in new proceedings if necessary. The defense requests that Judgment and Sentence be rescinded for this very reason: In order to inspect all *pertinent* evidence and to open all of the available evidence regarding the unprecedented nature of the case (civil 1056 and criminal 5003); furthermore to hold hearings as to whether the discoverer of the primal cosmic energy was correct in suggesting in a letter to the trial judge that the wording to the jury be amended by the words "*HAD TO*" violate, in addition to "*DID*" violate the injunction. *The injunction had to be violated* because the discoverer of the Cosmic Energy had during 1954-1955, the years of the injunction, fought under the very eyes of the Air Force the **First Battle of The Universe**. (See Oranur, *OROP Desert Ea Report*, 1954-1955.)

In his charge to the jury, the trial judge pointed out the "*dignity of the court*" and the power of the federal court to enforce its own laws. There is no objection to this, only agreement. However, *WHO had violated the dignity of the court*:

Was it the discoverer who had informed the court on the criminal misrepresentation which was perpetrated upon the federal court by the complainant? Or was it the complainant who had deceived the acting federal judge; who had in a subversive manner done everything to keep the lie in and the truth out of court; who has from the very beginning falsified facts in his presentation to the court in the first complaint for injunction?

Was it the discoverer or the assailant who represented the true interest of the public in this case?

Why then, if it was the discoverer who protected the dignity of the court through truthful behavior, and not the complainant, who violated it, why then, we must ask, should the friend of the court, the one who informed the judge of the indignity perpetrated upon it, go to jail, and the

true criminal go free? This does not make sense, no matter how one tries to turn it.

The accuser has himself in his last argument before the jury admitted the unprecedented nature of this case. Never before in the history of jurisdiction, he said, had the "government" charged a defendant with a crime and see the accused one only come back, saying, "*I did it.*" Of course, such a thing has never happened before: *Never before, too, has a government agency arrogated to itself the right to decide what is and what is not Knowledge of the Future.* Never before has a government agency falsified facts in presentations to the court in order to usurp such authority. *We do not wish to be governed nor do we wish our civil affairs to be administered by such impertinent administrators.*

The trial court instructed the jury, and we agree fully, that the *dignity and authority of the court must be guarded against disobedience of its orders*; its laws, even if they are not statutory laws, must be obeyed. True, very true. BUT THE ORDERS THEMSELVES MUST BE **LAWFUL ORDERS OR BE BASED ON STATUTORY LAW.** The courts are guarding over their dignity best by not permitting deceit of the court as was done in this case to happen at all.

Should such deceit of a court by an administrative agency be *without precedent*, then let us *establish the precedent*: A court of justice has certainly the power to refute its own order when it is shown beyond any doubt that the truth has been concealed and deceit was practiced. *The criminal contempt of court has been committed by the accuser and not by the accused*; the latter did all he could to clarify the situation.

Such precedent would certainly *increase* the respect for judicial procedure. Administration of justice is empowered by its very rootings in natural and common law to let the full factual evidence pour its light upon a befogged legal scene. The court has certainly the power to prescribe the procedure to secure the full factual truth.

If the court was led into error; if an *unprecedented social situation* is responsible for the error; if this is so, I repeat, and it **IS** true, then the court will win the admiration of all who stand for rational law if the tangled legal situation will be disentangled. There is criticism abroad in our society of present-day legal practices. We must not fail in these critical times to secure justice. We must clean our own house first before we ask others to clean theirs.

If procedure is so designed that it *kills* truth and fact, then procedure, and not factual truth, must yield to revision.

If law is practiced in such a manner that quite obviously to everyone, the guilty one goes free and the innocent and decent one faces imprisonment, then the law practice must be changed as quickly and as radically as possible.

These are the ABC's of justice, obvious *a priori*.

The discoverer understands perfectly well the duty of the courts of justice to guard over the dignity of the court and against the abuse of privileges of freedom of action and speech. But he also knows that scientists and medical men in high position have the terse duty to *watch over the independence of scientific inquiry into the laws of nature from any interference whatsoever*, especially from ignorance, arrogance, prejudice, political or commercial interests. I firmly believe science meets with jurisprudence at the very roots of man's existence. Let us not, however, neglect those common roots. We have painfully learned what replacement of such principles by arbitrary interference has done to destroy security and human happiness.

The discoverer has refused to be dragged into court by ignorant agents of the food and drug business. It was crucial to demonstrate the principle of security of basic research. The very security of Natural Science is in question.

On the other hand, the discoverer appeared freely in court, assisted the acting judges, and obeyed the court order *after* the factual demonstration of the true nature of the legal situation, just as soon as he had occasion to demonstrate the lack of precedent of fact, law, procedure, and social consequences. The discoverer was not a criminal rebel *before* and a creeping coward *after* the punishment. This he has amply proven.

In addition, the discoverer has dissolved all his organizational power in order to demonstrate that he does not want power; that he should not be feared. His power is his—may this be told candidly—unprecedented natural skill and training in functional thinking, practiced in endless efforts ever since his early childhood. It was this skill which empowered him to discover the basic cosmic force; it was the same skill that brought him trouble from the anxieties this accomplishment aroused.

The discoverer expects no more now than the full recognition of the *lack of precedent* of the case and the opportunity to bring forth the evidence fully which will prove *this lack of legal and factual precedent*.

There are the legal means to prevent injustice and to let the full factual background, submerged heretofore, speak. The injustice would inevitably emerge from the fact that the great bulk of the factual substance remained underground, out of sight. It would have remained underground had the discoverer appeared in court in February, 1954. The evidence was then neither organized nor even fully comprehended. The unprecedented assault on the discovery has had the beneficial consequences of making everyone think about what actually had happened. Everyone, including the acting judge, has learned from the case as it ran its course, exactly because of the non-appearance of the accused ones in court. The dignity of the court, never insulted by the discoverer or his assistants, never even doubted in any way, more: protected by the accused

wherever possible, will only be enhanced in the eyes of the international public if the court of appeals will open the doors wide to such full, factual enlightenment of the discovery and its social consequences.

The first contact with outer space has been accomplished with adequate tools. This alone is unprecedented in the history of mankind. The Second Oranur Report on **OROP Desert Ea** tells the story.

Relief Sought

The defendant Discoverer of the Cosmic Life Energy respectfully requests the Court, basing the request upon the recorded background, factual substance and trial proceedings of the case against orgonomy:

1. To reverse the judgment of the jury to "not guilty".
2. To rescind the jail sentence.
3. To remove the injunction against the Basic Research work on Cosmic Energy.
4. To open the legal way for restitution to the Discoverer of the financial expenses which he had to incur due to the legal action of the accuser.

October, 1956

Respectfully submitted,

WILHELM REICH, M.D.
Chief Counsel for the
Discovery of Cosmic Life Energy

Pro se

EVIDENCE - PETER MILLS MATERIAL

(Shown to Judge Sweeney and Peter Mills on May 5, 1956 at trial with folder of pertinent evidence.)

Folders: A. Correspondence (Excerpts).
 B. Important Documents deposited in Mills Law Office by Wilhelm Reich.
 C. From the Minutes of the WRF in reference to Mills.
 D. Contracts, in which Mills assisted.

A. Correspondence

No.	Date	From	To	Subject
A 1	8/18/48	P. Mills	I. Ollendorff	Details on a possible mortgage on a cottage to help finance Observatory building.
A 2	6/3/48	I. Ollendorff	P. Mills	Enclosing incorporation papers (OIRL); names of directors for filing application to incorporate in Maine. "..... AND, AS YOU SUGGESTED MR. PETER MILLS (as clerk)". Property owned by WR, since corporation owes him \$100,000.
A 3	6/23/49	P. Mills	I. Ollendorff	Incorporation of scientific institution does not automatically secure tax exemption, discusses difficulties.
A 4	11/2/49	WR	P. Mills	Regarding plans for Orgone Energy Hospitals: To be a research institute, shouldn't require state licensure for research MMs.
A 5	1/19/50	I. Ollendorff	P. Mills	Regarding difficulties with Oquossoc Light and Power Company in rating buildings at Orgone too high.
A 6	2/17/50	I. Ollendorff	P. Mills	A copy of a letter sent out by WR on <u>struggle for discovery is enclosed.</u>
A 7	2/25/50	I. Ollendorff	P. Mills	Enclosing copy letter to Hesk - Stevenson <u>Cancer Foundation.</u>
A 8	3/27/50	P. Mills	Oretha Hoff	On requirements for establishing possible <u>Founding Home at Orgone.</u>
A 9	4/3/50	P. Mills	WR	Sending final draft proposed WRF bylaws. "Although these are different in many particulars from the draft you sent me, I have no pride of authorship, and only submit these as my ideas of some essentials to be included to cover any legal questions about membership and the like."

Appendix

No.	Date	From	To	Subject
A 10	4/7/50	P. Mills	I. Ollendorff	Re Power Co.: "Surprised" that they resorted to discontinuation notice (via Telephone Co. Behaviour 1955). (Mills first contact with RF, is "surprised")
A 11	5/1/50	WR	P. Mills	Transferring assets to WRF.
A 12	5/24/50	WR	P. Mills	Will adhere to original (reparative) hp-lens; Renown for central directorate and financial administration outlined.
A 13	5/27/50	P. Mills	WR	Expresses some confusion about change in bylaws and in asset transfer. And, p 2. Waits for further conference. (Mills shows inability to follow WR's financial/directional development.)
A 14	5/29/50	WR	P. Mills	Gives facts of transfer in points. Suggests to meet on <u>relationship of WR to WRF</u> .
A 15	6/12/50	WR	P. Mills	Will send special notes for minutes to Mills, whose trip to Rangley isn't always required. <u>Form of Rangley Committee on Accumulator production has failed.</u>
A 16	7/12/50	I. Ollendorff	P. Mills	Arrangements for meeting Board of Trustees (BOT); wants copies of minutes WRF. Will file important documents with Mills. Dr. Reich would like to talk with you... <u>relationship between organic energy, atomic energy and war problems.</u>
A 17	7/15/50	I. Ollendorff	P. Mills	Keep enclosed matter on file.
A 18	7/15/50	P. Mills	I. Ollendorff	Sending minute copies; will meet at date set; "The war news makes all of us uncertain about the future. Being a member of the organized Reserve of the Navy I am quite apprehensive."
A 19	8/1/50	WR	P. Mills	1. Re communication with Mr. Sumner Pitt of ABC concerning <u>practical energy labeling and possible antitrust effect.</u> 2. On Mail Cassette as possible RF spy. 3. Returning memorandum on agreement.
A 20	8/1/50	I. Ollendorff	P. Mills	Returning questionnaire, asks Mills to complete, forward to <u>Raymond Rich Associates.</u>
A 21	8/9/50	I. Ollendorff	P. Mills	Report on OEP readers forwarded.

Appendix

No.	Date	From	To	Subject
A 22	9/6/50	WR	P. Mills	Hears on gossip spread by Fowler on "Oregonian & Communist outfit." Asks Mills to write letter.
A 23	9/7/50	P. Mills	WR	Advises contacting Fowler personally, possible civil action for libel, <u>wouldn't be worth it.</u>
A 24	9/8/50	WR	P. Mills	Reports were not hearsay, but directly from people who don't want name revealed. WR has written letter to Fowler.
A 25	9/23/50	Eva Reich	P. Mills	<u>Requests information on registration of accumulator trademark.</u>
A 26	9/25/50	Eva Reich	P. Mills	Sending sample metal plates planned to add to accumulator.
A 27	11/1/50	P. Mills	I. Ollendorff	Sets date for meeting on business corporation; trademark to be filed at patent office for priority.
A 28	1/17/51	I. Ollendorff	P. Mills	<u>Sends 6 copies of Trademark for filing.</u>
A 29	1/25/51	P. Mills	WR	Details on trademark of accumulator needed to know: (1) <u>name elements or full attack element</u> ; (2) <u>when separating first shipped in interstate commerce</u> ; (3) <u>descriptive literature with it...</u> is WR a corporation or individual doing business?
A 30	1/27/51	WR	P. Mills	Answers questions on <u>accumulator labeling</u> , etc.
A 31	1/29/51	I. Ollendorff	P. Mills	Encloses list of assets of WRF to be mortgaged to WR.
A 32	1/30/51	P. Mills	WR	Will send note and mortgage soon. Advised one executor of will. Please send lists of names received under retainer. Mentions cold wars.
A 33	2/22/51	I. Mills	Olin Rowe Town Manager Rangley	Outlines real estate belonging to WRF; suggests separate assessment for tax exemption.
A 34	3/21/51	I. Ollendorff	P. Mills	Since \$900 outstanding for use of Accumulator, would like legal letter composed, asking for accu. return.
A 35	3/28/51	P. Mills	Ollendorff	Details on accumulator labeling procedures. <u>Sending deed and formation personal property mortgage. A lawyer's letter might help collection (note:</u>

Appendix

No.	Date	From	To	Subject
A 36	5/11/51	P. Mills	WR	Inventory was about returns of accumulations. Necessary procedure and fiscal year of filing for tax exemption outlined.
A 37	4/3/51	WR	P. Mills	Would like to resign as Clerk WHP when successor found.
A 38	5/10/51	P. Mills	WR	Galley proof of accumulator pamphlet forwarded. Term "Organic Energy" was changed in spring 1950. Would like Mills to continue as Clerk WHP under \$2000. Retainer, plus.
A 39	4/12/51	WR	P. Mills	Concerning reduced retainer agreement. Interested in outcome tax assessor evaluation.
A 40	5/2/51	P. Mills	WR	Payment to Mills soon. Will see Dr. Galley with Mills. Trying to Organize Movement. to President's Office whether any objections to its publication. Movement's lab still unusable. (Still in 1951)
A 41	4/12/51	Richard Hildreth	P. Mills	Corrected account sent. Encloses letter by lawyer Hildreth. (Note Mills never commented on letter himself, at this point he wanted to get out of WHP.)
A 42	5/1/51	P. Mills	WR	Flagrant letter. Can't act for WHP trademark action, no scientific basis for device. "... we deal only with cases which possess a reasonably sound scientific basis... This Organic Accumulator proposition does not look sound to me... does not think patent office likely will grant patent work." (because they are probably a part of the conspiracy.)
A 43	5/1/51	P. Mills	WR	Concerning status of Farmington Bank. Recommends Washington Trademark Attorney.
A 44	5/24/51	WR	P. Mills	Regarding taxation of Orgone Institute laboratory equipment brought from Norway 1939, valued \$20,000. Value personal possessions at \$1,000. Wants some office to know he hasn't sold anything to WHP, but is being reimbursed for expenses for discovery of Orgone as rule of WHP symbols.
A 45	9/8/51	H. Hershovitch	P. Mills	Please inform Mr. Collins, he should not charge sales tax on accumulator production since it is tax exempt.

Appendix

Important Documents
Deposited with the Peter Mills Law Office for the Record.

Date	From/To	Subject
August 11, 1947	The Orgone Energy Meter Statement.	Witnessed by Peter Mills.
March 25, 1948	Statement, Frank Fisher - WR.	
July 5, 1948	The Geiger Muller Reaction Statement.	
April 23, 1950	Telegram WR to Mills.	Suggests withdraw contempt charge.

C. From the Minutes, WHP. Concerning Peter Mills

Date	From/To	Subject
10/15/49	Certificate of Organization of Corporation in Maine	Peter Mills is officer of WHP; secretary of Clerk; also notarized papers as Justice of Peace.
10/1/49	Petition, WR, A. Cobb, C. Raphael, T.P. Wolfe, T. Ollendorff	Desire to be incorporated as a scientific, charitable hospital and research corporation.
10/1/49	Warrent, P. Mills	To set date meeting.
10/15/49	Notarized, WR.	of signed warrant.
10/15/49	Minutes	First meeting, name charter, officers. Adoption of Bylaws.
11/25/49	P. Mills	Enclosing copies of purposes corporation for revision.
2/27/50	WR	Has sent draft of by-laws. Is resigning from various honorary memberships. "It is essential for you to be informed of the fact that this Institute is at present in the process of entering a major struggle against vested pharmaceutical interests in medicine, which obstruct in an underhanded manner the development of Orgone therapy of cancer and other diseases." discussed plan for founding home at Orgoneon.
4/29/50	Notes	Meeting WHP: Suggests cooperative for manufacture of accumulators. "WR. Mills said he would look into this." Mills discusses Maine Development Commission.

Appendix

Date	From/Kind	To/By	Subject
6/3/50	Meeting	By: WR, 24 absent	Gift of 19 acres from WR to WRF. Voted to assume contract of OHL to WR.

8/30/50	First Annual Meeting	WRF	Judge Mills elected Clerk. Mills to contact ABC re possible antinuclear effects of OR.
10/22/50	Meeting, Trustees	WRF	"...The annual contracts with the Bays office, New York, and Mr. Mills of Farmington have been discontinued. Services in the future...will be on case to case basis..."
1/9/51	Letter, WRF to P. Mills	P. Mills	"Has to stop one way street of the 'gimmie' attitude." Layout of agreement reached after Mills discussion on (1/8/1951).
2/16/51	Meeting, Trustees	WRF	On the expenditures and motives of building. Collapse of AHO; donations accomplish nothing (Doctors thought they were kickbacks). Expenditures Orgone Institute 1940-1950. "Barry of Financial Relations between WRF and WRF." Total contributions 1935 - 1950... \$120,000.00. No money of outside contributions is contained in assets held. Statement of monies received from WR which are to be covered by the contract.
2/16/51	Meeting, Trustees	WRF	60 acres given to WRF. New contract WR-WRF to be negotiated. Vote to give promissory note to WR for \$103,189.84 amount of total indebtedness...To secure payment of note mortgage of assets WRF, both real and personal given to WR...OIF included as functioning unit of WRF. First Orgone Experiment terminated. Telegrams to ABC that danger of experiment ended. Sale of assets stopped, any threaten economic foundation of WRF.
2/16/51	Meeting	WRF	Medical rise of ORACON assigned to WRF by WR.

Appendix

Date	From/Kind	To/By	Subject
2/17/51	Mortgage	WRF to WR	
2/21/51	Meeting	WRF	"Peter Mills has agreed to a minimum salary of \$600 yearly for legal services for the WRF."
Summer '51	Notes	WRF	Point B, 1, a) "Wrote Mr. Mills regarding formal amendment. No answer." (Successor to President an Executive Committee, not Vice President.)
8/6/51	Letter WR	Trustees, WRF	Promissory note of February could be changing. Promissory eliminating note entirely, and elimination of mortgage. Suggests all activities in future be on grant basis.
8/7/51	I. Glendonoff	Dresser, Accountant	Encloses draft of revised contract, providing \$12,000 yearly to WR, as grant, also lifetime use observatory. Also potential income should be included in assets.
8/15/51	Meeting, M. Sharaf	Dresser, Accountant	Dresser: How would promissory note be regarded by tax people? Donation of medical use accumulator watched by \$100,000 liability of WRF amounts to a sale. WR: Opposed: \$100,000 is partial reimbursement for factual expenses. Would have to pay taxes on it. WR states promissory note was idea of co-workers. WR's answer would be dissolution of WRF. Discuss tax angle on \$100,000. Main problems: 1) Status of promissory note, and 2) Eliminate concept that medical rights to assets were sold for \$100,000.
8/15/51	Meeting	F. Mills, Dresser, Miller, G.P.A.	\$103,000 has not been on the books as a liability. Background given. WR is for changing \$103,000 into Infant Trust Fund. WR advised to keep Observatory. WR only wants to safeguard independence of work.
8/16/51			"On 8/16/1951 WR went to Farmington and together with Judge Mills discharged the mortgage and notes."
8/31/51	Annual Meeting	WRF, Board of Trustees	Election of Clerk: The name of Judge P. Mills was given in nomination and seconded, and election was unanimous.
11/29/51	Meeting	WRF, Trustees	Judge P. Mills to be put on case to case basis regarding services, if this compatible with his retaining titular position of legal clerk of the WRF. Change in effect March 1, 1950.

Appendix

Date	From/Kind	To/By	Subject
12/17/51	Dr. C. Raphael	M. Sharaf	Will write letter to Mills re new financial arrangements. Doubts whether Mills would function as WRF Clerk without compensation.
4/2/52	Meeting	WRF, Trustees	Statement regarding disaster that struck Oregon. Possible total loss of all buildings and many instruments. Copy sent to Judge F. Mills.
4/12/52	WR	F. Mills	WR relinquished chief administrator job. Board of Directors of WRF to take over. Retains chairmanship of basic research.
4/30/52	Notes		Reduction of expenses due to financial disaster catastrophe. Point 2. Judge F. Mills. Clerk of WRF was asked to operate on a case to case basis. Possible loss estimated at \$100,000.
5/19/52	Meeting	Trustees, WRF	WRF must continue to function if at all, as a non-profit instrumentality of OI. Future existence of WRF to be decided at Annual meeting.
8/19/52	Meeting	Trustees, WRF	"Human reactions so severe...to Oramer...they jeopardize existence of WRF... Dr. Reich also commented that he had reason to feel dissatisfied with Mr. Mills as the clerk of the Foundation, and legal advisor. When recent difficulties requiring his assistance arose, when he was apprised of the extreme emergency at Oregon, and how important it was to have his assistance, particularly in order to bring the severe WR reaction to the attention of some government agency, he displayed extreme reluctance to do so. In the light of this, it is his opinion (WR's) that he should no longer be retained as clerk and legal advisor. In his place Dr. Reich proposed Miss Lois Wyvell as the clerk of the WRF."...
			Relationship WR to FIA discussed. WR does not want responsibility of accu. distribution any more. Oats all the problems, none of the benefits... Distribution center in New York suggested. Don't give FIA authority... Accus only sold for non-medical use. Proceeds of old ones to go to basic research... Major task to work for law administering Oregon energy; an Oregon Energy Act is needed.

Appendix

Date	From/Kind	To/By	Subject
8/22/52	Third Annual Meeting	WRF	We cannot understand the FIA investigation either... Must know whole of campaign starting 1931. It is this information which must be published first before the life positive scientific material... hate of the living must be handled first... I. Ollendorff elected Clerk WRF. "Oramer struck physically by disease, and emotionally by unknown... Irrational emotion is built upon energy state. Oramer increased the level of energy in every person and drove to the surface everything that was irrational in him. It was bad and yet good."
8/25/52	Certificate		Of Clark's election - Ilse Ollendorff.
10/30/52	Dr. C. Raphael	WR	Vote affirm WR's gift of personal royalties to be used for basic research.

STATE OF MAINE

FRANKLIN, ss.

5 July 1948

Personally appeared Wilhelm Reich, M.D. at Orgonon, Town of Rangeley, and said County of Franklin and State of Maine, who first being sworn made the following statement:

I, Wilhelm Reich, M.D., wish to deposit the following facts concerning the ORGONE ENERGY MOTOR:

1. On August 11th, 1947, an affidavit was executed concerning the discovery of a motor force in cosmic orgone energy. This document was sent to and deposited with the following persons and institutions:

Dr. Theodore P. Wolfe, Director of the Orgone Institute Press

Dr. Walter Hoppe, Medical Director of the O.I.R.L., Inc. Palestine

Dr. Ola Raknes, Oslo, Norway

Mr. A. S. Neill, Leiston, England

Dr. I. H. Lennbach, Copenhagen, Denmark, for the Danish Patent Off.

Law Office of Mr. Arthur Garfield Hays, New York

Law Office of Mr. Peter Mills, Farmington, Maine

U. S. Atomic Energy Commission (through office of Mr. Hays)

The Franklin Institute, Philadelphia

Irving Goodfriend, Patent Lawyer, New York

On March 25th, 1948, a second affidavit was executed, regarding VACOR TUBES (orgone-charged vacuum tubes). This document was sent to and deposited with the following persons and institutions:

Appendix

Dr. Theodore P. Wolfe, New York
 Dr. Walter Hoppe, Tel-Aviv, Palestine
 Dr. Ola Raknes, Oslo, Norway
 Mr. A. S. Neill, Leiston, England
 Dr. Simeon J. Tropp, New York
 Law Office of Mr. Arthur Garfield Hays, New York
 U. S. Atomic Energy Commission (through office of
 Mr. Hays)

2. On June 24th, 1948, at 1 p.m., I succeeded in setting a motor (Western Electric, KS-9154, Serial No. 1227) into motion by means of the Orgone Energy Motor Force which I had discovered by way of the Geiger Muller counter on August 8th, 1947. To date, the energy output has been increased to around 200,000 impulses per minute, measurable with the 32 Geiger Muller Scaler.

3. An activated filament of electronic amplifiers, without any high voltage, is sufficient to transmit the ORGONOTIC MOTOR FORCE.

4. In order to set the Orgone Motor into motion, a certain function, called Y, is necessary. This function cannot be divulged at the present time.

5. The sources of orgone energy used hitherto are the following:

- a) Orgone-charged Vacor tubes
- b) Atmospheric Orgone
- c) Earth Orgone
- d) Organismic Orgone Energy

No material, as is being used in the process of nuclear fission is required.

Appendix

6. The succession of impulses can be regulated. The sequence of impulses is even and continuous. The relation of the amount of used orgone energy to the tremendous reservoir of the Cosmic Energy Source is minimal. (Reference is made to the document executed on January 13th, 1948, by the law offices of Mr. Arthur Garfield Hays, New York, concerning basic organometric functional equations.)

7. The speed of the motor action can be regulated. It depends on

- a) the number of vacor tubes connected,
- b) weather conditions (in accordance with organotic functions found hitherto, such as temperature difference To-T, speed of electroscopic discharge, etc.)

c) Function Y

8. The functions of the vacuum tubes (vacor tubes), refute the theories of "empty space." There is no such thing as "empty space". Field actions are due to the activity of the universal Cosmic Orgone Energy. The strength of the energy field within the vacuum tube can be demonstrated and measured with a specific functional set-up.

The action of the Orgone Energy Motor was witnessed by the following:

Ilse Ollendorff, Administr. Director of the Research Corp.

Myron Sharaf, student of the Orgone Institute

William Washington, Physicist, student of the Orgone Institute

Appendix

Appendix

September 6, 1950

Judge Peter Mills
Mills & Mills
Farmington, Maine

My dear Judge Mills:

I am referring to the discussion we had at the last annual meeting on August 30th, 1950, concerning the responsibility involved in conveying the importance of our knowledge about the medical effects of orgone energy in case of a renewed strenuous war effort. It is, especially, the great danger of damage by nuclear radiation which constitutes the main worry in the United States. It has been known to me and some of our physicians for a long time that orgone energy counteracts nuclear radiation. I would like to summarize the hope which is entailed in the medical efficiency of the orgone energy in the following points which are specially concerned with possible application against nuclear radiation effects:

1. *Blood System.* It is to be expected that a bio-energetically strongly charged organism will resist the damage inflicted by nuclear radiation much better than a bio-energetically weak organism. The bio-energetic strength of an organism is, according to observations over a period of about 15 years now, especially reflected in the behavior of the blood system, particularly the red blood cell system. It has been established beyond any doubt that by way of the orgone accumulator, the blood system can be charged bio-energetically to a very high degree. Thus, the bio-energetic strength and resistance of the organism is heightened. Many physicians working with orgone energy have found invariably that such chronic conditions as chills, colds and

Appendix

so-called low resistance are alleviated if orgone energy is applied over long periods of time and regularly. Thus, understandably, also the disposition to pneumonia could be reduced. I omit here more details which can be submitted at any time.

2. *Tissues.* It has been established that orgone energy as applied by the orgone accumulator has a strong vagotonic effect, that means, that blood supply and turgor of the tissues are greatly increased. From well-known medical principles it follows that well charged tissues and organs will resist damage to a much greater extent than weak tissues.

3. *Wound Healing.* One of the most important effects of orgone energy application is a quick and nearly perfect healing of even severe wounds and burns by way of direct irradiation of the damaged region. For instance, severe damage due to 2nd and 3rd degree burns, is alleviated, and the worst effects are prevented if the severely burned region is irradiated with orgone energy immediately after the accident occurred. Blisters do not occur and the pain is reduced after a few minutes. Wounds due to cuts are healing quickly and cleanly. Old resilient ulcers are healing under the influence of direct orgone radiation by way of an acute inflammation which sets in in the degenerating region and replaces dead tissue by new granulating tissue. This may suffice to indicate the direction in wound healing.

4. *Alleviation of Pain.* Orgone energy, if applied directly to an aching region, has the effect of at least greatly reducing acute pain. These effects have been studied in such cases as acute pain in cancer, rheumatism, migraine, neuritis, cuts, and similar conditions. It is therefore to be expected that immediate application of direct orgone irradi-

Appendix

ation would greatly help to alleviate pains in cases of severe wounds due to shells, bullets, fractures, etc.

5. *Shock.* It has been established that due to the strongly vagotonic effect of orgone energy, shock reactions are at least diminished, and recovery is speeded up by total irradiation of the organism with orgone energy, since shock is mainly due to a sudden severe sympathicotonic contraction of the organism.

The above mentioned points are far from giving a complete picture. However, they may suffice to indicate what tremendous benefits could be derived from a general application of orgone energy in cases of emergencies such as atomic warfare, epidemics, etc. Last, but not least, I would like to mention a point which, at present, is no more than a prospect, but a very hopeful one. Lack of appropriate financial means has hitherto made it impossible to follow up the following line of research:

Nuclear radiation, for instance radium, is being changed under the influence of concentrated orgone energy. The kind and the extent of such change is still mostly in the dark. However, it can be conscientiously stated that these effects of orgone energy upon nuclear radiation could be elaborated in a short time with the appropriate means. Here it may suffice to state that orgone energy represents cosmic energy *BEFORE MATTER*, in contradistinction to nuclear radiation which is radiation *after matter* as handled by the Atomic Energy Project. It is understandable why I restrict the communication concerning this point to a mere indication.

Appendix

Would you be kind enough, as our legal adviser, to transmit this communication to the appropriate authorities of the Atomic Energy Commission. I felt it as my duty in these trying times to press toward awakening not only interest but also medical conscience regarding these matters in the responsible military and government circles. It would not take much money to elaborate the above mentioned effects to the satisfaction of medicine and for the safety of our country. I would therefore appreciate it highly if you were kind enough to exert your influence and your position as our legal adviser to carry these suggestions to their full realization.

Most sincerely yours,

Wilhelm Reich, M.D.
President

In reply refer to:
BMM:CLD

September 29, 1950

Mr. Peter Mills
Mills and Mills
Farmington, Maine

Dear Mr. Mills:

Mr. Pike has asked that I reply to your letter of September 18, 1950, to which was attached the communication from Dr. Reich.

Until more is known about the true nature of this BEFORE MATTER form of cosmic energy called orgone, it is my own personal opinion that it would be unwise for the Atomic Energy Commission to attempt to apply it to human disease. No one in this office feels qualified to pass on its merits.

Sincerely yours,

/s/ Charles L. Dunham

Charles L. Dunham, M.D.
Chief, Medical Branch

[LETTERHEAD OF]

KENWAY, JENNEY WITTER & HILDRETH
Counsellors at Law — Boston, Mass.

April 12, 1951

Peter Mills, Esq.
Mills and Mills
Farmington, Maine

Dear Mr. Mills:

I have just received the galley proof on the Orgone accumulator, and now that I see what the subject matter is, I cannot undertake to act for The Wilhelm Reich Foundation in applying for trademark registration. I am therefore returning the galley proof, the pamphlet describing the construction of an accumulator and the nameplates. I am also sending our check in the amount of \$75.00 in return for the advance payment which accompanied your letter of February 3.

The reason for this decision, as you probably suspect, is that *the device appears to be without scientific basis*. The article in galley proof is written in technical style, but that is as far as it goes.

We try in our work to deal only with those cases which are considered to possess a *reasonably sound scientific basis*; this Orgone accumulator proposition does not look sound to me. Also, I do not think the Patent Office would be likely to grant trademark registration. The nature of the apparatus would have to be explained and I do not see how an *explanation satisfactory* to the Patent Office could be given.

Appendix

Possibly I should have been more suspicious of this situation earlier, but I did not know what it was all about until the galley proof of the article came in this morning. I hope my action will not place you in an embarrassing position with your client, but I am sure the wise thing is for me to withdraw immediately and return everything to you.

Very truly yours,

Richard R. Hildreth

Appendix

May 4, 1951

Judge Peter Mills
Farmington, Maine

Dear Judge Mills:

Confirming my telephone conversation with you yesterday I desist from rebuking the law firm in Boston directly. However my reaction to their procedure must go on record for the future historians of orgonomy. The issue is this:

Just as court procedures do not permit empty opinion and admit solely factual evidence so does serious natural science. Here too, only the factual evidence is permitted to speak. This institute was not interested in what opinion any law office in Boston may have on orgone energy. *It was solely interested in getting a trade mark. They, of course, had the full right to accept or to deny to do the job. But they had no business, in such an official matter, to utter opinions without factual evidence.* Their statement amounts to an impertinence. *On what factual basis do they play the judge on what is scientific and what is not in orgone energy, in the face of many dozens of physicians and scientists of high rank who are working practically with orgone energy all over the world.* This is a top notch pioneering job which requires courage and independence *from many petty ideas of the day.*

I am taking a vacation of a few weeks after these most strenuous winter months. I regret that I shall not be able to see Dr. Colley personally. I suggest that if he is really interested in our work that he contact Dr. Simeon J. Tropp, Rangeley, Maine, or the Director of the Orgone Energy Clinic, Dr. E. Baker, 99-06 69th Ave., Forest Hills, New

Appendix

York. He may also contact me directly by mail and state his request clearly to enable me to direct further procedures.

I am enclosing a copy of a letter which was sent to the Health & Welfare, Department, Augusta, Maine, to the office of the President, as well as the AEC. Would you please add it to our file.

In the meantime you will have received a check for the amount due you until February 1951.

I would like to deposit some funds in a Farmington bank. Would you be kind enough to advise me which bank would be the best and which is backed by government security.

Sincerely yours,

Wilhelm Reich, M.D.

April 29th, 1952

Judge Peter Mills
Mills & Mills
Farmington, Maine

Dear Judge Mills:

I regret to inform you that due to aggravating complications of the *Oranur Experiment*, heavy financial losses have been incurred by the Foundation and by Wilhelm Reich personally. Due to these losses, we must restrict our expenses as much as possible. We therefore regret that we shall not be able to continue to pay for your services \$600. per year as heretofore.

Would it be convenient for you and would you agree to continue as the *Clerk of the Foundation on a case to case basis?* Please let us know.

Sincerely yours,

Hse Ollendorff
Treasurer

Appendix

THE WILHELM REICH FOUNDATION

Third Annual Meeting

Orgonon, Rangeley, Maine

August 22nd, 1952
3 P.M.

The third annual meeting of *The Wilhelm Reich Foundation* was held at Orgonon, in Rangeley, Maine on Friday, August 22, 1952 at 3 P.M. Present at this meeting, in addition to Dr. Reich, who presided, were members of The Board of Trustees, Drs. Baker, Raphael, S. Tropp; active members, Miss Ilse Ollendorff; associate members, Dr. Duvall, Miss Jeanette Hart, Helen MacDonald, Ph.D.; Miss Lois Wyvell, Clerk. *Mr. Peter Mills* and Miss Helen Herenroth.

Dr. Reich opened the meeting and called for:

I—ANNUAL REPORTS

Dr. Reich, in his introductory remarks, pointed out that, as events have developed, and as unpleasant as it is, it has become necessary to devote much time and effort to Modju. He had decided, he stated, not to present his own report, at this time, but to wait until 1953 to publish it or until, "Modju has been effectively dealt with." He had asked himself whether it was wiser to fight the plague by publishing scientific material and facts about the living or to publish material which shows the hate of life first. After much thought, he had decided that the hate of the living must be handled first. He warned that there was too much naivete about. We cannot simply go about "preaching our gospel" without an acute awareness of the emotional plague. "The bubble is bursting outside," he stated.

Appendix

There is a gap between what has been published and what is still to come and that gap must be bridged. This can be done by stopping all activities or by filling it up with Modju material which is unknown outside. While Modju was attacking Dr. Reich in Norway, for example, for about fourteen months, he had *confirmation from the French Academy of the bions*. It should be published now. We cannot understand the FDA investigation efforts unless we become acquainted with the whole red fascist campaign starting in 1931. It is this information which must be published first before the life positive scientific material which has been accumulating in much abundance. For this reason, it will be necessary to suspend the admission of new members for a period of time. Everything is in flux. The Oranur experiment has brought up very severe factual, scientific and emotional problems and it would be most unwise to complicate matters by admitting new members. * * *

Chester M. Raphael, M.D.
Secretary.

From	To	By and Date	About
1. Orgone Institute Research Labs (OIRL)	Director, Office of Technical Advisers, Atomic Energy Commission (AEC), NYC	Personal meeting of representatives (April 30, 1948)	GM effect of OR and vacor phenomena. AEC representative states OR fundamental natural-scientific research outside scope of AEC.
2. Chief, Public Information Bureau, AEC, NYC	OIRL	Letter (May 26, 1948)	Publication of GM effect of OR not restricted.
From	To	By and Date	About
3. Orgone Institute	Chairman, AEC, Washington, D.C.	Letter (July 22, 1948)	Public responsibility regarding motor force in OR. Danger of misuse by totalitarian powers.
4. OIRL	Director, Office of Technical Advisers, AEC, NYC	Letter (Sept. 9, 1948)	Motor effect in OR. Obtaining of spinner motor models.
5. Director, Office of Technical Advisers, AEC, NYC	OIRL	Letter (Sept. 17, 1948)	<u>AEC interested in fundamental research such as that in OR, but cannot help or support research outside scope of AEC act.</u>
6. Orgone Institute	Medical Directors, OIRL	Letter (Oct. 5, 1948)	Relationship of OR to NR. Need for public responsibility and support. Importance of factual results greater than legalistic separation of OR as outside scope of AEC.
7. OIRL	Director, Office of Technical Advisers	Letter (Oct. 21, 1948)	Relationship of OR to NR. Need for money to carry on research.
8. Director, Office of Technical Advisers, AEC	OIRL	Letter (Nov. 2, 1948)	OR outside scope of AEC.
9. Orgone Institute	Chief, Patent Branch, AEC, Wash., D.C.	Letter (Nov. 8, 1948)	Documents concerning OR reaction at GM. 10,000 impulses per second with vacor tube at GM Autoscaler.

Appendix

HISTORICAL RECORD

From	To	By and Date	About
10. Chief, Patent Branch, AEC	Orgone Institute	Letter (Nov. 23, 1948)	OR research does not relate to present activities of AEC.
11. Orgone Institute	Board of Trustees, The Wilhelm Reich Foundation (WRF)	Letter (Sept. 6, 1950)	Medical effects of OR. Hope that OR can counteract NR.
12. Legal Adviser, WRF	Commissioner, AEC	Letter (Sept. 18, 1950)	Transmission of Sept. 6, 1950 letter from Orgone Institute.
13. Chief, Medical Branch, AEC, Wash., D.C.	Legal Adviser, WRF	Letter (Sept. 29, 1950)	Must know more about nature of OR. No one in AEC Medical Branch able to pass judgment on OR.
14. OIRL	Radioisotopes (RI) Branch, AEC, Oak Ridge, Tenn.	Telegram (Dec. 4, 1950)	Application for radioisotopes.
15. OIRL	Tracerlab, Inc., Boston, Mass.	Letter (Dec. 4, 1950)	Procurement of radio cobalt. Standard CPM for radio cobalt.
16. OIRL	Tracerlab	Letter (Dec. 4, 1950)	Ordering of tongs, lead container and film badges.
17. Orgone Institute	Director, Orgone Energy Clinic, Forest Hills, N.Y.	Letter (Dec. 4, 1950)	Plans for Oranur Experimentation.
18. RI Branch, AEC	OIRL	Letter (Dec. 6, 1950)	Application for radioisotopes.
19. WRF	Important Civil Defense, State and Federal Agencies	Mimeographed Bulletin (Dec. 1950)	Layout of Oranur Experiment. (<i>Orgone Energy Emergency Bulletin</i>) (OEEB).
20. RI Branch, AEC	OIRL	Letter (Dec. 15, 1950)	Procurement of radioisotopes.
21. Orgone Institute	The President of the United States	Letter (Dec. 19, 1950)	Oranur Project.
22. Director, Orgone Energy Clinic	New Jersey Congressman	Letter (Dec. 28, 1950)	Oranur Project.
23. New Jersey Congressman	Director, Orgone Energy Clinic	Letter (Jan. 1, 1951)	Oranur Project.
24. New Jersey Congressman	Surgeon General, U.S. Public Health Service	Letter (Jan. 1, 1951)	Oranur Project.

Appendix

HISTORICAL RECORD

From	To	By and Date	About
25. Tracerlab	OIRL	Letter (Jan. 1, 1951)	Procurement of radio cobalt.
26. OIRL	RI Branch, AEC	Letter (Jan. 2, 1951)	Training of OIRL personnel in NR safety measures.
27. Canadian Radium and Uranium Corp., NYC	OIRL	Letter (Jan. 3, 1951)	Order of two mgs. radium.
28. New Jersey Congressman	Director, Orgone Energy Clinic	Letter (Jan. 5, 1951)	Surgeon General familiar with Oranur Project.
29. Tracerlab	OIRL	Letter (Jan. 5, 1951)	Impossible to give standard CMP for radio cobalt.
30. WRF	Important Civil Defense, State and Federal Officials, Libraries, Hospitals, etc. (Approx. 700)	Printed OEEB (Jan. 5, 1951)	Oranur Project.
31. RI Branch, AEC	OIRL	Letter (Jan. 8, 1951)	Training of Oranur personnel in handling NR material.
32. Industrial Hygiene Branch, AEC, NYC	OIRL	Letter (Jan. 8, 1951)	Protective respirator.
33. University of California Library	WRF	Letter (Jan. 10, 1951)	Receipt of OEEB.
34. Chief, Radiology Branch, AEC, Wash., D.C.	Brigadier General, U.S. Army	Letter (Jan. 15, 1951)	Oranur Project.
35. Brig. General	Orgone Energy Clinic, Forest Hills	Letter (Jan. 17, 1951)	Oranur Project.
36. Orgone Institute	Director, Orgone Energy Clinic	Letter (Jan. 22, 1951)	Proposed conference with Medical Chief, AEC, apropos Oranur.
37. Director, N.Y. State Civil Defense Commission	Medical Orgonomist	Letter (Jan. 24, 1951)	Receipt of OEEB.

Appendix

HISTORICAL RECORD

From	To	By and Date	About
38. Directors, Orgone Energy Clinic	Medical Chief, AEC	Personal Conference (Jan. 26, 1951)	Oranur Project. Effect of NR on OR.
39. General Manager, AEC, Wash., D.C.	U.S. Senator from New York	Letter (Feb. 2, 1951) (Letter forwarded to the Orgone Institute)	Possible use of OR energy against effects of radioactivity called to the attention of the AEC on several occasions.
40. Directors, Orgone Energy Clinic	Orgone Institute	Letter (Feb. 3, 1951)	Conference of January 26 with representative of AEC.
41. Orgone Institute	Director, Orgone Energy Clinic	Telephone (Feb. 13, 1951)	Seriousness of situation at Orgonon; mice dying, high count in East.
42. Directors, Orgone Energy Clinic	Medical Branch, AEC and Surgeon General	Telegram (Feb. 14, 1951)	Urgent that responsible physicist and public health officer be dispatched to Orgonon. Possible danger to community.
43. OIRL	Medical Branch, AEC, Surgeon General and State Health Officer, Augusta, Me.	Telegram (Feb. 16, 1951)	Immediate danger at Orgonon and in community curbed.
44. Orgone Institute	Medical Orgonomist, Oslo, Norway	Telegram (Feb. 19, 1951)	Warning against trying to treat radiation sickness with OR at present experimental stage.
45. RI Branch, AEC	OIRL	Letter (Feb. 23, 1951)	Potential hazards connected with use of P-32 in view of DOR reaction.
46. OIRL	RI Branch, AEC	Letter (March 6, 1951)	Interruption of Oranur experiment. Danger of political misuse of Oranur.
47. RI Branch, AEC	OIRL	Letter (March 13, 1951)	Interruption of Oranur Experiment. Cooperation in the future.
48. Orgone Institute	Dept. of Health and Welfare, Augusta, Me.	Telephone (April 13, 1951)	Reaction of Oranur at safe. Possible public health hazard.

Appendix

HISTORICAL RECORD

From	To	By and Date	About
49. Dept. of Health and Welfare, Augusta, Me.	Public Health Service, Wash., D.C.	Telegram (April 13, 1951)	Reaction of Oranur at safe. Possible public health hazard.
50. Dept. of Health and Welfare, Augusta, Me.	OIRL	Letter (April 26, 1951)	Public Health Service, Wash., D.C., states no public health hazard exists and CPM at safe not unusual.
51. OIRL	Dept. of Health and Welfare, Augusta, Me.	Letter (April 26, 1951)	Further measurements of Oranur at safe and at GM autoscaler. Contradictions with classical findings. Danger of political misuse of Oranur.
52. WRF	The President's Office, and AEC	Letter (Sept. 11, 1951) and galley proof of "The Oranur Report: First Experiment: First Report." <i>Orgone Energy Bulletin</i> , Oct., 1951	Whether President's Office regards publication of "The Oranur Report" and distribution abroad as dangerous to the interest of the USA, despite earlier statement by AEC that OR energy research is basic research and not restricted.
53. AEC	WRF	Letter (Sept. 24, 1951)	Oranur not classified.

Bibliography of Works on Orgone Energy

1. WILHELM REICH, M.D.
1. EXPERIMENTELLE ERGEBNISSE UEBER DIE ELEKTRISCHE FUNKTION VON SEXUALITÄT UND ANGST. Abhandl. zur personellen Sexualökonomie, Nr. 5, Sexpol Verlag, 1937. (*Out of print.*)
2. DIE BIONE. Klinische und experimentelle Berichte, Nr. 6, Sexpol Verlag, 1938. (*Out of print.*)
- a. Communication to the French Academie de Science on Bion Experiment No. VI, January, 1937. Ch. IV.
3. BION EXPERIMENTS ON THE CANCER PROBLEM. DREI VERSUCHE AM STATISCHEN ELEKTROSKOP. Klinische und experimentelle Berichte, Nr. 7, Sexpol Verlag, 1939. (*Out of print.*)
4. THE DISCOVERY OF THE ORGONE, vol. 1: THE FUNCTION OF THE ORGASM, 2nd edition, 1948.
5. THE DISCOVERY OF THE ORGONE, vol. 2: THE CANCER BIOPATHY, 1948.

Appendix

[EXCERPT]

REQUEST FOR ADMISSIONS

* * *

- (55) An hot hard-boiled egg placed in an operating refrigerator with a constant temperature of 32° F. will lose its heat and become cold.
- (56) The statement in the preceding paragraph is an example of the application of the second law of thermodynamics.
- (57) Cosmic rays originate from outer space.

* * *

- (60) For the proper operation of a vacuum tube there must be a complete electrical circuit between the anode and the cathode.
- (61) A direct current voltmeter measures an electrical phenomenon, namely, voltage, which is the same as the voltage measured by an electroscope.
- (62) A voltage measurement of 30/1000 of a volt is less than a voltage measurement of 5000 volts.
